EDINBURGH:
FULLARTON AND MACNAB, PRINTERS, LEITH WALK.

GAZETTEER OF THE WORLD,

OR DICTIONARY OF GEOGRAPHICAL KNOWLEDGE.

HENSBURROW, or Hensborough, a mountain near St. Austell's, in Cornwall. It is a boss of granitic high land, elevated 1,034 ft. above sea-level, and one of the highest points in the co. The prospect from its summit is very extensive and beautiful, stretching on the E into Devonshire, and on the W almost to the Land's End, and commanding views of the English and Bristol channels. The whole district of St. Austell's is sometimes called Hensburrow.

HENSHAW, a township in Haltwhistle p., Northumberland, 3½ m. E of Haltwhistle, on the line of the Newcastle and Carlisle railway. Pop. in 1831, 619; in 1841, 569.

HENSIES, a commune and village of Belgium, in the prov. of Hainault, 11½ m. WNW of Mons. Pop. 1,919. Fine hemp is grown in the vicinity.

HENSINGHAM, a township in the p. of St. Bees, in Cumberland, 1½ m. SE of Whitehaven. Pop. 1,019.

HENSLOW (Cape), a cape on the S coast of New Georgia, in S lat. 10°.

HENSTEAD, a parish in Suffolk, 6 m. SE by E of Beccles. Area 1,590 acres. Pop. in 1841, 573.

HENSTRIDGE, a parish of Somersetshire, 6 m. S of Wincanton. Area 4,080 acres. Pop. in 1831, 1,074; in 1841, 1,146.

HENTLAND, a parish in Herefordshire, 4½ m. NW of Ross. Area 2,550 acres. Pop. 612.

HENVIE, a commune of France, in the dep. of Finistere, cant. of Taule. Pop. 1,241.

HENZADAH, a town of Birmah, on the Irawaddi, a little below the point where the Anoukioup branch of that river goes off in a SW course to Bassein.

HEONG-SHAN, a town of China, in the prov. of Quang-tong, on an arm of the Canton river, 22 m. NW of Macao.

HEPBURN, a township in Lycoming co., in Pennsylvania, 9 m. N of Williamsport. Pop. 1,570.

HEPPACH (Gross), a large village of Würtemberg, 8 m. SE of Stuttgard, on the r. bank of the Rems. Pop. 1,300.

HEPPENHEIM, a town of Hesse-Darmstadt, in the Bergstrass, 17 m. NNW of Heidelberg. Pop. 4,170.—Also a town of Bavaria, 4 m. SE of Worms, on the Eisbach.

HEPTONSTALL, a township in the p. of Halifax, in the W. R. of Yorkshire, 8 m. W of Halifax. Pop. 4,791.

HEPWORTH, a township in Kirk-Burton p., in the W. R. of Yorkshire, 8 m. S of Huddersfield. Area 3,370 acres. Pop. 1,436.—Also a parish of Suffolk, 11 m. NE of Bury St. Edmund's. Area 1,640 acres. Pop. 582.

HERACLEA. See Erekli.

HERACLIA, an uninhabited rocky islet of the Archipelago, 6 m. S of Naxos.

HERALETZ, a village of Bohemia, in the circle of Czaslau, near Humbolecz.

HERAT, or Heraut, a district in the NW of Afghanistan, formerly an independent state. Its present extent, from Ouch on the E, to Ghorian on the W, is only about 120 m.; and its breadth, from Kurakh on the N, to Salzawar, or Isfazar, on the S, is about 90 m. In the present article we shall describe the whole territory to which the name has been applied, and which includes the tract to the N of the mountain-range that bounds the plateau, as well as the range itself, and the ancient Aria to the S of it; so that it comprehends the ancient *Margiana*, the hill-country of Paropamisus, and *Aria* or *Ariana*. The NW angle is an immense desert connected with that of Khowarazm, or Khorassan. In this there is no cultivated spot or permanent dwelling; and the shifting pop. consists of a few tribes of wandering Turkomans. The N face of the dividing range of mountains which overlooks this desert, sweeps down so gradually to its base as to afford, in its valleys and ravines, a quantity of rich land watered by numerous streamlets. This was once a well-peopled and cultivated district. It contained the large cities of Nisa, Bawerd, Duruhu, Mehineh or Mahan, Shurukhs or Serukhs, Jaferi, and Caender or Gandar, with their dependent villages; all of which — Shurukhs excepted — are now totally deserted, in consequence of the continual attacks of plundering Turkomans, who have full possession of the whole tract, and pitch their tents on the ruins of ancient civilization. From the city of Herat to Marou the road lies through a desert. From Murghab to Herat the country is quite uninhabited, except by a few Eels. To the E of Herat the country is wholly mountainous, and the abode of pastoral tribes. To the S, lies a desert of some extent, separating it from the district of Furrah, in the Durani country.

Mountains.] The great range of the Elburz, separating Persia from Khowarazm and the basin of the Oxus, passes to the N of Herat. It corresponds to the *Montes Seriphi* of Ptolemy; and runs E till it joins the Hindu-kush, or Indian Caucasus. We can say but little concerning the elevation or breadth of this range, as it has not been explored in this part of its course by any European traveller. On the road from Meschid to Herat, the range runs generally to the l. of the route at no great distance, and is denominated by the natives the Kohistan, or 'Mountain country.' It increases in height as it

proceeds eastward, and is of considerable elevation to the NW of Herat. E of Herat it expands to a breadth of 200 m., according to Elphinston's information, and is 350 m. in length; presenting a confused mass of mountains such as the most intimate knowledge could scarcely enable the traveller to trace, and which, though affording a habitation for wandering tribes, is so difficult of access, and so little frequented, that no precise accounts of its geography are to be obtained. The western half is less rugged than the eastern; but even in it the hills present a steep and lofty face towards H.,—the roads wind through rough valleys and over high ridges,—and some of the forts are so inaccessible that visitors must be drawn up with ropes by the garrison. Still the valleys are cultivated, and produce wheat, barley, and millet, and almonds. The NW part, inhabited by the Jumshedis, is more level and fertile; the hills are here sloping and well-wooded; the valleys rich, and watered by the Murgab. The south of the Tymuni lands also contains some wide and grassy valleys. The whole of the Paropamisus—Sanscrit *Parapanis*, or 'Mountain of springs'—abounds in springs. The E part is far more rugged, steep, and barren than the W. The country is here in many places impassable for horsemen. From the N face of the Paropamisan range, the descent is sudden and great to the plains of Bactria watered by the Oxus, which stretch, without a single break or undulation, to the very foot of these mountains, as to a wall. Several passes lead through this tract, from the Durani country, or Western Afghanistan, to Bactria. One of these leads straight N from Candahar to Balkh, which is the most western; and another from Cabul to the same city, by Bamian; but these passes are generally covered with snow, and impassable in winter. At Akrobat, a few m. N of Bamian, another route strikes off to the NW, and crosses the Paropamisus at a lower elevation. From Bamian another route runs straight W, and joins the road from Candahar to Balkh, 50 m. W of Bamian. The mountains on this route are covered with snow only about 4 months annually. The eastern termination of this mountain-plateau is exceedingly lofty, containing in its embrace the sources of the Bactrian rivers, those of Cabul and Ghizni, and the upper course of the Helmund and its northern tributaries. This tract includes the high land of Bamian, the Koh-i-Baba, the Kohistan of Cabul, and the western termination of the Hindu-kush.

Rivers.] There are but few rivers of any note in this country. The chief is the Hury or Herirud, or river of Herat. It rises in the territory of the Hazarehs, and runs W, passing 3 m. S of the city of Herat, whose beautiful and extensive valley it waters and fertilizes. A bridge originally of 33 arches crosses the river at this point. It then turns NW, and runs in that direction to Maru Shah-Jehan, receiving a little below Shurukhs the Tedjen, and a little farther on, the river of Meschid. From Maru it runs N and NW; but whether it falls into the Oxus, or into the Caspian sea, or is lost in a marsh or pool, has not yet been fully ascertained. By Rennel, it is made to fall into the Oxus at Amol; Fraser and Elphinston represent it as being lost in the marsh of Balacamber. It is believed, with good reason, to have once entered the Caspian, under the name of the Ochus, at the bay of Balkan. It receives a number of streams before it arrives at Herat, where the greater part of its water is expended in the vicinity on the cultivation, as several canals are cut from it and pass through the city.—The Murghab, the *Margus* of Ptolemy, rises in numerous streams in the Hazareh hills. It runs a NW course to Marushah, or Maru-al-Rudd, where it is joined by the Kyser flowing NW from the same mountains. A little farther to the NW the combined stream joins the Palimalan or Herirud at Seri Bund.—The Tedjen is rather a small and unimportant stream, rising in the mountains to the N of Herat, and running NW to the Palimalan.—There is no lake of consequence in this country.

Climate and productions.] The climate of this region must vary much with physical circumstances. At Herat the winter cold is extreme; while in summer, were it not for a permanent NW wind, the heat would be oppressive. On the high upland of Paropamisus, the cold must be severe, while the summer-heats will be temperate, unless in deep and narrow glens and valleys. As the general level of the Paropamisan country cannot be under 5,000 ft. of elevation, and must be much more at the E extremity, near the base of the Hindu-kush, the cold of winter must be excessive here. In that season, we know, it is impossible to travel from Herat to Cabul, on account of the deep snows, which continue to fall for weeks together. Sultan Baber tells us, in his *Memoirs*, that, in attempting the road in winter through this region, though in the lat. of 34°, he and his men narrowly escaped perishing on the road between Chekcheran and Yekeauleng.—As the Paropamisus is a pastoral country, its agricultural productions are scanty; but the valley of Herat is renowned for its fertility. This valley is 30 m. in length, and about half that extent in breadth, and the whole is covered with villages and gardens, and well watered with streams and canals drawn from the river. Besides abundance of the finest fruit-trees, the environs of Herat produce vast numbers of mulberry-trees, which are planted in the gardens for rearing silk-worms. Cotton is largely cultivated, and a considerable quantity of opium is grown. Pasture of the best quality exists on the neighbouring hills; wheat and barley are abundantly produced; and all the necessaries of life are cheap and plentiful. The districts of Ghorian and Iam, on the road from Herat to Meschid, are said to be fertile and well-peopled, thickly interspersed with gardens and villages. The district of Maru, or Merve, is said to be renowned for its fertility. It is, however, but a small district—a mere oasis in a desert of sand, as the cultivable soil does not extend above 12 or 14 m. around the city. The district of Seahbund, in the SW angle of the Paropamisan hills, is fertile and well-watered. Baber remarks in his *Memoirs*—for it is from him chiefly that we have our information respecting this country—that all the grazing-grounds are in the valleys; the hills are not clothed with grass like the mountains of Turkistan, nor are they even well-wooded with pine-forests. Above the hills, the country is good riding-ground, and level. Deer are numerous in these mountains. The courses of the streams are profound glens, often quite perpendicular, and incapable of being descended. Baber mentions it as a singular circumstance, that while, in all other mountainous tracts, the strong-holds, and steep and rugged places, are at the tops of the hills, here they are all towards the bottom. These remarks he applies to the hill-countries of Ghour, Karmed, and Hazareh.

Inhabitants and population.] Our materials on this subject, as well as on the physical geography and features of this region, are very scanty. The inhabitants of the district are mostly denominated Taujiks, an appellation generally bestowed on the agricultural population, who speak Persian as their vernacular tongue, in opposition to their Turkish and Afghan masters, who use the Turkish and Pushtu languages. These Taujiks are the descendants of Persians and Arabs, commingled by marriage, lan-

guage, religion, and manners; and are by far the best and most industrious part of the pop. of Eastern Persia. They are a race remarkable for their love of fixed dwellings, and their attachment to agriculture and settled employments, in which they are a perfect contrast to the other inhabitants, the descendants of Scythian horsemen, who still retain the roving, desultory, unfixed habits of their pastoral ancestors. The Taujiks are a mixed race, of Arab and Arian descent. The other inhabitants are Durani Afghans, Turks, erroneously called Moguls, Hindus, &c. The Paropamisan country is inhabited by the Eimaks and Hazarehs. They are different in language, appearance, and manners from the Afghans, and bear some resemblance to their Turkish neighbours on the N, but differ in this, that they use a dialect of the Persian language. The Eimaks inhabit the western division, and the Hazarehs the eastern division of this region. The whole numbers of the Eimak pop. E of Herat, exclusive of the Timuris and Hazarehs, are estimated by Elphinston's information at from 400,000 to 450,000 souls; by Fraser's account they are made much fewer.

Cities and Towns.] In the Paropamisan country are the cities of Ghorat, Bamian, and Seabund, of which we have no other information than that they are or were the abodes of the hakims of the Afghan monarchs, appointed to keep the Eimaks and Hazarehs in order. The present city of Bamian is certainly not on the spot of the old city, ruined by the Mongols, but on another site in the immediate neighbourhood. Ghorat is about two degrees to the S of Bamian. Seabund or Shahbund is on the SW angle of the Paropamisan country, in the prov. of the Eimaks. What is called the kingdom of H., in contradistinction to the rest of Eastern Persia, once abounded in numerous and populous cities, as Nesa, Bawerd, Caendar, Maru-Shah-Jehan, Maru-al-Rud, Mahan, Badagis, Sherruks, Turbut-i-Jami, Ahengeran, Gorian, Herat, &c. But the most of these have long since disappeared, leaving nothing but their ruins, from the want of a sufficient protecting government, the frequent revolutions for political power, and the vicinity of these powerful and constant enemies of peace and industry, the Turcomans and Usbeks. Maru-al-rud is on the Murghab, 120 m. SE of its junction with the Herirud. Nesa apparently corresponds with the *Nisaia* of Strabo, and the *Aparbartica*, and *Gadar*, of Isidore; of Charax. The inhabitants of Caendar and its district are named *Gandarii* by Pliny and Herodotus. Badagis corresponds to the *Bitaxa* of Ptolemy. It was once a place of note, but is now of small account. Its site does not appear in the maps of Elphinston and Fraser, but it lies NW of Herat. Mahan is called Mehineh by Fraser, and lies in the Attock, or skirt of the hills that separates Gurgan from the desert of Khawarism. Shuruckhs is a very ancient place, the *Siroc* of Isidore, 120 m. NE of Meschid, on the N slope of the Sariphi mountains. Being a caravanstation on the road from Meschid to Bokhara and Balkh, it is a place of some consequence. Turbit-i-Jami, half-way between Herat and Meschid, is the cap. of a well-peopled and fertile district, and is famed for being the birth-place of the poet Jami, author of the poem of 'Yussuff and Zuleika,' a production greatly admired in the East. Ahengeran, the cap. of the Ghoriani district, lies to the W of Herat. We have little difficulty in identifying Ghorian with the *Guriane* of Ptolemy. He places it between what he calls the two principal branches of the *Margus* in Margiana; but it is clear to us that his S branch of the Margus is the river of Heri, and his *Arius* the river of Furrah; for the *Etymandrus* or Helmund is not mentioned by him.

Herat, or Heraut, the ancient *Aria*, or *Artacoana*, at present the largest and most populous city in the district above described, and of Khorassan in its widest signification, has always been a city of note. It owes its importance to its fine situation, and the commerce it enjoys, as the chief if not the only channel of transit between Eastern and Western Asia. It is situated in N lat. 34° 22′, E long. 62° 9′, in a spacious plain surrounded on all sides by lofty mountains, and having an alt. of 2,759 ft. above sea-level. This plain—as already noticed—owes its fertility to the river Hury or Herirud, which runs through the centre of it. The city embraces an area of 4 sq. m., and is encircled with a lofty mound and wall, and a wet ditch 30 ft. wide. The citadel, on the N face, is a small square castle elevated on a mound flanked with massive towers at the angles. The wall has a gate in each face, and two in that which fronts the N; and from each gate a spacious and well-supplied bazaar leads up towards the centre of the town. The principal street, from the S gate to the cattle-market opposite the citadel, is covered with a vaulted roof. H. is admirably supplied with water, almost every house having a fountain of its own, independent of the public ones on either side of the bazaars; yet the city itself is one of the dirtiest places in the world. The houses are generally two stories in height, built of mud, and with windows filled with Russian paper instead of glass. The residence of the prince is, in appearance, a mean building. The Mesjid-i-Jama, or chief mosque, was once a noble edifice, enclosing an area of 800 sq. yds.; but, having been much neglected, is now falling into decay. This, however, cannot be said of the other buildings of H. No city, perhaps, in the East has so little ground unoccupied. Christie computed it to contain in 1810, 100,000 inhabitants, of whom 10,000 were Patans; the remainder are Afghans, a few Jews, and about 600 Hindus. But Conolly, who visited H. in 1830, did not estimate the pop. at more than 45,000; while Mohan Lal estimated it in 1833 at 60,000, and the number of houses at 4,000. From its extensive trade, H. has obtained the appellation of bundar, or port. It is the emporium of the commerce carried on between Cabul, Cashmere, Bokhara, Hindostan, and Persia. From the former are received shawls, indigo, sugar, chintz, muslin, leather, and Tartary skins, which are exported to Meschid, Yedz, Kerman, Ispahan, and Tehran. In return are received dollars, tea, china-ware, broad-cloth, copper, pepper, and sugar-candy: dates and shawls from Kerman, and carpets from Ghaen. The exports of H. itself are silk, saffron, assafœtida, pistachio-nuts, almonds, dried fruits, and rose-water. Its principal manufactures are whips, sadlery, silks of various fabrics and colours, silken and woollen carpets which are celebrated and in high demand over all the East for the beauty of their patterns and brilliancy and durability of their colours, sword-blades and cutlery, the former of which are equal to those of Meschid, and owe their excellence to the same cause, the transportation to this place of Damascene sword cutlers by Timur-Bek. The duties on merchandise, according to Captain Christie, was in 1810 a 16th part of a rupee on every 20 rupees' worth of goods sold in the city, which was levied on the purchaser; and a toll of 2 rupees on every camel's load of merchandise that leaves it; and taxes were imposed upon all serais, shops, and gardens. The aggregate amount of all was 4½ lacs of Persian rupees; and the revenue of the whole principality was estimated at 1,000,000 rupees, or £125,000 sterling.

History.] Amid the revolutions which have afflicted, and still continue to afflict Persia, H. long continued to prosper; and no city in all Persia, with the exception of Ispahan, could vie with it in riches or population. It was a favourite residence of Shah

Rokh-Mirza, the greatest and best of the sons of Timur, and of his successors, till it was taken by Shaibani Khan in 1509, who put an end to the dynasty of Timur in Khorassan and Mawaralnahar. At this period it possessed numerous and magnificent buildings, and was the chosen abode of science and literature in the East. During the reign of Hussein-Mirza, the court of H. was the most splendid and luxurious in Asia. A detailed account of the principal buildings of H., as they stood more than three centuries since, is given by Khondemer—himself a native of the place—who has described a tedious succession of mosques, colleges, caravanserais, palaces, &c., as also by Baber. On the defeat and death of Shaibani-Khan at Marou, by Shah Ismael Suffi, in 1510, H. remained under the Persian government till the period of the Afghan invasion, when it fell into the hands of the Abdali or Durani Afghans. It was recovered, after a ten months' siege, in 1731, by Nadir Shah. After the death of that conqueror it fell, in 1749, into the hands of Ahmed Shah Abdali, founder of the short-lived dynasty of the Cabul sovereigns, and has ever since been considered with the adjoining territory as a dependency of Cabul, and the residence of an Afghan prince. In the civil dissensions by which the Afghan monarchy has been torn to pieces, H. fell to the share of Mahmud Shah; who was succeeded by his son Shah Kamran. The Persians, stimulated it is said by Russian influence, besieged it in 1838; and though baffled in the attempt to take it, left it nearly in ruins. At the moment of this article going to press, intelligence has reached us of the death of Yar Mahomed Khan, the prince of H., on 4th June, 1851. He has been succeeded by his eldest son, Syed Mahomed Khan. But it is reported that the wily Dost Mahomed Khan of Cabul, alive to the opportunity afforded by this event of extending his power to the westward, has placed his son Hyder Khan at the head of a large army, with instructions to invade H. by the Balkh route. Hyder Khan, who married, according to Afghan custom, the widow of his brother Akbar Khan, daughter of Yar Mahomed, aspires to the succession of H., in virtue, it is understood, of that connexion; and Syed Mahomed is represented as an imbecile prince, utterly incompetent to the management of the country. It is not improbable that Persia also may again take the field with the view of annexing H. to her dominions, and that she will invoke once more the assistance of Russia, which Power, it is reported, has already, under pretext of repelling an invasion of Turkomans, landed a body of troops on the S coast of the Caspian.

HERAULT, a river of France, which has its source in the mountain of Laigoual, in the chain of the Cevennes, dep. of the Gard, arrond. and 11 m. N of Vigan, and 5 m. NW of Vallerangue. After passing the latter town, it directs its course to the S, and enters the dep. of the same name, in which it bathes the walls of Ganges, flows near Aniane, waters Gignac, Montagnac, Pezenas, and Bessan, and after a total course of about 93 m., of which 11 are navigable, falls into the Mediterranean 5 m. below Agde. Its principal affluents are the Arre, Vis, Boyne, and Tongue, on the r.; and on the l. the Ricutort. A little above Agde it is crossed by the Canal-du-Midi.

HERAULT, a department in the S of France, which takes its name from the river above described, and which consists of a portion of the ancient prov. of Languedoc. It lies between 43° 15′ and 43° 55′ N lat., and between 2° 33′ and 4° 11′ E long.; and comprises an area of 618,046 hectares. It is bounded on the N by the deps. of Aveyron and Gard; on the E by that of the Gard, from which it is partly separated by the Vidourle; on the SE by the Mediterranean; on the SW by the dep. of the Aude; and on the W by that of the Tarn. Pop. in 1801, 275,449; in 1821, 324,126; in 1831, 346,207; in 1841, 367,343; in 1846, 386,020. — The interior of the dep. consists of extensive, and, in some parts, marshy plains; the N and W districts are covered with the ranges of the Espinouze, the Orbe, the Black mountains, and the Garrigues, all moderately elevated branches of the Southern Cevennes; and numerous ramifications of that chain penetrate it towards the S, gradually declining in height as they approach the Mediterranean. The principal of these mountains are the Saranne, which rises on the r. bank of the Vis, at the confluence of that river with the Herault; the Gardiole, between the lagune of Thau and the town of Montpellier, and belonging to the ridge which separates the basins of the Vidourle and Herault; and the Malpas, which is 6 m. SW of Beziers, and which is crossed by the Canal-du-Midi. The coast along the Mediterranean is to a great extent below sea-level, and forms vast lagunes, separated only from the sea by narrow tracts of land, and opening into it by narrow channels locally named *grau*. Of these lagunes the largest are those of Mauguio, Perols, Maguelonne, Thau, Vendres, and Capestang. The general inclination of this dep. is to the Mediterranean, and the principal rivers by which it is watered flow either directly into the sea, or into the lagunes which communicate with it. Of these rivers the Vidourle, the Lez, and the Herault flow from N to S, the first of these skirting the E frontier of the dep.; the Orbe flows from NE to SW, and then from SW to SE, and receives the Jean, the Vialas, and the Bernasobres. The Canal-du-Midi enters the dep. on the SW, and runs to Agde near Herault, whence the Canal-d'Agde runs to the town of Cette on the Mediterranean. The Canal-des-Etangs runs 17 m. along the line of lagunes between Aigues Mortes and Cette.—The climate of this dep. is pleasant and genial, and presents neither extreme of temp. The prevailing winds are from NW and SE.—The soil is fertile. Of the total area, 156,566 hect., or about one-fourth part, are arable; 103,682 are in vineyards; 77,644 are in wood; and 214,040 are heaths and wastes. The principal productions are wine, grain, olive-oil, timber, fruit, inclusive of figs and pomegranates, which are here found in great quantities. The culture of wine forms a staple branch of local industry. The annual produce is estimated at 2,080,000 hectolitres, of which 1,280,000 hect. are made into brandy and spirits; 400,000 are consumed in the dep., and 400,000 exported. The best kinds are the red wines of Saint-George-d'Orgues, Verargues, Saint-Geniez, and Castries, and the Muscat wines of Frontignan and Lunel. The quantity of grain raised in this dep. is inadequate to its consumption. The annual produce does not exceed 948,500 hect. of cereals, and 256,000 hect. of potatoes. Few cattle are reared; but between 500,000 and 600,000 sheep of an improved breed are reared, and form one of the chief sources of local wealth. Mules, pigs, and goats are numerous. The culture of silk is carried on here with great success, and produced in 1835, 372,390 kilog. of cocoons, and 21,072 kilog. or 46,358 lbs. of raw silk. Bees are also reared in great quantities; and yield an average export of wax to the value of nearly 1,000,000 francs. The pilchard, and other fisheries in the Mediterranean and in the lagunes, form another important branch of employment. Their annual produce is 75,000 quintals, valued at 545,000 francs. H. abounds with iron, copper, lead, coal, lignite, marble of the finest quality, gypsum, puzzolano, alabaster, granite, aluminous earth, and petroleum; and has numerous mineral springs, of which the most celebrated are those of Balaruc, Gabian, Montpellier, Perols, Malou, and Avesne. In 1837, 12 mines of lignite, 9 of coal, 3 of iron, 4 of copper, and 1 of lead, were wrought within this dep.—H. possesses also considerable manufacturing industry. The distillation of brandy holds a chief place; that of Montpellier is esteemed the best in France. It has also extensive manufactories of cloth, silk and cotton fabrics, hosiery, liqueurs, comfits, perfumery, verdigris, and other chemical substances, leather, oil, salt, pottery, and wax-candles; also numerous wool-spinning and paper mills, and several dye-works. Wine and brandy form the chief articles of export in this dep.; but it has also an active trade in fruit, salt, wood, wax, and articles of local manufacture. A large portion of the cloth manufactured in this dep. is used in military clothing; the rest is sent to Spain, Italy, and the Levant. The

silk hosiery finds also good markets in Italy and Spain.—The dep. of H., of which Montpellier is the capital, is divided into the 4 arrond. of Beziers, Lodeve, Montpellier, and St. Pons; and is subdivided into 33 cant., comprising 326 com. The number of electors in 1834 was 3,182; and the dep. returned 6 deputies to the legislature.—It forms the see of a bishop, suffragan of Avignon.—The entire territorial revenue was valued in 1846 at 21,586,000 francs; and the number of proprietaries at 120,616.

HERBAS, a town of Spain, in the prov. and 50 m. S of Salamanca.

HERBAULT, a canton and commune of France, in the dep. of Loir-et-Cher, 9 m. W of Blois. Pop. of com. 724; of cant. 12,995.

HERBERTINGEN, a village of Würtemberg, in the Danube circle, 4 m. NW of Salgau. Pop. 1,340.

HERBEUMONT, a commune of Belgium, in the prov. of Luxemburg, 7 m. WSW of Neufchateau, on the Semoy. Pop. 992. There are extensive slate-quarries here.

HERBIEIS (Les), a canton, commune, and town of France, in the dep. of Vendee, 23 m. NE of Bourbon-Vendee. Pop. of com. 2,826; of cant. 13,142.

HERBIGNAC, a canton, town, and commune of France, in the dep. of Loire-Inferieure, arrond. and 17 m. WNW of Savenay. Pop. of com. 3,176; of cant. 8,065.

HERBLAIN (Saint), a commune and town of France, in the dep. of Loire-Inferieure, 6 m. W of Nantes, near Chatenay. Pop. 2,380.

HERBLAY, a commune and village of France, in the dep. of Seine-et-Oise, on the Seine, 9 m. WNW of Paris. Pop. 1,564.

HERBLON (Saint), a commune and town of France, in the dep. of Loire-Inferieure, cant. and 5 m. NE of Ancenis. Pop. 2,500.

HERBOLZHEIM, a town of Baden, in the circle of the Upper Rhine, 14 m. NNW of Freyburg. Pop. 2,057.

HERBORN, a town in the duchy of Nassau, on the Dille, 3 m. SSE of Dillenburg, 32 m. NE of Nassau. Pop. 2,267. Here is a celebrated Calvinist high-school, founded in 1584, which has the privileges of a university.

HERBRANDSTON, a parish in Pembrokeshire, 3 m. WNW of Milford. Pop. 249.

HERBRECHTINGEN, a village of Würtemberg, on the Brenz, 5 m. SE of Heidenheim. Pop. 1,524.

HERBSLEBEN, a town in the duchy of Saxe-Gotha, on the Unstrut, 9 m. NE of Gotha. Pop. 1,480.

HERBSTEIN, a town of Hesse-Darmstadt, in the principality and 13 m. W of Fulda. Pop. 1,616.

HERCK, a town of Belgium, in the prov. of Limburg, situated on a river of the same name, an affluent of the Damer, 23 m. NW of Maestricht. Pop. 1,763.

HERCOLE. See Ercole.

HERCULANEUM, an ancient city of Italy, 7 m. ESE of Naples, near the site of the modern Portici. It was destroyed by an eruption of Mount Vesuvius in A. D. 79; and its site had long been a matter of doubtful discussion, as it had been completely buried under volcanic substances to a depth of 70 ft. The neighbouring *Pompeii*, on the river Sarno, one of the most populous and commercial cities of this coast, and *Stabiæ*, which stood on the site of the modern Gragnano, together with *Oplontia* and *Teglanum*, experienced the same fate. Earlier excavations on this spot had long been forgotten, when three female statues—now in the Dresden museum—were found in digging a well at Portici. After this discovery, farther excavation was prohibited by the government, and nothing more was thought of the matter till Charles, king of Spain, having taken possession of Naples, chose Portici for his spring-residence in 1738. The well was now dug deeper, and traces of buildings were found. The theatre was the first discovery. In 1750, *Stabiæ* and *Pompeii* were explored. The latter place, being covered with ashes rather than lava, was more easily examined. In 1759, 1,696 papyrus rolls were discovered in a villa of the buried H. The rolls were of a cylindrical form, and so much charred as to have the appearance of tobacco rolls. Antonio Piaggio invented a simple, but ingenious machine, to unrol the manuscripts, previously strengthened by gold-beater's skin, by means of silk threads attached to their exterior edge. The uses of this machine were, however, limited; and various other experiments on the manuscripts—which were for the most part not only reduced to a coal, but almost entirely dissolved by the moisture which had penetrated them—afforded no satisfactory results. According to an examination instituted by Sir Humphrey Davy, in Naples, in 1819, 407 of the 1,696 rolls discovered had been unrolled, of which only 88 were found legible; 24 had been sent as presents to foreign princes, and, of the remaining 1,265, only from 80 to 120 were in a state which promised any chance of success, according to the chemical method invented by him. [See *Journal of the Royal Institution*, April 1819.] The authors of the works hitherto discovered are Epicurus, Philodemos, Demetrius, Polystratus, Colotes, Phædrus, Phanas. There have been published *Herculanensium Voluminum quæ supersunt*, Tom. i. and ii., Naples, 1793—1809, fol. In 1824, the university of Oxford published *Herculanensium Voll. Partes duæ*, containing fragments from the papyri at Oxford. The antiques discovered in these buried cities are represented in the great work, *Le Antichità d'Ercolano* (Naples, 1757), which, with the *Catalogo degli Antichi Monumenti d'Ercolano*, by Bayardi (1755), comprises 10 fol. vols.

HERCULANEUM, a town of Jefferson co., in the state of Missouri, U. S., situated on the Mississippi, at the mouth of the Joachin, half-way between St. Louis and St. Genevieve. The country behind is hilly, but well-timbered. Several mills and shot-factories have been erected in the neighbourhood of this place; and boat-building is carried on here.

HERDICKE, or Marien-Herdecke, a town of Prussian Westphalia, in the co. of Mark, on the Ruhr, 26 m. W of Arnsberg. Pop. 2,308. It has paper and gunpowder mills.

HEREFORD, an ancient city, the capital of the co. of Hereford, in the hund. of Grimsworth, nearly in the centre of the co.; 19 m. N of Monmouth, and 136 m. WNW of London. It stands on a gentle eminence sloping from the N bank of the Wye, in the midst of luxuriant scenery, and surrounded by a highly cultivated champaign country. A bridge of 6 arches here crosses the Wye. The streets in general are broad and straight; and the town is neat and cheerful in appearance. The principal and public edifices,—besides the cathedral and bishop's palace, and the churches, chapels, schools, and infirmary,—are the county-hall, a handsome building forming one side of the open space called the High-town, erected in 1817, after a plan by Sir Robert Smirke, and containing two well-arranged court-halls; the county-jail and house-of-correction, a spacious structure enclosed within a high brick wall, built in 1797, on Howard's plan; the old town-hall; and the theatre, a neat modern building, claiming notice from the circumstance of its having nurtured the histrionic genius of a Clive, a Siddons, and a Kemble. The income of the borough in 1839 was £2,886; in 1848, £3,464. Amongst the ancient privileges of H. was that of returning 2 members to parliament,—a privilege which it still retains. The number of electors registered in 1837 was 909; in 1848, 1,002. H. is the principal place of election for the co. members.—This city has never been of any note for manufactures, excepting that of gloves, which was long tolerably flourishing. There are manufactories of hats, leather, earthenware, ropes, cutlery, and other iron-work, in and near the city, and some ale and porter breweries. Six fairs, besides the bishop's fair, are held at H. in the year. They are all of more or less importance to the city, but the October fair is the largest. The pop. of the city in 1801 was 6,828; in 1831, 10,280; in 1841, 10,921.

Diocese, &c.] H. is one of the most ancient bishoprics in England. This dio. consists of the archdeaconries of H. and Salop, in the prov. of Canterbury. The number of benefices in this dio. returned to the commissioners in 1831, inclusive of sinecure rectories, but exclusive of benefices annexed to other preferments, was 321, besides 7 not returned. The average gross income of incumbents in the 321 returned benefices was £291. The total number of curates was 159; average stipends, £81. The total amount of the average gross yearly income of the see for 3 years ending 31st December 1831, was £3,090; net yearly income, £2,516. By order in council of date 21st August 1837, the eccle-

siastical commissioners are empowered to raise the average annual income to the sum of £4,200. The average net yearly income of the dean and chapter, or corporation of the cathedral, during the 3 years ending 1831, was £3,544. The corporation consists of the dean and 5 residentiary prebendaries, besides a precentor and 22 prebendaries. There is also a college of vicars forming a corporate body, with an average net yearly income of £986.—The cathedral, built about the year 1280, stands on the S side of the city. It is a cruciform building, with a small transept towards the E, and a chapel beyond it dedicated to the Virgin. From the intersection of the nave and transept, rises a square tower which had formerly a spire upon it, cased with lead, and rising 92 ft. in height above the battlements; but this was pulled down in order to relieve the arches of the tower from so much superincumbent weight. The general dimensions of the cathedral are as follows:—Extreme length, 325 ft.; from the W door to the choir, 130 ft.; length of the choir, 96 ft.; from the choir to the library door, 24 ft.; length of the library, 75 ft.; extent of the great transept, 100 ft.; breadth of the nave and side aisles, 74 ft.; breadth of the nave, 38 ft.; height of the body of the church, 91 ft.; height from the area to the vaulting, 70 ft. The exterior is very dissimilar in its parts, and has lost much of its original design, but the interior is still very attractive. Almost all the buildings dependent on the cathedral are situated on its S side. The bishop's cloisters, which form the communication between the cathedral and the palace, enclose an area of about 100 ft. square, appropriated to the purposes of sepulture. The bishop's palace is an ancient building, pleasantly situated at a little distance from the banks of the Wye.—The antiquity of H. is very remote. It became the capital of the Mercian kingdom, and acquired additional importance from the building of the cathedral, and the advantages to the city derived from the visits of multitudes to the tomb of Ethelbert. H. was repeatedly the seat of hostilities in the disputes between the houses of York and Lancaster, in which the castle was much injured. The city also suffered much during the civil war. The Devereaux family receive the title of Viscount from this city.

HEREFORD, a township of Lower Canada, in the co. of Sherbrooke, extending N from the boundary-line. It has a generally hilly surface, and is well-watered by several branches of the Connecticut, and by several lakes, all of which abound with excellent fish. Its soil is generally good, and is to a great extent under cultivation. Pop. 160. It contains a mountain of the same name.—Also a township of Berks co., in the state of Pennsylvania, U. S., 80 m. E of Harrisburg, bounded on the NE by Shoub's mountain, and watered by the main and W branches of Perkiomen creek. Pop. in 1840, 1,235.

HEREFORD (Little), a parish in Herefordshire, 7 m. NNE of Leominster, on the river Teme, intersected by the post-road from Ludlow to Tenbury. Area 3,840 acres. Pop. in 1831, 477; in 1841, 462.

HEREFORDSHIRE, an inland county of England; bounded by Salop on the N; Worcestershire on the NE and E; Gloucestershire on the SE; Monmouthshire, from which it is separated by the river Monnow, on the SW; Brecknockshire on the W; and Radnorshire on the NE. Its form is nearly an ellipsis; but some detached parishes are situated beyond the general outline. The greatest extent of the co. from Ludford on the N, to the opposite border, near Monmouth on the S, is 38 m.; its greatest width from Clifford on the W to Cradley on the E, is 35 m. Its circumf. is 180 m.; area, 860 sq. m., or 550,400 acres.

Physical features.] The surface of this co. is undulating, and the valleys occasionally stretch into plains. The elevations do not rise to a great height, but are sufficiently high to afford the ground-work of a pleasing diversity of scenery. The highest land within the limits of the co. is the Hatterel range of the Black mountains which borders it on the WSW. The prospects from these hills are peculiarly pleasing, as are those from the Malvern hills, which constitute the highest land on the E. Through the SE quarter a range of hills extends from the Lea NE towards Stoke-Edith. The most conspicuous hills in the N are those in the hund. of Wigmore near Downton, Leintwardine and Ludlow, with the chain running SW towards Kington, and through the hund. of Huntington to Brilley mountain. A peculiar and important feature in the aspect of the co. is seen in the two chains of hills running parallel with the Hatterel range, one beginning at Mynydd-Ferdinn, and terminating at the Vagar hill; the other a lower, lengthened, narrow ridge or chain, running from Monington-stradle to Middlewood, and forming the NE boundary of 'the Golden vale,' a rich and fertile tract of low land watered by the river Doyer. The general aspect of this co. is extremely rich. Exclusive of the orchard-like appearance which its fruit-trees and hop-gardens give it, it may properly be termed a woodland co. The sides and summits of the hills and upland grounds are often covered with extensive coppice-wood plantations; and alder coppices are plentiful in low and marshy situations. H., moreover, is almost all enclosed; and as most of the enclosures have been fenced with hedge-rows, the co., from this cause independently of others, has a woody, sylvan aspect. The romantic beauties of the rapid and majestic Wye have furnished many subjects for the poet and the painter; and the scenery displayed in river excursions from Hereford to Chepstow, is acknowledged to be unrivalled by that on any other stream in England.

Rivers.] The Wye, the Lugg, the Arrow, and the Frome, together with the Monnow and the Teme, are the larger rivers in this co.; but the two latter can scarce be claimed as H. streams at all. The Wye enters H. from the Hay in Brecon, and flows to Hereford, through a level but pleasant country. It is navigable by barges of from 18 to 40 tons up to Hereford, and for smaller craft to Hay, but the navigation is often interrupted either by a scarcity of water during greater part of every dry summer, or by the force of its stream when swelled by the mountain-torrents during winter. The Lugg enters this co. on the NW near Stapelton-castle, and flowing SE and S, receives the Pinsley near Leominster, and joins the Wye near Mordiford. Like the Wye, it is subject to sudden overflow, and is frequently swelled by partial rains. It is navigated to Lugwardine bridge. The Arrow, which has its source in Radnorshire, flows by Kington, Eardisland, and Monkland, to the Lugg. The Frome originates in the NE quarter of the co., and running by Bromyard, Bishop's-Frome, Castle-Frome, and Canon-Frome, and being joined by the Loden near Stretton-Grandison, falls into the Lugg a little above Mordiford. The Ledden and the Doyer are the largest of the other streams which intersect this co.—Some medicinal springs rise on the Hereford side of the Malvern-hills. Petrifying springs are met with in the neighbourhood of Moccas, Fownhope, Wormsley, Llanrothel, and other hilly parts of the co. where the soil is calcareous.

Canals, roads, and railroads.] Attempts have been made to increase the inland navigation of this co. to some extent, by the partial introduction of canals. In 1796, a canal, extending 20 m. between Leominster and the Mamble coal works in Worcestershire, was completed; and in the following year, other 8 m., forming the entrance of this line into the Severn, was opened. This canal passes through two tunnels, extending together to 3,975 yds., between Mamble and Stourport.—The H. and Gloucester canal was cut from Gloucester to Ledbury in 1798; and in 1839 the work was resumed. [See Gloucestershire.] According to the original plan, this canal proceeds from Ledbury to Hereford, by Canon-Frome, near which it passes through a tunnel, and afterwards crosses the Frome; it then runs W to the Lugg, which it also crosses, and then passing through another tunnel, terminates at Hereford.—The principal roads radiate from Hereford to Abergavenny and Newport; to Bristol and Bath by Monmouth; to Gloucester by Ross and by Ledbury; to Worcester by Castle-Frome; to Kidderminster, Birmingham, &c., by Bromyard; and to Leominster. whence, as well as from Hereford direct, roads leave the co. by Tenbury, Ludlow, Presteign, Kington, and Hay. Not many years ago the roads of H. were proverbially bad. The returns of turnpike trusts for 1836 show a total expenditure of £27,031 8s. 6d. by 14 turnpike trusts in this co.; and the highway returns for 1839, an expenditure of £13,138 on 1,374 m. of road.—The Hay railway, for which an act was passed in 1811, runs in a circuitous course of 24 m. through a mountainous district, betwixt the wharf of the Brecon and Abergavenny canal, near Brecon, and the v. of Parton-cross, passing by Hay. The Kington

joins the Hay railroad at Parton-cross, and is carried by Almeley and Kington, to the lime-works near Burlinjob in Radnorshire. This railroad is about 14 m. in length. It is also employed for the conveyance of coal, iron, lime, and agricultural products. The Hereford and Abergavenny railroad, or line of railroads separately termed the Hereford, Grosmont, and Llanfihangel railroads, pass from Hereford by Pontrilas, Llangue, Grosmont, and the rivers Monnow and Honthy, and running along by Llanfihangel-crugorney-court and Abergavenny, terminate at the Monmouthshire and Brecon canal. The nearest locomotive lines of railway are the Bristol and Gloucester, and the Gloucester and Birmingham.

Strata, soil, &c.] The prevailing subsoil in this co. is the old red sandstone formation, except in a few detached parts, especially on the W, where it is limestone. Among the mineral productions are red and yellow ochres, pipe-clay, and fuller's earth. Iron-ore occurs on the borders of Gloucestershire, but not in profitable quantities, although it has been thought that iron-works were established here as early as the Roman times. Deep beds of gravel are occasionally met with in the vicinity of Hereford, and the subsoil of several of the hills is of siliceous grit. The general character of the soil is argillaceous earth, or deep and heavy red loam, with a mixture of marl and calcareous matter, and in some districts a substratum of clay; in others of gravel.

Produce.] This co. is chiefly distinguished for its wool, wood, wheat, hops, cider, and perry. The usual rotation of crops is wheat, turnips, barley, clover, wheat, and pease or vetches. Wheat is most plenteously produced about the central parts of the co., and between Hereford and Ledbury. Oats are chiefly raised on the high grounds both on the W and E sides of the co., and barley in the vicinity of Ross. The wheat of the H. vales, and the barley of its high grounds, are considered equal to the best in England. The cultivation of hops forms a considerable branch of the rural economy of H. The plant cultivated for use—the *Lupulus fœmina*, or female hop—was introduced to England from the Netherlands in 1524. In 1528 a petition was presented to parliament against the use of it, wherein it is styled "a most pernicious and wicked weed." The partiality of the English for their native wormwood, however, by degrees gave way; and if the hop was thought at first to communicate a disagreeable and nauseous taste, the palate of the country soon became so reconciled to the exchange, that in 50 years thereafter, hops had gained the entire protection of the legislature. At what time they were first planted in H. cannot be clearly ascertained; but in 1656 they are said to have made extensive progress in the co., the Herefordshire farmers aiming "to be the chief hop-planters in England." From a parliamentary return, we find that in 175 Herefordshire parishes, the average annual number of acres occupied as hop-yards, exclusive of several parishes from which the returns could not be ascertained, during 7 years ending in 1835, was 11,978; the average of hops annually charged 2,022,092 lbs.; the average annual amount of duty £16,961 5s. 3d.—H. is even more generally celebrated for its cider than its other vegetable produce. Orchards abound in every quarter of the county. Various sorts of apples, yielding liquors of different strength and flavour, are grown. Amongst the old sorts is the styre apple, which is almost peculiar to this district of England, and has long stood first in general estimation, being remarkable for producing cider of unusual flavour, strength, and body. The hagloe-crab and the golden-pippin were next in esteem at the time when Marshall wrote his observations on the management of orchards and fruit liquor in H. The old red streak was brought into repute by Lord Scudamore, and has been considered peculiar to this co. The colours of good cider fruits are red and yellow: green is avoided as affording liquor of the harshest and generally of the poorest quality. The annual produce of the orchards greatly varies. In some years, 20 hhds. of cider have been made from the produce of a single acre of orchard-ground; but the more usual average from trees in good condition is 12 hhds. an acre. The labour of picking a sufficiency of apples and converting them into a hhd. or 110 gals. of cider, has been estimated at from 4 to 7 s. A hhd. is sold at from 3d. to 2s. per gal., according to the quality and the abundance of crop; in ordinary years the price varies from 4d. to 1s. 2d. per gal. The quantity of cider made in a favourable year in this co. cannot be exactly ascertained, but it has been estimated at no less than 20,000 hhds. The orchards are of various sizes: from 4 or 5, to 30 or 40 acres.—The H. cattle are held in estimation by the best informed judges; but excepting the production of cheese for home consumption or the Hereford market, dairy-farming is never practised here. The breed of sheep has long been celebrated amongst wool-growers. Their fleece is famed for the silkiness of its pile, and the delicacy of its texture. The stock of sheep in the co. is very large, being estimated at about 500,000 head; and the quantity of wool now annually brought to market is rated at about 8,300 packs.—Horses of good quality are extensively bred in this county for agricultural purposes; and the riding and coach-horses of the northern districts are highly bred, compact, and active.

Climate and vital statistics.] With the exception of the north riding of Yorkshire, more females, and, with the exception of Durham,—adjoining to the north riding,—and the north riding itself,—more males, live to the age of 80 and 90 years in this co. than in any other throughout all England and Wales. From parliamentary returns we find that in 1837 the rate per cent. of pauper lunatics and idiots on the whole pop. of 1831 in H. was ·17, the average for England being ·10, and for Wales ·12. The number of lunatics was 61; of idiots, 132. In another table the proportion of the same numbers to the pop. are stated as $\frac{1}{576}$, while the proportion for all England is $\frac{1}{1033}$.

Manufactures, trade, &c.] H. has no manufactures of any great importance, excepting the semi-agricultural branches of cider and perry making. Some coarse woollens are made in a few places. Woollens and linsey fabrics are still manufactured to a small extent in Hereford; and coarse linseys and check horse-collaring are made at Leominster, where also leather gloves and hats are made; rope and sacking is made at Ledbury; and at Kington, iron, nails, and gloves. Oak timber and oak-bark are important articles of export; these, with hops, cider, wheat, and other agricultural produce, are the principal articles of trade.

Divisions, Statistics, &c.] This co. comprises the hundreds of Wormelow, Webtree, Ewyas-Lacy, and part of Huntington, to the SW of the river Wye; and, to the NE, the remainder of Huntington, with Stretford, Grimsworth, Greytree, Radlow, Broxash, Wolphy, and Wigmore: in all 11 hundreds. It comprises 221 parishes; 1 city, Hereford; 2 boroughs, Hereford and Leominster; 7 market-towns, Hereford, Leominster, Weobly, Ross, Ledbury, Kington, and Bromyard. Pop. in 1801, 75,260; in 1821, 87,643; in 1841, 96,515; in 1851, 99,112. The rate of increase per cent. in 50 years from 1801 to 1851, has been 31·69; the annual rate of increase per cent. 0·55.—This co. is comprehended in the diocese of Hereford, with the exception of the parishes of Clodock, Dulas, Ewyas-Harold Llandillo, Michaelchurch-Escle, Rowlstone, St. Margaret's, and Walterstone, and the chapelries of Craswell, Long-town, and Llanwinno, which are all in the dio. of St Da-

vid's. The dio. of Hereford is in the ecclesiastical province of Canterbury, and the co. forms an archd. comprising the 7 deaneries of Frome, H., Irchingfield or Archenfield, Leominster, Ross, Weobley, and Weston. Of about 220 parishes in the archdeaconry, 50 are perpetual curacies, and the remainder consist of an equal number of rectories and vicarages.—The poor rate returns for 3 years to Easter 1750, show an average expenditure of £5,056 on the poor of this co.; for 1803, of £48,067; for 1832, of £63,468; for 1839, of £41,100; for 1847, of £45,363, being at the rate of 1s. 3½d. per pound on the annual value of property rated to poor rates, viz. £699,529.—The total number of savings banks in the co. in 1838 was 6; of depositors, 6,325; amount deposited, £162,880; average amount invested by each depositor, £26. In 1848, the number of savings banks was 6; of depositors, 8,998; amount deposited, £215,962; average amount of deposits, £24.—The total number of charities in H. in 1836, was 730, and their aggregate annual income, £13,153.—This co. returns 3 members to parliament, who are polled for at Hereford, Leominster, Bromyard, Ledbury, Ross, and Kington, the principal place of election being at Hereford. The number of electors registered for the county in 1837 was 7,216; in 1848, 7,371.—H. is comprehended in the Oxford circuit. The assizes and quarter-sessions are held at Hereford. The number of criminals to every 100,000 of the pop. being for all England, in 1801, 54, the proportion for this co. was in that year, 34; in 1830–2, 136, that for all England being 146; and in 1848, 232, that for all England being 177.

HEREM, a fortress of Syria, in the pash. and 40 m. W of Aleppo, in the territory and 20 m. E of Antakia.

HERENCHUN, a town of Spain, in the prov. of Alava, partido and 6 m. WSW of Salvatierra, and 13 m. E of Alava, in a plain. It is divided into 2 parts, one named Herenchun, and the other Aonza or Abaunza. Pop. 208.

HERENCIA, a town of Spain, in New Castile, in the prov. and 42 m. NE of Ciudad Real, partido of Alcazar-de-San-Juan, in a plain near the r. bank of the Giguela. Pop. 6,400. It has a parish church and a convent; and contains extensive manufactories of soap. A weekly market for grain is held here.

HERENCIAS, a town of Spain, in New Castile, in the prov. and 50 m. W of Toledo, partido and 9 m. SSW of Talavera-de-la-Reina, in a plain, 3 m. from the Tagus. Pop. 896.

HERENS, a dizain of Switzerland, in the cant. of the Valais. It comprises the valley of the same name, called in German Eringer-thal, and several communes. This valley extends N from the l. bank of the Rhône, a little above Sion, to the Col-d'Oren, in the Pennine Alps, a distance of 24 m. The Borgne, by which it is watered in its entire extent, takes its rise in the glaciers of Tourmente, at the Col-d'Oren. It possesses considerable fertility, but has little cultivation.—The dizain contains 8 parishes, and 6,320 inhabitants, of whom more than half dwell in the valley. Its cap. is Hermence.

HERENT, a department and commune of Belgium, in the prov. of South Brabant, arrond. and 2 m. NW of Louvain. Pop. of dep. 2,362; of village, 1,554. It has several breweries, an oil-mill, and a gin-distillery.—Also a commune in the prov. of Limburg, dep. of Nierpelt. Pop. 200.

HERENTHALS, a department, commune, and town of Belgium, in the prov. of Antwerp, arrond. of Turnhout. Pop. of dep. 3,300. The town is 20 m. E of Antwerp, and 13 m. SSW of Turnhout, on the l. bank of the Little Nethe. Pop. 2,470. It has manufactories of common woollen fabrics, lace, cordage, and leather, and several distilleries. This town is of great antiquity, and was originally named St. Vaudru. It was surrounded by walls and ditches, and erected into a town, in 1209, by Henry I., duke of Brabant.

HERENTHOUT, a department and commune of Belgium, in the prov. and 18 m. ESE of Antwerp, arrond. of Turnhout, 5 m. WSW of Herenthals, on the Great Nethe. Pop. 2,290. It has several distilleries of gin and manufactories of cloth, and carries on an active trade in butter.

HEREPIAN, a village of France, in the dep. of the Herault, cant. and 6 m. SE of St. Gervais, near the r. bank of the Orbe. Pop. 643. Fairs for cattle, sheep, salted meat, stuffs, pottery, &c.

HERFFELINGEN, a department and commune of Belgium, in the prov. of S. Brabant. Pop. 1,729.

HERFOLGE, a parish of Denmark, in the diocese and island of Sieland, bail. and 23 m. NNE of Prästöe, and 21 m. SW of Copenhagen. It contains 2 hospitals, and the abbey of Vallöe, founded by Queen Sophia Madelene in 1737.

HERFORD, or Herforden, a town of Prussia, in the prov. of Westphalia, capital of a circle of the same name, in the regency and 18 m. SW of Minden, on the Aa, at the confluence of the Werra. Pop. in 1846, 5,550. It was formerly fortified, but its only defence now is a wall, its ramparts having been converted into public walks. It is divided into an old and new town, and has a suburb. The houses are built in the old Westphalian style of architecture. It contains 3 public squares, 1 Catholic and 5 Protestant churches, 5 schools, a gymnasium, a museum, a large prison and an arsenal, and had formerly an imperial abbey. The manufacture of leather, tobacco, oil, calico and linen, and cotton spinning, form the chief branches of local industry. Pop. of circle, 22,325.

HERGEST, or Mottonaiti Islands, a group of islands in the Marquesas, or Mendana archipelago, in the S. Pacific, WNW of Noukahiva island, in S lat. 8° 40′, and W long. 140° 25′. They take their name from the English mariner by whom they were discovered.

HERGESTS-BOTH, a township in the p. of Kington, Herefordshire. Pop. 224.

HERGIBETTE (L'), a commune of Belgium, in the prov. of Hainault, dep. of Arc-Ainières. Pop. 230.

HERGINES, a commune of France, in the dep. of the Nord, cant. and 4 m. WNW of Condé-sur-l'Escaut, on the r. bank of the Schelde. Pop. 2,213. It has extensive coal-mines and brick-kilns, and manufactories of woollen hosiery.

HERGISDORF, a village of Prussia, in the prov. of Saxony, in the regency of Merseburg, W of Eisleben.

HERGISWEIL, a town of Switzerland, in the cant. of Luzern, SW of Willisau. Pop. 2,181.

HERGUIJUELA-DE-LA-SIERRA (La), a town of Spain, in the prov. and 66 m. SSW of Salamanca, partido of Sequèros-del-Condado, in a mountainous and infertile district. Pop. 800, of whom a large majority are muleteers. Honey forms the chief article of local produce.

HERHET, a commune of Belgium, in the prov. of Namur, dep. of Houyett. Pop. 120.

HERHOUT, a commune of Belgium, in the prov. of South Brabant, dep. of Thollembeek. Pop. 418.

HERIAMONT, a commune of Belgium, in the prov. of Hainault, dep. of Pont-à-Celles. Pop. 104.

HERIC, a commune and town of France, in the dep. of the Loire-Inferieure, cant. and 8 m. WSW of Nord. Pop. in 1841, 3,927.

HERICOURT, a canton, commune, and town of France, in the dep. of the Haute-Saône, arrond. of

Lure. The cant. comprises 26 com. Pop. in 1831, 13,243; in 1841, 14,665. The town is 15 m. SE of Lure, on the l. bank of the Lizène. Pop. 2,907. It has an old castle, and a Protestant consistorial church, and possesses extensive manufactories of hosiery, chintzes, linen, and pottery, several cotton-spinning mills and tanneries, and numerous dye-works. Fairs for ironmongery, straw-hats, cattle, &c., are held here monthly.

HERIMONCOURT, a village of France, in the dep. of the Doubs, cant. and 5 m. NNE of Blamont. Pop. 561. It has a cotton-spinning mill, several tanneries and dye-works, and extensive manufactories of iron and steel ware.

HERING, a town of the duchy of Hesse-Darmstadt, in the prov. of Starkenburg, district of Dieburg, 14 m. ESE of Darmstadt, at the foot of Mount Otzberg, which is surmounted by a fort. Pop. 478, of whom 153 are Catholics.

HERINGEN, a town of Hesse-Cassel, in the prov. of Fulda, circle and 8 m. E of Hersfeld, on the r. bank of the Werra. Pop. 1,224.—Also a town of Prussia, in the prov. of Saxony, regency and 51 m. W of Merseburg, circle and 18 m. W of Sangerhausen, on the r. bank of the Helme. Pop. 2,120. It has a castle.

HERINNES, a department and commune of Belgium, in the prov. of Brabant, arrond. of Brussels. Pop. of dep. 4,211. The village is 18 m. SW of Brussels, near the Marcq. Pop. 3,040. It has several breweries and distilleries of gin.—Also a dep. and commune in the prov. of Hainault, arrond. of Tournai. Pop. of dep. 2,032. The village is 10 m. N of Tournai, on the r. bank of the Schelde.

HERIOT, a parish of Mid-Lothian, on a stream of the same name, which is joined by the Gala at Halltree. Area 23½ sq. m. Pop. in 1841, 355.

HERIRUD, Rood-Malan, or Hury River. See Herat.

HERISAU, a town of Switzerland, capital of the district of Appenzell-Ausser-Rhoden, and of the division Hinter-der-Sitter, 5 m. SW of St. Gallen, and 9 m. WSW of Trogen, on the Glatt, a small affluent of the Sitter, at an alt. of 2,493 ft. above sea-level. Pop. (Protestant) 2,500; and including the com. 7,150. It has a court-house, an arsenal, an ancient church-tower in which the archives of the district are kept, a court-house, a savings'-bank, a large public library, 2 printing-establishments, and an orphan's asylum; and possesses extensive manufactories of fine muslin, varieties of cotton fabrics, printed muslins and tulle, numerous dye-works and bleacheries, paper and saw mills, and several tanneries. Fairs are held here 4 times a-year. On the summit of adjacent heights are the ruins of the castles of Urstein, Rosenberg, and Schwanberg, and at the distance of about 3 m. are the celebrated sulphureous baths of Heinrichsbad. This town appears to have been known to the Romans, and its church-tower is supposed to have been a Roman erection. It is also said to have been the first place in Switzerland in which Christianity was embraced.

HERISSON, a canton, commune, and town of France, in the dep. of the Allier, arrond. of Montlucon. The cant. comprises 18 com. Pop. in 1831, 11,855; in 1841, 11,922. The town is 14 m. NNE of Montlucon, and 31 m. WSW of Moulins, on the Omance. Pop. 1,407. It is surrounded by an old wall, now in ruins, and commanded by a castle also much dilapidated. Quills form its chief article of trade. Cattle fairs are held here 6 times a-year.

HERISTAL. See Herstal.

HERJAS. See Eljas.

HERJE, or Herje-an, a river of Sweden, in the län or prefecture of Jamtland, which issues from the mountains which separate the haerad of Herjedalen, from the prefecture of Stora-Kopparberg, runs first E, then NE, and after a course of about 45 m., joins the Ljusne on the r. bank, a little below the village of Sveg.

HERJEDALEN, a haerad or district of Sweden, in the prefecture of Jamtland. It derives its name from the Herje-an, which flows through it in the SE; in the W it is covered by the range of the Kölen-Mölen and its ramifications. It is well-wooded, and has a fertile soil, but possesses little cultivation. The rearing of cattle and manufacture of cheese form the chief branches of local industry. Although this district comprises an area of 840 m., its pop. does not exceed 4,000 persons. Its principal village is Hede.

HERJEHAGNA, a mountain of Sweden, in the prefecture of Jämtland, and haerad of Herjedalen, near the confines of Norway. The Sor and the Gor, head-streams of the E and W Dal, take their rise in this mountain.

HERKEYENHOCK, a commune of Belgium, in the prov. of E. Flanders, dep. of Nazareth. Pop. 579.

HERKIMER, a county in the state of New York, U. S., comprising an area of 1,370 sq. m., intersected in the SW by the Adirondack mountains, and, except to the S of the Mohawk, where it is level and very fertile, generally hilly. The Erie canal and the Utica and Schenectady pass through its S part. Iron ore is found here in great abundance, and also in considerable quantities gypsum and lead. Pop. in 1840, 37,477. The capital, which bears the same name, is pleasantly situated on the N side of Mohawk river, 78 m. WNW of Albany. Pop. 800. The township presents, except in the N, a level surface. It is bordered on the S by the Mohawk, the alluvial flats of which are extremely productive, and intersected by West Canada creek. Pop. 2,369.

HERKLA, or Herklia, a ruined town situated on the E coast of Tunis, on a promontory stretching into the gulf of Hammamet, 57 m. SE of Tunis. Dr. Shaw supposes it to mark the site of the *Adrumetum* of the earlier ages, the *Justiniana* of the middle, and the *Heraclea* of the lower empire. It appears to have been about 1 m. in circuit; but the ruins, though considerable, did not appear to Shaw so extensive as might have been expected.

HERKE. See Herck.

HERKENBOSCH, a town of Dutch Limburg, 5 m. SSE of Ruremonde. Pop. 1,231.

HERLEN. See Heerlen.

HERLISHEIM, a town of France, in the dep. of Bas-Rhin, cant. and 4 m. SE of Bischweiller, on the r. bank of the Zorn. Pop. 1,943.—Also a town in the dep. of Haut-Rhin, on the Lauch, 5 m. S of Colmar. Pop. 1,260.

HERLUFSHOLM, a parish and village of Denmark, in the island of Sieland, bail. of Soröe, 27 m. ESE of Corsoer.

HERM, a small island within 2½ m. of Guernsey, sheltering the roadstead of St. Peter's-port. Its length, from N to S, is about 1½ m.; its breadth half-a-mile. Pop. in 1831, 177; in 1841, only 38, a decrease attributed to the stoppage of granite quarries in the island. The shores afford abundance of sea-weed for manure. The shell-beach, as it is called, is composed exclusively of shells. Gneiss and granite constitute the basis of the island. Large quarries of granite are wrought on this island; and several hundreds of acres under potatoes and corn. Wild rabbits are numerous. There is a small harbour near the granite quarries.

HERM (L'), a commune and village of France, in the dep. of Haute-Garonne, cant. of Muret. Pop. 1,135.

HERMAGOR, or Ermachor (Saint), a small town of Carinthia, 11 m. S of Saxenburg, on the r. bank of the Gostringbach. There are copper-mines in the neighbourhood.

HERMANCE, a small town of Switzerland, in the cant. and on the lake of Geneva, 7 m. NNE of Geneva. Pop. 380. It was a fortified town in the early ages; but was burnt by the Bernese in the 16th cent.

HERMANMIESTETZ, a large village of Bohemia, in the circle and 4 m. W of Chrudim, on the Goldenbach. Pop. 2,565. Marble and gypsum are quarried in the vicinity.

HERMANNSTADT [Hungarian, *Szebeni Szek*], an administrative prov. of Transylvania, composed of various isolated territories in the Saxon-land, lying within the basin of the Aluta, an affluent of the Danube. It is a mountainous territory, being traversed by the Carpathians. The only extensive plain is that in which the cap., which gives name to the district, stands. It has an area of 37 German, or 785 English sq. m. The pop. in 1837 was 114,785. Grain, wine, and fruit, are the chief productions. Cattle, honey, and wax, are exported.

HERMANNSTADT, or Nagy-Szeben, the *Cibinium* or *Hermanopolis* of the middle ages, a large town of Transylvania, of which it was formerly and has been recently re-appointed the capital. It stands on the river Szeben, or Zibin, in N lat. 45° 47′, E long. 24° 9′, in a beautiful plain, surrounded on three sides by pleasant elevations, and on the S by the mountains of Fogaras. The plain itself is 1,300 ft. above sea-level; and the higher peaks of the Carpathians that overlook it, about 8,000 ft.; the Ventura Bufraria having an alt. of 7,953 ft., and the Negoi of 8,040 ft. It contained, in 1838, 18,337 inhabitants. Its streets are narrow, crooked, and badly paved; and there are few modern houses in the place. It is the chief town of the Saxon settlers in Transylvania, the place of deposit for their archives, and the seat of some establishments for the education of Protestants. It has also a convent and three monasteries, one of which belongs to the Greek monks of St. Basil. The principal square is large, and pretty regular, and contains a fine statue and a fountain. The other remarkable objects are the orphan-hospital, the barracks outside of the town, the theatre, and the palace of the Bruckenthal family. The last contains a library of 13,000 vols., and a valuable collection of pictures, antiquities, and natural history. The manufactures chiefly consist of woollens, cottons, felt, hats, leather, and soap. The town is still fortified, being surrounded by a mound and ditch; but a portion of its walls and towers have been taken down. It suffered by the removal, about 1790, of the seat of the government of Transylvania to Clausenburg; but if recent ordinances are carried into execution, the chief seat of government for Transylvania will be again transferred to H., which will become the residence of the *statthalter*.

HERMANOS, a small river of Buenos Ayres, which enters the Parana, on the r. bank, 25 m. above San Pedro.

HERMANOS (Dos), two islands in the entrance of Lyell sound, in the strait of Magelhaens, bearing S 48°, W 5½ m., from Cape Froward.

HERMANOS (Dos), two small islands in the Philippine group, near the W coast of Luçon, in N lat. 15° 48′.

HERMANOS (Los), seven islets off the coast of Venezuela, 40 m. N of the Morro of Roldar, and stretching 7 m. NNW. See also Brothers.

HERMANNS KRAAL, or Fort Brunn, a military post and village in S. Africa, 18 m. NE of Graham's Town, situated on a rising ground close to the Great Fish river, and surrounded on every side by bare rocky hills of slight elevation. The soil along the river affords excellent pasturage, but is either thickly covered with bush or entirely naked and barren at some distance from the river.

HERMANSTHAL, a village of Prussia, in the reg. of Stettin, circle of Cammin. Pop. 310.

HERMATRA, one of the smaller Hebrides, a little to the NE of N. Uist.

HERMENAULT (L'), a canton, commune, and town of France, in the dep. of Vendee, 8 m. NW of Fontenay-le-Comte. Pop. of com., 900; of cant., 11,678.

HERMENT, a canton and commune of France, in the dep. of Puy-de-Dome, arrond. of Clermont-Ferrand. Pop. of cant., 3,816; of com., 564.

HERMERODE, a village of Prussia, in the reg. of Frankfort, circle of Mansfeld. Pop. 188.

HERMERSDORF, a village of Prussia, in the reg. of Merseburg, circle of Lebus. Pop. 312.

HERMERSWEILER, a village of France, in the dep. of Bas-Rhin, cant. and 7 m. WNW of Seltz. Pop. 218.

HERMIES, a commune of France, in the dep. of Pas-de-Calais, cant. of Bertincourt. Pop. 2,301.

HERMINE (Sainte), a commune and canton of France, in the dep. of Vendee, 12 m. W of Fontenay-le-Comte. Pop. of com. 1,823; of cant. 11,886.

HERMIONE, or Castri, a village of Greece, in the prov. of Argolis, near the ancient promontory of H. Pop. between 700 and 800.

HERMITAGE, a vineyard of France, in the dep. of Rhone, arrond. and 12 m. N of Valence, on the r. bank of the Rhone. It has an area of about 300 acres. The noted wine called 'Hermitage,' both red and white, takes its name from this place; and is grown here to the annual extent of 2,500 hectolitres.

HERMITAGE, a river of Scotland, in the co. of Roxburgh, which, after a course of 10 m. through a fertile country, falls into the Liddel, 1½ m. above Castletown.—Also a parish in Dorsetshire, 6 m. SSE of Sherborne. Area 450 acres. Pop. 132.

HERMITAGE (L'), a village of France, in the dep. of Ille-et-Vilaine, cant. and 5 m. NE of Mordelles. Pop. 445.

HERMITE ISLAND, one of the Montebello group, off the W coast of Australia, in S lat. 20° 27′, and 0° 8′ 23″ W of Swan river.

HERMITES (Les), a small group in the Pacific, to the NW of the Admiralty isles, in S lat. 1° 28′ 30″.

HERMITE'S ISLANDS, a group of islands of unequal extent, situated at the S extremity of Tierra-del-Fuego, so called from Jacob Hermite, admiral of the Dutch fleet, in 1624. On the southernmost is Cape Horn, in S lat. 55° 58′ 41″, W long., 67° 10′ 53″; but the island which is generally distinguished by navigators as H. island lies about 10 m. NW of the Cape. It is of irregular form, with bold steep shores deeply indented by bays and coves; and surmounted by conical peaks, amongst which Mount Kater attains an alt. of 1,742 ft. above sea-level. Its greatest length from E to W is 12 m.; its breadth, 7 m. Its geological structure is syenitic greenstone resting on granite. Its S point, Cape Spencer, encloses a crater 200 ft. in depth, the bottom of which is now occupied by a lake. The scenery of the island closely resembles that of many parts of the W of Scotland. The evergreen beech [*Fagus Forsteri*] is the most prevalent tree. Ferns and mosses abound.—*Ross* and *Hooker*.

HERMOGENES (Saint), an island in the N. Pacific, near the entrance of Cook's channel, in N lat. 58° 13′. It is about 6 leagues in circuit, and is separated from the adjacent coast by a channel 1

league broad. It was discovered by Behring, and farther explored by Cook.

HERMON, a township in Penobscot co., in the state of Maine, U. S., 7 m. W of Bangor. Pop. 1,042.—Also a township in St. Lawrence co., New York, 201 m. NNW of Albany. Pop. 1,271.

HERMON (Little), a small range of hills in Syria, on the E side of the great plain of Esdraelon, or 'the valley of Jezreel,' running parallel with the mountains of Gilboa, and 5 m. distant from Mount Tabor.

HERMON (Mount), a mountain-chain of Syria, the Jebel-Es-Sheikh of the Arabs, forming the SE and the loftiest branch of the Anti-Libanus.

HERMONT, or Hermontis, a village of Egypt, between Asfun and Thebes, in a recess about 1 m. from the Nile. The ruins of the ancient *Hermonthis* lie between the v. and the hills which skirt the valley of the river. They consist of a temple and a prodigious heap of unburnt brick rubbish.

HERMONVILLE, a village of France, in the dep. of Marne, cant. and 9 m. ENE of Fimes.

HERMOSELLOS, a small but fortified town of Spain, in the prov. of Leon, at the junction of the Douro and Tormes, 9 m. below Miranda-de-Douro.

HERMOSILLA, a village of Spain, in the prov. and 21 m. NE of Burgos, on the Orca. Pop. 180.

HERMSDORF, a village of Prussian Silesia, in the circle of Bolkensheim-Landshut, 5 m. S of Landshut.—Also a v. of Silesia, in the circle and 4 m. SSW of Hirschberg, at the foot of the Kynastberg. Pop. 2,000. It has large bleachfields, and a mine of cobalt.—Also a village in the reg. of Breslau, circle of Brieg. Pop. 235.—Also a v. in the reg. of Breslau, circle of Ohlau. Pop. 353.—Also a v. in the same reg., circle of Waldenburg. Pop. 683.—Also a v. in the reg. of Frankfort, circle of Friedeberg. Pop. 249.—Also a v. in the reg. of Liegnitz, circle of Gorlitz. Pop. 564.—Also a v. of Bohemia, in the circle of Königgratz, 24 m. NW of Glatz.

HERMSDORF (Hinter), a village of Saxony, in the circle of Meissen, bail. of Hohenstein.

HERMSDORF-BEI-BIELITZ, a village of Prussia, in the reg. of Oppeln, circle of Neisse. Pop. 796.

HERMSDORF-BEI-LIPSA, a village of Prussia, in the reg. of Liegnitz, circle of Hoyerswerda. Pop. 266.

HERMSDORF-BEI-LOHSA, a village of Prussia, in the reg. of Liegnitz, circle of Hoyerswerda. Pop. 190.

HERMSDORF-BEI-PRIEBUS, a village of Prussia, in the reg. of Liegnitz, circle of Sagau. Pop. 292.

HERMSDORF-BEI-WEIDENAU, a village of Prussia, in the reg. of Oppeln, circle of Neisse. Pop. 543.

HERNAD, a river in the N of Hungary, which rises to the E of Teplicz, near the source of the Waag; flows E by S to Lemes, where it turns S; passes Kaschau; and pursues a S by W and then a S by E course, to the Theiss, which it joins on the r. bank, 18 m. SW of Tokay. Its principal affluents are the Tarcze which it receives, on the l., 16 m. below Kaschau; and the Rima, which joins it on the r. at Onod, a little above its confluence with the Theiss. It has a total course of 150 m.

HERNANI, a small town of Spain, in Guipuscoa, 3 m. SE of San Sebastian, and 7 m. NE of Tolosa, on the declivity of Mont Santa Barbara, near the Urumea. It consists of two good streets. Pop. 2,555. It has some trade in timber, iron, and linen thread. The British legion were defeated here by the Carlists in 1837.

HERNE, a parish and village in Kent, 6½ m. NE by N of Canterbury, near the coast. The p. also comprises the thriving town of Herne-bay. Area 4,560 acres. Pop. in 1801, 1,232; in 1831, 1,876; in 1841, 3,041. The church is a large, handsome, and ancient structure. The v. of H., or Herne-street, stands near the centre of the p., about 1¾ m. from Herne-bay, a modern watering-place, situated on a point of land which juts abruptly out from the line of coast in the Thames' estuary, between Whitstable and Reculver. This latter place is rapidly springing up into an important town, and is regularly visited by steamers, and crowded by fashionable visitors. Its pop. in 1841 was 1,572. The town is built on a gentle elevation, commanding a noble prospect of the ocean, and extends along the shore about 1 m. from E to W. Its distance from Canterbury is about 8½ m., from Margate 15 m., Ramsgate 17 m., and Dover 24 m. The pier forms one of the distinguishing features of the bay. Its length is nearly 3,000 ft. Its head runs parallel with the shore, 400 ft., and forms an efficient breakwater from the force of winds and tides. The width of the pier is 24 ft.; and the whole is constructed with great strength and solidity. A parade, 50 ft. wide, and running nearly the whole length of the town facing the sea, is constructed a few feet above the pebbled beach. It is of a firm, gravelly consistence, and furnished with iron balustrades. A clock-tower stands conspicuously fronting the sea adjoining the parade, and about equidistant from the two extremities of the town.

HERNE-HILL, a parish in Kent, 3½ m. ESE of Faversham. Area 2,690 acres. Pop. in 1801, 359; in 1831, 507; in 1841, 603. The land is divided into farms varying in extent from 60 to 150 acres, so that the employment of the people is entirely agricultural; and they are by no means destitute of physical comforts; yet it was in this p. that a riot was occasioned in May 1838, by a wretched fanatic calling himself Sir William Courtenay, which was not quelled until several lives were lost.

HERNIN (Saint), a town of France, in the dep. of Finistere, cant. and 6 m. S of Carhaix. Pop. 1,250.

HERNŒN, or Hernö, an island of Sweden, in the gulf of Bothnia, at the embouchure of the Angerman-elf. It is 6 m. in length, and 3 m. in breadth, and is separated by a narrow channel from the main.

HERNOSAND, a laen or administrative prov. in the N of Sweden, between the parallels of 62° and 64°, comprising the districts of Angermannland, Jemptland, and Medelpad; and sometimes known as Western Norrland. Its territorial extent is fully 18,000 sq. m., or two-thirds of the area of Scotland; but so thin is the pop. that in 1839 it was returned at only 85,242. In 1805 it was 59,684. The country is in general covered with wood. One-half of this surface exceeds 320 ft. in elevation above sea-level. It is subdivided into 3 fogderi, and 67 parishes. Its principal towns are H. and Sundsvall.

Hernösand, or Hernosund, the capital of the above government, stands on the W coast of the island of Hernœn, in the gulf of Bothnia, in N lat. 62° 38′, E long. 17° 59′; and is united to the mainland by a bridge. Its pop. is about 2,500. It has a small provincial college, an establishment for printing books in the Lapp tongue, and a botanical garden. It has a good harbour, and was formerly a staple town; its trade, particularly in linen and Baltic produce, is still considerable. The port was entered in 1849 by 74 vessels = 9,035 lasts, and cleared by 83 = 10,596 lasts, of which 18 were for England. H. is the see of a bishop, and the residence of the provincial magistrates. It has suffered repeatedly from war with the Russians, having been attacked and partly burned by them successively in 1710, 1714, and 1721.

HERO (North and South), two islands in Lake Champlain. The first, which is 13 m. in length, and 2 m. in breadth, forms a township annexed to Chittenden co., in Vermont, U. S. Area 6,272 acres. Pop. in 1840, 716. South H., belonging to the same co., and separated from North H. by a narrow strait, is 10 m. long, and 5 m. broad, and produces good crops of wheat and other grain. A ferry connects the island with Colchester point, and a sand bar which is fordable on horseback, with Milton in Chittenden co. Pop. 664.

HEROLDSBERG, a village of Bavaria, 6 m. ESE of Erlangen. Pop. 360.

HERON, a commune and village of Belgium, in the prov. of Liege, cant. of Couthain, 8 m. WNW of Huy. Pop. 1,028.

HERON ISLES, a small group in the gulf of Mexico, a little S of the entrance to the bay of Mobile, in N lat. 30° 12′. The channel between them and the main has only 4 ft. water, and is nearly 6 m. in length.

HERON (Lake), a sheet of water, 15 m. in length, between Island lake and Woody lake, in the course of the Missinippi, or Churchill river, in North America, in N lat. 55° 25′.

HERPF, a river of Germany, in Saxony, which rises in the co. of Henneberg, and falls into the Werra, 2 m. N of Meiningen.

HERQUEGRES, a commune of Belgium, in the prov. of Hainault, cant. of Frasnes-lez-Buissenal. Pop. 746.

HERRADON (El), a town of Spain, in the prov. and 10 m. SE of Avila, on the l. bank of the Gasnatas. Pop. 400.—Also a castle and small port in the prov. of Grenada, 16 m. W of Motril, and 20 m. E of Velez-Malaga. A fleet of galleys, under the command of Juan de Mendoça, was lost here in 1562.

HERRADURA, a port of Chili, in S lat. 29° 58′ 40″, W long. 71° 25′ 45″.

HERRADURA-DE-CARRISAL, a port of Chili, in S lat. 28° 05′ 45″, W long. 71° 15′ 45″.

HERRADURA (Pointe-de-la), a cape on the coast of Costa-Rica, at the SE extremity of Salinas bay, in N lat. 9° 36′.

HERRAMELLURI, a town of Spain, in the prov. of Burgos, 7 m. NW of Santo-Domingo-de-la-Calzada, near the Tiron. Pop. 1,188.

HERRENALB, a village of Wurtemberg, in the circle of the Black forest, 18 m. S of Carlsruhe. Pop. 340.

HERRENBERG, a small town of Wurtemberg, 14 m. SSE of Stuttgard, and 24 m. NE of Freudenstadt. Pop. 2,106.

HERRENBREITIMGEN, a town of Hesse-Cassel, in the prov. of Fulda, 5 m. WNW of Schmalkalden, on the r. bank of the Werra. Pop. 939.

HERRENGRUND, or Urvölgy, a small town of Hungary, 4 m. NNW of Neusohl, situated in a district rich in copper-mines, and inhabited chiefly by miners. Pop. 1,550. Near it is a spring impregnated with sulphate of copper, the most productive perhaps of its kind in Europe. The metal is obtained in the form of an oxide by precipitation with iron in the usual way, and is called 'cement copper.'

HERRERA, a town of Spain, in Estremadura, 57 m. W of Caceres. Pop. 950.

HERRERA-DEL-DUQUE, a town of Spain, in the prov. of Badajoz, 30 m. E of Villanueva. Pop. 3,697. Excellent wines are made here.

HERRERA-DE-PISUERGA, a town of Spain, in the prov. and 39 m. NW of Burgos. Pop. 987.

HERREROS-DE-SUSO, a town of Spain, in the prov. and 24 m. NW of Avila. Pop. 350.

HERRIARD, a parish in Hampshire, 4½ m. SSE of Basingstoke. Area 3,050 acres. Pop. in 1841, 427.

HERRIEDEN, a town of Bavaria, on the l. bank of the Altmuhl, 5 m. SW of Anspach. Pop. 1,000.

HERRIN, a village of Spain, in the prov. and 30 m. NW of Palencia. Pop. 600.

HERRINGFLEET, a parish in Suffolk, 6 m. NW of Lowestoft. Area 1,720 acres. Pop. in 1841, 197.

HERRINGSWELL, a parish in Suffolk, 4 m. SSE of Mildenhall. Area 2,540 acres. Pop. in 1841, 219.

HERRINGTON (East and West), two townships in the p. of Houghton-le-Spring, 4 m. SW of Sunderland. Area of East H. 1,320 acres. Pop. in 1841, 231. Area of West H. 720 acres. Pop. 343.

HERRLISHEIM, a commune of France, in the dep. of Haut-Rhin, cant. of Wintzenheim, 4 m. S of Colmar, on the Lauch. Pop. 1,214.—Also a com. in the dep. of Bas-Rhin, cant. of Bischwiller, on the r. bank of the Zorn, 11 m. NE of Strasburg. Pop. 2,100.

HERRMANNSERFEN, a village of Bohemia, in the circle of Bidschow, 27 m. N of Königgratz.

HERRNAH, a town of Lower Austria, or suburb rather of Vienna, 1½ m. N of Vienna, on the Alser. Pop. 2,950. There is here a seminary, founded in 1775, for the education of the daughters of officers.

HERRNHUT, a small town of Saxony, in Upper Lusatia, 6 m. S of Lobau, founded by Count Zinderdorf in 1722, for the use of the Moravian brethren. It is a modern-looking town, composed of white houses built in streets crossing at right angles. "All is extremely neat, clean, and profoundly quiet." [*Howitt.*] Pop. 1,100. Cotton and linen stuffs, stockings, sealing-wax, hats, coloured paper, ribbons, and utensils of copper, brass, and steel, are manufactured here.

HERRNKRETSCHEN, a romantic village of Bohemia, on the Elbe, 10 m. SE of Königstein in Saxony. Pop. 500. This place stands on the Saxon frontier, and carries on a great traffic in wood. It belongs to the prince of Clary, and is inhabited by foresters, sawyers, and a few farming-agents of the proprietor.

HERRNSBAUMGARTEN, a town of Lower Austria, in the circle of Korneuburg, on the Grotbach. Pop. 1,583.

HERRY, a town of France, in the dep. of the Cher, cant. of Sancergues. Pop. 2,124.

HERSBRUCK, a small town of Bavaria, in the circle of Middle Franconia, on the Peguits, 15 m. E of Nuremberg. Pop. 1,500.

HERSCHELL (Mount), a magnificent mountain on the coast of Victoria Land, in S lat. 72° 04′, E long. 170° 08′, terminating to seaward in Cape Roget.

HERSEAUX, a commune of Belgium, in West Flanders, cant. of Courtrai. Pop. 2,188.

HERSELT, a town and commune of Belgium, in the prov. and 24 m. ESE of Antwerp, in the cant. of Wasterloo. Pop. 4,022.

HERSFELD, or Hirschfeld, an administrative subdivision of Hesse-Cassel, in the prov. of Fulda. Area 10·25 German sq. m., or 139,300 acres, of which a little more than one-fourth is under cultivation, and a large proportion under forest. The live stock in the circle in 1840 amounted to 1,770 horses, 4,125 oxen, 7,100 cows, 833,700 sheep. The manufacture of coarse linens is the principal branch of domestic industry. Pop. in 1840, 35,034.—The circle is subdivided into 1 *langericht*, and 2 *zustiz-amts;* and comprises 1 city, 2 towns, and 82 villages.—The cap., which gives name to the circle, is situated on the l. bank of the Fulda, at the confluence of the Haune. It is walled, and is defended by a citadel. It possesses 2 churches, a gymnasium, a polytechnic school, an orphan hospital, and an infirmary. The manufacture of fine woollen cloth is the most important

branch of trade carried on in the town. There are also tanneries, dye-works, and soap-works; and 5 fairs are held here in the course of the year.

HERSIN-COUPIGNY, a commune of France, in the dep. of Pas-de-Calais, cant. of Houdain. Pop. 1,126.

HERSTAL, or Heristal, a town of Belgium, in the prov. and 3½ m. NE of Liege, on the Maese. Pop. 6,032. From the abundance of coal and iron in the vicinity, it has considerable manufactures of hardware.

HERSTEIN, a small town of the Prussian states, in the grand duchy of the Lower Rhine, 31 m. E by N of Treves.

HERTAIN, a commune of Belgium, in the prov. of Hainault, cant. of Tournay. Pop. 261.

HERTFORD, an ancient borough and market-town, the cap. of the co. of Hertford, situated on the river Lea, 21 m. N of London, and 5 m. NW of Broxburn, a station on the North-eastern railway, with which it is connected by a branch-line. Pop. of the old borough in 1801, 3,360; in 1831, 4,028; of the new borough, as recently enlarged by act of parl., in 1821, 4,235; in 1831, 5,247; in 1841, 5,450. It lies sheltered in the valley of the Lea, and consists of several neat and clean streets, built with tolerable regularity. Among the principal buildings are All Saints' and St. Andrew's churches, the East India company's preparatory school, Christ's hospital, the county-jail and house-of-correction, and the town-hall, sessions-house, and market-house.—The East India company's school, preparatory to the course of instruction at their college at Haileybury, is a large brick building. The college itself was established here in 1806, and originally occupied this edifice, till it was removed to Haileybury, about 2½ m. distant. The object of these institutions is to give a suitable education for youths about to be appointed to any post in the civil department of the company's establishment in India; as the seminary at Addiscombe in Hampshire is intended to do in relation to the military department. The buildings at Haileybury were erected at an expense of £70,000. Besides residences for the principal, and several professors, they contain accommodation for upwards of 100 students. The students, who must enter between the ages of 16 and 20, are classed in 4 successive terms of 6 months each. Every student pays £105 per ann., and costs the Company in addition £117, before he is ready to sail for India.—Christ's hospital is partly an independent institution, and partly a preparatory seminary for the splendid royal institution of the same name in Newgate-street, London. Upon an average of 14 years to 1834, the income of the borough was £550. H. returns 2 members to parliament. The number of electors registered in 1837 was 619; in 1848, 611. H. is one of the polling-places, and the principal place of election, for the co. members.—There is no manufacture in H.; but numerous mills are situated on the rivers Lea and Mimram, through which a good deal of business is done in malting and mealing. Its commerce has hitherto chiefly depended on the navigation of the Lea. The most important articles of trade, besides malt and flour, are wheat and wool, much of which is sent to London, whence coal and other heavy commodities are brought in exchange. One of the largest corn-markets in the kingdom is held here.—At the time of Domesday survey H. contained 146 burgesses, and had two churches. In the 25° of Elizabeth, the Michaelmas term was adjourned from London to H., on account of the plague that was raging in the metropolis, and all the courts were kept in the castle. This was also the case, and from a similar cause, in the 34° and 35° of the same reign.

HERTFORD, a county in North Carolina, U. S., situated towards the NE part of the state, and watered by branches of Chowan river. Area 356 sq. m. The cap. is Winton. Pop. 7,484.—Also the cap. of Perquiman's co., in North Carolina, 50 m. S by W of Norfolk.

HERTFORDSHIRE, or Herts, an inland county of England, bounded by Cambridgeshire on the N; by Essex on the NE, E, and SE; by Middlesex on the S; by Buckinghamshire on the SW and W; and by Bedfordshire on the NW. It is separated from Essex, on the E and SE, by the rivers Stort and Lea. Its form is very irregular. It lies NE and SW; and a small part of the co. belonging to Cashio hundred is isolated in Buckinghamshire; on the other hand, similar parts of Bucks and Bedfordshire are isolated in Dacorum and Hitchin hundreds, Herts. Its greatest length, from NE to SW, is about 35 m.; its greatest breadth, from NW to SE, about 27 m. Its circuit is between 130 and 140 m.; and its area has been variously estimated at 528 and 630 sq. m.; and in the population and other returns for 1831, at 400,370 acres. The general appearance of H. is extremely pleasant, especially as seen from eminences or from the high roads, though its eminences are not sufficiently elevated, nor its vales sufficiently depressed and broken, to afford the decisive character of picturesque or romantic beauty. The N part is the most hilly. A range of high ground stretches out from the neighbourhood of King's Langley, towards Berkhampstead and Tring, which in many parts commands a great extent of country. Most of the country is enclosed; and the enclosures being principally live hedges, intermixed with flourishing timber, have a verdant and pleasing effect.

Rivers.] The principal rivers are the Lea and its affluents, the Stort, the Rib, the Quin, the Beane, the Mimram, and the Ash; and the Colne, with its affluents, the Ver or Meuse, the Gade, and the Chess. The Lea rises near Luton in Bedfordshire, and entering the county at Hide Mill, proceeds at first in a SE direction, and then NE, flowing past Hertford and Ware. Changing its course to the S after its conflux with the Stort, it finally quits the county near Waltham abbey. This river is navigable to Ware and Hertford. The Stort enters this county from Essex, a little to the N of Bishop-Stortford, and divides the county from Essex to its junction with the Lea. The Rib has its rise near Cornybury, above Buntingford, past which it flows, and proceeding in a SE direction falls into the Lea between Hertford and Ware. The Beane rises near Cromer, and taking a S course, flows past Watton, and joins the Lea at Hertford. The Mimram or Moran runs past Welwyn, and flows on in a meandering course till it falls into the Lea at Hertford. The Colne is formed by the union of several small streams, one of which rises in Middlesex; flowing on to Watford, it passes that town on the SE; and then turning SW, about 1½ m. beyond Rickmansworth it leaves this county and enters Middlesex. The Ver or Meuse rises on the confines of Bedfordshire, and flowing SE, passes Redburn and Redburn-bury, and unites with the Colne, which is but a very inconsiderable stream till thus enlarged by the waters of the Meuse. The Gade has its origin on the borders of Buckinghamshire, and flowing to the S, near Rickmansworth falls into the Colne. Many other streams rise in this county, and several of them form the heads of more considerable streams in the adjacent shires.

Canals.] In the reign of Henry VI., government was induced to attempt to make the Lea navigable. For this purpose, dams were constructed at the upper part of the river's course, in order that a sufficient depth of water for floating boats might be procured. These attempts, however, were found to be very inept;

and in 1767 application was made to Smeaton, the celebrated engineer, to improve the works. A canal was then made from Hertford, where the river is upwards of 111 ft. above sea-level, to near the confluence of the Stort with the Lea, E of Hoddesdon; and thence various cuts were made to Tottenham. From Lea bridge at Clapton, another cut was made to Olford near Bowbridge. From Bromley, a cut 1½ m. in length has been opened into the Thames, at Limehouse, by which the circuit of the isle of Dogs, in the Thames navigation, is avoided. In 1824, a cut 1 m. in length was opened from Oldford, near Temple-mills, to the Regent's canal, at Bethnal-green. By these numerous cuts the sinuosities of the old river are avoided, and an easy navigation for barges from the Thames to Hertford has thus been effected. The length of the whole line, along the canals and the rivers, is about 25 m. The Grand Junction canal enters this co. N of Tring, where it is joined by the Wendover cut, a navigable feeder, and a collateral cut to Aylesbury. Here its elevation above the level of the Thames is 402 ft. Running along the valley of the Quin, by Berkhampstead, and SW of Hemel-Hempstead to Watford, along the valley of the Gade, a branch of the canal communicates with the latter town. The main trunk continues SW along the valley of the Colne, to Rickmansworth, and thence passes into Middlesex.

The Carlisle and Glasgow, or high North road, enters this co. from Whetstone to Chipping-Barnet, whence it crosses a narrow part of Essex to Little-heath, and then proceeds N by Hatfield, Welwyn, Stevenage, and Baldock, into Bedfordshire. The road to Liverpool branches from this road near Chipping-Barnet, and runs, along the line of Watling-street, through St. Alban's to Dunstable. The highway returns for 1839 show an expenditure of £11,862 on 1,475 m. of road in this co.

Railways.] The Northern and Eastern, or London and Cambridge railway, enters this co. near Waltham-cross, and running nearly in the line of the Lea river navigation by Broxburn and Hoddesdon north-eastwardly, enters Essex and Middlesex. The Broxburn and Hertford railway runs from the North-Eastern line at Broxburn to Hertford. The London and Birmingham railway, open throughout, runs through the SW quarter of Herts nearly in the line of the Grand Junction canal; and has stations at Watford, Berkhampstead, and Tring.

Subsoil, soil, &c.] The basis of almost the whole co. is chalk intermixed with silex. Most of the valleys are deep enough to expose some of it, and in the north-western district, near Bedfordshire, it rises to the surface in hills of considerable elevation. The whole co. is comprehended in the London chalk-basin.—The soil may be divided into chalk, clay, and gravel, according to the prevalence of each ingredient; and the mixture forms loams of various qualities. Arthur Young, who estimates the area of the co. at 302,088 acres, states the following as the proportions of these soils:

Chalk,	46.720 acres.
Clay,	90,240
Loam,	142,720
Rich loam,	5,120
Poor gravel,	17,280
Total,	302,080

The prevailing soils thus appear to be loam and clay. The most productive of the sandy loams are found on the W side of the river Lea, extending in a line of between 2 and 3 m. in breadth, through the parishes of Cheshunt, Wormley, Broxburn, and Hoddesdon, and on the S to the hills about Amwell. The principal clay district is on the NE or Essex side; yet even here the upper surface is in general a strong wet loam, improved by draining, and by ample dressings of manure from the capital.

Produce.] At an early period in the agricultural history of England, this co. was superior to most others in its husbandry; but it has not lately made equal improvement with some other parts of the country. Large quantities of turnips are grown, and artificial grasses are cultivated to a great extent; but the principal part of the land is under tillage for wheat, barley, and oats. Wheathempsted, on the river Lea, derived its name from the excellence of its wheat. A few acres of hops were introduced in the ps. of Lambourne and Stapleford-Abbott in 1835. The meadows on the river Stort, extending from Hackerill to Hertford, are very productive: as are those likewise in the vicinity of the Lea, and in the neighbourhood of Rickmansworth. In the SW corner of the co., and particularly in the ps. of Rickmansworth, Sarrat, King's Langley, Abbot's Langley, Flaunden, Bovington, Watford, and Aldenham, are numerous orchards. On the best soils nearest to London, cabbage, potatoes, pease, and other culinary vegetables are forced for market. In the poorer soils throughout the county, there are numerous small woods and coppices interspersed with cultivated fields; but these have latterly been much encroached on by the principal objects of H. husbandry. The wood-lands contain timber, chiefly consisting of oak, beech, and elm.—Live produce is not an object of marked regard in H. There are no peculiar breeds of cattle. The sorts kept on farms are principally the Suffolk, Hereford, Devon, &c., breeds. The sheep are mostly ewes of the South-down and Wiltshire kinds, or a breed between the Coteswold and Leicester. The horses preferred for farm-work are the Suffolk punches and a few Lincolns.

Climate.] The climate is considered to be mild and healthy; but it does not differ materially from that of other cos. equally southern.

Manufactures, trade, &c.] There are few manufactures in this co.; but silk and cotton goods are manufactured in the vicinity of St. Alban's, Rickmansworth, and Watford. The total number of hands employed in silk mills within the co. in 1847 was 912. Straw-plait has latterly been the principal employment of the labouring females in most parts of the county. Black lace used to be made to some extent about Berkhampstead; but the business has declined, and straw-plait is the chief manufacture there also. Malting is carried on to a great extent at Hitchin, Royston, Baldeck, and Ware; and there are several large paper-mills.

Divisions and Statistics.] This co. is divided into 8 hundreds, viz.:

Name.	Pop. in 1831.	1841.
Braughing,	17,827	19,146
Broadwater,	17,043	17,126
Cashio,	33,291	29,947
Dacorum,	28,872	33,693
Edwinstree,	9,237	9,925
Hertford,	19,217	15,404
Hitchin and Pirton,	10,711	11,972
Odsey,	7,143	8,047
Hertford borough,		5,450
St. Alban's do.,		6,497
	143,341	157,207

These hundreds are divided into 134 parishes, which contain 1 county-town, Hertford; 2 boroughs, Hertford and St. Alban's; and 19 market-towns, the principal of which are: Baldock, Barnet, Berkhampstead, Bishop's-Stortford, Hatfield, Hemel-Hempstead, Hertford, Hitchin, Hoddesdon, Royston, Tring, Ware, and Watford. Houses in 1831, 26,549; in 1841, 30,155; in 1851, 33,954. Pop. in 1801, 101,892; in 1831, 147,575, consisting of 29,250 families, of whom 13,268 were chiefly employed in agriculture, 8,552 in trade, manufactures, and handicraft, and 7,430 otherwise occupied; in 1841, 162,394; in 1851, 173,963. The annual value of real property assessed to income tax in 1815 within this co. was £571,107; in 1842–3, £849,793, whereof £438,225 were on lands, and £340,267 on houses.—H. was partly in the dio. of London, and partly in that of Lincoln; but has recently been transferred to the dio. of Rochester.—The number of Friendly societies in the co., on 20th November, 1838, was 65; income, £9,036; in 1848, 110; income, £13,944. The number of savings' banks was 5; total number of depositors, 2,595; total amount deposited, £84,179; average amount invested by each depositor, £32. In 1848, the savings' banks were 7 in number, and the amount deposited in them £114,482 by 4,255 depositors.—The poor-rate returns for 3 years, to Easter 1750, show an average expenditure of £16,452 on the poor of this co. In 1803,

the expenditure was £58,638; in 1839, £53,800; in 1847, £64,589, being at the rate of 1s. 8½d. in the pound on the annual value of property rated to poor-rates.

Franchise and government.] This co. returns 3 members to parliament, who are polled for at Hertford, Stevenage, Buntingford, Bishop's-Stortford, Hoddesdon, Hatfield, and Hemel-Hempstead, the principal place of election being at Hertford. The number of electors registered for the county in 1837, was 5,245; in 1848, 5,430. Besides the co. members, 4 borough members are returned, 2 each for Hertford and St. Alban's. H. is comprehended in the home circuit. The assizes and quarter-sessions are held at Hertford.—It appears that in a list of 11 agricultural counties, including all the surrounding district except Middlesex and Essex, H. ranks highest in crime, being 1·34, while the average is 1·07. The total number of offenders committed for trial or bailed within the co. in 1847 was 291, of whom 216 were convicted.

History.] H., with the adjoining counties of Bedford and Buckingham, previous to the Roman invasion, was chiefly possessed by the Cassii or Catieuchlani. After the complete subjugation of the southern parts of Britain, H. was included in the district named *Flavia Cæsariensis;* but on the conquest and division of the island by the Saxons, subsequent to the Roman departure, it became divided between the East Saxon and Mercian kingdoms; though by far the greater part was included in the latter. Edward the Elder, son of Alfred, built the castle of Hertford. After the general rising of the peasantry under Wat Tyler and Jack Straw, many of the ringleaders were executed at St Alban's, where the king, with a guard of 1,000 men, attended. In the war of the Roses, two sanguinary battles were fought at St. Alban's, between the houses of York and Lancaster. In the parliamentary war, this co. was the scene of one of Cromwell's earliest exploits, who, when he was yet only captain of his own troop of horse, seized the high-sheriff when he was on his way to St. Alban's, to denounce the parliamentary men as traitors.

HERTINGFORDBURY, a parish in Hertfordshire, 2 m. WSW of Hertford. Area 2,510 acres. Pop. in 1831, 753; in 1841, 737.

HERTKOUCZE, a village of Austria, in Military Slavonia, comitat of Peterwardein, to the N of Klenak.

HERTOGENSBUCH. See Bois-le-Duc.

HERTRE, a hamlet of France, in the dep. of the Orne, cant. and 2 m. W of Alençon. It is noted for a species of crystal found in the environs, called Alençon diamonds.

HERTS. See Hertfordshire.

HERTSBERGHE, a commune of Belgium, in the prov. of East Flanders, dep. of Oostcamp. Pop. 510.

HERTSWEGEN, a commune of Belgium, in the prov. of Brabant, dep. of Duysbourg. Pop. 140.

HERTSMONCEAUX, a parish in Sussex, 3 m. E of Hailsham. Area 4,870 acres. Pop. in 1831, 1,338; in 1841, 1,445.

HERTSEK. See Hertzegovine.

HERTZO, an island of the gulf of Bothnia, near the coast of Sweden, in the laen of Pitea, E of Lulea, in N lat. 65° 35′. It is about 12 m. in length, and 6 m. at its greatest breadth.

HERVAL, a parish of Brazil, in the prov. of São-Pedro-do-Rio-Grande, in the mountain-range of the same name, and near the Rio Jaquarão. The Serra-H. gives rise to several streams which flow into the lake Dos Patos.

HERVAS, a town of Spain, in Estremadura, in the prov. and 63 m. NNE of Caceres, and partido of Jarandilla. Pop. 2,600. It has a parish-church, an hospital, a custom-house, and a convent, and has some manufactories of common cloth.

HERVE, a department, commune, and town of Belgium, in the prov. of Liege, arrond. of Verviers. Pop. of dep. 3,354. The town is 5 m. NW of Verviers, and 11 m. E of Liege, on a rising ground. Pop. 3,304. The environs afford excellent pasturage, and are noted for their butter and cheese. It has also considerable manufactories of cloth and other woollen fabrics, shoes, and hosiery, and possesses an active transit-trade with Germany.

HERVE′ (Saint), a commune of France, in the dep. of the Côtes-du-Nord, cant. of Uzel, 9 m. NNW of Loudeac. Pop. 1,301.

HERVEY BAY, an extensive indentation of the coast of E. Australia, enclosed on the E by a long and narrow island named Great Sandy island, terminating on the N by a cape of the same name, in S lat. 25°, and E long. 153°. The depth of its embrasure is about 45 m., and the breadth of its entrance, which opens to the N, nearly the same.

HERVEY ISLANDS. See Harvey Islands.

HERVIAS, a town of Spain, in Old Castile, in the prov. of Logrono, partido and 7 m. SW of Santo-Domingo-de-la-Calzada. Pop. 426.

HERWIG, a commune of Belgium, in the prov. of East Flanders, dep. of Sainte-Marie-Hoorebeke. Pop. 177.

HERWIGSDORF, a village of Prussia, in the prov. of Silesia, regency and 48 m. NW of Liegnitz, circle and 3 m. WSW of Freystadt. Pop. 1,385.—Also a village of Saxony, in the prov. of Upper Lusatia, SE of Löbau. Pop. 958.

HERWYNEN, a village of Holland, in the prov. of Gelderland, arrond. and 15 m. WSW of Thiel, cant. and 8 m. WSW of Geldermalsern, on the r. bank of the Waal. Pop. 1,834.

HERXHEIM, or Herxenheim, a village of Bavaria, in the circle of the Pfalz, cant. and 6 m. SE of Landau. Pop. 3,557. An engagement took place here between the French and Austrians on the 17th June, 1793.

HERY, or Airy, a commune of France, in the dep. of the Yonne, cant. and 1½ m. E of Seignelay, and 9 m. NNE of Auxerre. Pop. 1,453. It contains the remains of an ancient Benedictine convent, noted for the national council held in it in 1015, which decreed the junction of the duchy of Burgundy with France.

HERY-SUR-UGINE, a village of Sardinia, in the div. of Savoy, prov. of Upper Savoy, mand. of Ugine, and 10 m. NNE of Conflans. Pop. 1,200.

HERZBERG, a bailiwick and town of Hanover, in the landr. and 40 m. SSE of Hildesheim, and 21 m. ENE of Gottingen, on the l. bank of the Sieber, near the S declivity of the Harz. Pop. 3,706. It has a castle, which belonged to the electors of Brunswick, and a church; and possesses an extensive manufactory of arms, a public granary, manufactories of linen and woollen fabrics, a spinning and a paper mill. Pop. of bail. 6,492.—Also a town of Prussia, in the prov. of Saxony, regency and 63 m. ENE of Merseburg, circle and 12 m. SE of Schweinitz, on an island formed by an arm of the Elster. Pop. 3,720. It is walled round, and has a suburb, and 2 churches. Common cloth and pottery form the chief articles of local manufacture. To the E of the last-named town is Old Herzberg, a village containing 200 inhabitants. The direct Berlin and Dresden railway passes H., and has a station here 47 m. from Berlin, and 23 m. from Dresden.

HERZEELE, a commune of France, in the dep. of the Nord, cant. of Wormhoudt, 13 m. SE of Dunkirk, near the r. bank of the Yser. Pop. 1,805.—Also a department and commune of Belgium, in the prov. of East Flanders, arrond. and 13 m. E of Audenarde. Pop. of dep. 1,903; of v. 725. It has a considerable trade in lint and linen.

HERZEGOVINE, Hertzegovine, Herzegovina, or Hertsek, a sanjak of Bosnia, but forming a kind of debateable land between the Austrian and Turkish frontiers. It lies between the parallels of 42° 25′ and 44° N; and between the meridians of 16° 20′ and 19° 10′ E. Its length from NW to SE

is about 130 m.; its mean breadth 60 m. Its superficial area may be taken at 7,000 sq. m. On the NW it is bounded by the sanj. of Bagnalouka; on the N and NE by that of Trawnik, from which it is separated by the Dinaric Alps; on the E it has the sanj. of Novibazar, from which it is likewise separated by the Dinaric Alps; on the SE it skirts the Montenegro territory, and on the SW and W, the frontiers of Dalmatia, through which it throws out a narrow projection to the Adriatic coast, terminating in the point of Kleck. The entire country is crossed by ramifications of the Dinaric chain. The only extensive plains are those of Gabela and Grahovo, on the frontiers of Montenegro. The general declination of the surface is towards the SW, to the Adriatic; and nearly all its streams are carried into that sea by means of the Narenta, which receives on the r. the Dretsnitza, the Josinitza, and the Trebisat; and on the l. the Drinovnik, the Jesero, the Bouhna, and the Croupa. The chief towns are Mostar, which is the cap., Stolacz, Trebigno, Nikitsch, and Poscitel.

HERZMAN-MIESTECTZ. See Hermanstadt.

HERZNACH (Ober and Unter), two contiguous villages in Switzerland, in the cant. of Argau, S of Frick. United pop. 766.

HERZOGAU, a village of Bavaria, in the circle of the Upper Pfalz, presidial and 2 m. SSE of Waldmunchen, and 39 m. NE of Ratisbon. Pop. 220. It has 2 churches and an alms-house, and possesses a brewery and 2 large glass-houses.

HERZOGENAURACH, a town of Bavaria, in the circle of Middle Franconia, 14 m. NW of Nurnberg, and 26 m. NE of Anspach, on the l. bank of the Aurach. Pop. 1,827. It has a castle and a church, and possesses several manufactories of woollen fabrics, a cotton spinning-mill, and a considerable trade in cattle and fish.

HERZOGENBUCHSEE, a parish and village of Switzerland, in the cant. of Berne, bail. and 5 m. SE of Wangen, and 8 m. ESE of Soleure. Pop. (Prot.) 6,000. It has a government corn-magazine, and several well-frequented markets.

HERZOGENBURG, a market-town of Austria, in the prov. of Lower Austria, in the upper circle of the Wienerwalde, 8 m. NNE of St. Polten, in a marshy plain on the r. bank of the Trasen. Pop. 1,280. It is surrounded by a wall and ditch, and has an old castle, and an Augustine convent founded in 1244, and containing an extensive library. This town is the ancient *Ducum-Burgum*.

HERZOGENRATH, or Rode-le-Duc, a town of Prussia, in the prov. of the Rhine, regency and circle and 8 m. N of Achen, on the Worno, near the Belgian frontier. Pop. 466. It was formerly fortified, and has the ruins of an ancient castle, and 2 Catholic churches. In the environs are extensive coal-mines and quarries of freestone.

HERZOG-ERNST, a summit of the Noric Alps, on the confines of the archduchy of Austria, and of the kingdom of Illyria, 57 m. S of Salzburg. It rises to the height of 9,600 ft. above sea-level.

HERZOGSWALDAU, a village of Prussia, in the prov. of Silesia, regency and 51 m. NW of Liegnitz. Pop. 848. In the circle and 3 m. NW of Freystadt is the v. of Nieder H., containing 646 inhabitants..

HERZOGSWALDE, a village of Saxony, in the Meissner circle, SW of Dresden. Pop. 667.—Also a village of Prussia, in the regency of Königsberg, S of Liebstadt. Pop. 467.

HESARAB, Hezar-asp, or Asarys, a town of Turkomania, in the khanat and 69 m. ESE of Khivah, a little to the S of a canal of the same name, and near its junction with the Amu or Jihun. It is enclosed by a rampart of earth, and contains about 600 houses. A considerable trade is carried on by the inhabitants with the surrounding countries.—The canal of H. extends from the capital to the Amu, and forms one of the numerous drains by which the country to the S of the sea of Aral is intersected.

HESDIN, a canton, commune, and town of France, in the dep. of the Pas-de-Calais, arrond. of Montreuil-sur-Mer. The cant. comprises 23 com. Pop. in 1831, 14,087; in 1841, 14,606. The town is 15 m. SE of Montreuil, and 35 m. WNW of Arras, in a marshy and insalubrious valley, on the Canche, a little above the confluence of that river with the Ternoise. Pop. in 1841, 3,790. It is surrounded by walls, with bastions and considerable outworks; and the Canche, by which it is intersected, maintains a constant supply of water in the ditches. It has a town-hall, a church, and a house-of-detention; and possesses manufactories of hosiery, soap, oil, earthenware, bricks, tiles, and leather, several breweries, and extensive bleacheries. Fairs for cattle, horses, and local produce, are held here 4 times a-year.—This town was founded in 1554, by Charles V., on the site of the village of Menil, 3 m. from Hesdin-le-Vieux. It was removed to its present situation by Louis XIII., in 1639, and in 1659 was united by the treaty of the Pyrences to France. The valley of the C. is highly productive in hemp and flax.

HESDIN-LE-VIEUX, a village of France, in the dep. of the Pas-de-Calais, cant. of Parcq, 12 m. W of St. Pol, and 3 m. ESE of Hesdin, on the r. bank of the Canche. This was formerly a place of considerable strength, and was the scene of frequent engagements during the wars of Charles V. and Francis I. It was destroyed in 1555 by Philibert-Emmanuel, duke of Savoy.

HESHBON, or Husban, a tent village of Syria, in the pash. and 105 m. SSW of Damascus, and 51 m. ENE of Jerusalem.

HESKEN, or Hisken, a township in the p. of Eccleston, Lancashire, 2 m. N of Prescot. Area 1,230 acres. Pop. in 1831, 324; in 1841, 359.

HESKET-IN-THE-FOREST, a parish in Cumberland, 9 m. NNW of Penrith, W of the Eden. Area 16,580 acres. Pop. in 1831, 2,107; in 1841, 2,018. It comprises the townships of Nether and Upper H., 7½ m. SSE of Carlisle. Pop. 883.

HESKET-NEWMARKET, a small market-town in the p. of Caldbeck, Cumberland, 9 m. SE of Wigton, on the Caldew.

HESLERTON, a parish in the E. R. of Yorkshire, 8 m. ENE of New Malton, on the York and Scarborough railway. Area 6,170 acres. Pop. in 1841, 563. It includes the townships of East and West H.

HESLERTON (East), a township in the p. of Heslerton, E. R. of Yorkshire, 3 m. SSE of Yeddingham, S of the Derwent. Area 3,990 acres. Pop. 235.

HESLERTON (West), a township in the p. of Heslerton, E. R. of Yorkshire, 1½ m. SW of East H. Area 2,180 acres. Pop. in 1831, 299; in 1841, 328.

HESLETON-COLD, a township in the p. of Dalton-le-Dale, co. of Durham, 6½ m. N of Hestleton-Monk. Area 820 acres. Pop. in 1841, 83.

HESLETON-MONK, a parish and township in the co. of Durham, 13 m. N of Stockton-upon-Tees, on a small stream which flows into the North sea. Area of p. 6,060 acres. Pop. in 1831, 501; in 1841, 935. Area of township 1,190 acres. Pop. in 1841, 490.

HESLEY-HURST, a township in the p. of Rothbury, Northumberland. Pop. in 1831, 40; in 1841, 36.

HESLINGTON (St. Paul), a parish in the E. R. of Yorkshire, 1½ m. ESE of York. Area 2,570 acres. Pop. in 1831, 536; in 1841, 1,246.

HESLINGTON (St. Lawrence), a township in the p. of St. Lawrence, E. R. of Yorkshire. Pop. 265.

HESN-KEIFA, a fortified town of Turkey in

Asia, capital of a sanj. in the pash. and 70 m. S of Diarbekir, and 63 m. NW of Jezirah, on the r. bank of the Tigris. It has a fortress on an adjacent height. This town bore in ancient times the name of *Castrum Cepha.* Its fortifications were destroyed by Justinian.

HESN-MANSUR, a town of Turkey in Asia, in the pash. of Marash, sanj. and 10 m. NE of Someisat, on the r. bank of the Euphrates.

HESPHOUDT, a commune of Belgium, in the prov. of Brabant, dep. of Gaesbeeck. Pop. 73.

HESSAY, a township in the p. of Moor-Monkton, ainsty and 5½ m. NW of York. Area 1,120 acres. Pop. in 1831, 170; in 1841, 149.

HESSE-CASSEL, Kur-Hessen, or Electoral Hesse, an electorate of Germany, created out of the former landgraviate of the same name. It lies between the parallels of 49° 56′ and 52° 26′ N, and the meridians of 8° 31′ and 10° 33′ E; and is composed of 6 distinct portions. The principal section is bounded on the NW by the Prussian prov. of Westphalia; on the NE by the kingdom of Hanover; on the E by the Prussian prov. of Saxony, the grand-duchy of Saxe-Weimar, and by Bavaria; on the SE by Bavaria; on the SW by the grand-duchy of Hesse and the republic of Frankfort; and on the W by the duchy of Nassau, the grand-duchy of Hesse, and by Waldeck. The two principal *enclaves*, or detached portions, are Schmalkalden and Schaumburg. The surface is 204·09 German sq. m., according to Hassel; Stein gives 209. Perhaps, including the detached territories, 4,350 British sq. m. will be near the truth. The pop. was returned to the confederacy at 545,208; subsequently it was estimated at 585,100, by Stein; in 1826 it amounted to 592,000, according to Balbi; in 1837 it was 782,671; but in 1846 it was returned at only 754,590. The following table presents the area and pop. of this electorate, according to the *Almanach de Gotha* for 1851:

	Area.	Pop. in 1832.	Pop. in 1846.
Lower Hesse, with Schaumburg,	98·3	325,765	366,663
Upper Hesse, ...	41·3	113,837	122,432
Fulda, ...	41·8	128,584	140,718
Hanau, ...	27·5	109,663	124,782
	208·9	677,849	754,590

Physical features.] Situated in the NW angle of the great German plateau, or Hessian terrace, H. is a mountainous country, but is intersected with valleys which offer much picturesque scenery,—particularly the fine valley of the Fulda, in which the cap. lies. The principal mountains are those of the Thuringian forest, to which belongs the Inselberg, 2,791 ft. in alt.; the Werra mountains, in which the Meisner attains an alt. of 2,327 ft.; the Rhön; the Fulda mountains, which are not very high, but remarkable for their volcanic origin and beautiful forests; the mountains of Hanau; and the Sünter. The principal rivers are the Weser, with its two branches the Werra and the Fulda; and the Main, and the Lahn, both affluents of the Rhine. Among the minor streams are the Diemel, the Edder, with its affluent the Schwalm, and the Haune, all tributaries of the Fulda; the Ohm, an affluent of the Lahn; and the Nedda and Kinzig, affluents of the Main. The Fulda and the Kinzig are the only streams whose course lies wholly within the electorate.

Productions, &c.] H. produces game, corn, fruit, wine, wool, flax, and hemp. Among the minor articles of cultivation are chiccory, hops, and poppy-seed; and juniper-berries form an article of export from Lower H. Near Frankenberg is a gold-mine; and copper is mined at Richelsdorf. Silver, copper, lead, and iron, are found in considerable quantities; also alum, vitriol, sulphur, coal, marble, and alabaster. About 50,000 quintals of raw iron, and 19,000 q. of bar or wrought iron, are annually made; and upwards of 5,000 cwts. of cobalt are obtained. Anthracite and coal are extensively wrought. The export of wool in 1835 amounted to 27,533 lbs. There are several salt springs, mineral waters, and medicinal baths. With the exception of the territory of Schmalkalden, the prevailing branch of industry in H. is that of agriculture and its immediately related arts; yet the state of agriculture here is inferior to that of the neighbouring Hanoverian, Prussian, and Saxon provs. About 1,000,000 acres were under cultivation in 1840. Next to the cultivation of the cerealia, that of lint is the most important; and wine is grown to a considerable extent as far N as Witzenhausen. The tobacco of Hanau is much esteemed. The forests occupy 1,578,333 morgens, of which 835,314 belong to the state.—There are few manufactures, except linen-weaving, which is carried on all over the country, and exported to the yearly value of 1,000,000 dollars. Carpets, porcelain, leather, paper, cutlery, gunpowder, and tar, are made. The transit-trade is very considerable.

Population.] In 1818, there were 329,200 Calvinists, 140,000 Lutherans, 90,000 Catholics, 8,500 Jews, and 200 Mennonites in this country. Later returns estimate the Protestants at 605,000; Roman Catholics at 105,000; Jews at 15,000. With the exception of the Jews, and about 4,000 of French and Flemish extraction, all the pop. is of German descent. There are 3 Protestant consistories: viz., those of Cassel, Marburg, and Hanau; 12 Protestant dioceses; and 291 parishes. The Catholics are under the bishop of Fulda, a suffragan of Friburg; and have 64 parishes. There are 6 convents within the electoral territory, and 18 synagogues. The Hessians are a strong and well-formed race. The women of the lower classes are neither handsome nor pleasant, and the lower class of villages are dirty and squalid in all their attributes. Hassel represents them as having no genius, and being little adapted for the cultivation of the arts. "No distinguished poet or author of genius in German literature," he says, "has been born in H."

Education.] The H. establishments for education are inefficient. The elementary schools are not good, and the university at Marburg, though a little improved of late, cannot compete with any other German university. It is generally attended by from 220 to 260 students. An ordonnance issued or renewed in 1818, allowed only the sons of nobles, and those civil officers who had equal rank with them, and the eldest sons of clergymen to enjoy a liberal education! There existed likewise a very severe censorship not only upon native publications, but also on the importation of foreign books, lest any liberal and enlightened principles might, by this means, be diffused in the country. The number of primary schools in 1840 was 1,255, attended by 107,600 pupils; there were also 6 gymnasia with 74 professors, and 980 pupils. There are several special institutes for educational purposes.

Government.] H. holds the eighth place in the German confederacy, and has 3 votes *in plenum.* The elector was an absolute sovereign, until compelled to grant a constitution in 1830. The assembly of estates which it granted, consisting of one chamber of 52 members, were elected partly by the town and the agricultural districts, by direct election. The franchise was possessed by every individual 30 years of age whose civil rights had not been destroyed by a felonious offence. The smaller portion of the members of the estates were the collateral branches of the electoral house and the representatives of the nobility. Religious freedom was

promised; but nothing was said respecting freedom of the press in the constitution. From 1830 to 1848 the liberal party struggled to impede the reactionary tendencies of the elector and his government, and to procure from them trial by jury, freedom of the press, and the other essential elements of popular political progress. In this struggle they have unhappily been defeated by Austrian influence. The succession runs in the male line; the prince is of age at 18.—The members of the ministry are, the ministers of finance, of war, of foreign affairs, of justice, of the interior, the director of the grand state chest [*haupstaatskasse*] and 2 ministerial councillors.—For administrative purposes the 4 provs. are subdivided into 21 circles; and the principal towns are governed by a burgomaster and a communal council.—The supreme court-of-justice is composed of two chambers, a civil and a communal chamber; and there are 5 *obergaricht* or superior tribunals at Cassel, Marburg, Fulda, Hanau, and Rinheln. Each of the provincial caps. has a head-police-court, subordinate to the tribunals in the cap.

Revenue.] The revenue amounted to about £643,750 in 1826, according to Balbi; and the debt to £274,166. In 1834–36, the expenditure was 3,258,212 dollars; and the revenue for the same period only 3,069,540 d. In 1846, 1847, and 1848, the entire revenue for the three years was taken at 12,942,460 d.; and the public debt in 1840 was 1,642,566 d. In round numbers the revenue may be stated at £650,000; the debt at £250,000.

Army.] The whole military force consists of about 18,000 men. In 1826, the contingent amounted to 5,679, levied by conscription.

History.] Hesse belonged to the Frankish empire; and till about the middle of the 13th cent. its history is blended with that of Thuringia. It was only after Henry I., after a violent struggle with the house of Meissen, had got into tranquil possession of Hesse, that the emperor Adolph of Nassau declared it an immediate fief of the empire. Henry made Cassel his residence. After his death the country was divided between his two sons; but one of them having died, it was again united under the other. After several unions and dismemberments, we find it, in 1500, again united under William, who left it at his death to his son Philip, then only five years of age. The troubles which distracted Germany, at this period caused the emperor Maximilian, in 1508, to declare the young landgrave—whose great qualities he foresaw—of age at fourteen. Philip, who obtained for himself the honourable appellation of 'the Magnanimous,' introduced the Reformation into Hesse; and with the secularized goods of the Church, founded the university of Marburg. It was he who, in 1529, negotiated the famous interview between Luther and Zuingle for the purpose of adjusting their differences. He undertook, together with the elector of Saxony, the direction of the Schmalkaldian league. He became a prisoner of Charles V., in the battle of Muhlberg; but obtained his freedom after a captivity of five years. He divided his possessions in 1562 among his four sons; but two of them having died, only the two lines of Cassel and Darmstadt remained. William IV. founded the line of Hesse-Cassel. William VIII. was an ally of England in the Seven Years' war. His son, Frederic II., maintained a brilliant court, and a considerable army, which he sold to England to fight against the cause of American independence. His son, William IX., took part in the war of the Revolution against France; but entered into the treaty of peace at Basle. He was indemnified for his cessions beyond the Rhine by some other districts, and named elector. In the war between France and Prussia, he declared himself neutral; but after the battle of Jena, he was driven from his country on the allegation of his having secretly favoured the Prussian interest, and his dominions were incorporated with Jerome Bonaparte's kingdom of Westphalia. After the victory of Leipzig, the elector returned to his country, and retained his title, although election no longer exists in Germany. William convened an assembly of the States in 1814, but could not agree with them regarding a new constitution. He died on the 27th of February, 1821, and was succeeded by his son, William XI., who established a new administration, and a new division of the country. On the 20th of November, 1847, Frederic William I. succeeded his father William XI Being the son of the sister of the king of Denmark, the succession to the Danish crown, by the law of 1665, comes to the present elector of H. in the event of the extinction of the male branch of the reigning sovereign.

HESSE-DARMSTADT, or GRAND-DUCAL HESSE, a grand-duchy of Germany, consisting of two large and several smaller districts, comprised between the parallels of 49° 22′ and 51° 4′ N, and the meridians of 7° 54′ and 9° 50′ E. The southern part is bounded on the NW by Nassau; on the N by Frankfort and Hesse-Cassel; on the NE and E by Bavaria; on the S by Baden; on the SW by Bavaria; and on the W by the Prussian province of the Lower Rhine. The northern part—of which some small districts lie enclosed in the counties of Waldeck and Nassau—is surrounded on the NE and S by Hesse-Cassel; on the SW by Frankfort and Hesse-Homburg; and on the W by Nassau, and the Prussian province of the Lower Rhine. Besides these sections there are 9 *enclaves*, or isolated districts, belonging to this grand-duchy: viz., Vohl, Horinghausen, and Eimelrode, lying within the principality of Waldeck; Finkenhof, Helenhof, and Wimpfen in the grand-duchy of Baden and in Wurtemberg; the other 3 sections lie within the foreign territory intervening between the two main sections of this grand-duchy. Stein estimates the superficial extent of this country at 153 German sq. m.; Hassel at 193·30, or 4,156 British sq. m. The following table is from the *Almanach de Gotha* for 1851:

	Area.	Pop. in 1832.	Pop. in 1846.
Upper Hesse,	72·9	271.642	310,141
Starkenburg,	54·8	256.745	317.093
Rhenish Hesse,	25·	189,986	225,445
	152·7	718,373	852,679

Physical features.] The whole country is mountainous; but where the majestic Rhine breaks through the S part, it expands on both sides into fertile plains. The N part partakes of the features of northern Germany, whilst the southern is adorned with the luxurious vegetation of the S of Germany.—The principal mountains are the Odenwalde, along and across which runs the celebrated road from Darmstadt to Frankfort called the *Bergstrasse*, or 'Mountain-road,' begun by the Romans, and celebrated for the romantic scenery of its environs. To this ridge belongs the Malchen, [alt. 1,640 ft.] formerly believed to be the *Melibockhus* of Ptolemy, and from which there is a beautiful view. The Herhenheimer-Höhe, a mountain known by the Romans under the name of *Taunus*, and of which the Feldberg, 2,605 ft. high, is one of the principal points, rises here. The Vogelsberg is a ridge consisting principally of basalt. The principal rivers are the Rhine, the Nahe, the Neckar, the Nidda, the Main, or Mayne, the Lahn, the Schwalen, and the Fulda.

Productions.] Of 3,128,586 morgens, or acres—of which there are 22,018 in a German sq. m.—of land in this duchy, 1,589,634 were under the plough; 381,408 in meadow; 38,173 under vines; and 1,081,410 under wood, in 1840.—Copper, iron, and salt are extensively wrought. A considerable amount of linen and coarse woollen goods are woven in this duchy; and paper, chemical substances, and works in metal are principal items in the manufacturing industry. The export of wool in 1835 was 810,714 lbs. The productions in the southern part are those of the S of Germany. The rearing of cattle is a principal branch of agricultural labour in the highland districts. In 1828, the stock was returned at 38,072 horses; 244,029 cattle; 224,243 sheep; 140,501 pigs; and 11,723 goats.

Population.] Hassel is of opinion that the pop. of this duchy has reached a higher point of civilization than that of Hesse-Cassel. There are a few Frenchmen and Waldenses, and about 15,000 Jews. Of the pop. in 1828, the Lutherans amounted to 366,000; there were 140,000 Catholics; 98,000 Calvinists; and 1,000 Mennonites. In 1832, when the pop. had increased to 718,373, there were 516,687 Protestants; 177,888 Catholics; 1,295 Mennonites; and 22,174

Jews. The Protestants had 3 superintendentships, 41 deaneries, and 421 parishes. The Catholics had 1 bishop, 17 deaneries, and 146 parishes.—The number of primary schools in 1840 was 1,594. There were 6 elementary polytechnic schools, 7 gymnasia, a university at Giessen founded in 1605, and several special educational establishments.

Government, &c.] Hesse-D. holds the 9th place in the confederacy, with 3 votes *in plenum*. The succession goes in the male line; the grand duke is of age at 18. The constitution secures equality of rights to every citizen without distinction of religious creed in the Christian confessions. But a short time since the chambers were dissolved on account of their democratic spirit; and in 1848, Duke Ludvig II. retired from the government, and the present duke succeeded, who is supposed to be under Austrian and Bavarian influence. There are two legislative chambers, the constitution of which has been recently liberalised.—The revenue amounted in 1826, according to Balbi, to £652,763; and the debt to £1,125,000. The revenue in 1834 was 6,576,106 florins; and the public debt amounted to 11,564,377 florins. In 1850, the revenue was 7,795,555 florins. In round numbers, the revenue may be taken at £650,000; and the debt at £450,000.

HESSE-HOMBURG, a small landgraviate or principality of the German confederation, at the foot of the Taunus mountains, to the N of Frankfort-on-the-Main, belonging, with the title of landgrave, to a younger branch of the family of Hesse-Darmstadt, and containing, with the seignory of Messenheim, an area of 5 German or 106 English sq. m., with a pop. in 1840 of 23,689; in 1846, of 24,203. In 1806, when the confederation of the Rhine was formed, the landgrave was deprived of his states; but the congress of Vienna not only restored these completely, but gave him an additional district on the l. side of the Rhine. He is also a member of the Germanic confederation; and his contingent to the federal army is 200 men. The government of the little state was absolute until a constitution was granted in January 1850, creating a representative chamber to be elected on the principle of one deputy for every 1,500 of the pop. The administration is managed by 3 commissions; and the supreme tribunal is the court of appeal at Darmstadt. The revenue of the landgraviate is about £75,000. Its debt amounts to £130,000.—The military force amounts to 488 men. The mediatised possessions of the landgrave are the seignory of Oebisfelde, comprising 15 villages, and 3,681 inhabitants, in the circle of Gardelegen, in Prussian Saxony; the seignory of Hœtensleben with 5 villages and 3,256 inhabitants, in the circle of Neuhaldensleben; and the seignory of Winningen, with 2 villages and 1,214 inhabitants, in the circle of Aschersleben.—The pop. is mostly Calvinist. There are about 3,000 Roman Catholics, and 1,000 Jews.—The family residence is at the town of Homburg, which see.

HESSEL, a small river of Prussian Westphalia, which runs into the Ems, 3 m. W of Sassenberg.

HESSELOE, a small island of Denmark, 15 m. N of Sieland, in N lat. 56° 11′. It is about 1¼ m. in length.

HESSEN, a town of Germany, in Brunswick, 14 m. NW of Halberstadt, and 6 m. E of Hornburg. Pop. 1,400.

HESSEN (Nieder), or Lower Hesse, an administrative province of Hesse-Cassel. Area, with the *enclave* of Schaumbourg, which is administratively annexed to this prov., 98·3 German sq. m. Pop. in 1840, 353,220; in 1846, 366,663. It is divided into 10 circles, viz.: Cassel, Hofgeismar, Wolfhagen, Fritzlar, Homberg, Melsungen, Rotenburg, Eschwege, Witzenhausen, and Schaumbourg; and comprises 34 towns and 592 villages and hamlets. Its cap. is Cassel.

HESSEN (Ober), or Upper Hesse, an administrative province of the landgraviate of Hesse-Darmstadt. Area 72·9 German sq. m. Pop. in 1840, 297,672; in 1846, 310,141. It is divided into 15 *landraths-bezirk*, viz.: Alsfeld, Battenberg, Büdingen, Friedberg, Giessen, Gladenbach, Grünberg, Hungen, Kutorf, Lauterbach, Nidda, Schlitz, Schatten, Vilbel, and Vöhl; and comprises 34 towns, 13 burghs, and 510 villages and hamlets. Its cap. is Giessen.—Also an administrative prov. of Hesse-Cassel. Area 41·3 German sq. m. Pop. in 1840, 119,008; in 1846, 122,432. It is divided into 4 circles, viz.: Marburg, Frankenberg, Kirchhain, and Zeigenhain; and comprises 15 towns, 5 burghs, and 250 villages and hamlets. Its cap. is Marburg.

HESSEN-RHENANE, Rhein-Hessen, or Rhenish-Hessen, an administrative province of Hesse-Darmstadt. Area 25 German sq. m. Pop. in 1840, 213,671; in 1846, 225,445. It is divided into 11 cantons, viz.: Alzei, Bingen, Mayence, Niederolm, Oberingelheim, Oppenheim, Osthofen, Pfeddersheh, Wöllstein, Wirrstadt, and Worms; and comprises 10 towns, 12 burghs, and 168 villages and hamlets. Its cap. is Mayence.

HESSET, a parish in Suffolk, 5 m. ESE of Bury-St.-Edmund's. Area 1,620 acres. Pop. 417.

HESSLE, a parish in Yorkshire, in the co. of the town of Hull, 4 m. W of Hull, with a station on the Leeds and Hull railway. There is here a ferry over the Humber to Barton in Lincolnshire. Area 2,400 acres. Pop. in 1841, 1,388.

HESTOE, one of the smaller Faroe isles, 6 m. N of Sandoe.

HESTON, a small island on the coast of Scotland, in Kirkcudbrightshire, at the mouth of the river Urr.—Also a parish of Middlesex, 1½ m. N of Hounslow. Area 3,720 acres. Pop. 4,071.

HESTRAD, a village of France, in the dep. of Nord, cant. and 4 m. NE of Solre-le-Chateau. Pop. 200.

HESWALL, a parish in Cheshire, 3 m. NNW of Great Neston, on the Dee. Area 2,070 acres. Pop. in 1831, 406; in 1841, 546.

HETA, a village of Mandshuria, in the prov. of Kirin-Oola, on the r. bank of the Amur.

HETAN, a district of Upper Guinea, on the coast of Biafra, to the N of that of Aosa.

HETEREN, a village of Holland, in the prov. of Gelderland, arrond. and 9 m. NW of Nimeguen, and cant. of Elst, on the l. bank of the Rhine. Pop. 2,426.

HETEYM, a tribe of pastoral Arabs, who inhabit the vicinity of Belbeis, in the prov. of Sharkieh, Lower Egypt. They are said to be able to bring upon the field 2,000 foot-soldiers and 200 horsemen.

HETHAURA, or Hettowra, a town of Northern Hindostan, in the state of Nepal, district of Mokvanpur, 18 m. SW of Khatmandu, in a fine plain on the Rapti, an affluent of the Gunduck. It is the chief mart for the trade carried on between the northern Nepaulese provinces and the British. The heat of this place is less intense than in Terriani; but in consequence of the forests by which it is surrounded, it is extremely insalubrious. The only accommodation for the merchants is a brick building enclosing a square court and a few shops.

HETHEL, a parish in Norfolk, 4 m. NE of Wymondham. Area 1,420 acres. Pop. in 1841, 211.

HETHERSET, a parish in Norfolk, 5½ m. WSW of Norwich. Area 3,190 acres. Pop. in 1841, 1,138.

HETHERSGILL, or Heathersgill, a township in the p. of Kirk-Linton, Cumberland, 6½ m. NE of Longtown, on a branch of the Eden. Pop. in 1831, 743; in 1841, 799.

HETI (Ras el), or Bistona, a cape of Persia, in Farsistan, on the Persian gulf, in N lat. 26° 30′, and E long. 54° 20′.

HE-TONG, a maritime town of Corea, in the prov. of Chuen-lo, on the S coast of the peninsula, 96 m. WSW of Sing-chu.

HE-TSING, a town of Corea, in the prov. of Chu-sin, 51 m. NE of Ku-fu.

HETT, a township and village in the p. of Merington, co. and 4 m. S of Durham. Area 1,580 acres. Pop. in 1831, 227; in 1841, 234.

HETTANGE-LA-GRANDE, a commune of France, in the dep. of the Moselle, cant. of Cattenom, 4 m. N of Thionville. Pop. 1,106. It has manufactories of pottery; and in the environs are extensive quarries of free and paving stone.

HETTEVAER, a group of islands in the West fiord, near the coast of the Norwegian diocese of Nordland, to the N of the Salten-fiord.

HETTINGEN, a village of Baden, in the circle of the Lower Rhine, to the E of Buchen. Pop. 1,058. —Also a village of the principality of Hohenzollern-Sigmaringen, in the seignory of the barons of Speth, 3 m. S of Gamartingen, and 11 m. N of Sigmaringen. Pop. 544. It has a castle, and possesses numerous spinning-mills.

HETTON-with-BROADLEY, a township in the p. of Burnsale, W. R. of Yorkshire, 4½ m. NNW of Skipton. Area 4,980 acres. Pop. in 1841, 191.

HETTON-LE-HOLE, a township in the p. of Houghton-le-Spring, co. and 6 m. NE of Durham, connected by railways with Sunderland, Durham, Hartlepool, &c. Area 1,590 acres. Pop. in 1831, 5,887; in 1841, 4,158.

HETTSTADT, a town of Prussia, prov. of Saxony, regency and 32 m. NW of Merseburg, circle and 6 m. NNE of Mannsfeld on the Wipper. Pop. in 1846, 4,000. It has several Lutheran churches; and possesses several distilleries, a large copper-finery, and a vitriol-work.

HETTSTADT (Gross), a village of the principality of Schwarzburg-Rudolstadt, on the Ilm, NE of Stadtelm. Pop. 200.

HETVELD, a commune of Belgium, in the prov. of East Flanders, dep. of Beernem. Pop. 250.

HET-Y. See Y-Het.

HETZENDORF, a village of the archduchy of Austria, in the prov. of Lower Austria, circle of the Lower Weinerwalde, 5 m. SSW of Vienna. Pop. 360. It has a fine castle.

HETZERATH, a village of Prussia, in the prov. of the Rhine, regency and NE of Treves.

HETZFELD. See Heidingsfeld.

HEUBACH, a town of Wurtemberg, in the circle of the Jaxt, bail. and 5 m. E of Gmund, and 35 m. E of Stuttgard, on the Rems. Pop. 1,189. It has manufactories of cotton fabrics, especially handkerchiefs and cotton-yarn.—Also a small district in the circle of the Schwarzwald, bail. of Spaichingen, to the E of Rotweil. It gives rise to some of the head-streams of the Neckar and Danube.

HEUBACH (Gross), a village of Bavaria, in the circle of Upper Franconia, presidial and 5 m. SE of Klingenberg, and 20 m. S of Aschaffenburg, on the r. bank of the Main. Pop. 1,850. In the vicinity, on a height, is a capuchin convent. In the same circle is the village Klein-H., containing 1,571 inhabitants.

HEUBUDE, a village of Prussia, in the regency and to the E of Danzig. Pop. 561.

HEUCHELHEIM, or Heichelheim, a village of the duchy of Saxe-Weimar, to the N of Weimar. Pop. 242.

HEUCHIN, a canton, commune, and town of France, in the dep. of the Pas-de-Calais, arrond. of Saint-Pol-sur-Ternoise. The cant. comprises 33 com. Pop. in 1831, 13,103; in 1841, 13,294. The town is 8 m. NNW of St. Pol, and 27 m. NW of Arras. Pop. 574. Fairs for cattle and grain are held here 3 times a-year.

HEUDICOURT, a commune of France, in the dep. of the Somme, cant. and 5 m. N of Roisel. Pop. in 1841, 1,546.

HEUGAS, a commune of France, in the dep. of the Landes, cant. and 8 m. SSE of Dax. Pop. 1,189.

HEUGH, a township in the p. and 1¼ m. NE of Stamfordham, Northumberland. Pop. in 1841, 442.

HEUKELUM, a town of Holland, in the prov. of North Holland, arrond. and 6 m. NE of Gorcum, and cant. of Vianen, on the l. bank of the Linge. Pop. 599.

HEULE, a department and commune of Belgium, in the prov. of East Flanders, arrond. of Courtrai. Pop. of dep. 3,778. The village is ½ m. NW of Courtrai, on the r. bank of the Heullebeke, an affluent of the Lys. Pop. 3,473. Hemp is extensively cultivated in this locality.

HEULE-BOUTER-MEULIN, a commune of Belgium, in the prov. of Flanders, dep. of Heule. Pop. 305.

HEULLEKEN, a commune of Belgium, in the prov. of Brabant, dep. of Linke-Beke. Pop. 468.

HEULLIE, a commune of Belgium, in the prov. of Antwerp, dep. of Westerloo. Pop. 332.

HEURE, a department and commune of Belgium, in the prov. of Namur, arrond. of Dinant. Pop. 535. Lace forms the chief article of local manufacture.

HEURE (Le Grande), a village of France, in the dep. of the Seine-Inferieure, cant. of Ingouville, near the r. bank of the Seine. Pop. 500. It stands on a tract of land reclaimed from the sea, and in 1811 was submerged by an inundation.

HEURE-LE-ROMAN, a department and commune of Belgium, in the prov. and arrond. of Liege. Pop. of dep. 1,040; of com. 1,000.

HEUR-LE-TIEXHE, a department and commune of Belgium, in the prov. of Limburg, arrond. of Tongres. Pop. 211.

HEURNE, a department and commune of Belgium, in the prov. of East Flanders, arrond. of Ghent, on the Schelde. Pop. 700.

HEUSAY, a commune of Belgium, in the prov. of Liege, dep. of Beyne-Heusay. Pop. 1,230.

HEUSCHEUER, a mountain of Prussian Silesia, in the co. and 12 m. WNW of Glatz, in N lat. 50° 28′ 25″. It belongs to the Grunewald chain; and has an alt. of 3,080 ft. above sea-level.

HEUSDEN, a small but strong town of Belgium, in N. Brabant, built in the midst of marshes, near the Maese, 15 m. NE of Breda, and 8 m. NW of Bois-le-Duc. Pop. 1,889. It was taken by the French in 1672 and in 1795.—Also a commune and village in E. Flanders, 2½ m. E of Ghent, on the Schelde. Pop. 1,953.

HEUSENSTAMM, a small town of Hesse-Darmstadt, 5 m. SE from Frankfort-on-Main, on the Bieberbach. Pop. 818, Catholics.

HEUSEUX, a commune of Belgium, in the prov. of Liege, dep. of Cerexhe-Heuseux. Pop. 248.

HEUSTREU, a village of Bavaria, in the duchy of Wurzburg, on the l. bank of the Saale, near Neustadt. Pop. 250.

HEUSY, a commune of Belgium, in the prov. of Liege, cant. of Hedimont. Pop. 717.

HEUVEL, a commune of Belgium, in the prov. of E. Flanders, cant. of Eyne. Pop. 201.—Also a com. in the prov. of Limburg, cant. of Overpelt. Pop. 238.—Also a com. in the prov. of Brabant,

cant. of Aerschot. Pop. 387.—Also a com. in the prov. of Limburg, cant. of Hasselt. Pop. 370.

HE'VE (Cape de la), locally Quief, or Chef-de-Caux, a cape on the N coast of France, on the English channel, 54 m. ESE of Cape Barfleur. It has two lights upon it distant NE and SW 70 yds., in N lat. 49° 30′ 43″, E long. 0° 4′ 15″. It was the *Caletorum Promontorium* of the Romans.

HEVER, a commune and village of Belgium, in the prov. of Brabant, cant. of Haecht. Pop. 1,488.

HEVER, a parish in Kent, 7½ m. WSW of Tunbridge. Area 2,680 acres. Pop. 582.

HEVERKEIR, a town of Hindostan, in the district of Gundwana, on the Pak, 50 m. ENE of Ellichpur.

HEVERLE', a town of Belgium, in S. Brabant, cant. of Louvain. Pop. 1,770. There are large gin distilleries here.

HEVERSHAM, a parish and village in Westmoreland, 7 m. SW of Kendal. Area 19.350 acres. Pop. in 1831, 3,163; in 1841, 815.

HEVES, a palatinate of Upper Hungary, now united with that of Külsö-Szolnok; bounded on the N by the coms. of Borsöd, Gomor, and Neograd; on the E by Szabolcs and Grand-Kumania; on the S by the coms. of Csongrad and Bekes; and on the W by Neograd, Pesth, and the district of Jazyges. Area 1,207 German sq. m. Pop. in 1837, 292,354. Towards the centre and S this prov. is flat and marshy; in the N rise the lofty mountains of Matra, a spur of the Carpathians. The Theiss is the principal stream of the district, and here receives the Erlau or Eger, the Nuller, and the Zagyva. The Körös waters the S part of the prov. The climate is mild; and the soil generally good and productive. The chief products are wine, corn, and tobacco. Mines of alum are wrought. The inhabitants are almost all of Hungarian descent, mixed, however, with a few Slavonians, Germans, and gipsy wanderers. The prov. takes its name from the small town of Heves, but the diets are held at Erlau; and the archb. of that place is upper palatine *ex officio*. It is subdivided into 4 marches or *jaras:* viz. Gyöngyös, Tarna, Theiss, and Matra; and comprises one town, 16 market-towns, and 127 villages.

HEVES, a small town of Upper Hungary, in the palatinate of the same name, jara of Tarna, 61 m. E of Pest, in N lat. 47° 36′ 8″. Pop. 5,690.

HEVILLERS, a commune and village of Belgium, in the prov. of Brabant, cant. of Perwez. Pop. 650.

HEVINGHAM, a parish of Norfolk, 3 m. S of Aylesham. Area 3,180 acres. Pop. in 1841, 893.

HEVOSKARI, a cluster of small islands in the gulf of Bothnia, near the coast of Finland, in N lat. 64° 12′.

HEWELSFIELD, a parish in Gloucestershire, 6 m. NNE of Chepstow. Area 1,580 acres. Pop. in 1841, 531.

HEWISH, a parish in Wilts, 3 m. NNW of Pewsey. Area 610 acres. Pop. in 1841, 133.

HEWORTH, a chapelry of Durham, 2 m. ESE of Gateshead. Area 2,190 acres. Pop. in 1831, 5,424; in 1841, 7,008, employed in potteries, ropeworks, and ship-building.

HEX, a commune and village of Belgium, in the prov. of Limburg, cant. of Looz. Pop. 392.

HEXAMILIA, a village of Greece, in the nom. of Corinth, on the site of the ancient town of that name, at a spot where the isthmus is 6 m. wide. In the neighbourhood are the ruins of a temple, a theatre, a stadium, and some ramparts.

HEXHAM, a parish of Northumberland, intersected by the Carlisle and Newcastle railway, on which there is here a station, 20 m. from Newcastle, and 39¾ from Carlisle. It is about 11½ m. in length, and 6 m. in breadth; and has an area of 28,370 acres. Pop. in 1831, 6,042; in 1841, 5,989. The valleys, in general, are rich and highly cultivated; but the high quarter of the p. is a large, wild, and mountainous district, extending from 6 m. SW of the town of H. to the borders of the co. of Durham. The H. poor-law union comprehends 69 parishes, embracing an area of 318 sq. m.; with a pop. returned, in 1831, at 27,271; in 1851, at 30,436. The average annual expenditure on the poor of this district, during the three years preceding the formation of the union, was £8,903: expenditure, in 1839, £7,491; in 1847, £7,891. In this parish are the castles of Prudhoe, Chipchase, Ayden, Langley, and Haughton; the towers of Fenwick, Halton, and Bywell; the halls of Wallwick, Beaufort, and Dilston; the villas of Spital, Hermitage, and Brunton; and many other beautiful seats.

Hexham, an ancient market-town in the above parish, and once the see of a bishop, 20½ m. W of Newcastle, 40 m. E of Carlisle, and 279 m. NNW of London, is delightfully seated along the sides of a low eminence whose sides slope down to the plain of the Tyne, which flows past the town about 150 yds. to the S, a mile below the confluence of its two great branches, the North and South Tyne. It is irregularly built, and the streets are narrow, except a few of the principal ones. In the outskirts of the town, on the SW, there are a number of neat houses in modern style. The quarter-sessions for Northumberland are held here annually in the first week after July 7th, in their course with Alnwick, Morpeth, and Newcastle. H. is a polling-place, and the principal place of election, for the S division of Northumberland. It has long been famous for its manufacture of leather, particularly gloves, of which about 24,000 dozens of pairs are made and exported annually, giving employment to about 1,000 women and girls, and 120 men and boys. Not less than 80,000 raw skins are used here yearly, besides about 18,000 skins of dressed leather. There are four tanneries in the town, in which upwards of 20,000 calf and sheep skins and hides are dressed every year. The making of stuff hats is another considerable branch of trade; and there are also two worsted manufactories, and a variety of trades. Immense quantities of vegetables are sent from H. to the Newcastle markets.

Ancient diocese and see.] The episcopal dignity of H. was derived from Wilfrid, a Northumbrian by birth, and educated at the monastery of Lindisfarne. The famous St. Cuthbert was the third bishop of H. The 12th and last bishop, Tydferth, died in 821. In 876, H. was completely destroyed by 'the terrific seakings of the Baltic,' and about a year after was appropriated, together with Holm. to the formation of a prebendal stall in York cathedral. In the 36° of Henry VIII., the archb. of York exchanged H. for other abbey lands, retaining nothing but episcopal jurisdiction.—The cathedral, or abbey-church, is the greatest ornament and boast of the town. It is in the form of a cross, with a square tower rising from the centre to the height of 90 ft. The transept is 156 ft., and the choir upwards of 70 ft., in length; but the appearance of the building is much injured by the want of a nave. The interior presents "one lofty aisle, open on all sides, grand in its pristine nakedness; pleasing in its simplicity; and astonishing in the magnitude of its proportions, and the unity of its parts. At equal distances from the centre, four light and lofty arches spring from as many masses of tall clustered columns supporting the tower, and opening into each division of the edifice." The choir, which is now used as the parish-church, consists of one aisle divided into three. The abbey, formerly the seat of the Beaumont family, occupies the site of the ancient monastery, and is separated from the church, on the W side, by the space on which the cloisters were built.

History.] The battle of Hexham Levels, which for some time decided the important contest of the rival Roses, was one of the most remarkable events connected with the history of this interesting town. The contest took place on the 14th of May, when victory declared for the army of Edward. The inhabitants of H. were staunch loyalists during the civil wars: and their attachment to the house of Stuart was conspicuous during the rebellions of 1715 and 1745. A direful commotion occurred here on the 9th

of March, 1761, in consequence of the newly-established regulations for raising the militia.

HEXHAMSHIRE, a district of Northumberland, comprising the parishes of Hexham, Allendale, and St. John Lee, in the S division of Tyndale ward. This district anciently constituted a regality, county-palatine, and diocese; but it was united, *quoad civilia*, to the co. of Northumberland, by act 14° Elizabeth, cap. 13. It had been previously held, both as a regality and a diocese, by the bishop of Hexham.

HEXTON, a parish and village in Hertfordshire, 6 m. NW by W of Hitchin. Area 1,460 acres. Pop. in 1831, 294; in 1841, 295.

HEYBRIDGE, a parish in Essex, 1 m. N of Maldon, on the Pant, and intersected by a navigable canal which joins the river Chelmer. Area 2,110 acres. Pop. in 1831, 1,064; in 1841, 1,117. Here are large salt-works. H. unites with Maldon in the election of 2 members of parliament.

HEYCOURT, a village of France, in the dep. of Meuse, cant. and 6 m. SW of Vaubecourt. Pop. 1,360.

HEYD, a department and commune of Belgium, in the prov. of Luxemburg, arrond. of Marche. Pop. of dep., 715; of com., 435.

HEYDE, a commune of Belgium, in the prov. of East Flanders, dep. of Berlaere. Pop. 281.—Also a com. in the prov. of Brabant, dep. of Cortenacken. Pop. 104.—Also a com. in the prov. of Antwerp, dep. of Desschel. Pop. 235.—Also a com. in the prov. of Liege, dep. of Homburg. Pop. 630.—Also a com. in the prov. of Antwerp, dep. of Leest. Pop. 400.—Also a commune in the prov. of Brabant, dep. of Lubbeek. Pop. 181.—Also a com. in the same prov., dep. of Neerlinter. Pop. 247.—Also a com. in the prov. of East Flanders, dep. of Oost-Eecloo. Pop. 230.—Also a com. in the prov. of Brabant, dep. of Steenuffel. Pop. 220.—Also a com. in the prov. of Antwerp, dep. of Veerle. Pop. 225.—Also a com. in the prov. of East Flanders, dep. of Wichelen. Pop. 288.

HEYDE (Klyn), a commune of Belgium, in the prov. of Antwerp, dep. of Stegem. Pop. 186.

HEYDEKANT, a commune of Belgium, in the prov. of Limburg, dep. of Berbroek. Pop. 214.

HEYDEKAPELLE, a commune of Belgium, in the prov. of East Flanders, dep. of Waesmuntter. Pop. 126.

HEYDON, a parish in Norfolk, 5 m. W by N of Aylsham. Area 2,200 acres. Pop. in 1841, 321.

HEYDUKES. See Haiducks.

HEYENDE, a commune of Belgium, in the prov. of East Flanders, dep. of Lokeren. Pop. 688.

HEYERSUM, a village of Hanover, in the princip. and 6 m. W of Hildesheim. Pop. 220. There are large salt works here.

HEYFORD (Nether), a parish in Northamptonshire, 7 m. W by S of Northampton, in the line of the London and Birmingham railway, and crossed by the Grand Junction canal. Area 1,690 acres. Pop. in 1831, 507; in 1841, 599.

HEYFORD-PURCELL, a parish in Oxfordshire, 4¼ m. SSE of Deddington, on the banks of the Cherwell. Area 1,650 acres. Pop. in 1841, 562.

HEYFORD-WARREN, a parish in Oxfordshire, 6 m. NW by W of Bicester, on the E bank of the Cherwell. Area 1,300 acres. Pop. in 1841, 337.

HEYHOEK, a commune of Belgium, in the prov. of East Flanders, dep. of Cruybeke. Pop. 200.—Also a commune in the prov. of Brabant, dep. of Hever. Pop. 126.—Also a com. in the prov. of East Flanders, dep. of Lembeke. Pop. 201.

HEYHOEK, or Banhenshoek, a commune of Belgium, in the prov. of East Flanders, dep. of Nieukerken-Waes. Pop. 350.

HEY-HOUSES, a township in Whalley p., Lancashire, 4 m. SE of Clitheroe. Area 320 acres. Pop. in 1831, 155; in 1841, 156.

HEYKANT, a commune of Belgium, in the prov. of Antwerp, dep. of Esschen. Pop. 215. Also a com. in the same prov., dep. of Herenthout. Pop. 166.—Also a com. in the same prov., dep. of Mariekerke. Pop. 206.—Also a com. in the prov. of Brabant, dep. of Rotselaer. Pop. 225.—Also a com. in the prov. of East Flanders, dep. of Zell. Pop. 779.

HEYKEN, a commune of Belgium, in the prov. of Brabant, dep. of Hever. Pop. 118.—Also a com. in the prov. of Antwerp, dep. of Loenhout. Pop. 169.

HEYKEN-EN-WOLFELAER, a commune of Belgium, in the prov. of East Flanders, dep. of Waesmuntter. Pop. 192.

HEYL, a river in Cornwall, formed by the union of several streams near St. Erth-bridge. From this point it pursues a N course; and, at its mouth, after being joined by a brook from the E, forms a broad estuary opening into the bay of St. Ives. It is 11 m. in length, 2¼ m. of which are tidal.

HEYLAER, a commune of Belgium, in the prov. of Antwerp, dep. of Beerasse. Pop. 151.

HEYMA, one of the Westmanna isles, off the S coast of Iceland, in N lat. 63° 14′. It is the largest of the group, 6 m. in length, and about 3 m. in breadth.

HEYMELAERE, a commune of Belgium, in the prov. of West Flanders, dep. of Moorslede. Pop. 740.

HEYMOLEN, or Kattenhey-et-Weverstraet, a commune of Belgium, in the prov. of East Flanders, dep. of Saint-Nicolas. Pop. 208.

HEYNA, a town of Saxe-Coburg-Gotha, in the princip. and 9 m. WNW of Gotha, on the r. bank of the Nesse. Pop. 364.

HEYNDONCK, a department and commune of Belgium, in the prov. of Brabant, arrond. of Malines, on the Rupel. Pop. 600.

HEYNE, a commune of Belgium, in the prov. of East Flanders, dep. of Capryck. Pop. 233.

HEYOP, a parish in Radnorshire, 3¼ m. WNW of Knighton, on the river Teme. Pop. in 1841, 259.

HEYPLASCH, a commune of Belgium, in the prov. of East Flanders, dep. of Lede. Pop. 173.

HEYRIEUX, a canton and town of France, in the dep. of Isere, 11 m. NE of Vienne. Pop. of cant., 12,402; of town, 1,424.

HEYSHAM, a parish and village in Lancashire, 4¼ m. W of Lancaster, on a peninsula between the bay of Morecambe and the estuary of the Loyne. Area 1,620 acres. Pop. in 1831, 582; in 1841, 698.

HEYSHOT, a parish in Sussex, 2½ m. SSE of Midhurst, on the Rother. Area 2,210 acres. Pop. in 1831, 358; in 1841, 408.

HEYST-OP-DEN-BERG, a canton and town of Belgium, in the prov. of Antwerp, 12 m. ENE of Malines. Pop. of cant., 6,902.

HEYSTRAET (Kuyldam-et), a commune of Belgium, in the prov. of East Flanders, dep. of Saint Nicolas. Pop. 149.

HEYTESBURY, a parish and borough in Wilts, 4 m. ESE of Warminster, on the borders of Salisbury-plain, and on the N bank of the river Wilby. Area 3,380 acres. Pop. in 1801, 1,072; in 1831, 1,412; in 1841, 1,311. The borough is chiefly comprised in one street. It returned 2 members to parliament, until disfranchised by the reform act. There is a large and well-endowed hospital here.—H. is an ancient town. In old records it is called Heightsbury, and the name has also been variously written Hatchbury and Haresbury. A great part of it was burnt down in 1776. It gives the title of baron to the family of A'Court, whose heirs-male formerly held the baronetcy of A'Court.

HEYTHORPE with DUNTHORPE, a parish in

Oxfordshire, 3 m. E by N of Chipping-Norton. Area 1,710 acres. Pop. in 1831, 123; in 1841, 198.

HEYTHUYSEN, a village of Dutch Limburg, arrond. and 6 m. NW of Ruremonde. Pop. 1,279.

HEYVOORT, a commune of Belgium, in the prov. of Antwerp, dep. of Olmon. Pop. 152.

HEYWOOD-IN-HEAP, a chapelry and extensive village in Bury parish, Lancashire, 8 m. NNW of Manchester, and 42 m. E by N of Liverpool. Area 2,240 acres. Pop. in 1801, 4,283; in 1831, 10,429; in 1841, 14,856. The Manchester and Leeds railway, and the Rochdale canal, intersect the chapelry and township, passing 1½ m. to the E of the town, to which a branch railway has been formed. The cotton manufacture is the staple trade; the village being situated at an easy distance from Manchester, and plentifully supplied with coal from the numerous pits in the neighbourhood. There are numerous steam-engines employed in moving machinery and power-looms in manufacturing woollen-cloth, spinning fine cottons, making paper, constructing wheels, &c.

HEYWYK, a commune of Belgium, in the prov. of East Flanders, dep. of Meirelbeke. Pop. 591.

HEYZYDE, a commune of Belgium, in the prov. of Antwerp, dep. of Turnhout. Pop. 140.

HEZ (Sur-les), a commune of Belgium, in the prov. of Liege, dep. of Saive. Pop. 156.

HEZE, a commune of Belgium, in the prov. of Brabant, dep. of Grez-Doiceau. Pop. 508.

HIA, a town of China, of the third rank, in the dep. of Keai-tchau, prov. of Shan-si, 50 m. NE of Pou, in N lat. 35° 10′.

HIA-KIANG, a town of China, of the third rank, in the dep. of Len-Kiang-fu, prov. of Kiang-si, on the l. bank of the Kan-Kiang, 30 m. N of Kin-ghan, in N lat. 27° 32′, E long. 115° 14′.

HIAL-CHE, a city of China, of the second rank, in the prov. of Quang-si, in N lat. 22° 10′.

HIA-LOUI-CHU, a city of China, of the second rank, in the prov. of Kwang-si, on an affluent of the Hong-Kiang, 42 m. NW of Tai-ping, in N lat. 22° 54′, E long. 106° 34′.

HIANG-HO, a town of China, of the third rank, in the dep. of Chun-thien-fu, in N lat. 39° 46′, E long. 117° 12′.

HIANG-WOU-CHU, a city of China, of the second rank, in the prov. of Kwang-si, in N lat. 23° 12′, E long. 106° 45′, on an affluent of the Ngv-ou-Kiang, 30 m. SSE of Tchin-ngan.

HIAO-FUNG, a town of China, of the third rank, in N lat. 30° 30′, E long. 119° 36′.

HIAO-Y, a town of China, of the third rank, in N lat. 37° 10′, E long. 111° 45′.

HIAQUI, a river of Mexico, which rises on the borders of Chihuahua and Sonora; runs SSW and then W; and enters the gulf of California at the village of Huiribis, after a course of about 350 m. Its banks produce abundant harvests of maize, French beans, a kind of pease, and lentiles.

HIARNOE, an island of Denmark, off the E coast of Jutland, at the entry of Horsens bay. Pop. 115.

HIA-Y, a town of China, of the third rank, in the dep. of Kouei-te-fu, prov. of Ho-nan, 30 m. SSE of Koue-ti, in N lat. 34° 20′.

HIBALDSTOW, a parish of Lincolnshire, 4 m. SSW of Glandford-Brigg. Area 4,390 acres. Pop. 688.

HIBBE. See Geib.

HIBBERT, a township in the Huron district of Upper Canada, intersected by an affluent of the Bayfield. Pop. in 1842, 95.

HIBBS (Point), an elevated and projecting cape on the W coast of Van Diemen's Land, in S lat. 42° 39′.

HIBORNIA, a village in Callaway co., in Missouri, U. S., 1 m. N of Jefferson.—Also a v. in Clarke co., in Iowa.

HICKES'S BAY, a bay on the NE coast of New Zealand, in S lat. 37° 42′, 14 m. WNW of Cape Runaway.

HICKES'S KEYS, a cluster of islets and rocks in the bay of Honduras, near the coast of Mexico, in N lat. 17° 10′.

HICKES'S POINT, a cape on the SE coast of Australia, in S lat. 38° 0′, E long. 148° 53′.

HICKLETON, a parish in the W. R. of Yorkshire, 6 m. SW of Doncaster. Area 770 acres. Pop. 157.

HICKLING, a parish in Norfolk, 9¾ m. ESE of North Walsham. Area 4,510 acres. Pop. in 1831, 762; in 1841, 860.—Also a p. in Nottinghamshire, 11 m. SE of Nottingham, on a branch of the Smite, and intersected by the Grantham canal. Area 2,930 acres. Pop. in 1831, 529; in 1841, 581.

HICKMAN, a county in the central part of the state of Tennessee, U. S., comprising an area of 750 sq. m., watered by Duck river and its branches. Pop. in 1840, 8,618, of whom 1,379 were slaves. Its cap. is Centreville.—Also a co. in the SW part of the state of Kentucky, comprising an area of 350 sq. m., drained by Little Obion river and its branches, and by Bayou Desha creek. Pop. 8,968, of whom 1,615 are slaves. Its cap. is Clinton.

HICKORY, a township of Mercer co., in the state of Pennsylvania, U. S. Pop. in 1840, 1,831.

HICKORY-GROVE, a village in Warren co., in the state of Missouri, U. S., 81 m. ENE of Jefferson city. Pop. in 1840, 828.

HICKORY-TOWN, a village of Plymouth township, Montgomery co., in the state of Pennsylvania, U. S., 101 m. E of Harrisburg.

HICKSVILLE, a village in Greenville co., in the state of Virginia, U. S., 62 m. S of Richmond, on the SW side of Meherrin river, a branch of Chowan river, which, at a little distance from the v., is crossed by the Petersburg railroad.—Also a v. of Oyster bay township, Queen's co., in the state of New York, U. S., on the Long Island railway.—Also a v. of William's co., in the state of Ohio, 177 m. NW of Columbus. Pop. in 1840, 67.

HIDANG, a fort of Hindostan, in the state of Nepaul, district and 30 m. NNE of Khatang, and 100 m. E of Khatmandu, near the r. bank of the Arun.

HIDCOAT-BATRIM, a hamlet in the p. of Mickleton, Gloucestershire. Pop. in 1841, 74.

HIDDA, a village of Afghanistan, 5 m. S of Jellalabad, remarkable for its topes, mounds, caves, and other remains of unknown antiquity.

HIDDEN-SOE, or Hiddensee, an island of Prussia, in the prov. of Pomerania, regency and 12 m. N of Stralsund, circle and 15 m. WNW of Bergen, in the Baltic, to the W of the island of Rugen, from which it is separated by Frogg strait. Pop. 500. It is 11 m. in length, but does not exceed 1½ m. in breadth. Its soil is sandy, and affords good pasturage, but is completely destitute of wood. Yellow amber is found in considerable quantities on its shores. It contains 4 villages, of which Kloster is the principal. Fishing and the manufacture of linen form the chief branches of local industry. The language spoken in this island consists of a melange of Danish, Swedish, and Teutonic words.

HIDDIR, or Hadrar (Jebel), a mountain-range in Marocco, running S from the town of that name, and forming the S branch of the Atlas chain. It presents rounded and verdant summits, and abounds, it is reputed, in iron.

HIDE (East and West), or Hyde, a hamlet in the p. of Luton, Bedfordshire. Pop. 631.

HIDE (West), a parochial chapelry in the p. of

Stoke-Edith, Herefordshire, 7 m. ENE of Hereford. Area 950 acres. Pop. in 1831, 196; in 1841, 159.

HIDJELLEE, Hijala, or Injellee, a town and pergunnah of Hindostan, properly in the prov. of Orissa, but generally included in that of Bengal, and district of Hugli, 66 m. SSW of Calcutta, on the l. bank of the embouchure of the Hugli, at the confluence of a river of the same name, in N lat. 21° 50′, E long. 88° 4′. It occupies an important but insalubrious situation, and is now but rarely touched at by vessels. A portion of the surrounding district is defended from inundation by embankments carried along the banks of the numerous streams by which it is intersected, and is extremely fertile, producing rice, betel, and cocoa-nuts, in great abundance. Other parts, distinguished as the *duns*, or salt land, are left exposed to the periodical incursion of the tides, for the purposes of the salt-manufacture. This place was taken and fortified by the English in 1687, but a treaty of peace having been entered into with Aureng-Zeyb, they quitted it after the short period of 3 months, half of their forces having perished from its insalubrity.

HIDVEG, a village of Transylvania, in the comitat of Upper Weissemburg, near the r. bank of the Aluta, 15 m. N of Cronstadt. It is of considerable extent, and is noted for its dye-works.

HIDVEG-RABA, a town of Hungary, in the comitat of Eisenburg, 14 m. SSE of Steinamanger.

HIELM, a small island of Denmark, in the Cattegat, near the coast of Jutland, in N lat. 56° 8′, E long. 10° 49′, 3 m. distant from the peninsula of Ebeltoft.

HIELMAR, or Hiælmar, a lake in the central part of Sweden, in the laen of Œrebro, intersected by the parallel of 59° 15′ N. It is about 40 m. long from E to W, but of small comparative width. Its waters communicate with the Mälar lake by a rapid torrent; but, for the purpose of navigation, a canal has been led from the N bank of the lake, a little to the W of Oja, to the Arboga-an, which flows into the W end of the Mälar lake.

HIELMELAND, a parish and village of Norway, in the bail. and 21 m. NE of Stavanger. Pop. 2,485.

HIENHEIM, a village of Bavaria, on the l. bank of the Danube, 7 m. SW of Kelheim. Pop. 600.

HIEN-NING, a town of China, in the dep. of Wu-chang-fu, prov. of Hou-pe, in N lat. 29° 55′.

HIEN-YANG, a town of China, in the prov. of Shen-si, 15 m. NW of Si-an, in N lat. 34° 20′, E long. 108° 38′.

HIEOU-NING, a town of China, of the third rank, in the prov. of Hou-pe, in N lat. 29° 53′, 60 m. S of Han-yang.

HIERDAL, a parish and village of Norway, in the bail. of Bradsberg, 112 m. NNE of Christiansand. Pop. 2,850.

HIE`RES. See Hye`res.

HIERRO. See Ferro.

HIERS, a commune of France, in the dep. of Charente-Inferieure, cant. of Marennes. Pop. 815.

HIERSUC, a canton and village of France, in the dep. of Charente, arrond. of Angouleme. Pop. of cant. 10,045; of v. 621.

HIETZING (Maria), a village of Lower Austria, 3 m. SW of Vienna, on the Vienne. Pop. 2,000. Its environs are thickly studded with summer-villas of the citizens of Vienna.

HIGANQUET, a town on the E coast of the island of Mindanao, in N lat. 9° 26′.

HIGGANUM, a village of Haddam township, Middlesex co., in the state of Connecticut, U. S., 21 m. S of Hartford, on Connecticut river.

HIGGINS (Point), a cape on the W coast of N. America, in N lat. 55° 27′, forming the NW point of the N entrance into the Canal de Revilla-Gigedo.

HIGGINSPORT, a village of Lewis township, Brown co., in the state of Ohio, U. S., 124 m. SSW of Columbus, on the N bank of the Ohio, below the confluence of the White Oak river.

HIGHAM, a hamlet in Shirland p., Derbyshire. Pop. 451.—Also a parish in Kent, 4¼ m. NNW of Rochester, S of the Thames, and crossed by the Thames and Medway canal. Area 2,820 acres. Pop. in 1831, 703; in 1841, 777.—Also a p. in Suffolk, 5 m. S of Hadleigh, at the confluence of the Bret with the Stour. Area 1,020 acres. Pop. in 1831, 260; in 1841, 259.

HIGHAM-FERRERS, a parish and borough in the co. of Northampton, 16 m. ENE of Northampton, and 65 m. NNW of London. Area of p. 2,260 acres. Pop. in 1831, 965; in 1841, 1,030.—The town stands on a rocky elevation abounding in springs, and consists of two streets and a market-place. The church is one of the most handsome in a co. distinguished for the beauty of its ecclesiastical structures. The borough returned 1 member to parliament till disfranchised by the reform act. Lace-making, which formerly flourished here, has gone to decay since the introduction of machinery.

HIGHAM-GOBION, a parish in Bedfordshire, 11½ m. SSE of Bedford, and about 5 m. SW of Shefford. Area 770 acres. Pop. in 1841, 109.

HIGHAM-GREEN, a hamlet in Gazeley p., Suffolk. Area 3,200 acres. Pop. 370.

HIGHAM-ON-THE-HILL with LINDLEY, a parish in Leicestershire, 3½ m. NW of Hinckley, intersected by the Ashby-de-la-Zouch canal. Area 2,880 acres. Pop. in 1831, 560; in 1841, 556.

HIGHBRAY, a parish in Devonshire, 8½ m. NE of Barnstaple. Area 4,150 acres. Pop. in 1841, 314.

HIGHBRIDGE, a village in Somersetshire, on the Bristol and Exeter railway, 7 m. N of Bridgewater.

HIGHCLERE, a parish in Southampton, 7¼ m. NNW of Whitchurch. Area 4,560 acres. Pop. 468.

HIGH-CROSS, a summit on the borders of Leicestershire and Warwickshire, 5½ m. NW of Lutterworth.

HIGH FALLS, a village of Marbletown township, Ulster co., in the state of New York, U. S., 69 m. S of Albany, on Rondout creek, and on the Delaware and Hudson canal. Pop. 200.

HIGHGATE, a chapelry and populous village in the ps. of Hornsey and St. Pancras, Middlesex, 4½ m. NNW of St. Paul's, delightfully situated on the summit and sides of one of the highest hills in the co., rising 400 ft. The pop. of H. is returned with the respective ps. in which the v. is situated. H. comprises many elegant villas, the seats of opulent merchants in the metropolis. In 1839, a spacious and tasteful cemetery, having an area of about 20 acres, was formed here.

HIGHGATE, a township of Franklin co., in the state of Vermont, U. S., 71 m. NW of Montpelier, on the E side of Lake Champlain, watered by Missisque and Rock rivers. Pop. 2,292.

HIGHLAND, a county in the state of Ohio, U. S., comprising an area of 555 sq. m., between Scioto and Miami rivers, and watered by Paint and Brush creeks, and the E fork of Miami river. Its surface is elevated, and its soil generally fertile. Pop. in 1840, 22,269. Its capital is Hillsboro'.—Also a village of Jackson co., in the state of Tennessee, 69 m. ENE of Nashville, on the W side of Cumberland river.—Also a village of Fairfield township, Highland co., in the state of Ohio, 50 m. SW of Columbus, on Lee's creek. Pop. 250.—Also a township of Oakland co., in the state of Michigan, 45 m. NW of Detroit. Pop. 566.—Also a village of Vermilion co., in the

state of Indiana, 72 m. W of Indianapolis. Pop. 1,653.

HIGHLAND MILLS, a village of Monroe township, Orange co., in the state of New York, U. S., 97 m. SSW of Albany, consisting in 1840 of about 25 dwellings.

HIGHLANDS (The), a thinly inhabited division of Scotland, comprehending somewhat more than one-half of its surface, and remarkable for the peculiar character of its ancient inhabitants and history, and for a pervading mixture of wildness, beauty, and sublimity in its scenery. To define the limits of the H., or rather to trace the boundary-line with the Lowlands, requires a previous fixation of the differential or characteristic features of the region. If by the H. be meant the territory commensurate with the use of the Gaelic language, and with marked vestiges of ancient Celtic manners, the limits must include considerable districts in the present day, such as the isle of Bute, and large tracts in the shires of Dumbarton, Perth, Forfar, and Aberdeen, which were undoubtedly included at comparatively a very modern date. If *high lands*, in the literal signification of the words, be understood, the broad mountain-belts S of the Forth, and S and E of the Clyde, though sometimes popularly called the Southern H., were never included by community of peculiar name or history or manners in the H. properly so designated, and stand far apart from them in geographical position; while, on the other hand, the stretches of low country which intervene amongst the H. mountains, and in some instances—as in Dumbartonshire and Caithness—come down from these mountains in gentle slopes to points where they are terminated by a great natural barrier, never were included in the Lowlands. Though, with these exceptions, mountainousness of surface, and the perpetuation to the present day of the Celtic language and some Celtic usages distinctively characterize the whole H., yet the definition of the territory which best suits the purposes of history, and in all respects most nearly accords with those of political and moral geography, is one which makes it commensurate with the country or locations of the ancient H. clans. This definition assigns to the H. all the continental territory N of the Moray frith, and all the territory, both insular and continental, W of an easily traccable line from that frith to the frith of Clyde. The line commences at the mouth of the river Nairn; it thence, with the exception of a slight NE or outward curve, the central point of which is on the river Spey, runs due SE till it strikes the river Dee at Tullach, nearly on the 3d meridian of long. W of Greenwich; it then runs generally S till it falls upon West-water, or the southern large head-water of the N. Esk; it thence, over a long stretch, runs almost due SW, and with scarcely a deviation, till it falls upon the Clyde at Ardmore, in the p. of Cardross; and now onward to the Atlantic ocean, it moves along the frith of Clyde, keeping near to the continent, and excluding none of the Clyde islands except the comparatively unimportant Cumbraes. All the Scottish territory W and NW of this line is properly the H. Yet both for the convenience of topographical description, and because, altogether down to the middle of the 13th cent., and partially down to the middle of the 16th, the H. and the Western islands were politically and historically distinct regions, the latter are usually viewed apart under the name of the Hebrides. See article Hebrides. The mainland H., or the H. after the Hebrides are deducted, extend in extreme length from Duncansby-head or John o'Groats on the N, to the Mull of Kintyre on the S, about 250 m.; but over a distance of 90 m. at the N end, they have an average breadth of only about 45 m.; over a distance of 50 or 55 m. at the S end, they consist mainly of the Clyde islands, and the very narrow peninsula of Kintyre; and even at their broadest part, from the E base of the Grampians on the E to Ardnamurchan-point on the W, they scarcely if at all extend to more than 120 m. The district comprehends the whole of the cos. of Caithness, Sutherland, Ross, Cromarty, Inverness, and Argyle, the large parts of Nairn, Perth, Dumbarton, and Bute, and considerable portions of Elgin, Banff, Aberdeen, Forfar, and Stirling. Those cos., all of which are comprehended—with the exception of Caithness, and the addition of the Perthshire and Dumbartonshire sections—contain, in a geographical or physical point of view, nearly all the territory and the scenic features which are strictly Highland.

General features.] A district so extensive can be but faintly pictured in a general and rapid description. Mountains, chiefly covered with heath or ling, but occasionally, on the one hand, displaying sides and summits of naked rock, and on the other exhibiting a dress of verdure, everywhere rise at short intervals, in chains, ridges, groups, and even solitary heights. Their forms are of every variety, from the precipitous and pinnacled acclivity, to the broad-based and round-backed ascent; but in general are sharp in outline, and wild or savagely grand in feature. Both great elongated ridges, and chains or series of short parallel ridges, have a prevailing direction from NE to SW, and send up summits from 1,000 to upwards of 4,000 ft. above the level of the sea. Glens, valleys, and expanses of lowland, stretch in all directions among the mountains, and abound in voluminous streams and large elongated lakes of picturesque and magnificent appearance,—nearly all the inland lakes extending in stripes either NE and SW, or E and W. Along the whole W coast, at remarkably brief intervals, arms of the sea, long, narrow, and sometimes exceedingly rugged in outline, run NE or SE into the interior, and assist the inland fresh water lakes in cleaving it into sections. The rivers of the region are chiefly impetuous torrents, careering for a while along mountain-gorges, and afterwards either expanding themselves into beautiful lakes and flowing athwart delightful meadows, or ploughing narrow and far-stretching valleys. Native woods, principally of pine and birch, and occasionally clumps and expanses of plantation, climb the acclivities of the gentler heights, or crowd down upon the valleys, and embosom the inland lakes. On the E side, along the coast to the Moray frith, and toward the frontier in the cos. of Nairn, Elgin, and Perth, gentle slopes and broad belts of lowland, fertile in soil and favourable in position, are carpeted with agricultural luxuriance, and thickly dotted with human dwellings, and successfully vie with the S of Scotland in towns and population, and in the pursuit and display of wealth. But almost everywhere else, except along Loch-Fyne, and the S shore of Loch-Etive, the H. are sequestered,—a semi-wilderness, where a square mile is a greatly more convenient unit of measurement than an acre.

Population, &c.] The H., till less than a century ago, were exclusively occupied by a people whose manners, language, and framework of society were strikingly peculiar, and quite as different from those of the inhabitants of the S of Scotland as if the two races had been separate nations, mutually removed by the intervention of an ocean. The transition of the Highlanders from their ancient moral and social condition to a state of enlightenment and of begun community of character and interests with the inhabitants of the Lowlands, did not commence till the 18th cent. Two years after the quelling of the last rebellion, or in 1748, two acts were passed, and an old one revived, with a view of entirely destroying

the clan-system of the Highlanders. One of the new acts abolished hereditary jurisdictions; the other proscribed the use of the Highland dress. The Highland peasantry were now made masters of their own actions; and in numerous instances the chieftains—now converted into plain landed proprietors—came down with true dignity of character from their barbarous grandeur to the morally great position of cultivators of the soil and encouragers of an industrious tenantry in the valley.—But the beneficial effects of obliging the pop. to employ themselves chiefly as husbandmen and graziers could never, to any considerable degree, have been realized, had not the country been laid open by facilities of communication. The H., in their original state, were almost utterly inaccessible from without, and were traversable within their own limits only by the light-footed pedestrian, bearing no heavier a load than the accoutrements of war. During the rebellion of 1715, when the royal troops made a vain attempt to penetrate farther than Blair-Athol, government began to see the necessity of cutting paths through the mountain-fastnesses even as a measure of national police. In 1730, several great lines of road were commenced,—one from Luss, both by the head of Lochlomond and by Inverary, to Tyndrum,—another from Callander, near Stirling, to the same point,—another, in continuation of these, from Tyndrum, through Glencoe, to Fort-William, and thence along the great glen to Fort-George,—another from Cupar-Angus by Braemar to Fort-George,—and another from Crieff and from Dunkeld by Dalnacardoch and Dalwhinnie, to Fort-Augustus and Inverness. So great a social and moral revolution as the formation of the H. roads has gradually accomplished cannot easily be conceived. Regular carriers have for a considerable period been established on all the principal roads, carrying goods at all seasons of the year; and the communication of intelligence by letters and newspapers, or the working of the post-office system, is the same on all the great lines of road as in the Lowlands.—But a prodigious addition to what the roads have effected, is found in the results of cutting the Crinan canal, and of constructing the magnificent work called the Caledonian canal; and the great lines of railway skirting the E coast from Edinburgh to Aberdeen, and the W coast from Glasgow to Ayr. As regards also the whole coast-line of the continental H., the whole length of the Great glen, and the entire extent of the Western islands, improvement has been achieved probably much more by the constructing and amending of harbours, introduction and exploits of steam-navigation, than in other districts by all sorts of wheeled conveyances along the roads. Parts adjacent to the Clyde, and to the principal ramifications of its estuary, and portions of the W coast and of the islands, have, with the simple appliance of steam-navigation, suddenly passed from a state of wildness and desolation to the possession of almost a suburban character. Large villages or little towns—as in the instances of Helensburgh, Dunoon, Campbelltown, Bowmore, and Oban—have either sprung up from the unoccupied soil, or arisen out of poor and inconsiderable hamlets. The consequent and continuous increase of traffic, not only by the new method of steam-navigation and railways, but by the old one of sailing-vessels, has been proportionate to the gigantic movements of everything connected with H. amelioration.—Certain patriotic institutions have likewise operated powerfully to rouse the mind of the Highlander from its dormancy, and incite and direct him to avail himself of the advantages which were accumulating round his position. No surer criterion of the vast amount of agricultural improvement which has taken place can be found—even abating for the advantageous influence of the war period upon landed property—than in the fact that the value of Highland estates has undergone a fourfold, a sixfold, and in some instances nearly a tenfold increase.

Agriculture and manufacture.] Owing to the very great extent of surface which is available only as grazing-ground and sheep-walk, much of the attention which was anciently paid in an engrossing way to stock required to be perpetuated and enlightened. Great effort and skill have been employed in improving the black cattle by diffusing over the region the best breeds of its choicest districts, and by importing cows from Ayrshire. The H. cattle are small; but they furnish the shambles with beef of a peculiarly delicate quality; and are driven southward for sale to the number annually of about 20,000 from Inverness-shire, and about the same number from the other northern counties, and of a still larger number from the southern Highlands.—Besides due care being used, on account of the very fine flavour of its mutton, for the black-faced sheep which the commencement of the improving era found in possession of the sheep-walks, attention is universally given on account of the fineness of their wool and the largeness of their size, to imported cross-breeds, and especially to the Cheviots. Considerable attention has been paid to the breed of horses, for the purposes both of tillage and of draught, and has even in some instances been successfully directed to the rearing of horses of the finest description. Highland ponies are small, but strong, hardy, and capable of enduring great fatigue; and are annually driven southward in large numbers for the uses of the Newcastle coal-mines, and for general disposal in the Lowland and the English markets. For the disposal of stock, various trysts or markets are held in the interior, and along the southern borders of the region. To supersede the inconveniences of a scattered market, and of purchasers having sometimes to seek out their commodity at the homes and fanks of the farmers, a great annual sheep and wool market was established in 1817 at Inverness; and here all the disposable fleeces and sheep in the N of Scotland are usually sold or contracted for in the way of consignment. The manufactures of the H.—excepting in the annual production of about 11,000 or 12,000 tons of kelp, about £200,000 worth of whisky, and an inconsiderable quantity of hempen cloth—are so trivial as to be seen or estimated only by a minute statist. In commerce, however, or in the exportation of the produce of the soil and of the seas, and in the importation of the conveniences and the luxuries of life, the region exhibits an increase of importance quite sufficient to demonstrate that a process of enrichment, or at least of growing prosperity, is going on throughout its territory. The state of traffic by navigation will be seen by reference to our articles Caledonian Canal, Crinan Canal, and those on the various ports; and that of the fisheries, by reference to the articles Wick, Ullapool, Tobermory, and Stornoway. The annual exportations from the whole of the H. and Western Islands are estimated by the Messrs. Anderson, in their *Guide to the Highlands*, at £1,100,000,—consisting of sheep and wool, £250,000; black cattle, £250,000; herrings, £200,000; grain, £100,000; whisky, £200,000; salmon, kelp, wood, pork, &c., £100,000. Two remunerating productions of a kind not very likely to be generally adverted to, may be particularly specified,—timber and game. H. timber consists principally of pine, or fir, and birch. The former, when raised from planting, is disposed of chiefly in the form of props for coal-mines; and the latter is sold as material for herring-barrels. Between 200 and

300 cargoes of props, logs, and deals are annually shipped from the Moray frith. Game, though not strictly an article of exportation, draws profits to the country as directly as if it were. Highland proprietors now so very generally let the right of sporting on their lands, that moors, varying in their accommodations and resources to suit the different classes of bidders in the market, may be rented at all prices from £50 to £500. Partridges and hares in the low grounds, the ptarmigan and the mountain hare in the lofty uplands, the stately red-deer in the sequestered wilds, the roe in the lower coverts, the heath-fowl as a substitute for the pheasant,—these, and grouse, woodcocks, snipes, wild-ducks, and other game, attract the sportsman, and bring rental to the proprietor.

Education and Ecclesiastical affairs.] The H. and Western islands, after the extinction of Culdeeism and the full establishment of Popery, were distributed into the 6 dioceses of Dunkeld, Argyle, Moray, Ross, Caithness, and the Isles. On the abolition of Popery in 1560, the first draft of the constitution of the Reformed church, portioned the H. and Islands, including the Orkneys, into the districts of Argyle, Ross, and Orkney, and assigned to them 3 of the 10 superintendents which it provided for the kingdom. But there followed struggles between Presbyterianism and Episcopacy, alternate ascendancies of the two systems, which operated with a most malign influence; and in the earlier years succeeding the Reformation, the paucity of preachers which could be found for the whole kingdom, the obstacle of the Gaelic language, and the poverty, thinness of population, and physical obstructions of the Highlands, prevented many parts of the region from becoming the scene of any pastoral ministrations, or even occasional religious services. So late as 1650, Lochaber, and some other equally important districts, remained untrodden by any Protestant pastor. The people were profoundly ignorant of the art of reading; and, even though the schoolmaster had gone amongst them, they possessed not a single copy of the Scriptures. After the Revolution, in 1688, and the immediately subsequent settlement of the Established church upon its present basis, considerable solicitude was evinced to make more extensive religious and educational provision for the H. Still, in spite of all efforts, the 18th cent. closed without any considerable enlightenment of the pop. having been effected. Since the commencement of the 19th cent., however, the ecclesiastical and educational and literary history of the H. partakes largely of the bright tints of improvement which depict the history of their agriculture and their political condition. According to the report of the General Assembly's committee, in 1833, the H. and Islands, including the Orkneys and the Shetlands—or the synod of Argyle, the presbyteries of Alford and Kincardine O'Neil in the synod of Aberdeen, and the synods of Moray, Ross, Sutherland and Caithness, Glenelg, Orkney and Zetland, comprehending 220 parishes, and a pop. in 1831, of 504,955—contained 273 parochial schools, attended by 14,202 scholars, —315 societies' schools, attended by 18,085 scholars, —137 privately endowed schools, attended by 6,314 scholars,—372 unendowed or voluntary schools, attended by 13,728 scholars,—418 Sabbath schools,—20 week-day evening schools,—and about 80 schools of industry supported by the Society for propagating Christian Knowledge.

HIGHLANDS, a range of mountains in the state of New York, U. S., sometimes called Mattoawan, or Fishkill mountains, and forming a branch of the Alleghany chain. They run NE and SW through the counties of Rockland, and across the Hudson into Orange, Westchester, Putnam, and Dutchess counties, and present a varying breadth of from 15 to 20 m. Their highest summit does not exceed 1,685 ft. above sea-level.

HIGHLEY, a parish in Salop, $6\frac{3}{4}$ m. SSE of Bridgenorth, W of the Severn. Area 1,460 acres. Pop. in 1831, 404; in 1841, 360.

HIGH-SHOALS, a village of Walton co., in the state of Georgia, U. S., 70 m. NW of Milledgeville, near a rapid of the same name in Appalachee river.

HIGHTAE, a village in Dumfries-shire, in the p. and $2\frac{1}{2}$ m. S of Lochmaben. It forms one of 4 small contiguous villages, named Four Towns, the united pop. of which is 664 individuals.

HIGHTOWN, or Hieton, a village of Roxburgh-shire, in the p. of Roxburgh, on the turnpike from Berwick to Carlisle, and $2\frac{1}{4}$ m. from Kelso. Pop. about 300.

HIGHTSTOWN, a village of East Windsor township, Mercer co., in the state of New Jersey, U. S., 19 m. E of Trenton, and intersected by the Camden and Amboy railroad, and consisting, in 1840, of about 60 dwellings.

HIGHWAY, a parish of Wiltshire, $4\frac{1}{2}$ m. NE of Calne. Area 950 acres. Pop. in 1841, 147.

HIGH-WEEK, a parish of Devonshire, $1\frac{1}{2}$ m. NW of Abbots-Newton. Area 2,140 acres. Pop. in 1841, 1,303.

HIGHWORTH, a market-town and parish in Wilts, 22 m. NE of Chippenham, 40 m. NE of Salisbury, 74 m. NW of London, and $3\frac{1}{2}$ m. NW of the Shrivenham station of the Great Western railway. Area of p. 9,810 acres. Pop. 3,939. The town is pleasantly situated on an eminence, near the Vale of the White Horse. It is chiefly built of stone. Pop. of tything of H. town, 891.

HIGUERA (La), or El-Higuer, a cape of Spain, in the prov. of Guipuzcoa, to the NW of the embouchure of the Bidassoa. It has but little elevation, and forms the W point of the entrance to the port of Fuenterrabia.

HIGUERA (Isla de la), or Isla Cristina, a village of Spain, in Andalusia, in the prov. and 18 m. W of Huelva, partido and 12 m. E of Ayamonte, on the Mediterranean, between the embouchures of the Guadiana and Odiel. Pop. 1,819. It has a parish-church and a custom-house, a safe and commodious harbour, and possesses extensive pilchard fisheries. This v. was founded by the Catalans after the great earthquake in Lisbon in 1755.

HIGUERA-JUNTO-A'-ARECENA, a town of Spain, in Andalusia, in the prov. of Huelva, partido of Arecena, in the Sierra Morena. Pop. 1,195.

HIGUERA-DE-ARJONA, a town of Spain, in Andalusia, in the prov. and 19 m. NNW of Jaen, partido of Andujar, on the r. bank of the Salado-de-Arjona, near the confluence of that river with the Guadalquivir. Pop. 704. It has an hospital.

HIGUERA-DE-BARGAS, a town of Spain, in New Castile, in the prov. and 28 m. S of Badajoz, partido of Olivenza. Pop. 1,711. It has some manufactories of cloth.

HIGUERA-DE-LLERENA, or Llerena, a town of Spain, in New Castile, in the prov. of Badajoz, partido and 11 m. NE of Llerena, on the great road from Badajoz to Madrid. Pop. 81.

HIGUERA-DE-MARTOS, a town of Spain, in Andalusia, in the prov. of Jaen, partido of Martos-y-Fuensanta.

HIGUERA-LA-REAL, a town of Spain, in New Castile, in the prov. and 41 m. SSE of Badajoz, partido and 2 m. SW of Fregenal-de-la-Sierra, on a hill covered with vines, olive-trees, &c. Pop. 4,992. It has a parish-church, a Jesuits' college, and several convents, and possesses considerable trade.

HIGUERA-DE-LA-SERENA, a town of Spain, in New Castile, in the prov. of Badajoz, partido of Castuero. Pop. 1,297.

HIGUERON, a river of Central America, in the republic of Costa Rica. It descends from the chain which runs centrally through the republic, flows SW, and throws itself into the Pacific at English-Harbour, after a course of about 60 m.

HIGUERUELA, a town of Spain, in the prov. and 26 m. E of Albacete, and partido of Chinchilla, on a declivity of Mount Hiagos. Pop. 2,372. It has a parish church and an elementary school.

HIGUEY, a bay on the SE coast of the island of Hayti, in the dep. of Ozama, in N lat. 18° 20′, and W long. 68° 35′, to the W of Cape Espado. It receives a small river of the same name, which passes in its course a town also called Higuey. It is 84 m. E of St. Domingo, and has about 500 inhabitants. The river H. has a course of about 30 m.

HI-HO, a river of the Corea, in the prov. of Hoang-haï. It has its source in the mountains which extend in a S direction through the interior of the peninsula, runs W, and throws itself into the Yellow sea, in N lat. 38° 45′, and at the confluence of the Ping-Yang. It has a course of about 75 m.

HIJAR, a judicial partido and town of Spain, in Aragon, in the prov. and 62 m. NNE of Teruel, on the brow of a hill, on the Martin. The partido comprises 13 pueblos. Pop. 3,060.

HIKLAR, a town of Turkey in Asia, in Karamania, in the sanjak and 15 m. N of Kaisarieh, and 90 m. SW of Sivas, on the slope of a rocky hill which forms the N extremity of the plain of Kaisarieh, and the summit of which is crowned by an artificial mound, supposed to be the tomb of one of the kings of Cappadocia. The streets are narrow and very steep.

HILAIRE (St.), a canton and commune of France, in the dep. of the Charente-Inferieure, arrond. of Saint-Jean-d'Angely. The cant. comprises 12 com. Pop. in 1831, 8,365; in 1841, 8,324. The village is 7 m. S of St.-Jean-d'Angely, near the source of the Bramerit. Pop. 1,321.—Also a canton, commune, and town, in the dep. of the Aude, arrond. of Limoux. The cant. comprises 13 com. Pop. in 1831, 4,671; in 1841, 4,681. The town is 5 m. ENE of Limoux, on the Languette. Pop. 983. It has 2 oil-mills. Fairs for cattle, mercery, linen fabrics, and other commodities, are held twice a-year.—Also a village in the dep. of the Indre, cant. of Belabre. Pop. 1,010. It produces good red wine.—Also a commune in the dep. of the Lot-et-Garonne, cant. of Ogen. Pop. 1,127.—Also a commune in the dep. of the Nord, cant. and 4 m. ENE of Carnieres. Pop. in 1841, 1,905.—Also a hamlet in the dep. of the Seine-Inferieure, cant. and com. of Rouen. Pop. 1,000.—Also a village in the dep. of the Allier, cant. and 8 m. S of Bourbon-l'Archambaud. Pop. 782. Cattle fairs are held here 5 times a-year.—Also a village in the dep. of the Doubs, cant. and 2 m. NNE of Roulans-l'Eglise. Pop. 140. Fairs for cattle and grain are held here 4 times a-year.

HILAIRE-DU-BOIS (Saint), a commune of France, in the dep. of the Loire-Inferieure, cant. of Clisson, 17 m. SE of Nantes. Pop. 1,224.—Also a commune in the dep. of the Maine-et-Loire, cant. and 1½ m. SW of Vihiers, and 26 m. WSW of Saumur. Pop. 1,293.

HILAIRE-BONNEVAL (Saint), a village of France, in the dep. of the Haute-Vienne, cant. and 2 m. NNE of Pierre-Buffière. Pop. 780. In its vicinity are mines of copper, iron, lead, and tin.

HILAIRE-DE-BRENS (Saint), a village of France, in the dep. of the Isere, cant. and 4 m. SSE of Cremieux. Pop. 265. A fair is held here once a-year for cattle, ironmongery, and agricultural implements.

HILAIRE-DE-BRIOUZE (Saint), a commune of France, in the dep. of the Orne, cant. of Briouze. Pop. 1,090.

HILAIRE-DE-CHALE'ONS (Saint), a commune of France, in the dep. of the Loire-Inferieure, cant. and 6 m. NE of Bourgneuf-en-Retz. Pop. 800. It has an annual cattle fair.

HILAIRE-DE-LA-COTE (Saint), a commune of France, in the dep. of the Isere, cant. and 4 m. E of La-Côte-Saint-André. Pop. 1,259.

HILAIRE-SOUS-COURS (Saint), a village of France, in the dep. of the Cher, cant. and 2 m. SW of Vierzon, on the l. bank of the Arnon. Pop. 289.

HILAIRE-LE-DOYEN, a village of France, in the dep. of the Maine-et-Loire, cant. and 1 m. N of Montreuil-Bellay, and 9 m. SW of Saumur. An important fair is held here once a-year for cattle, pigs, grain, wine, casks, ironmongery, and mercery.

HILAIRE-CUSSON-LA-VALMITTE (Saint), a commune of France, in the dep. of the Loire, cant. and 4 m. S of Saint-Bonnet-le-Château. Pop. 1,014. It has an annual fair.

HILAIRE-DE-DURFORT (Saint). See Durfort.

HILAIRE-D'ESTISSAC (Saint), a village of France, in the dep. of the Dordogne, cant. and 8 m. ESE of Villemblard. Pop. 400. It has several iron-works.

HILAIRE-FROISSAC (Saint), a commune of France, in the dep. of the Corrèze, cant. of Lapleau. Pop. 1,145.

HILAIRE-DU-HARCOURT (Saint), a canton, commune, and town of France, in the dep. of the Manche, arrond. of Mortain. The cant. comprises 12 com. Pop. in 1831, 14,389; in 1841, 14,568. The town is 9 m. SW of Mortain, and 39 m. S of Saint Lô. Pop. in 1841, 2,994. It has a communal college, and possesses numerous tanneries, several wax-works, a wool-spinning-mill, and manufactories of woollen and linen fabrics. It has 5 annual fairs, and carries on an active trade in grain, horses, cattle, wax, honey, sheep's leather, linen thread, and jewellery.

HILAIRE-DES-LANDES (Saint), a commune of France, in the dep. of the Ille-et-Vilaine, cant. and 5 m. S of St. Brice-en-Cogles. Pop. 1,789. It has several tanneries.—Also a commune in the dep. of the Mayenne, cant. of Chailland. Pop. 1,775.

HILAIRE-EN-LIGNIE'RES (Saint), a village of France, in the dep. of the Cher, cant. and 2 m. S of Lignières, on the l. bank of the Arnon. Pop. 1,838. Ochre of excellent quality is found in the environs.

HILAIRE-DES-LOGES (Saint), a commune of France, in the dep. of the Vendee, arrond. of Fontenay-le-Comte. The cant. comprises 10 com. Pop. in 1831, 10,478; in 1841, 10,914. The village, called also Hilaire-sur-l'Austise, is 8 m. E of Fontenay-le-Comte. Pop. 3,570. It has an annual cattle fair.

HILAIRE-DE-LOULAY (Saint), a commune of France, in the dep. of the Vendee, cant. and 2 m. N of Montaigu, and 24 m. NNE of Bourbon-Vendee. Pop. 1,845.

HILAIRE-DES-MONTS (Saint), a village of France, in the dep. of the Vienne, cant. and 5 m. SE of Chatellerault, and 21 m. NE of Poitiers. Pop. 1,300.

HILAIRE-LES-MORTAGNE (Saint), a village of France, in the dep. of the Vendee, cant. and 2 m. SE of Mortagne-Sur-Sèvre, near the r. bank of the Sevre-Nantaise. Pop. 629. It has a paper-mill.

HILAIRE-LA-PALLU (Saint), a commune of France, in the dep. of the Deux-Sevres, cant. of Mauzé, 14 m. WSW of Niort. Pop. 1,645. A cattle fair is held here monthly.

HILAIRE PEYROUX (Saint), a commune of France, in the dep. of the Correze, cant. and 8 m. NW of Tulle. Pop. 1,619. Fairs for cattle and pigs are held here 6 times a-year.

HILAIRE-DE-RIEZ (Saint), a commune of France, in the dep. of the Vendee, cant. and 2 m. N of Saint-Gilles-sur-Vie, and 20 m. NNW of Les Sables. Pop. 2,560. Cattle fairs are held here 3 times a-year.

HILAIRE-DU-ROSIER (Saint), a commune of France, in the dep. of the Isère, cant. of Saint-Marcellin. Pop. 1,015.

HILAIRE-SAINT-MESNIM (Saint), a commune of France, in the dep. of the Loiret, cant. and 5 m. SW of Orleans, on the l. bank of the Loire. Pop. 1,282. It has a paper-mill.

HILAIRE-DE-LA-SONE (Saint), a village of France, in the dep. of the Isère, cant. and 5 m. SW of St. Marcellin, and 26 m. WSW of Grenoble. Pop. 765. Cattle fairs are held here 3 times a-year.

HILAIRE-DE-TALMONT (Saint), a commune of France, in the dep, of the Vendée, cant. and ¾ m. E of Talmont, and 10 m. ESE of Sables-d'Olonne. Pop. 2,420. In the vicinity is a mine of sulphurated argentiferous lead.

HILAIRE-LA-TREILLE (Saint), a commune of France, in the dep. of the Haute-Vienne, cant. of Magnac-Laval. Pop. 1,098.

HILAIRE-DE-VOUHIS (Saint), a commune of France, in the dep. of the Vendée, cant. of Chantonnay. Pop. 1,040.

HILARY (Saint), a parish in Glamorganshire, 2 m. SE of Cowbridge. Pop. 164. See also Heliers (Saint) and Hillary (Saint).

HILCHENBACH, a town of Prussia, in the prov. of Westphalia, regency and 30 m. S of Arnsberg, circle and 9 m. NNE of Siegen. Pop. 1,279. It has manufactories of woollen and linen fabrics, of tobacco, leather, and steel-ware, and several powder-mills.

HILCOT, a tything in the p. of North Newnton, Wilts. Pop. in 1841, 262.

HILDBURGHAUSEN (Saxe), a duchy in the interior of Germany, bounded by Saxe-Meiningen and Saxe-Coburg, and now united to Saxe-Meiningen. It contains a territorial extent of 217 sq. m. The soil is in general of little fertility, particularly in the N, where the surface is covered with part of the forest of Thuringia. The chief wealth of the country consists in its woods and pasture. Woollens, linen, thread, glass, dye-stuffs, salt, and vitriol, are exported in small quantities. The duke of Saxe-Hildburghausen held the fourth rank among the princes of the house of Saxe, and had a share of a vote in the smaller Germanic diet, and a full vote in the larger. This miniature principality had a military force of little more than 100 man; and a revenue of £20,000, materially encumbered, after the fashion of greater empires, by the interest of debt. The administration was also divided, with true German minuteness, into the departments of justice, finance, education, police, public works, and the army.

Hildburghausen, a town of Saxe-Meiningen, the cap. of the duchy of the same name, situated on the r. bank of the Werra, 17 m. SE of Meiningen. Pop. 4,181. It has a gymnasium, an orphan asylum, and a seminary for schoolmasters. Its manufactures are woollen cloth and *papier-maché*.

HILA'L (Ras El). See Hal-al.

HILDEN, a village of Prussian Westphalia, in the duchy of Berg. Pop. 975. It has manufactures of cloth, and cotton spinning mills.

HILDERSHAM, a parish in the co. of Cambridge, 2 m. NNW of Linton, on the Cam. Area 1,450 acres. Pop. in 1831, 214; in 1841, 238.

HILDERSTONE, a township in the p. and 3 m. ENE of Stone, Staffordshire. Pop. in 1841, 501.

HILDERTHORPE with WILSTHORPE, a township in the p. and 1½ m. S of Bridlington, E. R. of Yorkshire. Area 480 acres. Pop. in 1841, 116.

HILDESHEIM, a considerable province in the S of Hanover, lying between 51° 44′ and 52° 25′ N lat., adjacent to the prov. of Göttingen. The superficial extent of the whole is estimated at 660 sq. m., and the pop. at 162,000. The surface is uneven throughout, particularly in the S, where it is intersected by ramifications of the Harz. It is watered by the Innerste, the Oker, the Ecker, and the Fuse. Corn, fruit, flax, hops, cattle, and wool, are objects of export. H. was long an independent ecclesiastical state, the bishopric having been founded by Charlemagne in 822, and its territory having received large additions from time to time. It was noted for a succession of warlike bishops, one of whom having undertaken a contest, in 1519, with the dukes of Brunswick and Hanover, these princes procured a ban of the empire against him, and took possession of the greater part of his states, which they did not restore till 1643. The treaty of Westphalia preserved the bishopric, placing it under the protection of Hanover; and this arrangement continued till 1802, when the territory of H. was included among other secularizations, and given to the king of Prussia. After 1807, it formed a part of the kingdom of Westphalia; and in 1815 it was added by the congress of Vienna to the kingdom of Hanover. It is governed as an independent province, and has its own states. It is divided into 15 bailiwicks; and still has a bishop, but without temporal authority.

Hildesheim, the chief town of the above principality, situated 18 m. SE of Hanover. Pop. in 1845, 14,734. It is old and irregularly built, and presents numerous quaint old houses, with gables to the street, and many of them very lofty, consisting of several stories, each swelling out above the one beneath it. It was formerly fortified; but its walls have been demolished; and converted into public walks. It stands on a declivity near the small river Innerste, which, dividing into two branches, here forms an island covered with gardens. The town is divided into an old and new quarter, which have each their own magistrates, but in affairs affecting the general interest, hold meetings in common. The council and the majority of the citizens are Lutherans; the bishop and a part of the inhabitants are Catholics. The cathedral is a large, "severe, old" Gothic building, containing many antiquities, but it has been disfigured by recent repairs. The Catholics have 10 other churches, the Lutherans 8. The other public buildings are the episcopal palace, the council-house, the arsenal, the public stables, and the mint. The chief employment of the inhabitants is brewing and the manufacturing of yarn and coarse linen. A branch railway runs from this town to the Hanover and Brunswick railway, which it joins at Lehrte, 10 m. E of Hanover.

HILELA, or Hilel, a town of Marocco, in the prov. of Tafilet, in the upper part of the valley of the Ziz or of Tafilet.

HILFIELD, a parochial chapelry in Dorset, within the p. of Sydling-St.-Nicholas, 9 m. S of Sherbourn. Area 2,120 acres. Pop. in 1841, 147.

HILGAY, a parish in Norfolk, 3¾ m. SSE of Market-Downham, on the Wessey. Area 7,310 acres. Pop. in 1831, 1,176; in 1841, 1,515.

HILGERSDORF, a village of Bohemia, in the circle and 39 m. NNE of Leitmeritz, consisting of about 150 houses.

HILL, a parish in Gloucestershire, 4 m. SSW of Berkeley, on the Severn. Area 2,020 acres. Pop. in 1831, 257; in 1841, 227.—Also a township in the p. of Hales-Owen, Salop. Pop. in 1841, 936.—Also a hamlet in the p. of Leamington-Hastings, Warwickshire. Pop. 109.

HILL, a township of Grafton co., in the state of New Hampshire, U. S., 24 m. NNW of Concord, watered by Pemigewasset and Smith's rivers. The surface, especially towards the S, is hilly, but the soil possesses considerable fertility. The village consists of a long street, on the Pemigewasset, opposite Sandbornton, with which it is connected by a bridge. Pop. in 1840, 999.

HILL-DEVERILL, a parish in Wilts, 3½ m. S of Warminster, on the Willey. Area 1,420 acres. Pop. in 1831, 129; in 1841, 118.

HILL-END, a hamlet in the p. of Leigh, Worcestershire. Pop. in 1841, 350.

HILL-FARRANCE, a parish in Somerset, 3¾ m. W of Taunton, on a branch of the Tone, and on the line of the Bristol and Exeter railway. Area 850 acres. Pop. 564.

HILL-GORE, a township of Washington co., in the state of Maine, U. S. Pop. in 1840, 30.

HILL-MARTON, or Hillmarton, a parish in Wilts, 3½ m. NNE of Calne. Area 3,590 acres. Pop. in 1831, 651; in 1841, 806.

HILL-AND-MOOR, a township in the p. of Fladbury, Worcestershire, 3 m. NNE of Pershore, N of the Avon. Area 1,940 acres. Pop. in 1831, 304; in 1841, 334.

HILL-MORTON, or Hillmorton, a parish in Warwickshire, 2½ m. SE of Rugby, on a branch of the Avon, and intersected by the Birmingham and London railway, and the Oxford canal. Area 3,150 acres. Pop. in 1831, 873; in 1841, 953.

HILL-RIVER, a river of British North America, which has its source to the NE of Lake Winnipeg; runs first E through Winnipagosses lake; thence bends NNE, traverses Holy and Knee swampy lakes; and throws itself into Hudson's bay, at York, to the ESE of Port-Nelson, after a course, in a generally NE direction, of 300 m.

HILLAH, or Hellah, a town of Asiatic Turkey, in the pash. and 60 m. S of Bagdad, on the W bank of the Euphrates, and on the borders of the great Syrian desert, in N lat. 32° 28½′, E long. 44° 28′, 91 m. by water, or 61½ m. direct S, 33° E of Felujah. It contains about 10,000 inhabitants. The town is well-built, has an extensive and well-regulated bazaar, several stately caravanserais, chiefly built of materials obtained from ruins in the vicinity, and a number of coffee-houses along the banks of the river. It is governed by a hakim, under the pasha of Bagdad. A quarter of the town, situated on the E bank of the river, is connected with the other by a bridge of boats, but is not nearly so considerable as the W quarter. The soil in the vicinity is fertile, but almost quite neglected. The Euphrates widens considerably as it approaches H., where it is about 200 yds. wide, and in spring about 40 ft. deep. Its ordinary depth here is 15 ft., with a current of 2½ knots per hour. A floating-bridge, with a moveable boat in its centre, 450 ft. in length, here crosses the river. A tolerably active commerce is carried on here by means of sharp well-built latine vessels of from 50 to 80 tons, and drawing from 5 to 9 ft. water. Some of the smaller of these vessels make their way as far up the river as to Hit and Anna, which they supply with rice, dates, oil, cloth, and Indian goods. The distance along the Euphrates from Anna to H. is 440 m.; from H. to Kornah, 348 m.; to Bassora, 390 m. — The modern features of H. possess very little interest, compared to that derived from the circumstance, that upon it, and a district immediately to the N, appear to be situated the remains of the ancient and renowned capital of the eastern world. See article Babylon.

HILLAM, a township in the p. of Monk-Fryston, W. R. of Yorkshire, on the York and Derby railway, 4 m. N of Ferrybridge. Area 1,660 acres. Pop. in 1831, 291; in 1841, 342.

HILLARE, a commune of Belgium, in the prov. of E. Flanders, dep. of Lokeren. Pop. 486.

HILLARTSHAUSEN, a village of Electoral Hesse, in the prov. of Lower-Hesse, circle of Cassel, on the l. bank of the Weser, 10 m. E of Immenhausen, and 2 m. NNW of Munden. Pop. 102. In the vicinity of this village is an extensive glass-work.

HILLARY (Saint), a parish in Cornwall, 5 m. E by N of Penzance. It includes the town of Marazion. Area 3,380 acres. Houses 560. Pop. in 1801, 1,999; in 1831, 3,121; in 1841, 3,649. Among the examples of brecciated lodes, observed during the Ordnance geological survey, were noticed, in this district, fragments of slate cemented by oxide of tin and yellow copper-ore, at Wheal-Fortune, near Marazion, and angular portions of slate joined by oxide of tin at Perranuthno downs, near St. H. Between the sea in Mounts bay, and the tidal water in the Heyl river, the land is of very moderate height, probably not above 100 ft. At Wheal-Fortune, according to the approximative heights obtained during the survey, it is only 90 ft. Even at St. H., on the high ground separating the Heyl river, near Tregember, from the sea in Mounts bay, the elevation was found to be only 190 ft.: the Marazion mines 148 ft., and Penberthy cross, near St. H., also 148 ft. The Heyl and its tributary-stream, from Germoe, nearly cut this part, with the Land's-end high land, across from the Bristol to the English channels. In the year 1800, there were 4 copper-mines in St. H., but none of them were amongst the most productive in Cornwall. The quantity of copper-ores from the Marazion mines, sold at the Cornish ticketings, during the year ending 30th June, 1838, was 1,659 tons, value £9,729 9s.; from the Great Wheal-Fortune, &c., mines, 3,143 tons, value £19,079 2s. The quantity of black tin sold by ticketing, in 1837, from the Marazion mines, was 102¾ tons, value £4,575 8s. 9d.; from East Wheal-Fortune, 3½ tons.

HILLAYA, or Hilaya, a village of Sinde, on the W bank of the Oxus, 32 m. S of Kotri, near the Kinjor lake.

HILLBECK, a township in the p. of Brough, Westmoreland, ½ m. NNE of Bough. Pop. in 1841, 42.

HILLBOROUGH, or Hillburgh, a parish and village in Norfolk, 6 m. S of Swaffham, on a branch of the Wessey. Area 3,230 acres. Pop. in 1841, 237.

HILLE, a village of Prussia, in the prov. of Westphalia, regency and 8 m. NW of Minden. Pop. 2,486. —Also a village of Sweden, in the laen and 4 m. NE of Gefle.

HILLEBRUGS-EYNDE, a commune of Belgium, in the prov. of Antwerp, dep. of Bevel. Pop. 133.

HELLEGEM, a department and commune of Belgium, in the prov. of East Flanders, arrond. of Audenard. Pop. 1,135.

HILLEGOM, a village of Holland, in the prov. of Holland, arrond. and 11 m. NNE of Leyden, cant. and 8 m. NE of Noordwyk, pleasantly situated on the W side of the lake of Haarlem, and near the Haarlem and Leyden canal. Pop. 1,538. Legumes and fruit are extensively cultivated in the environs.

HELLEROD, a town of Denmark, in the island and diocese of Sieland, bail. of Frederiksborg, 21 m.

NNW of Copenhagen, on a little lake. Pop. in 1840, 1,800. It possesses a church, a grammar-school, and two hospitals. It has several distilleries, and extensive tanneries. In the vicinity is the fine royal castle of Frederiksborg, built by Christian IV., in the chapel of which the crown of Denmark is kept.

HILLESDEN, a parish in Buckinghamshire, 3½ m. SSW of Buckingham. Area 2,150 acres. Pop. in 1831, 251; in 1841, 262.

HILLESGONDSBERG, a village of Holland, in the prov. of Holland, arrond. and 2 m. N of Rotterdam. Pop. 1,991.

HILLESHEIM, a town of Prussia, in the prov. of the Rhine, regency and 39 m. N of Treves, circle and 11 m. NW of Daun, at the foot of the Eifel mountains. Pop. 700. In the vicinity is an extensive iron-mine.

HILLESTED, a parish of Denmark, in the island of Laaland, 2 m. SW of Marieboe. Pop. 500.

HILLIAR, a township of Knox co., in the state of Ohio. Pop. in 1840, 1,012. It contains the village of Centreburg.

HILLIER, a township of Upper Canada, in Prince Edward district, comprising an area of 30,717 acres, of which 16,460 are under cultivation, bounded on the S and W by Lake Ontario, and watered by several creeks which flow into the bays by which the W side of the township is indented.

HILLIER, or Hellier (Point), a headland of SW. Australia, on the S side of the peninsula which forms the E side of William bay, in S lat. 35° 4′, E long. 117° 9′.

HILLIE'RE (La), a village of France, in the dep. of the Gers, cant. and 3 m. ESE of Samatan, 4 m. E of Lombez. Pop. 987.

HILLINGDON, a parish in Middlesex, 1 m. SE of Uxbridge, intersected by the Great Western railway and the Grand Junction canal. Area 4,720 acres. Pop. in 1831, 6,885; in 1841, 9,246.

HILLINGTON, a parish in Norfolk, 6¾ m. SE of Norwich, on the Yare. Area 220 acres. Pop. in 1831, 52; in 1841, 64.—Also a parish 3¾ m. E of Castle-Rising. Area 2,230 acres. Pop. in 1841, 321.

HILLION, a commune of France, in the dep. of the Côtes-du-Nord, cant. and 4 m. E of Saint-Brieux. Pop. 2,518.

HILLOCK POINT, a headland of NE. Australia, on the E side of a small island, separated from the continent by a narrow channel, and to the N of Halifax bay, in S lat. 18° 50′, E long. 146° 40′.

HILL'S POINT, a headland of the state of Maryland, U. S., in the co. of Dorchester, on the E side of Chesapeak bay, between the embouchures of the Choptank and Hudson, in N lat. 38° 35′.

HILLSBORO', a village of Jefferson co., in the state of Missouri, U. S., 132 m. E of Jefferson city, on the E side of Big river.—Also a river in St. John co., Florida, which has its source to the SW of Lake George; runs SW; and falls into the bay of Espiritu-Santo, in the gulf of Mexico, after a course of about 78 m.

HILLSBOROUGH, a parish and market-town in co. Down, 3 m. SSW of Lisburn. Pop. of p. 6,524; of town, 1,338.

HILLSBOROUGH, the capital of the island of Carriacou, one of the Grenadines. It stands on the SW side of the island, and has a good port. The adjacent district is covered with cotton plantations.

HILLSBOROUGH, a county of the state of New Hampshire, U. S., comprising an area generally hilly of 1,245 sq. m., watered by Merrimac, Contoocook, Nashua, Souhegan, and Piscataquoag rivers. The soil possesses various degrees of fertility. Pop. in 1840, 42,494. Its cap. is Amherst.—Also a county of Florida, bounded on the W by the gulf of Mexico, and including Tampa bay. It is watered by Hillsboro', Alafia, and Asterual rivers, and possesses considerable diversity of soil. Pop. 452. Its cap. is Tampa.—Also a township of the co. of the same name, in New Hampshire, 24 m. WSW of Concord. It has a hilly surface, watered by Contoocook and Hillsborough rivers, and possesses considerable fertility of soil. Pop. 1,807.—Also a township of Somerset co., in the state of New Jersey, bordered on the N by Raritan river, on the E by Millstone river, and watered by Roy's brook. It is partly hilly, and its soil is partly clay loam and red shale. Pop. 2,863.—Also a village of Bethlehem township, Washington co., in the state of Pennsylvania, 203 m. W of Harrisburg, at an alt. of 1,002 ft. above the level of the Ohio at Wheeling. It consists of a single street, and contained in 1840 about 180 inhabitants.—Also a village of Caroline co., in the state of Maryland, 59 m. E of Annapolis, on Tuckahoe creek.—Also a village of London co., in the state of Virginia, 166 m. N of Richmond. Pop. 175.—Also a village of Orange co., in the state of North Carolina, 40 m. NW of Raleigh, on Eno river, a branch of Neuse river.—Also a village of Jasper co., in the state of Georgia, 28 m. NW of Milledgeville. Pop. about 75.—Also a village of Scott co., in the state of Mississippi, 48 m. E of Jackson, on a small branch of Pearl river.—Also a village of Fleming co., in the state of Kentucky, 91 m. E of Frankfort. Pop. 200.—Also a town of Highland co., in the state of Ohio, 75 m. SW of Columbus, near the source of Rocky fork of Paint creek. Pop. 1,200.—Also a village of Montgomery co., in the state of Illinois, 64 m. S of Springfield. Pop. 400.—Also a parish of New Brunswick, on the W and S side of the Peticodiae river.

HILLSBOROUGH (Bay), an extensive indentation of the S coast of Prince Edward's island, in the gulf of St. Lawrence. The depth and greatest breadth of its embrasure are about 15 m. Three rivers—one of the same name, the Gork, and the Elliot—flow into this bay at Charlotte's town. Of these the H. is the largest, being navigable for large ships 7 or 8 m.—Also a bay on the coast of Kerguelen island.

HILLSBOROUGH (Cape), a headland of New South Wales, to the SE of Repulse bay, in S lat. 20° 53′ 40″, E long. 149° 0′ 15″.

HILLSBOROUGH (Island), an island of the Atlantic, near the E coast of Labrador, to the N of Nain, in N lat. 57° 15′, W long. 61° 40′.

HILLSDALE, a county of the state of Michigan, U. S., comprising a surface generally hilly of 576 sq. m., drained by St. Joseph of Lake Michigan, St. Joseph of the Maumee river, Little Saint Joseph, Goose and Tiffin's creeks, Hog and Sandy rivers, and the S branch of Kalamazoo river. The soil is a rich, black, sandy loam; and iron ore is found here in considerable quantities. Pop. in 1840, 7,240. Its cap. is Jonesville.—Also a township of Columbia co., in the state of New York, 45 m. S of Albany. It is intersected by ranges of hills, including Taghkannic mountain, and is drained by Ancram and Copake creeks. The soil consists of gravelly loam and clay. Pop. 2,470.—Also a village of Fayette township, Hillside co., in the state of Michigan, 98 m. WSW of Detroit, on the outlet of St. Joseph or Baubese lake, near the entrance of French creek.

HILLSIDE and STAPELY, a tything in the p. of Odiham, county of Southampton. Pop. 411.

HILLTOP, a township in the p. of Wragby, W. R. of Yorkshire, 4½ m. NNW of Sheffield, S of the river Lochy. Pop. in 1831, 86; in 1841, 92.

HILLTOWN, a township of Bucks co., in the state of Pennsylvania, U. S., 100 m. E of Harrisburg, drained by branches of Nishaming creek. Pop. in 1840, 1,910.

HILO. See Ilo.

HILONGOS, a town of the island of Leyte, one of the Philippine islands, on the W coast. To the N of the town is a cape of the same name, in N lat. 10° 22′, E long. 124° 40′.

HILPERTON, or Hilprington, a parish in Wilts, 1½ m. NNE of Trowbridge, intersected by the Kennet and Avon canal. Area 980 acres. Pop. 973.

HILPOLSTEIN, or Hillpoldstein, a langerichtbezirk, or presidial, and town of Bavaria, in the circle of Upper Pfalz, 22 m. S of Nuremburg, and 32 m. ESE of Anspach, on a small river. Pop. 1,495. It has a town-house, remarkable for its antiquity, and a castle. Pop. of presidial, 12,010.—Also a town in the circle of Upper Franconia, 4 m. ENE of Grafenberg, and 23 m. SSW of Baireuth, on a rising ground. Pop. 400.—Also a town in the circle of Middle Franconia, SE of Schwabach. Pop. 1,200.

HILSAH, a town of Hindostan, in the prov. and 18 m. NW of Bahar.

HILSBACH, a town of Baden, in the circle of the Middle Rhine, cant. of Sinsheim, 21 m. SSE of Heidelberg, on a small stream of the same name, at an alt. of 900 ft. above sea-level. Pop. 1,366, of whom 527 are Catholics. It has a Lutheran and a Reformed church. Fairs are held here 3 times a-year.

HILSBORO, or Reggala (Port), a bay of the W coast of Marocco, in the district of Suse, to the NE of Cape Non, at the mouth of a small stream which flows into the Atlantic, in N lat. 29° 10′.

HILSEA, a hamlet in the p. of Wymering, island of Portsea, co. of Southampton, 3 m. NNE of Portsmouth. Pop. 227.

HILSENHEIM, or Hiltzen, a commune of France, in the dep. of the Bas-Rhin, cant. of Marckolsheim, 7 m. NE of Schelestat. Pop. in 1841, 1,747. Sugar from beet-root is extensively manufactured here.

HILSTON, a parish in the E. R. of Yorkshire, 13 m. ENE of Kingston-upon-Hull. Area 530 acres. Pop. in 1831, 43; in 1841, 41.

HILTENFINGEN, a village of Bavaria, in the circle of Suabia, 17 m. SSW of Augsburg. Pop. 689.

HILTERFINGEN, a village of Switzerland, in the cant. of Berne, on the Thuner-see. Pop. 350.—Also a v. of Bavaria, in Suabia, NE of Turkheim. Pop. 760.

HILTERS, or Hilders, a town of Bavaria, in the circle of Upper Franconia, 66 m. NE of Bischofsheim. Pop. 1,070. It has a castle.

HILTON, a township in the p. of Marston-upon-Dove, Derbyshire, on a branch of the Dove. Pop. in 1831, 651; in 1841, 723.—Also a parish in Dorset, 7½ m. WSW of Blandford-Forum. Area 1,870 acres. Pop. in 1831, 685; in 1841, 730.—Also a township in the p. of Staindrop, co. of Durham, 5¼ m. SSW of Bishop-Auckland. Area 1,260 acres. Pop. in 1831, 118; in 1841, 112.—Also a parish in Huntingdonshire, 3½ m. SSW of St. Ives. Area 1,510 acres. Pop. in 1831, 329; in 1841, 344.—Also a township in the p. of Wolverhampton, Staffordshire, W of Bilston. Pop. in 1831, 45; in 1841, 57.—Also a parish in the N. R. of Yorkshire, 3 m. ESE of Yarm, on the Tees. Area 1,510 acres. Pop. in 1831, 113; in 1841, 126.—Also a township in the p. of Appleby-St.-Michael, or Bongate p., Westmoreland. Pop. 271.—Also an ancient parish of Berwickshire, now conjoined with that of Whitsome.

HILTON, or Hylton, a township in the p. of Monkwearmouth, co. of Durham, 3¼ m. NW of Sunderland, on the Wear. Area 2,670 acres. Pop. in 1831, 420; in 1841, 350. It contains the hamlet of Wilton, and the village of Wilton-Ferry.

HILTON, or Hulton, three adjacent townships, distinguished from each other by the names of Over, Middle, and Little Hilton, in the p. of Dean, co. of Lancaster. They extend from Walkden-moor on the E, to West Houghton on the W, 4 m. SW of Bolton-le-Moors, and 10 m. NW of Manchester. 4 m. SSW of Bolton-le-Moors is the v. of Hilton-laneends. Little or Peel H. is 5½ m. NE of Leigh. Area 1,470 acres. Pop. in 1831, 2,981; in 1841, 3,052. Middle H. is 8 m. E of Wigan, and is W of Little H. Area 1,280 acres. Pop. in 1831, 934; in 1841, 902. Over H. is 3 m. WNW of Little H. Area 1,300 acres. Pop. in 1831, 538; in 1841, 445.

HILTON-HEAD, or Trenche's Island, an island near the shore of the state of S. Carolina, U. S., to the S of the entrance of Port Royal, and NE of the embouchure of the Savannah. It is separated from the continent by a channel 5 m. in length, and about 1 m. in breadth. At its NE extremity is a cape of the same name, in N lat. 32° 12′, W long. 90°.

HILTOWN, a village in the p. of Fearn, Rossshire, on the Moray frith. Pop. 310.

HILVARENBEEK, a town of Holland, capital of a district in the prov. of N. Brabant, arrond. and 17 m. WNW of Eindhoven, and 17 m. SSW of Bois-le Duc. Pop. 2,500.

HILVERSUM, a village of Holland, in the prov. of N. Holland, arrond. and 17 m. SE of Amsterdam, and 5 m. S of Naarden. Pop. 3,500. Woollen fabrics and carpets are extensively manufactured here.

HILZINGEN, a village of Baden, in the circle of the See, amt and 6 m. SE of Blumenfeld, and 11 m. NNE of Schaffhausen. Pop. (Cath.) 1,009. It has a castle.

HIMA'LAYA MOUNTAINS, a magnificent barrier running along the N frontiers of Hindostan, and separating it throughout its whole extent from Tibet and Chinese Tartary; and having on the S the plains of Northern India whose greatest elevation above sea-level does not exceed 1,200 ft.; and on the N the elevated table-land of Tibet. It is the *Imaus* of the ancients,—that appellation being the Greek form of the Sanscrit noun *hima*, signifying 'snow,' 'cold,' or 'frost.' From the term *hima* arise the various appellations given to this chain, of *Himadri*, *Himachull*, *Himalichull*, *Himavat*, *Himavati*, *Himalleh*, and *Himalaya*, which last is the most general name, and signifies 'the abode of snow.' To the W of Cashmere, the Persian appellative *Hindu-kush*, or 'the Indian mountain,' is substituted for that of Himalaya. Commencing to the W of the Dihong branch of the Brahmaputra, at the snowy chain of the Lang-tang, which runs off from the main range in 97° 25′ E long., 28° N lat., it runs W and WNW till it meets the Cashmerian range, in N lat. 34°, E long. 76°. Thence it turns N to 36° N lat., whence taking a W direction it runs to the NW frontier of Cabul, in 35° N lat., 67° E long., where it joins the Gaurian mountains, or Paropamisan range, NW of Bamian. Between these extreme points, comprehending 30° of long. and 8° of lat., the H. cannot be less than 1,800 geog. m. in extent. It has, however, become an opinion well-supported by able observers, that the H. is not a distinct mountain-chain apart from the general mass of the great table-land of Tibet, but just the S edge of that vastly elevated plateau. The appearance of this remarkable barrier, as far as it borders Hindostan, especially between the sources of the Gogra and Gunduck, or from the meridians of 81° to 83°, is so imposingly grand as to induce the belief of ocular deception in those who have witnessed its glories. Hardwicke, Elphinstone, Raper, Webb, Fraser, Hodgson, Strachey, Herbert, Hooker, and others, who have visited this elevated region, seem to have been utterly lost in astonishment when it was first disclosed to their view. The magnificence and variety

of its lofty summits, their sharp and pointed peaks soaring sublime from broad but lofty bases,—the dazzling brightness of their snowy mantle when illumined by the rays of an almost tropical sun,—and the awful and undisturbed repose which reigns amidst their eternal solitudes,—fill the mind with admiration and astonishment which no language can express. "During the day, the stupendous size of the mountains, their interminable extent, the variety and sharpness of their forms, and, above all, the tender clearness of their distant outline melting into the pale blue sky, contrasted with the deep azure above, is described as a scene of wild and wonderful beauty. At midnight, when myriads of stars sparkle in the black sky, and the pure blue of the mountains looks deeper still below the pale white gleam of the earth and snowlight, the effect is of unparalleled solemnity, and no language can describe the splendour of the sunbeams at daybreak streaming between the high peaks, and throwing their gigantic shadows on the mountains below." [*Mrs. Somerville's Physical Geography.*] But this unparalleled scene is best observed in the clear soft light which prevails between dawn and sun-rise,—misty exhalations hiding it during the heat of the day. The sun gilds the pinnacles of the snowy mountains long before it is visible to the inhabitants of the plain, and lights them up again at the close of the day, while darkness already pervades all the lower regions.

Elevation.] *Imaus* and *Emodus* were well known to the ancients as ranges clothed in perpetual snow, but they had not, of course, any accurate idea of their real height. Even the Hindus were equally ignorant on this point; and, as to the moderns, though the combined testimony of several travellers, as Andrada, Grueber, Dorville, Bernier, Freyre, Desideri, and Cassiano, had established the fact of their great elevation,—though Rennel had stated that they rose considerably above the horizon, when viewed from the plains, at the distance of 150 m.,—though the illustrious Jones had declared that Chumulari was distinctly visible at a distance of 244 m.,—and finally, though Bogle and Turner, in crossing the H. from Bengal to Lassa and Tishulumbu, had borne witness to the fact by their own experience,—yet all these testimonies long passed almost unheeded. Philosophers and their followers, reposing in perfect security on the theories of Bouguier, Kirwan, and Leslie,—which, built on a few partial facts, pretended to fix with mathematical accuracy limits of congelation for every latitude of the globe,—believed that no mountains could equal, much less excel, the Andes; and Mont Blanc in Savoy, though inferior to Chimborazo by nearly 6,000 ft., was unceasingly proclaimed as the loftiest summit in the old continent. The height of the H. had not indeed been hitherto ascertained by actual measurement; and therefore it was believed that though it might perhaps equal the Alps, it probably did not surpass them. Col. Crawford was the first to throw doubts on these opinions, by the actual measurement of several peaks in the vicinity of Nepal, and he was followed by Colebrook and Webb. The task of defence was undertaken by one theorist in the *Quarterly Review*, whilst Professor Leslie boldly declared his utter disbelief in the measurements of Webb, and affirmed that though the peaks of the H. might perhaps rise to an elevation of 17,000 ft., they could not exceed it. The chief objections were founded on the want of barometrical measurements,—the too great distances of the measuring stations,—the uncertainty of terrestrial refraction,—and above all, the inconsistency of such altitudes with the received doctrine of isothermal lines, and the believed limits of inferior congelation, which latter were stated as curves gradually diminishing in height from the equator to the poles all over the globe. But all these objections were answered and confuted by Webb; who, in order to evince the truth of his measurements, ascertained the elevation of the Niti pass, by a series of observations made with four different barometers on the 21st of August 1818, to be 16,814 ft. above the level of the sea, though not a vestige of snow appeared on the crest of the pass, nor on a shoulder of the mountain 300 ft. higher. By this stubborn experimental fact, the limit of inferior congelation in 31° N lat. was demonstrated to be more than 17,200 ft. above the level of the sea, or 6,000 ft. higher than that stated in Leslie's tables, and 1,453 ft. higher than the limit on the side of Chimborazo.

"The mean height of the H. is stupendous, certainly not less than from 16,000 to 20,000 ft., though the peaks exceeding that elevation are not to be numbered, especially at the sources of the Sutlej; indeed, from that river to the Kali the chain exhibits an endless succession of the loftiest mountains on earth; forty of them surpass the height of Chimborazo, the highest but one of the Andes, and many reach the height of 25,000 ft. at least."

The following are the highest peaks which have yet been measured; and for the sake of comparison, we subjoin the altitudes of the highest observed summits in the South American Andes:

I. Himalaya.

Jamnutri,	in N lat.	30°	55′, E long.	78°	12′	25,669 ft.
Manda-Devi,	,,	30	22 ,,	79	50	25,598
Dhawalagiri,	,,	29	10 ,,	83	0	27,600
Gosain-than,	,,	28	20 ,,	86	0	24,700
Kang-shang,	,,	27	42 ,,	88	10	28,176
Chumulari,	,,	27	52 ,,	89	18	23,929
The Zwillinge or Twins,	,,	27	50 ,,	92	50	21,600 21,476

II. Andes.

Aconcagua,	23,199 ft.
Chimborazo,	21,424
Sorata,	21,286
Illimani,	21,149
Descabasado,	21,100
Desyacassada,	19,570

Subsequently to this survey of Kumaon by Webb, another survey of Gurwhal, or Sirinagur, was made by Messrs. Hodgson and Herbert, for the purpose of determining the altitudes of the H. in that district. This survey was not finished till 1821. It presents a list of 202 elevations, amongst which are 50 peaks. Successive surveys were also made by Gerard, from 1818 to 1823 inclusive, in Kunawar, bordering on Ladak. By these different surveys of Webb, Hodgson, Herbert, and Gerard, all the peaks of that portion of the H. extending from 78° 34′ 4″ E long. and 31° 53′ N lat., to 81° 2′ E long. and 29° 49′ 43″ N lat., were determined with the utmost apparent exactness. From these memoirs, and the elevations taken by Crawford on the Nepal frontier, and by Captain Blake, we subjoin the following tables, with the authorities for each:—

I. Altitudes.

No.	Authorities.	Height.
1 Snowy range on the table land of the Indus,	Gerard,	Feet. 29,000?
2 Dhawalaghiri, or 'Great white mountain,'	Webb and Blake,	28,1044
3	Webb and Hodgson,	25,749
4 Swetaghar, E of Dhawalaghiri 36 miles,	Blake,	25,261
5	Crawford,	24,924
6	Do.,	24,809
7	Do.,	24,744

In the above Table, *No.* 1 was observed by Gerard from Hangarang in 1823. "I stood on the crest at noon," says he, "the therm. 25°. In front was a granitic range of most desolate aspect; not a blade of vegetation visible; the snow itself only finding a resting place at 19,000 ft. Beyond it, through a break, were seen snowy mountains, pale with distance, appearing to rise out of the table-land on the banks of the Indus; and from the angles of alt. which I observed, their pale outline, and the broad margin of the snow, they cannot be less elevated than 29,000 ft. The impression which their faint cloud-like appearance leaves on the mind of the spectator who views them on the verge of the horizon, language fails to convey. It is like something we have seen, but of which the idea retained is vague and ill-defined, appearing, through the dimness of distance, as objects mingling with the skies. As I had no time nor place for fixing their position, I adopted Humboldt's plan of vertical lenses, the results of which should give an approximation to their height." He observed it also from the pass of Keobrung, and says, that it was so completely covered with snow that not a rock was distinguishable even by a telescope of large magnifying power.—*No.* 2 was measured from different stations by Webb, and his measurements were confirmed by those of Captain Blake in 1814; but Captain Hodgson estimates Dhawalaghiri at over 27,600 ft.—*No.* 3 is given at 25,669 ft. by Webb, and 25,829 ft. by Hodgson and Herbert. The mean between the two measurements is 25,749 ft. as given in the table.—*No.* 18 seems to be the peak, 4 m. to the N of Kedarnaut temple and whose height is given by Webb at 22,840 ft., difference 222 ft. It is denominated the Sumeru Purbut or 'great mountain Meru,'—an appellation commonly given by the Hindus to very lofty mountains. Its angle of alt. above that temple is 26° 15′ 15″, and it is elevated above it 11,062 ft.; the temple itself being 12,000 ft. above the sea.—*No.* 20 is not more than 5 m. from the temple of Gangutri, and is elevated 12,586 ft. above it. Its angle of alt. from Gangutri must be enormous. *Nos.* 21, 22, and 25, are more than 10,000 ft. above the bed of the Ganges, though not more than from 6 to 8 m. distant, and surround the snowy vale from which it emerges.—*No.* 24 is given at 22,488 ft. by Gerard, or 212 ft. less than the table from Hodgson. This vast mountain rises to the height of 14,662 ft. above the Spiti which is washed by its base. Such an elevation from the immediate bank of a river has no parallel in any mountain of the globe, so far as known to us.—*Nos.* 30, 38, 39, and 41 belong to the Gangutri valley, and are like No. 20 invisible from the plains of Hindostan. —*No.* 45 is the huge Ruldung peak, which at the distance of only 5 m. from the village of Ribe, near the Baspa, makes an angle of 27° with the horizon, and an elevation of 13,412 ft. above that place.—*No.* 47, or the Pyramid peak, was distant only 14,800 ft. from Hodgson and Herbert's station near the great snow-bed of the Ganges, and had an angle of elevation of about 33°, and 8,465 ft. of height above their station. To form a proper idea of the imposing appearance of such a snowy peak, seen at so short a distance and with such an angle of elevation, it may be remarked that, if even when viewed from the plains of Hindostan, at angles of elevation of 1° and 1½°, the H. peaks towering over many intermediate ranges of mountains, inspire the mind with ideas of their grandeur, at so vast a distance, how much more sublime must they appear when their whole bulk cased in snow from the base to the summit at once fills the eye. It falls to the lot of few to enjoy the pleasure of contemplating so magnificent an object as a snow-clad peak rising to the height of more than 1½ m. at the short horizontal distance of only 2¾ m.—*No.* 49 is the high conical peak at the source of the Baspa.—*No.* 50 is the highest peak of the Jumnotri range at the source of the Birhai-Gánga, the main branch of the Jumna; but an alt. in this quarter has since been stated by Hodgson at 25,669 ft.—*Nos.* 57, 58, 59, belong to the large three-peaked mountain between the sources of the Tonse and Rupin.—*No.* 60 is the elevation of the Hindu-kush peaks taken by Macartney, above the valley of Peshawur. But that valley itself cannot be less than 1,500 ft. above the level of the sea, and consequently the absolute height of these peaks must be 22,000 ft.—*No.* 62. This peak was supposed by Fraser to be the highest in the valley of the Baghirathi, and to be far higher than Bunderpuch, which was presumed by Barrow, in his review of Fraser, to be 25,000 ft. high, as had been previously determined, but erroneously, by Webb, who had placed it 23′ too far N from his point of observation. The ascertained height in the table, has proved that Fraser and Barrow were both wrong.—*No.* 63 makes an angle of 28° above the point of Shipke. E of Purkhyal, the banks of the Sutlej are bristled on both sides with a succession of sharp snowy pinnacles more than 20,000 ft. high.

The subjoined table of passes, determined in the cases marked B by the barom., will give some idea of the elevation of the ridges themselves, as in continuous ranges these are always the lowest parts of the *jugum* or ridge. It is these, and not the peaks, which indicate the mean elevation of the range, or great buttress rather, that is itself the base of the peaks, —the latter being the culminating points, and the former the minima points of the crest. In the Alps and the Caucasus, the relation of the minimum of crest is to the culminating points as 1 to 2, or the latter are double the elevation of the former. But in the H., so far as observed, the crest is to the peaks as 1· to 1·8. From the subjoined table it appears

that the mean height of the H. is upwards of 17,000 ft., and not, as Humboldt imagines, only equal to the culminating points of the Alps. The passes below 16,500 ft. do not belong to the main crest, but to the lateral ridges or ribs projecting from the spine, and to the S ridge of the H. Humboldt assigns near 12,000 ft. as the mean elevation of the crest of the Andes; but this can only be applied to the Andes of Quito. The mean elevation of the passes of the Andes of Titicaca is from 15,030 to 15,195 ft., and even this is 2,000 ft. lower than the mean height of the H. range. It must be admitted, however, that where mountains form groups or clusters, and not a continuous line, it is impossible to determine the mean height from passes.

II. PASSES IN THE GREAT HIMALAYA.

	Feet.
1 Pass crossed at the NE frontier of Khunawur, near the stone bridge, by Dr. Gerard, upwards of (B)	20,000
N.B. Gerard attained this elevation without crossing the perpetual snow. This is undoubtedly the highest spot on the globe hitherto attained by man. It is higher by 800 ft. than Humboldt attained on the side of Chimborazo.	
2 Point of elevation attained by Gerard, in 1818, on the mountain Pargiula, near Nako, on the Sutlej, by the barom.,	19,411
The same taken geom., in 1821,	19,442
3 Pass into Tibet by Lebong, crossed by Webb, (G)	18,871
4 Do. of Manerung, crossed by Gerard, in 1818 and 1821 (B)	18,612
5 Do. Keoubrung, do. do. (B)	18,313
6 Do. Gungtung, do. do. (B)	18,295
7 Do. Shirang, from Shipke to Gortope, upwards of	18,300
N.B. Only one small stripe of snow on it.—Gerard.	
8 Do. Oota-Dhoora, a day's march beyond Milum. Monson, (B)	17,780
9 Do. at the head of the Ihannevie. Hamilton,	18,000
10 Do. of Lachung, in N lat. 28°, and a little to the E of 88° 30′ E long.,	18,000
11 Do. of Takklacote, crossed by Webb in 1816, (G)	17,598
12 Do. Meyang-La, from Shipke to Gara, (B)	17,700
13 Do. Charang, crossed by Gerard in 1821, (B)	17,348
14 Nitee pass, crossed by Webb 1818. (B)	16,814
15 Do. of Wallanchung, to the W of Kanglachem pass, in E long. 87° 35′. Hooker,	16,700
16 Pass between Shipke and Ladauk. Gerard. (B)	16,500
17 Kongma pass, between Numjea and Shipke. Gerard, (B)	16,007
18 Kanglachem pass, in 87° 40′ E long. Hooker,	16,000
19 Kimlia pass, attempted by Gerard in 1821,	17,000
20 Nibrang pass (Southern Himalaya), (B.) Gerard,	16,035
21 Gunass do. do. (B.) do.,	16,020
22 Yusu do. do. (B.) do.,	15,877
23 Ghusul do. do. (B.) do.,	15,851
24 Shotul do. do. (B.) do.,	15,556
25 Lachen do. over the Kongra-Lama, to the W of Lachung pass. Hooker,	15,500
26 Bamsuru pass from the Jumna to the Ganges,	15,447
N.B. This pass was crossed by Fraser in 1816, and by Hodgson in 1818.	
27 Buranda pass, crossed by Fraser, from the Pabur to the Sutlej. Gerard, (B)	15,248
28 Nalgun do., crossed by Fraser. Gerard. (B)	14,891
29 Hangarang do., N side of the Sungnaum valley. Gerard. (B)	14,837
30 Snow bed of the Ganges. Hodgson and Herbert,	14,600
N.B. Farther advance was impracticable for snow.	
31 Runung pass, S of Sungnaum,	14,500
32 Point of emersion of the Ganges from the snow,	13,800
33 Lapcha pass from Shealkur to Surma,	13,625
34 Tungrung do. from Marang to Nisung,	13,739

No. 10 in the above table was first visited by Dr. J. D. Hooker in 1849. *No.* 11 is the most eastern pass measured by Webb. Takklacote is at the N foot of the range in Chinesian Tartary. But beyond Takklacote another range must be crossed before we can arrive at the valley of the Mansaroar lake, and at the station of Gurdon or Gharewdhoon, the abode of a Chinese deputy.—*No.* 3 lies to the W of this, and is the highest pass crossed hitherto next to that attained by Dr. Gerard.—*No.* 8 was not crossed till 1827. It lies E of the Niti pass, and a day's journey N of Milam village in the purgunnah of Juwahir, the most northern station of the Juwahir Bhotiyas. Herbert was unable from indisposition to scale this pass, but his assistant, Monson, advanced to it, and found it to be loftier than those of Niti and Takklacote crossed by Webb. It is on the road to Gortope or Gertokh; and between it and this pass are several ridges of equal elevation. The whole space is destitute of vegetation, the road being for one march on this side of the pass more than 1,000 ft. above the line where shrubs of any kind are found. This pass is practicable only two months in the year. During the rest it is blocked up by the snow. Notwithstanding the difficulties of the journey, however, this is the most frequented pass throughout the whole range by the Bhotiya traders. It is computed that above 7,000 sheep, the only beasts of burden used in the Himalaya country, pass this mountain annually, importing about 9 or 10,000 maunds of salt and borax. Here we have another proof, amongst many, of the absurdity of determining by mere lat. the inferior line of perpetual snow, as at this elevation of 17,780 ft. the pass is two months free from snow.—*No.* 4 leads from the valley of Sungnaum, over the range to the NW into the Spiti of Ladak, and is tremendously difficult, as Gerard experienced in September 1821. It is not so much the intensity of the cold as the presence of wind, that causes fatal consequences in these elevated regions. Captain Gerard found the cold endurable at an alt. of 18,700 ft. when the therm. was 22° below the freezing-point, during a perfect calm; but at another time was almost frozen in a temp. of 4° above 32°. Mr. Strachey, in an article in the 20th vol. of the *Geographical Journal*, says, "The valleys that traverse the mountains between the snowy ranges and the plains are for the most part little more than gigantic ravines, at the bottom of which flows the river each contains, in a very contracted channel, which at intervals only opens out into an alluvial flat, capable of cultivation. The level of the bottom of these valleys is, of course, very various; but in tracing up the courses of the larger streams we usually arrive within 10 miles in a direct line from the snowy peaks, without having risen to more than 4,000 or 5,000 ft. In proceeding, however, we find that where we cross the line on which the great peaks are situated the ascent very rapidly increases, and a very few miles carries the river-bed up to an altitude of 9,000 or 10,000 ft.; thus showing that the sudden increase of height of the mountains along this line is not confined to the peaks alone, but is a general elevation of the whole surface. As we pass to the N from the line of greatest elevation, the diminution of the altitude of the ridges is not much, while the level of the bottom of the valleys is constantly increasing in height; it is, therefore, not improbable that the mean height of the whole may actually increase as we recede from the great peaks until we reach the watershed of the streams that flow to the S, which is found at about 25 m. to the N of those peaks. In passing through the most elevated portions of the mountains, the traveller, who naturally expects to see scenes of surprising magnificence amid these gigantic snow-clad pinnacles, is too often doomed to be disappointed; for, in his painful progress along the narrow gorges that traverse these regions, he can but seldom see anything beyond the rocks that frown immediately over his head. Exceptions however there are, though few, to this rule, and we are sometimes able to snatch from the summits of the higher passes, in the rare intervals during which they are not shrouded in mist, views of stupendous and chaotic masses of mountain that fill the mind with astonishment and awe. Nor is the scene that presents itself, when we at length reach the watershed, less remarkable. After weeks have been spent in traversing mountain after mountain, of the seeming interminable succession of which the eye begins to tire, while the incessant roar of the torrents

that rush by begins to weary the ear, we are here suddenly arrested by seeing spread out before us a plain, that without sign of water, of vegetation, or of animal life, stretches away, as far as the eye can reach, in a north-westerly direction; behind which rise mountains that gradually fade away in the distance, with here and there only a peak lightly tipped with snow. This, in fact, is the very plain which was seen by some of the earliest missionary travellers in Tibet, and the account of whose existence gave rise to the idea that the whole country was a vast plain of immense altitude. When it became apparent, as it ultimately did from the accounts of subsequent travellers, that a great part of Tibet was a confused mass of mountain, doubts were thrown on the existence of any plains at all, and it has become necessary, so to speak, to re-discover this very remarkable feature of these mountains. The plain immediately to the N of the British Himalayan provs. is about 120 m. in length, and 15 to 60 m. in extreme breadth. The mountains that bound it to the N, as I have already noticed, hardly appear to be what we should call snowy, and they are by no means so high as the ranges of the H. on its S edge. The height of the celebrated peak Kailás has been determined by purely trigonometrical operations to be not quite 22,000 ft.; while another peak, more to the W, one of the few that just entered the region of perpetual snow, was similarly found to be little above 20,500 ft. The surface of the plain itself, which has been traversed throughout its length by my brother Captain Henry Strachey, as well as to a less extent by myself, in company with Mr. Winterbottom, varies in elevation from above 16,000 ft. along its southern edge to about 15,000 in its more central parts, where it is cut through by the river Sutlej, which flows at the bottom of a stupendous ravine furrowed out of the alluvial matter of which the plain is composed to a depth not much less than 3,000 ft. As we advance into the eastern parts of the plain, we find that it gradually becomes more obstructed with mountains, which rise abruptly from the level surface like islands and rocky coasts from the sea; and if at any time it requires but little effort of the imagination to reproduce to the mind the picture of the days long gone by, when an ocean rolled over this expanse, now upraised above the level of the highest of the puny mountains of Europe, even that little is sometimes not needed when the mirage that plays over the arid surface of the ground, under the influence of the intense heat of the sun's rays, unrolls before the eye its fairy vision of the things that were."

Geology.] It is said that gneiss is the prevalent rock in the H. This is however as yet but mere conjecture, as the geological composition of the range has been but very partially examined by mineralogists. Throughout the H. comparatively little granite has as yet been detected; the most extensive rock being gneiss; a circumstance which might lead geologists to assert that the present H, vast as they are, are but secondary to some more mighty formation that once existed. From the plains through the first and second or Sivalik ranges of hills, to the great barrier itself, there appears to be a series of bands of supermedial rocks succeeded by sandstones and limestones, and transition rocks reposing alternately on mica slate, gneiss, or granite. "The first great mass of mountain," says Mr. Strachey, "which rises over the outer hills and 'Dúns' consists of argillaceous schists, grits, and limestones, all devoid of fossils, and it is not till we pass beyond the line of greatest elevation that we find any trace of organic remains to guide us in our speculations as to the age of the strata with which we meet. The whole area between the outer hills or the sandstones that succeed them, and these fossiliferous beds, is made up of every variety of metamorphic rock, amongst which several lines of eruptive action are met with, all following more or less the general line of the strike. Two lines of granite are thus found to traverse this portion of the mountains, the more northern of which is coincident with the line of greatest elevation, while the southern, which is of a totally different mineral character, appears to have no very marked influence on the elevation of the surface. Several distinct lines of eruptive rocks of the greenstone order have likewise been traced. It may also be noticed that the actual quantity of granite in these districts is on the whole small; the granite that follows the line of maximum elevation is chiefly in the form of veins, and in very few instances expands into mountain masses, the great peaks for the most part being composed of stratified rocks, as may be very distinctly seen from a great distance. Immediately following the crystalline schists that accompany the northern line of granite, we find a considerable thickness of slaty beds, both argillaceous and calcareous, on which rest strata that are certainly of Silurian age. The fossils obtained by me from these beds, the upper part of which rises to a height of between 19,000 and 20,000 ft., have been partially examined by Mr. Salter, and he has no hesitation in ascribing them to the Silurian period. Succeeding the palæozoic strata we find a remarkable bed, apparently quite analogous in the form of its fossils to the muschelkalk of Europe; and still ascending we come to oolitic beds, among which the presence of the Oxford clay is well marked, while the lias seems to be altogether wanting. But probably the most remarkable feature of the geological structure of these mountains is that to which I shall next advert. The plain of Tibet is found on examination to be a tertiary deposit of boulders and gravel, which has attained its present wonderful elevation, above 15,000 ft., without any sensible disturbance of the horizontality of the beds in which it was originally laid out. Bones of elephant, rhinoceros, and horse, the latter apparently identical with the horse of the Siwaliks, also of some large undetermined ruminant, as well as of a new species allied to the goat, are found embedded in these strata. The existence of such animals in the country in its present state being a physical impossibility, there can be no doubt that these strata have been elevated from some lower level since the time of their deposition. There is no direct proof that these beds are marine, no shells having been got from them, and they might possibly have been laid out by some large body of fresh water at a considerable elevation above the sea; but it appears to me to be far more probable that we have a real sea-bottom to deal with. The general extension of some of the older fossiliferous rocks along the northern face of the H., over a very great longitudinal distance, is a fact of which we have certain proof. It follows, therefore, that the line on which they occur, distant about 20 or 30 m. to the N of the great Himalayan peaks, has been a sea-margin from the remotest ages of the earth's history till as late, certainly, as the oolitic period. The existence of other plains, apparently of a similar nature, at distant points along the mountains, seems to indicate the probable extension of the body of water by which these tertiary strata were formed, to such dimensions as would, of necessity, show that it was the ocean and no lake."

Vegetation.] The general upper limit of the forest on the S face of the H. is about 11,500 ft. above the level of the sea; oaks and pines reach that alt.; birches ascend a few feet higher; and juniper has been seen growing at 13,300 ft. of elevation. The prevailing trees are the oak, pines of great variety, and rhododendrons; the smaller trees are *juniperus*, *salix*, and *ribes;* the grasses, *agrestis*, *poa*, *festuca*, *bromus*, and *phleum*. The extreme height of cultivation on the S slope is 10,000 ft.; the highest habitation is 9,500 ft. On the N slope villages are found at 13,000 ft.; cultivation at 13,600 ft.; fine birch trees at 14,000 ft.; and furze at 17,000 ft. Captain Strachey carries the extreme limit of vegetation N of the great snowy peaks to 19,000 ft., and saw a variety of barley growing at 15,000 ft. alt. in Ladak.—As to animals, the *entellus*, of the monkey family, here ascends to 9,000 ft.; and the tiger, leopard, and others of the feline tribe, follow their prey to about the same height. The ounce has his peculiar abode in the higher parts of Tibet, but occasionally commits ravages among the flocks down to 11,000 ft. The wild dog and hog abound; the *Cervus jurao*, or great stag, is common, as is also the *Cervus rutiva* or 'barking deer.' The different species of antelopes are generally found in the higher regions. The *kyang* or wild ass roams over the plains to the N of the H.; and the wild sheep is common both in Tibet and the higher parts of the H. The yak forms the only species of horned cattle in the higher parts of Tibet, and is met with wild along the S edge of the plateau. The eagle and vulture are seen on the highest peaks; the hoopoo, at an alt. of 16,500 ft.; bustards, ducks, and teel at 15,500 ft.; pheasants, partridges, and crows abound everywhere. The lakes and smaller streams abound in fish.

Snow line.] Dr. J. D. Hooker, whose recent explorations of the H. extended from Chumulari westward to the head-streams of the Tambur in about 87° 35′ E long., estimates the line of perpetual snow at about 17,000 ft. on the S slope of the range

in this quarter; and 18,000 ft. on the N or Tibetian side. Mr. Royle offers the following explanation of the remarkable fact, that the limit of the line of snow rises higher on the northern than on the southern flank of the H. "From the details which have been given, it seems abundantly clear that the elevation of the Indian snowy range is sufficient to prevent the passage across of the cloudy masses which deluge the plains of N. India with rain, both in the cold and in the warm season. The atmosphere, therefore, on the N face of the H. preserves unimpaired the dryness which is the characteristic of the rarefied air of lofty situations: hence the little deposition of snow which takes place in winter in proportion to the lowness of the temperature. The returning warmth of spring rapidly dissolves this thin layer of snow from level places, in consequence, it appears, of the undiminished power of the solar rays in passing through so rare and transparent a medium; a fact tending to confirm Mr. Daniel's views respecting the superior energy of the solar rays in the higher regions of the air; and as this seems already to have been done with respect to his opinions of their great power in polar regions, the fact is interesting as giving an additional cause for the analogy between alpine and polar vegetation. When the snow is once melted, these elevated tracts, surrounded and confined by towering mountains, absorb heat as readily during the presence of the sun as they radiate it freely while he is absent; and becoming, like the surface of the earth at ordinary levels, the source whence the heat received from the sun is diffused to surrounding objects, they cause the line of perpetual congelation to recede higher and higher in proportion to their own elevation. Peaks and pinnacles, on the contrary, projected into the air like promontories into the ocean, partake rather of the equability of temperature of the media into which they intrude, than impress on them, like plains and table-lands, their own extremes of heat and cold."

HIMBERG, a town of the archduchy of Austria, in Lower Austria, circle of the Lower Wienerwalde, 9 m. SSE of Vienna, near the confluence of the Kallenganger with the Triesting-bach. Pop. 1,230. Chintz, muslin, and linen are manufactured here.

HIMBLETON, a parish of Worcestershire, 4 m. SE of Droitwich, on a branch of the Avon, and on the line of the Birmingham and Gloucester railway. Area 2,040 acres. Pop. in 1831, 478; in 1841, 424.

HIMBLIATAUELLE, a military post of the island of Ceylon, in the district of Ouva, situated on the summit of a bleak hill, 4,000 ft. above sea-level, to the SW of Mount Namma-Couly-Kandy, and 42 m. SE of Kandy.

HIMER (Saint), a village of France, in the dep. of Calvados, cant. and 2 m. S of Pont-l'Eveque, and 27 m. ENE of Caen. Pop. 1,060.

HIMLE, a haerad of Sweden, in the N part of the prefecture of Halmstadt, between the haerads of Wiske and Fauras. Warberg is its chief town.

HIMLEY, a parish and village of Staffordshire, 3¾ m. W of Dudley. The Stafford and Birmingham canal passes about 1½ m. W of the village. Area of p. 1,200 acres. Pop. in 1831, 156; in 1841, 409.

HIMMELPFORTEN, a town of the kingdom of Hanover, in the gov. and 9 m. W of Stade. Pop. 420.

HIMMELSKRON, a town of Bavaria, in the circle of Upper Franconia, 10 m. NNE of Bayreuth, and 32 m. NE of Bamberg, on the l. bank of the White Main. Pop. 682. It has a royal castle, and an ancient monastery.

HIMMELSTADT, a village of Prussia, in the prov. of Brandenburg, regency and 45 m. NE of Frankfort-on-the-Oder, circle and 5 m. NNW of Landsberg. White iron is manufactured here.

HINA, a district of Ceylon, in the W part of the island, to the N of the district of Hevagam, to the S of those of Allont-cour and to the W of that of Belligalé. It is watered on the S by the Kalenyganga.

HINAUMETZ, a commune of Belgium, in the prov. of Hainault, dep. of Thieulain. Pop. 155.

HINCASTER, a township in the p. of Heversham, Westmoreland, 2½ m. NNE of Milnthorpe. Area 770 acres. Pop. in 1831, 156; in 1841, 136.

HINCHE, a town of Hayti, in the dep. of Ozama, 36 m. S of Fort Liberty, and 60 m. NNE of Port-au-Prince, at the confluence of a river of the same name with the Guayanuco. Pop., with dependencies, 4,500. The river H. forms an affluent of the Artibonite.

HINCHINBROOK, an island of the South Pacific, in the archipelago of the New Hebrides, a little to the N of Sandwich island, in S lat. 17° 33′, E long. 168° 20′.—Also an insular mountain of New South Wales, on the shore of the Pacific, to the SE of Rockingham, and to the N of Halifax bays, in S lat. 18° 25′, E long. 146° 30′. It rises to the height of 2,500 ft. above sea-level, and is visible at sea at the distance of 18 leagues.—Also a township of Lower Canada, in the co. of Beauharnois, bounded on the S by the United States, and separated from Godmanchester by the Chateauguay. It comprises an area of 38,000 acres, to some extent hilly, but tolerably fertile. In some parts are swamps covered with cedar, spruce fir, and hemlock trees; and the rising grounds are thickly covered with timber. Towards the Chateauguay are gentle slopes and fine meadow-land, watered by the affluents of that river. Pop. 1,214. The v. of H., or Huntingdon, is built on each side of the Chateauguay, partly in H., and partly in Godmanchester, and is connected by a bridge 240 ft. in length. Pop. 125.

HINCHINBROOK, or Tkhalkha, an island of the N. Pacific, near the S coast of Russian America, at the entrance of Prince William's sound, in N lat. 60° 24′, W long. 146°. It is 24 m. in length from NE to SW, and 12 m. in breadth, and terminates in the S in a cape of the same name. The coasts are extremely irregular, and present numerous bays. Of these, one of great extent lies to the NE; and to the S is Port Constantine and Helen.

HINCHINBROOKE, a township of Upper Canada, in the Midland district. Near its centre is a large lake, with an island in the middle, and several small lakes are scattered over its surface.

HIN-CHU, a division and town of China, in the prov. of Shan-si. The div. comprises 2 districts, viz., Ting-jang-heen and Tsing-heen. The town is 45 m. NNE of Tae-yuen, on an affluent of the Houto-Ho, in N lat. 38° 26′.

HINCKLEY, a parish and market-town in Leicestershire, 13½ m. SW of Leicester, and 99 m. NW by N of London. The p. comprises the township of Hinckley-Bond, the chapelries of Dadlington and Stoke-Golding, and the hamlets of Wykin and Hydes-Pastures. Area 6,200 acres. Pop. in 1801, 5,676; in 1831, 7,180; in 1841, 7,291.—The town, which is the principal one in the hund., is pleasantly situated on an elevated table-land, near the borders of Warwickshire. It formerly enjoyed the privileges of a borough. It is one of the polling-places for the members for the S division of the co. The manufacture of hosiery is carried on here to a very considerable extent. Excepting Leicester, more stockings have been manufactured in H. than in any other place in the kingdom; the inhabitants have long been chiefly employed in this manufacture, which was introduced here in 1640. It is computed that there have been upwards of 2,500 frames employed in the town and the villages in its vicinity, giving employment to 6,000 persons. The coarser kinds of stockings, both cotton and worsted, are chiefly produced here. H. has likewise manufactories of coarse cotton, thread, and worsted.

HINCKLEY, a township of Medina co., in the state of Ohio, U. S., 132 m. NNE of Columbus, watered by a branch of Rocky river. Its surface is elevated, but its soil is fertile, and affords grain, as well as excellent pasturage. It contains red sandstone, iron-ore, and coal, in considerable quantities. Pop. in 1840, 1,285.

HINDAOU, or Gartaas, a district of Nubia, in the territory of the Kenous, on the l. bank of the Nile, 20 m. SSW of Es-Souan. It is celebrated for the numerous ruins which it contains. The only

habitations to be found here are a few miserable cabins.

HINDELANG, a market-town of Bavaria, in the circle of Suabia, 17 m. S of Kempten. Pop. 1,288.

HINDELBANK, a village of Switzerland, in the cant. and 9 m. NE of Berne, bail. and 5 m. W of Berthoud. It has a church, in which is a fine mausoleum of the sculptor Nahl; and in the environs are 2 castles. Pop. 960.

HINDELOPEN, or HINDELOOPEN, a seaport town of Holland, in the prov. of Friesland, capital of a cant., in the arrond. and 14 m. SW of Sneek, and 27 m. SW of Leeuwarden, on the Zuyder-Zee. Pop. 1,207. Ship-building, fishing, and navigation, form the chief branches of local employment.

HINDELWANGEN, a village of Baden, in the circle of the See, N of Stokach. Pop. 280.

HINDERCLAY, a parish in Suffolk, 14 m. NE of Bury-St.-Edmunds. Area 1,950 acres. Pop. in 1841, 387.

HINDERWELL, a parish in the N. R. of Yorkshire, 8½ m. WNW of Whitby, on the coast of the North sea. Area 3,960 acres. Pop. in 1841, 4,970.

HINDIA, a town of Hindostan, in the prov. of Kandeish, capital of the district of the same name, 102 NE of Buranpur, pleasantly situated on the l. bank of the Nerbudda, opposite Nemavor, with which it is connected by a bridge 1,000 yds. in length. It is populous, and has a fort which commands the river, but possesses little military strength. The district is bounded by the Nerbudda on the N, and on the SE by the Calygong or Caligrama hills. Its chief towns are Hindia, Hussingabad, and Charwan.

HINDIAN, a nomade tribe of Arabs, who inhabit the shores of the Persian gulf, in the prov. of Fars.

HINDIKEES, a people of Afghanistan, of Indian origin. They are more numerous than the Taujiks, with whom they divide the local commerce. Their language bears a close resemblance to that of the dialect of the Punjab.

HINDLEY, a chapelry in the p. of Wigan, Lancashire, 2¼ m. ESE of Wigan, in the line of the Wigan and Newton railway. Area 2,310 acres. Pop. in 1831, 4,575; in 1841, 5,459.

HINDLIP, or HINLIP, a parish in Worcestershire, 3 m. NNE of Worcester, in the line of the Birmingham and Gloucester railway, and of the Worcester and Birmingham canal. Area 1,140 acres. Pop. in 1831, 134; in 1841, 139.

HINDOEN, one of the Lofoden islands, in the Arctic ocean, near the NW coast of Norway, dio. of Nordland, between 68° 25′ and 69° 2′ N lat., and 14° 20′ and 16° 10′ E long. This island, which is the largest of the Lofoden group, is separated from the continent by a narrow channel, and lies to the E of the islands of Ost-Vaagen, Hasselt, and Langöen, and to the S of that of Andöen. It is 54 m. in length from NE to SW, and about 30 m. in breadth; and is divided into two nearly distinct parts by the Gullesfiord, an arm of the sea running S, the western section belonging to the bail. of Nordland, and the eastern to that of Finmark.

HINDOLVESTON, or HILDERSTON, a parish in Norfolk, 3 m. N of Foulsham. Area 2,720 acres. Pop. in 1831, 797; in 1841, 839.

HINDON, a parish, borough, and market-town in Wilts, 8 m. SSE of Warminster, and 94 m. WSW of London. Area 270 acres. Pop. in 1831, 991; in 1841, 772.

HINDONE, a town of Hindostan, in the prov. and 65 m. SW of Agra, belonging to the rajah, and 74 m. ESE of Jypur. It was formerly large and populous, but has been greatly reduced by the frequent incursions of the Maharattas. It is chiefly built of dark red sandstone, squared in large masses, and finely polished, and contains 2 spacious chowks, with a Hindu temple in each.

HINDOSTAN.

The classical appellation, *India*, seems to have been anciently given to the whole of that vast region which stretches from Persia and Bactria on the W, to the country of the Sinæ or Chinese on the E; and from the Scythian desert on the N, to the ocean on the S. Within these stupendous limits, comprising an area of 40 degrees both of lat. and long., were included the lofty mountain-ranges of Tibet,—the romantic valley of Cashmere,—all the rugged domains of the old Indo-Scythians,—the countries of Nepal, Butan, Kamrup, and Assam,—together with Siam, Ava, and Arracan, and the bordering states as far as the China of the Hindus,—the island of Ceylon, and the whole Western peninsula. The name itself is generally supposed to have been derived from the river Indus, which waters the W extremity of this region. Under the appellation of *India beyond the Ganges*, some writers have comprised the whole group of countries lying between the bay of Bengal and the Chinese sea. In the early part of the 15th cent. we find India made to comprehend nearly the same portion of the globe as that on which we so vaguely bestow the appellation of *East Indies*, the islands of the Indian archipelago being included.

The modern name *Hindostan*, or *Hindúst'han*, is a Persian appellation; and if, as some regard it, composed of the words *hindu*, 'black' or 'swarthy,' and *stahn*, 'a place,' signifies 'the black or swarthy country.' According to other philologists, the term *Sind'hu*, signifying in the ancient Indian language 'the ocean,' was originally given to the largest river of India; whence the Persians called the country separated from them by that river *Sind'húst'han*, or *Hindúst'han*, *i. e.*, 'the Sindian' or 'Indian country:' the substitution of *h* for *s* being common in the early languages of this region of the globe. By Mahommedan writers the term *Hindostan* was applied to the countries immediately subject to the Mogul sovereigns of Delhi, or the eleven provinces lying to the N of the Nerbudda; while the tract to the S of that river was denominated the *Deccan*, or 'south country.' By the Bramins, Hindostan is denominated *Medhyama*, or 'central,' and *Punyab'humi*, or 'the land of virtues'—appellations vague and unmeaning in geography. Some modern geographers consider the limits of Hindostan as co-extensive with those of the Hindu religion. "This delineation," Hamilton remarks, "has the advantage of being singularly well-defined on three sides by strong natural barriers." According to this arrangement, H. is separated, on the N, from the table-land of Tibet, by the lofty chain of the Himalaya mountains. To the S, it is everywhere bounded by the ocean; and on the W by the course of the river Indus. Its limits on the E are more difficult to define; "but the most distinct are the range of hills and forests that skirt the Bengal districts of Chittagong and Tiperah, and stretch N to the Brahmaputra, near to where that immense river, after having long flowed almost due W, makes a sudden sweep to the S. In this NE corner the Hindu religion is irregularly diffused, as it extends, far beyond the limits assigned, into Assam and Cassay, while that of Buddha prevails in Butan, and protrudes into the Brahminical regions on the banks of the Tista."

Boundaries and extent.] H., then, assigning to it the limits thus indicated, is bounded on the N by the S front of the Himalaya, which, commencing near the Indus, and circling Cashmere on the N, runs in an uninterrupted line, with a southern inclination, beyond the eastern extremity of the coun-

try; on the E, by Arracan, Cassay, and the Langtang mountains; on the SE, by the bay of Bengal; on the S and SW, by the Indian ocean; and on the W, by the course of the Indus. According to these boundaries, the extreme length of H., from N to S, is 27 degrees of latitude—viz. from Cape Comorin, in 7° 57′, to the crest of the Himalaya, in 35° N lat. —or 1,620 geog. m., which are equivalent to 1,880 British m. Its length from E to W, or from the mountains which, in 92° E long., separate the circar of Silhet from Cassay, to the NW mouth of the Indus, in 67° E long., is 25 degrees, which, in that latitude, are equal to 1,400 geog., or 1,620 British m. These boundaries comprise an area of 1,100,000 geog., or 1,280,000 English sq. m., according to Arrowsmith's large map of India, and Hamilton's *Statistical Description of Hindostan*. We apprehend this approximation must be near the truth; but, until the trigonometrical survey shall be extended over the whole, we cannot speak with perfect assurance on this point.—The following table of the classification, area, and pop. of the political divisions of this great region, was originally formed, in 1820, by Mr. Hamilton:

	British sq. m.	Pop.
I. British Territories.		
Bengal, Bahar, and Benares,	162,000	39,000,000
Additions in Hindostan since 1765,	148,000	18,000,000
Gurhwal, Kumaon, and the tract between the Sutlej and the Jumna,	18,000	500,000
Total under the Bengal presidency,	328,000	57,500,000
Under the Madras presidency,	154,000	15,000,000
Under the Bombay presidency,	11,000	2,500,000
Territories in the Deccan, &c., acquired since 1815, consisting of the Peishwa's dominions, &c., and mostly attached to the Bombay presidency,	60,000	8,000,000
Total under British government,	553,000	83,000,000
II. British Allies and Tributaries.		
The Nizam,	96,000	10,000,000
The Nagpur raja,	70,000	3,000,000
The king of Oude,	20,000	3,000,000
The Guicowar,	18,000	2,000,000
Kotah, 6,500; Bundi, 2,500; Bopal, 5,000,	14,000	1,500,000
The Mysore rajah,	27,000	3,000,000
The Satara rajah [annexed in 1842],	14,000	1,500,000
Travancore, 6,000; Cochin, 2,000,	8,000	1,000,000
Under the rajahs of Judpur, Jeypur, Odipur, Bicanir, Jesselmere, and other Rajput chiefs, Holcar, Amir-Khan, the Row of Cutch, Bhurtpur, Macherry, and numerous other petty chiefs, the amirs of Sind, Sikhs, Gonds, Bhils, Coolies, and Catties, all comprehended within the line of British protection,	283,000	15,000,000
Total British government and allies,	1,103,000	123,000,000
III. Independent States.		
The Nepal raja,	53,000	2,000,000
The Lahore raja,	50,000	3,000,000
The amirs of Sind,	24,000	1,000,000
The dominions of Sindia,	40,000	4,000,000
The Cabul sovereign, E of the Indus,	10,000	1,000,000
These last four territories may now [1851] be regarded as incorporated with British India.		
Grand total of Hindostan,	1,280,000	134,000,000

Recent events have operated to transfer Sind, the Punjab, Sattara, and the greater portion of the Lahore territories, from the list of independent states to those standing immediately under the dominion of Britain; and to enlarge the total area of British India by some 100,000 sq. m.; to which must be added, the acquisitions made in India-beyond-the-Ganges, in 1824 and 1825, viz.:

	Sq. m.	Pop.
Countries south of Rangun, consisting of half the prov of Martaban, and the provs. of Tavoy, Ye, Tenasserim, and the Mergui isles,	21,000	51,000
The prov. of Arracan,	11,000	100,000
Countries from which the Burmese have been expelled, consisting of Assam and the adjacent petty states,	45,000	150,000
Total,	77,000	301,000

The present political distribution of this magnificent region, over which England holds imperial sway, is sketched in another paragraph of this article.

Progressive geography.] The first notice of India is given by Herodotus. Prior to the invasion of that country by Darius Hystaspes, the Persian monarch sent Scylax of Caryandra to trace the course of the Indus, and ascertain the place where it discharged itself into the sea; and it was from his account that Herodotus was supplied with his knowledge of India, which evidently does not extend beyond the sandy tract which lies E of the Indus and S of the Punjab.—The conquests of Alexander supply us with the next step in the progressive geography of this country. He is generally supposed to have crossed the Indus at Attock; but Major Wilford is of opinion that he crossed at the ferry of Torbeilam, a few miles to the S of Attock. From the E side of the Indus, he advanced to the *Acesines* or Chenab, which he crossed, and also the *Hydraotes* or Ravi. After this he deviated from the direct road leading to the Ganges, and advanced by a SW route to Sangala; where he turned again to the E, and reached the *Hyphasis* or Beas. This was the limit of his march; consequently the information which Arrian and other historians afford respecting India, derived from his victories, does not extend beyond this tract of country,—that is about 200 m. across the Punjab,—and the countries which, on his return, Alexander traversed from Multan to the sea.

Our first knowledge of the Ganges is derived from Megasthenes, who was sent ambassador by Seleucus to Chandragupta or Sandracottus king of the Prasii. The cap. of his kingdom was Palibothra, generally supposed to be Patna, on the S side of the Ganges, in N lat. 25° 37′, and E long. 85° 15′. In this city Megasthenes resided three years; and as he kept a journal of what he saw and heard regarding India during his residence, it may be supposed that his information added much to the knowledge which the ancients possessed of India.—Diodorus Siculus, Strabo, Arrian, and Pliny seem to have derived all the accounts which they gave of India from Megasthenes. All these authors lay down the proportional dimensions of this country with tolerable accuracy. According to Diodorus, the breadth is seven-eighths of the length. Arrian's geography of India is principally confined to the N parts which had been visited by Alexander and Megasthenes. He gives a tolerably accurate account of most of the rivers which flow into the Indus and Ganges; and the extent of India, which he derived from Megasthenes, is as near the truth, according to Rennel, as that which we assigned it 90 years ago. Pliny was evidently acquainted with the form of the peninsula, from the measures which he gives along the coasts between the mouths of the Ganges and the Indus.

One of the most important ancient records of this country is to be found in the map and description of Ptolemy. In some respects this author is very minute and accurate; but in others he is grossly erroneous. Though he lived 60 years after Pliny, he describes the peninsula of India as stretching from the gulf of Cambay from E to W, instead of from N to S. This is the more extraordinary, not only because he had access to the comparatively accurate information respecting India recorded by Strabo, Diodorus Siculus, and Pliny, but because he himself traces with great minuteness the sea-coast,—specifies the most remarkable places on it, and assigns the lat. and long. of each, from Cape Comorin to the mouth of the Ganges. Hence it would appear that his general account of the form of India was expressly contradicted by his detailed description of the country. To Ptolemy also we are indebted for the enumeration and relative position of the different mouths of the Ganges; and for a curious delineation of various roads used by the traders to China, across the N of India. The geography of this part of H. is also greatly illustrated by the description given by Pliny, Dionysius Periegetes, Ptolemy, and the Peutingerian tables, of the famous royal or Nyssean road. This was made with great care: and at the end of every Indian Itinerary measure a small column was erected. The first part of it corresponds with the route pursued by Alexander from the Indus to the Hyphasis; the remainder led to Palibothra. Its whole length was nearly 1,500 m. This road has been illustrated with considerable learning, but not always with the soundest judgment, by Major Wilford.

After the age of Ptolemy, we derive no additional or more accurate information regarding India till the 6th cent. after Christ. At this period Cosmas, an Egyptian merchant, made some voyages to India. From his work it appears that he was well acquainted with the W coast of the peninsula, which he particularly mentions as celebrated for its trade in pepper.—After this time, till the discovery of the Cape of Good Hope, the geography of India is almost entirely illustrated by the Arabian writers, particularly by two Mahommedan travellers in the 9th cent., whose travels have been published by Renaudot; by Mas-

soudi, and by another Arabian author, who wrote about the middle of the 14th cent. The Mahommedan travellers mention a great empire on the Malabar coast: their relation in this and other respects is confirmed by Massoudi, who published his account of India in the 10th cent. This last author describes India as divided into four kingdoms. The first comprised the provs. on the Indus and its tributary streams, of which Multan was the capital. Of the second, which seems to have lain on the banks of the Ganges, Kanoge was the cap. This kingdom and its cap. are much celebrated in the most remote times of ancient Hindu history. The third kingdom was Cashmere; the fourth, Gujerat. It is evident that the information respecting India possessed by Massoudi, and probably by his countrymen in general, was confined to H. Proper. The Arabian author who wrote about the middle of the 14th cent. divides India into the northern part, comprehending all the provs. on the Indus; the middle, which stretched across from Gujerat to the Ganges; and the southern, which he calls Comar, probably from Cape Comorin.—About the middle of the 13th cent., Marco Polo visited different parts of Hindostan. He is the first author who mentions Bengal and Surat by their present names as rich and powerful kingdoms.

The next illustration of the geography of H. is derived from the Ayin Acbari, a work executed under the reign of the emperor Acbar. This sovereign divided H. Proper into eleven *subahs* or provinces, which were again divided into *circars*. Cabul and the countries W of the Indus constituted a 12th subah; and the conquests in the Deccan afterwards were divided into 3 more. The details given in the Ayin Acbari of the extent, boundaries, divisions, productions, military force, &c., of these provs. is surprisingly minute, and apparently the result of much attentive and laborious investigation and inquiries.

The conquests and settlements of the Portuguese in India were almost entirely confined to the coast, and did not much increase the geographical knowledge possessed by Europeans respecting this country. Indeed till the conquests of the English, during the middle and latter end of the 18th cent., little was accurately known respecting the interior of H. In 1788, Major Rennell published the first edition of his *Memoir of a Map of Hindostan*. In this work, with wonderful research and information,—though not always with the most perspicuous or satisfactory arrangement,—he has thrown great light on the geography of this country; and except with regard to those districts which at that time had been little if at all explored by the English, he left scarcely any point uninvestigated. In the subsequent editions of his memoir, as well as in the *Oriental Repertory* of Dalrymple, the *Asiatic Researches*, the valuable *Travels* of Dr. Francis Buchanan, *Malcolm's Memoir on Central India*, *Todd's Annals of Rajasthan*, the *Travels* of Burnes, Masson, Hugel, Wood, Vigne, and others, the *Erdkunde von Asien* of Ritter, the *Transactions* of different Indian literary and scientific societies, the results of Parliamentary inquiries, and a variety of other sources,—the geography of H. has received such ample and minute investigation as to leave few parts of this extensive country altogether unexamined and reported upon.

General Physical features.] Two sides of the irregular four-sided figure which this great and diversified region forms are washed by the sea; the other two are bounded by land. The bay of Bengal, which washes the SE shore, is not so broad as the Arabian sea which laves the SW side; but the countries on the latter sea, especially towards the N, are more arid and sterile than those which lie along the former. The land-boundary on the NW toward the sea is flat and desert; as it recedes inland, the elevation increases and the scenery improves. The remaining or NE side, from the termination of the low and swampy grounds near the bay of Bengal, is formed by mountains of prodigious elevation. From this vast chain the two great rivers of India have their sources, and flow to opposite points of the continent. The countries on the Indus,—the central desert, as it is called,—and the valley of the Ganges,—comprise the whole of India N of a line drawn from the gulf of Cutch, eastward of the mouth of the Indus, to the mouth of the Ganges. All the features of this continental portion of India are on the most magnificent scale; those of the southern or peninsular part are less bold, and partake more of the nature of an island. From the mouth of the Ganges to that of the Kristna, in about N lat. 16°, the E coast lies nearly in a straight line NE and SW, and the general outline of the country is that of a great oval basin, of which the S portion approaches near to the Arabian sea, but is divided from it by high land. From the mouth of the Kristna, a very irregular mountain barrier, called the Eastern Ghauts, extends southward at varying distance from the coast, which is here for the most part sandy and barren. The elevated country within this mountain-barrier gets the name of *Balaghaut*, or the country 'above the gates,' in opposition to the *Payinghaut*, or country 'below the gates.' The name of Balaghaut is given to the whole upland country from Cape Comorin to the Ganges.—From Cape Comorin another mountain-barrier runs parallel to the western shore for an extent of about 900 m. This range, nearer to the coast, loftier, and less interrupted than the other, is called the Western Ghauts. The termination towards the N is near the gulf of Cambay; and here, for a short distance, the general slope of the country is towards the W, where the valley of the Nerbudda is formed.—Under the 13th parallel, the Eastern and Western Ghauts are connected by a cross ridge, and the country does not immediately slope down to the N and S of this transverse ridge, but forms a table-land of considerable extent. N of the gulf of Cambay, the peninsula of Gujerat, beautifully diversified with hill and dale, extends towards the gulf of Cutch. To the N of the latter gulf, and extending northwards to the great central desert, there is a dreary marsh called the Runn, measuring about 250 by 70 m. If we enter H. at the NW corner, in Lahore, the face of the country is hilly, till we reach the S extremity of this prov., where the Punjab commences. Passing thence to Multan, we again meet with hills in the N extremity of that prov. The face of the country in Ajmir is nearly the same; but when we pass SW into Guzerat, it becomes very flat; on the contrary, if we pass S or SE into Malwah, we enter a very elevated region,—one of the most elevated, indeed, in H., as great rivers flow from it in every direction. If from Lahore we enter Delhi, we find the face of the country very flat; indeed, Delhi, Oude, and Bengal, are the most flat provs. in H. The surface of Orissa, N of the river Chumbul, is likewise flat; but to the S of that river, as well as on the NW, it is hilly. Proceeding S, the first lofty land we meet with in H. Proper is in the Bundelcund district of the prov. of Allahabad, in the SW. The S part of Bahar is also hilly, while the N division of this prov., beyond the Ganges, partakes of the flat character of Bengal and Oude. On the E side of the Deccan, before we arrive at the Ghauts, there is a mountainous ridge, extending from the Godaveri to the Mahanada. Proceeding across the country in a direction nearly due W from this ridge, we enter Berar, the surface of which is for the most part elevated and hilly; the same character applies to the provs. of Gundwana, Candeish, Hyderabad, Orissa, and the Northern Circars. The S of India consists of table-land, or rather an elevated surface considerably broken in the centre, and remarkable for numerous isolated precipitous rocks, the natural strength of which has been greatly augmented by the erection of fortresses on them. The Ghauts lie on the E and W of this table-land; and a flat country extends between both chains of the Ghauts and the sea. In Malabar, however, there is a chain of low hills, separated from one another and from the Ghauts by narrow valleys. In some places these hills rise to the coast; but in other parts there is between them and the sea a flat tract, seldom above 3 m. wide, and in general not so much. Near the low hills these plains are the most level.

Mountains.] On the north, H., in the largest acceptation of the word, is bounded by the Himalaya mountains, a chain superior in elevation to any other yet known. See HIMALAYA. Branches spread from them to the S as far as the borders of Bengal, Oude, and Delhi. The last prov. is also separated from Northern H. by the Sivalic or Kemaun mountains.—

The Vindhya mountains, among which lies the Arcadia of India, pass through Bahar, Benares, Allahabad, and Malwah, along the N side of the Nerbudda, nearly to the W coast. To the S of these is a less elevated chain called the Tahya hills.—The chain of hills commonly described under the appellation of the Eastern Ghauts, commences in the S, about N lat. 11° 20′, to the N of the Cavery, and extends, with little interruption or comparative deviation from a straight line, to the banks of the Kristna, in N lat. 16°, separating the two Carnatics,—the one named the Carnatic Balaghaut (the true Carnatic); the other the Carnatic Payinghaut, extending along the coast of Coromandel. The exact height of this ridge along its whole course has not been ascertained, which is rather extraordinary; but its general elevation is known to be considerably less than that of the Western Ghauts. About the lat. of Madras, which is the highest part, it is estimated at 3,000 ft.; and the table-land of Bangalore, towards Uscottah, which is within the chain, is more than 3,000 ft. above the level of the sea. The circumstance that the rivers which have their sources in the upper table-land universally flow towards the E, proves the superior elevation of the Western Ghauts, and they are by far the most abrupt in their ascent. The geology of these mountains is very imperfectly known; but the chief rock is said to be a granite, consisting of feldspar and quartz, with dark green mica in a small proportion to the other two ingredients. The rocks appear stratified, but the strata are very much broken and confused.—The chain of the Western Ghauts is better defined than the other, as it extends from Cape Comorin to the Tupti or Surat river; where, however, it does not terminate in a point or promontory, but departing from its meridional course, bends eastward in a wavy line parallel to that river, and is afterwards lost among the hills in the neighbourhood of Burhanpur. In its line along the Tupti this ridge forms several *ghauts* or passes, from which there is a descent into the low land of Candeish. In their whole extent the Western Ghauts include 13° of lat., with the exception of a break in the ridge about 16 m. wide, in the lat. of Paniani, through which the river Paniani flows to the Western ocean. Their distance from the sea-coast is seldom more than 70 m., commonly about 40 m.; and they are frequently visible from the sea, to which, between Barcelore and Mirjaoa, they approach within 6 m. The Western Ghauts are in general from 2,000 to 3,000 ft. higher than the Eastern Ghauts; several are from 5,000 to 6,000 ft. above the level of the sea. The peak of Mount Subramani, on the frontiers of Coorg, has been estimated at 5,611 ft.—The Neilgherries, or 'Blue mountains,' were scarcely known to the British public before 1819, when some account of them appeared for the first time in the Indian journals. These mountains are situated to the NW of Coimbatur, about 11° from the equator. They extend nearly 40 m. in length, by 15 or 20 m. in breadth, and form a connecting link between the Eastern and Western Ghauts. The following are the barometrical heights of some stations above the level of the sea: Jackanairy, 5,659 ft.; Jactally, 5,976 ft.; Dimhutti, 6,041 ft.; Oota-Kamund, 6,416 ft.; and Murchurti-Bet, 8,800 ft. In equality and salubrity of temp. this region surpasses any other of the Indian continent. The average range of the therm. is about 30° below that on the adjacent coasts of Malabar or Coromandel. The maximum heat in the shade, at noon, during 14 months, was 68°; and the average for the year 56¾°; whilst the extreme variation was only 12°.

Plains.] From the general description which has been given of the surface of the country, it will naturally be expected that the most numerous and extensive plains must be sought for in H. Proper. Indeed, the whole country through which the Ganges flows, from the Sivalic mountains to the sea, is one vast plain. There is also a plain stretching from Sirhind to the city of Delhi, in a NNW direction, a distance of 155 m. This plain contains the towns of Paniput and Carnal; and is celebrated as having been the scene of two great battles, one in 1525, between the Emperor Babar and the Patan Sultan Lodi; and the other in 1761, between the Mahrattas and the Mahommedan army commanded by Abdalli. Across the E entrance of the pass of Paniani, already described, there is an elevated plain, 60 m. in extent, which rises suddenly from the level of the surrounding country, resembling an extensive terrace. There are similar elevated plains in Bengal, and in the Bundela country S of the Ganges, near the Suhagi Ghaut. From the summit of the minaret in front of the mausoleum of Acbar, at Secundra, 6 m. to the N of Agra, an extensive plain stretches 30 m. in a direct line, filled with the ruins of ancient grandeur.—Of the Sandy desert mentioned by Herodotus, our knowledge is but imperfect. Cutch lies to the S of it; Gujerat to the E; Sind to the W. According to Rennell, it extends from the sea to the Punjab country. In this extent, however, he probably comprehends the Runn, a large salt morass which bounds the W frontiers of the prov. of Gujerat, and communicates with the gulf of Cutch, and which in some places seems to adjoin and in other places to be intermixed with the Sandy desert. The latter is about 550 m. in length, and about 160 m. in the widest part. In some parts of it there are spots of clay mixed with the sand; but in general the surface is bare, desolate, and sterile, and the wells are frequently at the distance of 8 or 10 coss from one another. All over this sandy tract are scattered isolated jungles, but of stinted growth. The Runn or salt morass in some places consists of water only a few inches deep; in others it is an impassable swamp; in others a bank of sterile and loose sand. It bends round the N of Cutch, and, including its windings, is supposed to extend several hundred miles.

Rivers.] The glory of H., it has been remarked, consists in its noble rivers; in this respect it presents a remarkable contrast to Persia, the neighbouring kingdom on the W. The great rivers of India, too, have this peculiarity, that the greater part of them flow along very gentle declivities, and possess great depth of water, so that they may easily be rendered available for the purposes of internal communications; and instead of tearing up and devastating the country, during the rainy season, as in Africa, they merely overflow it with a fertilizing influence. The only rivers of H. of a very lengthened course, or great volume of water, are those which run through H. Proper,—the Indus and the Ganges, with their respective tributary streams. The Indus enters H. about the lat. of 33° 15′. Here it is an inconsiderable stream, but its breadth and volume of waters is much increased by the junction of the Attock, flowing into it from the W. The Indus pursues its course through H. to the beginning of its Delta, about 170 m. from the sea, nearly in a straight line S by W. The whole course of this river, from its entrance into H., is about 900 m. It is navigable to Attock; but the tide does not flow up more than 60 or 65 m. At Tattah, about 130 m., by the course of the river from the sea, the Indus is very narrow; about 5 m. below this town the greatest depth is 4, and the common depth only 2 fath. The breadth here is about a mile. The land-floods, occasioned by the melting of the snow, begin about the middle of July, and do not subside till the end of

August. The tributary rivers of the Indus chiefly flow into it in the northern half of its course, in the prov. of Multan, forming the Punjab, or country of rivers. These rivers, the Jelum, the Chenab, the Ravi, the Beas, and the Sutlej, all rise nearly in the same place, at the foot of the Himalaya mountains. The Jelum, the *Hydaspes* of the Greeks, after crossing the great road leading from Lahore to Attock, and flowing along the E side of the Joud mountains in the province of Ajmir, unites with the Chenab, about 60 m. above Multan. Its whole course is about 450 m. It is the most westerly of the streams that flow through the Punjab into the Indus; and is navigable to Oin.—The Chenab, the *Acesines* of the Greeks, is nowhere after it enters the Punjab more than 35 m. from the Jelum. About 28 m. above the city of Multan, about 50 m. below its junction with the Jelum, it receives the Ravi; and 60 m. below this point enters the Indus. The length of its course is about 650 m. It is navigable to Aknur.—The Ravi enters the plains of Lahore near Shahpur; its course is SW till it passes the city of Lahore, above which it is 120 yards broad, and very rapid. Its whole course is about 450 m.—The course of the Beas, for the first 200 m., is directly S; it afterwards flows to the W. It unites with the Sutlej about 300 m. from the sea. This junction, however, formerly took place much lower. The whole length of its course is about 220 m.—The Sutlej, the most eastern of the rivers of the Punjab, enters H. at Bellegpur in the prov. of Delhi. Before it is joined by the Beas, it is a very considerable stream; after their junction at Hureki, they lose their respective appellations, and take the name of Ghara, the *Hyphasis* of the Greeks. It is navigable to Ropur. Its whole course is about 860 m.—These five rivers of the Punjab increase the breadth and depth of the Indus so much, that there is water sufficient for flat-bottomed vessels of nearly 200 tons burden, from the gulf of Cutch to Lahore, a distance of 760 geog. m. See INDUS and PUNJAB.

The Ganges rises on the S side of the Himalaya mountains, and enters the plains of H. at Hurdwar, in the prov. of Delhi, in N lat. 29° 57′, E long. 78° 2′. Its course is nearly straight till it passes Allahabad, when it becomes more winding, and its bed deeper and broader. After receiving the tributary streams of Bengal and Bahar, some of which are equal in volume to the Rhine, its channel attains its full breadth, which is commonly about ¾ m. when the river is at its lowest. Its depth, at this time, is 30 ft. for an extent of 500 m., before it reaches the sea. Of the different branches into which this river is divided before it enters the gulf of Bengal, the westernmost, called the Hugli, and the most eastern, which receives the Brahmaputra, are the widest and most important. The whole navigable course of the Ganges is about 1,500 m. For a fuller account of this river, see the article GANGES.—The first large river that joins the Ganges after it enters H. Proper, is the Jumnah. Its source is farther to the NW than that of the Ganges. A little before it enters H., in the prov. of Delhi, the two rivers are only 40 m. distant from each other. After its entrance into H., its course is nearly parallel with that of the Ganges, at the distance of from 50 to 75 m. These rivers unite at Allahabad. Its whole course is about 780 m., on the W side of the Ganges.—Nearly 10 m. below Etaweh, in the prov. of Agra, the Jumnah is joined by the Chumbul, which rises near the source of the Nerbudda in the prov. of Malwah. Its course is NE: its whole length is 440 m. It long constituted the boundary between the British possessions in H. Proper on the S, and those of Scindiah.—The largest rivers that flow into the Ganges from Bengal and Bahar are the Goggra, the Soane, and the Cosa. The first is composed of the waters of the Goggra and the Saregu, which unite at Swargadwara. They afterwards flow through the prov. of Oude, and unite with the Ganges in Bahar. The course of the Goggra is nearly parallel to that of the Ganges on the E side.—The Soane rises near the Nerbudda, on the E side of the table-land of Amercuntuc. Its direction is at first due N; it afterwards turns NE, and joins the Ganges in the prov. of Bahar. Its whole course is about 500 m.—The course of the Cosa, which rises in the Himalaya mountains, is at first SSE; it afterwards winds much. Its junction with the Ganges takes place 45 m. above Rajemal, in the district of Purneah, in the prov. of Bengal. Its course is about 400 m. The Brahmaputra, which afterwards forms the great E branch of the Ganges, is supposed to rise very near that river. Its course for a considerable way is E, and at one place it reaches within 220 m. of the most western prov. of China. It then very abruptly turns W, through Assam,—a country remarkable for the number and magnitude of its rivers, most of which flow into the Brahmaputra. It enters Bengal near Ranjamatti. Its course is now W, and afterwards S, in the Deccan district, where it is joined by the Megna. The Ganges and the Brahmaputra unite below Luckipur. The whole course of this river, as far as it is known, is about 1,650 m. It flows 400 m. through Bengal. Though the Ganges and it rise near each other, yet at one part of their course they are 1,200 m. distant.

The rivers in the Deccan, or central division of H., are the Nerbudda and the Tupti on the W, and the Subunreka, the Mahanadda, and the Godaveri on the E.—The Nerbudda's course has been already noticed; but while the Soane flows to the NW, the Nerbudda takes nearly an opposite course, flowing almost due W. It has fewer windings than most Indian rivers. After passing through part of the provinces of Gundwana, Candeish, Malwah, and Guzerat, it joins the sea 25 m. below Baroach. Its whole course is about 750 m.—The Tupti, or Surat river, rises in the mountains which bound the prov. of Berar on the N. Its direction is W, through Candeish and Guzerat; and, after a course of about 400 m., it falls into the sea about 20 m. below Surat.—Subunreka rises in the southern extremity of the prov. of Bahar. Its course is to the SE for 250 m., when it falls into the bay of Bengal, about 30 m. to the W of the Hughli mouth of the Ganges. This river is by some considered as the NE boundary of H. Proper.—The Mahanada rises in the hilly country of Gundwana. Its course is very winding. In the district of Cuttack, in the prov. of Orissa, it receives several streams. It directs its course to the bay of Coojung, where it falls into the gulf of Bengal. Its whole course is 550 m.—The Godaveri rises in the Western Ghauts at Trembuch-Nassor, about 70 m. to the NE of Bombay. Its course is at first due E, through Arungabad and Telligana; it afterwards turns SE. At Rajamundri, in the Northern Circars, it divides into several branches, which form a fertile delta, and several harbours for small vessels. Its whole course is about 850 m. About 90 m. from its mouth it is joined by the Bainjunga.

To the south of the Tupti the course of all the rivers is to the E, in consequence of the superior elevation of the Western Ghauts. The few rivulets that flow into the western sea descend so abruptly from the mountains that they have not time to collect into streams of any magnitude. Those on the E side are mostly choked with sand-banks thrown up by the violent surf across their mouths. Some of these, however, require notice. The Kristna rises

in the Western Ghauts, not more than 50 m. from the W coast of India. Its direction is to the SW till it reaches Mersetch, in the province of Bejapur. Here it is joined by a number of streams from the Ghauts, united under the common name of Warnah. Its course is now more to the E, where its volume is again increased by several rivers, the principal of which are the Malpurba and Tumbuddra. It forms a delta near Masulipatam, after a course of nearly 650 m. It equals, if it does not surpass, any other Indian river, in the fertility which it creates during its course; watering, and of course fertilizing, the provinces of Bejapur, Beder, Hyderabad, &c.—To the south of the Kristna, is the Pennar, the Palar, and the Caveri. The Panar is said to spring among the hills of Nundydrug in the Mysore. Its course is northerly till it reaches Guti, in the Balaghaut ceded districts, when it changes to the SE, and afterwards to the E. It falls into the sea at Gungapatnam in the Carnatic, 108 m. to the N of Madras.—The Palar also springs from the hills of Nundydrug, but its course is to the S. After flowing for 220 m. through the Mysore and Carnatic, it falls into the sea at Sadrass.—The Caveri has its source in the Kurg country, a district among the Western Ghauts, but it is of no magnitude till it quits it. Near Seringapatam it forms an island; and opposite to Trichinopoly in the Carnatic, it again separates into two branches which surround the island of Seringham. The northern branch is named the Colorun, the southern retains the name of Caveri. About 13 m. farther to the E, these branches approach each other; and an immense mound is formed in order to prevent the Caveri from falling into the Colorun, the bed of which is 20 ft. lower.—The Colorun falls into the sea near Negapatam, and the Caveri at Tanjore. These rivers form a wider delta than any other river in this part of India. Their whole course is about 300 m.

Lakes.] There are but few lakes in H. The Chilka lake divides the northern Circars from the Cuttack district of Orissa. It is about 35 m. long, and 8 m. broad. Towards the E and S, it is bounded by a narrow sand, very plain and flat, and about 1 m. in breadth; and on the NW by a chain of mountains. Its water is salt, as it has a communication with the sea by a very narrow and deep outlet; and, indeed, evidently has been formed by the sea breaking over the flat sandy shore. This lake receives one of the branches of the Mahanada. It contains several islands, which are inhabited.—Between the Kristna and Godaveri, in the lower part of their course, there is an extensive tract of flat and rich country, evidently alluvial, and formed by these rivers, about 150 m. in length along the coast, and from 40 to 50 m. wide. About half-way between the two rivers, a hollow of considerable extent occurs in this alluvial soil, in the lowest parts of which there is a lake at all seasons. The whole extent of this hollow ground is 47 m. from W to E, and 14 m. from N to S. During the rainy season, the whole is covered with water, except 60 or 70 small eminences, on which the inhabitants take refuge. This is the Colair lake. Between it and the Godaveri and the Kristna, there are traces of a channel which has been formed either to drain the lake, or to irrigate the adjacent lands. The latter purpose has indeed been effected by various other channels. — The lake of Pulicat, on the coast of the Carnatic, is about 33 m. from N to S, and 11 m. across in its broadest parts. Its water is salt, as it communicates with the sea by several narrow channels; and it evidently owes its origin to the same cause which produced the Chilka lakes. There are several large islands in it.—The lake of Onore, in North Canara, reaches nearly to the Ghauts. It is almost salt during the dry season but when the rains bring down the torrents from the mountains its waters become fresh.—In the N parts of Hindostan there are few lakes, especially in the vicinity of the Ganges and the Indus. There are two lakes close under the walls of Ajmeer; the most northern is 6 m. in circumf., and very deep.

Canals.] The greater part of H. Proper is so much intersected by navigable rivers that canals seem scarcely necessary; while, in the Deccan, and the south of India, the surface is in general so very uneven that they are almost impracticable. Nevertheless this mode of internal communication was formerly not neglected in H. Proper, though the canals were rather intended for the purpose of irrigation than that of conveying goods. The most celebrated were those partly executed in the reign of Feroz II. It is doubtful whether they were ever completed; if they were, they would have united the Indus and the Ganges; for one of them was drawn from the Jumna, near the northern hills, to the city of Hissar; and the object of the other was to form a water-communication between the Sutlej and the same town. The first canal, which seems to have been completed, was 114 geog. m. in length. It was repaired and first used to Delhi, in 1626, by Shah-Jehan; thus making its whole length 185 geog. m. There is no precise or clear information respecting the part of the Sutlej from which the other canal was drawn. It is said to have been 100 m long. Besides these main canals, there were several branches which united them in different parts, and in different directions. The design of Feroz was to fertilize a vast tract of land naturally very dry and sterile, and also to facilitate and increase inland navigation. In 1817–20, the British government cleansed and repaired the canal from the hills at Rair to Delhi, which, during the convulsions of the Mogul empire, had been almost wholly choked up; and in 1823–9, the canal of Feroz-Shah with its branches, was cleansed and restored.—From Shahpur, where the Ravi enters the plains, a canal was drawn from that river to Lahore, about 80 m. in length; the object was to supply the city with water during the dry season. For the same purpose three other canals were drawn from the Ravi, near Shahpur, to the S and E of Lahore. Between the years 1823 and 1830 these canals of the Doub, having a total length of 160 m., were restored.—In 1803, a canal was made from the Black-town of Madras to the river Ennore. Its length is 10,560 yds.; its greatest breadth at the top 40 ft.; greatest depth 12 ft. By means of this canal, boats convey charcoal and fire-wood, the produce of the high land behind Pulicat, to Madras. The rivers of Tripapolore and the Panar, which approach within about 1,800 yds. of each other, near Fort St. David, are joined by a canal, which runs nearly parallel to the sea, at the distance of about 1,000 yds.

Coasts.] The eastern and western coasts of India differ in a very striking manner. The Malabar, or W coast, is high and bold, and possesses a few excellent small harbours, formed by insulated rocks and promontories. The Coromandel, or E coast, is low, sandy, and full of shoals and banks, without a port of any kind; the entrance to its small rivers being blocked up by the sand thrown in by the dangerous surf, which beats against it at all seasons.—Cape Monze, in the lat. of 24° 55′ N, and in the long. of 65° 46′ E, is considered as the commencement of the coast of H. on the W. The bay of Kurrachi, between this cape and the Indus, admits vessels of 300 or 400 tons during the rainy season. The tide rises here 12 ft. From Cape Monze to the gulf of Cutch, is called the coast of Sind. The gulf of Cutch runs far inland towards the E. Its upper part is full of shoals, and is bounded by a low narrow plain always overflowed during the rainy season.—On the S shore of this gulf, the coast of Guzerat begins. Between it and the gulf of Cambay the coast is rather high. The gulf of Cambay, bounded by the coast of Guzerat on the W, and by that of Surat on the E, runs nearly 150 m. inland. Near Cambay, the upper part of the gulf, the tides run nearly at the rate of 6 m. an hour; at high water rise 40 ft.; and at low water leave the gulf dry for 7 leagues below the town. At 15 m. to the E of this town the breadth of the gulf is only 6 m. It is here also completely dry at ebb tide; but the bottom is covered with mud and quicksands, so as to render a passage across without a guide extremely dangerous. In the gulfs of Cutch and Cambay, the *bore*, or rush of the tide, is nearly as rapid as that at the mouth of the Indus and Ganges. As we approach further to the S, the coast becomes more level. The first sea-port that occurs is Surat, on the l. bank of the Tupti, about 6 leagues from the sea. This river, however, is so shallow at the town, that large vessels are obliged to anchor at its mouth. The coast between Surat and Cape St. John continues so very low, that, during the prevalence of the SW monsoon, and high tides, it is inundated.—From this cape to Bombay, a reef, lying 3 leagues off, stretches along. Bassein, a port in the prov. of Aurungabad, lies on a narrow strait which separates it from the island of Salsette. Across the mouth of this there is a bar of sand, so that only small vessels can enter. Salsette, 18 m. long, and 14 m. broad, was formerly divided from Bombay by a strait 6 m. long, and about 200 yds. across, which was occasionally fordable; but these islands are now united by a causeway. Bombay, with Salsette, Caranga, and Elephanta, forms a most commodious harbour. The tides rise higher here than in any harbour possessed by the English in their Indian settlements. The usual height is 14 ft., but they sometimes rise to 17 ft.—We now enter on the coast of Concan,

on which the first object of importance is a rocky promontory, joined to the continent by a narrow neck of sand, about 1 m. long, and ½ m. broad, on which stands Gheriah, formerly the cap. of the celebrated pirate Angria. A river of some magnitude runs from the Ghauts into the sea, on the N of this promontory. About 30 m. to the S of Gheriah lies Melunday, or Malwan island. To the S of it, 4 leagues off the coast of Bejapur, lie a cluster of rocks called the Vingorla, or burnt rocks. On the l. bank of a navigable river, and about 7 m. from the sea, stands the town of Goa. Here a fine bay, bounded on the S by the peninsula of Marmagon, presents itself. From Goa to Cape Ramas the coast is low, with a beach of sand. There are few coasts so much broken into small bays and harbours, and at the same time retaining so straight a general outline, as the coast between Bombay and Goa, a distance of nearly 220 geog. m.

After passing Cape Ramas, the coast of Canara begins. At Fort Carwar there is an inlet of the sea, with a wide and deep but intricate channel. To the S of this is the island of Anjediva, about 2 m. from the shore, in front of a bay, formed by two promontories so lofty that they afford some shelter to ships even during the SW monsoon. Mirjahur, a river which, in the month of February, 7 m. from the sea, is 700 yds. across, affords the most convenient wooding and watering-place on the coast of Malabar.—The lagune of Onore, already described, succeeds in N lat. 14° 18′. Mangalore, in S. Canara, in lat. 12° 49′, is situated on a peninsula, which stretches into a large salt lagune separated from the sea by a sand beach. Across this beach there was formerly an opening capable of receiving large ships; but at present this channel has become so shallow as to admit only vessels drawing less than 10 ft. Nearly 25 m. E by S from Mangalore stands Cumly, on a high point of land between two rivers, which run into a salt-water lake divided from the sea by a narrow sand bank. In the rainy season both the rivers and the lake are fresh. From Cumly, for several leagues to the S, the coast is lined by a range of salt-water lakes, which, however, are of little use to navigation, in consequence of the sand-banks which lie between them and the sea.

The coast of Malabar begins at the river Chandragiri, in lat. 12° 27′. This coast is much indented by inlets of the sea, and salt lagunes lying within a chain of sandy and narrow islands. These inlets run for great lengths parallel to the coast, and receive the small and rapid streams that descend from the Ghauts. They open to the sea by narrow and shallow channels. The first remarkable spot on the coast of Malabar is Mount Dilla, which is separated from the main land by salt-water creeks. The best bay on this part of the coast is formed by a point of land on which stands the fort that protects the entrance to the town of Cananore. The town itself is situated at the bottom of the bay. Tellicherry, in lat. 11° 44′, succeeds; it stands on a small river. The coast here is very low and sandy. At Vadagherry, in lat. 11° 35′, the series of salt lakes commence, which run without interruption to the S, forming a kind of inland navigation protected from the sea by a chain of sandy islands. Calicut is situated on a river, navigable by boats, 100 m. up the country. It is the port principally frequented by the Arabs of Muscat. Paniani, 40 m. SE from Calicut, is situated on the S side of a river which flows from Animalaya. The entrance of this river, though wide, is so obstructed by a bar, that only the trading-boats of the natives can reach the town. The salt lakes, islands, and small ports situated on them, now become numerous; but the first of consequence, to the S of Paniani, is Cochin, which is built on a very low island. The inlet to it is navigable for vessels of considerable burden. Cape Comorin, the S extremity of H., in N lat. 8° 5′, and E long. 77° 30′, is in itself low and level; but, about a ½ m. to the N of it is the mountain of Komari, the S termination of the Ghauts, the summit of which is said to be 1,294 yds. above the level of the sea. This is regarded by mariners as the cape.

The SE extremity of H. is occupied by the coast of Tinnevelly. On it are no ports of any consequence. On some parts of it the tide rises only two or three feet. Between the island of Ceylon and Point Ramen is the island of Ramisseram, about 11 m. long and 6 m. broad. It is low and sandy. The strait between it and the main land is about 1 m. wide; but so obstructed by rocks, and with an entrance from the N so very narrow, that it cannot be navigated except by very small vessels. From Point Calymere to the river Caveri is the coast of Tanjore, which is so extremely low and flat that the first objects seen in approaching it are the tops of the cocoa palms.—Negapatam, 48 m. to the E of the town of Tanjore, in lat. 10° 45′, is situated on a small creek. Only coasting vessels, or ships for refreshments, frequent it.—Tranquebar, in lat. 11°, is situated on a small river, across the mouth of which is a bar. The best roadstead on this part of the coast is off the town of Portonovo, in lat. 11° 30′. It is sheltered on the S by a shoal.—Pondicherry, on the river Gingie, is a port of little consequence with respect to trade, as the river can only receive small vessels even during the rainy season. Its roadstead, however, is not so dangerous as that of Madras; and landing may occasionally be accomplished in ships' boats. To the N of Sadras, and about 38 m. S by W from Madras, the coast seems to have been encroached upon by the sea to a considerable extent. According to the traditions of the Bramins, a large city, called Mahabalipuram, or 'the city of the Great Ball,' stood here in very remote times; and the surf is said still to break over its ruins.—Madras, in N lat. 13° 5′, E long. 80° 25′, lies on a coast where a rapid current runs, and on which a dreadful surf breaks, even when the weather is calm. The shore here is perfectly straight. Hence the roadstead of Madras is the worst in India; the most dangerous season to remain in it is from the beginning of October to the end of December. Large ships generally anchor about 2 m. from the shore. When the surface is unusually high, catamarans are used to convey passengers from the Manilla boats. In lat. 15° 30′ the coast of the Carnatic terminates, and that of the Northern Circars begins. After passing Masulipatam, on a branch of the Kristna, and some other plains of less importance, we arrive at the bay of Coringa, in lat. 16° 49′. Into this bay one of the branches of the Godaveri falls. A bar of mud lies across its entrance, through which ships must be forced. This is the only place on the E coast of Hindostan where there is smooth water during the SW monsoon, so that a ship of above 200 tons can be thoroughly refitted here by being hove down.—A little to the N of Coringa bay the low coast terminates, and a ridge of high mountains commences which lines the coast to Ganjam in lat. 19° 23′. There is nothing remarkable as we proceed N, till we arrive at Point Palmyras, which forms the entrance into the bay of Balasore on the S. A reef extends nearly 10 m. to the ENE of this point. There is little depth of water in the bay of Balasore. In some places the water leaves the shore for half-a-mile at low tide; and even at the distance of 3 leagues there is not more than 7 or 8 faths. water. This arises from the immense quantity of mud and sand carried out by the Ganges. The shores of the bay are intersected by several small streams, some of which are navigable. The town of Balasore stands on the Buri Bellan river, in which the tide commonly rises 8 ft. At high-water vessels of 100 tons burden can cross the bar.

The coast of Bengal commences at the town of Piffey on the Subunrika river, about 22 m. NE from Balasore, in lat. 21° 42′. This was formerly a port of considerable trade, but it is now little frequented, in consequence of the flood having formed a dangerous bar across the mouth of the river, as well as washed away a great part of the town itself. Across the entrance of the Hugli, or W branch of the Ganges, there are several sounds, which render the navigation difficult and dangerous, particularly two called the E and W sea-reefs. The whole of the coast from the W to the E mouth of the Ganges consists of low islands, divided from one another by inferior branches of the river, and intersected in almost every direction by creeks.—The coast of Chittagong, a district lying at the SE extremity of the prov. of Bengal, is divided from that prov. by the E mouth of the Ganges; and from Aracan by the river Naup. On this coast there is one good port, Islemabad, about 2½ leagues off the river Chittagong. Ships of considerable tonnage are built here.—To the S of the river on which Islemabad stands there is an island called Kuttubdea, separated from the continent by a strait in no place more than 3 m. broad; and to the S of Kuttubdea is Mascale island, which is larger and of greater elevation.—The coast which we have described, from Cape Comorin to Chittagong, forms the W side and the bottom of the bay of Bengal. The depth of water on the W side is very great, at a comparatively short distance from the shore, there being no soundings about 30 m. off. At the bottom of the bay, however, the sea is shallow.

Climate.] The climate of India is much affected by the three great modifying causes of position in latitude,—the nature of the surrounding region,—and the form of the surface. It has been said of India that it has only two seasons,—the dry and the rainy,—produced by the SW and NW monsoons; but the truth is, it is Southern and Peninsular India only that is governed by the monsoons.

Monsoons.] In treating of the climate of India, the monsoons first claim our attention. It is generally said that the monsoons do not extend beyond the tropics; this, however, is not accurately the fact. At present, however, we shall regard them as blowing on the coast of India, from Cape Comorin to the tropic, and point out their effects on the climate of this region. On the Malabar coast the SW monsoon commences about the middle of April, and continues till August or September. It begins to blow first on the S parts of this coast, and gradually advances to the N. In September it has generally lost its violence; and for the next six weeks there are light variable winds. At the latter end of October the NE monsoon begins on this coast. It also blows first in the S, and about 15 days afterwards is felt on the N parts of the coast: this monsoon continues till April. On the Coromandel coast the SW monsoon begins about the end of March or early in April; but it is not regular or strong till the month of June, land and sea breezes being not uncommon in March, April, and May. In June, July, and August, this monsoon is very steady, regular, and strong; but even during these months a land or W wind blows from the shores for 24 or 48 hours. In August and September the SW monsoon begins to lose its steadiness and violence; and the NE monsoon commences about the middle of October. From this period till the beginning of December it is very boisterous, and navigation is rendered extremely dangerous; but in December, January, and February it is steady well-settled weather. On both coasts the setting in of the monsoons is generally attended by violent hurricanes. Such is a short description of the monsoons as they appear on the W and E coasts of India; but before we proceed to point out their effects on the climate, it will be proper to advert to the circumstance of their extending beyond the tropics. This is decidedly the case at Tattah, which lies in N lat. 24° 44′. The monsoon, however, does not reach Kurachi in N lat. 24° 51′. There are indeed at

this place, as well as along the coast of Mekran, from April to October, SW and W winds; but, as they often veer round to the N and NW, they cannot be regarded as monsoons, especially as they are seldom attended with squalls and rain,—the invariable marks of the SW monsoon on the coast of Malabar. The climate of that part of India—as far as respects rain—in which the monsoons prevail, and the Ghauts are situated, is remarkably regular. It will easily be conceived, that when the SW monsoon prevails on the coast of Malabar this coast will be deluged with rain, in consequence of the Western Ghauts intercepting the clouds brought by this monsoon; and that the same monsoon, on the Coromandel coast, will occasion dry weather; while, on the latter coast, the rainy season will be occasioned by the NE monsoon, which dashes the clouds, surcharged with moisture, against the Eastern Ghauts. On the Malabar coast, on the contrary, this monsoon will occasion dry weather. Hence it appears that the rainy season on the Coromandel coast must commence with the NE monsoon, about the middle of October, while, at that time, the dry weather begins on the coast of Malabar; and that the rainy season on the Malabar coast must begin in April or May, the period of the commencement of the dry season on the Coromandel coast. The rains on this coast are not, however, so violent as those on the Malabar coast. This seems to arise from the circumstance that the Eastern Ghauts are farther from the sea than the Western; and, consequently, the clouds are not so soon broken, and have also a greater space over which they can spread themselves before they are broken. It is not improbable, too, that the greater height of the Western Ghauts may intercept a larger portion of the clouds than the Eastern, and break those which it does intercept more completely. As the Western Ghauts extend no farther than the lat. of Surat, the SW monsoon, to the N of this lat., as far as it blows, carries the rain without interruption over the whole country. We have already mentioned the break in these Ghauts near Paniani. In consequence of this break affording a passage to the NE monsoon, from the Coromandel coast, ships which navigate the Malabar coast commonly experience a stronger gale in the neighbourhood of Paniani than on any other part of this coast. The lower part of the province of Coimbatur partakes of the rainy monsoon of the Malabar coast, which is probably occasioned by the same break permitting the SW winds to blow through the Ghauts in this part. The SW monsoon blowing so long, and part of the time with such violence, forces a great body of water into the gulf of Bengal; and during its prevalence, the surf on the Coromandel coast is very tremendous. The NE winds continue this surf, by impelling the waves on the shore, which is very steep, having, as was before observed, no soundings at the distance of 30 m.

Seasons in H. Proper.] Having thus briefly explained the monsoons and their effects in the S part of India, we shall now make some observations on the climate, as it respects wind, rain, and heat, in other parts of this country. In that part of Bengal which lies near the head of the bay, the winds blow alternately from the N and S, during unequal portions of the year. A N wind prevails during the cold season, that is, during October, November, and December; and a S one during the hot, that is, from March to the end of May. In the E parts of Bengal, a NW wind begins about the middle of March. During the prevalence of this wind, there are sudden and violent squalls of wind and rain, which are often very destructive to the boats on the Ganges. These squalls are more frequent in the E than in the W parts of Bengal. The most settled weather is between the end of the rainy season and the beginning of the NW winds. The seasons in Bengal are generally divided into cold, hot, and dry; but the natives are more minute in their divisions, assigning six seasons to the year. The spring and dry season occupy four months, that is, February, March, April, and May. The periodical rains commence nearly at the same time over the whole of this part of H., that is, in the beginning of June. During the first two months there is scarcely an interval of two dry days; and the rain falls in such abundance, that 4 and 5 inches have fallen in the course of a single day. In August and September the intervals are more frequent and of longer duration, and the weather becomes sultry. As the cold season approaches, fogs and dews are very common and dense. See article BENGAL. This description of the climate of the prov. of Bengal will apply, in almost every particular, to the climate of the whole of H. Proper, except that in the mountainous parts the rainy season begins early in April.

Rain.] When the quantity of rain that not unfrequently falls in Bengal, in the course of a single day, during the rainy season, and the long continuance of that season, are considered, we shall not be surprised that the average annual fall of rain in the lower parts of the prov. should be between 70 and 80 inches. During the SW monsoon at Bombay, the quantity of rain generally exceeds 100 in.; sometimes it reaches 110 or 112 in. At Madras, according to Mr. Cockburne, upwards of 30 in. fall in the course of one month; and yet he estimates that only from 45 to 70 or 80 in. fall in the course of the year, according to the situation and severity of the monsoon. During the first part of the rainy monsoon on the coast of Malabar, that is, in the months of May and June, a considerable quantity of rain falls on the table-land of Mysore; but it is uncertain whether this is the effect of the monsoon, or is merely the periodical tropical rain. In the NW extremity of the rajah of Mysore's territories, on the summit of the Western Ghauts, there are usually nine rainy months in the year. During six of these months the rain is so violent and constant that it is impossible to go abroad, and "it is customary to make the same preparatory arrangements for provision — water excepted—as are adopted in a ship proceeding on a voyage!" The elevation of this part of India is so great that the climate is a month later than it is on the sea-coast. In the mountainous parts of the prov. of Coimbatur, there are two rainy seasons; the first is in April; the second in July, August, September, and October. The NW parts of H. Proper seem the driest with respect to climate. "During the greater part of the SW monsoon, or at least in the months of July, August, and part of September —which is the rainy season in most other parts of India—the atmosphere is here generally clouded; but no rain falls except very near the sea. Indeed few showers fall during the whole year. Owing to this cause, and the neighbourhood of the sandy deserts which bound it to the E, and are not far removed from it on the NW, the heats are so violent, and the winds from those quarters so pernicious, that the houses are contrived so as to be occasionally ventilated by means of apertures on the tops of them, resembling the funnels of small chimneys."

Temperature.] The general temperature of India, it is evident, must be very high, especially in those parts, which, like Sind, are of a sandy soil, and dry climate, and in the southern provinces. In the more elevated regions, however, a considerable degree of cold is often experienced. The following table affords a comparative view of the monthly and yearly mean temp. at Calcutta, Madras, Bombay, and the Neilgherry hills, [8,000 ft. above sea-level,] compared with the temp. of the city of London:

	CALCUTTA.		BOMBAY.		MADRAS.		NEILGHERRIES.		LONDON.

In Calcutta the heat is sometimes so great that people drop down dead at noon, while flying over the open plain. In the middle districts of Bengal the heat is moderated by occasional thunder-storms during the hot season, which render the atmosphere cool; and in the E districts the same effect is produced by occasional showers of rain. In the higher parts of Bengal, the weather is sometimes very cold. Between the latitudes of 28° and 29°, in the prov. of Delhi, the heat during summer is very intense; but when the wind blows from the northern mountains in the winter, the therm. often falls below 30°, and water freezes in the tents. The same description applies to the Shahrampore district of Delhi, which lies farther to the N, principally in the Doab. But the cold here is moderate, compared with what it is in some parts of Northern H. At the end of May in 1808, there were masses of snow about 70 ft. in thickness, lying undisturbed on the road to Bhadrinah, in lat. 30°. Even in the Benares district of Allahabad, the cold of winter is so severe as to render fires necessary, while in April, May, and June, the heat is very oppressive. The winters in the Deccan, which contains a large portion of high land, are cold. At Hyderabad, and the provs. to the N of it, the therm. during three months is often as low as 45°, and sometimes only 35°.—The climate of Sind, on the NW coast, has been generally described. It may be here added, that in the months of June and July, the therm. ranges from 90° to 100°. At Surat the variations are, in the course of the year, from 59° to 96°. At Bombay from 64° to 98°; the former about the end of the year. The hottest months on the Malabar coast are April and May. In the former month, the maximum height of the therm. at Cochin is 105.

The temp. of the coast of Coromandel is in general much higher than that of the provinces on the coast of Malabar; and the Carnatic and the NW extremity of the Northern Circars are deemed the hottest, not only on the Coromandel coast, but in all India. Taking the average of the whole year, the heat at Madras is less than that of Calcutta. In January the therm. is about 70°; this is the lowest temperature. The highest is in July, when the therm. is about 91°. Taking Madras and Bombay as medium stations on the two coasts, the difference in winter-temp. may be stated at 7°,—Madras being 71°, and Bombay 64°. In April and May, before the showers, the therm. at Calcutta rises to 110°; and a *coup de soleil* is almost the certain result of exposing one's self to the direct rays of the sun.—Extraordinary hailstorms occasionally occur in H. On the 22d of May, 1851, a storm of thunder, lightning, and rain, occurred near Bangalore, during which the hailstones which at first made their appearance, were about the size of limes and oranges, and broke through the tiles and roofs of houses, and destroyed gardens and fruit trees. Some of the hailstones found next morning were as large as goose eggs, some as big as pumpkins; one block, found in a dry well, measured 4½ ft. in length, 3 ft. in breadth, and 1½ ft. in thickness. It was probably the result of the cementation of several of the smaller pieces into one lump, although the fall of pieces of ice of this size is not unfrequent in India. In the reign of Tippu Sultan a piece was found the size of an elephant, which took several days to melt; in 1826, a piece of similar size fell in Candeish; in 1838, a block of ice, apparently a mass of cemented hailstones, was found near Dharwar, measuring 20 ft. in circumf.

Diseases.] It will be readily apprehended that miasma, or malaria, must be very prevalent in this country, especially in the tracts contiguous to the larger rivers. The incessant decomposition of animal matter, the insalubrious exhalations from the dense low jungles, the presence of extensive forests, and the extent of rice-grounds, are all powerful sources of malaria in this country; and it seems to be an established fact that miasmatic influence generates ague, remittent fever, malignant continued fever, dysentery, and disorders of the liver and spleen. In the Bengal presidency, fever is most frequent in the rainy and hot seasons, dysentery and diarrhœa during the rainy and cold seasons,—and hepatitis and cholera in the hot season. The banks of the Hugli and the district of Jessore, Murshedabad, Gundwana, and Cuttack, are considered very unhealthy places. The prevailing diseases in the presidency of Madras are fever, dysentery, and hepatitis; and the sickliest period is about the commencement of the monsoon, or from August to November. In Travancore, diseases of the liver appear to be particularly endemic among Europeans. The presidency of Bombay is the least salubrious. The singular affection of hemeralopia, or night-blindness, is very frequent among the natives. Pulmonary and bronchial affections are said to accompany fever in the northerly provinces. Rheumatism is the disorder of the elevated districts of the N provs. of Hindostan. Dr. Rankin considers as the primary cause of the endemic disorders to which Europeans are subject in India, an excess of heat amounting on an average to 30° above the temp. of Great Britain. At the same time it must be confessed that Europeans in India are seldom sufficiently attentive to their diet and regimen. Nothing can be more pernicious to a European constitution, under such a climate as that of India, than the practice of consuming a quantity of fish, meat, and eggs at breakfast; rich soups, roast meat, and fowl at tiffen, with the usual allowance of wine, and occasionally malt liquor.

Soil.] The soil of H. exhibits perhaps fewer varieties than might be expected in such a vast tract of country. In the whole of that district which is watered by the Ganges, the most prevalent soil is a rich black mould, evidently of alluvial origin. No other soil appears between the Tipperah hills on the E and the district of Burdwana on the W, nor below Dacca and Borleah to the N; nor is there any substance so coarse as gravel either in the Delta or nearer the sea than 400 m. along the course of the Ganges at Oudanulla. At this place, a rocky point, evidently stretching from the base of the neighbouring hills, projects into the river. In other parts of Bengal and the adjacent provs., there is a considerable extent of clayey soil; and that this was the original soil, where the black mould is now found, is proved by the appearance of the beds of the rivers, which are of clay. The substratum of the soil in this part of H. Proper is in many places calcareous; in others clay; in a few instances rocky. The soil of the Punjab resembles that which chiefly prevails in Bengal, and is equally fertile. As we approach to the SW into Sind and Gujerat, the soil becomes more sandy; in Malwah, it is a deep, black, rich mould. Of this kind of soil there is one variety, named by the natives *eyrey*, which is deemed very unhealthy. The whole of the plain of Chitteldrug, in the Mysore, which is 10 m. from N to S, and 4 m. from E to W, consists of this kind of black mould to a great depth. The provs. of Gundwana and Orissa contain the largest proportion of poor unproductive soil perhaps in all H. To the S of these the soil near the coasts both of Malabar and Coromandel is sandy, and generally of a poor quality; it is more fertile, however, as the mountains are approached. In the prov. of Malabar, the soil at the foot of the low hills which intervene between the sea and the Ghauts is a red clay or brick earth. On the Coromandel side, the sandy soil continues nearly to the foot of the Eastern Ghauts. The soil on the table-land, and also in the extreme southern provs. of India is of various quality; but is in general a loam on rock, and very fertile.

Vegetable kingdom.] We can only devote a few sentences to the natural history of this country, rich indeed though it be both in vegetable and mineral treasures. India produces those species of grain which are most common to Europe; but rice, as it forms the chief food of the inhabitants, is the great object of culture, and is a grain which the levelness of the country peculiarly fits it for producing. There are no fewer than 27 varieties of it cultivated; and

under the best cultivation the land brings forth crops all the year round. Maize seems next to rice to be the most extensive crop at least in the western provs., but wheat and barley are likewise successfully cultivated. Sugar-canes and cotton are reared in many places; but the tobacco of H. is said to be inferior to that of America, probably because it is cured with less skill. Mulberry-trees are carefully reared for the purpose of breeding silk-worms. Indian silk, however, is considered inferior to China silk by 9, and to Italian silk by 11 per cent.—The species of trees are very numerous. Among them may be distinguished several species of the numerous and peculiar family of palms, of which that producing the cocoa-nut—*Cocos nucifera*—is the most remarkable. This palm is seldom seen wild; but is everywhere cultivated on account of its nuts, which are chewed with betel. A vigorous tree will yield 500 full grown nuts in the season. On the coasts of Malabar and Canara palms are very abundant. The large fan-palm has leaves of which one is sufficient to cover ten men; and three or four will thatch a cottage. The leaves of the smaller fan-palm are used as paper; and from its trunk, as also from the nut-bearing palm, is procured a liquor called *palm-toddy*—the palm-wine of Africa—which becomes *arrack* after it has undergone the vinous fermentation; and when boiled down to a syrup is called *jagary*, and serves as a substitute for sugar. The plantain produces a fruit which in many places is used as bread; and the teak-tree—*Tectona grandis*—is said to excel British oak in the building of vessels. The bamboo—*Bambusa arundinacea*—is a most valuable tree, or, to speak more correctly, reed. It will shoot up to the height of 60 ft. in a season; in one year it attains its full growth, and during the next the wood consolidates, and acquires those properties of hardness and elasticity which render it so useful for a variety of purposes.—The fruits of H. are very numerous. Cocoa-nuts and plantains have been mentioned; to these may be added pomegranates, citrons, dates, almonds, grapes, ananas or pine-apples, and tamarinds. In the northern provinces, apples and pears are plentiful. Oranges and lemons are also grown, but are said to be of an inferior quality. The fruit called mango, one of the most exquisite of all the fruits of India, is found abundantly to the W of the bay of Bengal. The mangosteen is the most delicious fruit that grows in British India. The durion is a fruit of most offensive smell but exquisite taste. The small-fruited banana has in all ages been the food of the Indian philosophers.—Many trees and shrubs useful in medicine or the various arts occur in India, though in these respects the country cannot vie with the Eastern archipelago. Among those used in medicine are the *Cassia fistula*, *Nux vomica*, and *Laurus cassia*. Among those useful in the arts are the tree whose gum is well known by the name of *gamboge*, and the *Cæsalpina sappan* used in dying red. The cotton-tree also flourishes here. Many of the trees yield wood of a beautiful grain, capable of the finest polish, and consequently much used in cabinet work. Sandal-wood is almost exclusively confined to the SW of Mysore. The pepper-vine is found native in some places of India. The *Papaver orientale*, from which opium is obtained, thrives in almost all the provinces. Indigo is cultivated on a large scale in Bengal, Bahar, Oude, and Agra. Of the poas, the *Poa cynosuroides*, the kossa grass of the natives, deserves particular notice. It is regarded as a sacred grass, and is held almost constantly in the hands of such as are anxious to be regarded as particularly devout. It is also of considerable use in this climate, as it is from its roots that the kind of mats called *tatts* are made, which are placed against the doors or windows, and constantly watered, to keep the rooms cool; as its natural fragrance is pleasant, it spreads an agreeable scent as well as freshness through the apartments. On the E frontiers of Bengal, there is an immense extent of land covered by a peculiar kind of grass, called by the natives the augeah grass. The soil on which it thrives is sandy. It grows to the height of 30 ft., and is as thick as a man's wrist. The jungle-grass is very common in many parts of H. In the Rajemal district of Bengal, it attains the height of 8 or 10 ft.; and on the top of it there is a beautiful and elegant down, resembling the feathers of a swan. When we come to treat of the agriculture of India, we shall have occasion to notice some plants and productions, which are more properly treated under that head.

Zoology.] The zoology of India is extensive, but our limits preclude us entering into details. Among the domestic or tame animals may be enumerated elephants, buffaloes, oxen, horses, asses, and mules. The Indian elephants differ from those of Africa in having the transverse ridges of enamel in the teeth smaller and more numerous, and a toe more upon each foot. About 9 ft. is the standard height for male elephants; and such an animal will carry a load of nearly a ton.—The dromedary is found in some places, but appears not to be common in every part of H.—Horses are numerous; but as the breed is not equal to that of Arabia, the wealthy are supplied from that country and from Britain. The native breed of horses in India is a small ill-shaped vicious pony, in some parts not exceeding 30 in. in height, particularly on the confines of the Nepalese territories. Wild horses, of a hardy and useful breed, spotted in a singular manner, and with great variety of colour, are regularly brought from the banks of the Bontsu in Nepal, for sale. Horses brought from Candahar and Tibet are sold at the annual fairs of H. In the Chotisgur district of Gundwana, brood mares of the tattu species are kept in considerable numbers. This is the same species that is common in Bengal; it is a thin ill-shaped animal. The horse commonly used by the Mahrattas in war is a poor looking animal, about 14 or 14½ hands high, with large bones; but in the Punah Mahratta territory, particularly near the Bimah river, beautiful horses, of a middle size, and generally of a dark bay colour, with black legs, are reared, which are highly esteemed by the Mahrattas. In the prov. of Aurungabad also great numbers were reared for the Mahratta cavalry. In that part of the prov. of Bahar which lies near the Nepalese territories a number of horses are bred for the British cavalry. It has been satisfactorily ascertained that this animal degenerates in size, and in most of his useful qualities, in low and moist situations; hence the horses of Bengal are of inferior description and small size. In dry and moderately elevated situations, on the contrary, they thrive well, and are strong, active, and handsome. Since the British began to pay attention to the breeding of horses in the N parts of Bahar, many of the very first quality have been reared there, particularly in the districts of Tirput and Hajipur; and they are in such request, that horse dealers from Upper H. frequent the fairs at Hurdwar and other places to purchase them. Farther to the N., however, where the country becomes very mountainous, the horses fall off in point of size; but though nearly as small as those of Bengal, they are much more handsome, active, and strong. The British have also frequently obtained horses from the middle districts of Gujerat and from Lahore; the latter are particularly excellent.—In some parts of India the ass is a common and useful animal, parti-

cularly in Bengal, the Carnatic, and above the Ghauts. They are small in size, and are distinguished by the great variety of their colour. Herds of wild asses are sometimes seen near the mountains in the N.—The cattle kept in India are the common black cattle, and the buffalo. They are both very numerous, particularly in the Ceded districts, where, in 1806, there were 1,198,613 black cattle, and 1,147,492 buffaloes; in Bengal, where it is supposed that there are of both kinds above 50,000,000; and in Gujerat, where the bullocks are reckoned the strongest, swiftest, and handsomest in India. From the Chotisgur district of the latter prov., which contains about 20,000 sq. m.,—part of which is mountainous, or covered with jungle,—are exported in favourable seasons 100,000 bullocks. The British government in India have paid considerable attention to the improvement of the breed of bullocks for their ordnance; but there are only two districts in the Bengal presidency in which bullocks of a size required by the British for this purpose are bred,—the Purneah district of Bengal, and the Sarun district of Bahar. The bullocks of the former are of a large size, very strong and active, well-formed, and much superior to the cattle employed for draught in the lower parts of Bengal. The bullocks in the Sarun district are not so excellent in their qualities, nor so large, but they are little inferior in these respects. The common draught cattle all over India have a hunch on their shoulders, on which the yoke rests; they are of a white colour, small size, but active and well-proportioned.—The sheep in India are small, generally of a black or dark grey colour, with wool like hair for hardness and coarseness, and scarcely fit for any purpose. In Allahabad, and on the Coromandel coast, the sheep are small, and of an inferior quality, even compared with those of Bengal. In 1806, the number of sheep in the Ceded districts amounted to 1,147,492. They are also numerous in the Mysore, where they are of three varieties of colour, red, black, and white. Here the shepherds and their families live with their flocks, the men sleeping in the open air among their sheep, wrapped up in blankets, and the women and children under baskets made of leaves, and about 6 ft. in diam. In the S of India sheep are most extensively bred in Coimbatur, particularly in the Aranasi district. There are in Bengal a few sheep with four horns, and superior in size to the common kind.—Goats are by no means uncommon in the hilly districts of India. They resemble in size, &c., the European goat.—Swine were common in the Mysore till they were almost extirpated by Hyder Ali. They are not numerous in any part of H., either domestic or wild.—The wild beasts are numerous, particularly in such parts of the country as are but thinly peopled. The lion has been supposed to be unknown in H., but our countrymen have both hunted and killed lions in the neighbourhood of Bombay. The chief haunts of the tiger are near the banks of the Ganges. His leap is said to be sometimes not less than 100 ft.,—an assertion in itself not very probable, and the truth of which it would be difficult to ascertain. The minor animals of prey are leopards, jackals, wolves, bears, wild boars, panthers, hyænas, lynxes, and foxes. In the forests near the Circars the ourang-outang is found, and apes and monkeys of different kinds are very numerous. The rhinoceros is common in Northern H.; and is said to occur in some of the isles of the Ganges. Different kinds of antelopes are numerous; with red deer, fallow-deer, musk deer, and elks. In the northern districts are many species of small animals, among which may be mentioned the musk-weasel.

The birds of India are very various, and some of them uncommonly beautiful. This is the native country of the peacock, which here exists in almost every part in a wild state. Near Cambay, and in different parts of the prov. of Malabar, they are particularly abundant. The historians of Alexander mention the delight and surprise with which that conqueror first beheld the peacock, and that he forbade them to be killed under very severe penalties. There are few birds, natives of India, so remarkable, and which have so excited so strongly the attention of naturalists, as the gross-beak—*Loxia Philippina*—the olomari of the Malabars. It is described in the *Asiatic Researches* as "rather larger than a sparrow, with yellow brown plumage, a yellowish head and feet, and light coloured breast, and a conical beak, very thick in proportion to its body." They chiefly frequent the cocoa-nut trees, or the palmyra and Indian fig, being partial to a lofty site. This bird constructs its nest in a very curious way, with the long fibres of plants or dry grass, and suspends it by means of a kind of cord nearly half-an-ell in length, from the extremity of an extremely slender branch of the tree, in order that it may be inaccessible to snakes and other animals. This bird is much valued in H. for its docility and attachment to those who domesticate it. The common fowl is found in the jungles, and is called the jungle bird; and the wild cock, the feathers of which are of various colours, and shine like gold, is found in the Ghauts and the adjacent forests. The *Pelicanus onochrotalus*, or large Asiatic pelican, is found in Malabar. This prov. is also the native country of what is called the Malabar bat, *Vespertilio vampyrus*, or *caninus*. The *Gracula religiosa*, common in the districts adjoining the Ghauts, is a bird held in considerable esteem by the natives on account of its song. The eigrus, the largest of aquatic birds, is found among the lakes in the N of H. Proper, where it is kept by the natives in their gardens for the purpose of picking up the vermin. Parrots of almost all the varieties abound.

The *Coluber naia*, or *Cobra de capello*, the most poisonous of all the species, is one of the most common snakes in Malabar. The mountain-snake of the Ghauts seems to resemble the boa constrictor, as it is represented by Bartolomeo, as being from 30 to 40 ft. long, and as thick as an ox.—The insects are very numerous, and in great variety in all parts of India. The *Termes fatale*, or white ant, which is particularly noticed by Herodotus and Arrian, is here very destructive. The *Meloe trianthema* is found in great quantities in the Doab, and in that tract which stretches along the r. bank of the river Jumna. The *Meloe cicorei* is principally found in Bengal, Berar, and Oude; it subsists on the flowers of the cucurbitaceous plants, and also on those of the hibiscus and sida species, and is most abundant during the rainy seasons. The fire-fly is very common in India, and is one of the most beautiful insects of that country; the trees are sometimes so completely covered with it as to appear like "pyramids of light." The most troublesome insects are the flies, mosquitoes, chinches or bugs, and the chigoe, a small worm which deposits its eggs under the skin.

In the Ganges there is a great variety of fish. Of all the kinds found either in this river, or in any other part of India, the most delicate and highly flavoured is the mango fish, so called because it appears in the rivers while the mangoes are fit for use. The other kinds of fish in highest repute for their flavour are the cockup and the sable fish. The coast of Chittagong is celebrated for oysters. Oysters are also plentiful in the rivers of Cochin, where they are fished for in the same manner as the pearl-oyster. Turtle are found in the Ganges, but small and of inferior quality. The salmon frequents the sea-coast

and the rivers of Malabar, and pilchards in immense abundance are found on this coast. In the Alakananda river there are many fish of the Cyprinus genus, particularly *C. denticulatus*, which grows to the length of 4 or 5 ft., and even 7 or 8 ft. They are represented as very beautiful; the scales on the back and sides are very large, and of a fine green colour, with a bright gold edge; the belly is white, with a slight tinge of gold colour; the tail and fins are of a dark bronze colour. Alligators and porpoises are common in the Ganges. The whale is sometimes seen off Cape Comorin. The sword fish is very abundant in almost all parts of the Indian seas. The sea hedge-hog, sea-star, sea-nettle, &c., are common in the Indian seas.

Mineralogy.] The mineralogy of India has not yet been very carefully or thoroughly examined. The Ghauts are composed of a granite in which the feldspar and quartz, both of which are remarkably white, bear more than the usual proportion to the mica, which is of a dark green colour. Many of the masses of rocks in the Mysore country, on which the almost impregnable fortresses of Tippu were built, are of granitic porphyry, and rise into high sharp peaks. Granite seems to form the principal mountains in H., as well as the Ghauts. It is found mixed with the soil in the neighbourhood of Rajamal, a town situated on the SW side of the Ganges, in lat. 55° 2′, but not lower down the river. Limestone is found in many places, particularly among the hills near the bed of the river Palar, in the vicinity of Arcot, where it is found in the form of nodules. This species of limestone forms the *chunam*, that is used by the natives along with the areca-nut and betel. Chunam is also met with in almost inexhaustible quantities in the Silhit district of Bengal; and from this district Calcutta and the most remote parts of the prov. are supplied with it. In the neighbourhood of Bombay a good deal of chunam is made from shells. The Madras chunam is smooth, hard, and polished as marble. There are marble quarries of considerable extent, which yield marble of excellent quality, in the prov. of Ajmir. Other stone proper for building, particularly what is called the Theban stone, is abundant over H. Proper, and is by no means rare in the Deccan and the S of India. In Bombay there are large quarries. In the prov. of Oude, lapis lazuli of an excellent quality occurs.—The diamond mines of India have been long known and celebrated. The most remarkable is that of Pannah, which seems to have been known to Ptolemy. The emperor Acbar, among his other plans for improving and enriching his territories, paid great attention to this mine, from which he drew 8 lacs of rupees annually. The native chiefs of Bundelcund, as well as the last Mahratta conquerors of this district, also raised considerable revenue from this mine. Besides the diamond mine of Pannah, there is one other to the N of the Deccan, near Sumbulpur, in the prov. of Gundwana, near the junction of the Hebe with the Mahanadda: the other diamond mines are to the S of the Nerbudda. About the middle of the 17th cent. the diamond mines in Sedhout, a district in the Balaghaut ceded territories, were very productive; but these, as well as all the other diamond mines of H., have long ceased to be very valuable, being either exhausted or neglected. There are also mines at Raolconda, about 40 m. NW from the junction of the Bimah and the Kristna; at Colore, on the S bank of the latter river, not far from Condavir, in the Gentur circar; and in Golconda. Cornelian and other opaque stones are found near Cambay, and garnets near Hyderabad.—The metals found in H. are gold, iron, and lead; there are no indications of silver; and with respect to copper, though it has been enumerated by some authors among the metals of H., there seems no foundation for the statement. There are no mines of gold; this metal being only found among the sand washed down by the rivers. The quantity thus obtained from the Indus and its tributary streams was probably much more in ancient times than it is at present. Herodotus informs us that the tribute paid by the Indian satrapy of Persia to Darius Hystaspes was in gold; and that the sum paid was nearly one-third of the whole tribute paid by all the 20 satrapies. In the Ayin Acbari we learn that gold was found in the channels of the Ravi and in Kemaun. In many of the rivers of Assam which flow into the Brahmaputra gold occurs, especially in the Dekrung, which is famous not only for the quantity but the quality of its gold. In the E extremity of the rajah of Mysore's territories, an area of country comprising 130 sq. m. is said to contain gold dust. In the Fernadu district of the province of Malabar, gold dust is found in a branch of the river which falls into the sea at Parapanda.—Iron ore is not common; it seems to be chiefly bog iron ore, or particles of iron mixed with sand. Of the latter there is a considerable quantity in the Mysore rajah's dominions, not far from Severndrug. Indeed, the Mysore seems to be more abundant in this metal than most other parts of H. At some of the iron works 47 per cent. of malleable iron is obtained from the ore, but it is by no means in a pure state. On the W side of the S of India, iron occurs in the Velater district of the prov. of Malabar. The highland district of Bahar is also rich in iron, which is fused for sale by the natives in large quantities. On the SW coast of the Gujerat peninsula, there are likewise extensive works for fusing this metal. There are lead mines in the territories of the rajah of Jodpur, in the prov. of Ajmir; and rich iron-ore is abundant in Cutch, where it is skilfully wrought.—The manufacture of salt from seawater, and of saltpetre, will be noticed afterwards. Mines of rock-salt occur in the district between the Indus and Jelum, in Lahore. They are uncommonly productive; and the fragments of rock-salt are sufficiently hard to be shaped into different kinds of vessels, &c. Large lumps of it are brought down to Amritsir, the cap. of the Sikhs, slung on each side of camels. In some parts of the Mysore, the ground is strongly impregnated with salt, particularly in the low moist parts of the district of Cotlar, where during the dry season it is extracted, the surface of the ground having been previously scraped off, and collected into heaps. The grain of this salt is large, and the crystals well-defined; it is however by no means pure. During the reign of Tippu, when in consequence of his regulations the trade with the Lower Carnatic was declared contraband, the salt was extracted from the soil in very large quantities, but the natives entertained a strong prejudice against it. Earth similarly impregnated with muriate of soda is found in the prov. of Coimbatur, to the S of the Mysore; but here the muriate seems to be mixed with the nitrate of soda. Much of the well-water here has a saline taste. A thick coat of salt, as white as snow, is spread over part of the morass Calud, in the Runn; and salt lakes occur near the sources of the Indus, at an elevation of 16,000 ft. above sea-level.—Coal is wrought in Silhet, and likewise in Burdwan. It has also been found near Hurdwar in the Himalaya, and in Cutch. — Sulphur is found about 30 m. to the N of Odipur, in the SE quarter of the prov. of Ajmir, but it is neither so strong nor so pure as that which comes from Surat. — There are several mineral waters, particularly in the hilly districts of H.; such as are warm are deemed sacred. Most of the wells in the vicinity of the city

of Odipur, though they are by no means deep, are strongly impregnated with some mineral substances, probably with iron, but they have not been analyzed. In the Boglipur district of the prov. of Bahar, about half-a-mile from the banks of the Ganges, in a plain nearly surrounded with rocky hills, is a celebrated hot spring, from which the flow of water is considerable. Though there are several cold springs not more than 20 yds. from it, the water is so hot that the hand cannot be long kept in it. Another hot well, held in great veneration by the Hindus, occurs about 20 m. to the N of Islamabad, in the Chittagong district of Bengal.

Agriculture.] The agriculture of H., generally speaking, is in a very rude and imperfect state: there are, however, districts in which this art has reached a state of improvement not inferior to that in which it exists in many parts of Europe. Perhaps the Burdwan district of Bengal deserves the first place in the scale of agricultural excellence, and the prov. of Tanjore the second. Many parts of the prov. of Allahabad, and especially the district of Benares, rank nearly on a level with Burdwan and Tanjore. In the neighbourhood also of the city of Patna, the cap. of Bahar, the husbandry is excellent, the fields in many places being cultivated with such nice and minute attention as to resemble gardens. Travancore is distinguished for its excellence in what is called the wet-cultivation. The agriculture of the Circars is also good. From this prov. and Tanjore the Carnatic is frequently supplied with grain; the Circars being esteemed its granary during the NE monsoon, and Tanjore during the SW monsoon. Formerly the Punjab exhibited undoubted proofs of good husbandry, and its crops, owing to this and the natural fertility of its soil, were abundant; but in consequence of the devastations from war it has sustained, and the number of petty hostile states into which it was long divided, it is now but imperfectly cultivated, and contains a large proportion of land absolutely waste and neglected. That part of Agra which is called the Doab, was formerly, like the Punjab, cultivated with skill and success, especially during the latter part of the nabob of Oude's government: at present its cultivation is improving, as indeed is the case with most of those parts of India which are placed under British authority. The parts of the Deccan in which the condition of agriculture rises above the level of that generally practised in H., are the low districts of Aurungabad, some parts of Berar, and the Circars. In the S of India, besides Tanjore and Travancore, which rank in the highest class, the industry of the husbandman in the Ceded districts has raised agriculture to a considerable degree of perfection; but in no part of India has the husbandman had to struggle with greater difficulties in the improvement of his land, and nowhere has he surmounted them more completely, than in Canara. The larger portion of the surface of this prov. is so rocky and uneven, that nearly all the agricultural labour, and especially the indispensable previous operation of levelling the ground, must be performed without the aid of cattle. And, even after the land is brought into a state of cultivation, it would soon revert to its original character, and be broken up by the torrents from the mountains, were not the husbandman constantly alert and active. Notwithstanding these difficulties, there everywhere throughout this district appear undoubted proofs of good husbandry, not merely in the quantity produced, but also in the neatness of the culture, and the regularity and method with which it is carried on. The circumstance that each man here cultivates his own land, and that the subdivisions of property are very minute, may doubtless account in some measure for this superiority in the arts of cultivation. The same character applies to the husbandry of Malabar; each proprietor bestowing on his little spot "all that minute labour and attention which is so important to Indian husbandry." The tract of land in N. Coimbatur, which lies near Mutu and Coleagala, and that part of S. Coimbatur which stretches along the banks of the Amarawati, are remarkably well-cultivated, particularly the first district, in which the management of rice is equal to that of any other part of India. The same remarks apply to the rice-cultivation in the valleys of Cochin. From this sketch of the general state of agriculture in H., it will be seen that, with a few exceptions, that of the S of India is superior to that of H. Proper; and that the husbandry of the Deccan is inferior both to that of H. Proper and the S of India.

Modes of culture.] Over all H., as in every country that lies within the tropics or only a little beyond them, the general mode of cultivation, as well as the particular crops cultivated, depends in a great measure on the more or less abundant and regular supply of water. Hence arise two distinct modes of cultivation in H., besides subdivisions of these modes. The two leading species of cultivation are denominated *nunjah* and *punjah;* the first being the wet-grain culture, the other the dry-grain culture. The first is more generally practised than the second, and is deemed more valuable and beneficial. The grain cultivated on nunjah lands is generally only of one kind, or at most of two, and is consequently cut down at one season or two; hence the produce of this land can be stored, watched, and sold, with greater facility and at much less expense than the other kinds of grain. In the S of India the produce of nunjah land was always divided between the government and the cultivator. Punjah land is in almost every respect the reverse of this. The grains sown on this land are very numerous, and are put into the ground at various periods; the produce is uncertain, depending on the rain that falls; and the gathering of the crop must be performed at different times, for that part of it which carries grain in the ear must be reaped at one season, and that which carries it in the pod at another. Hence, the produce being uncertain, and the labour great, the revenue exacted by government from punjah land was uniformly paid in money. This kind of land appears to have been brought into cultivation after the nunjah land, as it generally lies at a considerable distance from the village.—*Nunjah mail* punjah is a species of nunjah cultivation, carried on either in the stubble of paddy or nunjah land, or when, from an accidental deficiency of water, land which is usually cultivated with rice becomes unfit for that grain. In these cases the cultivator, availing himself of the moisture remaining in the ground, or of the water that may be drawn by picotahs to the field, sows the best kinds of dry grain.—*Vanpyer*, or *totical lands*, are lands managed according to garden-culture, in which the more valuable articles, such as sugar-cane, tobacco, chillies, &c., are grown. These lands are generally secured against a failure of water by artificial means.

Irrigation.] The nunjah lands are rendered fit for wet-grain cultivation by the overflowing of the rivers,—by canals and water-courses cut from the rivers and streams, for the purpose of irrigating them,—or by water drawn from tanks and wells. The Ganges and its branches are the great sources of fertility to that vast tract of country which lies near their banks, in H Proper. The Punjab, or that extensive tract of country which is watered by the E branches of the Indus, is not sufficiently inundated and enriched by these rivers: the lower part only, towards Multan, which is very flat, deriving this benefit to its agriculture from the periodical rains which fall between the months of May and October The lower part of Sind is also inundated by the Indus; but this river and its branches do not, unassisted by art, greatly or extensively benefit agriculture. Though artificial inundation from the Ganges is not carried to such extent, nor conducted with so much skill as it might be, it is not entirely neglected; and much has of late years been done for its improvement and extension by opening up the old lines of canals. Tanks, or reservoirs of water, are constructed either by digging, or by shutting up, by an artificial bank, an opening between two natural sides of hills. The former mode is practised in Bengal, and in other parts where the surface is level, and the soil loose, and free of rocks; the latter, in the more hilly districts of the Deccan and the S of India, where natural situations are met with in abundance. In Bengal, and other flat districts, the tanks are generally lined with stone, and their bottoms rendered hard and impervious to water by a mixture of chunum and clay. In these parts of H. they frequently cover 100 acres of land. Tanks are constructed either by government or by rich individuals. In the former case, a tax is levied on the land for their repair; in the latter, they are kept in repair by the person who constructs them, but, as a compensation, one-fourth part of the lands which receive water from the tanks is given up to him in full proprietary right. Tanks are very numerous, and some of them very extensive in the Carnatic; where, indeed, from the extreme aridness

of the soil, and the want of water from other sources, they are indispensably necessary to cultivation. Some of them in this district occupy an area of 8 m. in length, and 3 m. in breadth; and contain water enough to supply the lands of 32 villages for 18 months. In the villages watered by one tank are 5,000 persons employed in agriculture; and at another place there is a tank which waters 2,500 acres. In Malabar, Congo, Wynaad, and in the vicinity of Surat and Bassein, irrigation by means of tanks is carried to great perfection.—Wells are also constructed in many parts of H., at great labour and expense, not only for domestic purposes, but also for irrigating the land. In the elevated and sandy districts of Ajmir the wells are from 100 to 200 ft. deep, made of brick. In Gujerat there are a greater number of wells. In the sandy soil of this prov., which lies to the N of the river Mahe, the wells are from 80 to 100 ft. deep; but in the adjoining prov. of Malwah they are still deeper; the inhabitants being frequently under the necessity of digging to the depth of 300 ft. before they obtain a sufficient supply of water.—Land under water-courses is more productive than land under tanks or wells, in the proportion, in land of the first quality, of 146 to 97; in land of the second quality, of 119 to 86; and in land of the third quality, of 97 to 75.

Cereals.] Wheat, which is probably indigenous to the region stretching from Afghanistan to the Caspian, is principally cultivated in H. Proper, and in one or two provs. of the Deccan; but the climate to the S of the Deccan is much too hot for it; nor, indeed, is there much demand for it, in consequence of rice being the favourite and almost universal food of all classes; but from Allahabad to the frontiers on the N, wheat is the principal object of the farmer's attention. It is sown on sandy loams, which are ploughed once about the commencement of the rainy season in June, and after the rain ceases are ploughed repeatedly again. In September or October the seed is sown; and when the dry season begins it must be watered. It ripens in January or February. The average crop is estimated at 15 maunds per bejah, or 7 quarters per acre. The wheat of the prov. of Bahar, especially that part of it which is watered by the Ganges, Sone, &c., is of a superior quality to that which is usually grown in India: that perhaps of the worst quality is grown in the Dinajpur district of Bengal. Gujerat is famous not only for the quantity, but also the quality of the wheat it produces, especially on the rich black soil near Wurgaum. From this quarter Bombay is principally supplied with wheat. In the valley of the Nerbudda soft wheat, or *dudya*, sells for 3 rupees per 400 lbs.; hard wheat, or *julalya*, at 4¼ rupees. —Barley is a most abundant crop in all the upper districts of India, where it is made into thin cakes by the natives. March and April are the harvest-months for wheat, barley, and the grains which are sown with them. As there is a very great and almost universal demand for vegetable oil among the natives of H., such plants as produce it are cultivated most abundantly in both harvests, mixed with other crops. Flax and mustard are generally sown along with wheat and barley for this purpose; and as they ripen first, they are pulled from among the wheat and barley. The latter are reaped together; but are necessarily much injured by pulling out the flax and mustard, and still more so when the plant affording the yellow dye is also sown in the same field. The produce of these grains is also diminished by their being often permitted to stand till they are over-ripe.—Rice is cultivated much more extensively than any other crop in India: indeed there are very few provinces in which it is not the most prevalent crop. There seem to be three kinds of it in the S of India. The first is reaped in September; the second in December and January; and the third in March or April. But in most parts of India there are only two kinds; the common rice, and a kind of which the grains are very white and small, with an aromatic taste. There are three modes of sowing this grain practised throughout India generally. According to one mode, the seed is sown dry on the fields which are to bring it to maturity. By the second mode, the seed is steeped in water till it vegetates, and the field in which it is to be sown is watered till it becomes a kind of puddle: this is the sprouted cultivation. The last mode is by transplantation. A piece of rich ground is selected, in which the seed is sown; and as soon as the plants have attained the height of a foot they are transplanted. The means used to sink it to the bottom of the field, which is covered with water, are very simple and effectual. "A small ball of clay is formed around the root of each stalk, to carry it perpendicularly to the bottom, and to secure it nourishment, till the roots, by spreading, procure a more liberal supply." [*Tennant.*] In a wild state, this grain sows itself in the first month of winter, and at the approach of spring begins to appear above the ground; it ripens during the rainy season, and drops its seed at the beginning of winter; but, in order that he may have two crops of this necessary and valuable grain, the ryot sows it not only at its natural period of vegetation, but also during the second month of the rainy season, that he may reap a second harvest at the beginning of winter. In those parts of H. Proper, where rice is cultivated on good land, well managed, 5 quarters per acre are deemed a large produce, or a return of 15 for 1 on the seed. In some parts of Mysore, the first quality of land will produce from 47 to 49 bush.; the second from 35 to 42; the third from 17 to 24. Where it is necessary to use artificial means to water the rice, the rice fields are divided into squares of 100 or 120 yds., round the sides of which borders are constructed high and firmly, to retain a sufficient quantity of water; furrows are made from one square to another, by which the water is without much labour carried all over the rice field; and at harvest it is cut with a sickle, nearly 4 ft. of the shaw being left on the ground to rot and serve as manure. Rice is cleaned with a wooden pestle and mortar; and this operation, like all the other operations connected with husbandry, is paid for in produce,—the person performing it binding himself to deliver back five-eighths of the weight in clean rice, receiving three-eighths with the husks for his labour. It is afterwards scalded in hot water, spread out on mats to dry in the sun, and deposited in *patagas*, or granaries built of teak wood. The district of Dacca-Jellalpur is deemed, from the immense quantity of rice which it produces, the natural granary of this grain for all Bengal.—Maize is little grown, except in the western provs. of H. Proper, on the poorer soils and hilly grounds. Millet is much more extensively cultivated; there are several varieties of it. Though a small-eared grain, it furnishes a great quantity of straw, 10 ft. long, which is used as provender for the cattle. The Doab is particularly distinguished for its culture of millet. A very important grain in the Deccan is *natchni*, or *ragi*,—the *Cognosurus corocanus*, which returns 200 for 1.—The pulses and legumes cultivated are exceedingly numerous.

Indigo, &c.] In a commercial view, indigo has taken the lead of every other Indian product. Though raised and manufactured from time immemorial, it is only about 30 years ago that, through the exertions of several enterprising Europeans, its cultivation was extended, the successful prosecution of which is chiefly owing to the small duty—almost nominal—levied on its importation into Britain. Some idea may be formed of its importance from the fact, that in the presidency of Bengal the cultivation of indigo occupies upwards of 1,000,000 statute acres, and produces annually about £3,000,000. The amount imported into Great Britain in 1844 was 10,642,877 lbs.; in 1845, 9,845,920 lbs.—Silk is another staple article of India. It is produced largely in Bengal, and to

a limited extent in the upper provs. The quantity exported to Britain in 1834 was 1,203,658 lbs.; in 1845, 1,723,295 lbs. The production of this essential and beautiful article of commerce is in the hands of ryots, or small cultivators, to whom advances are made by the Company, who in return expect the amount produced to be delivered to them. In the presidency of Bombay efforts are being made, which promise success, to extend the production of raw silk, by which means England may at no remote period be rendered, in reference to this material, independent of every other country.—Opium is grown almost exclusively in the central provs. It is cultivated extensively in Benares and Bahar, and constitutes in great part a monopoly in the hands of government. It is a very uncertain crop, the produce of an acre varying from 20 to 40 lbs. It also requires much labour in the cultivation, and in the gathering of the juice which is afterwards evaporated into opium. Besides the opium itself, the cultivator obtains about 40 lbs. of poppy-seed from an acre of land, and frequently from the same land a crop of pot herbs, or some other early vegetables or grain. In Bahar, the cultivation of the poppy and the manufacture of opium are carried on so extensively that 8,000 chests of the latter may be exported annually; but it is a general complaint in Europe, that in this, as well as other provs. of H., the opium is frequently adulterated by a mixture of cow-dung, an extract from the leaves and stalk of the poppy, the gum of the mimosa, and other substances. In the ceded districts of Mysore, poppies are cultivated not only for the purpose of making opium, but also for their seed, from which when ripe an intoxicating liquor called *post* is made. The opium made from the poppies grown in Malwah is deemed much inferior to that of Bengal, and is almost always adulterated with oil and other substances. In some of the provs. in the S of India, the poppy is cultivated almost entirely on account of its seed. The quantity of opium shipped from Calcutta during 1829–30, amounted to 9,678 chests, and the price at which each chest sold was 1,200 dollars. This stimulating drug—used by the Chinese as we do wine and spirits—has been for many years introduced into China clandestinely to the amount of upwards of £3,000,000 per annum. The quantity of Indian opium introduced into China in 1832–3 was 23,693 chests. The opium exported in 1847–8 was 23,877 chests. — Sugar is another important product, in general use among the Hindus. It forms, indeed, an essential ingredient in almost every domestic preparation, whether of food or drink. The amount produced is not only very great, but the quality is good, equal in purity and strength to the best Mauritius or Demerara sugar. The average import of sugar into this country from British India for the 5 years from 1841 to 1845, was 1,156,773 cwts. — Coffee forms no unimportant article of Indian produce. In Malabar, Coimbatur, and other provs., its cultivation is very extensive, and the berry, when properly attended to, is of a superior flavour. Of this article the East India company in 1834 imported into the United kingdom 1,560,098 lbs.—Pepper is also a valuable product of H. The gardens in which it is reared have been described as occupying the deepest glens, shaded by mountains and dense forests, and as appearing only like specks in the wilderness by which they are surrounded. The imports from the East of pepper amounted in 1827 and 1828 to 14,045,868 lbs.; in 1845, 9,042,944 lbs.; but a small proportion only of this was the native produce of H.—The quantity of tobacco raised in India, though not an indigenous plant, is enormous. It was introduced after its discovery in America, and the fascinating power of this leaf has brought it into general use among the Hindus, who cultivate it in every quarter. Were the duty upon it in England lowered, large quantities might be obtained from the rich soils of the East. Snuff made of the tobacco of Masulipatam is highly prized in this country. It was at one time supposed that the tobacco plant was indigenous in India; but Major Rennell has shown that this notion is erroneous, as there are in existence proclamations issued by the Mogul emperors, especially one by the Emperor Jehangire, in the beginning of the 17th cent., in which tobacco is mentioned as "a pernicious plant, introduced by Europeans." Besides the names by which it is known in H., even the Sanscrit names do not occur in old writings, and are evidently corruptions from the European term. Tobacco is now cultivated in almost every part of H., especially in the N and W provs. of the presidency of Bengal, in Malwah, the Northern Circars, &c. In the S provs. it is not so commonly grown. The district round Bilsah, in the prov. of Malwah, is highly celebrated all over India for the excellent quality of its tobacco. The tobacco grown in the Rungpur district of Bengal, though by no means equal to that of Bilsah, is likewise of good quality, and remarkably cheap. In the vicinity of Baroach in Gujerat, tobacco must be a productive crop, as a begah of land planted with it yielded a net revenue to government of 20 rupees; whereas, according to Mr. Tennant, in the N and E provs. of the presidency of Bengal, "between 16 and 20 maunds of tobacco are reckoned a medium produce from 3 begahs," and the value of each maund is only a rupee. Very rich lands produce about 160 lbs. per acre of the green leaf.

Culture of Cotton.] There is no doubt that India produces abundance of cotton. Its millions of inhabitants are clothed in home-grown cotton,—in the hot weather in calico and muslins,—in the winter in cotton-padded coats. Instead of blankets they cover themselves with quilts; and in place of doors and glazed windows they hang up curtains padded with cotton; while tents and tent ropes, covered carriages, the housings of elephants and of horses, are all made of cotton cloth, besides its being applied to a variety of other purposes, all indicating a very large production of this necessary of life, in addition to the surplus provided for export to this country and to China. At present the native consumption of cotton in India may be estimated at 1,500,000,000 lbs. annually. If each village that now grows cotton were to increase its cultivation to a small extent, its supply would, even in a single season, be enormously increased. Much of it is good enough for all purposes, but some is short in staple and rough in texture, probably from being grown in very dry situations. It has often been disputed whether the "webs of woven air," for which the natives of Dacca were once so famous, owed their beauty to the fineness of finger or the superior quality of their cotton: something probably was due to both; but Mr. F. C. Brown assures us that the species of cotton from which these muslins were fabricated, and which had grown immemorially on the rich banks of the Megna, has become extinct with the manufacture itself. A good deal of what is now known as Surat cotton is of excellent quality; but there is reason to believe that this is produced in Central India, and reaches Surat by a circuitous route. The American planters describe the cotton of Umrawutti, near Nagpur, as fine in quality and long in staple, and the cotton of Central India in general as excellent cotton, and requiring only to be properly picked and carefully cleaned. The produce of cotton per acre in India is only about 100 lbs.; in America it is 400 lbs. India is a coun-

try of such vast extent, and so diversified in soil and climate, that the culture suited to one part is sure to fail in another, unless corresponding differences in treatment are adopted. Thus, in the NW provs. of Bengal very fair native cotton is grown, and a very good return per acre is obtained; but there the American cotton plant did not succeed well, apparently owing to two very dry seasons, when rain fell for only about six weeks, instead of, as usual, for three months. In the moist and rich parts of Bengal the American plants run too much into leaf. This might no doubt be obviated by variation in culture, but the insects are unfortunately also very destructive to the American cotton; but even here some varieties of cotton, either indigenous or exotic, may be found suitable to the soil and climate. In the Madras presidency the experiments at Coimbatur—which is far from a favourable situation for American cotton—have been proceeding successfully, for the cultivation has been going on for some years with the acclimated American seed, and the cotton remains of good quality. But none of these sites are within what is considered the true cotton district of India; that is the country above the Ghauts, as the Mahratta country, the Deccan, Candeish, Nagpur, Hyderabad, all not unfrequently comprehended in the term Central India. There the elevation of the table-land, with the modifying influence of the several ranges of mountains, produces a peculiarity of climate which is equally removed from the excessive moisture of Bengal, or the parching drought of Northern India. With a favourable climate, there is also abundance of the excellent cotton soil of India; and hence the cotton culture has extended almost of itself, and will go on extending in proportion to the encouragement given by the capital and energy of European merchants. The natives of India are well known to be careless in the picking, the cleaning, and packing of their cotton. The Indian cotton, however, has many good qualities, and would be employed by our manufacturers to a much greater extent if it were supplied in a clean state in large quantities. The application of the American gin by Americans to the cleaning of Indian cotton has been completely successful at Coimbatur, at Dharwar, and at Baroach; and the cotton has sold in the Liverpool market at nearly the price of New Orleans cotton. The average export per ann. of cotton from India, during the five years ending 1841–2, was to Great Britain 66,125,966 lbs., and to China 452,795,315 lbs. In 1825 only 39,567 bales were imported into this country; in 1844 no less than 239,718 bales. Some of this cotton was from districts where no cotton was cultivated for exportation a few years since. Mr. Chapman, in a recently published pamphlet on the *Cotton and Commerce of India*, gives it as his opinion, that out of the 480,000,000 lbs. of cotton which we have annually imported, 360,000,000 lbs. were of a quality which India might furnish.

Culture of Tea.] In addition to the exertions making in India for the improvement of the quality of cotton, by the introduction of American and other seeds, experiments to some extent are in progress to increase the growth of tea, coffee, timber, and other necessary articles of consumption, as much for the benefit of the natives themselves, as for a source of profit by exportation to foreign countries. These experiments have been undertaken by the sanction and with the assistance of the East India company, and generally have proved successful. The Hindus are proverbially slow in adopting new customs, especially as regards any article of food or refreshment, yet in the course of a very few years, tobacco and potatoes, which heretofore had been completely unknown, are now both extensively cultivated and largely consumed by them. With the intention of spreading civilization still further by the use of what have hitherto been deemed luxuries, the growth of other articles of a similar kind is progressing, and in addition to the prov. of Assam, in which tea has been so successfully introduced as not only to supply a part of India itself, but also to furnish shipments to this country, it has also been successfully planted in Kumaon and Gurhwal. Plantations have been formed at various elevations beyond the level of the sea, subject to considerable variation in the temp., some in parts where snow seldom falls, but where the frosts are sometimes severe; and in others annually exposed both to frost and snow. See articles Assam and Kumaon.

Implements of husbandry.] The plough used throughout all India is as rude and imperfect an instrument as can well be conceived. It consists simply of two or three pieces of wood clumsily united; or of a piece of crooked stick, with nothing resembling or serving the purposes of a coulter or mould-board. It is so extremely light, that a Hindu, a man of no muscular strength, can easily carry it on his shoulder to the field. In Bengal, and generally in H. Proper, it is drawn by a yoke of oxen guided by the ploughman himself. These, however, work only part of the day, as there are always two or three pair of oxen assigned to each plough. In some parts of Orissa the women are seen holding the plough, and the female children driving the oxen. Where the same person performs both operations, he generally holds the plough with one hand—for it has but one stilt or handle—and occasionally pulls the tails of the oxen with the other. A pair of oxen may be purchased for 6 or 8 rupees, a plough for five-tenths of a rupee, and a yoke for one-fourth. In H. Proper it is calculated that a man and two oxen can plough a begah of land several times in the course of the day; and in the S of India, that 12½ acres of watered land, and 25 acres of dry land, require 5 ploughs. Where it is necessary to plough the ground to a considerable depth, several ploughs follow one another; but even then, unless the soil is very loose and friable, they do not penetrate far, and the field remains full of dirt and rubbish. The second ploughing, where only three or four are given, is generally across, and the third in a diagonal direction. The harrow is, if possible, a more imperfect implement than the plough: it is simply a bough broken from the nearest tree. The roller is a ladder about 18 ft. in length, drawn by two bullocks, and guided by two men, who stand upon it to increase its weight. In most parts of H. there are two *huharies* or ploughing seasons, viz., after the setting in of the rains in June, and after they cease in October. The wages of a ploughman are 5 seers of the grain which is in cultivation, and 2 rupees, for each ploughing season. The wages of the other country-labourers are 5 seers of grain, and a 25th sheaf during harvest. The *hackery*, an ill-constructed and clumsy two-wheeled cart, is used by the ryots of Bengal for some purposes on their farms, where they have not an opportunity of water-carriage; but for heavy burdens to be carried to any considerable distance, oxen and bullocks are most commonly used. Mr. Chapman remarks: "Whatever improvements in culture may be devised, it is clear that they cannot be carried into effect without the aid of appropriate artisans. That improved implements are not without effect in India, may be gathered from the conduct of the cultivators in a district near Nassick, who having been persuaded, with much ado, to try a Scotch plough, were so impressed with its superiority that they painted it red, set it up in one of their villages, and worshipped it! The habits and performances of the workmen in the dock-yard of Bombay, as well as other facts, show clearly that the natives of India are capable of becoming clever and efficient artisans, but nothing can be more deplorable than the present capabilities of the generality of village workmen. As to supply of material, I found that at Ortur, a town of about 8,000 inhabitants, the six or eight smiths in the place must join their stocks of iron on the occurrence of a job wanting 8 or 10 lbs. of it; yet English iron is not dear there. In the same town I was credibly informed there are not half-a-dozen pairs of scissors. At Murr, a small market-town in a Ghaut district, when I wanted what I may term an iron yard-band, the smith had to send to Jooneer, 8 m. off, for the material; and here I attempted in vain to get done little jobs of the commonest kind. From inquiries made at Alleh, I found reason to conclude that not more iron is annually consumed in the cultivation of 100 acres of land in India than in that of a single acre in England. In those districts, as indeed I believe in all Western India, English tools are used; if a file or chisel be disabled, a new one is not to be had nearer than Poonah, 50 m. off. As to works for lifting water, grinding corn, &c., I do not believe that in all Western and Central India, except perhaps near Bombay, there is such a thing as a pump, a water-mill, or a wind-mill."

Manufactures.] Of all the various manufactures carried on in India, that of cotton claims our first notice, on account of its antiquity, of its being the staple and most common manufacture of the country, and of the variety of the fabrics which it pro-

duces. It is estimated that cotton-goods to the value of £20,000,000 a-year are manufactured in British India; and to the value of £20,000,000 per ann. in the tributary states. The perfection to which the natives are known, from the most remote times, to have carried the cotton manufacture, must be mainly attributed to the circumstance, that every distinct kind of cloth is the produce of a particular district, in which the mode of manufacturing it has been transmitted for centuries from father to son. The prov. of Bengal, and the E side of the Peninsula, are the principal seats of the cotton manufacture. The vicinity of Simoga, a town in the Mysore rajah's dominions, 122 m. NW of Seringapatam, is the limit of the manufacture of cotton to the westward, in this part of India; and, with the exception of a particular kind of chintz made at Punah, and painted with gold and silver, there are as fine cotton cloths made on the W side of the Peninsula. On the E side, the Madras investment of cotton piece-goods for the East India company was always provided from the district between Cape Comorin and Ganjam in the Northern circars, a distance of about 1,500 m., and principally in the Northern circars. In Bengal this manufacture, in almost all its branches, still flourishes. It also extends into the provs. of Oude, Allahabad, particularly the Benares district, Bahar, and Orissa. Coarse cotton cloth is manufactured in different parts of the prov. of Agra. In the centre of the Doab there is a very coarse and common article made, which is dyed red with cheap materials. The coarsest sort of blue handkerchiefs are manufactured near Calcutta. The cotton goods made in the more southern parts of India in general are not coarse, though there are goods of this description manufactured in the Northern circars, both to the N and S of the Godavery. There is also a manufacture of coarse cotton cloths at Arcot. Dacca, in the E quarter of Bengal, was long celebrated for the manufacture of the finest muslins. In this district there is or was grown a kind of cotton called *banga*, which, though not of a very superior quality, was necessary to form the stripes of such muslins; and this circumstance may have contributed to the perfection of the fabric. Before the fall of the imperial government, the delicate and beautiful fabrics of Dacca were held in such estimation, not only at the court of the emperor, but amongst all the higher orders of the nobility in India, as to render it a matter of difficulty to supply the demand for them. Plain muslins of an inferior quality, as well as flowered, striped, and checkered muslins, are still manufactured in the district of Dacca, and in the N parts of Benares. The manufacture of muslins in pieces, chiefly for turbans, is carried on to a great extent in the Cuttack district of Orissa. Dimities of various kinds and patterns, and cloths resembling diaper and damask linen, are made at Dacca, Patna, Taunda, and other places. Chintzes are manufactured principally in the district of Benares, and in the country around Patna and Calcutta; in H. Proper; and at Masulipatam in the S of India. Masulipatam and Madras were also celebrated for their palampores, the ground-work of which is formed of the plain long cloth chiefly wrought in the island of Nagur and its vicinity.

The manufacture of silk next claims our notice. Though the Romans procured their silk from China, and were obliged to depend upon the Persians for a supply of it, there is little doubt that, at that period, it was manufactured in H. In the Sanscrit there are names for the silk-worm and for manufactured silk; and, what is more decisive on this point, there appear to have been from the remotest times two castes of Hindus, whose respective employments were the feeding of silk-worms and the spinning of silk. In 1762, when the power of the East India company was pretty firmly established in H. Proper, they sent over some natives of Italy to introduce the Italian mode of spinning; but the first attempt to establish a silk manufacture, a little below Calcutta, did not succeed. In 1773, buildings for that purpose were erected at Junjipur, in Bengal, and in 1803, about 3,000 people were employed here. This is still a great silk station. At Cossimbazar, Mauldah, Bauleah, Commercolly, Radnagur, and Rungpur, all in the district of Raujeshy, silk goods are made. The raising of silk-worms is principally confined to a part of the district of Burdwan, and to the vicinity of the Bhagiratti and Great Ganges, from the fork of these rivers, for about 100 m. down their streams. The introduction of the silk-worm has not yet succeeded in the warmer districts. The mulberry-tree used for feeding the worms is the Oriental; the dryness of the soil, it is supposed, is prejudicial to the China mulberry. Wild silk-worms are common in the forests of Silhit, Assam, and the Deccan; and from them a kind of coarse silk, called *tisser*, is procured, which is far inferior in colour and lustre to the other silk. The most extensive and flourishing manufacture of wove silks is at Murshedabad and at Ahmedabad. Here are also made various kinds of taffetas, plain and flowered, brocades of silk and gold, and other sorts of silk goods both for home-consumption and exportation. The annual value of the brocades made for home-consumption at Ahmedabad is 40,000 rupees; of these exported, 300,000 r. In the district of Benares, tissues, brocades, and ornamented gauzes are manufactured; in the W and S parts of Bengal, plain gauzes, principally for home-consumption; and mixed goods of silk and cotton, at Mauldah, Boglipur, and in some parts of the district of Burdwan. Though the silk-worm has not been introduced into the Carnatic, and probably would not thrive there, yet in this prov. the silk-weavers make goods of a very strong fabric.

The other manufactures of H. are not of great extent or value, and may therefore be noticed in a more cursory manner. In all the colder parts of H., particularly in the elevated districts of the Mysore, the natives wear woollen cloths called *comelies*. These are worn as they come from the loom, and are of different lengths; some being 6 or 7 ft. long, by 4 or 5 ft. broad; others of a finer texture, are about 10 ft. long, by 6 or 7 ft. broad. Neither of the kinds are dyed, but are of the natural colour of the wool, which, in the fine ones, is almost always a good black; the price of the coarser kind is from 1s. 6d. to 2s., of the finer from 12s. to 15s. The Chitteldrug district of Mysore is celebrated for this manufacture. Flannels well woven, but fulled in a very imperfect manner, are manufactured at Patna. Carpeting of a very durable fabric is made in the Churrar district of Allahabad; and Ellore, the capital of one of the Northern Circars of the same name, is famous for carpets of a rich and beautiful texture.—The best coir cables are made at Anjengo and Cochin, of the fibres of the Laccadive cocoa nut.—Canvass is manufactured from cotton and from the sun hemp; the former in the neighbourhood of Chittagong, Patna, and some other places, and the latter at Calcutta. It is of the same length, breadth, and weight, as English canvass; and has a dross upon it which is removed by bleaching and washing. Pack thread is woven into sackcloth in many places, particularly in the N parts of Bengal, where it is used as clothing by the mountaineers. A coarse, but very strong sackcloth, is also made at Bangalore, in the Mysore, from the Indian hemp. The annual export of

gunnies, or coarse sacking, amounted in 1835–6 to 2½ lacs of rupees; it now exceeds 13 lacs in value. — Saddles, harness, military accoutrements, and other articles of leather, are manufactured by the natives in Bengal. Leather gloves are made at Madras, and shoes all over India. Hyderabad, the capital of Sind, is noted for its artificers who embroider on leather.—Brazen water-pots are manufactured at Bareilly in the prov. of Delhi. Articles of cutlery, and even brass instruments, are made in some parts of India in tolerable perfection. The swords made in the Deccan, and in the N part of India, are equal to the best swords made in any other part of the world. The armourers of Hyderabad, in Sind, are celebrated for the excellence of their workmanship.—At Muteodon, in the Mysore rajah's dominions, glass is manufactured which is used for making the rings which are worn by the Hindu women round their wrists. It is made of five colours, black, green, red, blue, and yellow: the black is in the most request, and bears the highest price. The natives obtain the soda used in this manufacture in the fields, where it forms, by a natural process, during the hot season. The same fields supply them with sand. The ring makers on the W side of India purchase the greater part of this glass. Vizagapatam is celebrated for its beautiful cabinet work, which is painted and inlaid with ivory and black wood with great elegance and art.

The manufacture of opium and indigo, have already been mentioned.—About forty years ago, the cochineal insect was introduced into India; and cochineal, though of an inferior kind, is now produced in different parts of India. The insect is found to thrive best on the indigenous opuntia, which is abundant in Bengal, and in most parts of India.—Tar is extracted from teakwood in most of the places where ships are built of it.—Rose-water is distilled in many parts. Gazipore, in the Benares district, has long been celebrated for it.—Paper is manufactured in some parts of Northern H. from the bark of a tree named *deah*. It is very strong, and capable of being woven, when gilt, into the texture of silks and satins.—Saltpetre is manufactured to a great extent in the provs. of Bengal and Bahar, particularly in the latter. The climate and soil are extremely favourable to its spontaneous production. It is sent to Europe in an impure state, but crystallized, put up in bags, each bag containing two bazar maunds, or about 164 lbs. The total export to England is from 8,000 to 10,000 tons per ann.—Salt is made from sea water along nearly the whole of the E coast, as far as the mouth of the Ganges, in great abundance. Tumlock and Hijeli, which lie to the SW of Calcutta, are the principal places where salt is manufactured for the Bengal presidency. On the W coast of India, salt is made in large quantities on the coast of the island of Salsette. The process is similar to that which is followed in Europe; but when salt of a superior quality is wished for, it is obtained "by fixing a jagged piece of stick in the water, when first let into the reservoirs, to which, as the water evaporates, saline particles adhere, to the weight of 3 or 4 ounces."

The mechanism of the Hindus is very rude and imperfect, and probably has been stationary for at least 2,000 years. The native rice-mill still consists of two round flat stones; in the lower one of which there is a hollow, into which the middle of the upper one is inserted. It is turned round by means of a wooden peg, and the flour comes out through a groove in the under stone. It is in fact the *quern* of Scotland. Two Indians with their hand corn-mill can grind only 60 lbs. of flour in a day. On several of the streams, however, in H. Proper, there are water-mills for grinding corn. The mill that is used to extract the oil from the cocoa nut is very simple in its construction, and, at the same time, answers its purpose extremely well. "The Indian carpenter knows no other tools than the plane, chisel, the wimbol, a hammer, and a kind of hatchet. The earth serves him for a shopboard, and his foot for a hold-fast; but they are a month in performing what our workmen will do in three days. The sawyer places his wood between two joists fixed in the ground; and, sitting carefully on a little bench, employs three days, with one saw, to make a plank which would take our people an hour's work. The blacksmith always carries his tools with him, his forge, and his little furnace; working wherever he is employed. He sets up his forge before the house of the person who calls him, and, with the dirt of the place makes a little wall, before which he places his hearth. Behind the wall are two leather bellows, which the apprentice keeps going, by alternately pressing the top. A stone serves for an anvil; and his whole apparatus consists of a pair of pincers, a hammer, a mallet, and a file. The productions of the goldsmith announce, in every shape, the want of tools. Like the Chinese, they have not as yet arrived at the art of polishing gold or silver, or to work the gold in different colours. The Indian goldsmith carries his workshop with him wherever he is sent for. His furnace is an earthen pot; an iron pipe serves him for a bellows; and a pair of pincers, a hammer, a file, and a small mallet, are all his tools. He makes his crucible on the spot, with clay mixed with charcoal and cow dung. About 1s. are the wages of the master and his servant for a whole day. The shoemaker is of the most despicable caste, and is also the poorest of all the artisans. He has no other tools than an awl and a knife. When a pair of shoes are wanted, the money must be advanced; and with this money he buys a sheepskin, which he prepares on the same day, and on the morrow brings the shoes." [*Sonnerat*]. In a recent paper on the raw products and manufactured articles of India, Dr. Royle makes the following interesting remarks: "India, vast in extent and diversified in surface, is remarkable as the cradle of one at least of the nations who earliest practised the arts and cultivated the sciences which characterize civilization, and from whence these travelled to the West, and perhaps also to the East. Its present inhabitants continue to venerate sciences which they know only by name, and to practise arts of which they know not the principles, and this with a skill not only remarkable for the early period at which it attained perfection, but also for the manner in which it has remained stationary for so many ages. This can be explained only by the fact that the son was unable to add to the manual dexterity of the father, and could not improve an art which he knew only as a routine process. But when commerce was in its infancy, or dealt only in the most precious commodities, these arts could not have been practised unless India had contained within itself all the raw materials which art could convert into useful articles or elegant ornaments. Without cotton the so-called 'webs of woven air' could have had no existence. Without numerous barks, woods, and flowers, dyeing could not have been practised, and calico-printing would probably not have been invented. If an *Indigofera* had not been indigenous, indigo would never have derived its name from India, nor have afforded us the proof, in the stripe of mummy-cloth, of the early commercial intercourse between its native country and Egypt. Neither would sugar have been arranged by the Greeks with honeys, nor the Indians described as those who '*bibunt tenera dulces ab arun-*

dine succos,' unless they had had the cane-like *Saccharum* as a plant of their country. Neither in Persia would the proverb of 'giving an Indian answer' have been considered equivalent to a cut with an Indian sword, unless the Hindus had possessed the ore which enabled them to manufacture their far-famed wootz steel; and gunpowder is likely to have been invented at an early age only in a country where 'villanous saltpetre' is abundant. Besides these, India possesses an immense number both of animal and of vegetable, as well as of mineral substances, well fitted for arts and manufactures of every kind; and the country has often been described as capable of producing within its own limits almost all the useful products of every other quarter of the globe. As India produced the raw material and manufactured it into a costly article, gold and silver have from the earliest times been required to purchase this combination of the gifts of nature with the creations of art; but mechanical invention has deprived the Hindus of many of the advantages of their position, and they have in a great measure lost the commerce which they had themselves created, especially as some of their products were subjected to discriminating duties, which amounted to a prohibition on import into this country. Hence their foreign commerce has not advanced, as might have been anticipated from the enjoyment in many parts of long-continued peace. But fashion, which here is as fickle as the wind, is in the East as steady as their monsoons, and has fortunately preserved some of their manufactures in their pristine excellence, and which, in any general collection of manufactures, would enable those of India still to hold a conspicuous place. For instance, though the muslins of Dacca may not now be produced of as fine a quality as formerly, those of Chunderee are still highly esteemed by the natives of rank and wealth. So the embroidered muslins of Dacca, the brocades of Benares, and the worked shawls of Delhi, will bear comparison with any other goods. The shawls of Cashmere still remain unrivalled. The workers in gold and in silver still produce chains of matchless beauty, and their filagree work displays that delicacy of hand for which the Hindus have so long been famous. The wootz steel, the various arms, the works in copper and brass, and in the different little known metallurgic compounds, the inlaid metals, and the endless variety of images, display many instances of ingenuity and skill."

Internal trade.] The internal trade of India is conducted by boats, land-carriers, travelling merchants, and at fairs. The boats which are used on the Ganges and its tributary streams are of various sizes and constructions; from Patna to Calcutta, where the navigation resembles that of the sea, both from the width of the river and the storms which frequently arise, it is necessary to employ large and strong boats, or rather ships of upwards of 100 tons. In the higher parts of the river, the boats are made either low and deep, or flat and *clinker built*. Between Calcutta and the sea, among the shallows, the boats are made without keel. Those which are used in the Indus are flat-bottomed, with square heads and sterns, low forward, high abaft, and drawing only a few inches water; oars are seldom employed, but they are either dragged by men or pushed along with poles; when the wind admits it, sails are used. The materials of which these boats are constructed are very few, simple, and cheap; and the boatmen scarcely receive any wages except what will purchase them a little salt, tobacco, and clothing; grain is supplied them for food. By the inland navigation in H. Proper, salt, grain, cotton, and manufactured articles, are interchanged. It is said that the whole number of boatmen employed on the rivers of Bengal and Bahar are nearly 300,000; most of these are also labourers in husbandry, or fishermen. See articles BENGAL, GANGES, INDUS.—Land-carriage is performed by oxen, buffaloes, and sometimes by horses; carriages are seldom used, there being no roads adapted for them. The owners of the cattle are generally the owners also of the merchandise they carry, as well as the drivers. One driver is allowed to four oxen. Their food is generally obtained without expense on the road-side; but where buffaloes are employed, it is necessary to give them grain. The articles of merchandise which are thus transported are grain, salt, cotton, sugar, tobacco, betel-nut, &c. In the Deccan there is a wandering tribe of carriers, called Lomballies or Burgarahs, who interchange the commodities of this part of H. for those of Bengal and the adjacent provs. There are also in the Mahratta countries and other parts of India, Vanjaries or itinerant grain-dealers,—a singular race of people. They travel in large parties, with their grain on bullocks, brought from a great distance; but they do not depend entirely on their profits as grain-dealers, nor on their returns of merchandise, for they occasionally become stationary, and apply themselves to husbandry. The Banians or travelling merchants resemble the chapmen in Britain; they come in great numbers from Gujerat to Bombay, selling muslins, cotton cloths, &c. They are chiefly Hindus, though some Mahommedans adopt the name and the profession. They are distinguished by a red turban, shaped in front like the horn of a rhinoceros. The banyans are generally rich, and carry on a stationary as well as an itinerant business. When travelling they are attended by coolies or porters, to carry their merchandise. Besides these there are the Borahs or petty chapmen, who travel about the country with a variety of small and cheap articles in their boxes. The principal carriers between India and Cabul are the Lohanis, a tribe located between Ghuzni eastward to the Indus. They import calicoes, muslins, chintzes, shawls, brocades, and spices.

Markets and fairs.] There are weekly markets over most part of H. Proper, but they are not common in other parts of India. At these there is a considerable interchange of commodities. The most celebrated fairs are those of Kulu, Hurdwar, and Nolucky-Hant. The fair of Kulu, in the prov. of Orissa, is attended by the traders from the inland parts of H., particularly those of Berar, and traders in salt and European commodities from the sea-coast. During the months of January, February, and March, the former arrange their caravans, and bring their merchandise, which consists chiefly of cotton, on bullocks to Kulu. Here they are met by the traders from the sea-coast. Factors are employed to transact the business among them, and they also supply them with huts, food, and other necessaries, during their abode. The commission of the factors is 1 per cent. Nearly all the business is carried on by factors. The fair breaks up about a month before the commencement of the rainy season. The traders then depart, but the factors are stationary.—The common fair at Hurdwar, the place where the Ganges enters H., is held annually; but every 12 years there is a fair here at which are assembled a much greater number of people than at any other fair in the world. Many of these, indeed, perhaps the largest portion of them, visit Hurdwar from motives of superstition, and as a place of pilgrimage; but great numbers are also led hither from commercial motives. At the annual fairs it is computed that between 200,000 and 300,000 people are collected. At the great fair every twelfth year, there are often 1,000,000. In April 1809, it is supposed

there were assembled at Hurdwar, from every part of H., from the confines of China to those of Persia, Hindus of every description, amounting to 2,000,000 of persons. An immense variety of articles are sold at this fair. Cabul, Candahar, Multan, and the Punjab, supply horses, mules, camels, tobacco, antimony, assafœtida, and dried fruits of all kinds. Cashmere, and the country of the Sikhs, send shawls and other goods of that description. Spotted turbans, looking-glasses, toys, with various manufactures in brass and ivory, are supplied from Jeypur; shields from Rohilcund, Lucknow and Silhit; bows and arrows from Multan and the Doab; rock-salt from Lahore; baftas and piece goods from the Punjab; and cotton and woollen goods, cocoa-nuts, &c., from the lower provs. The most frequented place in the fair is the bed of the river,—for at this season of the year it is almost dry. The bargains are conducted and settled without a single word being spoken. A cloth being thrown over the hands of the parties, they communicate with each other by touching the different joints of the fingers, and thus effectually prevent those near them from gaining any information. Before the British gained possession of this part of H., heavy duties were levied on the cattle brought to this fair; but these are now taken off; neither are there any of those scenes of tumult and bloodshed, which formerly always disgraced it. The fair at Nolucky-Hant, in the pergunnah of Bowal, in the Dacca district of Bengal, is held annually for the space of nine days. Here the weavers assemble to purchase their annual stock of trade; and it is computed that the business carried on there frequently amounts in value to three lacs of rupees. There is a great deal of carrying trade between the Deccan and Bengal, and generally between the countries below and above the Ghauts. The manner in which the internal commerce appears to have been originally carried on, and which, in a great measure, still continues, is at *hauts*, or open markets. These hauts are held on certain days only, and are resorted to by petty venders and traders, who wish to buy and sell by retail. They are usually established in open plains, where a flag is erected, to the vicinity of which the farmer, the mechanic, and the fisherman, bring their various commodities. The ground is divided into several plots, or what is in Scotland called 'stands,' and each plot is occupied by one or more venders. The business is conducted in a manner similar to our fairs, only a police-officer attends to preserve the peace; formerly duties or customs were levied by the proprietors of the lands on which these fairs were held; but these are now pretty generally abolished.

Roads.] The Grand Trunk road from Calcutta, the main artery of communication throughout Bengal and H., extends 770 m., with a general breadth of 30 ft., increased in some places to 40 ft. The road from Puri to Bissenpore, which connects Orissa with Bengal, and which is commonly known as the Jugurmath-road, is held to be of the next importance. A road from Sylhet to Gowhatti, the capital of Assam, across the Cassia hills, is in active preparation. The Deccan road from Mirzapore to Jubbulpore, a distance of 239 m., commenced in 1824, has been completed lately. Another road, small in point of expense, but of great importance, has been made from the E frontier of Bengal, through Cachar, and across the Munipore hills to the limits of the Burmese empire. Besides these roads, which are stated to be the most prominent, a variety of district roads have added greatly to the local convenience of the people, and have proportionately occupied attention. A toll on a road is unknown in India. Mr. Chapman, in his recent pamphlet on the Cotton and Commerce of India, undertakes to demonstrate, by well-arranged facts and tables, that the export of cotton from India to England has risen exactly as the difficulties or expense of its transmission have been diminished, and also that costs and impediments still remain which are sufficient to account for the smallness of the quantity we continue to receive. He next shows that what holds good of India holds good also everywhere else. Those countries whose populations approach most nearly in their characteristics to those of India, depend for commerce upon their relative condition with regard to facilities of transit to the interior. Mexico, Central America, and Ecuador present striking instances of the evils resulting from their deficiency. The way in which the trade of tropical countries, whose inhabitants in the mass are certainly not superior in industry or in their desire for European manufactures to the natives of India, has increased with every extension of means of communication, he argues affords a lesson of the most encouraging character. While it is pointed out that each individual in South America, including Spaniards, Portuguese, mixed classes, Indians, and slaves, takes from us eight times as much in manufactures as each inhabitant of India, it is contended that this disparity is removeable, and that roads and railways might, in an incredibly short time, beget an exchange of produce for manufactures which, as a rise of the Indian demand to the level of the South American, would augment our exports to that country from £6,000,000 to £48,000,000, and would only be limited by our own capabilities of meeting it.

Railways.] India presents peculiar and general fitness for a connected system of railroads. At present, according to Major Kennedy, it costs 22 days' hard work to reach Umballah from Calcutta, a distance of 1,000 m., a good railway train at a moderate speed would accomplish the distance in 40 hours, and save £10 a-ton on heavy goods. The time that heavy goods require to make the same journey by the present conveyances of the country is from two to three months, at a cost of £12 to £15 per ton. Whilst, if a train existed, they would be conveyed this distance in 48 hours at a cost of £4 to £5 per ton. The cost to a traveller making this journey, by the present covered conveyances, in 22 days, cannot be less than £50 to £70. By the train it ought to be done within 40 hours, for less than £6 cost. It is difficult to estimate the increase of mercantile and industrial activity in all its ramifications which must follow the establishment of a good railway system in India. The following great railways are projected in our Indian empire:—The East Indian railway, which is intended to proceed from a station on the western bank of the Hugli, opposite the town of Calcutta, by Burdwan to Mirzapore, with provisions for the collection of the intermediate traffic, and such future extension as circumstances may render expedient.—The Great Western railway of Bengal, which is to proceed from Calcutta along the E bank of the Hugli, which river it will cross at Chogda, 30 m. above Calcutta, and thence pass by Burdwan, Ranigunge, Serampore, and Behar, to Patna and Dinapur. A branch-extension of the first part of the line from Calcutta to Chogda is projected from the latter place along the E branch of the Hugli, by Kishungur and Murshedabad, to the junction of the Hugli with the Ganges, a distance from Chogda of about 120 m. —A line from Madras to Wallajanuggur, about 83 m. from Madras, and the emporium of traffic for the surrounding districts. This line admits of ready extension about the S parts of the Peninsula.—From Bombay, the great emporium of trade and shipping on the W coast of India, the Great Indian Peninsular railway company have projected a line to proceed across the peninsula to Coringa, situate at the mouth of the Godaveri, and offering the most commodious harbour on the E coast. From this main line convenient branches might extend, so as to collect the great staple traffic coming from Central India on the N, and the districts about Hyderabad on the S. At present this line seems only destined to lead from Bombay to Callian, and thence perhaps to the Malsei ghaut. Colonel Grant strenuously urges its being pushed forward to Punah, the cap. of the Deccan, and in the direct line to Ahmednuggur, the S. Mahratta country, the Madras presidency, the Nizam's dominions, and the Calcutta dawk line. See PUNAH.

Commerce.] The commerce of India may be considered under two grand heads: viz., that which is carried on with Europe and America; and the coasting-trade, or that which is carried on from one part of India to another; and from India to the ports of the Indian islands, China, the Arabian and Persian gulfs, and the E coast of Africa. The Indian commerce with Europe is almost entirely carried on by Great Britain; and, till within these few years, it exclusively consisted of the commerce of the East India company. That which was called 'the privilege trade,' was established by an act of parliament in 1793, by which the Company were empowered to grant licences to individuals to trade to India; and 'the private trade' was that enjoyed, under certain stringent regulations, by the commanders and officers of the Company's ships. Since the trade to India was thrown open, a large capital and amount of tonnage have been embarked in it by individuals.

History of the Company's charter.] The first association for prosecuting trade between England and India was formed in London in 1599. Its capital was divided into 101 shares, and amounted to £30,000. On the 31st of December, in the following year, this association procured a charter to last for fifteen years, and constituting the adventurers a body politic and corporate, by the name of 'The Governor and Company of Merchants of London trading to the East Indies.' In the prosecution of their object, five ships were provided, which sailed from Torbay on the

2d of May, 1601, with cargoes of bullion and merchandise. The result of this expedition was encouraging; and eight other voyages were performed between 1603 and 1613. The clear profits in the trade varied in the other seasons from 100 to 200 per cent. upon the capital employed.—In 1609, the Company obtained a renewal of its charter for an indefinite period, subject, however, to its being dissolved by government upon three years' notice being given. About two years after this time, permission was granted to the Company to establish factories at Surat, Ahmedabad, Cambaya, and Goga, upon its agreeing to pay a duty of 3½ per cent. upon all shipments of merchandise. The system of subscriptions, in order to provide the funds needed for the prosecution of each voyage, was discontinued in 1612, when the association assumed the character of a joint-stock company. Capital was now raised amounting to £429,000, which was embarked in four separate adventures or voyages. The advantages derived (87½ per cent.) were sufficiently encouraging to produce a second set of subscriptions; and, in the year 1617–18, a new fund was raised to the amount of £1,600,000.—A third joint-stock company was created in 1632, the subscriptions to which amounted to £420,700. In 1636, a license to trade with India was granted by the king to a body of adventurers wholly distinct from the existing corporation, of whose rights this was deemed to be an invasion. Both associations seem, however, to have become aware of the disadvantages resulting from competition; for in 1650 their interests were joined, and new subscriptions obtained under the denomination of The United Joint stock.

The first of those peculiar privileges to which must be ascribed the growth of the Company's political power in India, was obtained in 1652. Upon payment of a very inconsiderable sum, it obtained from the native government of Bengal an unlimited right of trading throughout the province, without being subjected to the payment of any duties. A new charter was obtained by the Company on the 3d of April, 1661, confirming its former privileges, and giving authority to make peace or war with any prince or people, "not being Christians," as well as to seize all unlicensed persons found within the limits to which its trade extended, and to send them to England. In 1668, the island of Bombay, which had been ceded by Portugal to Charles II., as part of the marriage-portion of the Princess Catherine. was granted to the Company "in free and common soccage, as of the manor of East Greenwich, at an annual rent of £10 in gold, on the 30th of September in each year." In 1693, the king granted a new charter to the Company, under which it was required to augment its capital stock, then £756,000, to £1,500,000, and to export in every year British produce to the value of £100,000; but the power of the crown to grant such exclusive privileges was questioned by the commons, who passed a resolution declaring, "that it is the right of all Englishmen to trade to the East Indies, or any part of the world, unless prohibited by act of parliament." In this situation, the affairs of the Company continued till 1698, when, to obtain a charter conferring an exclusive privilege of trading to India, £2,000,000 at 8 per cent. was offered to government, by a number of subscribers, unconnected with the old company, which, to maintain its privileges, had previously offered to government £700,000 at 4 per cent. As was to be expected, the administration accepted of the larger sum, though at the higher interest; and a new company was erected, but the old company was not abolished. In 1702, by what was called an indenture tripartite, of which Queen Anne formed the third party, the two companies were in some measure united; and in 1708, they were, by act of parliament, formed into one company, under the denomination of the United Company of Merchants trading to the East Indies, and secured in the exclusive possession of the trade to the East, till the expiration of three years' notice after the 25th of March, 1726. With the issue of the new charter of the Company, its powers were distributed. All proprietors possessed of £500 stock, and assembled in general court, were invested with the supreme legislative authority; and all laws and regulations, all declarations of dividends, all grants of money, it was declared, should be made by them. The executive power was vested in 24 directors, chosen by the general court from among persons possessed of £2,000 stock. It was their duty to act under the ordinances of the proprietors, and to manage the business of routine. They had a chairman and a deputy chairman to preside in the courts. In India the Company's affairs at this time, and for a long period after, were directed by three councils, at Bombay, Madras, and Calcutta, which were generally composed of the senior servants of the Company. These officials, however, were not debarred from holding subordinate situations at the same time, and consequently uniformly distributed among themselves the most lucrative situations in their own gift!—In 1732, the Company's charter was renewed; and in 1744, when government was pressed for money, they made a proposal to lend the state £1,000,000, at 3 per cent., provided the period of their exclusive privileges were prolonged to the expiration of three years' notice from March, 1780. The offer was accepted, and the Company borrowed, on their own bonds, the sum which they lent to government. By a law passed in 1753, the qualification for a vote in the court of proprietors was raised from £500 to £1,000 stock. In 1793, the act 33° Geo. III. c. 52, was passed, by which the possession of the British territories in India, together with the right of exclusive trading thither, were, under certain limitations, continued to the Company for the further term of twenty years.

The first breach in the monopoly of the East Indian trade was made, in 1813, when the Company's charter was renewed. On this occasion the trade was thrown open to the enterprise of individuals, under certain restrictions and regulations, as specified at large in the act of the 53d Geo. III. cap. 155. By this act it was declared that the territorial acquisitions in India, with the late acquisitions on the continent of Asia, or in any island N of the equator, were to remain under the government of the East India Company for 20 years, from the 10th of April, 1814. The Company had also the exclusive monopoly for the like term of years, of the trade to and from China. But private traders, subjects of his Majesty, in the United Kingdom, were authorised to export goods to any port or place within the limits of the Company's charter, provided the return cargoes were sent to such ports only in Great Britain and Ireland as should be specified by an order of his Majesty in council. The East India directors were required to keep separate and distinct accounts of their territorial, political, and commercial affairs, which had been heretofore so amalgamated as to render it impossible, with any degree of accuracy, to ascertain the profit or loss on their trade. In the same year, the acts of the 54th of Geo. III. cap. 34, 35, and 36, made further regulations with respect to the East India trade. By the first act, British subjects were authorised to trade between the United Kingdom and the limits of the Company's charter, and to any intermediate port or place situate in N. or S. America —British colonies in America excepted—either directly or circuitously, provided they did not trade in tea, excepting also the dominions of the emperor of China. The second act allowed trade to be carried on with India. in ships not British built, until the 1st of January, 1815. The third act made various regulations with respect to duties, drawbacks, manifests, &c. These four acts of parliament regulated the whole of the trade in India, under the new system which had been established.

In 1833, the constitution of the Company was again restored and remodelled. The following is an analysis of the principal clauses of the act 3 and 4 William IV., c. 85, under which its concerns are at present administered:—

Sec. 1.—The government of the British territories in India is continued in the hands of the Company until April, 1854. The real and personal property of the Company is held in trust for the Crown, for the service of India.
2.—The privileges and powers granted in 1813, and all other enactments concerning the Company, not repugnant to this new act, are to continue in force until April, 1854.
3.—From 22d April, 1834, the China and tea trade of the Company to cease.
4.—The Company to close its commercial concerns and to sell all its property not required for purposes of government.
9.—The debts and liabilities of the Company to be charged on the revenues of India.
43.—The governor-general in council is empowered to legislate for India and for all persons, whether British or native, foreigners or others.
44.—If the laws thus made by the governor-general are disallowed by the authorities in England, they shall be annulled by the governor-general.
81.—Any natural-born subject of England may proceed by sea to any part or place within the limit of the Company's charter having a custom-house establishment, and may reside thereat, or pass through to other parts of the Company's territories to reside thereat.
88.—Slavery to be immediately mitigated, and abolished as soon as possible.

Up to the 25th of March, 1848, India laboured under a double system of restriction. Whilst the Company retained its exclusive commercial character, all ships, except its own, were virtually prohibited from any trade with India. In 1815, the Americans were, by special treaty with our government, allowed to trade with the ports of Calcutta and Bombay. At a subsequent period, the like liberty was granted to British ships. In 1819 the privilege was ceded to Portugal, and at later dates to other countries, as the Indian government continued to charge double duties on all imports and exports in foreign bottoms, but the privilege was practically of little value, and was, in fact, used almost alone by the Americans and Portuguese. And even so lately as 1823, all native ships and English ships, except their own, were, in common with all foreign ships, obliged by the Company to pay double duties on exports, whether to foreign ports in India, or to England or any foreign country. The prohibition was some few years afterwards repealed, so far as concerned British and native ships, but the double tax on imports and exports in foreign vessels was continued until an act passed by the present governor-general in council, on the 4th of March, 1848, opened, so far as the Company were concerned, the trade with India on equal terms to the ships of all nations. This act came into force on the 25th of March in the same year. But it in no way lessened the restrictions imposed by our navigation laws on the trade with India. It could still be carried on direct only in our own ships; and the 17th clause of the 8° and 9° Victoria, cap. 88, enacting that the native sailors of British India were not British seamen, still made it practically impossible for ships so manned to trade with England. In our ports Lascars were held to be, though British subjects, foreign sailors, and the ship must take another crew on board before she could clear outwards from our ports or from any port in our colonies; and as native Indian ships were British ships, and Lascars foreign sailors, our act shut these ves-

sels out from all participation in foreign trade, so that the only beyond-coast trade in which they had any part was in carrying cotton to China and rice to Mauritius, from both which places they had to return almost entirely in ballast. Lord Dalhousie's act prepared the way for India to reap the full benefit of the abolition of our navigation acts.

Progress of Commerce.] The following tables will illustrate the nature and progress of the commerce betwixt Great Britain and India.—The following is a statement of the amount in value of the principal articles exported from India, from 1793–4 to 1809–10 inclusive, consisting of the company's, the private and privilege trade, and the neutral and prize goods:

	Company's goods.	Private goods.	Neutral goods.
Bengal piece goods,	£14,490,378	6,980,505	108,921
Coast and Surat ditto,	11,563,923		
Saltpetre, . .	3,060,956	320,777	18,469
Indigo, sugar, drugs, &c.,	5,031,516	20,191,183	1,484,235
Silk, . .	7,014,986	1,211,081	6,455
Pepper, . .	3,322,835	320,777	18,469

The commerce of India, in its then two great divisions of the trade to and from Europe and America, and the coasting-trade, gave the following general return of imports and exports between 1802–3 and 1810–11:

I. IMPORTS INTO INDIA.

	Merchandise.	Bullion.	Total.
From London, on account the East India company,	£8,024,793	£5,551,934	£13,576,727
Ditto on account of commanders and officers,	3,895,000	225,062	4,120,062
Ditto on account of private merchants, .	3,584,154	1,425,274	5,009,428
Total from London,	15,503,947	7,202,270	22,706,217
From America, . .	851,306	6,595,400	7,446,706
From Foreign Europe, .	1,327,504	2,626,842	3,954,346
From Foreign Europe and America, .	2,178,810	9,222,242	11,401,052
Total, . .	17,682,757	16,424,512	34,107,269

II. EXPORTS FROM INDIA.

	Merchandise.	Bullion.	Total.
To London, on account of the East India company,	£12,320,642	£150	£12,320,792
Ditto on account of the commanders and officers,	2,990,867		2,990,867
Ditto on account of private merchants, .	8,881,465	7,756	8,889,221
Total to London,	24,192,974	7,906	24,200,880
To America, . .	7,091,384	22,881	7,114,265
To Foreign Europe, .	3,107,750	787	3,108,537
To Foreign Europe and America,	10,199,134	23,668	10,222,802

III. COASTING TRADE OF BRITISH INDIA, INCLUDING THE COUNTRY TRADE TO CHINA.

The following table shows the value of goods and treasure entered inwards, and cleared outwards, at the custom-houses of the several ports, on an average of six years, commencing in 1802–3, and ending in 1806–7, from and to the districts and places named in the margin:

V. EXPORTS OF BRITISH AND IRISH PRODUCE TO INDIA.

1. The declared value of British and Irish produce and manufactures exported from the United Kingdom to the East India company's territories and Ceylon, in each year from 1827 to 1850, was as under:

1827	£3,662,012	1833	£3,495,301	1839	£4,748,607	1845	£6,703,778
1828	4,256,582	1834	2,578,569	1840	6,023,192	1846	6,434,456
1829	3,059,218	1835	3,192,692	1841	5,595,000	1847	5,470,105
1830	3,895,530	1836	4,285,829	1842	5,169,888	1848	5,077,247
1831	3,377,412	1837	3,612,975	1843	6,404,519	1849	6,803,274
1832	3,514,779	1838	3,876,196	1844	7,695,666	1850	

2. The quantities and declared value of the principal articles of export, consisting of British manufactured goods, from the United Kingdom to the British territories in Continental India and the contiguous islands, in 1846 and 1849, were as follows:

	1846.		1849.	
	Quantity.	Value.	Quantity.	Value.
I. *Cottons.*				
White or plain cottons,	206,457,987 yds.	£2,627,098	258,486,822 yds.	£2,787,907
Printed or dyed cottons,	25,236,452	608,615	37,457,175	649,948
Hosiery, lace, and small wares,		14,428		64,036
Twist and yarn,	24,193,923 lbs.	1,087,744	22,193,700 lbs.	874,947
II. *Woollens.*				
Woollen yarn,	1,465 lbs.		3,467 lbs.	
Cloths of all sorts,	25,778 pieces.		24,362 pieces.	
Woollen or worsted stuffs,	27,676		36,901	
Flannel,	34,263 yds.		113,742 yds.	
Blanketing,	8,382	237,946	36,429	225,815
Carpets,	11,542		5,380	
Woollens mixed with cotton,	84,720		293,465	
Hosiery,	522 doz. prs.		1,975 doz. prs.	
Sundries,		6,491		12,518
III. *Linens.*				
Linen by yard,	1,205,968 yds.	44,921	1,521,472 yds.	58,274
Thread and tapes,		1,366		1,393
Yarn,	6,720 lbs.	288	11,656 lbs.	964
IV. *Metals.*				
British copper,	78,980 cwt.	377,500	6,481 tons.	374,549
Pig iron,			1,039	
Bar iron,			21,276	
Bolt and rod iron,			4,970	
Cast iron,			183	
Iron wire,			51	
Wrought iron, anchors, &c.,		161,039	537	313,376
Hoops,			4,340	
Nails,			304	
All other sorts,			6,812	
Unwrought steel,			74	
Hardware and cutlery,	19,810 cwt.	108,886	19,553 cwt.	107,337
Machinery and mill work,		116,771		15,507
Lead ore,			12 tons.	
Pig and rolled lead,			2,684	
Shot,		14,139	433	52,902
Red lead,			709	
White lead,			262	
Tin and pewter,		6,341		20,309
Zinc or spelter,			88	
V. *Sundries.*				
Apparel and haberdashery,		88,868		126,327
Arms and ammunition,		222,397		163,920
Beer and ale,		110,922		111,151
Printed books,		28,491		133,241
Coals and culm,		39,664	81,866 tons.	43,017
Earthenware,		30,157		31,282
Glass,		58,894	45,257 cwt.	48,461
Leather and saddlery,		48,141		35,286
Plate and plated ware,		29,969		29,222
Salt,	290.334 bushels.	4,997	1,195,935 bushels.	17,741
Stationery,		66,326		86,030

Indian shipping.] The merchant vessels belonging to Bombay in 1848 were 69 = 34,354 tons, and manned by 4,134 men; to Calcutta, 106 = 37,222 tons, and manned by 2,888 men; to Madras, 8 = 2,645 tons, and manned by 236 men; to Coringa, 23 = 4,338 tons, and manned by 250 men.

British shipping.] From the comparative statements of British shipping entered inwards and cleared outwards from and to places within the limits of the East India company's charter, for the years 1843 and 1844, it appears that the number of vessels entered inwards at the port of London during 1844 was less than the number that entered during 1843 to the extent of 4 vessels, with an increase of 1,688 tonnage; the figures for the respective periods being 542 vessels and 222,810 tonnage; and 538 vessels and 221,122 tonnage. In 1849, the number of vessels was 594 = 281,768 tons; and in 1850, 597 = 288,849 tons. The entries at Liverpool in 1843 were 162 vessels = 73,170 tons; in 1844, 210 vessels = 90,496 tons. In 1849, their number was 199 = 95,516 tons; and in 1850, 248 = 123,843 tons. The returns for Bristol and Hull, for the former period, and for the Clyde and other Scotch ports, for both periods, show an increase. The increase in the case of Bristol and Hull between 1843 and 1844, was 6 vessels = 1,944 tons; and in that of the Clyde and the other Scotch ports, 5 vessels = 2,454 tons. In 1849, the Clyde and Scottish ports received 46 vessels = 17,731 tons; and in 1850, 59 = 21,640 tons. But Bristol and Hull, which received 29 vessels = 11,464 tons in 1849, received only 22 vessels = 8,461 tons in 1850. A general review of the entries inwards gives a total increase of 45 vessels and 15,128 tons in favour of 1844 against 1843; the arrivals in the one year being 805 vessels with 331,605 tons, and in the other 760 vessels with 316,477 tons. The gross increase between 1849 and 1850 was 58 vessels = 36,314 tons; viz., in 1849, 868 vessels = 406,479 tons; in 1850, 962 vessels = 442,793 tons. The clearances outwards in all respects showed a large increase for 1844. There were despatched from the port of London during that year, 449 vessels of 186,917 tons, against 395 vessels of 162,628 tons in 1843; or an increase of 54 vessels and 24,289 tons. In 1849, the clearances outwards were 580 vessels = 276,718 tons; and in 1850, 584 vessels = 291,741 tons. From Liverpool, 320 vessels of 119,340 tons went out in 1844; while in the previous year only 255 vessels = 99,960 tons left; thus establishing an increase of 65 vessels and 19,380 tons. In 1849, 303 vessels = 149,224 tons cleared outwards; and in 1850, 331 = 167,937 tons. Bristol and Hull despatched 13 vessels more, with an increase of 3,755 tons in 1844 than 1843; but show a decrease in the clearances of 1849 and 1850, of from 18 vessels = 7,551 tons in 1849, to 13 vessels = 6,148 tons in 1850. The Clyde and other Scotch ports sent out in 1844, 7 vessels and 1,580 tons beyond the number of 1843; and in 1850, 18 vessels = 8,106 tons beyond that of 1849: viz., in 1849, 227 vessels = 88,563 tons; in 1850, 245 vessels = 96,669 tons. A review of clearances outward gives a total increase of 139 vessels = 49,004 tons between 1843 and 1844; the gross number for 1844 being 965 vessels = 373,915 tons; and for 1843, 826 vessels = 324,911 tons. In 1849, the total clearances outward were 1,128 vessels = 522,056 tons; in 1850, 1,173 vessels = 562,495 tons.

The following general remarks on the trade betwixt Britain and India, are from an able pamphlet entitled *India, Great Britain, and Russia:* "England carries on with India a lucrative and increasing commerce. That commerce, like most of the elements of improvement in India, is yet but in its infancy. The next generation will see it vastly extended; and that which succeeds will behold it still enlarging itself, but still susceptible of further increase. The wide-spread and fertile provinces of India are capable of producing, in almost boundless quantities, articles which are of prime necessity to the manufacturing power of England; and that power can supply to the natives of India commodities which are of prime necessity to them, on better terms than they can procure them at home. The cotton of India may be imported into this country, manufactured into cloth, then returned to the place from which the raw material was obtained, and sold at a less price than home-manufactured goods, yet yielding a profit at every step of the transaction. Here, then, is a source of prosperity to the agricultural industry of India and the manufacturing industry of England. From the nature of the climate and the established habits of the people, cotton piece-goods will continue to furnish the clothing of the mass of the people of India, as they have hitherto done. England can produce these goods at a cheaper rate than any country in the world. But to enable England to keep employed her untiring and almost unlimited machinery, a constant and steady supply of the material for its operation must be found. India can afford this. It is true that at present but a small part of the supply is derived from that quarter; but it is increasing; and in the event of any sudden suspension of supply from other countries, how greatly would it increase, and how incalculable would be the advantage of being able to turn to the East as a resource against disappointment in the West! Such disappointment is by no means beyond the limits of possibility. We have been at war with America—we may again be in that state, however anxious to avoid it. What would be the condition of Lancashire and the south-west of Scotland if the supply of cotton were interrupted? What would be the condition of our general commerce if one of our most important articles of export could no longer be furnished? Is it not wise, then, to guard against circumstances which may arise, in despite of all that sagacity can do to foresee, or prudence to avert them. A sufficient and certain supply of cotton being essential, not merely to the prosperity but to the very existence of our principal manufacture, it is not unnatural to place it foremost; but India can supply many other articles for which a steady and increasing demand exists in this country. We may select silk for an illustration. The silk manufacture of England has greatly increased, and will probably continue to increase for a long period. From India the manufacturer may depend upon an almost inexhaustible supply of this article, the quality of which will improve in proportion to the encouragement which the grower receives. Sugar is a commodity which habit has rendered a necessary of life. The freight of so bulky an article from such a distance is certainly a serious drawback upon its general consumption here; but if a supply from the colonies, which have been accustomed to furnish it, should cease or be seriously diminished, the power of resorting at once to another market would prevent the occurrence of any great inconvenience to the consumer. In these instances, and in many others which might be quoted, India has the power of ministering to our wants. In return for her commodities, we have the means of clothing her myriad population in the production of our mills and looms. The quantity of British goods at present consumed by the people of India is enormous, although the consumption has been greatly checked from two causes,—the poverty of a great portion of the people, and the difficulty of finding returns. These causes will disappear as the march of commercial enterprise proceeds. The poverty of

the people will be removed by the increase of employment, and the intelligence that will be diffused among them will tend to the improvement of their staple articles of silk and cotton, so as to enable them to compete successfully in the market with similar productions from other countries. The fertile plains of India will afford employment to the hundreds of thousands who depend for subsistence on the prosperity of the manufacturing establishments of Great Britain, and those establishments in return will contribute to the comfort and well-being of the people of India, while enriching the coffers of the British capitalist, and creating for the British workman fresh sources of demand for his labour and his skill. India wants capital,—England has superabundant capital seeking employment. A portion of that capital will certainly find its way to improve the cultivation of India, now that the country is open to European enterprise, and the prospect of return is so fair and promising."

Monies.] In general all the transactions in India are made in cowries, rupees, pagodas, or Spanish dollars:

Money used in Bengal as common currency.

4 cowries = 1 gunda,
20 gundas = 1 pon,
23 pons = 1 Company's rupee = 1s. 10½d.
A lack of rupees is 100,000.

The value of a Bombay rupee is 2s. 3d.; of a dollar, 5s.; of a Chinese tale, 6s. 8d; and of a pagoda, 8s. The Sicca rupee is rated at exactly 2s., or the 10th part of a pound sterling; so that the conversion of Sicca rupees into pounds sterling is effected by striking off the right hand figure.

Weights and measures.] There is no uniformity in weights and measures in British India; they not only differ in different markets, but frequently in the same market; there are even different weights for the same article,—rice being often bought by one weight and sold by another. There is no denomination of weight greater than a *maund*, which is divided into 40 *seers*, but this denomination likewise differs;

A factory-maund being .	74 lbs. 10 oz.
A factory-seer, . .	1 lb. 13 oz.
A bazaar-maund, . .	82 lbs. 2 oz.

Liquids are sold by the maund.—a measure supposed to contain a quantity equal in weight to the solid, but one also extremely defective.

Population.] We have already stated, that any estimate of the immense population of India, must be a mere approximation; and have given the elements of one approximative estimate by which it is reckoned at 134,000,000. Mr. Macculloch estimated the pop. of H., in 1840, at 131,751,509. Mr. M. Martin, about the same period, estimated the pop. of British India at 100,000,000; and that of the protected and allied states at the same number. Berghaus, in his *Grundriss der Geographie*, published in 1843, estimates the total pop. of the Indo-British empire at 170,779,000; of which that of the protected states formed 58,479,000. In the closing paragraphs of this article will be found another estimate of the pop. of India.

Hindus.] The Hindus still form the most numerous tribe in this country. Prichard classifies them among the Arian race. Aryavarta, the holy land of the Bramins, and the ancient abode of the Hindus, who had a national existence here five-and-twenty centuries before the Christian era, was the country lying between the Himalaya and the Vindhya mountains; and from this region they appear gradually to have spread over India. The aboriginal mountaineers of the Himalaya were a different race. The features and persons of the Hindus mark them out as a peculiar race. Their hair is long, deep black, and by no means coarse. Their nose and lips resemble those of the European. Their eye-brows are full, especially in the men. The eye itself discovers a tinge of yellow in the white of it, while the iris is black; but it possesses little animation or intelligence. The form of the face is oval. In the northern provs. the men are strong and muscular. To the S of Lahore they are generally delicate, and comparatively weak in the structure of their frames: even these, however, are what is called clean made, and can undergo great fatigue. In the N of India their stature approaches that which is common in the middle and S of Europe; in the S it diminishes sensibly, and in some parts it is very low. The Banians of Gujerat are reckoned the handsomest people in H.; some of the lowest castes, especially those whose business it is to remove all kinds of filth, and to bury and burn the dead, are deemed the most ugly. The female Hindus of the higher caste are distinguished by the polish and softness of their skins, and by their fine long hair, black eyes, extended ears, and straight delicate persons. Those of the inferior castes, however, are generally of small stature, and by no means handsome. "In spite of the disadvantages attendant upon the colour of the skin," says a writer in the *Asiatic Journal*, "perhaps no part of the world can present more perfect specimens of feminine beauty than are to be found in H. Travellers are struck with admiration at the appearance of many of the women filling their water-pots at the ghauts and wells, or going about the towns and villages in pursuit of their daily avocations. Their fine erect forms, set off by the graceful drapery wound in so picturesque a manner around them, are highly attractive, even when the veil casts its shroud over the face, leaving 'half an eye to do its worst of witchery.' The custom of carrying light burdens upon the head from childhood gives great breadth to the chest, uprightness to the figure, and freedom to the movements; and the unfrequent use of shoes, or the substitution of an easy slipper for the tight ligatures worn in Europe, imparts a beauty which few save Oriental females possess—that of a perfect foot. Though seldom much below the middle height, and occasionally tall, all the native females are delicately framed; their hands and feet are exquisite, and the latter, when not encumbered by ornaments, resemble those carved by the chisel of a Grecian sculptor. The beauty of feature, though not quite is almost as common as that of figure; all have the splendid, dark, gazelle-like eyes, which form the characteristic mark of Orientals. In the whole pop., the general expression is softness; excepting when inflamed by rage, very few are fierce, and there is an indescribable charm, a fascination, about their eyes, which in many instances is quite irresistible. The form of the face is usually very fine, boasting that beautiful curve, from the ear to the chin, which is always given to statues. Strangers in India have few opportunities of judging of the beauty of the women, except from specimens found amongst the lower orders. Some idea of the great superiority of the higher ranks may be formed by the appearance of the Sepoys, a very handsome class of men, who are said to derive much of their personal attractions from their mothers. Many of the nautch girls are lovely creatures; and, though personal beauty is not considered essential to their profession, when superadded to other accomplishments, it is of course highly prized, and some romantic stories are told of the extraordinary attachments inspired by females of this class in the breasts both of native and European admirers."—"The dress of the H. is remarkably simple, and, except in the fineness of the cotton-cloth of which it is made, there is little difference in that of the rich and the poor, the distinction of the former consisting more in their jewels and attendants. The two grand divisions of the Hindu or Brahminical faith, are distinguished by the position of a white line on the face, which is made with chunam or lime—rather chalk and clay mixed—found in some holy places in Gujerat. The followers of Siva wear the line perpendicular, and

those of Vishnu horizontal. The adoration of Siva has at one time been more prevalent on the west coast, and that of Vishnu on the east; but they are now in so far blended. The distinguishing badge of the castes is a string tied round the shoulders; the number, form, colour and order of the threads in which, indicate the particular rank that the wearer holds in his caste. No member of an inferior caste is allowed to wear so many threads in the string as the very lowest order of the caste above him; and the Sudra is not permitted to wear any string. The men have two fashions of dress,—one which they are described as having worn in the days of the Greeks; the other has been in part adopted from the Mahommedans. The ancient dress consisted of three pieces of cotton cloth, one fastened round the waist, and falling down as far as the knee,—the second wrapped round the body,—and the third twisted round the head. The Mahommedan imitation consists of cotton-drawers down to the ankles, and a long robe of cotton crossed on the breast, and tied round the body with a scarf; but to distinguish them from the Mahommedans, who fasten the robe on the right side, the Hindoos fasten it on the left. A turban forms part of this dress, but it is easily distinguished from the Moorish turban. This is the regular dress of the Hindus; but many of the poorer classes have only a piece of cloth wrapped round the loins; while in the cold districts they have a thicker piece of cloth, oftentimes of woollen, and sometimes of British manufacture, resembling the puncho of the South Americans, which answers all the purposes of a robe, a mantle, and a bed. This covering of all work is most frequent in the Balaghaut country, and among the mountaineers in the N. The head is usually shaved, except a small lock on the hinder part, and a pair of small mustachios."

Castes.] No Hindu can ever quit the caste to which by birth he belongs; to be expelled from it, is the greatest misfortune which can befal him. These divisions and subdivisions have little intercourse with each other; they never intermarry; they will not even eat together; nor will they do so with any other, whatever be his profession, who belongs not to the same caste with themselves. The Parias, or casteless, are abhorred by their countrymen; they dare not enter a temple; they are employed in the meanest offices; and being by all accounted worthless, are for the most part infected with every vice. Of all the castes that of the Bramins is accounted the most honourable. This caste, indeed, claims precedence even of princes, who belong to the second order. The greatest crime which can be committed is the murder of one of their number; and if a Bramin be guilty of any crime, his punishment is much more mild than that which would be inflicted on a member of any of the other three orders. Even in the most trivial affairs they claim precedence, which is always willingly allowed them. Thus, if one of them has occasion to cross a river along with others, he enters the boat first,—is first landed on the opposite side,—and then stalks away without paying for his passage. The second class consists of warriors; and from them are chosen the sovereigns of the country, with the inferior rulers. The third class consists of such as are employed in agriculture and merchandise; and the fourth class of labourers and artists of every description. This class is subdivided into other inferior classes, corresponding to the various arts and trades.

Mahommedans, &c.] The next numerous class of inhabitants are Mahommedans, who may perhaps amount to one-eighth of the number of Hindus. They are divided into the two great sects of Sunis and Shiahs; the first of whom acknowledge Abubecker, Omar, and Osman, as the legitimate successors of Mahomet; while the latter call these personages usurpers, holding, that Ali was the first lawful khalif. Except on this point, there is not much difference in their respective articles of faith. They are also divided into the four great tribes of Shaikh, Syed, Patau, and Mogul. The first are either descended from Arabs, or converts to their religion; the second claim their descent from Mahomet, and are the same as the Emirs of Turkey, but are generally descendants of Persians; the third are Afghans or their descendants; and the fourth of Mogul or Tartar origin.—The third class of population are the Sikhs, who are most numerous in the province of Lahore.—The fourth class are native Christians. These are most numerous on the coast of Malabar, where they are divided into the Nestorian and Romish churches; but there is also a considerable number of the descendants of the Portuguese in different parts of the country.—The fifth class are Jews. They principally inhabit the western coast, and are divided into White and Black Jews.—The sixth are Parsis, or followers of Zoroaster; and are principally to be found in Gujerat and Bombay. They are an industrious, active people.—To these may be added Chinese, Africans, and people belonging to every nation of Europe, with great numbers of the children of Europeans by native women. Taking the whole strangers and descendants of strangers in India, they do not amount to above one-seventh of the whole pop.

Europeans.] Supposing the present pop. of India to amount to 136,000,000, it is calculated that of this number there are not above 40,000 Europeans,—or one European to 3,400 natives generally,—or, where they have the whole command of the government, one European to 2,125 natives. It is evident that, however equally distributed over the country this small number might be, they can produce comparatively little effect upon the modes of thinking or domestic habits of the vast multitude into which they have been interfused, especially when we consider that none of them purpose to remain permanently in the country, but only aim at making a fortune as rapidly as they can, and then retiring to spend it on the opposite side of the globe. They have no more social habits with the people—as Burke remarked—than if they still resided in England. Still, however, the presence of Europeans in India appears the only chance for civilization—including under the term whatever knowledge is the most conducive to the introduction of true religion—that has ever, in the whole lapse of time, been afforded to the mighty mass of its inhabitants.

Hindu religion.] The customs of H. are so closely connected with its religion, that to describe the one, is in a great measure to delineate the other. The religion of the Hindus is connected with the most minute details of private life. The supreme God of the universe, according to the Hindus, is Brahm, or Brahma; at whose word this universe came into existence. Brahma, after the foundation of this world, created Bawaney, a female divinity, called 'the mother of the gods.' From her proceeded Brimha, Vishnu, and Siva, three male deities, the principal ministers of Brahma, and personifications of his different energies. Brimha, said to represent the wisdom of God, rides on the flamingo, and has a crown on his head. He is generally represented with four hands. In one he has a sceptre, the ensign of his power; in another the sacred books; and in a third a circle, the emblem of eternity. To Brimha was committed the care of creating the things of this world. He created man, and laid the foundation of the castes, into which the Hindus are divided. The Brahmins proceeded from his mouth; the Khetris from his arms; the Vaisy from his belly and thighs; and the Sudra from his feet. He composed the sacred volumes called Vedas, and delivered them to the Brahmins to be explained by them to the other castes. As Brimha represents the wisdom of the supreme Deity, Vishnu represents his goodness employed in the preservation of all sublunary existence. He is said to have had several incarnations; and he is represented under many fantastic forms, each having a supposed connection with his numerous attributes. He sometimes rides on the garoora, a large kite; sometimes he

is seen in the figure of a serpent with many heads; sometimes in the form of a man with four hands and many heads, looking in every direction. Siva, who represents the power of the Deity employed in the correction of sublunary things, is represented as a man with a fierce look. He has a crescent on his head; a serpent twisted about his neck; and rides upon an ox. He is sometimes called Mahadeva, and presides over good and evil fortune. Darham, or Yam Rajah, is the judge of the dead; he holds a sceptre in his hand, and rides upon a buffalo. Chiter and Gopt are his assistants. The former reports the good actions of men, the latter their evil actions. Each of these likewise has his assistants, Chiter's genius being stationed on the right hand, and Gopt's on the left of each individual of the human race. Krishen and the nine Gopia correspond to the Grecian Apollo and the nine muses. Like Apollo, Krishen is represented as a young man, with an instrument resembling a flute. Indeed the instances in which the mythology of the Hindus corresponds to that of the Greeks and Romans, might induce us to believe that the former has been the original of the latter. Kamædeva, the god of love, corresponds to Cupid. His father is Maya, the general attractive power, and his mother, Retty, or Affection, by whom may be understood Venus. Like the Cupid of the Greeks, the Kamædeva of the Hindus is furnished with a bow and arrows; but the Hindu conception of this weapon is still more highly poetical than that of the Grecian mythology, for the bow of Kamædeva is of sugar-cane, or of the most fragrant flowers, and the string is of live bees. The number of his arrows is five; and each of them is headed with an Indian blossom of a healing quality. Lingam is the Priapus of the Greeks, and is worshipped by such unmarried women as desire husbands, and by such married women as desire children. Vuruna is the god of the seas and waters, and represents Neptune. He rides on a crocodile. Æolus is represented by Vayu, the god of the winds, who carries a sabre in his hand, and rides on an antelope, the fleetest of animals. The care of learning is committed to Vrikaspaty, and a class of nymphs called Vidyadhares, or professors of science. Agnee, the god of fire, rides on a ram. The earth is represented by a goddess called Vasudka. Pakrita, or Nature, is represented as a beautiful young woman. Surya, the sun, sits in a chariot, and is drawn by one horse. He has sometimes seven heads, and sometimes twelve. Sangire, the wife of the sun, is the mother of the river Jemna. Chandara, the moon, holds a rabbit in her hand, and sits in a chariot drawn by antelopes. Ganes is the god of prudence. Fame is known by many names, but is generally represented by a serpent with many tongues. Virsavana, or Cobhair, the god of riches, rides on a white horse. Darmadeva, the god of virtue, is sometimes represented under the figure of a white bull. Among those numerous divinities it seems impossible to ascertain the superiority of rank. Many of them appear to be equal in dignity; and particular deities have their own votaries, according to the suggestions of a prejudiced fancy.

Besides these gods, which are inferior not only to Brahma, but to his principal ministers, there are many demi-gods dispersed in the various regions of the air, the earth, and the waters. Of these demi-gods there are some whose exploits are said to have a remarkable coincidence with those of Bacchus, Hercules, Theseus, and the other divine heroes of Grecian fable. Their number appears to be infinite; some of them being assigned to the superintendence of almost every object in nature. They are by nature mortal; but, by the use of a drink called *amrit*, they acquire immortality.—Most of the Hindu idols are formed of clay, and very much resemble in composition, colouring, and execution, though of course not in form, the more paltry sort of images which are carried about in England for sale by the Lago di Como people. At certain times of the year, great numbers of these are in fact hawked about the streets of Calcutta, before they have been consecrated by being solemnly washed in the Ganges by a Bramin pundit. Till this is done they possess no sacred character, and are frequently given as toys to the children, or used as ornaments of rooms, which when hallowed they could not be, without giving great offence to every Hindu who saw them thus employed.

The ceremonies of the religious worship of the Hindus consist in prayers, fasting, visiting the temples, and performing certain actions accounted sacred. A Hindu prays three times daily,—in the morning, at noon, and in the evening. During prayer, he turns his face towards the East; and, like the Mahommedans, he always washes before he takes meat, and frequently at other times. To bathe in the water of the Ganges is a ceremony highly religious, and efficacious in purifying from many offences. Running water is always preferred for ablutions when it can be obtained. Sacrifices are offered to the gods, but no living creature is ever killed for that purpose,—the doctrine of transmigration rendering the killing of an animal an impious rather than a religious action. Incense, flowers, fruit, and money, are the common offerings. Pilgrimages to holy places form a great part of the ceremonial of the Hindu faith. The places of these were usually those that were the most inaccessible; such as mountain-tops, hot springs, cascades, caves, the junctions of rivers, and wild and pestilent places by the sea-shore. The multitudes that still throng to some of these places are immense. To detail the numerous ceremonies performed by the Hindus, in the worship of their various gods, would neither interest nor entertain the reader. Our limits are totally inadequate to describe their various institutions of fasting, and different kinds of penance, and self-castigation.

Among the Hindus, the immortality of the soul is a universal tenet; and the transmigration of the soul is a doctrine no less universal. This world, therefore, is by the Hindus considered both as a state of probation, and as a state of reward and punishment. Their hell is called Narekha; and contains many mansions of different degrees of punishment, into which individuals are introduced according to their various degrees of guilt. When they have continued in this place during a period sufficient to expiate their offences, they are sent back to this world, to animate other bodies, of which the nature corresponds to their former behaviour; and when at last, by repeated transmigrations, they have been cleared from every impurity which adheres to mortals, they are conveyed to the heavenly regions, where they are absorbed into the universal Spirit. When religion has condescended to interfere in the articles of dress and food, we cannot expect that the more important affair of marriage should be left indifferent. Marriage is, by his religion, made incumbent on every Hindu who has the smallest prospect of being able to maintain a family; and, in a country so fertile as H., few individuals have not this in their power. In this country, no man receives a dowry with his wife; on the contrary, he makes presents to her parents,—a custom which must have proceeded from the ancient practice of purchasing wives.

Science and Literature.] The learning of H. is a subject with which Europeans are but just commencing acquaintance. Few are qualified to give an account of it, much less to form a complete idea of it. "Wherever we direct our attention to Hindu literature," says Jones, "the notion of infinity presents itself; and the longest life would not be sufficient for the perusal of nearly five hundred thousand stanzas in the Puranas, with a million, and more perhaps, in the Vedas, and other works." In H., the sciences seem to have arrived at greater perfection than the arts. In all the arts of calculation their accuracy has astonished Europeans. Of their progress in geometry, Dr. Playfair gives the following remarkable instance: In the *Ayin Akbari*, the proportion of the circumf. of a circle to its diameter is said to be as 3,927 to 1,250,—a solution to obtain which arithmetically, in the simplest manner possible, he assures us would require the inscription of a polygon of 768 sides, and at least nine extractions of the square root, each extending to ten decimal places. The zodiac, according to the Bramins, is divided into 27 constellations. The ecliptic, as in Europe, is divided into signs, degrees, and minutes. The places of the sun and moon are calculated from the time of their entrance into the moveable zodiac. This causes the beginning of the year, with regard to the seasons, continually to advance. In 24,000 years it returns to the same point. In their calculations they suppose 800 years to contain 292,207 days, which makes their year only 1′ 53″ longer than that of De la Caille,—a degree of accuracy which has not long been known even in Europe. In calculations respecting the motion of the moon, as in Europe, they use the cycle of 19 years. The most difficult particulars in the motion of this secondary planet are calculated with much precision. The apparent motion of the fixed stars eastwards is, by the Siamese tables, made to be only 4″ too quick,—a calculation in which the celebrated Ptolemy made an error of no less than 14″. The most celebrated of all the Indian astronomical tables are those known by the name of the *Tables of Tirvalore*. If Dr. Playfair's reasoning be just, the age of these tables is 4,905 years, corresponding to the year of the world 902. Whether this era—commonly known by the name of the *Calyougham*—be a real era, ascertained by the actual observation of the places of the heavenly bodies at that time, or an imaginary period, discovered by calculating backwards, has excited among astronomers much altercation. Playfair is decidedly of opinion, that the Calyougham was ascertained by the actual observation of the state of the heavenly bodies at that precise period. Others, however, hold a very different opinion, and their reasoning appears completely to overthrow the arguments of Playfair upon the great antiquity of Indian astronomy. Amongst these, Marsden in the *Philosophical Transactions*, and after him, Bentley in the *Asiatic Researches*, hold the first rank. We do not mean to follow the arguments on either side, as these are foreign to a work of this nature, and can be interesting only to the scientific reader, whom we refer to the works already mentioned. Suffice it to say, that Bentley has shown, in a very clear manner, that the *Surya Siddhánta*, the most ancient of all the astronomical performances of the Hindus, and to which the Indian astronomers assign the ridiculous antiquity of 2,164,900 years, cannot be more ancient than the beginning of the 8th cent., and that the celebrated tables of Tirvalore, which the Hindus, and after them Playfair, assert were compiled from actual observation in the year of the world 902, have in reality only been written and dated 516 years ago.—Poetry has existed in India from the earliest ages, and has assumed both the epic and dramatic forms; but, though the ideas are often sublime, they are too frequently turgid, and swell into that inflated diction which is equally contrary to genuine poetry and to good sense. Painting and sculpture are in a state still inferior to that of poetry in this country. The Hindus appear to be ignorant of the rules of perspective, and their drawing is in general deficient. In colouring they are greater proficients. Their sculpture is rude, and said to have some resemblance to that of the ancient Egyptians; by some it is asserted to be much more elegant. Like the architecture of that people, too, their buildings are calculated to strike rather by magnitude than elegance; they are large, and abound in pillars, but have no pretensions to an order, and are deficient in proportion. The music of H. is represented as still remaining in an imperfect state. Melody seems to be more studied than

harmony; and many of the simple airs are pleasant even to an European ear. The musical instruments are numerous.

Arts.] The use of powder and of fire-arms was known in the East long before it was discovered in Europe, but the precise date of the discovery is unknown. Fire-works of different kinds have long made part of the amusement of many eastern countries; and in the construction of these they equal, if they do not excel, the most dexterous of Europeans. The pottery of the Hindus is rude and coarse; in anything, however, that merely requires handling, they excel. Some of their embroidered leather is very rich, and their cabinet-work is tastefully inlaid and painted. In the N of India Proper a very fine paper is made from the inner bark of a tree. Glass-making is understood and practised. The ingenuity of the Hindus in several of the mechanical arts and manufactures has long been celebrated. Their tools and implements, however, are simple in the extreme, and to Europeans they appear very imperfect. The instruments of weaving in India are now precisely of the same construction they exhibited 2,000 years ago. The Indians still spin their yarn, warp as well as weft, with distaff and spindle. The loom upon which the cloth is woven is composed of a few sticks or reeds; and when it is in operation, it is placed under the shade of a tamarind or mango-tree, with the balance fastened to one of the branches. Two loops underneath the gear, in which the weaver inserts his great toes, serve as treadles; and the shuttle, formed like a netting-needle, but of a length exceeding the breadth of the cloth, is used alternately to draw through the weft and to strike it up into the web. The loom has no beam; the warp is laid upon the ground, the whole length of the piece of cloth, and upon this primitive machine the Asiatics produce muslins which have long been subjects of admiration for their beauty and the fineness of their texture The Hindus are exceedingly skilful in the practice of those juggling arts of which the chief object is to deceive the senses.

Languages.] The original language of H. seems to have been the Sanscrit,—a language now found only in books, and understood only by the learned. Jones assures us that it is in every respect a refined speech, and more perfect even than the Greek. It answers nearly the same purpose in India that Latin did in Europe during the Middle ages, being the principal vehicle of religion, law, science, and literature. The languages now spoken in H. are numerous, but it is generally believed that they are all derived from the Sanscrit. Of these languages, or rather dialects, the following are the chief:

1. The *Cingalese*, spoken at Candy in the island of Ceylon, said to have a close resemblance to the Sanscrit.
2. The *Tamul*, spoken in almost every part of the Deccan. It is harmonious, and easily acquired. The central parts of the Deccan use the Mahratta.
3. The *Malabar* language, spoken from Cape Comorin to the Illi mountain. It has several alphabets.
4. The *Canaree*, or language of Canara, which is extensively spoken throughout Mysore and as far as Goa.
5. The *Marashda*, or *Maharatta* language, spoken by the Maharattas, whom Wesdin assures us we should call Marashdi.
6. The *Telinga*, or *Talinga*, an harmonious, nervous, masculine, copious, and learned language, which, like the Sanscrit, has 52 characters, and these are sufficient to write the latter. It is spoken on the coast of Orissa, in Golconda, on the river Kristna, and as far inland as the mountains of Balaghaut. All these languages have their own alphabets; so that in every prov. you must make yourself acquainted with a distinct kind of character, if you wish to express your thoughts in the dialect common to each.
7. The common *Bengali*, or *Gaura* language, — a wretched dialect, corrupted in the utmost degree. It is spoken at Calcutta, and generally over Bengal on the banks of the Ganges.
8. The *Dewanagari*, or *Hindustani* language,—called by some *Nagru*, *Nagari*, and also *Davanegari*. It is spoken at Benares, and has 52 characters, with which you can write the Sanscrit. Its mode of writing has been introduced into all the N part of India.
9. The *Guzaratic*, which has been introduced not only into the kingdom of Gujerat, but also at Baroche, Surat, Tatta, and the neighbourhood of the Balaghaut mountains. Its characters are little different from those of the Devangari.
10. The *Nepalic*, which is spoken in the kingdom of Nepal, and has a great similarity to the Devangari.

There is a language called *Pracrit* still spoken among the Sikhs to the NW of Delhi, which Mr. Colebrooke identifies with the vernacular Sanscrit. The Serampore missionaries calculate that the Hindustani, the Maharatta, the Bengali, and the Orissa, (the vernacular dialects of Central India,) are spoken by upwards of 50,000,000.

Education.] Among the Hindus female education seldom extends farther than to the simplest precepts of religion, and those domestic duties which are afterwards to become necessary. On the education of boys more care is bestowed. They are taught to read and write by the Bramins, who are the only schoolmasters. The leaves of the palm are used for paper, and a pointed iron instrument in place of a pen. These leaves are not apt to decay, nor are the letters formed upon them easily effaced, and to make the impression more strong, a black powder is rubbed upon the characters. The palm-leaves are cut in long pieces, an inch in breadth, and a number of these, fastened together by the ends, form a book. Sometimes they write on a kind of paper, and for a pen make use of a small reed. Beginners form their characters in sand strewed on the floor. The rules of calculation are performed with small stones. The following statement comes from one whose learning and intelligence entitle all he says to high respect. Civilized England might lay some of the words of Sir Alexander Johnston to heart: "In the Hindu political system, the education of the people has always formed part of the business of the government; and with this view, a certain portion of the produce of the soil in every district is assigned to the support of the schoolmaster; in Scotland a similar plan has been followed to a certain extent; in England no such provision exists; while in India it is clearly traceable 2,000 years ago. So highly, indeed, is education prized among the Hindus, that it is regarded with a sort of religious veneration, and this feeling of respect extends to those employed in its administration. The children are brought by their parents in early infancy into the presence of the schoolmaster, to whose care they are consigned with something of the solemnity of a public and official act." It was stipulated at the last renewal of the Company's charter, that £10,000 should be annually devoted from the surplus territorial revenue of India to the purpose of education. It appears that the Company, although there was no surplus revenue, have in some years expended double and even treble this sum.

Colleges.] The Government Sanscrit college at Calcutta was established in 1821, and is largely endowed. The establishment consists of 14 Pundits, and 100 scholars on the foundation. The course of study in this college comprehends grammar, general literature, rhetoric and prosody, law and logic, and natural and experimental philosophy. A portion of the college funds is assigned to defray stipends to 100 students who are either strangers or indigent.—The Madrissa or Mahommedan college was founded in 1780, by Mr. Hastings, and is also largely endowed by the government. The course of education comprises the Arabic and Persian languages, general literature, law, philosophy of law, traditions of Mahommed, rhetoric, logic, geometry, arithmetic, astronomy, according to the British system; to which may be added the regulations of the British government.—The Bishop's college, near Calcutta, founded in 1820, for the education of such students as the government, or the religious societies connected with the Church of England, may place there, has a principal, 2 professors, 8 missionaries, 2 catechists, and a printer.—In the interior of India the most important of the government seminaries are the colleges of Benares and Agra: the former founded in 1794; the latter in 1823.—A college for both Hindus and Moslems exists at Delhi.—A Hindu college exists at Punah; and an Engineer college has been formed at Bombay. The Medical college of Bengal numbered 3,952 native students in 1846–7.—The Bramins have several seminaries of learning, which have existed during many ages. At Cangiburam in Carnate there is still a celebrated Bramin school, which, according to the testimony of Ptolemy, existed in the 1st cent. of the Christian era.

Government.] The home-government of British India is composed of,—1. The Court of Proprietors; 2. The Court of Directors; and 3. The Board of Control.

Court of Proprietors.] The proprietors vote according to the amount of stock which they possess. The lowest sum which entitles to a single vote is £1,000 stock. The number of proprietors recently entitled to vote are about 1,956. The proprietors elect the directors and declare the dividend. All proceedings in parliament affecting the company's interest, and all grants of money beyond £600 must have their approval.

Court of Directors.] The court of directors consists of 24 proprietors, who conduct the whole affairs of the Company, subject to the superintendence of the board of control. They are elected for four years, six going out annually by rotation. These are re-eligible at the expiration of a year, and are mostly re-elected: 13 form a court. The election of its chairman and deputy-chairman is made annually, and rests with the directors. The power of nominating the governors of the presidencies is vested in the directors, subject to the approval of the Crown. They can recall the governors or any other of their servants independently of the board of control. For the despatch of business, the court of directors divides itself into three committees: the committee of correspondence,—of buying and warehouses,—and of shipping. By the act of 1794, the directors were charged to appoint a secret committee, in order to forward to India such despatches as the board of control consider should be secret. This committee usually consists of the chairman, deputy-chairman, and the senior member of the court of directors. These all take the oath of secrecy, and form the organ for transmitting the orders of the board of control on all matters relating to war or peace.

Board of Control.] In August, 1784, Mr. Pitt's celebrated India bill was passed. By this enactment a board of control was established, composed of 6 privy-councillors, to be selected by the king, whose duty it was declared to be to superintend the territorial concerns of the Company, to inspect all letters passing to and from India between the directors and their agents (with the exception of such only as are purely commercial),—to alter and amend in such manner as they should think proper the despatches sent to India,—and even, where the case should appear urgent, to transmit orders to the functionaries in India without the concurrence of the directors. The chancellor of the exchequer and one of the principal secretaries of state are, by virtue of office, members of the board of control. Of the other four members, the senior is president of the board, and with him the whole business of the board has ordinarily rested, the other commissioners assembling but seldom, and being called upon to deliberate still more rarely. Under this arrangement it has been truly said that the president "is essentially a new secretary of state—a secretary for the Indian department"—that "the powers of the board of control convert the Company's courts into agents of its will. The real, the sole governing power of India is the board of control, and it only makes use of the court of directors as an instrument, a subordinate office, for the management of details, and the preparation of business for the cognizance of the superior power." By a subsequent act, the commissioners are no longer required to be taken exclusively from the privy council, and it is provided, that their salaries shall be paid by the East India company.

Executive Government.] The executive government of the Company abroad is administered at three presidencies, Bengal, Madras, and Bombay. In Bengal the government consists of a governor-general and 5 councillors, and at Madras and Bombay of a governor and 3 councillors. The presidency of Bengal includes the whole of H. Proper, that is to say of the country N of the Nerbudda, comprising also the E shores of the bay of Bengal, and extending in the opposite direction beyond the banks of the Indus. It is true that in 1833, the formation of the new presidency of Agra, or the North West presidency, was announced; but these provinces are still governed only by a lieutenant-governor, and we believe little distinction is retained in the principal departments of their administration from those of Bengal. The three commercial emporia in the straits of Malacca were also annexed to the Bengal presidency; but are to be dissociated from it from and after the 1st of November, 1851. The presidency of Madras comprises almost the whole of Peninsular India; that of Bombay is confined to a narrow strip on the Malabar coast, between Cambay and Goa, with the addition of Gujerat and Cutch, and the appendage of Sind. The directors may appoint the commander-in-chief in each presidency to a seat in the council; the other councillors are civilians, who must have resided ten years in India in the company's service. The governor-general has a controlling power over the governors of Madras and Bombay; and if he thinks fit to proceed to either of these presidencies he there assumes the chief authority. The governors of the presidencies of Bombay, Madras, and Agra, are extraordinary members of the supreme council when it assembles within their respective territories.

The power of making and enforcing laws for the government of the respective presidencies rests in the governor-general, or governor, and the councillors; subject, in some instances, to the consent of the supreme court of judicature to register their decrees, and likewise to the approval of the board of control and court of directors.—The supreme court of judicature for Bengal consists of a chief-justice and 2 puisne justices; that of Madras and of Bombay, of one chief-justice and one puisne justice each.

There exists in India two concurrent, and in some instances, conflicting systems of judicature;—the Company's courts, and the king's or supreme courts. In the Company's courts there are three grades of European judges,—the district, the provincial, and the judges of the *sudder* court. There are also two classes of native judges: *munsifs*, of whom several are stationed in every district, and *sudder amins*, established at the same stations with the European district-judges. There are also magistrates, who exercise civil jurisdiction; and registrars, who decide such causes as may be referred to them by the judge.

Trial by jury is confined entirely within the limits of the supreme courts, the jurisdiction of which extends to Europeans generally, and to natives also, within a certain distance around the several presidencies.

The police system of India is founded on the division of each revenue district of about 4,000 sq. m., into sections of about 16 m. square. Each of these sections may contain on an average 253 villages, and perhaps 56,000 inhabitants. To each district there are a *thannadar*, or officer equal to a serjeant, and from 10 to 15 men, attached. Along some of the high roads, there are stations every 2 m., wherein one or two policemen remain to patrol the intervening distances; there are besides a few horsemen to every large district to assist the foot police. The *darogha*, or police inspector of every small district, visits the spot where any crime has been committed, examines witnesses, arrests offenders, and forwards his report and depositions, attested by three or more of the principal inhabitants of the nearest village, to the magistrate; but has no power to give redress for any trifling injury, whereas the police under native governments can give instant and effectual redress in ordinary cases. The magistrate has not only a district of 4,000 sq. m. to look after; but has all its revenue settlements to arrange, and taxes to collect. He is in fact the sole agent for this enormous estate: and has to adjudicate on the numberless suits arising within it.

The government of the British possessions, as above explained, is one of law and responsibility, under numerous and salutary checks. At the same time, it must be confessed, that as far as the natives themselves are concerned, we rule by force alone in India. Neither patriotism, nor piety, nor interest, nor ambition, can attach the natives to our sway in the present state of things in that country; and we have done very little yet to assimilate the national mind and interests to our own. We do not indeed think that the tremendous assertion of Burke would be true in the present day, were the contingency contemplated by that illustrious orator to befall us: we do not think that "were we to be driven out of India this day, nothing would remain to tell that it had been possessed, during the inglorious period of our dominion, by any thing better than the ouran-outang, or the tiger;" but candour compels us to confess, that our government in India has too often exhibited a strange spectacle of misrule and impolicy. The main defects in our Anglo-Indian rule are thus temperately yet faithfully set forth by Mr. Mackenna in his continuation of Dr. C. Taylor's history of India: "The three years of grace allowed to the East India company for winding up their political affairs have begun. The period fixed for the termination of their lease of the government of India is the 30th of April 1854, and preparations ought to be going forward for regulating the government of that vast continent consistently with the in-

terests of the British people. The proprietors of India stock gave up all their rights in 1834, by the acceptance of the act of parliament which abolished the commercial privileges of the Company, and declared that the Eastern possessions entirely belonged to the Crown, and were merely vested in the Company for twenty years for the benefit of the empire. The respite then granted to the Company must soon come a close; it is, therefore, a public duty to investigate the subject, and ask, 'What course ought, in the present circumstances, to be adopted?' India has, unfortunately, been hitherto looked upon in parliament as a bore. Few of the young members study the Eastern questions; and, during the last 16 years, no annual inquiry has been made by the Commons into the administration or government of that great continent, although such inquiry ought, in a constitutional and imperial sense, to have been annually instituted. The result is, that India is not yet fully understood; neither are the numerous advantages arising from the connexion in any respect clearly developed. It should never be forgotten, that India has cost England nothing; for, besides defraying every expense more than tenfold, India has, in various ways, enriched a million of families in this island. Great Britain owes a great deal to India: and when the British people learn that the most extensive fields of prosperity are still open in that magnificent land, surely there can be no doubt that they will enter with spirit into the arrangement of plans for the welfare as well of this country as of the Eastern British empire. A complete and searching investigation of Indian governmental matters, will involve many decisions of moment; and, among them, one as to whether the system of seniority is to be continued, or whether young, active, and intelligent civil servants are to be preferred. This decision, in case the last named plan be adopted, ought to be attended with the stipulation that an examination of the competitors should always take place, and that the office should be given to the worthiest of the rivals, under proper guarantees of future good conduct. The disadvantages of allowing the directors or the Board of Control to retain all the patronage exclusively at their disposal, will form a subject of anxious inquiry; for the utility of offering certain employments for public competition has become evident. Family ties and partial interests must succumb before the general prosperity of the empire: and the cliques of the directors, of the proprietors, and of their parliamentary adherents must be annihilated. The world is watching the progress of intelligence even in India; and young men educated in Europe will no longer be tolerated there to rule the natives as they please, with perfect impunity, from being, as they fancy, secure from supercession by their covenant with the Company, and certain of advancement as contingencies arise. India cannot longer be maintained by the close borough principles. Free trade is as necessary in places of emolument and beneficial employment as in merchandise or other commodities, for the welfare of 152,000,000 is involved in it. The application, in India, of the various branches of education demands great care: it requires to be decided whether the schools are to be public or private nurseries of learning. The administration of justice in the courts of the Mofussil—as the districts of the interior are called in India—demands a laborious inquiry, as also do the various systems of police. In England but little has as yet become known of the abuses that prevail in India; but they will yet force themselves before the British people, in a way by no means acceptable, unless parliament by a satisfactory inquiry and investigation, and eradication of them all, does its duty and forestalls the outburst. The various establishments of India cry out for inquiry, in order that their uses, abuses, and results may become apparent. Parliament has already laid down at home abundant examples of this course of examination in the Official Salaries committee and other measures of that description. This course is necessary for India. No doubt there will be much difficulty in carrying it forward; but as it is far from being an impossibility, the sooner it, like the railway, is opened, the more speedily will its benefit be felt. The actual Indian governmental machine has been at work for 17 years, and, at length, the time has arrived for overhauling it—for examining into its defects and effecting the necessary repairs." The Board of Control does its duty lazily; for there is no man to spur it forward. It was at first adapted to control the vagaries of the directors; but it is now the drag upon the wheels of the governmental coach, and stops all progress. A board of 'energy and talent to produce good for India' is the present desideratum. There is no efficient public voice to control the acts of any authority in India, and the superintendence of the civil and military *employés* is by far too lax, for it tolerates vices of the grossest character; and hence the advancement of the country in wealth, civilisation, and happiness, is of the slowest kind, if it be not altogether torpid. Occasionally commotions arise which almost shake the social edifice to pieces, and Great Britain, having the care of it, is then frightened by the approach of danger into acts of justice and prudence. It is only at those periods of alarm, to which the Eastern empire is frequently exposed, that any wish to introduce measures likely to prove beneficial to India is exhibited."

Native government and laws.] The government of those parts of H. which still belong to native princes is completely despotic, varying only in the apparatus of despotism. The native jurisprudence often evinces much knowledge of human nature, and much judicial discrimination; but not less frequently exhibits the powerful influence of superstition in perverting the understanding and moral perceptions of men. When the English first gained footing in India, the right of the soil was vested in the sovereign; the people had only an annual indefeasible interest in it, subject to constant diminution at the will of the ruling power. The Bengal government, under the administration of Lord Cornwallis, so far restored the subject's right as to fix the proportion to which the state should be entitled, leaving to the possessor of the land, after this deduction, the benefit of progressive improvement, with an unrestrained power of alienation, to be regulated by native law. The property of a Hindu is distinguishable, as with us, into real and personal, moveable and immoveable; but there is this difference betwixt British and Hindu law, that by the latter real and personal property are alike descendible to the same persons. There is great importance, however, attached by it to land, in which the sons are considered as possessing a special interest; having with their father—according to the doctrine of the *Mitachara*, which is prevalent in the peninsula and N of India—so far a co-ordinate right by birth in that part of it which is ancestral, that if he thinks proper to come to a partition in his lifetime, he must divide it as directed by law,—that is, he must give them and himself equal shares. Adultery is always punished criminally by the Hindus. Maintenance by a man of his dependents, even to the outcast wife or children, is with the Hindus a primary duty. Slavery is distinctly recognised in Hindu law. The various modes by which a person becomes a slave are, capture in war—voluntary submission to it—involuntary submission, as in payment of debt, or by way of punishment—birth or offspring of a female slave—and gift or sale by a former owner.

Ecclesiastical establishment.] The Episcopal establishment of India is superintended by a lord bishop of Bengal, a bishop of Madras, and a bishop of Bombay; each assisted by an archdeacon. Ordinary chaplains receive 800 rupees per month in the Bengal presidency; 700 in that of Madras; and 670 in that of Bombay. Assistant chaplains have 500 r. per month.—At the close of 1850, 403 missionaries connected with 22 missionary societies, and 551 native preachers, were employed in India and Ceylon; and the number of native churches founded by them, during 50 years, was 309, with 17,356 members. The stations at which the gospel is preached were 260, There were at the same period 1,345 day-schools, at which 83,700 boys were receiving instruction; 73 boarding-schools, with 1,992 boys, chiefly Christian; 128 day-schools in which the English language was taught, and attended by 14,000 boys; 354 day-schools attended by 11,500 girls; and 91 boarding-schools, attended by 2,450 girls. The cost of this missionary agency in 1850 was £187,000. The Bible has been translated into 10 languages, and the New Testament into 5 others—not reckoning the Serampore versions.

Revenue.] When H., in the time of Aurungzebe, was united under one monarch, the revenues amounted to £32,000,000, supposed, in a comparative sense, to be equal to at least £160,000,000 in modern Britain. When the British first gained possession of India, they found the system of public finance on precisely the same footing upon which it had remained from the dawn of history, notwithstanding the various dynastic revolutions occasioned by the invasion of Alexander, the Mahommedans, and Tamerlane, and the intestine broils of the different Moslem princes who figured in its later history. The system—which prevails generally among Oriental nations—consists in taxing the soil to an amount limited only by the will of the sovereign, so that rent and revenue may be considered as synonymous wherever it prevails. The desire of the rulers of India to possess the utmost possible portion of the produce of the land, led to minute admeasurements, inspections, and assessments. The land was parcelled out in small lots, which were held by the cultivator with a perpetual and transferable title emanating directly from the supreme authority. Between the crown or supreme power, and the cultivators of the soil, there existed a class of middle men—aptly designated by a native historian, "vultures, who grind the very bowels of their country"—who were appointed to collect the revenue, and were responsible for the sums assessed by government, and who out of the gross receipts were allowed a per centage usually of a one-tenth part. These middle-men, or collectors, are distinguished in India by the title of *zemindars*, or *talukdars*,—the actual cultivators, or those from whom the tax is collected, by that of *ryots*. There is a tendency, during each interval between the revolutions incidental to despotic governments, to that settled stability of interests and appointments which merges ultimately in hereditary possession; and hence the zemindars—whose office, according to the existing order of things, was indispensable—became in process of time a class not less permanently based upon the hereditary system than that of the ryots. It is easy to perceive how under such a system the wealth of the country as it was annually created found its way into the coffers of certain classes, whence it never again issued but for purposes of misrule and violence.

In this state, then, did affairs continue in India until the administration of Cornwallis, who, in 1793, remodelled the system of revenue in the presidency of Bengal according to a plan denomi-

nated *the permanent settlement*, the nature of which may be thus briefly described. A fixed assessment, unsusceptible of farther increase, either by the progress of improvement or the arbitrary will of government, and amounting to half the produce of the soil, was imposed; from which, as formerly, the zemindars were allowed a tenth part, and after the imposition of which they were entitled to grant leases to the ryots upon the principle of perpetuity, so long as the leaseholder or his disponees continued to fulfil the terms of such agreement. This system, though deriving its origin from benevolence, had no claim to relationship with wisdom, and speedily produced a total revolution in property throughout the whole of Bengal. The zemindars, thus constituted hereditary proprietors of the soil upon a quit-rent,—the amount of which was expressly stipulated, and admitted not of increase,—had thenceforward a powerful inducement to wring from the now completely subordinate ryots a greater share of the fruits of their industry than was directly claimed by government; while the ryots, oppressed by their rapacious masters, and unable to obtain justice in courts the doors of which were shut against them by their poverty, sunk into the apathy of indolence, and ceased to struggle for more than the bare supply of their natural wants. The rapacity of the zemindars thus ultimately defeated itself; for in proportion as industry became diminished, their means of remitting to government the sums regularly charged to their account diminished also, until, when totally unable to discharge their arrears, summary processes were instituted against them, and their estates exposed to sale; and so general was the destruction, that the whole landed property of Bengal is said to have changed hands since the establishment of the permanent system!

The Indian government has latterly become the purchaser of all estates which have been brought to sale, with the view of abolishing an authority which has stood between itself and the dispensation of that measure of just and benevolent government which it feels called upon to administer to all its subjects. In proportion as it succeeds in obtaining possession of the estates in Bengal, the government substitutes for this zemindary system another, which it has always principally followed at the other presidencies, and which, as it admits of no intervening authority between its officers and the actual cultivators, the ryots, is known under the name of the *ryotwary system*. The principal feature of this mode of administering the land revenue consists in this, that the government makes its bargain with each individual cultivator for the rent of his holding. In fixing these amounts in former years, too much of the old leaven of oppression was used by the officers of government, and the assessments were laid at so high a rate, that it has scarcely ever been found possible to adhere to them, so that a sort of bargain has to be made annually with the ryots, in settling which a great deal of discretion must necessarily rest with the officers. In this manner the legal claim of the government is, with but few exceptions, always greater than can be enforced without ruining the tenant, to whom abatements are made from year to year, varying in amount with the circumstances that influence his capability of paying, but which are generally so regulated as to take nearly all which he has to give, leaving him barely the means of continuing the cultivation of the soil. The advantage of the ryotwary system is, that it gets rid of the oppressions of the middle-men, and brings about a direct connection between the government and the bulk of the people, under which they enjoy a greater degree of security from oppression than accompanied a state of dependence upon their native landlords. The collectors appointed by the Company's government are persons of intelligence and respectability, who are doubtless anxious to perform the duties of their office uprightly. Unfortunately, however, owing to the heat of the climate, and the difficulty they find of transacting business in a foreign language, the collectors are obliged to employ natives under them, upon whom they must in a great measure depend for executing the details of the business; and it is too much to be feared that the cultivators do not meet with such consideration at their hands as they would doubtless experience were the collector himself capable of conducting every part of the business.

A modification of the ryotwary system is very commonly adopted in the Bombay presidency. This plan is known under the name of *the village system*. It is generally the case in India, that in every village or district there are a head man and an accountant, who manage affairs for the rest of the community. The head man goes by various names in different places. In Bengal he is called the *moccudum*, or *malik;* in Madras and Bombay he is called the *potail;* and the village accountant bears the name of the *cornum*, or *putwarry*. The head man stands forward to make the engagement, and becomes answerable to government for the revenue, which, on the part of the village, he undertakes to pay. In many districts there are persons who claim to be hereditary managers for the villages. As the custom here described has long prevailed, and as the natives of India always prefer what is customary, simply because it is so, it is probable that the government would have some difficulty in wholly abolishing the village system. A new system, which promises well, has been introduced into the North-west provs., by which the lands belonging to a village are assessed and settled for periods of 20 and 30 years.

The land-revenue collected by the Company exceeds £14,000,000 per annum; and forms about two-thirds of the whole amount of its income, exclusive of mercantile profits.

The secondary sources of revenue are the duty on salt, the monopoly of the sale of opium, and sundry smaller duties, as the *abkarry*, or excise on the manufacture of spirits, licenses, sale of drugs, &c., the customs, canal-tolls, and stamp-duties. Besides these, there are subsidies or tribute receivable from certain native chiefs. The following is an abstract of the revenue and expenditure of the Indian government since 1829:

Year.	Revenue.	Charges.	Surplus.	Deficit.
1829-30	£14,629,388	£15,356,161	...	£726,773
1831	14,603,951	14,494,752	£109,199	...
1832	14,198,155	14,506,540	...	308,385
1833	13,955,042	14,219,374	...	264,332
1834	13,680,165	13,630,767	49,398	...
1835	14,387,258	14,880,741	...	493,483
1836	15,549,545	15,179,469	370,076	...
1837	15,214,798	14,017,118	1,197,880	...
1838	15,086,269	14,292,026	794,243	...
1839	15,343,091	15,046,332	...	303,241
1840	14,549,262	16,390,278	...	1,840,916
1841	15,133,822	16,887,330	...	1,753,408
1842	15,788,499	17,554,258	...	1,745,759
1843	16,419,931	17,766,104	...	1,346,173
1844	17,173,788	18,612,915	...	1,439,128
1845	17,293,305	18,036,819	...	723,514
1846	17,812,419	19,307,795	...	1,495,376
1847	18,653,145	...	...	971,202
1848	17,577,102	...	...	1,911,791
1849	18,227,065	...	...	1,473,115
1850	20,275,831	..	354,337	...
1851	20,249,932	...	415,866	...
1852	19,927,039	...	...	469,701

The total net revenues and receipts in India for the three years ending 1850-51, and the charges in India and England, were as follows:

	Net revenues.	Charges in India.	Charges in England.
1848-49	£18,227,350	£16,687,557	£3,012,908
1849-50	20,275,981	17,170,707	2,750,937
1850-51	20,250,530	17,117,478	2,717,186

The estimated charges for 1851 and 1852 are put down at £17,901,666, and the revenues at £19,927,039; this does not include the disbursements in England, which are estimated at £2,495,074, leaving a deficiency of £469,701 for that year. The total net revenues of India are made up of the following sums for the year 1850-51:

Bengal presidency, . . .	£7,799,393
North-western provinces, . . .	4,746,799
Punjab and Trans-Indus territory, .	1,334,371
Madras presidency, ...	3,625,000
Bombay presidency, . . .	2,744,950
Total net revenue of India, . .	£20,250,513

The above sum does not include a small amount produced from commercial assets in India and China.—In 1851-2, the receipts from the prov. of Sind were £254,000; the charges £439,000; loss in 1851-2 by the acquisition of Sind, £185,000. And as with Sind, so with Sattara: its receipts in 1851-2 were £205,000; its charges, £242,000; loss, £40,000 a-year. By Sind and Sattara in 1851-2 the Indian government lost nearly £500,000; add the loss involved in the Punjab, and we have an annual burthen of about £1,500,000 sterling caused by these recent extensions of territory. The receipts from the six principal sources of revenue, and the charges of collecting each in the several years noted, were as follows:

GROSS RECEIPTS.

	1843-4.	1844-5.	1845-6.
Land revenue, .	£12,402,013	12,397,553	12,549,861
Sayer, Akberri, &c.	890,379	856,455	895,627
Customs, including duty on salt, . .	1,984,737	1,900,999	1,959,339
Sale of salt, .	2,137,320	2,192,666	1,877,262
Opium and opium passes,	2,473,843	2,670,738	3,354,377
Tobacco, . .	78,844	79,823	84,445

CHARGES OF COLLECTION.

Land revenue, Sayer, Akberri, &c.,	1,604,600	1,603,346	1,565,716
Customs,	202,399	185,414	182,709
Cost and charges of salt,	596,597	589,254	517,278
Cost and charges of opium,	575,569	625,780	726,237
Cost and charges of tobacco,	25,473	21,674	18,873

The returns of the stamp-duties, the item of revenue next in importance, were:

	Gross receipts.	Charge of collection.
1843-4	£411,061	22,796
1844-5	417,430	23,230
1845-6	408,819	27,596

The income from the duty on salt has remained almost stationary since 1845, while the revenue derived from opium in the Bengal presidency has increased from 2,95,99,875 rupees per ann. in that year to 3,11,94,816 r. in 1850; or from about £2,774,000 to £2,924,000. In the Madras presidency the land-revenue has decreased since 1847 from 3,65,48,058 r. to 3,51,59,696 r. in 1850; or from £3,426,000 to £3,296,000. The sale of salt has also retrograded. In Bengal, this monopoly yielded in 1843-44, £1,840,000; in 1850, only £1,000,000. In the North-western provinces the land-revenues show a considerable increase between 1845 and 1850. The revenue at the former period was £4,220,000; in the latter it had increased to £4,678,000.—In Bengal the land-revenue has oscillated between the years 1848 and 1852 from £3,500,000 to £3,560,000; in Madras from £3,640,000 to £3,470,000; in Bombay from £2,240,000 to £2,300,000. The cost of collecting the Indian revenue is very great. In Bengal a gross revenue of £10,000,000 is collected at the cost of £1,700,000. In the North-west provinces, gross revenues of £6,000,000 cost £500,000 in collecting. In the Punjab £170,000 is spent to collect £1,000,000; in Madras it takes £680,000 to collect £5,000,000; in Bombay £310,000 to raise £4,300,000; so that of a gross revenue of £27,000,000, nearly £3,400,000 are spent in collecting it. The expenditure on public works under the years noted was as follows:

	1843-4.	1844-5.	1845-6.
Buildings, roads, &c. (exclusive of repairs),	£170,504	135,294	169,443
Pilotage, &c.,	337,102	299,126	331,763

Debt.] On the 30th of April 1846, the territorial debt of the East India company in India amounted to 41,59,22,492 Company's rupees, or £38,992,734, bearing an average annual interest of $5\frac{3}{8}$ per cent., which amounted to 1,96,24,453 company's rupees, or £1,839,772. There is no statutory limit to the extent of debt which the Company may incur on India. In the last year of the last Indian charter, the Indian debt was £35,463,483, bearing an interest of £1,754,545. On the 30th April 1850, the debt had accumulated to £46,908,064, and the interest to £2,236,140. The Indian revenue is now loaded, moreover, with the interest of what is supposed to have been the commercial capital of the old trading firm, and also with the interest of a commercial debt of that firm, the first of these having amounted in 1850-51 to £636,493, and the last to £144,979. With these new liabilities, the capital of the Indian debt will be £63,332,539, and the yearly interest £3,017,612. The interest charged on the debts of each presidency in 1845-6 and 1850-51, was as follows:

	1845-46.	1850-51.
Bengal presidency,	£1,699,000	£2,097,216
North-western provinces,	2,602	37,475
Madras presidency,	70,470	51,986
Bombay presidency,	55,113	68,792
Total interest on debt,	£1,827,185	2,255,466
		1,827,185
Increase,		£428,284

The capital debts of each presidency are given in the following return, by which it will be seen that the total amount is £47,999,827, at a rate of interest ranging from 4 to 10 per cent:

I. Bengal.	Debts.	Rates of interest.	Annual amount of interest.
Registered debt.	Co.'s rupees.		Co.'s rup.
Loans,	1,10,55,697	6 per cent.	6,63,342
Ditto,	28,84,28,493	5 per cent.	1,44,21,424
Ditto,	15,38,74,708	4 per cent.	61,54,988
Co.'s rupees,	45,33,58,898		2,12,39,754
Loan transferred from Fort Marlborough,	8,972	10 per cent.	897
Treasury notes,	84,95,049	aver. 5 per ct.	4,26,363
Civil and medical funds,	2,04,85,047	6 per cent.	12,29,102
Miscellaneous deposits,	9,85,208	5 and 4 per ct.	41,083
Co.'s rupees,	48,33,33,174		2,29,37,199
II. NW Provinces, (Including the newly acquired territory.)			
Miscellaneous deposits,	2,00,000	4 per cent.	8,000
Temporary loans,	37,33,000	5 per cent.	1,86,650
Co.'s rupees,	39,33,000		1,94,650
III. Madras.			
Loans,	1,54,000	8 per cent.	12,320
Ditto,	80,500	6 per cent.	4,330
Civil, military, and medical funds,	66,82,765	6 and 5 per ct.	3,80,032
Miscellaneous deposits,	6,01,975	6, 5, and 4 per ct.	26,438
Treasury notes,	36,500	4 per cent.	1,460
Fund for the redemption of the bonds issued to the creditors of the late rajah of Tanjore,	28,11,894	4 per cent.	1,12,476
Co.'s rupees,	1,03,67,634		5,37,556
IV. Bombay.			
Civil annuity and other service funds,	59,36,032	6 per cent.	3,56,162
Civil provident and military funds,	76,06,303	5 per cent.	3,80,315
Miscellaneous deposits,	7,98,514	4 per cent.	31,940
Treasury notes,	23,500	4 per cent.	940
Co.'s rupees,	1,43,64,349		7,69,357
Total Co.'s rupees,	51,19,98,157	Co.'s rupees.	2,44,38,762
At 2s. per Sicca rupee,	£47,999,827		£2,291,134

Military force.] The troops in India belong partly to the British government, and partly to the East India company. The force is always considerable; and in time of war the Anglo-Indian army has been rendered very formidable. The strength of this army, in efficiency, consists of Europeans, whose skill in military tactics gives them a decided superiority in every contest. The sepoys are natives, enrolled and disciplined in the European manner. The grand total of the British military force in India, in October 1826, exceeded 300,000 men, viz.:

Artillery,	15,782
Native cavalry,	26,094
Infantry,	234,412
Engineers,	4,575
	280,865
King's troops,	21,934
Grand total,	302,797

Of these the irregulars of all descriptions amounted to 82,937 men.—In 1830, the military force employed at the three presidencies and subordinate settlements in India amounted to 224,444 men, and its expense to £9,474,481.—In 1837, the total effective force maintained in India was 295,840 men, of whom 26,582 were British. In 1851 the total strength of the Bengal army was 167,199 men, and 225 guns.—This formidable army is distributed throughout II.

under the orders of the supreme government, promulgated through its political agents. Commencing from the great station in the doab of the Ganges, one corps is stationed at Ajmir, another at Neemutch, and a third at Mow, all which stations are supplied from the Bengal army. A force of 66,589 men and 129 guns was mustered in the Punjab in 1851, and the Sirhind division amounted to 23,408 men. These are succeeded by the Gujerat subsidiary forces, the field corps at Mulligaum, and the Punah division, furnished chiefly by the Bombay army. The circle is further continued by the field-force in the southern Mahratta country; the Hyderabad and Nagpur subsidiaries, composed of Madras troops; and detachments from the Bengal establishments forming the Nerbudda and Saugur divisions. At Mirut, Allahabad, Benares, and Dinapore, strong divisions are maintained. Such is the general outline, liable, of course, to temporary modifications, and occasional change in the selection of stations. The officers in the Company's service receive commissions from Her Majesty corresponding with those which they receive from the East India company. Westward of the Cape of Good Hope, the Company's officers possess no rank when on service with the queen's officers; eastward of it they take precedence according to date and rank of commission. Every officer who has actually served 22 years in India is permitted to retire from service with £360 pay if a captain; £290 as commander; £190 as lieutenant or purser. An officer retiring from ill health, after 10 years' service, has £200 per ann. of retiring allowance as a captain; £170 as a commander, and £125 as a lieutenant. The officers for the Company's artillery and engineers are educated at Addiscomb college, near Croydon.

Marine force.] The Indian naval establishment is attached to the Bombay presidency, and consisted in 1830 of 4 18 gun ships, 6 10 gun corvettes, 2 armed steamers, and some surveying vessels. In 1844–5 it consisted of 4 vessels mounting in all 48 guns, and 4 steam frigates mounting in all 20 guns.—The pilot-service,—the best formed of its class in the world,—consists of 12 strong well-fitted vessels of 200 tons burthen; with 12 branch-pilots, 24 coasters, 24 first mates, and 24 second mates. The Company had 23 steam vessels of a total power of 2,770 horse-power in 1845–6.

Mails to and from England.] At present the Peninsular and Oriental steam-ship company maintains a monthly mail between England, Ceylon, Calcutta, Singapore, and Hong-Kong; for which they receive £90,000 per ann. from government; and £70,000 per ann. from the East India company. The duration of the voyages of this Company, under ordinary circumstances, is to Aden, 27 days; to Bombay, 35; to Ceylon, 41; to Madras, 45; to Penang, 46; to Calcutta, 48; to Singapore, 49; to Hong-Kong, 55. The steamers of this Company are from 400 to 520 horse-power; and cost from £50,000 to £90,000 each. The vessels for Alexandria sail on the 20th of each month, and arrive at Alexandria on the 9th of the following month. At Suez, at the head of the Red sea, an East India company's steamer is in waiting to convey the passengers and mails to Bombay; and another steamer, the property of the Peninsular and Oriental company, is also in waiting for the mails to Ceylon, Madras, and Calcutta. The two steamers sail down the Red sea in company; but their routes diverge at Aden, 1,308 m. from Suez; the Oriental steamer holding nearly due E to Point-de-Galle in Ceylon, where she exchanges mails with the China steamer, and then stretches along the Coromandel coast to Madras and thence to Calcutta, where she arrives in 28 days from Suez.

Native States.] The political relations of the E. India company are of three kinds. In the first class may be placed those States with which they hold only foreign relations, such as Cabul, Sennaa, Siam, and Acheen. A second class embraces the frontier states of Ava, Nepal, Tibet, Afghanistan. The third and more important, embraces the political relations of the government of India to internal States within the frontiers of H. These latter States may be divided into 6 classes:

The 1st class embraces those States with which the Company has treaties offensive and defensive, conferring a right on the States to claim protection, and on the Company to interfere in their internal affairs when thought necessary. To this class belong:

	Area.
1 Oude,	23,922 sq. m.
2 Mysore [now annexed],	27,999
3 Berar,	56,723
4 Travancore,	4,573
5 Cochin,	1,987
	115,204

To the 2d class belong such States as likewise hold treaties offensive and defensive with the Company; but which do not concede the right to the Company to interfere further than to aid in levying the revenue of their chiefs. They are 3 in number, viz.:

1 Hydrabad,	88,887 sq. m.
2 Baroda,	5,525
3 Kattiwar, or Gujerat,	19,424
	113,836

To the 3d class belong those States which are tributary to the Company, and acknowledge its supremacy, but whose chiefs are supreme in their own territory. These are:

1 Indore,	4,245		
2 Odipur,	14,784	14 Dhar,	1,465
3 Jypur,	13,426	15 Dholpur-Bari,	1,625
4 Judpur,	34,131	16 Rewah,	10,310
5 Kotah,	4,388	17 Dhuttia,	
6 Banswarra,	1,440	18 Jansi,	16,173
7 Pertubgurh,	1,457	19 Tirhi,	
8 Dungurpur,	2,004	20 Sawuntwari,	934
9 Kerauli,	1,878	21 Bhondi,	2,291
10 Serawi,	3,024	22 Bikanir,	18,059
11 Bhurtpore,	1,945	23 Jesalmir,	9,779
12 Bhopal,	6,772	24 Alwar,	3,234
13 Cutch,	7,395	25 Kishingur,	724
	93,889		158,483

With a 4th class of States the Company has entered into treaties of guarantee and protection, with supremacy in their own territory, and subordinate co-operation. These are:

	Area.
1 Tonk,	1,103 sq. m.
2 Serongi,	262
3 Nimbhera,	269
4 Puttiala,	
5 Keytul,	16,602
6 Daba,	
7 Jhind and other small Sikh states,	
	18,236

The 5th class, comprising States with which the Company holds treaties of amity and friendship, comprises only one state, viz.:

Scindia or Gwalior, . . 32,944 sq. m.

The 6th class comprises States which hold treaties of protection giving a right to the Company to control their affairs. These were:

1 Sattara (since annexed),	7,943
2 Kolapore,	3,184
3 Delhi,	3,184
	14,311

General recapitulation.] The following table, which exhibits the area and pop. of the different territories and states of India, though made up from the latest materials in our possession, must be regarded as a mere approximation:

I. BRITISH TERRITORY.

	Area in square miles.		Population.	
I. Presidency of Bengal.				
1 Province of Bengal,	76,000		25,000,000	
2 „ Bahar,	45,000		12,000,000	
3 „ Orissa,	20,000		3,000,000	
4 Ultra-Gangetic provinces,	42,000		350,000	
		183,000		40,350,000
II. Sub-Presidency of Agra.				
1 The 24 Collectorates,	81,000		15,270,000	
2 Additional districts in Gundwana, Oude, Bundelcund, Ajmir, the Rohilla districts, Kumaon, Bissahir, and the Doab,	90,000		5,000,000	
		171,000		20,270,000
III. Presidency of Madras,		128,000		17,000,000
IV. Presidency of Bombay,		68,000		7,000,000
V. The Punjab,		100,000		3,000,000
VI. Sind,		60,000		200,000
		710,000		87,820,000
To the above may be added the recently annexed territories of Mysore and Sattara,		36,000		3,600,000
		746,000		91,420,000

II. SUBJECT STATES.

1 Nizam of Hydrabad,		88,900		10,000,000
2 Rajah of Berar,		57,000		3,500,000
3 King of Oude,		24,000		5,000,000
4 Ras of Cutch,		7,400		350,000
5 Rajah of Rewah,		10,310		1,030,000
6 Rajah of Travancore,		4,600		500,000
7 Rajah of Cochin,		2,000		200,000
8 Rajah of Kolapore,		3,200		320,000
9 Rajah of Sawuntwari,		1,000		95,000
10 Rajah of Sikkim,		4,400		440,000
11 Chiefs of Dhuttia, Jansi, Tirhi, and others, in Bundelcund,		17,000		2,000,000
12 Rajah of Bhurtpore,		2,000		195,000
13 Rajahs of Dholpur-Bari,		1,650		163,000
14 Nabob of Bhopal,		6,800		700,000
15 Holcar's territories in Malwah,		4,250		425,000
16 Rajahs of Dhar and Dewas,		1,500		150,000
17 The Guicowar of Baroda,		5,600		800,000
18 Chiefs of Gujerat,		20,000		1,200,000
19 Sikh rajahs of Puttiala, Keytul, Duba, Jhind, and other districts between the Jumna and the Sutledge,		16,600		500,000
20 Daudputra chiefs and Bhawulpur,		18,000		350,000
21 Rajput provinces in Rajputana and Malwah, viz.:				
Mewar or Odipur,	11,800		1,178,000	
Jypur,	13,500		1,400,000	
Marwar or Judpur,	35,000		1,700,000	
Kotah,	4,400		4,400,000	
Bhondi,	2,300		230,000	
Alwar,	3,300		324,000	
Bikanir,	18,000		180,000	
Jesalmir,	10,000		100,000	
Kishingur,	730		72,000	
Banswarra,	1,440		144,000	
Pertaubghur,	1,500		145,700	
Dungarpur,	2,000		200,000	
Kerauli,	1,900		188,000	
Serawi,	3,000		300,000	
Chief of Tonk, Serongi, and Nimbhera,	1,700		164,000	
22 Sikh sirdars in Delhi,	18,000		500,000	
23 Maharajah of Cashmere,	5,000		500,000	
		129,570		11,725,700
		225,780		39,643,700

III. INDEPENDENT STATES.

	Area in square miles.	Population.
1 Maharajah Scindia or Gwalior,	33,000	3,500,000
2 Kingdom of Nepal,	36,000	2,000,000
3 Deb-rajah of Bhotan,	20,000	1,000,000
	89,000	6,300,000

IV. OTHER EUROPEAN TERRITORIES.

1 French territory,	530	178,000
2 Danish,	93	35,000
3 Portuguese territories of Goa, Damao, and Diu,	1,200	350,000
	1,823	563,000

RECAPITULATION.

I. British States,	746,000	91,420,000
II. Subject States,	425,780	39,643,700
III. Independent States,	89,000	6,300,000
IV. Other European Territories,	1,823	563,000
	1,262,603	137,926,700

History.] The history of H. may be divided into three heads; viz., the ancient history,—the Mahommedan history,—and the history of the establishment and progress of European colonies in the country.

The ancient history of H. reaches to a very great antiquity; but the only events prior to the birth of Christ of which we possess any clear information, are the invasions of India by Sesostris, the great war of the Mahabharat, and the successive invasions by Darius Hystaspes, by Alexander the Great, by Seleucus, and by Antiochus the Great. The sanguinary war which forms the subject of the epic poem called the *Mahabharat*, is calculated to have taken place about 1,200 years before the Christian era, and was distinguished by the political and religious changes which it produced. It was carried on by Krishna and his brother Bali Rama, against Jara Sandha, who reigned in Magadha, and who was surprised and slain in his capital. The conqueror raised himself, along with his brother, to the sovereignty over vast provinces, and were subsequently conjointly worshipped as one incarnation of Vishnu. Of the invasion of India by Sesostris, nothing is known, beyond the fact itself as mentioned by Diodorus Siculus. Dr. Robertson, indeed, doubts whether any such invasion ever took place, and ranks the exploits of Sesostris with the fabulous ones of Bacchus and Hercules. Under Darius Hystaspes, the Persians, about 500 B. C., overran a part of India Proper, and imposed upon its princes an annual tribute of 300 talents of gold. Before this event, dissensions had arisen among the different states of H., which invited the inroads not of the Persians only, but also of the barbarians of Tibet, who attacked and laid waste the northern provs.; and at the era of the invasion of Alexander the Great, the nations of the peninsula were separated from the eastern kingdom of the Prachii, which comprehended the modern Bengal, Bahar, and part of Oude. It is admitted by a Hindu writer, that the ostensible cause of the invasion of India by Alexander the Great, was to enforce the tribute of Darius Hystaspes, and to compel the Indian princes to acknowledge the supremacy of Persia. After having subdued several small states on the banks of the Indus, Alexander passed the different rivers of the Punjab, attacked Porus, the king of that district, who had collected a numerous army on the banks of the Hydaspes to oppose him, and obtained a decisive victory over that prince. He then resolved to push forward to the Ganges, but his troops had suffered so much from the excessive rains and inundations, that their patience as well as strength was exhausted, and on the banks of the Hyphasis, the modern Beyah, that conqueror was obliged to abandon his schemes, and to issue orders for marching back to Persia. He left behind him some troops, for the purpose of keeping possession of the conquered territory on the banks of the Indus, but his death, which happened shortly after, hastened the downfall of the Persian power in India. It was not, however, immediately annihilated. Seleucus, who obtained Upper Asia on the death of his master, marched into those countries of Asia which had been subdued by Alexander, partly with a view of establishing his own authority there, and partly to curb Chandra Gupta, or Sandracottus, king of Maghada, who had offered his assistance to the western princes against the neighbouring dominions of the Macedonians. The particulars of this invasion are obscurely and differently related; but it would seem that no decisive success was gained by either party, as a treaty was concluded, in which Seleucus gave his daughter in marriage to Chandra Gupta, who in return agreed to furnish Seleucus annually with fifty elephants. To confirm and perpetuate this amicable arrangement between the two monarchs, Seleucus sent Megasthenes, one of his officers, to reside at Palibothra, the capital of Maghada. After the embassy of Megasthenes, we hear no more of the affairs of India until the time of Antiochus the Great, who, nearly 200 years after Seleucus, made a short incursion into the country. The successors of Antiochus appear, soon after his death, to have abandoned their Indian possessions. The throne of Maghada, after the death of the grandson of Chandra Gupta, is stated to have been successively filled by seven Maurya kings of the family of Chandra Gupta, and ten of the Suryavarsha family. The eighth of the latter dynasty, Vicramaditya or Bickermajit, by a series of bold exploits attained the supreme sovereignty of India, in 56 B. C. His reign forms a splendid era in the Hindu annals, and the Hindus evince their respect for the memory of this prince, by calculating their civil time from the period of his inauguration. Maghada had originally comprehended Southern Bahar only. Under the government of the Andharas it was again reduced to its original limits, and it finally sunk in power before the kingdom of Gaur or Bengal, which rose to be the first sovereignty in India, under distinct Maharajahs or great chiefs. Orissa, Gujerat, and the provs. of the Peninsula, had also their dynasties, their civil contests and petty revolutions, of which it would be useless to attempt a succinct narrative.

Mahommedan history.] In the reign of the Kalif Walid, the Mahommedans first obtained possession of Sind, whence they made frequent incursions into the neighbouring provs. Subuctagi, after having subdued the fortresses of Bost and Kosdaur, carried his arms across the Indus, and ravaged the Punjab, but he made no permanent acquisitions in that direction, and formed no establishment in H. To his son, the celebrated Sultan Mahmud Ghiznavi, by whom the glories of his house were raised to their zenith, belongs the reputation of first establishing the Mahommedan power in India. Mahmud, equally influenced by the love of conquest, and a desire to exterminate the Hindu religion, invaded India, A. D. 1000, and reduced the prov. of Multan. In 1011, he reduced Delhi; and in 1024, the whole peninsula of Gujerat. At his death, in 1028, his possessions, forming the empire of Ghazni, embraced the eastern and larger part of Persia, and the Indian provs. from the W of the Ganges to Gujerat, with those between the Indus and the mountains of Ajmir. In 1158, the empire, which had been brought to rapid maturity by the talents and successes of Mahmud, began to fall to pieces. The western part was seized by the Gauri, while that contiguous to the Indus remained in the possession of Chusero, whose capital was Lahore. In 1184, Chusero's sons were expelled by the Gauri. In 1194, Mahomed Gori penetrated into H. as far as Benares. His death, in 1205, occasioned a new division of the Ghaznian kingdom; the Persian part became subject to Eldoze, and the Indian to Cuttub, who founded the Patan or Afghan dynasty in H. Cuttub made Delhi his capital; and in 1215, his successor, Altmush, reduced the greater part of H. Proper,—his empire extending from the mountains of Tibet to that part of the Deccan which lies in the lat. of 20° N, and from the Indus to the Ganges. This monarch was contemporary with the celebrated Mogul, Gengis Khan, who put an end to the Karasmian dynasty of Ghazni, which had succeeded the Gaurian, and overrun all Asia to the northward of the lat. of 30°. In 1265, the kingdom of Malwa, which had been reduced by Cuttub, shook off the yoke; and the rajpoots revolted.—From this period almost to the time that the British government commenced, India presents a continued series of wars and revolutions. The Moguls made such frequent and formidable invasions, that in 1292 Ferose II. allowed them to settle in the country. In 1397, the famous Timur Bek, or Tamerlane, after subduing all the W of Tartary and Asia, invaded H., and rapidly penetrating to Delhi, soon completed the subjugation of the country. Delhi was sacked, its palaces and temples burned, and an immense number of the inhabitants massacred by this cruel conqueror. He may be said, however, rather to have overrun than to have reduced and conquered it; for he did not disturb the order of succession in H., but reserved to himself the possession of the Punjab only. Baber's first expedition was in 1518; and in 1525 he took Delhi, and proclaimed himself emperor of H., thus establishing the Mogul dynasty. He reigned, however, only five years; and on his death, his son was obliged to take shelter for a time among the rajpoot princes of Ajmir. The reign of Acber, his grandson, which lasted 51 years, was the most brilliant and prosperous in the history of the Mahommedan empire of India. Under his son and successor, Selim, who assumed the appellation of Jehanghire, the empire continued to prosper. It was in this reign that the first English ambassador was sent to H. Jehanghire died in 1628, and was succeeded by his son, Shah Jehan, who pursued the conquest of the Deccan with great vigour. This monarch had four sons,—Dara, Sujah, Aurengzebe, and Morad,—among whom, even before the death of the father, bitter contests arose for superiority, which ended in the final triumph of Aurengzebe, who seated himself, without a rival, on the throne, in 1660. He died in 1707, after a reign of 52 years. Under him the Mogul empire reached its utmost limits, comprehending the country from the 10th to the 35th degree of lat., and nearly as many degrees of long. His wealth was immense. "His revenue," says Major Rennel, "exceeded £32,000,000 sterling, in a country where provisions are about four times as cheap as in England. But so weighty a sceptre could be wielded

only by a hand like Aurengzebe's; and accordingly, in 50 years after his death, a succession of weak princes and wicked ministers reduced this astonishing empire to nothing!" He left four sons. Mauzum, after defeating his brothers, reduced the Sikhs, a sect of religionists who had established themselves along the foot of the eastern mountains. He died at Lahore in 1712, leaving also four sons, among whom a contest for the succession again arose. Mahomed Shah, who was raised to the throne in 1720, acquired his full and legitimate power by defeating the Sikhs. But a new enemy, more formidable than either the Sikhs or the Mahrattas, started up in the person of Nadir-Shah, the celebrated Persian conqueror, who, after the capture of Candahar in 1737, marched to the eastward, and entering H, took Ghazni, Cabul, and Peshawer, and crossing the Indus near Attock, reduced the Punjab, took Lahore, defeated Mahomed near Carnaul, and marched to Delhi. The Mogul empire now became a prey to all the neighbouring states that were sufficiently powerful to attack it. Bengal became independent of Delhi, under Aliverdy Cawn. The Rohillas erected an independent state on the E of the Ganges, within 80 m. of Delhi. The Jauts, a Hindu tribe, established themselves, and founded a state in the prov. of Agra. The Deccan was usurped by its viceroy, Nizam. Oude, which had remained attached to the throne of Delhi, was seized upon by Seifdar-Jung; Allahabad by Mahomed Kooli. Malwah, which had been invaded and overrun by the Mahrattas in 1707, was finally separated from the Mogul government about 1732, and divided between the Poonah Mahrattas and several native princes. The Mahrattas also obtained the greater part of Gujerat, Berar, and Orissa, besides their ancient territories in the Deccan. Ajmir had never become a regular organized possession of the Mogul empire, like Agra and Delhi, though it continued under nominal subjection; but about 1748 it assumed total independence, and reverted to its ancient masters, the Rajpoot princes. The Sikhs also took advantage of the weakness of the Mogul empire, and in 1746 made themselves masters of a considerable part of the Doab of Ravay and Jallinder. "Thus," says Major Rennel, "the whole country of H. Proper was in commotion from one extreme to another, each party fearing the machinations or attacks of the other; so that all regular government was at an end, and villany was practised in every form. Perhaps in the annals of the world it has seldom happened that the bonds of government were so suddenly dissolved over a portion of country containing at least 60,000,000 of inhabitants."

History of British India.] The Venetians were the first Europeans who traded extensively with India before the discovery of a passage to it by the Cape of Good Hope, in 1497. The political situation of the leading European nations, all engaged more or less in ruinous wars, long left the Portuguese undisturbed in the enjoyment of those advantages which their discovery and exertions had secured to them. In the reign of Elizabeth, a body of English merchants petitioned that queen to grant them encouragement and exclusive privileges for the purpose of carrying on a trade with India. Elizabeth, on the 31st of December 1600, granted a charter erecting the petitioners into a corporation, under the title of 'the Governor and Company of Merchants of London trading to the East Indies.' By this charter—the origin of that important and anomalous power which has since grown up under the name of the East India company—the corporation was invested, for a period of 15 years, with the privilege of an exclusive trade "into the countries and parts of Asia and Africa, and into and from all the islands, ports, towns, and places of Asia, Africa, and America, or any of them, beyond the Cape of Bona Esperanza, or the straits of Magellan, where any traffic may be used, and to and from every of them." The commercial history of the rise and progress of this Company has been already detailed. In 1611, the English fleet off the coast of India was attacked by a large Portuguese armament, but made a triumphant defence; and the Mogul emperor allowed the English to establish factories at Surat, Ahmedabad, Cambaya, and Goga, by firman, on the 11th Aug. 1612. In 1614, Sir Thomas Roe was sent as the first British ambassador to the Mogul, from whom he obtained considerable privileges for the Company. About the same time the Zamorin of Calicut granted them similar privileges. In 1640, the English first effected a settlement at Madras. In 1634, they obtained from the court of Delhi the privilege of free resort to the port of Piply, in Bengal. The professional skill of a surgeon named Boughton, belonging to one of the Company's ships, who had the good fortune to cure the daughter of the emperor Shah Jehan of a severe illness, secured the favour of that monarch and of the nabob of Bengal. On the payment of 3,000 rupees, a license was given for an unlimited trade without demand of customs, and factories were established in Bengal. In 1661, a new charter was obtained from Charles II., who ceded to the Company the island of Bombay and the island of St. Helena The supreme seat of government, which had hitherto been at Surat, was transferred in 1687 to Bombay. Madras was at the same time formed into a corporation, governed by a mayor and alderman. In 1698, Azim, one of the grandsons of Aurengzebe, who commanded the Mogul army in Bengal, was bribed by the English to confer on them a grant of the three connected villages of Chuttanutte, Gorindpore, and Calcutta, together with a justiciary power over the inhabitants. Shortly afterwards, the fortifications of the new possessions being completed, received the name of Fort William; and about the same period the agency of Bengal was elevated to the rank of a presidency. For some years the position and relative constitution of the British presidencies fluctuated much; but Bombay at last superseded Surat; and from the date of the building of Fort William, the established presidencies were those of Madras, Bombay, and Bengal. The peace of Aix la Chapelle, in 1748, terminated those direct hostilities which the French and English had long carried on in India; but the armies which both states maintained at that period continued to assist different native princes, with the view, doubtless, on each side, of ultimately obtaining such a position as would make their power, on the renewal of a contest, paramount to that of their rival. The territory of the Carnatic, within the jurisdiction of which both Madras and Pondicherry were situated, was one of the subordinate principalities immediately governed by nabobs, but subject to the subadar of the Deccan, who was still regarded as a feudal prince under the Mogul emperor. On the death of Nizam-ul-Mulh, the subadarship of the Carnatic was disputed between his son Nazir and his grandson Murzafa. At the same time the nabob of the Carnatic, Anwaraadin, who had been regularly established in that office by the nizam, was opposed by Chunda Sahib. The latter and Murzafa made common cause; and M. Dupleix, the French governor of Pondicherry, a man of talent, intrigue, and ambition, lent them his aid. The combined troops of the French and the two princes overthrew those of Anwaraadin in a pitched battle, in which he himself was slain, and his eldest son taken prisoner, while his second, Mahomed Ali, escaped and obtained the assistance of the English. Thus commenced the Carnatic war, which was in reality a contest between the European powers for superiority in H. It was during this war that Mr. Clive, afterwards Lord Clive, commenced his brilliant career. On the breaking out of the seven years' war between England and France, in 1756, fresh fuel was added to the contests in India. At first the French captured several of the subordinate English factories, and even laid siege to Madras. But the arrival of reinforcements from Europe succeeded in turning the fortunes of war; Pondicherry was taken; and Mahomed Ali established in his principality. Salabut Jung, the third son of the nizam, who had been raised to the musnud of his father by the assistance of the French, at length obtained an accommodation with the English, in return for which they received from him a grant of the possessions which their victories over the French had given them, namely, the circar of Masulipatam and its districts, and the circar of Nizampatam. While the English were thus successfully establishing themselves in this part of India, they were obliged to detach a force to the succour of their interests in Bengal. Surajah Dowlah, who had, in 1756, succeeded to his grandfather, Aliverdy, nabob of Bengal and its dependencies, had at first shown himself favourable to the British. At length, however, he invested and made himself master of Calcutta. Clive, with his forces, now embarked for Bengal; and arriving in December, commenced their operations with vigour and success. Calcutta, Fort William, Tanna, and Bushbudgi, were quickly retaken; and on the 23d of June in the following year, was fought the famous battle of Plassey, by the issue of which Mir Jaffier gained the nabobship of Bengal, and his English allies a large treasure, and a portion of territory adjoining to Calcutta. Jaffier was speedily deposed by the same power which had placed authority in his hands, and Mir Causim his son-in-law invested with the dignity of nabob. Mir Causim had not been long possessed of the nabobship when he entered into projects unfavourable to the English; levying high duties on their merchandise; and even putting to death the English deputies who were sent to him to adjust matters. It was now resolved to restore Mir Jaffier to the dignity from which he had been degraded. On the 7th of June, 1763, he was proclaimed subadar of three provinces, and war was declared against Causim, who, after a brave resistance, abandoned by his army, and deprived of every fortification which he had possessed, fled to Sujah-Dowlah, nabob of Oude, at that time vizier to the mogul. The British were now masters of Bengal; for the sovereignty conferred on Jaffier was merely nominal. But Dowlah managed to maintain a vigorous resistance to the British arms; and Lord Clive, convinced that to exterminate the power of Dowlah was to destroy the strongest barrier of the Company's possessions against the incursions of the Mahrattas, reinstated him in his dominions, except a small district which was ceded to the mogul. To the Company's officers was reserved the power of collecting the revenues of Bengal, and all its dependencies,—a stipulation which constituted them the real sovereigns. Of this revenue, they were to be accountable for 20 lacs of rupees, or £225,000, to the mogul: and 53 lacs of rupees or £596,250, to the nabob of Bengal. The remainder was to belong to the funds of the Company. Notwithstanding what was called the successful event of this eastern contest, and notwithstanding the extension of the Company's territories and the great augmentation of their nominal revenues, its affairs were now in reality so embarrassed, that the interference and assistance of the British parliament was solicited; the ministry made use of their interference for the purpose of subjecting the Company's territorial possessions to the authority of the Crown; and thus, without a struggle, assumed a sovereignty to which, perhaps, their title was no less valid than that of the Company.

Hyder Ali.] The British in India were not long allowed to enjoy that tranquillity which Clive had procured for them. Hyder Ali, an adventurer, who, by his daring activity and energetic policy, had raised himself from the condition of a sepoy to the rank of a prince, conceived designs of extending his power still farther, and, if possible, driving the British out of India. He entered into and maintained an almost uninterrupted series of conflicts with the English, with varying fortune until his death in December 1782, at an age exceeding 80.

Tippu Saib.] In 1783, the English forces made an expedition into the territory of Canara, that part of Hyder's dominions for which he had evinced the greatest partiality. Hyder no longer existed to check their efforts; but Tippu, his son and successor, inherited too much of his father's activity to permit the British unmolested to ravage his dominions. In a short time, the invading army was invested in Bednore, the capital of Canara, by an Indian army consisting of 150,000 men, and obliged to capitulate. Tippu was, without doubt, the most powerful of all the Indian princes. His dominions were equal in extent to Great Britain; his revenue was computed at £4,000,000; and his military establishment consisted of about 150,000 men. With these means, he maintained a vigorous resistance to the British arms, but in 1792 was compelled to cede one-half of his dominions to the British and their allies. The French expedition to Egypt—which was imagined to be only a preparatory step to an expedition to India—confirmed the suspicions which the British had so long entertained; and suggested the necessity of immediately crushing Tippu. On the 8th of November, 1798, the Marquis Wellesley, governor-general of India, in order to bring the sultan to an open declaration of his sentiments, informed him, by letter, that his connection with the French was no longer a secret, and desired him to receive Colonel Doveton at his court, in order that such negotiations might be entered into as should terminate all existing differences. The sultan affirmed that he had formed no connection with the French, and expressed his surprise at the warlike preparations which were daily making. Whatever plausibility was in Tippu's assertions, the governor-general reckoned them unsatisfactory; and the British army, unwilling to allow Tippu, under pretence of negotiation, to prepare for a vigorous defence, advanced with rapidity into his dominions; and General Harris continued his march, till he came within sight of Seringapatam. The sultan now offered to capitulate; but the only terms offered him were, that half of his territories should be delivered to the allies; that he should pay two crores of rupees; that every Frenchman should be dismissed from the service; that he should receive ambassadors from the British and their Indian allies; and that four of his sons, and four of his chief officers, should be delivered as hostages, for the performance of the stipulated conditions. Convinced that he could no longer hope to obtain peace without completely sacrificing his dignity and his power, he formed the resolution of defending his capital to the last extremity, and of falling with the ruins of his empire. On the 2d of May, 1799, the works of the besiegers were completed. On the 4th the breach was judged to be practicable, and the assault, conducted by General Baird, commenced early next morning. To save the life of the sultan, a flag of truce was despatched to his palace; but Tippu disdaining to shrink from the combat, continued to encourage his soldiers by his presence, and to rouse them to exertion by his example, till he fell in a gateway on the N side of the fort, surrounded by the dead bodies of his attendants. With Tippu ended the powerful kingdom of Mysore; and by its fall the designs of France against the British empire in India were totally frustrated. Of his territories the East India company obtained the province of Canara, the district of Coimbatur and Duramporam, the country situated between the British possessions in the Malabar and those of the Carnatic, the forts and posts constituting the passes above the Ghauts on the table-land of Mysore, and the island, city, and fortress of Seringapatam. The nizam acquired the districts of Guti and Gorumcondah, with a territory upon the line of Chitteldrug, Sera. Nundidrug, and Colar. Though the Mahrattas had taken no active part in the war, political motives induced the British to grant them Harponelly, Sunda, Chittledrug, and part of Bidnur. The relations of Tippu were transported to the Carnatic; and a descendant of the ancient rajahs of Mysore, of five years of age, was sought out, and elevated to the nominal sovereignty.

War with Sindia, Holkar, &c.] The peshwa, or chief magistrate of the Mahratta states, had long been the ally of the British, but his power and authority were in a great measure usurped by the military chieftains, Sindia, the rajah of Berar, and Holkar. To avoid destruction from their hands, he threw himself upon English protection; and on the 31st of December, 1802, a treaty offensive and defensive was concluded between him and the British, in which the latter engaged to support his authority, and to restore him to the throne of Punah. On his part, the peshwa ceded to the Company a portion of his territories yielding a revenue of 2,000,000 rupees, to defray the expenses of the war, and as a compensation for the assistance to be lent him. A sufficient force under the command of General Wellesley was collected and in motion to conduct the peshwa to his capital, where he arrived on the 14th May. Sindia now raised a numerous army, which he placed in a situation which threatened the security of the British dominions. Holkar, and the rajah of Berar, were without difficulty engaged in the confederacy, which was also encouraged to look forward to French assistance. A force, however, more formidable than ever Britain had mustered in India, well provided, and supplied with every necessary, stood ready to counteract all the plans of their enemies. It amounted to about 50,000 men, besides pioneers, gun lascars, and persons belonging to the stores and ordnance service. The Mahratta army, or rather the army of the confederates, was also very formidable, particularly as it was under the discipline and conduct of several French officers, the most distinguished of whom was M. Perron, who had the power of making treaties in his own name. That under Dowlut Row Sindia, and the rajah of Berar, amounted to 24,000 infantry, and 38,000 cavalry, with 210 pieces of artillery; and that under M. Perron, to 43,650 men, infantry, and cavalry, with 464 pieces of artillery. Perron undertook to penetrate into the British possessions, along the valley of the Ganges, by Lucknow and Allahabad; and was opposed by the British forces under Lord Lake. The forces under Sindia and the rajah of Berar, were intended to march upon Bombay, and were opposed by General Wellesley. Early in August, 1803, active operations were commenced against the Mahratta states. On the 8th, Sir Arthur Wellesley commenced his operations against Ahmednagur, an important fortress in the province of that name, and on the 28th of September, he came up with the united forces of Sindia and the rajah, encamped on the N side of the Kristna, their line extending from that river to the village of Assaye. An attack immediately commenced upon the enemy's left, and after a terrible contest, the enemy's line gave way in all directions, and the British cavalry cut in amongst their broken ranks and made dreadful carnage. The battle of Assaye is memorable as the first of that brilliant series of victories which has distinguished the military career of the Duke of Wellington. On the 24th of November General Wellesley concluded an armistice with Sindia, by which the British troops were not to advance beyond Dohud, and those in the service of Sindia were not to approach Dohud, from the eastward, nearer than 50 m. The main army of the Berar rajah was encamped at Argaum, near Gawilghur. On the 29th of November, General Wellesley, joined by Colonel Stevenson, came in sight of the enemy, and after an obstinate conflict totally defeated them. Gawilghur, the rajah's principal fortress, was then reduced, and the rajah compelled to submit to a treaty of peace on very unfavourable terms.

While these events were passing on the western shores of India, the Bengal army, under Lord Lake, was advancing, on that side, against the enemy. On the 29th of August, 1803, he came up with the forces under the command of M. Perron, strongly posted, and defeated them. Perron finding that the cause in which he had embarked was not likely to succeed, abandoned the service of Sindia; and, on the 7th September, obtained leave to pass with his family, property, and attendants, unmolested to Lucknow. M. Louis Bourguien succeeded him in the command of the army. The skill and perseverance of the British commanders, however, overcame all difficulties; and the forces under Holkar were in the end so reduced and dispirited by repeated defeats that scarcely a sufficient number could be found to form a guard to his person. Peace had already been concluded with Sindia and other chiefs, and it was evident that Holkar would soon be compelled to follow their example. Previous to this desirable event, however, several severe conflicts took place betwixt the British forces and the confederate troops, in all of which the enemy was eventually worsted. The principal of these was the siege of Bhurtpore, which was assaulted three different times by Lord Lake without success, and before which he lost above 3,000 men. On the 6th January, 1806, a treaty of peace was concluded with Holkar, by which he surrendered a great part of his territories; and at the same time, engaged, "never to entertain in his service Europeans of any description, whether British subjects or others, without the consent of the British government." The greater part of the territory wrested from Holkar was afterwards restored to him.

Nepal war.] From this period, no event of much importance occurred till 1814, when the Company's government became involved in hostilities with the Nepalese. Nepal, a mountainous and intricate country, stretched along the borders of the British territories for six or seven hundred miles, and had gradually pushed its encroachments to the Sutlej on the W, and absorbed many of the petty rajahships in the N. At no distant period, this extensive tract of mountainous country appears to have been divided among several independent sovereigns, of whom the most considerable were the rajahs of Nepal Proper and of Catmandu. In 1768, the former of these princes entertaining apprehensions from the ambitious designs of the latter, entered into an alliance with the neighbouring rajah of Gorkah, whom, upon the invasion of his territory by the rajah of Catmandu, he called to his assistance. The Gorkah chief readily complied with his invitation, and succeeded in expelling the rajah of Catmandu, but retained possession of the country for himself, and established the Gorkah or Gurkha dynasty upon the throne of Nepal. It is thus that in speaking of these people, they are commonly called Gurkhas, from the origin of the reigning family, while the country in general is denominated Nepal. From the year 1768, the Gurkha government, by a series of vigorous operations, had been gradually increasing in strength and extending its dominions. It had successively reduced all the independent chieftains of the hills, and, by incorporation of territory, had consolidated a vast empire, and become a very formidable power. At the bottom of the Nepal hills, and along the whole of their extent on the side of H., there is a narrow slip of land, not more on an average than 20 m. in breadth, which has been considered to belong to the Nepalese. It is denominated the Tariya, and forms a sort of margin along the whole line of the British provinces of Bengal, Bahar, Oude, and Delhi. This narrow slip of land gave rise, as might naturally be expected, to continual disputes concerning the line of boundary. The Gurkhas, ever desirous to extend their possessions upon the plains, had been pursuing, for many years, a system of petty encroachment upon the British provinces: at first by steps so gradual as hardly to be noticed, but latterly by larger strides and more palpable aggression. In this posture of affairs the Governor-general, Lord Hastings, after a strong remonstrance, to which no attention was paid, formally declared

war against the kingdom of Nagal: and in a decisive campaign compelled the rajah to submission. A treaty was framed, the terms of which, while they left the rajah an independent sovereign, [illegible] was given up, and united in perpetuity to the Company's dominions: and the country upon the Jumna, to the W of Kemaon, was restored to the several chiefs from whom it had been con-

Pindarry war.] The next important political measure which engaged the attention of Lord Hastings was the extermination of a roving band of marauders, who, under the denomination of Pindarries had frequented Central India and the adjoining British states. They consisted of 30,000 cavalry, subject to no regular discipline, and having in fact no national existence. Cheitu, the principal Pindarry chieftain, had fixed his cantonments amid the rugged hills and wild forests which lie between the N bank of the Nerbudda and the Vindhya range. From these fastnesses he was soon driven; and in 1817, when the British armies entered Central India, he was closely pursued to Aggur and Mawar. Surrounded and driven as if into a net by the converging forces of the British presidencies,—repelled from the frontiers of Sindia and Holkar by the events of the Mahratta war,—and cut off from their accustomed retreat across the Nerbudda into the territories of the peshwa,—one of the main bodies of the Pindarries at length fell in with a British corps near Gungraur, and were so completely routed, that they instantly came under

Mahratta war.] In November 1817, Sindia, one of the most powerful chiefs of the Mahratta confederacy, engaged to unite his efforts with those of the British government in suppressing the predatory system, and restoring the general tranquillity of the country. Meanwhile, however, under the mask of solemn treaties, reiterated assurances of friendship, and apparent co-operation in the scheme which then engaged the governor-general's attention, the Mahratta powers had concerted a deep-laid conspiracy for overthrowing the British dominion in India. The plot was first revealed at Punah, on the 5th November 1817,—the very day on which the treaty with Sindia was signed. The peshwa commenced hostilities against the subsidiary force stationed in his capital. The movements of Holkar's army, and the character and circumstances of the court of Indore, left little doubt that this branch also of the Mahratta power would speedily participate in the general plot. Amir-Khan was waiting artfully until he could calculate the result of the approaching conflict: the neutrality of Sindia was insecure, and exposed to a thousand risks from the continual solicitations and taunts with which he was alternately assailed: in fact, the only one of the Mahratta allies who strictly preserved his fidelity to the British government was the Guicowar. A war was now commenced upon a scale before which the dimensions of a European campaign shrink in comparison. Every native power was upon the watch to profit by any miscarriage or misfortune of the British army, which had moreover to protect a frontier of not less than 2,500 m. in extent. The army was visited at this momentous juncture by an epidemic disorder denominated *cholera morbus*, but resembling that malady only in some of its principal features. It had been first observed about the middle of the rainy season of 1817, at Jessore, in the Delta of the Ganges, along whose banks, and those of its tributary streams, it spread its fatal course, comprehending the city of Calcutta in its ravages. For about ten days the camp was converted into an hospital,—the deaths amounting to a tenth of the number collected. As the army advanced in hopes of reaching a purer air, each day's route was strewed with the dead and dying. The malady had happily expended its virulence, when the movement of the Pindarries towards Gwalior, at the end of the month, demanded active exertions in the field. The military results of the whole Mahratta campaign may be summed up in a few words. Between Nov. 1817, and June 1818, 28 actions were fought in the field, and 120 forts, many of which had been deemed impregnable, fell by surrender, siege, or storm. The distance between the most northern and the most southern of these forts was not less than 700 m. The forces on each side cannot well be compared, for want of accurate knowledge of the numbers belonging to the hostile powers, but Colonel Blacker estimated the aggregate amount of the hostile armies at 217,000. The British force in the field, including the auxiliary and irregular troops, amounted to 116,000, of which only 13,000 were Europeans. The war thus successfully terminated placed in the hands of the British the sovereignty and the

Burmese war.] The war with the Burman empire—by which a large extent of territory along the bay of Bengal was [illegible]—Afghanistan,—an independent kingdom situate between our Indian possessions and Persia, [illegible] the British arms permanent employment. The government of India, with the view of frustrating the hostile designs of Russia, and of securing as far as practicable the integrity of the Afghanistan territory as a barrier against Russian aggression, became parties to a treaty between Shah-Shuja and Runjit-Singh of Lahore, which had for its chief object the re-establishment of the former on the throne of his ancestors. The British troops accordingly entered Afghanistan to carry the objects of that treaty into effect. On the 3d of June 1839, the last division of the troops marched from Candahar, and on the 20th the whole force was before Ghuzni, the most formidable fortification in Asia, which they took by storm on the 21st. Advancing to Cabul, the British army placed Shah-Shuja on the throne; but a series of disastrous events followed, which are related in the historical paragraph of the article AFGHANISTAN.

War in the Punjab.] The country lying between the Indus and the Sutledge, from 29° 15′ to 34° N lat., and 70° 40′ to 76° E long., and watered by these two great rivers, and the Jelum, the Chenab, and the Ravi, constitutes a rich and important territory, of which the pop. has been estimated at 1,500,000, about one-half Hindus, 500,000 Mahommedans, and 250,000 Sikhs. There had long been no government in this territory strong enough to control its own Sikh soldiery. The Sikhs, though constituting so small a proportion of the pop., were in fact the governing class in the Punjab. The religion of the Sikhs, and the nation itself as distinguished from the natives of India generally, originated, towards the close of the 17th cent., with Baba Nanak, who had been once a trader, but who subsequently led a life of religious meditation. He was one of those individuals of the unlearned classes who have arisen from time to time chiefly among the agricultural population of Upper India, and who, dissatisfied with the distinction of caste, and its concomitant national disunion, have endeavoured to produce a fusion of the existing systems of faith, in which might be included the various Hindu votaries, and even the Mahommedans of India. Nanak was enabled to disseminate his system by the protection of the native ruler who held the government of the Punjab under the Mahommedan sovereign of Delhi. He is said to have been a great traveller; and he certainly induced numbers of his countrymen to adopt his faith, and to call themselves *Sikhs* or 'disciples.' The sect continued to exist, with precarious fortune, after his death, under a succession of teachers, some of whom suffered persecution under the Mahommedan sovereigns, and one of them, Tegh Bahadur, the ninth in order from Nanak, was put to death in 1765. The Sikhs had almost disappeared, when Govind Singh, the son and successor of Tegh Bahadur, converted them from a religion of quietism and toleration to a republican confederacy of soldiers, who declared implacable enmity to all the followers of Mahommed. He abrogated the distinction of caste, admitted all Hindus into the new republic, and adopted for his military adherents the surname of *Singh*, or 'Lion.' He also began the political organization of the Sikhs, by the institution of a federal council of chiefs, who met periodically to consult on all measures connected with the body. The mode of government adopted at that time continued with several modifications until the close of the last century. The country was divided into 12 misals, within each of which the chief exercised independent power,—though joining with the federal body for objects common to all, and all agreed in determined resistance to the Mahommedan yoke. The Sikhs prospered under this mode of government, which lasted until the time of the late Runjit Singh, who gradually destroyed the several chiefs, under any, or even no pretext, and thus possessed himself of all the powers of government. The only misals which did not come under his yoke were those between the Sutledge and the Jumna, which spontaneously dissolved themselves under the protection of the British government. The last general diet was held in 1805, when Lord Lake pursued Holkar into the Punjab. Runjit Singh reduced the whole of the Punjab under his own absolute power, gained a considerable portion of Afghanistan, occupied and ruined Cashmere, compelled the chiefs of Little Tibet to pay him tribute, and even came into collision with the forces of China. All this power was the growth of little more than 20 years, and was obtained wholly by the sword, unchecked by the necessity of any plea or pretext, and kept together solely by the means which formed it, to be dissolved into more than pristine insignificance as soon as the person who gave it birth should be no more. The British government was the only power with which Runjit maintained friendly intercourse, and the only one from which his ambition could receive a check; and to that government it would seem that the task is now delegated of keeping alive the monarchy founded by the successful chief, after having destroyed the military body with which he obtained his power, and which, unrestrained by his iron will, had become as destructive to the nation which maintained it as dangerous to its neighbours. The political confederacy of the Sikhs was destroyed by the power of Runjit Singh; and the religion of Nanak has also ceased to exist in its original character. On the fall of Napoleon, numerous French and Italian officers found their way into the Punjab, and were taken into the service of the maharajah. By these means Runjit Singh organized and disciplined an army of Sikhs wholly disproportioned to the actual wants of the government; and his successors soon discovered that this army was in fact the master of the country, and regarded itself as the state. Every attempt to reduce its numbers was set at defiance; not a single regiment would suffer extinction; while the revenues of the country were wholly exhausted in the vain attempt to satisfy their rapacity. At last, in an evil hour for themselves, these formidable soldiers, encouraged doubtless by the disasters which the British had sustained in Afghanistan, resolved to measure their strength with that of the rulers of India. On the 11th of December 1845, the Sikh army in great strength, and with a vast and formidable field of artillery, crossed the Sutledge, and proceeded to intrench themselves at Ferozeshah, on the l. bank of that river. Sir Henry Hardinge, the governor-general, on this intelligence, hastened towards the invaded frontier, and on the 18th of December an action took place near Mudki, in which a Sikh army of 40,000 men, with 40 guns, was

defeated by a force not exceeding a third of that number with a few small guns. Three days after this engagement, the intrenched camp of the Sikhs at Ferozeshah was attacked and carried at the point of the bayonet after an obstinate combat. The Sikhs, however, kept together in sufficient force to threaten Ferozepore and Ludiana, but were again defeated at Aliwal, and on the 10th of February, the whole concentrated Sikh forces were driven across the Sutledge, with prodigious loss of men and that of their whole park of artillery. Following up these advantages, the British army marched upon Lahore, and finally annexed the Punjab, with the exception of Cashmere, and some small territories assigned to Gholab-Singh.

It affords us pleasure to close this brief historical sketch of the Company's proceedings in India with the following testimony of one well-qualified to judge of the manner in which the duties and obligations of that great body of 'merchant princes' have been generally discharged in their government of India: "To communicate," says Mr. Mill, in his *History of British India*, "the whole of the impression made upon a mind which has taken a survey of the government of India by the East India company, more completely, through the old field of its action, than was ever taken before, and which has not spared to bring forward into the same light the unfavourable and the favourable points, it may be necessary to state,—and this I conceive to be the most convenient occasion for stating,—That, in regard to *intention*, I know no government, either in past or present times, that can be placed equally high with that of the East India company: That I can hardly point out an occasion on which the schemes they have adopted, and even the particular measures they pursued, were not by themselves considered as conducive to the welfare of the people whom they governed: That I know no government which has on all occasions shown so much of a disposition to make sacrifices of its own interests to the interests of the people whom it governed, and which has, in fact, made so many and such important sacrifices: That, if the East India company have been so little successful in ameliorating the practical operation of their government, it has been owing chiefly to the disadvantage of their situation,—distant a voyage of several months from the scene of action,—and to that imperfect knowledge which was common to them with almost all their countrymen: but that they have never erred so much as when, distrusting their own knowledge, they have followed the directions of men whom they unhappily thought wiser than themselves, viz., practical statesmen and lawyers: and that, lastly, in the highly important point of the servants or subordinate agents of government, there is nothing in the world to be compared with the East India company, whose servants, as a body, have not only exhibited a portion of talent which forms a contrast with that of the ill-chosen instruments of other governments, but have, except in some remarkable instances, as that of the loan transactions with the nabob of Arcot, maintained a virtue which, under the temptations of their situation, is worthy of the highest applause. In matters of detail I have more frequently had occasion to blame the Company's government than to praise it; and, till the business of government is much better understood, whoever writes history with a view solely to the good of mankind will have the same thankless task to pursue; yet I believe it will be found that the company during the period of their sovereignty have done more in behalf of their subjects,—have shown more of good-will towards them,—have shown less of a selfish attachment to mischievous powers lodged in their own hands,—have displayed a more generous welcome to schemes of improvement,—and are now more willing to adopt improvements,—not only than any other sovereign existing in the same period, but than all other sovereigns taken together on the surface of the globe."

HINDRINGHAM, a parish in Norfolk, 3½ m. SE of Walsingham, on a branch of the Skiffkey. Area 2,990 acres. Pop. 721.

HINDS, a central county of the state of Massachusetts, U. S., comprising an area of 875 sq. m., drained by an affluent of Pearl river on the E, and on the W by several tributaries of Big Black river. Its surface is level, and its soil generally fertile. Pop. in 1840, 19,098. Jackson, the capital of the state, is situated in this co., on Pearl river. Its chief town is Raymond.

HINDU-KUSH, Hindu-Koh, or Indian Caucasus, a mountain-range on the N frontiers of Afghanistan, which Humboldt regards as forming a connecting link between the mountain-ranges of N. Turkistan, and the Hazareh range to the E of them, and the great Kuen-lun range of Central Asia, rather than as the western prolongation of the Himalaya, which latter range is separated from the Kuen-lun by the valley of the Upper Indus. Humboldt represents the H. as striking-off from the Bolar range in about N lat. 36°, E long. 74°, and running 300 m., in a direction to the S of W, to its culminating summits, in N lat. 35° 40′, E long. 68° 50′, about 45 m. NNW of Cabul. The ridge immediately to the E and W of this point appears to be about 20,000 ft. above sea-level; but we have no exact measurements. Wood, who explored the Khawak pass, in N lat. 35° 38′, E long. 70°, estimated its alt. at 13,200 ft.; and it lies 50 m. to the E of the great collection of lofty peaks forming the H. Proper. Between the Khawak pass and Bamian, a distance of about 150 m., occur numerous passes leading from Cabul into Budakshan. To the W of Bamian, the range becomes greatly depressed, but may be regarded as prolonged in the Ghur mountains, or *Paropamisus*, to the great Persian table-land. Burnes crossed the H. by 6 successive passes, from Cabul to the valley of the Oxus at Khulum, 40 m. E of Balkh. The journey, estimated by him at 260 m., employed 13 days. Starting from an elevation of 6,600 ft. above sea-level, he followed the river of Cabul to its source, at an elevation of 8,600 ft.; and attained the greatest points of elevation in the passes of Hajiguk [12,400 ft.] and Kalu [13,000 ft.], both of which were covered with snow. None of the other passes exceeds 9,000 ft. in alt. From the last of them, called Kara-Kotul, he descended the bed of a river, falling 60 ft. a-mile, till he reached the plains of Turkistan, 2,000 ft. above sea-level. Granite appears to form the core of this mountain-range; near the surface appear secondary limestone and fossiliferous sandstone. Its vegetation is scanty, presenting only a few dwarf firs, poplars, and birches; and in the more sheltered passes, apricot trees, blackberry bushes, sweet-briar, and hawthorn. The *kiang*, an animal resembling a quagga, the *yak* or grunting-ox, and the *kutchkar* or wild sheep, roam over its untrodden wilds, and find plentiful fodder in the furze, aromatic plants, and *prangos*, a species of umbellifera, the leaves, flowers, stems, and seeds of which are alike nutritious. See Afghanistan.

HINESBURG, a township of Chittenden co., in the state of Vermont, 42 m. W of Montpelier. It has an irregular surface, and is watered by Platte river and Lewis creek. Pop. in 1840, 1,682.

HINESVILLE, a village of Liberty co., in the state of Georgia, 196 m. SE of Milledgeville, on the pine lands, 14 m. NE of Riceboro'. In 1840 it consisted of only 3 or 4 dwellings.

HING, a district and town of China, in the prov. of Shan-se, division and 100 m. NW of Tae-yuen-fu, on an affluent of the Hoang-ho, in N lat. 38° 38′.

HING-E-FU, a division and town of China, in the prov. of Kwei-chu. The div. comprises 4 districts, one of which bears the same name.

HING-GAN, a district and town of China, in the prov. of Kwan-se, division and 35 m. NE of Kwei-lin-fu, on the Siang-kiang, and about 12 m. from the frontier of the prov., in N lat. 25° 32′.

HINGENE, a department and commune of Belgium, in the prov. of Antwerp, arrond. of Malines, watered by the Schelde and Rupel. Pop. of dep. 3,607; of com. 1,216.

HINGEON, a department and commune of Belgium, in the prov. and arrond. of Namur. Pop. of dep. 577; of com. 568.

HINGES, a commune of France, in the dep. of the Pas-de-Calais, cant. and 3 m. N of Bethune. Pop. 1,055.

HINGHAM, a parish and market-town in Norfolk, 6 m. NW of Wymondham. Area 3,630 acres. Pop. in 1831, 784; in 1841, 1,691.

HINGHAM, a township of Plymouth co., in the state of Massachusetts, 15 m. SE of Boston, on the S side of Boston bay. Its surface is irregular, but its soil in many parts possesses considerable fertility. It has packet-communication with Boston; and con-

ducts an active fishing and coasting trade. Pop. in 1840, 3,564.

HING-HWA, a division and town of China, in the prov. of Fo-keën. The div. comprises 2 districts. The town, which is situated on a bay of the channel of Fo-keën, in N lat. 25° 25′ 22″, and E long. 119° 8′, has a small port. It occupies a highly advantageous position, and is superior as a town to Tseuen-chu-fu, but possesses comparatively little trade. The surrounding country is highly romantic, but its resources are not very abundant.

HING-KING-LE-TSZE-TING, a district and town of China, in the prov. of Leaou-tung, division and 81 m. E of Fung-teen-fu.

HING-KU-CHU, a district and town of China, in the prov. of Hu-pih, division and 88 m. SE of Wu-chang-fu, on an affluent of the Yang-tse-kiang, in N lat. 26° 22′.

HINGLAISGHUR, a fortress of Hindostan, in the prov. of Malwah, and district of Mundissor, 100 m. N of Ougein, and 45 m. SSW of Kota. It stands on a height, surrounded by walls and a deep natural ravine, 200 ft. in breadth, and crossed by 3 artificial causeways. It belongs to the Holcar family; and is considered one of the strongest citadels in their dominions.

HINGLAJ, a celebrated place of Hindu pilgrimage, in Beluchistan, on the l. bank of the Aghor, about 20 m. above the entrance of that river into the Indian ocean, and 60 m. SW of Beila. The pagoda is a low mud edifice dedicated to Kalee.

HING-MI, a district and town of China, in the prov. of Kwan-se, division and 20 m. WNW of Yuh-lin-chu, near one of the sources of a river which flows into the gulf of Tonquin at Lien-tchou.

HING-NING, a district and town of China, in the prov. of Hu-nan, division of Lin-chu, on a small stream, 90 m. SE of Hang-chu-fu, in N lat. 25° 54′ 40″, and E long. 113°.—Also a district and town in the prov. of Kwang-tung, division of Kea-ying-chu, 70 m. NW of Chaou-chu-fu, in N lat. 24° 3′ 36″, and E long. 115° 42′.

HING-PING, a district and town of China, in the prov. of Shen-se, division of Si-gan-fu, in N lat. 38° 18′.

HING-TANG, a district and town of China, in the prov. of Chih-le, division of Ching-ting-fu.

HINGUNGHAUT, a considerable commercial town of Hindostan, in the prov. and 50 m. SSW of Nagpur, on an affluent of the Wurda.

HING-WAN, a district and town of China, in the prov. of Sze-chuen, division of Seu-chu-fu, in N lat. 28° 10′, and E long. 105°.

HING-WHA, a district and town of China, in the prov. of Keang-su, division of Yang-chu-fu, in N lat. 32° 56′.

HING-YAN-FU, or SIN, a division and town of China, in the prov. of Shen-se. The div. comprises 7 districts. The town is on the r. bank of the Han-kiang, 120 m. SSE of Se-gan-fu, in N lat. 33° 31′ 20″.

HING-YIH-HEEN, a district and town of China, in the prov. of Chih-le, div. of Shun-tih-fu.

HINHANGABAHU′, a river of Brazil, in the prov. of São Paulo, which waters the city of that name, and, after uniting with the Tamandatahi, falls into the Tieté.

HINIESTA, JINIESTA, or YNIESTA, a town of Spain, in New Castile, in the prov. and 50 m. SSE of Cuenca, partido of Villanueva-de-la-Jara. Pop. 4,116. It lies on the sides of two small hills which rise amid fertile plains, and is large and well-built. It has a handsome church, and possesses extensive manufactories of common woollen fabrics. A fair is held here once a-year. This town occupies the site of the ancient *Segestica* of the Romans, numerous remains of which still exist. In the environs are quarries of black and red jasper.

HINKLETOWN, a village of Lancaster co., in the state of Pennsylvania, U. S., 42 m. SE of Harrisburg, on the N side of Conestoga creek.

HINKSEY (NORTH), or LAURENCE, a parish in Berks, about $\frac{1}{4}$ m. W of Oxford, and $5\frac{3}{4}$ m. NNW of Abingdon, on the W bank of the Isis. Area 900 acres. Pop. in 1831, 187; in 1841, 295.

HINKSEY (SOUTH), a parish in Berks, about $\frac{3}{4}$ m. S of Oxford, and $4\frac{3}{4}$ m. N of Abingdon. Area 550 acres. Pop. in 1831, 153; in 1841, 157.

HINOJALES, a town of Spain, in Andalusia, in the prov. and 55 m. NNE of Huelva, partido and 6 m. NE of Aracena. Pop. 336.

HINOJAR-DEL-REY, a village of Spain, in Old Castile, in the prov. and 12 m. SE of Burgos, and partido of Salas-di-los-Infantes, near the l. bank of the Arandilla, and near the supposed site of the ancient *Clunia*. Pop. 130.

HINOJARES, a town of Spain, in Andalusia, in the prov. and 38 m. ESE of Jaen, and partido of Cazorla, in a plain, watered by the Turilla. Pop. 588. It has salt-works, a glass-house, and several manufactories of brooms.

HINOJOS, a town of Spain, in Andalusia, in the prov. and 32 m. E of Huelva, and partido of La Palma. Pop. 774.

HINOJOSA, a town of Spain, in Leon, in the prov. and 55 m. W of Salamanca, partido of Lumbrales, between three eminences near the l. bank of the Duero. Pop. 2,028. The streets are steep, and the houses generally low and damp. It possesses manufactories of hats and linen, a fulling-mill, and a tile-work. In the environs are several tumuli bearing Latin inscriptions. The surrounding district, which is watered by the Camaces, Huebra, and Agueda, is fertile but very unhealthy.—Also a town in New Castile, in the prov. and 45 m. WNW of Toledo, and partido of Talavera-de-la-Reina, at the foot of Mount St. Vincent, on the summit of which are the remains of a fortress of the Templars. Pop. 1,400. It has a convent and a hermitage. The environs produce good wine.—Also a town in Old Castile, in the prov. of Soria and partido of El-Burgo-de-Osma.

HINOJOSA-DEL-CAMPO, a town of Spain, in Old Castile, in the prov. of Soria and partido of Agreda.

HINOJOSA-DEL-DUQUE, a judicial partido and town of Spain, in Andalusia, and prov. of Cordoba. The partido comprises 6 pueblos. The town is 42 m. NNW of Cordoba, in an extensive plain the extremities of which are bathed by the Zujar and Guamatilla. Pop. 7,748. It has 2 convents and 2 hospitals; and possesses several manufactories of linen and of woollen fabrics.

HINOJOSA-DE-LA-SIERRA, a town of Spain, in Old Castile, in the prov. and partido, and 9 m. NNW of Soria, near the l. bank of the Duero.

HINOJOSA-DEL-VALLE, a town of Spain, in Estremadura, in the prov. and 16 m. NE of Llerena, and partido of Almendralejo, in a fertile plain. Pop. 578.

HINOJOSOS, a town of Spain, in New Castile, in the prov. and 50 m. SW of Cuenca, partido of Belmonte. It consists of two contiguous pueblos, distinguished as Hinojosos-del-Marquesado and Hinojosos-del-Orden, containing respectively 1,347 and 1,758 inhabitants.

HINOTOAN, a town of the island of Mindanao, on a bay of the E coast, to the N of Catel.

HINSDALE, a township of Cheshire co., in the state of New Hampshire, U. S., 71 m. WSW of Concord, bounded on the W by Connecticut river,

and watered by Ashuelot river and several of the tributaries of the Connecticut. It is intersected from E to W by a mountain-range 800 or 900 ft. in height, but is to a great extent fertile and well-cultivated. Pop. in 1840, 1,141.—Also a township of Berkshire co., in the state of Massachusetts, 121 m. W of Boston. It is hilly, but affords fine pasturage. Pop. 995.—Also a township of Cattaraugus co., in the state of New York, 287 m. WSW of Albany, on the Genesee Valley canal, and on the New York and Erie railroad. Pop. 1,937.

HINSTOCK, a parish in Salop, 6 m. NNE of Newport, on the Birmingham and Liverpool Junction canal. Area 6,720 acres. Pop. in 1841, 897.

HINTLESHAM, a parish in Suffolk, 4½ m. NE of Hadleigh. Area 3,858 acres. Pop. in 1841, 583.

HINTON, a township in the p. of Pontesbury, Salop. Pop. 59. — Also a tything in the p. of Berkeley, Gloucestershire. Pop. 539.—Also a hamlet in the p. of Woodford, Northamptonshire. Pop. 299. — Also a hamlet in the p. of Blythburgh, Suffolk. Pop. 136.

HINTON (Great), a tything in the p. of Ashton-Steeple, Wilts, 4 m. ENE of Towbridge. Pop. in 1831, 234; in 1841, 216.

HINTON (Little), a parish in Wilts, 5 m. E of Swindon. Area 2,230 acres. Pop. in 1841, 324.

HINTON-ADMIRAL, a chapelry in the p. of Christ-church, Hants. Pop. 334.

HINTON-AMPNER, a parish in Southampton, 3 m. SSW of New Alresford. Area 1,640 acres. Pop. in 1831, 389; in 1841, 360.

HINTON-BLEWETT, a parish in Somerset, 7½ m. NNE of Wells. Area 1,070 acres. Pop. in 1831, 325; in 1841, 336.

HINTON-CHERRY. See Cherry-Hinton.

HINTON-ST.-GEORGE, a parish in Somerset, 2 m. NNW of Crewkerne. Area 1,480 acres. Pop. in 1831, 850; in 1841, 832.

HINTON-ON-THE-GREEN, a parish in Gloucestershire, 7½ m. ENE of Tewkesbury, on the Isborn. Area 2,030 acres. Pop. in 1831, 310; in 1841, 178.

HINTON-IN-THE-HEDGES, a parish in Southampton, 2 m. NW of Brackley. Area 2,070 acres. Pop. in 1831, 173; in 1841, 171.

HINTON-MARTEL, or Magna, a parish in Dorset, 4 m. NNE of Wimborne-Minster. Area 1,860 acres. Pop. in 1831, 267; in 1841, 290.

HINTON-PARVA, or Stanbridge, a parish in Dorset, 2½ m. N of Wimborne-Minster, on the Allon. Area 430 acres. Pop. in 1831, 36; in 1841, 47.

HINTON-ST.-MARY, a parish in Dorset, 6½ m. SW of Shaftesbury. Area 1,170 acres. Pop. in 1831, 303; in 1841, 361.

HINTON-ST.-WALLERY, or Waldrist, a parish in Berks, 6 m. ENE of Great Farringdon. Area 2,180 acres. Pop. in 1831, 348; in 1841, 358.

HINTON-TARRANT, a parish in Dorset, 8 m. SW of Cranborne, crossed by the post-road from Dorchester to Salisbury. Area 620 acres. Pop. in 1831, 241; in 1841, 278.

HINTS, a parish and village in Staffordshire, 3½ m. SW of Tamworth, on a branch of the Tame. Area 1,570 acres. Pop. in 1831, 225; in 1841, 213.

HINWICK, a hamlet in the p. of Puddington, Bedfordshire. Pop. 204.

HINWYL, a bezirk or bailiwick, parish, and village of Switzerland, in the cant. and 15 m. ESE of Zurich, bail. and 5 m. NE of Grüningen. Pop. (Protestant) 2,729. In the vicinity are the alkaline springs and baths of Gyrenbad and Ehrlösen.

HINXHILL, a parish in Kent, 2¼ m. E of Ashford, on the South-Eastern railway. Area 650 acres. Pop. in 1831, 163; in 1841, 171.

HINXTON, a parish in Cambridgeshire, 4½ m. WSW of Linton, on the banks of the Cam, and on the railway from London to Cambridge. Area 1,503 acres. Pop. in 1831, 333; in 1841, 382.

HINXWORTH, a parish in Hertfordshire, 4 m. N of Baldock. Area 1,440 acres. Pop. in 1841, 328.

HINZEMONT, a commune of Belgium, in the prov. of Namur, dep. of Hastiere-Lavaux. Pop. 101.

HINZUAN. See Anzuan.

HIO (San-Andres-del), a town of Spain, in Galicia, in the prov. and partido of Pontevedra, on the shore of the Atlantic. Pop. 2,590. It has a parish-church and a custom-house. Fishing and the rearing of cattle form extensive branches of local industry.

HIORRING—formerly Wendsyssel—an amt or bailiwick and town of Denmark, in Jutland. The bail. occupies the N extremity of Jutland, and terminates on the NNE in a long peninsula, the end of which forms the Skaw, or Cape Skagen. It is bounded on the E by the Cattegat; on the S by the bail. of Aalborg, from which it is partly separated by the Linn-Fiord; on the SW by the bail. of Tisted; and on the W and NW by the Skager Rack; and comprises a total area of 1,080 sq. m. It is divided into the hærads of Horns, Wennebjirg, Dronninglund, Börglum, Hvetho, and Osterhan with Lasöe; and comprises 4 towns, viz. Skagen, Frederikshafn, H., and Säby, and 85 villages. Pop. 67,800.—The town is 30 m. N of Aalborg, and about equidistant to the SW of Cape Skagen, in N lat. 57° 27′ 41″, and 2° 35′ 43″ W long. of Copenhagen. Pop. 1,800. It has a church, and possesses several breweries and distilleries of brandy. In 1693, it was nearly totally destroyed by fire.

HIORTOE, a small island of Denmark, in the Little Belt, to the S of the island of Fyen, and E of that of Dreyoe. Agriculture and fishing form the chief employments of the inhabitants.

HIPANEMA, a river of Brazil, in the prov. of Sâo-Paulo, an affluent of the Rio-Sorocaba.

HIPPA, a small island in the N. Pacific, near the shore of British North America, to the W of Queen Charlotte's island, and to the NW of Rennel strait, in N lat. 53° 33′.

HIPPENSCOMBE, an extra-parochial district of Wilts, near Great Bedwin. Area 980 acres. Pop. in 1831, 58; in 1841, 59.

HIPPERHOLME with BRIGHOUSE, a township in the p. of Halifax, W. R. of Yorkshire, on the Manchester and Leeds railway, 26 m. from Leeds, and 34 m. from Manchester. Area 2,550 acres. Pop. in 1831, 4,977; in 1841, 5,421. The village is skirted on the S by the Calder.

HIPPOLYTE (Saint), a canton, commune, and town of France, in the dep. of the Doubs, arrond. of Montbéliard. The cant. comprises 26 com. Pop. in 1831, 7,233; in 1841, 7,726. The town is situated between lofty mountains, at the confluence of the Doubs and Dessoubre. Pop. 862. It has extensive manufactories of clocks and of jewellery, a dye-work, several tanneries, and a hat-manufactory. The environs are noted for their cheese. The origin of this town is unknown. In 1303, a chapter, composed of 8 prebends, was founded here by Jean II., and an Ursuline convent was established in 1617.—Also a canton, commune, and town, in the dep. of the Gard, arrond. of Le Vigan. The cant. comprises 6 com. Pop. in 1831, 7,922; in 1841, 8,059. The town is 14 m. E of Le Vigan, and 29 m. WNW of Nimes, near the sources of the Vidourle. The town, which has some fortifications, and an old castle, is well built, and has 4 suburbs. Pop. in 1841, 5,297. A canal, by which it is intersected, supplies its fountains with water. It has a Calvinistic consistorial

church, and possesses considerable manufactories of silk and cotton-hosiery, leather, and cloth. Cattle-fairs are held 4 times a-year. In 1687 this town was enclosed by a wall.—Also a village in the dep. of the Puy-de-Dôme, cant. and 3 m. WNW of Riom. Pop. 1,398.—Also a town in the dep. of the Haut-Rhin, cant. and 4 m. NE of Ribeauviller, on a mountain of the same name. Pop. 2,258. It is defended by a fortress, and has a parish-church, in which are the relics of the saint from whom the town takes its name. St. H. was taken in 1444 by the dauphin, son of Charles VII., and was afterwards taken and ravaged by the Germans. It was ceded to France by the treaty of Westphalia, and by that of Paris in 1718, to the duke of Lorrain. In the vicinity is a coal-mine.

HIPPOLYTE (Saint), or La-Chapelle-Saint-Hippolyte, a commune of France, in the dep. of the Indre-et-Loire, cant. and 8 m. SE of Loches, on the r. bank of the Indre. Pop. 1,058. A fair for cattle, grain, hemp, wax, and other commodities, is held here once a-year.

HIPPOLYTE-DE-CANTELON (Saint), a village of France, in the dep. of Calvados, cant. and 8 m. E of Lisieux, and 36 m. ESE of Caen. Pop. 200. A fair for cattle and mercery is held here once a-year.

HIPSWELL and ST. MARTINS, a chapelry, in the p. of Catterick, N. R. of Yorkshire, 1½ m. SE of Richmond. Area 2,290 acres. Pop. in 1841, 313.

HIR, a hamlet in the p. of Llanarth, Cardiganshire. Pop. 270.

HIR-ABAD, a town of Persia, in the prov. of Khorassan, 60 m. NNW of Yezd.

HIRAM, a township of Oxford co., in the state of Maine, U. S., 79 m. WSW of Augusta, on Saco river. It possesses a good and fertile soil. Pop. in 1840, 1,233.—Also a township of Portage co., in the state of Ohio, 154 m. NE of Columbus. It possesses a fertile and well-cultivated soil. Pop. 1,080.

HIRAPUR, a town of Hindostan, in the prov. of Allahabad, district of Bundelcund, 48 m. SSW of Chutterpur.

HIRCHOVA, or Hirsova, a town of Turkey in Europe, in Bulgaria, sanj. and 57 m. NE of Silistria, and 42 m. SW of Babadagh, near the r. bank of the Danube, on a steep rock at the foot of which are suburbs inhabited by Wallachians and Greeks. Pop. 4,000. It is fortified, and contains a castle and a mosque. It occupies the site of the ancient *Axiopolis*.

HIREL, a commune of France, in the dep. of the Ille-et-Vilaine, cant. of Cancale. Pop. 1,754.

HIREPOLI, a town of Turkey in Europe, in Rumelia, capital of a district in the sanj. and 66 m. NNE of Gallipoli, and 54 m. SE of Adrianople, on the l. bank of the Ainadjik.

HIRLINGEN, or Hirrlingen, a town of Würtemberg, in the circle of the Schwarzwald, obmt and 4 m. SSW of Rottenburg, and 17 m. SW of Reutlingen. Pop. (Cath.) in 1840, 1,544. It has a castle.

HIRMAH, a town of Abyssinia, in the Dawaro district, 54 m. SW of Hubetta, and 360 m. SE of Gondar.

HIRMANLI, or Hermanli, a town of Turkey in Europe, in Rumelia, capital of a district in the sanj. and 15 m. W of Tchirmen, and 36 m. NW of Adrianople, at the confluence of the Uzundja with the Maritza.

HIRNANT, a parish in Montgomeryshire, 6½ m. NW of Llanfyllyn. Pop. 301.

HIRRAHALE, a populous village and fort of Hindostan, in the prov. of Balaghaut, district and 12 m. SW of Ballary.

HIRRIUR, a town of Hindostan, in the prov. of Mysore, 108 m. N of Seringapatam, on the r. bank of the Vavadotti. It was fortified, and was formerly of considerable importance, but suffered much from the incursions of the Mahrattas.

HIRSAU, or Hirscha, a village of Würtemberg, in the circle of the Schwarzwald, bail. and 2 m. N of Kalw, and 22 m. W of Stuttgard, on the Nagold, at an alt. of 1,077 ft. above sea-level. Pop. in 1840, 743. Hosiery, tinned iron plates, morocco leather, and paper, form the chief articles of local manufacture. It has also a fine wool-spinning mill. Here are the ruins of a Benedictine abbey, founded in 830.—Also a town of Bavaria, in the circle of the Upper Palatinate, presidial and 9 m. NE of Amberg, and 43 m. N of Ratisbon. Pop. 1,406. It contains a royal castle and a parish-church, and has extensive manufactories of stone-ware. Jerome of Prague was arrested here in 1415. In the environs are quarries of slate and talc.

HIRSCHBERG, a circle and town of Prussia, in the prov. of Silesia, regency and 30 m. SW of Liegnitz, on the l. bank of the Bober, at the confluence of the Zacken, and at an alt. of 1,200 ft. above sea-level. Pop. 7,327. It is surrounded by walls, and has 3 suburbs. It is regularly built, and contains a Lutheran and 4 Catholic churches,—the former with a fine organ and a library,—a gymnasium, an orphan's asylum, 2 hospitals, an alms-house, and a commercial school. It has extensive manufactories of cloth, linen, sail-cloth, hosiery, gloves, and porcelain; numerous bleacheries, dye-works, and printing and fulling-mills; several sugar-houses, a paper-mill, and 2 printing establishments. It is also the emporium for the greater part of the linen made in the prov. This town was reduced to ashes in 1549. In 1633 it was pillaged by the Saxons, and again the following year by the Imperialists. The circle of H. is noted as one of the most industrial parts of the kingdom.—Also a town in the prov. of Westphalia, regency, circle, and 11 m. E of Arensberg. Pop. 711. Linen is extensively manufactured here.—Also a town in the principality of Reuss-Lobenstein-Ebersdorf, 9 m. ESE of Lobenstein, on the r. bank of the Saale. Pop. 1,700. It has a castle, a church, and a town-house; and possesses extensive manufactories of calico, handkerchiefs, and leather.—Also a village in the kingdom of Saxony, circle of the Erzgebirge, to the NW of Schneeberg.—Also a mountain of Bavaria, in the circle of Upper Bavaria, near the Tegernsee, which rises to the height of 6,150 ft. above sea-level.

HIRSCHBERG, Dokzy, or Dobzy, a small town of Bohemia, in the circle of Bunzlau, 17 m. NW of Jung-Bunzlau, and 26 m. W of Leitmeritz, in a marshy valley. Pop. 1,946. It is encircled by an old and ruinous wall. Its streets are narrow, and houses lofty. It has manufactories of calico, hosiery, and printed muslin.

HIRSCHENSTAND, a village of Bohemia, in the circle and 16 m. N of Elnbogen, and 42 m. W of Saatz. The chief article of manufacture here is lace, which, in this and 16 neighbouring villages, gave occupation in 1820 to 8,561 individuals. It has also a manufactory of alum, and one of vitriol.

HIRSCHFELD, or Hirschfelde, a town of Saxony, in the circle and 29 m. SE of Bautzen, on the l. bank of the Neisse, 5 m. NE of Zittau. Pop. 1,551. It has manufactories of linen and cotton fabrics.—Also a village of Bavaria, in the circle of Lower Franconia, on the Main. Pop. 456.

HIRSCHFELD. See Hersfeld.

HIRSCHHAUSEN, a village of the duchy of Nassau, bail. and 3 m. ESE of Weilburg. Pop. 270.

HIRSCHHOLM, a town of Denmark, in the stift and island of Seeland, bail. of Frederiksborg, 13 m. SSW of Elsinore, and 15 m. N of Copenhagen, on the confines of a forest near the Sound. Pop. 300. It

contains a magnificent royal castle, which was the residence of Queen Matilda.

HIRSCHHORN, a town of the grand duchy of Hesse-Darmstadt, capital of a district in the prov. of Starkenburg. 10 m. ENE of Heidelburg, and 37 m. SSE of Darmstadt, on the slope of a hill, near the r. bank of the Neckar, at the confluence of the Finkenbach. Pop. 1,694. It is ill-built; and, with the exception of the castle and a church, possesses no buildings worthy of note. Several important fairs are annually held here. Pop. of district 4,487.

HIRSCHLAND, a village of Switzerland, in the cant., bail., and 1½ m. SE of Zurich. It has on the Muhlbach an extensive iron-work.

HIRSCHOVA. See Hirsau.

HIRSINGUE, or Hirsingen, a canton, commune, and town of France, in the dep. of the Haut-Rhin, arrond. of Altkirch. The cant. comprises 25 com. Pop. in 1831, 12,910; in 1841, 13,473. The v. is 3 m. SSE of Altkirch. Pop. 1,281.

HIRSON, a canton, commune, and town of France, in the dep. of the Aisne, arrond. of Vervins. The cant. comprises 13 com. Pop. in 1831, 14,042; in 1841, 15,246. The town is 11 m. NE of Vervins, and 35 m. NNE of Laon, on the Oise. It has several forges, foundries, and nail-works; and manufactories of fine thread, common pottery, and baskets. It has numerous annual fairs. This town was formerly defended by a castle, which, in 1650, was taken and destroyed by the Spaniards.

HIRTSHOLMEN, a group of small islands, 3 in number, in the Cattegat, near the coast of the bail. of Hioring, Jutland, 4 m. ENE of Frederikshaven, in N lat. 57° 28′, E long. 10° 38′. They belong to the diocese of Aalborg, and bail. of Hioring, and are inhabited by about 80 fishermen.

HIRTZBACH, a village of France, in the dep. of the Haut-Rhin, cant. and 1½ m. WNW of Hirsingen, on the l. bank of the Ill. Pop. 680. Near this place are mines of coal.

HIRZBODEN, a small district of Switzerland, in the cant. and 27 m. SSE of Berne, and bail. of Frutigen, towards the centre of the valley of Aldboden. It has a sulphureous spring.

HIRZEL, a village of Switzerland, in the cant. and 12 m. SSE of Zurich, bail. and 4 m. W of Wädenschwyl. Pop. of p. 1,100.

HIRZENACH, a village of Prussia, in the prov. of the Rhine, regency of Coblenz, and circle of St. Goar. Pop. 400.

HIRZENHAIN, a village of the grand duchy of Hesse-Darmstadt, prov. of Upper Hesse, district and 5 m. ESE of Nidda, and the same distance N of Budingen, on the Ridder. Pop. 249. It has iron-works, which afford an annual supply of about 1,800 quintals of iron.

HISINGEN, an island near the W coast of Sweden, in the prefecture of Gottenburg, in N lat. 57° 46′, E long. 11° 54′. It is formed by the two arms of the Goeta-Elf and the Cattegat; and is 17 m. in length from NE to SW, and 9 m. at its greatest breadth. It is divided into two haerads, named E. and W. Hisingen. The town of Gottenburg originally stood on this island.

HISPAGNAC, or Hispanhac, a town of France, in the dep. of the Lozere, cant. and 5 m. NW of Florac, and 11 m. S of Mende, in a fine valley, on the r. bank of the Tarn. Pop. 1,405. It has a cotton spinning-mill, and a manufactory of cotton and linen handkerchiefs. In the vicinity is a mine of iron.

HISPANIOLA. See Hayti.

HISSAMPUR, a town of Hindostan, in the prov. and 48 m. NW of Oude, district and 24 m. S of Baraitche, near the r. bank of the Gogra.

HISSAR, a district and town of Turan. The district lies to the S of the Kokan, to the SE of the khanat of Bokhara, and to the NW of Budakshan, between the Toupalak on the W, and the Jihon on the SE. It is generally mountainous, and is intersected by the Kafernikhan or Hissar, an affluent of the Jihon. The town, which is fortified, is 160 m. SE of Samarcand, and 200 m. NW of Budakshan, near the l. bank of the Kafernikhan.—Also a town of Hindostan, in the presidency of Bengal, prov. and 105 m. WNW of Delhi, and 15 m. W of Hansi. It was formerly cap. of the circar of Hissar-Firozeh, now forming the division of Hurriana, but is now little more than a mass of ruins; and, with the exception of its fortress,—the palace of the Sultan Feroze,—has nothing to render it of any importance. The locality in which it is situated is parched and sandy, and the canals formed for its irrigation by the Sultan Feroze have been suffered to fall into disrepair.—Also a fortress of Turkey in Europe, in Bulgaria, in the sanj. of Sophia, 25 m. NNE of Philoppopolis.

HISSARDJIK, a village of Turkey in Europe, in Rumelia, sanj. of Sophia, 15 m. NW of Tatar-Bazardjik, and 35 m. WNW of Philippopolis.—Also a v. of Anatolia, 4 m. W by N of Bunarbashi. Here are the ruins of New Ilium, and 3 m. onward, in the same direction, is Mount Tepe, the tumulus of Ajax.

HISTON, a parish in the co. of Cambridge, 4 m. NNW of Cambridge. Area 2,300 acres. Pop. 859.

HIT, the ancient *Is*, a town of Turkey in Asia, in the pash. and 114 m. W of Bagdad, on the r. bank of the Euphrates, 53 m. by water, and S 36 m. E in a direct line from Hadisah. It contains about 1,500 houses, built all round an elongated hill rising from and parallel to the river. The houses are chiefly of clay, one or two stories high, flat-roofed, and covered with a layer of bitumen. The streets are narrow, dirty, and steep. The hill and town are enclosed by a high mud wall, with semicircular towers, but no ditch. One graceful minaret appears amidst this mass of brown clay. H. is celebrated for its bituminous fountains, and its boats covered with bitumen. These boats are generally used to carry bitumen, salt, and lime, to Hillah, Bosrah, and even to Bagdad. Boat-building, burning lime, making salt, and preparing naphtha, form the chief occupations of the inhabitants. The bitumen is got from springs ¾ m. W of the town. These springs throw out a dark-coloured water, of a temp. of about 160° F., which is carried off slowly by an aqueduct; an oily substance gathers on the top, which is skimmed off and laid in pits exposed to the air, in which it speedily hardens into flakes of about an inch thick, which are sold at H. for about 2¾d. per cwt.

HITA, a town of Spain, in New Castile, in the prov. of Guadalajara, and partido of Brihuega.

HITCHAM, a parish in Buckinghamshire, 5 m. WNW of Windsor, on the banks of the Thames. Area 1,370 acres. Pop. in 1831, 232; in 1841, 267.—Also a p. in Suffolk, 1½ m. N of Bildeston. Area 4,040 acres. Pop. in 1831, 1,022; in 1841, 1,065.

HITCHCOCKVILLE, a village of Barkhamstead township, Litchfield co., in the state of Connecticut, U. S., 26 m. NW of Hartford, on the W branch of Farmingham river. In 1840 it consisted of about 25 dwellings.

HITCHENDEN, or Hughenden, a parish in Buckinghamshire, 1¾ m. N of High Wycombe. Area 5,970 acres. Pop. in 1831, 1,457; in 1841, 1,481.

HITCHENDERRY, a town of Hindostan, in the state of Nepal, district of Morung, on the frontier of Bengal, 45 m. N of Purneah, and 54 m. ESE of Amarpur. It is a considerable emporium for the trade between Bengal and Nepal.

HITCHIN, a parish and market-town in Hertfordshire, 17 m. NW of Hertford. The p. includes the hamlets of Missenden, Preston, and Temple-Disney. Area 6,150 acres. Pop. in 1801, 3,161; in 1831, 5,211; in 1841, 6,125. The church is a handsome structure in the pointed style, near the middle of the town. The town is situated in a delightful valley, sheltered by eminences, and consists of several streets and lanes of generally well-built houses. The wool trade was formerly flourishing here. Its chief business at present is in malt and corn.

HITERO-DEL-CASTELLO, or Itero-del Castillo, a town of Spain, in Old Castile, in the prov. and 28 m. W of Burgos, and partido of Castrojeriz. Pop. 274.

HITERO-SECO, or Itero-Seco, a town of Spain, in Leon, in the prov. of Palencia, and partido of Saldana, 10 m. NNE of Carrion-de-los-Condes. Pop. 364.

HITERO-DE-LA-VEGA, or Itero-de-la-Vega, a town of Spain, in Leon, in the prov. and 22 m. NE of Palencia, and partido of Asteidillo, on the r. bank of the Abanades. Pop. 562.

HITO, a town of Spain, in New Castile, in the prov. and 39 m. WSW of Cuenca, and partido of Belmonte, on a hill. Pop. 513. In the vicinity is an extensive pond, abounding with aquatic birds; and at a short distance are the ruins of the ancient *Bayona*.

HITTDORF, a town of Prussia, in the prov. of the Rhine, regency of Dusseldorf, and circle of Solingen. Pop. in 1837, 1,594. It has a manufactory of tobacco, and possesses a considerable trade in grain, wine, wood, and coal.

HITTEREN, an island of the Atlantic, near the W coast of Norway, in the stift of S. Trondheim, and 40 m. W of Trondheim, in N lat. 63° 30′. It is 30 m. in length, and about 12 m. in average breadth. Pop., including several small adjacent villages and islands, 3,700. The rearing of cattle, and fishing, form the chief objects of local industry.

HITTEROE, a small island of the North sea, near the coast of Norway, stift of Christiansand, bail. of Mandal, at the mouth of the Quinisdal, in N lat. 58° 13′, and E long. 6° 30′. Pop. 1,160. It is fertile, and has a parish church.

HITTISLEIGH, a parish in Devonshire. 7¼ m. WSW of Crediton. Area 1,090 acres. Pop. in 1831, 168; in 1841, 199.

HITU, or Hitoe, a mountainous peninsula, forming the larger part of the island of Amboyna, in the Molucca archipelago. It is 60 m. in length, and 8 m. in breadth, and is connected by the isthmus of Baguala with Leytimor.

HITU. See Itu.

HITZACKER, a town of Hanover, cap. of a bail., in the principality and 33 m. ESE of Lüneburg, and 11 m. W of Dometz, on an island formed by the confluence of the Jeetze with the Elbe. It has a castle, a church, and a custom-house, and possesses a considerable trade in grain and thread. Pop. of bail., 3,650.

HITZING, a village of the archduchy of Austria, in the prov. of Lower Austria, lower circle of the Wiener-wald, 5 m. WSW of Vienna, and 1½ m. W of Schoenbrunn. Pop. 930. It has manufactories of carpets, liqueurs, and vinegar; and is surrounded by numerous villas.

HITZKIRCH, or Hiskirch, a village of Switzerland, capital of a circle, in the cant. and 13 m. N of Lucerne, bail. and 5 m. NNW of Hochdorf, near the N extremity of Lake Baldegg. Pop. of parish, 3,324.

HIVES, a department and commune of Belgium, in the prov. of Luxemburg, arrond. of Marche. Pop. of dep., 383; of the com., 286.

HIVITURUHI, or Hivitujahi, a name by which the Serro Frio, an extensive mountain-chain in Brazil, in the prov. of Minas-Geraes, is distinguished by the Indians, and like the Portuguese appellation, denoting the extreme coldness of the winds which prevail upon these mountains.

HIWASSEE, or Highwassee, a river which has its source on the NE confines of the state of Georgia, U. S., in Rabun co., flows thence through the SW corner of the state of North Carolina, enters the state of Tennessee, passes through the N part of the territory of the Cherokees, and along the S confines of the counties of M'Minn and Rhea, and falls into the Tennessee, on the l. bank, opposite Hiwassee garrison, in Hamilton co. It has an entire course in a generally NW direction of about 75 m., and is partly navigable.

HIWEL, a village of Bohemia, in the circle and 14 m. WNW of Policzka. In the environs are mines of iron.

HIX'S FERRY, a village of Randolph co., in the state of Arkansas, U. S., 170 m. NE of Little Rock, at the crossing of Currant river.

HJERTING, or Hierting, a town of Denmark, in the stift and 23 m. NW of Ribe, on an extensive estuary of the same name. Pop. 200. It has a small port and a custom-house. The estuary or bay of H. forms an arm of the German ocean, to the N of the island of Fanœ, 9 m. in length, and 3 m. in breadth, enclosed on the N and W by the Skallugin, a sandy peninsula. The Varde-aae flows into it in the NW. The port of H. has been used for some years past as an occasional harbour for steamers engaged in the cattle trade, for which it is admirably adapted by nature when compared with other ports on this dangerous coast. Protected by the Skallugin on the N and W, and by Fanoe on the S, and thus sheltered from the tempestuous winds that have blown so many vessels to destruction on Jutland, H. is almost the only point on the W of that district which combines safety with facility of access; while, in the event of very bad weather, the harbour of List, in the island of Silt, which lies a little to the S, offers the most secure holding ground and the most prominent landmarks from the Elbe to the Skaw. In the channel of H. there is good bottom, with 12 ft. of water at ebb tide; and there is no point on the coast so capable of developing the staple trades of Denmark in corn and cattle as this obscure port. The great cattle-district, covering an area of 457 geog. m., lies N and S of it; and 30,000 head of poor cattle and 10,000 horses have been carried annually through this district to Schleswig and Holstein to be grazed in the marsh lands. The passage to England, between this port and Lowestoft, which the Northern Steam-packet company attempted to open up in 1851, is at once the shortest and cheapest. Between H. and Lowestoft the distance is but 300 nautical m., the average passage may be reckoned at from 24 to 28 hours; and the Danish government have had under consideration a plan for a railroad to Fredericia, which would open rapid communication between England and all the capitals of Northern Europe. The mails transmitted by this route left London at 5 o'clock on Saturday and reached H. about 1 o'clock on Monday; and the land-journey from H. to Copenhagen may be taken at 36 hours, by Holsted, Kolding, Middelfahrt, Odensee, Nyeborg, Korsor, Ringsted, and Roeskelde. But the steamers have, we understand, been withdrawn from this route after a few months' trial.

HJO, a small town of Sweden, in the län and 30 m. SSE of Mariestadt, on the W bank of Lake Wetter. Pop. 570.

HJORRING. See Hiorring.

H'LASSA. See Lassa.

HLAUPIETIN, a village of Bohemia, in the circle and 23 m. NW of Kaurzim, and 18 m. NE of Prague. It has manufactories of alum and vitriol.

HLINSKO, a town of Bohemia, in the circle and 17 m. S of Chrudim, and 27 m. ESE of Czaslau, on the Chrudimka. Pop. 3,264. It has manufactories of linen and of pottery.

HLUBOSCH, a village of Bohemia, in the circle and 17 m. S of Beraun, and 28 m. E of Pilsen, on the r. bank of the Latawka. It has a castle, with a park, and possesses manufactories of pins and of iron-ware.

HLUBZIEN. See Leobschutz.

HLUK, a town of Moravia, in the circle and 8 m. SE of Hradisch, and 7 m. WSW of Ungarisch-Brod. Pop. 1,920. It has a castle. The vine is extensively cultivated in the environs.

HO, or Heng, a mountain of China, in the prov. of An-hoeï, dep. of Lu-chu-fu. It is the most southerly of the four Yo or mountains which represented the 4 cardinal points, and at which certain religious ceremonies were periodically performed by the sovereign.

HOADLIN, a township of Van-Wert co., in the state of Ohio, U. S. Pop. in 1840, 40.

HOAI-HO. See Hwae-Ho.

HOANG-HO, or Hwang-ho, [*i. e.*, the 'Yellow river,] a great river of China, the Rmatchu of the Tibetians, and Kara-Muren or Khatun-Gol of the Mongolians, which is generally supposed to have its source in the W part of the desert of Koko-Nor, to the SW of the lake of that name, in about N lat. 35° 35′, and E long. 96° 10′. Descending in a SSE direction through a wide valley, it forms lakes Tcharing and Oring, and the nenters another valley bordered on the E by steep rocks. At the E extremity of this rocky ridge it bends abruptly to the WNW; makes an extensive circuit, and then crosses the frontier of the Chinese prov. of Kansu, 70 m. W of Lan-chu, in N lat. 36°, and E long. 102° 20′, and after having run a distance of 700 miles. After traversing the NW part of the prov. of Kansu, and forming for some leagues its line of separation from Mongolia, it leaves China and pursues its course in a NE direction for 430 m., till it is deflected eastward by the range of the Tchastai-oola and Inchan mountains. At the point of deflection it divides into several small branches, and forms a number of lakes; but in its entire circuit of the Ortoos country, 500 m. in extent, it receives not a single stream of any size. About 110° 30′ E long., it is deflected S by a spur of the latter chain, along the E confines of the country of the Ortoos, and re-entering China, flows between the provinces of Shan-si and Shen-si for about 500 m., till it enters the Great plain, at a point distant from Lan-chu 1,130 m. At this part of its course it becomes tinged with the clay from which both its colour and its Chinese name are derived. At the SW corner of Shan-si, where it receives the Wei, its largest tributary, it bends abruptly eastward, along the S confines of Shan-si, and into the prov. of Honan. Then taking an ESE direction, after forming the boundary-line between the provs. of Shantung and Honan for a distance of about 50 m., it flows into the prov. of Kiang-su, and, after receiving the Hwae-ho, bends ENE, and falls into the Yellow sea, in N lat. 34°. The area of its basin is estimated at 700,000 sq. m.; and although its source is only 1,290 m. in a direct line from its mouth, its numerous windings prolong its course to nearly double that distance. Its mouth is only 150 m. N of the embouchure of the Yang-tse-kiang-keou, and its source is at no great distance from the sources of that river; yet between their lines of route there is an interval at some points of upwards of 900 m.—Of the numerous affluents of the H., the principal are, on the r., the Tura-Kundulen in Kokonor, the Cucur-su, or Tie-tsan-ho, and the Kan-kou-choui in Kan-suh; the Kiu-ye-ho, Vou-tin-ho, Yen-ho, Lo-ho, and Hoei-ho in Shen-se; and in Kiang-su the Hoai-ho or Hwae-ho, the feeder of Lake Hong-tse. On the l. it receives the Olan-muren or Tai-tong in Kan-suh, the Khara-yol on the confines of the Ortoos country, and in Shan-se the Fuen-ho. The Eu-ho, or Imperial canal, runs for a considerable distance along its l. bank, and crosses it near the confluence of the Hwae-ho. With the exception of the Nile, the H. receives fewer important tributaries than any other large river in the world. The principal mountain-chains by which the basin of the H. is enclosed are the Holang-chan or Alajin-alim, Keptel-oola, Tchastai-oola, and Inchan-oola, on the N; and on the S separating it from the basin of the Yang-tse-kiang, the Bain-khara-oola, Naktomchi, and Ratchico mountains, the Pe-ling or Northern mountains, the Teinling or Tich-ling, and Tan-sia or Chan mountains. Lan-chu, Ning-hea, Kae-fung, Su-chu, and Hwae-gan are the most important towns situated on its banks. In the lower part of its course this river flows with great rapidity, and it is only by means of extensive dikes and embankments that its waters are restrained from devastating many of the districts through which it flows. In breadth it varies from 800 to 1,200 yds., and its depth is also very unequal. There are considerable indications that this river has greatly changed its course, and that it formerly discharged itself into the gulf of Chih-le.

HOANNA, or Haanna, one of the Hapaii islands, in the Friendly archipelago, in the South Pacific, in S lat. 19° 39′, and E long 174° 39′.

HOAPIN-SU, one of the Madjicosemah islands, in the Tong-hai or Eastern sea, 75 m. NE of Formosa, in N lat. 25° 43′, and E long. 122° 55′. It is low and woody.

HOAR-FROST RIVER, a stream which flows into the E end of Great Slave lake, in the NW territories of America, in a series of appalling cascades and rapids.

HOATHE, a parish in Kent, 5½ m. NE of Canterbury, N of the Stour. Area 1,660 acres. Pop. in 1831, 360; in 1841, 394.

HOATHLEY (East), a parish in Sussex. Area 2,000 acres. Pop. 607.

HOATHLEY (West), a parish in Sussex. Area 4,420 acres. Pop. 1,095.

HOBACH, a town of Arabia, in the mountainous part of Yemen, 21 m. E of Denn, and 81 m. S of Sana.

HOBART, a village of Stamford township, Delaware co., in the state of New York, U. S., 65 m. WSW of Albany, on the head-waters of Delaware river. Pop. in 1840, 300.

HOBART-TOWN, the capital of Tasmania, or Van Diemen's Land, built on the l. bank of the Derwent, about 20 m. from its mouth, in S lat. 42° 52′, E long. 147° 21′. Its streets are wide, but unpaved, and much cut up by the constant transit of carts and cattle; the houses are mostly of brick. The public buildings consist of a large brick church, a court-house in which the supreme court holds about four sittings in the year, the governor's residence, government storehouse, military barracks, prisoners' barracks, penitentiary, and jail. Besides the Episcopal church, there are Wesleyan, Independent, Presbyterian, and Roman Catholic chapels here; also three public banks, a public school, several private seminaries, and several extensive manufactories connected with the staple commodities of the island. The total number of inhabitants, including those of the immediate suburbs, the prisoners and military, is about 12,000. Two or three newspapers are pub-

lished here weekly. House rents are very high, and living is dear. In 1848, 10 vessels under 50 tons, 4 under 100, 3 under 200, and 1 above 300 tons, were built here. A basin 300 ft. long, and 200 ft. wide, with a depth of 9 ft., at low water of spring-tides, is in course of formation, for the accommodation of the small river-craft; and there is a depth of from 10 to 15 ft. at low water alongside the wharves. The number of vessels belonging to the port on 31st Dec., 1848, was 162 = 14,610 tons.—The mean temp. at H. in 1846 was 53°·1.; for 1847, 53°·2; for 1848, 52°·3. The following table shows the mean pressure and temperature during 1848, at the Royal observatory. The cistern of the barometer is 107 ft. above the level of mean tide, causing a depression in the mercurial column of about 0°·1.

The quantity of rain which fell in 1842 was 22·84 inches; in 1845, 15·89 inches; in 1848, 23·67 inches. —The H. district has an area of 828,160 acres, of which 6,310 were under cultivation in 1848. The quantity of stock in the district was 1,806 horses, 3,041 horned cattle, 9,811 sheep, 845 goats, 3,307 pigs. Pop. 21,249. Houses 4,014. A fine road, 120 m. in length, now connects H. with Launceston.

HOBIGUNGE, a town of Hindostan, in the prov. of Bengal, district of Backergunge, 40 m. SSW of Dacca, pleasantly situated between two arms of the Ganges.

HOBKIRK, or Hopekirk, a parish in Roxburghshire, 6 m. ESE of Hawick. Pop. in 1801, 760; in 1841, 776. All the p., except the SW corner, consists of the vale of the Rule. It contains several mountain-summits. The most remarkable mountains are Winbrough, Fanna, Rubberslaw, and Bonchester. The first and second, situated in the S extremity of the p., rise to about 1,600 ft. above the level of the sea, and have such breadth of base as to be each 1½ m. in ascent to the summit. Winbrough looks out over the great intervening distance, in each case of about 40 m., upon the marine waters which gird both the W and the E coasts of Scotland. Rubberslaw, situated near the N extremity, on the boundary with Kirktown and Cavers, and belonging partly to these parishes, lifts its dark, rugged, heath-clad form 1,420 ft. above the level of the sea. Bonchester, on the E side of the p., a little N of its middle, rises to the height of about 1,260 ft., and presents to the eye a round-shouldered and grassy mountain-form of beauty.

HOB-LINCH, or Abbot's Lench, a hamlet in Fladbury p., Worcestershire, 5½ m. NNE of Pershore. Area 770 acres. Pop. in 1831, 116; in 1841, 93.

HOBOKEN, a department, commune, and village of Belgium, in the prov. and 4 m. SW of Antwerp, on the r. bank of the Schelde. Pop. of dep. 2,393. It has manufactories of woollen fabrics and wax-cloth.—Also a village of Bergen township, Hudson co., in the state of New Jersey, U. S., 60 m. NE of Trenton, on the W bank of Hudson river, opposite New York.

HOBORG, a mountain of Sweden, at the S extremity of the peninsula which forms the S part of the island of Gottland, in N lat. 56° 56′, E long. 8° 20′. The peninsula forms a small district of the same name.

HOBROE, a town of Denmark, in the stift and 39 m. NNW of Aarhuus, and bail. of Randers, 32 m. S of Aalborg, at the extremity of the Mariager-fiord. Pop. 700. It consists of a principal and 5 lateral streets, and contains 2 market-places, a church, and a town-house. It has several distilleries.

HOBSCHEID, a department and commune of Belgium, in the prov. of Luxemburg, and arrond. of Arlon. Pop. 1,879.

HOBY, a parish in Leicestershire, 6 m. SW of Melton-Mowbray, on the Wreak. Area 1,060 acres. Pop. in 1831, 357; in 1841, 392.

HOC (Le), a promontory of France, in the dep. of the Seine-Inferieure, cant. of Ingouville, 5 m. E of Havre, on the r. bank of the Seine, near the embouchure of the Lezarde.

HOCANGE, a district in the N part of Lower Guinea, to the S of the district of Anzico, and on the r. bank of the Zaire. It is said to be large and populous.

HOCHBERG, a village of Bavaria, in the circle of Lower Franconia, to the W of Wurzburg. Pop. 1,060.—Also a v. of Baden, in the circle of the Upper Rhine.—Also a v. of Würtemberg, in the circle of the Neckar, to the E of Ludwigsburg. Pop. 680.

HOCHDORF, a village of Bavaria, in the circle of the Pfalz, to the SE of Durkheim. Pop. 538.—Also a bailliage, circle, parish, and village of Switzerland, in the cant. and 9 m. N of Lucerne, about 1½ m. S of the Baldegger-See. The bail. comprises 3 circles, viz.: Hetzkirch, Hochdorf, and Rothenburg, and contains 16 parishes. Pop. 16,787. It produces corn, fruit, and wine, the two former in great abundance, and pastures large numbers of cattle.

HOCHEN, a village of Bavaria, in the circle of the Pfalz, on the Höcher-Berg, to the W of Waldmohr. Pop. 470.

HOCHFELD, or Hochfelden, a canton, commune, and town of France, in the dep. of the Bas-Rhin, arrond. of Saverne. The cant. comprises 21 com. Pop. in 1831, 17,239; in 1841, 17,078. The town is 10 m. ENE of Saverne, and 16 m. NW of Strasburg. Pop. in 1841, 2,503. A general fair is held here once a-year.

HOCH-GOLLING, a summit of the Noric Alps, on the confines of the archduchy of Austria and of Styria, 60 m. SW of Saltzburg, and rising to the height of 9,459 ft. above sea-level.

HOCHHEIM, an amt or bailiwick and town in the duchy of Nassau, 7 m. SE of Wiesbaden, and 39 m. S of Weilburg, on an eminence, near the r. bank of the Main, a little above the confluence of that river with the Rhine, and on the Taunus railway. Pop. 1,971. The environs are noted for their wine. Pop. of bail. 10,783.

HOCHHOLDINGEN, a town of Bavaria, in the circle of Middle Franconia, 5 m. NW of Oettingen. Pop. 914.

HOCH-HORN, one of the principal summits of the Noric Alps, on the confines of the archduchy of Austria and of Illyria, 57 m. S of Saltzburg. It rises to the height of 11,355 ft. above sea-level.

HO-CHI-CHU, a district and town of China, in the prov. of Kwan-se, and division of King-yuen-fu, 50 m. NNE of Wu-chu-fu, on an affluent of the Long-kiang, in N lat. 36° 3′.

HO-CHING, a district and town of China, in the prov. of Shan-tung, division of E-chu-fu.

HOCHKIRCH, a village of Saxony, in the circle of Lausatia, 7 m. SE of Bautzen, on a height. It is memorable for the defeat of the Austrians under

Field-marshal Daun, which took place here on the 14th October 1758.—Also a v. of Prussia, in the prov. of Silesia, and circle of Leignitz, SE of Glogau. Pop. 200.

HOCH-KOGL, a mountain of the archduchy of Austria, in Upper Austria, circle and 42 m. SW of Saltzburg, and 15 m. SE of Kizbuhel, in the Pinzgau. It rises to the height of 9,562 ft. above sea-level.

HOCH-NARR, or Hohesnarr, a summit of the Noric Alps, on the confines of the archduchy of Austria and of Illyria, to the S of Saltzburg, and 12 m. E of the Gross-Glockner. It rises to the height of 11,640 ft. above sea-level.

HOCHSAL, a village of the archduchy of Baden, bail. and 3 m. NE of Kleinlaufenburg, and 22 m. E of Bale. Pop. 380. It has several silk and cotton spinning-mills.

HOCHSPEYER, a village of Bavaria, in the circle of the Pfalz, bail. and 6 m. E of Kaiserslauten. Pop. 1,296.

HOCHST, a market-town of the grand duchy of Hesse-Darmstadt, in the prov. of Starkenburg, and district of Brenberg, 4 m. WSW of Neustadt, and 22 m. ESE of Darmstadt, on the l. bank of the Mumling. Pop. 1,320.—Also a bail. and town in the duchy of Nassau, 6 m. W of Frankfort, and 33 m. W of Weilburg, on the r. bank of the Main, near the influx of the Nidda, and on the Taunus railway. Pop. 1,800. It has a church, and possesses extensive manufactories of tobacco, chemical substances, vermicelli, chicory, cabinet-work, needles, and nails. It has also a cotton spinning-mill, and several lime and gypsum-kilns. This town suffered much during the military operations of the French in 1796. Pop. of bail. 11,605.

HOCHSTADT, or Hochstedt, a langericht-bezirk, or presidial and town of Bavaria, in the circle of Suabia, on the l. bank of the Danube, and on the Nuremberg and Neuenmarkt railway, 24 m. NW of Augsburg, and 32 m. WSW of Neuburg. Pop. 2,460. It is defended by an old castle, which stands on an adjacent height, and has 2 churches, and an hospital. The environs have been the theatre of several sanguinary battles. In 1703 the Imperialists were here defeated by the French and Bavarians; the following year Marshal Tallard was here defeated and made prisoner by Marlborough, in what is usually called the battle of Blenheim.—Pop. of bail. 11,605, of whom a large proportion are Catholics.

HOCHSTADT, or Hochstatt, a presidial and town of Bavaria, in the circle of Upper Franconia, 18 m. WSW of Bamberg, and 25 m. NNW of Nuremberg, on the l. bank of the Aisch, which is here crossed by a bridge. It has a castle, 2 churches, an hospital, and a classical school. Pop. 1,713. It has several spinning-mills and breweries. Hops are extensively cultivated, and cattle are reared in great numbers in the environs. Pop. of presidial 11,834.—Also a town of Hesse-Cassel, in the prov. and circle of Hanau. Pop. 747.

HOCHSTADT, Wisoky, or Wisokey, a small town of Bohemia, in the circle of Bunzlau, 32 m. NE of Jung-Bunzlau. Pop. 1,604. In the vicinity is a mine of iron.

HOCHSTATT, or Hochst, a commune of France, in the dep. of the Haut-Rhin, cant. of Altkirch. Pop. 1,068.

HOCHSTATTEN, or Hosdat, a district of Transylvania, towards the centre of the comitat of Hunyad. It contains a few villages, one of which bears the same name.

HOCHSTETTEN, a village of Baden, in the circle of the Rhine, SE of Breisach.—Also a v. in the circle of the Middle Rhine, on the banks of the Rhine. Pop. 462.

HOCHSTETTEN (Gross), a parish and village of Switzerland, cant. and 10 m. SE of Berne, amt of Honolfingen. Pop. (Protestant) 4,163.

HO-CHU, a division and town of China, in the prov. of Shan-se. The div. comprises 2 districts.—Also a district and town in the prov. of Kan-suh, div. and 60 m. SW of Lan-choo-fu, on an affluent of the Hoang-ho.—Also a district and town in the prov. of Sze-chuen, div. of Chun-king-fu, in N lat. 30° 8′ 24″.

HOCH-VOGEL, a mountain on the confines of Bavaria and Tyrol, 48 m. ENE of Innspruck, and 81 m. SSW of Augsburg. It belongs to that branch of the Arlberg which separates the Lech and Iller, and rises to the height of 959 ft. above sea-level.

HOCH-WALD, or Hohe-Wald, a mountain-range in Prussia, in the prov. of the Rhine, circle of Treves, extending along the confines of the duchy of Oldenburg, from the r. bank of the Saar to the Idarwald, which connects it with the Hundsrück.

HOCHWIESEN, or Velkopolya, a town of Hungary, in the comitat of Bars, 9 m. NNW of Uj-Bunya, and 20 m. S of Kremnitz. Its inhabitants are chiefly Germans.

HOCHZEIT, a village of Prussia, in the regency and SE of Danzig. Pop. 274.

HOCKAI, a commune of Belgium, in the prov. of Liege, dep. of Francorchamps. Pop. 119.

HOCKELBACH, a commune of Belgium, in the prov. of Liege, dep. of Henri-Chapelle. Pop. 142.

HOCKENDORF, a village of Saxony, in the circle of Erzgebirge, bail. and 5 m. NW of Dippoldiswalde, and 11 m. SE of Dresden. In the environs is a mine of silver.—Also a village in the circle of Meissenes, bail. of Radeberg and Laussnitz, 15 m. NNE of Dresden. Linen is extensively manufactured in the locality.

HOCKENHEIM, a village of Baden, in the circle of the Neckar, bail. and 5 m. S of Schwetzingen, and 13 m. SW of Heidelberg. Pop. 1,506. Tobacco is extensively cultivated in the environs.

HOCKENHULL-STAPLEFORD, a township in the p. of Tarvin, Cheshire, 5½ m. E of Chester. Area 360 acres. Pop. in 1831, 35; in 1841, 35.

HOCKERING, a parish in Norfolk, 5¾ m. E of East Dereham. Area 1,980 acres. Pop. in 1831, 438; in 1841, 457.

HOCKERTON, a parish in Nottinghamshire, 2 m. NNE of Southwell, on a branch of the Trent. Area 1,510 acres. Pop. in 1831, 108; in 1841, 136.

HOCKHAM, a parish in Norfolk, 5 m. NW of East Harling. Area 3,860 acres. Pop. in 1841, 644.

HOCKHOCKING, a river of the state of Ohio, U. S., which has its source in Fairfield co., to the NW of Lancaster; runs SE through the cos. of Hocking and Athens; and, after a meandering course of about 90 m., falls into the Ohio, on the r. bank, at Troy, 25 m. below Marietta, and to the SW of the confluence of the Little Kenawha. The bed of this river is narrow but deep, and it is navigable to the falls, which it forms above Athens—a distance of 42 m. Its banks are high, and in some parts contain valuable mines of lead, iron, and coal, and inexhaustible quarries of free-stone.

HOCKING, a central county in the state of Ohio, U. S., comprising an area of 432 sq. m., generally hilly, and watered by Hockhocking river and the head-waters of Racoon and Salt creeks. Pop. in 1840, 9,741. Its capital is Logan.—Also a township of Fairfield co., in the same state, containing the villages of Lancaster and Hamburg. Pop. 2,137.

HOCKLEY-SUPER-MONTEM, a parish in Essex, 2½ m. NNE of Rayleigh. Area 3,460 acres. Pop. in 1831, 777; in 1841, 850.

HOCKLIFFE, a parish in Bedfordshire, 4¾ m. NW of Dunstable, and 3¾ m. from the Leighton station of the London and North-Western railway. Area 1,370 acres. Pop. in 1831, 460; in 1841, 435.

HOCKWOLD-CUM-WILTON, a parish in Norfolk, 4 m. NW of Brandon, on the Little Ouse, Area 7,400 acres. Pop. in 1831, 878; in 1841, 949.

HOCKWORTHY, a parish in Devonshire, 5½ m. ESE of Bampton. Area 1,970 acres. Pop. in 1831, 335; in 1841, 369.

HOCOULES, a Slavonic people, who formerly inhabited the banks of the Dniester, but who, at the period of the Turkish and Tartar irruption into Russia and Poland, took refuge in the Carpathian mountains, and are now to be found on the confines of Galicia and Hungary. They are about 30,000 in number, and live in villages, each of which has its respective *wataszka* or chief. Their dress consists of a white blouse reaching to the knees, and gaily trimmed with ribbon. Over this they throw a mantle of sheep's or wild beast's skin. They wear the hair long, and cover the head with a bonnet decked with ribbon and feathers. Their language is Russ, with a considerable admixture of other tongues. The rearing of cattle forms their only employment and means of subsistence.

HODBECK, a river of Yorkshire, which has its source near Trout's dale, and falls into the Derwent, near Wikeham.

HODDAM, a parish in Dumfries-shire, 4 m. N of Annan. Pop., comprising the v. of Ecclefechan, in 1801, 1,250; in 1841, 1,627.

HODDESDON, a chapelry and market-town, in the parishes of Amwell and Broxburn, Hertfordshire, 4 m. SE of Hertford, near a branch of the Eastern Counties railway. Area of chapelry 2,650 acres. Pop. in 1831, 1,615; in 1841, 1,743. The town is pleasantly situated about a ½ m. W of the Lea.

HODEÏDA, a large town and port of Arabia, capital of a district in Yemen, on the Arabian gulf, 35 m. NW of Beit-el-Fakih, and 67 m. SSE of Loheia. The town is surrounded by a high wall; the houses, with the exception of those of the governor and principal inhabitants, and the town-house, are built of mud. It has a small castle. The port is good, but incapable of receiving large vessels. It is, however, much frequented by coasters engaged in the coffee-trade. The *dola* or governor depends immediately upon the imaum of Sanaa, from which H. is 3 days' journey. The district comprises little beyond the area of the town, and its revenues are chiefly derived from the duties imposed upon the export of coffee. The merchants are chiefly Indian Banians. In the environs is the tomb of Sadik, patron of the town. H. was taken by Abu-Arich, chief of the Wahabees; and subsequently seized by the pasha of Egypt.

HODEN, or Wodan, an oasis and town in the W part of the Sahara, about 250 m. from the Atlantic, and 47 days' journey WNW of Timbuctu, in N lat. 19° 30′, and W long. 15° 15′. It is inhabited by Trarzas.

HODGDON, a township of Aroostook co., in the state of Maine, U. S., 202 m. NNE of Augusta. Pop. in 1840, 665.

HODGE-AHMET, or Haji-Ahmed (Wady), a valley and village of Fezzan, 70 m. NW of Murzuk, and intersected by the road which runs W to the oasis of Tuat.

HODGESTON, a parish in Pembrokeshire, 3 m. ENE of Pembroke. Pop. in 1831, 72; in 1841, 75.

HODIMONT, a department, commune, and village of Belgium, in the prov. of Liege, arrond. of Verviers. Pop. 2,600. The village is 12 m. E of Liege, and 1½ m. NW of Verviers, on the Vesder. Pop. 2,000. It has extensive manufactories of cloth and dye-works, several spinning and fulling mills, and an iron-foundery.

HODISTER, a department and commune of Belgium, in the prov. of Luxemburg, arrond. of Marche. Pop. 736.

HODNET, a parish in Salop, 5½ m. SW of Market-Drayton, on the Tern. Area 13,920 acres. Pop. in 1831, 2,097; in 1841, 2,135.

HODOMONT, a commune of Belgium, in the prov. of Namur, dep. of Bioul. Pop. 96.

HODOS, a lake of Transylvania, in the comitat of Doboka. It is 15 m. in length from SSE to NNW, and about ¾ of a mile across at its broadest part, and is formed by an affluent of the Szamos. It abounds with fish and aquatic birds. On its banks is a village of the same name.

HODRITSCH, or Hodrus-Ba′nya, a town of Hungary, in the comitat of Honth, 5 m. W of Schemnitz. Pop. 3,340.

HODSAGER, a village of Denmark, in Jutland, in the stift of Ringkioping, 10 m. ESE of Holtsbroe, near the r. bank of the Stor.

HODSOCK, a lordship in the p. of Blythe, Nottinghamshire, 4¾ m. NNE of Worksop, on the Ryton. Pop. in 1831, 228; in 1841, 225.

HODY, a department and commune of Belgium, in the dep. of the Liege and arrond. of Huy, watered by the Ourthe. Pop. of dep. 469; of village 170.

HOE, a village of Denmark, in Jutland, in the stift of Ripen, 3 m. S of Oxbye, near the W bank of Hierting Bay.

HOE, or Hoo, a parish in Norfolk, 2½ m. NNE of East Dereham. Area 1,610 acres. Pop. in 1831, 235; in 1841, 220.

HOECK, a commune of Belgium, in the prov. of East Flanders, dep. of Erembodegem. Pop. 637.—Also a com. in the same prov., dep. of Audegem. Pop. 227.

HOECKXKEN, a commune of Belgium, in the prov. of East Flanders, dep. of Wichelen. Pop. 299.

HOEDIC, or Hedic, an island in the Atlantic, near the French coast, in the dep. of Morbihan, cant. and 3 m. E of Belle-Isle-en-Mer, and 12 m. from the mainland, in N lat. 47° 20′ 46″. It is 1½ m. long. from E to W, and about 1 m. in breadth. Its NE point is defended by Fort Pengarde, and on its S side is Port-er-Cos. Its shores on the NW and SE are studded with rocks which extend a distance of 2 m. into the sea; on the SW is a tower furnished with cannon and surrounded by a broad ditch. The only production of the soil is corn, and the inhabitants, about 250 in number, find their chief employment in fishing.

HOEF, a commune of Belgium, in the prov. of Limburg, dep. of Helchteren. Pop. 132.—Also a com. in the prov. of Brabant, dep. of Uccle. Pop. 84.

HOEGANAES, a village and parish in Sweden, in the prefecture of Malmoehus, haerad of Luggude, on the W coast of the prefecture, at the N entrance of the Sound, 12 m. NNW of Helsingborg, and 48 m. NNW of Malmoe. The village has a small port. The parish contains extensive coal-mines, and a large glass-work.

HOEK, a commune of Belgium, in the prov. of Limburg, dep. of Achel. Pop. 77.—Also a com. in the prov. of East Flanders, dep. of Schellebelle. Pop. 210.—Also a com. in the same prov., dep. of Selzaete. Pop. 908.—Also a com. in the same prov., dep. of Zele. Pop. 419.—Also a haerad of Sweden, in the S part of the prefecture of Halmstadt, intersected by the Laga-an. Its chief town is Laholm.

HOEKESTRAETE, a commune of Belgium, in the prov. of East Flanders, dep. of Knesselare. Pop. 670.

HOEKJE, a commune of Belgium, in the prov. of E. Flanders, dep. of Waerschut. Pop. 212.

HOEKSKEN, a commune of Belgium, in the prov of W. Flanders, dep. of Luchristy. Pop. 674.

—Also a com. in the prov. of E. Flanders, dep. of Hautem-Saint-Lievin. Pop. 140.—Also a com. in the prov. of E. Flanders, dep. of Wieze. Pop. 132.

HOEKSTRAET, a commune of Belgium, in the prov. of Brabant, dep. of Hever. Pop. 84.

HOEL, a parish of Norway, in the diocese of Aggershuus, bail. of Buskerud, 87 m. NW of Christiania. Pop. 2,500.

HOELAND, a parish of Norway, in the diocese and bail. of Aggershuus, 36 m. ESE of Christiania. Pop. 3,534.

HOELBECK, a department and commune of Belgium, in the prov. of Limburg, arrond. of Tongres. Pop. of dep. 301.

HO-E-LANGO, a pass on the frontiers of Ladakh, between the Pangchoche valley and Ororotse. Capt. Strachey estimates its alt. at 18,600 ft. above sea-level.

HOELEDEN, a department and commune of Belgium, in the prov. of Brabant, arrond. of Louvain. Pop. of dep. 722; of com. 153.

HOELST, a commune of Belgium, in the prov. of Antwerp, dep. of Baelen. Pop. 73.

HOENHEIM, a commune of France, in the dep. of Bas-Rhin, cant. of Oberhausbergen. Pop. 1,222.

HOENRIK, a commune of Belgium, in the prov. of Limburg, dep. of Exel. Pop. 83.

HOERDT, a commune of France, in the dep. of the Bas-Rhin, cant. of Brumath, on the r. bank of the Zorn. 9 m. N of Strasburg. Pop. in 1841, 1,539.

HOESKEN, a commune of Belgium, in the prov. of E. Flanders, dep. of Zonnegem. Pop. 219.

HOESSELT, a department and commune of Belgium, in the prov. of Limburg, arrond. of Tongres. Pop. of dep. 2,014; of com. 1,645.

HOESSELT-VIEUX, a commune of Belgium, in the prov. of Limburg, dep. of Hoesselt. Pop. 369.

HOETJES BAY, an inlet on the coast of Saldanha bay, on the W coast of Cape Colony, in S lat. 33°, E long. 17° 52′. Vessels can anchor here in from 3 to 7 fath. close to and land-locked.

HOETSEL, a commune of Belgium, in the prov. of E. Flanders, dep. of Somergem. Pop. 380.

HOEVE, a commune of Belgium, in the prov. of Brabant, dep. of Teslett. Pop. 148.—Also a com. in the prov. of Antwerp, dep. of Vosselaer. Pop. 102.

HOEVELAKE, a bail. and village of Holland, in the prov. of Guelderland, 14 m. W of Arnheim. Pop. 624.

HOEVEN, a commune of Belgium, in the prov. of Antwerp, dep. of Olmen. Pop. 109.

HOEVENEN, a commune of Belgium, in the prov. of Antwerp, dep. of Eeckeren. Pop. 90.

HOEY. See Huy.

HOEYLAERT, a department and commune of Belgium, in the prov. of South Brabant, arrond. and 8 m. SE of Brussels, near the forest of Soigne, and watered by the Isque. Pop. of dep. 2,138.

HOEYLAND, a parish of Norway, in the diocese of Christiansand, bail. and 12 m. SE of Stavanger. Pop. 1,469.

HOEYTIAEINEN, a lake of Russia in Europe, in Finland, towards the centre of the gov. of Kuopio, in the district of Œfre-Karelens. It is about 30 m. in length from N to S, and 12 m. in breadth; and communicates on the SW with Lake Wünijaervi.

HOF, a village of Iceland, near the S coast, in N lat. 63° 54′, W long. of Copenhagen 29° 22′, at the S foot of the Hofsfjall [alt. 2,395 Danish ft.], and 4 m. SSE of Sandfell.—Also a v. in Nordr-müla-sysla, near the l. bank of the Hofsa, a stream which flows in a course of 20 m. E by N into the Vopna-fiord.

HOF, or Dworec, a municipal town of Moravia, in the regency of Brünn, circle of Olmütz. Pop. 2,457, of whom only 17 are Protestants.

HOF, or Hoff, a hamlet of Prussia, in the prov. of East Prussia, regency and 33 m. S of Königsberg, circle and 11 m. SW of Preussisch-Eylau. A sanguinary engagement between the French and Russians took place here in 1807.—Also a village of Illyria, in the gov. and 24 m. SE of Laybach, circle and 11 m. W of Neustädtl, on the l. bank of the Gurk. It has several iron-works.

HOF. See Gastein.

HOF, or Stadt-am-Hof, a town of Bavaria, capital of the landgericht-bezirk or presidial of the same name, in the circle of Upper Franconia, 33 m. NNE of Bayreuth, 54 m. NE of Bamberg, on the l. bank of the Saale, and on the Saxon-Bavarian railway. Pop. in 1846, 8,049. It is walled, has 2 suburbs, and contains 4 Lutheran churches, a gymnasium with a large library, an hospital, and an orphan's asylum. Since 1823, when it was to a great extent destroyed by fire, it has been built in a regular manner, and its streets are well-lighted at night. It has extensive manufactories of woollen and cotton fabrics, yarns, leather, paper and colours, and a large brewery; and in the environs are considerable mines of iron and marble quarries. Fairs are held here twice a-year. H. was founded in the 11th cent., and soon after erected into a free imperial town. Pop. of presidial 15,375.

HOF-AN-DER-MARCH, a town of Austria, in Upper Austria, ldgb of Vienna, and circle of Korneuberg, near the confluence of the March and Stempselbach. Pop. 351.

HOFACH, a district of Arabia, in the mountainous part of Yemen, near the confines of Tehamah.

HO-FE-HIN, a district and town of China, in the prov. of Gan-hwuy, div. of Leu-chu-fu.

HOFEN (West), a town of Hesse-Darmstadt, 3 m. from Ost-Hessen, on the Secbach. Pop. 1,838.

HOFENHEIM, a village of Baden, in the circle of the Lower Rhine, bail. and 2 m. NW of Sinsheim. Pop. 1,380.

HOFEYND-ET-BIST, a commune of Belgium, prov. of Antwerp, dep. of Grobbendonck. Pop. 678.

HOFF, a village of France, in the dep. of the Meurthe, cant. and 1½ m. N of Sarreburg, and 30 m. NNE of Luneville, on the r. bank of the Sarre. Pop. 465. It has an oil-mill, a brewery, and tile and lime kilns.—Also a parish of Norway, in the diocese of Aggershuus, bail. of Hedemarken, 54 m. NNE of Christiania, on the Glommen. Pop. 6,009. —Also a village in the bail. of Christiania, on the Dramma.

HOFFE and ROW, a township in Appleby St. Lawrence parish, Westmoreland. Pop. in 1841, 108.

HOF-GEISMAR, a town of Hesse-Cassel, the cap. of a circle of the same name, in the prov. of Lower Hesse, on the l. bank of the Esse, 6 m. SSW of Trendelburg, and 14 m. NNW of Cassel. Pop. 3,503, of whom a large majority are Jews. It is enclosed by walls; and consists of three parts, viz. Peterstadt, Altstadt, and Neustadt. It has 2 churches, a synagogue, an hospital, and a handsome public fountain; and possesses manufactories of linen, tobacco, paper, vinegar, and brandy. Linen forms its chief article of traffic.—About 1½ m. from the town are the baths and castle of Schömberg, the latter of which was built in 1787, near the site of an ancient castle of the same name.—The circle, or administrative division of H., comprises an area of 240 sq. m., of which nearly one-half is arable land. The greater proportion of the remaining surface is covered with wood. Pop. in 1840, 37,887. It is a generally mountainous district; and contains the forest of Reinhardwald, the most extensive in the principality. The principal productions of the soil are rye, oats, beet-root, lint, hemp, forage, and, in small

quantities, tobacco. Horses, to the number of 4,600, 8,300 cattle, 35,000 sheep, 8,500 pigs, and 4,000 goats are annually reared in this district. The manufacture of linen forms also an important branch of local industry. The circle comprises 4 amts or bail., viz. Carlshafen, Grebenstein, Hofgeismar, and Salaburg; and contains 44 towns and villages.

HOFHEIM, a village in the duchy of Hesse-Darmstadt, in the prov. of Starkenburg, circle and 13 m. from Hippenheim, near the Rhine, 4 m. NE of Worms, and 17 m. SW of Darmstadt. Pop. 1,270, of whom 814 are Protestants. It has a church, and possesses an active trade in tobacco.—Also a walled town in the duchy of Nassau, amt and 5 m. W of Höchst, and 11 m. NE of Mayence, on the Guldenbach, an affluent of the Main. Pop. 1,471. It has several forges and a tile-work.—Also a town of Bavaria, capital of a landgericht-bezirk of the same name, in the circle of Lower Franconia, on the Aurach, 26 m. NW of Bamberg, and 42 m. NE of Würtzburg. Pop. 850. Pop. of ldbz. 9,290.

HOFKIRCHEN, a town of the archduchy of Austria, in Upper Austria, in the circle of the Muhl, near the l. bank of the Danube, 36 m. W of Freystadt, and 28 m. WNW of Lintz, a town in the circle of Hausruck, on the Trettnach. — Also a town of Bavaria, in the circle of Lower Bavaria, presidial and 5 m. NW of Vilshoven, on the l. bank of the Danube. Pop. 542.

HOFLEIN (Gross), Nagy Hofflein, or Velka-Holovajana, a town of Hungary, in the comitat and 14 m. NNW of Oedenburg, and 10 m. WNW of Rust. Pop. 1,132. It has an extensive vinegar manufactory, and possesses several mineral springs and baths. Nearer Eisenstadt lies the village of Klein-Höflein.

HOFOABREKKA, a village of Iceland, in the Skaptafells-sysla, near the S coast, in N lat. 63° 27′.

HOFOI, a village of Iceland, on the E coast of the Eyja-fiord, and 17 m. from its head, in N lat. 65° 55′.

HOFRAH (El), an oasis in Eastern Nigritia, in the desert near Darfur.

HOFRAIN, a village of Styria, in the circle and 6 m. NW of Cilly. In the vicinity are extensive iron mines.

HOFSTADE, a department and commune of Belgium, in the prov. of E. Flanders, arrond. of Dendermonde. Pop. of dep. 1,925. The village is 7 m. SSW of Dendermonde, and 3 m. NNE of Alost, on the l. bank of the Dendre. Pop. 440. It has an oil-mill, and extensive manufactories of linen.

HOFSTAEDE, a commune of Belgium, in the prov. of Brabant, dep. of Muysen. Pop. 414.

HOFSTAOIR, a village of Iceland, in Skagafjardar-sysla, near the r. bank of a stream flowing into the Skaga-fiord.

HOFSTRAET, a commune of Belgium, in the prov. of East Flanders, dep. of Audegem. Pop. 189.

HOFTENBERG, a commune of Belgium, in the prov. of Brabant, dep. of Rhode-St.-Genest. Pop. 164.

HOFTEREN, an island of the North sea, on the W coast of Norway, diocese of Bergen and bail. of S. Bergen, in N lat. 60° 3′. and E long. 5° 25′. It is 12 m. in length, and 5 m. in medium breadth.

HOFVA, a town of Sweden, in the prefecture of Skaraborg, haerad of Waldsbo, to the S of Lake Skagern, and 18 m. NE of Mariestadt. Pop. 300.

HOFWEIER, a village of Baden, in the circle of the Middle Rhine, to the S of Offenburg. Pop. 1,137.

HOFWYL, Hofweil, or Wylhof, a village of Switzerland, in the cant. and 9 m. N of Berne, bail. and 6 m. SSW of Fraubrunnen. It is noted for its educational and agricultural establishments, founded here in 1799 by Emmanuel de Fellenburg. The former comprises a school for classical and general literature, a normal school, and several free schools for the poor. The latter consists of a model and of an experimental farm, both of great extent. An interesting account of these establishments will be found in the 58th vol. of the *Edinburgh Review*.

HOG-HEAD, a promontory of the coast of Munster, co. Kerry, on the NW side of the entrance of Kenmare river.

HOG-ISLAND, an islet in co. Clare, in the Shannon, between Kilrush and Inniscattery.

HOG-ISLAND, an island in the Flores sea, to the W of Salayer island, in S lat. 6° 9′, E long. 120° 20′.—Also a small island of Hindostan, in the prov. of Aurungabad, and harbour of Bombay.—Also an island of Upper Canada, at the SW extremity of Lake St. Clair, at the Detroit river, and 2 m. above the town of that name. It has an area of about 170 hect., one-fifth of which is capable of cultivation.—Also an island in the Bahama archipelago, to the NE of New Providence, from which it is separated by a narrow channel, forming the port of Nassau. It is 5 m. in length, and less than a mile in breadth. At the W extremity is a lighthouse, situated in N lat. 25° 5′ 37″, W long. 77° 22′ 0″.

HOG-ISLAND, or Sapodi, an island in the Asiatic archipelago, off the NE extremity of the island of Java, in S lat. 7° 5′, E long. 114° 55′. It is about 20 m. in circumf.

HOG-ISLAND. See Babi (Pulo).

HOG-ISLANDS, The Seven Hogs, or The Magheries, a cluster of islets, 7 in number, in co. Kerry, 3 m. NW of Lamb-head, 3½ m. S of Hog-head, and 1¾ m. W of the nearest part of the mainland. The two largest are Scariff or Scarav, and the Little Hog.

HOGANAS, a town of Sweden, in the laen and 55 m. N of Malmo, on the Cattegat. It has a small port, and is noted for the manufacture of crucibles.

HOGANSBURG, a village of Bombay township, Franklin co., in the state of New York, U. S., 234 m. N of Albany, on St. Regis river, an affluent of the St. Lawrence, and navigable to this place by steam-boats. Pop. in 1840, 250.

HOGE, an island of the North sea, near the W coast of Denmark, in the duchy of Sleswick, and bail. of Bredstedt, in N lat. 54° 35′, E long. 8° 33′. It is 4 m. in length, and about 2 m. at its greatest breadth. Its inhabitants, about 480 in number, are of Frisian origin. Navigation, wool-spinning, and the fattening of cattle, form their chief industrial occupations.

HOGESTOWN, a village of Cumberland co., in the state of Pennsylvania, U. S., 9 m. SW of Harrisburg, consisting in 1840 of about 12 dwellings.

HOGHTON, a township in the p. of Leyland, Lancashire, 5 m. WSW of Preston. Area 1,670 acres. Pop. in 1831, 2,198; in 1841, 1,706.

HOGLAND, Hochland, or Hooghland, an island of Russia in Europe, in the gulf of Finland, 24 m. from the coast of the gov. of Viborg, and 42 m. from that of Esthonia, and 120 m. W of St. Petersburg, in N lat. 60° 5′ 30″, E long. 26° 57′ 32″. It is 6 m. in length from SSE to NNW; but does not exceed a ½ m. in breadth. It contains some good land, and is well supplied with spring-water. Its inhabitants, about 350 in number, find their chief employment in fishing and navigation. Two lighthouses have been built on this island, the rocky character of its shores rendering approach to it extremely dangerous. The upper light is in N lat. 60° 5′ 41″, E long. 26° 57′ 24″; the under is in N lat. 60° 6′ 20″, E long. 26° 57′ 43″. The highest light is 328 ft. above sea-level. A naval engagement between the Swedes and Russians, on the 17th July 1788, in which the latter were victorious, took place near this island.

HOGNASTON, a parish in Derbyshire, 4 m. SW of Wirksworth. Area 1,270 acres. Pop. 272.

HOGNE, a department and commune of Belgium, in the prov. of Namur, arrond. of Dinant. Pop. 134.

HOGNE'E, a commune of Belgium, in the prov. of Liege, dep. of Cheratte. Pop. 350.

HOGNOUL, a department and commune of Belgium, in the prov. and arrond. of Liege. Pop. 417.

HOGOLEU, a group of islands in the North Pacific, in the Caroline archipelago, to the E of the Enderby islands, in N lat. 7° 15′, E long. 151° 45′.

HOGSHAW WITH FULBROOK, a parish in Buckinghamshire, 4 m. SSW of Winslow. Area 1,030 acres. Pop. in 1841, 50.

HOGSTHORPE, a parish in Lincolnshire, 5¼ m. ESE of Alford, on a branch of the Steeping. Area 2,870 acres. Pop. in 1831, 698; in 1841, 790.

HOGSTIES, or Los Corrales, a group of rocky islets in the Bahama archipelago, 12 leagues N by W ½ W of the Great Inagua, and to the S of the Mariguana passage, measuring 4½ m. in length from E to W, and 2½ m. from N to S. They surround a sand-bank in the form of a horse-shoe, opening to the SW, and each side terminating in a low sandy cay or islet of considerable size. The reef forms an excellent harbour, the space inside being of clear sand, with 3½ to 5 fath. water. The NW island in the cluster lies in N lat. 21° 41′ 30″, W long. 73° 50′.

HOGSTON, or Hoggeston, a parish in Buckinghamshire, 3½ m. SE of Winstow. Area 1,250 acres. Pop. in 1831, 173; in 1841, 204.

HOGSUND, a village of Norway, in the stift of Buskerud, on the Drammen, to the NW of the town of that name.

HOGUE (La). See Hougue (La).

HOGVESZ, or Hogyesz, a town of Hungary, in the comitat of Tolna, 31 m. NNE of Pecs or Funfkirchen, and 13 m. SSE of Tamasi. Pop. 3,070. It is the cap. of a seignory, and has a castle belonging to the counts of Appony, and a church. Wine and tobacco are extensively cultivated in the environs.

HOHBACH, a town of Wurtemberg, in the circle of the Jaxt, 8 m. S of Mergentheim, and 54 m. NNE of Stuttgard, on the l. bank of the Jaxt, which is here crossed by a handsome stone bridge. Pop. 936.

HOHBURG, a village in the kingdom of Saxony, in the circle of Leipzig, to the NE of Wurzen. Pop. 304.

HOHE. See Taunus.

HO-HEEN, a district and town of China, in the prov. of Kwan-se, div. of Ping-lo-fu.

HOHEGEISS, a village of the duchy of Brunswick, in the district and 18 m. S of Blankenburg, circle and 7 m. NNE of Walkenried. Pop. 900. It is situated at an alt. of 2,940 ft. above sea-level, and is the most elevated inhabited point of the Harz mountains.

HOHENASPE, a village of Denmark, in Holstein, 4 m. N of Itzehoe.

HOHEN-ASPERG. See Asberg.

HOHENAU, or Hochenau, a town of the archduchy of Austria, in Lower Austria, ldgb. and 45 m. NE of Vienna, and circle of Korneuberg, with a station on the Emperor Ferdinand's railway, and on the l. bank of the March. Pop. 1,557.

HOHENBERG, formerly a county of Würtemberg, in the circle of Schwarzwald. It was divided into high and low, and contained the towns of Rotenburg, Horb, Schonberg, and Oberndorf. The castle from which it derived its name is still to be seen in ruins, near Schonberg.—Also a town of the archd. of Austria, in Lower Austria, ldgb. and 49 m. SW of Vienna, circle and 23 m. S of Saint Polten, on the l. bank of the Trasen. Pop. 450. It has a castle, now in ruins, and possesses extensive manufactories of iron-ware.—Also a town of Bavaria, in the circle of Upper Franconia, 35 m. ENE of Bayreuth, and 21 m. SE of Hof, on a height, at the foot of which flows the Eger. Pop. 600. It has a castle. Alum is manufactured here, and in the environs is an iron-mine.

HOHENBRUCK, or Trzebechowice, a town of Bohemia, in the circle and 8 m. E of Koniggratz, and 21 m. NNE of Chrudim, on the Diedina. Pop. 2,231. Linen is extensively manufactured here.

HOHENBURG, a town of Bavaria, in the circle of the Upper Pfalz, on the Lauterach, to the S of Amberg. Pop. 710.

HOHENECK, a village of Würtemberg, in the circle of the Neckar, bail. and N of Ludwigsburg, on the Neckar. Pop. in 1840, 669.

HOHENECK, or Vojnik, a town of Styria, in the ldgb. of Gratz, circle and 5 m. N of Cilly, and 27 m. SW of Marburg, on the r. bank of the Konigsbach. It has a castle. In the vicinity are the celebrated mineral baths of Loka.

HOHENELBE, Hochelb, Vrchlaby, or Wrchlab, a municipal town of Bohemia, in the circle of Bidschow, 18 m. NE of Gitschin, and 20 m. N of Neu-Bidschow, on the Elbe, near its source. Pop. 3,257. It has a castle, a church, and a convent, and possesses extensive manufactories of paper, linen and cotton fabrics, lace, and wooden-ware. The paper of this locality is reputed the best in the kingdom. In the environs are mines of iron. The seignory of the counts of Morzin, to which this town belongs, comprises a portion of the Riesengebirge.

HOHENEMBS, or Hohenems, a market-town of the Tyrol, in the Vorarlberg, in the ldgb. of Innsbruck, circle and 7 m. S of Bregenz, at the foot of a mountain of the same name, on which are the ruins of an ancient fortress. Pop. 2,200. It has a castle, sulphureous baths, and a Jewish synagogue; and contains a cotton spinning-mill. It is the only place in the Tyrol exclusively inhabited by Jews.

HOHENFELS, a market-town of Bavaria, in the circle of the Upper Palatinate, 20 m. S of Amberg, and 21 m. NW of Ratisbon, on an affluent of the Vils. Pop. 740.

HOHENFRIEDEBERG. See Friedeberg (Hohen).

HOHENFURTH, Hohenfur, or Hohenfurt, a town of Bohemia, in the circle and 27 m. S of Budweis, and 39 m. S of Pisek, on the Moldau. Pop. 1,042. It has an abbey of the Cistercian order, founded in 1259, with a library and museum. It has several bleacheries, and a considerable trade in cotton for candle wicks.

HOHENGEROLDSECK, a county of the grand duchy of Baden, in the S part of the circle of the Middle Rhine. It comprises a superficies of 24 m., forming the bail. of Seelbach, and including also portions of the bail. of Gengenbach, Ettenheim, Lahr, and Haslach. It is watered by the Schutter, produces considerable quantities of corn and fruit, and pastures large numbers of cattle. Mines of argentiferous silver are wrought in the valley of the Schutter. Pop. (Cath.) 5,000. The revenue is estimated at 40,000 florins.—This co. originally belonged to the now extinct family of the counts of Clonenburg. In 1711 it was conferred upon the counts of Leyen. At the dissolution of the confederation of the Rhine, in 1814, it was restored to Austria; and in 1819 was ultimately ceded to the grand duchy of Baden.

HOHENHAMELN, a market town of Hanover, in the principality and 9 m. NNE of Hildesheim, bail. and 10 m. WSW of Peina, at the foot of a mountain. Pop. 1,031. It has a Catholic and a Lutheran church.

HOHENHASLACH. a town of Würtemberg, in the circle of the Neckar, obmt. and 6 m. N of Vaihingen, and 19 m. NNW of Stuttgard, on a mountain. Pop. in 1840, inclusive of that of the v. of Nieder-Haslach, 1,356. Freestone is wrought in the environs, and in the vicinity is the ancient convent and agricultural establishment of Rechentshofen. Wine of good quality is cultivated in the locality.

HOHENHEIM, a hamlet of Würtemberg, in the circle of the Neckar, obmt and 5 m. SSE of Stuttgard, near Pleiningen. In the vicinity is a fine castle built in the last cent., with an extensive park and garden. An agricultural establishment was instituted in 1818 in connection with this domain.

HOHENKAMMER, a village of Bavaria, in the circle of Upper Bavaria, 12 m. WNW of Friesing, and 32 m. ENE of Augsburg, on the r. bank of the Glon. Pop. 250. It has a brewery, a distillery, and a saw-mill.

HOHENKIRCHEN, a village of Hesse-Cassel, in the prov. of Lower-Hesse, circle of Hofgeismar. Pop. 872. It has several iron-works.

HOHENLANDSBERG, a castle of Bavaria, in circle of Middle Franconia, 6 m. NE of Uffenheim, and 25 m. NW of Anspach.

HOHENLEUBEN, a market town of the principality of Reuss-Schleitz, 16 m. NW of Schleitz. Pop. 2,200. It has a castle and a church, and possesses manufactories of woollen, cotton, and linen fabrics, and a dye-work.

HOHENLINDEN, a hamlet of Bavaria, in the circle of Upper Bavaria, 23 m. E of Munich, to the W of Haag, and SW of Isen, on the N skirts of the forest of Ebersberg. Pop. 221. It is noted for a victory gained here by the French under Moreau, against the archduke John of Austria, on the 3d Dec., 1800.

HOHENLOHE, an ancient principality of Germany, in the SW part of the circle of Franconia, now in its greater extent comprised in the circle of Jaxt, Würtemberg, and partly in the Bavarian circle of Middle Franconia. The princes of Hohenlohe are descended from Duke Everhard, brother of Conrad I., king of Germany.

HOHENMAUTEN, or Hohenmauth, a town of Styria, in the circle and 27 m. W of Marburg, and 36 m. SSW of Grätz, partly on a height near the l. bank of the Drave. Pop. 430.

HOHENMAUTH, Hohenmaut, or Wysoky-Meyto, a town of Bohemia, in the circle and 18 m. E of Chrudim, and 26 miles SE of Königgratz, on the Meyto, and near the North States railway, on which it has a station. Pop., with suburbs, 4,623. It is surrounded by walls, and has a fine church and a town-house. The manufacture of woollen fabrics forms the chief branch of local industry.

HOHENMOLSEN. See Molsen.

HOHENRUPPERSDORF, a town of the archduchy of Austria, in Lower Austria, 27 m. NE of Vienna, and 8 m. SW of Zistersdorf. Pop. 650. The vine is extensively cultivated in the environs.

HOHENSAX, a village of Switzerland, in the cant. of St. Gallen, N of Gambs. Pop. 1,153.

HOHENSCHWANGAU, a village of Bavaria, in the circle of Upper Bavaria, presidial and 3 m. SSW of Schongau, and 60 m. SW of Munich. In the environs are quarries of marble and of gypsum.

HOHENSOLMS, a town of Prussia, in the prov. of Lower Rhine, regency and 48 m. NE of Coblenz, and circle and 6 m. N of Wetzlar. Pop. 424.

HOHENSTADT, or Tabrzih, a market town of Moravia, in the circle and 32 m. NW of Olmutz, and 9 m. SW of Schömberg, on the Sazawa, and with a station on the North States railway. Pop. 1,494. It is the capital of an extensive seignory belonging to the princes of Liechtenstein, and has 3 suburbs, a castle, and 2 churches.

HOHENSTATT, a village of Würtemberg, in the circle of the Jaxt, W of Abtsgmünd. Pop. 636.—Also a village in the circle of the Danube, SE of Weisensteig. Pop. 358.

HOHENSTAUFEN, a town of Würtemberg, in the circle of the Danube, bail. and 5 m. NE of Göppingen, and 29 m. NNW of Ulm. Pop. 1,106. Linen and woollen lace are manufactured here. In the immediate vicinity are the ruins of the castle of Hohenstaufen, the cradle of the celebrated family of that name, which, in the middle ages, gave six emperors to Germany. It was destroyed in 1525.

HOHENSTEIN, a town of Saxony, in the krdr. of Zwickau, seignory and 6 m. E of Glauchau. Pop. 4,670. It has several spinning-mills, and extensive manufactories of woollen, cotton, and linen fabrics.—Also a town in the circle and 17 m. ESE of Dresden, near the l. bank of the Polenz. Pop. 994. In the vicinity are the castle and bear-garden of Hohenstein.—Also a village in the duchy of Saxe-Coburg, S of Coburg. Pop. 93. See also Hohnstein.

HOHENSTEIN, Olstinck, or Olstynck, a town of Prussia, in the prov. of East Prussia, regency and 84 m. SSW of Königsberg, circle and 17 m. ESE of Osterode, on the Amelang, near the small lake Mispel. Pop. 1,000.

HOHENTANN, or Hohenthann, a village of Bavaria, in the circle of Lower Bavaria, SE of Rottenburg. Pop. 114. It has a castle.

HOHENTHENGEN, a village of Baden, in the circle of the Upper Rhine, SW of Jestetten. Pop. 400.—Also a village of Würtemberg, in the circle of the Danube, bail. and 6 m. W of Sulgau, and 42 m. SW of Ulm. Pop. 2,450.

HOHENTHURN, a village of Prussia, in the prov. of Saxony, and regency of Merseburg, W of Landsberg. Pop. 150.

HOHENTWIEL, a hamlet of Würtemberg, in the circle of the Schwarzwald, bail. and 17 m. S of Tuttlingen, and 20 m. WNW of Constanz, locally situated in the grand duchy of Baden, near the Swiss frontier. In the vicinity are the ruins of a celebrated fortress, of the same name, which was razed to the ground by the French General Vandamme in 1800.

HOHENWART, or Hohenwarth, a town of Bavaria, in the circle of Upper Bavaria, ldgr. of Schrobenhausen, 8 m. NW of Pfaffenhofen, and 36 m. N of Munich, on the r. bank of the Paar. Pop. in 1818, 964. It is walled, and has 2 churches, an hospital, and numerous breweries. A convent now occupies the site on an adjacent mountain of the ancient fortress of Hohenwart.

HOHENWESSELY. See Roth-Wessely.

HOHENWESTEDT, a village of Holstein, to the S of Rendsburg. Pop. 700.

HOHENWELTERSBACH, a village of the grand-duchy of Baden, in the circle of Murg and Pfinz, bail. and 2 m. S of Durlach, and 4 m. SE of Carlsruhe. Pop. 494.

HOHEN-ZIERITZ, a bail. in the W part of the grand-duchy of Mecklenburg-Strelitz, with a village and castle of the same name, on the Tollense.

HOHENZOLLERN-HECHINGEN, a principality of Germany, which takes its name from the ancient castle of Hohenzollern, which crowns the summit of a mountain 1½ m. S of Hechingen. It is bounded on the N and S by Würtemberg; and on the E and W by Hohenzollern-Sigmaringen. The surface is about 120 sq. m. This little country forms a part of the Suabian Alb or Alp; and the greater part of it forming the valley of the Starzel,

an affluent of the Neckar, lies in the basin of the Rhine; the remainder, forming the valley of the Lauchart, belongs to the valley of the Danube. The pop. amounted in 1842 to 21,000, the majority of whom were Catholics. There was under the late regime a representative assembly of 12 citizens, who determined the taxation. The revenue amounted to 160,000 florins. The contingent was 145 men. The prince held, together with Sigmaringen, Liechtenstein, the two lines of Reuss, the two of Lippe, and that of Waldeck, the sixteenth place in the confederacy, and had one vote *in plenum*. But by treaty dated 7th October, 1849, the reigning princes of H. Hechingen and H. Sigmaringen ceded all their rights of sovereignty to the king of Prussia for an annual pension to the former of 10,000, and to the latter of 25,000 crowns.—Hechingen, with 3,000 inhabitants, is the capital, and residence of the prince. The princes of Hohenzollern descend from the counts of Zollern, who are also the ancestors of the royal house of Prussia. At the end of the 16th cent., they divided into the two lines of Hechingen and Sigmaringen.

HOHENZOLLERN-SIGMARINGEN, a principality of Germany, bounded on the N, E, and W, by Würtemberg; and on the S by Baden. Its superficial extent is about 400 sq. m. It lies at the foot, and on both flanks of the Suabian Alb, the NW portion belonging to the basin of the Rhine, the SW to that of the Danube. The soil is stony; but some fertile tracts extend on the r. bank of the Danube, which is the principal river. Agriculture has been of late greatly improved, and in spite of the stony soil, there is more corn grown than is needed for consumption. The population was returned in 1818 at 37,032; in 1844, at 44,641, the majority of whom are Catholics. There is a representative chamber of 17 members. The revenue was about 320,000 florins. The prince held the sixteenth place in the confederacy, with the above-mentioned states, and had one vote *in plenum*. The contingent was 356 men. Sigmaringen, on the Danube, with 777 inhabitants, is the cap., and contains a castle in which the prince resides.

HOHE-OFEN, a village of Prussia, in the prov. of Brandenburg, regency of Potsdam, circle and 17 m. WSW of Neu-Ruppen, and 52 m. NW of Berlin, near Neustadt, on the l. bank of the Dosse. Pop. 370.

HOHE-VEEN, or Hautes-Fagnes, a group of mountains, a branch of the chain of the Ardennes, which extends between the Rhine and the Meuse, comprising an area of 30 m. from E to W, and 15 m. from N to S; bounded on the W by the r. bank of the Ourthe, on the SW by that of the Aywailles, on the NW by the l. bank of the Vester, and running NE to the source of that river. On the SE, near the sources of the Roer and Warge, they join the Erfel mountains. Their height does not exceed 1,482 ft. above sea-level, and they are to a great extent covered with furze. The principal towns which lie within their range are Montjoie, Eupen, Verviers, Theux, Spa, and Malmedy.

HOHESCHID-MIT-MEIRSCHEID, or Hohescheid, a town of Prussia, in the prov. of the Rhine, regency and 21 m. E of Dusseldorf, and circle of Solingen. Pop. in 1837, 10,255.

HOHN, a village of Denmark, in the duchy of Sleswig, SE of Friedrichstadt. Pop. 500.

HOHNDORF, a village of Prussia, in the prov. of Saxony, and regency of Merseburg, E of Wittenberg. Pop. 100.

HOHNECK, a village and castle in the kingdom of Saxony, circle of the Erzgebirge, S of Stolberg.

HOHNSTEIN, or Hohenstein, a town in the kingdom of Saxony, in the circle of the Erzgebirge, seignory of Schonberg, 5 m. NE of Lichtenstein. Pop. 4,325. It has a fine church, and an orphan asylum; and possesses considerable manufactories of cotton fabrics, stockings, and flannel, a cotton spinning-mill, and several bleacheries. In the environs are mines of gold, silver, copper, and arsenic.—Also a town in the circle of Meissen, cap. of the bail. of Hohnstein and Lohmen, 17 m. ESE of Dresden, near a lofty rock, the summit of which is crowned with a castle. Spinning and the manufacture of linen form the chief branches of local industry. Pop. 917. Pop. of bail. of H. and Lohmen 19,900.

HOHR, a village of the duchy of Nassau, bail. and 8 m. W of Montabaur, and 5 m. NE of Coblenz. Pop. 1,064.

HOIER, or Hoyer, a town of Denmark, in the duchy and 50 m. NW of Sleswig, and bail. of Tondern, on the North sea, at the mouth of the Hoid-Aa. Pop. 630. It has a port, and good roadstead, and contains a church and custom-house. In the vicinity are extensive oyster-fisheries.

HOIERSWERDA. See Hoyerswerda.

HOJA, a group of small islands in the Skager-Rack, near the coast of Norway, to the W of the Hval-Oen, and at the mouth of the Glommen.

HOJA-JAMOTE-KA-GOTE, a village or encampment in Beluchistan, near the N frontier of Luz. It consists of about 40 huts, formed of mats. In summer it is deserted by its inhabitants, the heat of the locality compelling them to betake themselves to the mountains. In the vicinity are rich mines of copper and silver; antimony and lead are also said to be abundant in the locality. The v. belongs to a chieftain of the Jamote tribe, and is capable of sending into the field about 100 men, armed with matchlocks.

HOJLAND, a village of Norway, in the bail. of N. Trondheim, NW of Overhalden.

HOJOS, a town of Mexico, in the state of Tamaulipas, 60 m. N of New Santander, and 225 m. NNE of San-Luis-Potosi.

HO-KEEN-FU, a division and town of China, in the prov. of Chih-le. The div. comprises 11 districts. The town is 105 m. SSW of Pekin, in N lat. 38° 30′, and long. W of Pekin 0° 18′ 0″, and is situated in a vast plain between the Tae-ho and Hou-to-Ho. It is one of the largest towns of the prov. Its walls are of considerable height; but the houses are mean-looking, and it contains only one street in which any ornamental buildings are to be found.

HOKENDORF, a village in the kingdom of Saxony, in the circle of the Erzgebirge, NW of Deppoldiswalde. Pop. 750.

HO-KEO-HEEN, a district and town of China, in the prov. of Shen-se, div. of Paou-tih-chu, near the l. bank of the Hoang-ho, in N lat. 39° 15′.

HOKI-ANGA, or Shouki-anga, a river of New Zealand, in North Island, which descends in a headstream called the Manga-muka from the SE side of Mount Maunga-taniwa or Ngate-po; flows SSE; and, after receiving several tributaries, bends SW, and swelling into a considerable estuary, falls into the sea to the N of Point Arahi-te-houdou. The estuary is joined by several fresh-water tributaries, which have a little cultivable land on their banks. It forms a harbour, which can be entered by large vessels. The surrounding hills are clothed with a primitive forest of pines. The hills consist of argillaceous slate, covered with a stiff white clay.

HOLABINA, or Holubina, a village of Austria, in Hungary, in the comitat of Beregh, 15 m. NE of Munkacs, on an affluent of the Latorcza.

HOLAKAIRA, a town of Hindostan, in the prov. of Mysore, 120 m. N of Seringapatam.

HOLANG-CHAN, or Ai ajan-Alin, an exten-

sive range of mountains on the NW confines of China, and forming, for the space of about 50 m. on the NW side of the div. of Ning-hea, in the prov. of Kan-suh, the boundary-line of the kingdom.

HOLAOUA ISLAND, an island of the Hapay group, in the Friendly archipelago, South Pacific, in S lat. 19° 52′, W long. 174° 35′. It is connected with the island of Lafouga by a bank which dries at low water. In 1777, when it was visited by Cook, it was uninhabited.

HOLAR, or Holum, a village of Iceland, in the syssel of Skagafjardar, on the Hjaltadalsa, 7 m. above its entrance into the E side of the Skaga-fiord, and 135 m. NNE of Reikiavrick, in N lat. 65° 44′. It has a cathedral, a school, and a printing establishment; but the houses are few in number, and considerably scattered. The place is one of great antiquity, and had formerly a bishopric, founded in 1106, and endowed in the 16th cent. by Christian III.

HOLBEACH, a parish and market-town in Lincolnshire, 41 m. SE of Lincoln, and 105 m. NE of London. Area of p. 20,240 acres. Pop. in 1831, 3,890; in 1841, 4,637. The town is of great antiquity, and consists of one long and two shorter streets. It was originally called Oldbeche, from its having been built near a beach left by the recession of the sea. It is one of the polling-places for the members for the parts of Kesteven and Holland.

HOLBECK, a township in the p. of Cuckney-Norton, Nottinghamshire, 4 m. SW of Worksop. Pop. in 1831, 244; in 1841, 267.—Also a ward and chapelry in the p. of St. Peter's, Leeds, W. R. of Yorkshire, within the boundary, and 1½ m. SW of the borough, on the Aire, and on the Leeds and Liverpool canal. Pop. of ward 20,436. Area of chapelry 760 acres. Pop. in 1831, 11,210; in 1841, 13,346.

HOLBEK, a bailiwick, town, and port of Denmark, in the island of Sieland. The town is 37 m. W of Copenhagen, on the Holbek's-fiord, an arm of the Ise-fiord. Pop. 2,300. It contains a castle and a church, and has several distilleries. The harbour is small, but secure, and has a considerable trade in grain.—The bail. of H. forms the NW part of the island of Sieland, and is bounded on the NE by the Ise-fiord; on the W by the Great Belt; and terminates on the N in a long peninsula. It comprises the island of Samsoe, and is divided into 7 haerads or districts; and contains 73,200 inhabitants, on an area of about 500 sq. m.

HOLBETON, a parish in Devonshire, 3¼ m. SW of Modbury, at the mouth of the Erme. Area 4,800 acres. Pop. in 1831, 1,107; in 1841, 1,120.

HOLBORNE ISLAND, an island of the S. Pacific, near the NE coast of Australia, to the N of Edgecombe bay, in S lat. 19° 40′, E long. 148° 20′.

HOLBROOK, a chapelry in Derbyshire, 2 m. SSE of Belper. Pop. in 1831, 703; in 1841, 880.—Also a parish in Suffolk, 5½ m. SSE of Ipswich, on the Stour. Area 1,720 acres. Pop. in 1841, 747.

HOLCOMB, a village of Burke co., in the state of Georgia, U. S., 58 m. ESE of Milledgeville, on the Central railroad, 100 m. NW of Savannah.

HOLCOMB (Great), a tything in the p. of Newington, Oxfordshire. Pop. 103.

HOLCOMBE, a parish in Somersetshire, 6 m. NNE of Shepton-Mallet. Area 680 acres. Pop. 468.

HOLCOMBE-BURNELL, a parish in Devonshire, 4¾ m. SW of Exeter. Area 1,890 acres. Pop. in 1831, 264; in 1841, 306.

HOLCOMBE-ROGUS, a parish in Devonshire, 7 m. ESE of Bampton, on the Exeter and Bristol railway, and Grand Western canal. Area 2,750 acres. Pop. in 1831, 915; in 1841, 843.

HOLCOT, a parish in Northamptonshire, 7 m. WNW of Wellingborough. Area 1,670 acres. Pop. in 1831, 433; in 1841, 456.

HOLCUTT, or Holcote, a parish in Bedfordshire, 4 m. NNW of Woburn. Area 1,000 acres. Pop. in 1831, 49; in 1841, 62.

HOLDEN, a parish of Norway, in the dio. and 99 m. NE of Christiansand, and 15 m. W of Skeen. Pop. 2,195.—Also a township of Worcester co., in the state of Massachusetts, U. S., 48 m. W of Blackstone and Nashua rivers. Pop. in 1840, 1,874.

HOLDENBY, a parish in Northamptonshire, 6½ m. NNW of Northampton. Area 1,790 acres. Pop. in 1831, 181; in 1841, 187.

HOLDENHURST, a parish in Hants, 3 m. NW of Christ-church, on the Stour. Area 7,320 acres. Pop. in 1831, 733; in 1841, 905.

HOLDERNESS, a township of Grafton co., in the state of New Hampshire, U. S., 38 m. N of Concord, watered on the E by Squam lake, and its outlet Pemigewasset river. Pop. in 1840, 1,528.

HOLDFAST, a hamlet in the p. of Ripple, Worcestershire, N of Tewkesbury, between the Severn and Avon. Area 740 acres. Pop. in 1841, 97.

HOLDGATE, a parish and township in Salop, 11 m. NNE of Ludlow, on the Cerne. Area of p. 2,840 acres. Pop. in 1831, 188; in 1841, 224. Pop. of township in 1831, 56; in 1841, 79.

HOLDINGHAM, a hamlet in the p. of New Sleaford, Lincolnshire, 1½ m. N of Sleaford. Area 1,360 acres. Pop. in 1831, 137; in 1841, 198.

HOLEN, a small town of Norway, in the bail. of Aggershuus, on the Holen-Elv. Pop. 158.

HOLENBURG, a town of the archduchy of Austria, in Lower Austria, in the circle of the Upper Wienerwalde, 34 m. WNW of Vienna, on the r. bank of the Danube.

HOLESCHAU, a town of Austria, in Moravia, in the circle and 22 m. N of Hradisch, and 9 m. ENE of Kremsir, on the r. bank of the Russawa. Pop. 3,800, of whom a large proportion are Jews. It has a fine castle, with a large park, and a church; and possesses some manufactories of cloth and linen. Its trade, which is carried on with considerable activity, consists chiefly in articles of local production.

HOLETOWN. See James Town.

HOLFORD, a parish in Somerset, 6 m. SW of Watchet. Area 250 acres. Pop. in 1841, 185.

HOLGATE, a township in the p. of Mary-Bishopshill-Junior, E. R. of Yorkshire, near one of the branches of the Ouse. Area 250 acres. Pop. in 1831, 97; in 1841, 143.—Also a river in Yorkshire, an affluent of the Swale.

HOLGUIN, a town of Cuba, capital of a jurisdiction of the same name, in the Departemento-Oriental, 36 m. ENE of Bayamo. Pop. 4,200; of the jurisd. in 1841, 23,635.

HOLICS, or Holitsch, a town of Hungary, in the com. of Neutra, march and 4 m. SW of Szakolcza, near the l. bank of the March. Pop. 4,382, of whom about one-fourth are Jews.

HOLINKA, a village of Poland, in the obwod and 27 m. E of Augustowo. Pop. 225.

HOLITZ, a village of Bohemia, in the circle and 12 m. NE of Chrudim, on the Redicka. Pop. 3,424.

HOLKAR (States of), the name by which certain protected territories of Hindostan, lying between the parallels of 21° 10′ and 24° 50′ N, and between 73° 44′ and 77° 30′ E long., are at present known. They consist of three distinct portions; one, and the largest, in the SW of Malwah; another in the E part of Gujerat; and a third in the N part of Candeish. On the N are the larger portion of the territories of the Rajput chiefs of Scindiah; on the E, smaller territories, and the possessions of the Company; on the S, the states of the Nizam and of the

Company; and on the W, the states of the Guicowar. The Nerbudda river traverses the territory from E to W, and the Tapti skirts it on the SE. The second portion, lying further N, is entirely comprised in Malwah, and is surrounded by the territories of Scindiah and of the Rajput chiefs. The third portion lies to the E of the latter, and forms likewise an enclave within the territories of Scindiah. The area of the whole may be estimated at 11,500 sq. m.; and the revenue in 1824 exceeded 25 lacs of rupees, or £250,000. The present chief has made Indur his capital. See MAHRATTA.

HOLKAR (UPPER), a township in the p. of Cartmel in Lancashire, 1½ m. NNW of Cartmel. Area 6,550 acres. Pop. in 1801, 1,039; in 1841, 1,114.—Lower H., in the same p., has an area of 2,130 acres. Pop. in 1801, 882; in 1841, 1,670.

HOLKHAM, a parish and village in Norfolkshire, 3 m. W of Wells. Area 4,230 acres. Pop. in 1801, 550; in 1831, 792; in 1841, 731. The v. is pleasantly situated on a gentle eminence above the saltmarshes. H. house, the magnificent seat of the Earl of Leicester, is in this p. The surrounding domain comprises above 3,200 acres.

HOLKHAM BAY, a bay formed by Stephen's passage, to the E of Admiralty island, on the coast of Russian America, in N lat. 57° 42′.

HOLLABRUNN (OBER), a town in the archd. of Austria, in the lower circle of the Mannhartsberg, 21 m. NW of Korneuburg. Pop. with Nieder H. 2,272.

HOLLAHONUR, a town of Hindostan, in the prov. of Mysore, subah of Nagara, near the confluence of the Tunga and the Bedra, 45 m. ENE of Bednore.

HOLLAND,

A small European kingdom, politically retaining the title of KINGDOM OF THE NETHERLANDS, lying between the parallels of 51° 15′ and 53° 30′; and between the meridians of 3° 30′ and 7° E. Its area is somewhat greater than that of Belgium, from which it was recently dissociated, and about the tenth part of that of Great Britain and Ireland. Taking the area of Europe at 100; that of Holland will be represented by 0·30; while that of Belgium is 0·29: and that of the United Kingdom 3·19.—It is bounded on the N by the North sea. On the E it has the estuary of the Ems, and the Dollart; and a line drawn from the S extremity of the latter expansion of tidal water, S through the great Bourtanger morass to about 52° 35′ N lat., and 7° E long., where it turns E till it strikes the Vecht, separates it from Hanover. From the Vecht, the E frontier-line runs in a very irregular wavy course, inclining gradually to the W, till it strikes the Rhine a little below Emmerich in Prussia, separating throughout this distance H. from Prussia. It then runs SW to the N frontier of Limburg, where it turns SSE and runs along the Maas to Ceistern, where it turns W to the great Peel marsh, then S, and then SW, till it strikes the Zuid Wilhelm's Vaart canal, at a point 5 m. SSW of Weert in Limburg. From this point it runs, on the frontiers of Belgium, in an irregular line W till it strikes the Schelde, near Ossendrecht, and crossing that river sweeps round by Sas-van-Ghent, Philippine, Sainte Kruis, and Sainte Anne, to the Zwin, a small inlet of the North sea. Its boundary on the W is the North sea.

Divisions.] The following are the present divisions of H., with the area and pop. of the different provinces:

	Area in sq. m.	Pop. in 1824.	Pop. Jan. 1, 1844.	Pop. Dec. 31, 1850.
North Holland,	928	391,586	456,320	479,566
South Holland,	1,166	453,818	546,975	568,872
Zealand,	588	133,396	154,633	161,495
Utrecht,	542	122,313	149,746	150,127
Guelderland,	2,018	293,396	359,031	374,734
Overyssel,	1,293	165,936	207,147	218,702
Drenthe,	788	59,915	78,854	83,675
Gröningen,	778	133,982	184,619	189,180
Friesland,	1,151	200,332	238,102	249,769
North Brabant,	1,653	332,551	382,709	398,433
Total,	10,905	2,287,225	2,758,136	2,874,553
Part of Limburg,	852	...	185,000	206,600
Part of Luxemburg) in 1841, and 1849,	990	...	175,223	186,485
			3,118,359	3,267,638

The whole of the Netherlands is a low flat country, especially Flanders and H., which, as Temple observes, "look like the sea in a calm." The extreme flatness of the surface in H. deprives it of that picturesque beauty of landscape which results from the mixture of hills and valleys. Scarcely an eminence is to be seen all the way from Utrecht to the frontiers of France; and even to the E of that city, the proportion of level country is much greater than of that which presents a slight degree of elevation. What is called a hill in the E provs. of H., would in any other country be considered only as a small sandy hillock. In the N and W the country is so low that the surface of the provs. of Groningen, Friesland, and Holland, is actually below the sea-level; yet the fields are carefully cultivated, and preserved from the fury of the ocean waves, partly by vast artificial dykes, partly by natural sand-hills or downs. Here the numerous canals intersecting every district in all directions,—the frequency and cleanly neatness of the towns,—the innumerable villas decorated with the utmost nicety of art,—proclaim the laborious perseverance and wealth of the inhabitants, who have converted fens and bogs and sandy heaths into fruitful fields and smiling meadows. A recent traveller argues that H. is not an unpicturesque, uninteresting country. "Flat it is," says he; "but it is so geometrically only, and in no other sense. Spires, church-towers, bright farm-houses, their windows glancing in the sun,—long rows of willow-trees, their bluish foliage ruffling up white in the breeze,—grassy embankments of a tender vivid green, partly hiding the meadows behind, and crowded with glittering gaudily-painted gigs and stool-waggons, loaded with rosy-cheeked, laughing country-girls, decked out in ribbons of many more colours than the rainbow, all as streaming in the wind,—these are the objects which strike the eye of the traveller from seaward, and form a gay front view of H. as he sails or steams along its coast and up its rivers. On shore, the long continuity of horizontal lines of country in the background, each line rising behind the other to a distant, level, unbroken horizon, gives the impressions of vastness and of novelty."

Rivers.] If this region cannot be denominated a land of hills and valleys, it may very properly be designated a place of broad rivers and of streams. But the flatness of the whole country is such, that the rivers, as if uncertain whither to pursue their course, roll with tardy current, and divide into numerous branches before they reach the sea. The great rivers of H. are the Rhine, the Schelde, and the Maas or Maese; but it is only the lower part of these rivers which belong to this country. The streams next in importance are the Vecht, the Yssel, the Hanse, the Fevel, the Aa, the Dommel, and the Mark.—The principal mouth of the Rhine during the Roman sway, is now all but obliterated excepting in name, and the whole coast of H. has much receded from its earlier tide-mark; for, at the spot where the

Rhine entered the sea, stood a fortress, by some ascribed to Drusus, by others to Claudius, intended to guard the entrance; but the whole plan of this structure, with walls of hewn stone—still 3 ft. high when last seen—is now buried under the waves, more than a mile from the present shore. Coins of Posthumus, Victorinus, and others resembling early Anglo-Saxon *skeatta*, which have been picked up here during low tides, indicate that the fortress was garrisoned, and therefore, that the river was still navigable after the Roman departure from Britain. Farther W is the Roompot estuary, where another Roman fastness is supposed to have existed on the sand-bank facing Ter-Veer, on the E. Schelde; Romerswaal, another fortress of the same people, was also a small town, on a bank on the W. Schelde, opposite Bergen-op-Zoom. So late as 1606, the Hock of Holland, Goerce, and other parts of the coast, were invaded and swept away; and, at this day, W. Capelle, in Walcheren, after similar devastations, is defended by rows of piles, which occur again at Blankenberg, and even at Ostend. This subject is treated with more detail in our notice of the province of H.

Such of our learned readers as wish to be more particularly informed concerning the ancient mouths of the Maese and the Rhine, the *Insula Batavorum*, and the canal of Drusus, may obtain as much satisfaction as the nature of the subject will allow, by consulting the learned Cluvier, D'Anville, and Mannert. The Rhine at present divides into two branches, 12 m. below Emmerich, in the Prussian duchy of Cleve. The S branch, under the name of the Waal —the ancient *Vahalis*—runs almost due W till it joins the Maese, to the N of Bois-le-Duc. The N branch, after proceeding a small distance to the NW, is divided into two streams at Ardheim. The branch called the Leck runs W, and joins the E branch of the Maese, a little to the E of Rotterdam. The other branch called the Yssel, runs N, and falls into the Zuyder-zee at Campen. "The navigation of the Rhine below the Prussian frontier," says Mr. MacGregor, "is virtually in possession of H.; but neither the treaty of Vienna, nor the convention of Mayence, yield any presumptive right to H. over that navigation; and the British government not only always disclaimed such assumption on the part of H., but has claimed the right to navigate even as far as Frankfort from and into the sea." The treaty of Vienna is sufficiently positive on this head; and the treaty of Mayence, 1831, declares the Rhine a free navigable route along its whole littoral from Basle to the sea. "The navigation of the Rhine," Mr. MacGregor continues, "by steam, or by those large and small vessels called Rhine ships, is, and has long been, in the hands of the Dutch, and the spirit of monopoly is striking in the few steam-boats, and those certainly of an inferior and uncomfortable description, which are employed in the Lower Rhine navigation. Neither England nor the German Rhine-bordering states should sanction this, either passively or actively."—The Meuse, Maas, or Maese, as it is called by the Dutch and Germans, rises in the neighbourhood of Langres, near the village of Meuse, which is reckoned the highest ground in France, and from which the Seine, the Aube, the Marne, the Sâone, and the Maese, flow in different directions to the sea. The Maese waters, in its tortuous course through France, Stenay, Verdun, Sedan, Doucherry, Mezieres, and Charleville; and entering Belgium at Givet, runs between it and Charlemont; passes by Namur, where it receives the Sambre; by Huy and Liege, where it receives the Ourthe from Luxemburg; by Maestricht and Roermonde, where it is joined by the Roer; pursues its course to Venloo, Grave, and Battenburg; and thence proceeds in a W direction, till it divides itself into two branches. The S branch joins the Waal, forming with it the isle of Bommel, and thus united, passes by Gorcum to Dort, where it is again divided, one branch joining the Leck on the N, by means of the Meuse. Of the N branch which pursues a W course, a small branch runs S into that arm of the North sea called the Haring Vliet; while the main branch continuing its W course, falls into the sea at Briel in the isle of Voorne. Below Gorcum, the Meuse by its divided channels forms many islands, the chief of which are Ysselmonde, Stryen, and Voorne. The comparative course of this river, from Givet to the Briel, is 250 m. It retains its name during the whole of its course, and has in vulgar speech usurped the honours due to the majestic Rhine. If we were to speak or write with strict correctness, the estuaries or mouths of the Maese should be styled those of the Rhine; though the people, accustomed to the ancient and more northern egress of this grand river, and preferring tradition to fact, have denominated that the Maese which in point of fact should be called the Rhine. The Leck and Waal must be regarded as mouths of the Rhine, though after their junction below the isle of Bommel, they are commonly styled the Maese; while in just and precise geography, it should be said that the Maese now falls into the Rhine on the E side of the isle of Bommel.—That branch of the Rhine, which runs through Gelderland, and falls into the Zuyder-zee at Campen, is called the Yssel, from a comparatively small stream of that name, which rises in the bishopric of Munster, and, running a NW course, falls into this branch of the Rhine at Duisburg.—The Scheldt, or Schelde, called l'Escaut by the French, rises in Picardy, in a small lake, 1 m. E of Beaurevoir. It passes by Cambray, Bouchain, Valenciennes—where it begins to be navigable for boats—Conde, Tournay, Oudenarde, Ghent, Dendermonde, and Antwerp. It divides into two branches below Fort Lillo. One of these, called the Eastern Scheldt, flows by Bergen-op-Zoom; the other, the Western Scheldt, proceeds to Flushing; and both of these branches, after forming several islands, fall into the German ocean. These islands are called the isles of Zealand. The Scheldt is joined by the Selle, a little above Denain; by the Saussel, at Bouchain; the Scarpe, at Mortagne; the Lys, at Ghent; and the Dender, at Dendermonde. Most of these tributary streams rise in the prov. of Artois, at no great degree of elevation. The whole course of the Scheldt may be estimated at 150 m., without including the windings of the stream. It has a very large volume of water, considering the shortness of its course, being at Antwerp 2,160 ft. broad, and 30 ft. deep at low water. The tide rises 15 ft., and runs up as far as Ghent, 30 m. direct distance above Antwerp. The navigation of the Scheldt and the Meuse has been thus provided for by treaty of April 19, 1839:

Art. 2 So far as regards specially the navigation of the Scheldt, and of its mouths, it is agreed, that the pilotage and the buoying of its channel, as well as the conservation of the channels of the Scheldt below Antwerp, shall be subject to a joint superintendence; and that this joint superintendence shall be exercised by commissioners to be appointed for this purpose by the two parties. Moderate pilotage dues shall be fixed by mutual agreement, and those dues shall be the same for the vessels of all nations. In the meantime, and until these dues shall be fixed, no higher pilotage dues shall be levied than those which have been established by the tariff of 1829, for the mouths of the Meuse from the high sea to Helvoet, and from Helvoet to Rotterdam, in proportion to the distances. It shall be at the choice of every vessel proceeding from the high sea to Belgium, or from Belgium to the high sea, to take what pilot she pleases: and upon the same principle, it shall be free for the two countries to establish along the whole course of the Scheldt, and at its mouth, such pilotage establishments as shall be deemed necessary for furnishing pilots. Every thing relating to these establishments shall be determined by the regulation to be concluded in conformity with

section 6, hereinafter following. These establishments shall be placed under the joint superintendence mentioned in the beginning of the present paragraph. The two governments engage to preserve the navigable channels of the Scheldt, and of its mouths, and to place and maintain therein the necessary beacons and buoys, each for its own part of the river.

Art. 3. There shall be levied by the government of the Netherlands, upon the navigation of the Scheldt, and of its mouths, a single duty of florin 1·50 per ton; that is to say, florin 1·12 on vessels which, coming from the high sea, shall ascend the Western Scheldt in order to proceed to Belgium by the Scheldt, or by the canal of Terneuse; and of florin 0·38 per ton on vessels which, coming from Belgium by the Scheldt or by the canal of Terneuse, shall descend the Western Scheldt in order to proceed to the high sea. And in order that the said vessels may not be subject to any visit, nor to any delay or hinderance whatever within the Dutch waters, either in ascending the Scheldt from the high sea, or in descending the Scheldt in order to reach the high sea, it is agreed that the collection of the duty above-mentioned shall take place by Dutch agents at Antwerp and at Terneuse. In the same manner, vessels arriving from the high sea in order to proceed to Antwerp by the Western Scheldt, and coming from places suspected in regard to health, shall be at liberty to continue their course without hinderance or delay, accompanied by one health-guard, and thus to proceed to the place of their destination. Vessels proceeding from Antwerp to Terneuse, and *vice versa*, or carrying on in the river itself coasting trade or fishery (in such manner as the exercise of the latter shall be regulated in pursuance of section 6 hereinafter), shall not be subjected to any duty.

Art. 4. The branch of the Scheldt called the Eastern Scheldt not being in its present state available for the navigation from the high sea to Antwerp and Terneuse, and *vice versa*, but being used for the navigation between Antwerp and the Rhine, this eastern branch shall not be burdened, in any part of its course, with higher duties or tolls than those which are levied, according to the tariffs of Mayence of the 31st of March, 1831, upon the navigation from Gorcum to the high sea, in proportion to the distances.

Art. 5. It is also agreed that the navigation of the intermediate channels between the Scheldt and the Rhine, in order to proceed from Antwerp to the Rhine, and *vice versa*, shall continue reciprocally free, and that it shall be subject only to moderate tolls, which shall be the same for the commerce of the two countries.

Art. 6. Commissioners on both sides shall meet at Antwerp in the space of one month, as well to determine the definitive and permanent amount of these tolls, as to agree upon a general regulation for the execution of the provisions of the present article, and to include therein a provision for the exercise of the right of fishing and of trading in fish, throughout the whole extent of the Scheldt, on a footing of perfect reciprocity and equality in favour of the subjects of the two countries.

Art. 7. In the meantime, and until the said regulations shall be prepared, the navigation of the Meuse and of its branches shall remain free to the commerce of the two countries, which shall adopt provisionally, in this respect, the tariffs of the convention signed at Mayence on the 31st of March, 1831, for the free navigation of the Rhine, as well as the other provisions of that convention, so far as they may be applicable to the said river.

Notwithstanding the above articles, foreign vessels are still greatly harassed in their navigation of the outlets of the Rhine. The imposts by the Dutch government "on the channels below Gorcum, which they assume to be inlets of the sea, and not mouths of the river, serve as an excuse to the inland states to keep up a system of tolls on the Rhine which amount to a serious freight. The dues levied on goods between Gorcum and Strasburg are, by the tariff of 1845, on the cwt., 2 fr. 68 c., or nearly £2 10s. per ton, being in many cases equal to the freight from Calcutta or Batavia. The Dutch receive 28 cents, or one-ninth of this plunder. Their own charge, 13½ cents. per cwt. up to 9 cents. down the stream, is apparently not heavy, but is made so by pilot, lighthouse, and harbour dues, that are only levied to half their amount on Dutch vessels. There must have been some meaning in the clause of the treaty of Vienna, which stipulates that the great rivers serving as inlets to the continental states should be free. We find this essential stipulation everywhere disregarded. We have certainly to thank our connection with Hanover for not being able to throw the weight of British influence into the scale, when, at various times, opposition was raised to the evil. It was to allow the kings of Hanover to raise the Stade duties in the Elbe that we connived at the Dutch control over the Rhine and the Scheldt, and at the continuation of the Sound dues. There are good reasons for thinking that Holland, which has concluded a treaty with France allowing a direct trade in colonial wares with Strasburg, would be a gainer by relaxing her grip of the mouth of the Rhine, and thus inducing the German states to abolish their tolls; as these sufficiently explain the desolate condition of that fine river, where the vessels that navigate it are few and far between. The Scheldt toll is, too, an intolerable nuisance for the rest of Europe. It serves, like the Rhenish toll, to allow Holland and Belgium to impose differential duties on the shipping of all other states. For reciprocity treaties bind those countries only not to levy more dues on their neighbours than they do on their own shipping; but they do not bind these states not to make a present of the duties so levied to their own ships, which, of course, comes to the same thing. A similar subterfuge takes place in levying most import duties: ten per cent. being remitted in Holland on all goods imported in Dutch vessels. The remission on corn amounts to 2 fl. per last, being on wheat 25 per cent., and on barley 50 per cent. of the tariff impost." [*Daily News.*]

The Ems, where it falls into the Dollart, belongs to Holland. The Mosel, or Moselle, touches the E boundaries of Luxemburg. Almost all the rivers we have named are navigable, and connected together by the numerous canals which intersect the whole of H., and the greater part of Belgium.

Lakes.] There are no lakes in the ci-devant Austrian Netherlands, but there are some in H. It has been supposed that the Zuyder-zee, which occupies 1,207 sq. m., was originally a large fresh-water lake, and that the *Flevo lacus* of Pomponius Mela was what is now the S part of this great inlet of the North sea. The circumstance of this part of that inland sea being much deeper than the N part, which is extremely shallow, strengthens this conjecture. In the days of Tacitus, the Issel or Yssel was connected with the Rhine by the canal of Drusus; but this canal being neglected, the Rhine joined the Issel with such force, that the confluent stream increased Lake Flevo to a great extent; and instead of a river of the same name, which ran formerly 50 Roman m. from that lake to the sea, there was opened that wide gulf which now forms the entrance or N part of the Zuyder-zee.—The Haarlemer-meer or lake of Haarlem, before the recent operations for its drainage commenced, was about 15 m. in length, and about one-half of that extent in breadth. See HAARLEM (LAKE OF).—The Dollart, between Groningen and the Hanoverian province of East Friesland, occupies about 60 sq. m., and was formed by two successive irruptions of the sea in 1277 and 1287. See DOLLART.

Inland navigation.] The whole Netherlands, especially Holland, abound in canals, the cutting of which is greatly facilitated by the extreme flatness of the surface, and the multitude of small streams intersecting the country in all directions. By means of these an extensive inland commerce is carried on; and, as they communicate with the Rhine and other large rivers, the productions of the whole earth are conveyed at comparatively small expense into the interior of Germany and the Netherlands. The usual way of travelling is by covered boats, called *treckschuyts*, or track-boats, dragged along the canals in a way similar to that which is practised on the Great canal between Glasgow and Grangemouth. A treckschuyt moves precisely at the rate of 4 m. an hour. Near Amsterdam, and in the neighbourhood of the larger cities, the canals are bordered for miles by elegant pleasure-grounds and country-houses, indicative of the extraordinary wealth and comfort of the inhabitants. The total of the hydraulic works between the Dollart and the Scheldt, have been estimated by a competent judge to have cost £300,000,000 sterling; and form, in so small a country, a most astonishing monument of auman industry. "In our progress through Holland," says Mr. MacGregor, "viewing their canals, dams, and sluices, at every step we move, the labour, the vigilance to which the Dutch have been and are subjected, merely for preserving the ground they stand—we might almost say, float—upon, is extraordinary;—the labour and the expense thus applied, is all withdrawn from productive purposes; nothing ever seems neglected, nothing out of order, no building, rivers, nor dykes, nor any other structure broken down: everything, and every place is neat, and everything appears completed. The example of the Dutch living in the canal or river boats, illustrates their industry and thrift. A man marries—he and his wife possess or purchase a small boat that will carry one to three tons. They live, cook, move about, carry articles to and from markets; and their first, if not second child is born, or at least nursed in this puny vessel. The wife nurses the children, mends and often makes all the family clothes, cooks, and assists in navigating the craft, especially in steering; when you may, at the same time, observe the husband with a rope over his shoulder dragging the boat along a canal or river when the wind is adverse."—The noblest of these artificial lines of inland navigation is the Helder. The line which this stupendous work follows may be easily traced on a map of Holland. From the river Y or Ye, at Amsterdam, it proceeds N to Purmerend, thence W to Alkmaar lake, thence N by Alkmaar to a point within 2 m. of the coast near Petten; and it continues to run nearly parallel to the coast from this point to the Helder, where it joins the sea, at the fine harbour of Nieuwediep. At the latter place there is a powerful steam-engine for supplying the canal with water during neap tides, and other purposes The time spent in tracking vessels from the Helder to Amsterdam, is 18 hours. The Helder point is the only spot on the shores of Holland that has deep water: and it owes this advantage to the island of Texel opposite, which, by contracting the communication between the German ocean and

the Zuyder-zee to a breadth of a mile, produces a current which scours and deepens the channel. Immediately opposite the Helder there is 100 ft. of water at high tides, and at the shallowest part of the bar to the W there are 27 ft. In the same way, the artificial mound which runs into the lake or river Ye, opposite Amsterdam, by contracting the water-way to about 1,000 ft., keeps a depth of 40 ft. in the port at high water, while above and below there is only 10 or 12 ft. The canal, begun in 1819, and finished in 1825, cost about one million sterling. If we compute the magnitude of this canal by the cubic contents of its bed, it is the greatest we believe in the world—unless some of the Chinese canals be exceptions. The volume of water which it contains when filled, or the *prism de remplissage*, is twice as great as that of the New York canal, or the canal of Languedoc, and two and a half times as great as that of the Caledonian canal, if we include only those parts of the latter which have been cut with human labour.

Sea-dykes.] As the coast of H. is remarkably flat, especially from the islands of Zieland to the Texel, the Dutch have been at infinite expense and labour in making and repairing dykes and embankments, to prevent the encroachments of the sea, and those dreadful inundations to which the country is sometimes subjected from the height and violence of the tides acting upon a shore unusually and uniformly flat and low. These dykes are usually 30 ft. high, and 70 ft. broad at the bottom; and are made of the roughest clay, fenced on the land-side with wood and stone, and on that next the sea with mats of rushes and flags staked down as high as the tide usually rises, or with sea-weed, which prevents the water from sapping and undermining the body of the dykes. However, in spite of all their labour, the sea is still gaining on the coast. The winter is the season when accidents most frequently happen to the dykes. Long-prevailing SW winds, acting on the surface of the Atlantic, drive an accumulation of water round the N of Scotland into the German ocean. If these are succeeded by violent tempests blowing from the NW, the effect is to propel the sea with great violence southward through the British channel; but the straits of Dover are too narrow to admit the augmented body readily to pass, and in consequence it falls back upon the low lands of Holland. At such moments the tall ocean may be truly said "to lean against the land," and the strength of the dykes alone preserves the country from submersion. To guard against such assaults, the utmost skill, energy, and activity are required. If the water surmounts the dyke, its ruin is inevitable; and when such a calamity is apprehended the alarm-bell is rung, and every man in the neighbourhood hastens to his post. An upper rampart is erected on the top of the dyke in an incredibly short space of time, with stakes driven into the ground, willow faggots, or baskets and earth. If the strength or solidity of the dyke be doubtful, and a breach is apprehended or begins to appear, mats of woven straw and rushes, or large sheets of sailcloth, are laid on the outside in the same manner as a leak is sometimes stopped in a ship. This prevents the earth being washed away by the action of the waves; and when the danger is past, the temporary works are removed, and permanent repairs effected. The Zuyder-zee in the 13th cent., was all dry land; when the ground which it covers was inundated, 80,000 people lost their lives. About the same period 44 villages were swallowed up in the province of Groningen. In 1717 no less than 1,560 habitations disappeared beneath the waters of the ocean, which had broken their bounds. It is clear, therefore, that the existence of H. depends upon the preservation of her dykes to restrain the sea, and the management of her sluices to permit the egress of her rivers and internal waters. The term *der dronken land* ['the drowned land'] is applied to more than one district which has been submerged, and subsequently recovered. In the interior of H. and Guelderland, they are likewise exposed to inundations arising from another cause, viz. the melting of the snow in the Alpine country of Switzerland, which swelling the Rhine and its tributary mountain-streams, floats down great quantities of ice into H., where the banks of the river being low, and the country flat, the inhabitants are forced to raise embankments to prevent inundation. Sometimes the masses of ice, from the slowness of the current, and from the ice continuing long at the Zuyder-zee, and the mouths of the Waal and Leck, get gorged, and an inundation ensues in spite of artificial embankments. As the Dutch are forced by a necessity, strong as that of self-preservation, to keep the dykes in good order, they have a college or board of dyke-commissioners, whose duty it is to superintend the whole embankments of the country; and likewise interior colleges all over the country, which are obliged to report from time to time to the high board on the condition of the dykes and embankments in their district.

Climate.] While the climate of Belgium considerably resembles that of the south of England, and is more moist than warm,—the climate of H., from the abundance of its rivers and canals, is cold and humid. This circumstance is increased in H. by the NE winds which prevail during winter, and which bring from the frozen regions of northern Europe a degree of chillness unknown in Britain. The Zuyder-zee, and the principal ports upon the coast, are frozen during several months of winter; in some years the rivers bear the passage of heavy-loaded waggons across them. The climate of H., from its humidity, is unfavourable to longevity. The sudden transitions from heat to cold, and from cold to heat, augment the unhealthiness of the climate, and occasion fevers, pleurisies, and scorbutic complaints. The most pleasant time of the year is the months of September and October. The largest quantity of rain and snow generally falls in January. Upon the coast of Flanders, and the mouths of the Scheldt, the climate is remarkably moist and unhealthy, as our soldiers fatally experienced in the Walcheren expedition. Yet consumptions are not common in Holland, as the Dutch are in the habit of suiting their clothing to the changes of the climate.

Soil and agriculture.] Destitute of coals and without copse-wood, the Dutch have to depend on their *veener* or peat-mosses for fuel. There are two kinds of these, the higher and the lower. The high mosses afford a layer of what is called gray or dry peat. The upper bed of peat is generally about six feet in thickness; it seems to be composed rather of leaves and stems of reedy plants than of heath, or the plants which commonly accompany heath; and fragments of large branches of trees have sometimes been found in it. Beneath this peat a thin blue clay commonly appears, and which, on the peat being removed, forms arable land. The low mosses afford what are called mud-peats, and when these are taken from the inferior layer of such moss, the excavation speedily becomes covered with water. When the under stratum of moss is formed and contains wood, it is called *derry*. Many trunks of trees occur in it; and these uniformly lie with their heads pointing eastward, showing that the storm or debacle which overwhelmed them had come from the west. Some of the timber, oak in particular, remains sound, so that it can be used in carpentry; but it is of a dark colour, as if stained with ink: thus proving the amazing durability of oak. There is a law in H. against digging through this derry in the lowest parts of the country, much water being found to ooze in the sand below, and to be repressed by the compact layer of wood moss.—The humidity and coldness of the Dutch climate are unfavourable to the cultivation of grain. The corn raised in H. is insufficient for the home-consumption, but the productions of the dairy afford ample means for supplying the defect in grain. By far the greater part of the land is laid out in pasturage,—a purpose for which it seems admirably adapted. By draining the bogs and marshes, excellent meadows are created, upon which lean German and Dutch cattle can be fattened to a vast size. The utmost attention is paid to the warmth and cleanliness of the cattle; even in summer, these animals sometimes appear in the meadows clothed with apparently ludicrous care to keep off the flies which infest them. The cows do not yield so large a quantity of milk as many of our English cows; but from the quantity of butter and cheese which they produce, it appears to be of richer quality. The annual produce of each cow in S. H. is calculated at 78 lbs. of butter, and 180 lbs. of cheese. The provs. of North and South H., Groningen, and Utrecht, make together 140,000,000 lbs. of cheese annually, the home-consumption of which does not exceed 7,000,000 lbs., or one-twentieth. This large quantity at its average price produces £1,800,000 sterling annually. The value of the butter manufactured is about 24,000,000 guilders, or about £2,000,000 sterling more, of which their own consumption amounts to one-tenth, thus leaving a surplus of £1,800,000 sterling annually. During the last 40 years, these simple productions of the soil have amounted at several times to nigh £7,000,000 in one year. In 1844, the quantity of butter imported

into England from all parts was 10,150,000 lbs., Dutch weight, and chiefly from H. The quantity of butter exported from H. in that year was 10,804,000 lbs.; in 1849 it amounted to 11,109,720 lbs.; in 1850 to 12,016,261 lbs. The export of cheese in 1849 was 20,538,236 lbs.; in 1850, 22,309,822 lbs. On receding from the coast, and approaching the German frontier, the husbandry assumes the character of that of the midland counties of England. Both landlords and tenants are exceedingly careful to improve their lands, and follow a proper system of rotation, and, above all, to enrich the soil by manure, which is carefully collected by a variety of processes. In fact, the Dutch, by unwearied and persevering industry, have conquered almost every disadvantage of climate, soil, and territory. The air and water are both equally bad,—the soil naturally produces scarcely anything but peat,—and even the very possession of this soil is disputed by the sea, which is constantly endeavouring to reclaim it as its own,—and yet the labours of the patient Dutchmen have rendered their small, boggy, insignificant territory, one of the richest spots in Europe. Besides wheat, rye, barley, oats, pease, beans, and buckwheat; madder, rape-seed, hops, tobacco, clover-seed, mustard-seed, flax, hemp, poppy oil, and some other productions, are raised both for home-consumption and exportation. The science of horticulture is also much cultivated in H.; and there is a neatness and degree of taste displayed in their gardens and orchards that is scarcely to be found in any other part of Europe. Corn is grown only in a few districts, and is of very inferior quality. The following tables will illustrate the comparative agricultural condition of the different provs.:

I. Statement of the area and population of the several provs. of Holland, according to admeasurement made in 1833.

Provinces.	Cultivated land.	Other land, including roads, open places, walks, ramparts, &c.	Water, including rivers, brooks, lakes, canals, morasses, &c.	Heaths, sea-shore, banks of rivers, downs, reed and rush lands, peat bogs, &c.	Total.	Pop. to 100 Dutch bunders.
N. Brabant,	296,811	12,757	22,262	179,384	511,673	71·6
Guelderland,	323,912	9,692	9,305	165,723	508,632	66·1
N. Holland,	182,666	3,620	17,209	44,500	247,995	170·9
S. Holland,	257,792	2,039	19,643	24,143	303,617	167·9
Zealand, .	164,232	2,393	3,623	3,554	173,782	83·7
Utrecht, .	113,204	706	2,461	22,191	138,562	101·5
Friesland,	264,708	2,812	23,067	36,746	327,333	69·5
Overyssel,	204,369	3,155	3,402	123,003	333,929	57·2
Groningen,	182,262	2,159	2,748	45,977	233,176	74·0
Drenthe, .	136,379	1,391	445	128,056	266,271	26·3
Total,	2,126,365	40,724	104,165	773,716	3,044,970	84·8

By the above statement it will appear that 2,167,089 bunders [a bunder equals 2·4736 English acres, or 2½ acres nearly] have been reclaimed of the lands, waters, and sea-shores down to land water-mark; leaving 877,881 bunders of sea-shore, banks of rivers, reed and rush lands, peat-bogs, heaths, and morasses, unreclaimed in 1833.

II Statement of the yearly average quantity of different sorts of grain and other agricultural produce raised in Holland, between 1837 and 1841 inclusive, taken from the reports of the governors of provinces.

Provinces.	Wheat. muddes.	Rye. muddes.	Barley. muddes.	Oats. muddes.	Potatoes. muddes.

Flax, . .	1,086,601 lbs.	21,392 cwt.
Canary seed, .	4,210 muddes	1,610 quarters

The average annual quantity of corn produced in H. is set down at 297,000 Dutch lasts; of corn imported since 1835 into that country, at 58,649 lasts; of exported corn, at 21,000 lasts: and of corn conveyed *in transitu*, at 5,919 lasts. It is found that the quantity of corn required for the home consumption of the Dutch bears the following proportions to the annual average produce of their own country: wheat, about one-seventh; rye, two-sevenths; barley, one-ninth; and buckwheat, one-sixteenth. Nearly all are spring crops, and are said to average,—

Wheat, . .	1,272,225 muids, or	400,000 qrs.
Rye, . . .	3,015,639 ...	1,000,000
Barley, . .	1,174,124 ...	400,000
Oats, . . .	2,342,636 ...	781,300
Buckwheat, . .	91,233 ...	30,400
Rape and Linseed, .	1,439,566 ...	479,850

The distilleries at Scheidam are said to consume alone 30,000 lasts, or 3,000,000 quarters of grain of all kinds annually. Tobacco is extensively cultivated. In

Guelderland, . . .	1,188,235 lbs.
Utrecht, ...	868,808
N. Brabant, ...	404,054
S. Holland, . . .	770,576

is the yearly crop. Madder is chiefly grown in Zealand; the quantity exported in 1844 was 4,020,500 lbs.; in 1849, 5,263,407 lbs. The export of flax in 1844 was 5,000,000 lbs., whereas of hemp there was 18,000,000 lbs. imported, and but 60,000 lbs. exported. In 1849, the export of undressed flax was 7,332,801 lbs.; of dressed flax, 29,570 lbs. Since 1836 the Dutch have had a sliding scale ranging

from a duty of 15s. per quarter on wheat at a market price of 25s. to 45s. market value, when the duty is null.

Fisheries.] The herring-fishery, long called with propriety the gold-mine of H., was carried on as early as the 12th cent.; but the art of curing and barrelling these fish was only first discovered by Beukelz in 1316. In 1610, 3,000 busses, manned by 50,000 fishermen, were employed in it; besides 9,000 boats and 150,000 persons who were occupied in transporting, curing, and selling the fish, which then yielded a yearly revenue to the country of £2,500,000. In the middle of the 18th cent. the Dutch fishery was at its height, and employed 100,000 fishermen. In 1780, the number of vessels employed in this trade were reduced to 200, in consequence of the increasing attention which Britain and other maritime nations paid to their own fisheries. On the decline of the herring-fishery, the industrious Dutch directed their capital to the more distant and precarious whale-fishery. The British vice-consul at Rotterdam in 1842, reported that the number of ships and fishermen employed in the Dutch fisheries amounted to 1,605 vessels, and 8,350 classed as follows:

	Ships.	Fishermen.
a Herring and cod fishery with nets,	120	1,800
b Herring and cod fishery with lines,	45	525
c Fresh fish and fresh herring for smoking and drying,	208	1,455
d Fresh fish, exclusively off the coast, and in the Zuyder-Zee,	1,000	4,000
e Fresh fish on the Zieland streams,	230	500
	1,603	8,280
Whale or seal fishery,	2	70
Total,	1,605	8,350

The first cost of the above shipping, when fully equipped for sea (exclusive of the two whalers), or in other words, the capital invested in the fisheries, was estimated thus:

Ships.	Florins.	£
a 120	1,200,000	or 100,000
b 45	405,000	33,750
c 208	832,000	69,330
d 1,000	1,600,000	133,330
e 230	216,000	18,000
1,603	4,253,000	354,410

And the annual expenditure of the same was,—

Ships.	Florins.	£
a 120	1,120,000	or 93,333
b 45	360,000	30,000
c 208	936,000	78,000
d 1,000	1,200,000	100,000
e 230	157,000	13,080
1,603	3,773,000	314,416

The annual average produce during the 5 years preceding 1842 was found to amount to 40,000 tons of salt herrings, 10,000,000 herrings for smoking or drying, and 10,000 tons of salt fish.

	Florins.	£
The estimated gross value of which is,	4,000,000	or 333,333
Of which the proportion annually consumed in Holland is valued at	360,000	30,000
Leaving a residue of	3,640,000	303,333

This latter amount constituted the value of the fish exported to Germany, Poland, Russia, and Belgium.

Trade and commerce.] When the Dutch had won their independence, Europe was just emerging from the gloom of ten centuries Ignorance and despotism stood arrayed in every dreadful form to repress the growing spirit of political and religious freedom; but the Dutch had felt oppression and learned the value of liberty, and the lesson was not lost on them. They established a government to secure that freedom for which they had so long and so vigorously contended, and upon it they constructed a system of civil and religious liberty unmatched at that time in Europe. To the fens and swamps of H., therefore, however physically uninviting, the discontented and the persecuted hurried from every quarter, to enjoy that freedom which fairer climes yielded them not. The Puritans from England, the Huguenots from France, the Walloons from the Netherlands, the Protestants from Germany and Poland, hastened thither, bringing with them, if not wealth, something which was far more valuable,—the love of social liberty, and habits of industry. The maritime situation of the country pointed out the path by which industry could most successfully pursue its object; and the Dutch became, what the Americans were during the late war, the carriers of Europe. The trade of H. fast rose upon the ruins of that of Antwerp and Portugal; and the commerce of England being yet in its infancy, presented no rival to Dutch enterprise. Meanwhile, the merchants of Antwerp, disgusted by the oppressive measures of Philip II. of Spain, expatriated themselves, and settled in great numbers at Amsterdam, where they began to fit out ships, and sought to revive, if possible, that universal commerce which they had formerly carried on from Antwerp. They sent vessels under neutral colours to purchase East Indian commodities at the port of Lisbon, then under the dominion of Spain; but the Spanish ministers confiscated the ships, and imprisoned their seamen. The Dutch were thus forced to betake themselves to a direct trade with India; and it has been observed by one of their writers, that if the Spaniards had not acted as they did, the Dutch had probably never extended their navigation beyond the Baltic, the Mediterranean, and the countries of France, England, and Spain. They first attempted a NE passage to India, in which they failed, as all others have done since. But while thus fruitlessly engaged, a new and unexpected incident turned their schemes in another direction. Amongst the number of those who were seized at Lisbon in 1594, was a seaman of the name of Houtman, who being allowed some liberty in his captivity, employed it in conversing with the Portuguese, and in making inquiries as to the route they held in their East Indian voyages, the places to which they traded, and their manner of dealing with the natives. On his return to Amsterdam, Houtman was appointed commander of an expedition fitted out for Indian commerce, which sailed from the Texel in 1595, and returned in two years and four months, after a prosperous voyage. This success animated the Dutch to more extensive enterprises; and the foundation of the Dutch East India company was laid on the 20th of March, 1602, by a charter from the States. A capital of 6,600,000 florins was subscribed, and divided into 22,000 shares of 3,000 florins, or somewhat less than £250 sterling each. Having wrested the Spice islands out of the hands of the Portuguese, this company soon became rich by the acquisition. In the course of eight years they augmented their capital to 30,000,000 florins; and in the course of 130 years, the annual profits of the Indian commerce was estimated at 12,700,000 florins; and the trade of Japan at 2,000,000 florins more. The Indian commerce, when in its zenith, employed 15,000 sailors in constant pay; and 180 ships of from 30 to 60 guns, were employed as a naval force to protect this commerce. The West India company was incorporated in 1621; but the shares did not pay nearly so well as those of the East India company. The Dutch West India islands, though of little consequence as agricultural colonies, were, however, of much use to the national trade. The general neutrality of H. in the wars between France, Spain, and England, caused the otherwise insignificant islands of Curacoa and St. Eustatia to become the general depots of the produce of the French and Spanish West Indies, whence it was shipped under the Dutch flag for Europe. Of the Dutch colonies on the continent of America, Surinam alone was of consequence for its exports of sugar, coffee, and cotton. The Dutch settlements on the W coasts of Africa supplied above 12,000 slaves annually. But while the adventitious circumstances which had so long favoured the Dutch power and wealth gradually ceased to operate, their trade and commerce also began to decline; the French, the Danes, the Swedes, and above all the English, became their rivals in the commerce of the East; and increasing competition narrowed their sales and diminished their profits. The greatest blow to their trade was given by the insane policy of the Louvestein faction, which embroiled them with Great Britain. The opposition of that party to the Stadtholder, and their jealousy of Great Britain and Prussia as his partisans, led them to look to France for support, and ultimately to throw themselves into the arms of that country. This infatuated act consummated the ruin of Dutch trade; as it involved Holland in a war with her powerful commercial rival, which gradually but rapidly annihilated her foreign commerce, and destroyed her once powerful navy. The empire which the Dutch had founded in the East, upon the ruin of the Portuguese power, was overthrown; and nothing retained of what had been won by the wisdom and courage of a Broeck, a Koen, a Hulst, and a Spielman, but the melancholy remembrance of what they had lost. The spirit of industry, however, still survived in H., and the Dutch struggled bravely on. "Although under Napoleon their commerce was nearly annihilated, that statesman will be greatly in error, who classes the kingdom of Holland among those which now stand low in political consequence. There are great riches still in Holland. It is a country in which there is less suffering than in any other in the world; there are no poor rates; yet those in distress are better sheltered, clad, and fed, than in any other part of Europe. Benevolent institutions for all necessary aid, whether to the orphan, the sick, the blind, or the lame, are found in every town in Holland. The principles under which all is managed are, no waste, no extravagance, no jobbing in the direction; that all who eat, if in health, must work, and

for all who can work there is no excuse for being idle, as the municipal administrations are always prepared to employ the unoccupied. Beggary is there a profession that cannot be allowed." [*Macgregor*]. The commerce of H. receives special illustration under the articles AMSTERDAM, ROTTERDAM, and JAVA, in addition to the general commercial statistics comprised in the sub-joined tables.

Exports.] The following is a statement of the quantities of the principal articles of home-produce exported from H. by sea and land, in each year, from 1833 to 1836, and from 1846 to 1849:

	1833.	1834.	1835.	1836.	1846.	1847.	1848.	1849.
Butter, cwts,	118.000	122,000	137,000	160.000	9,663,844 ponds,	10,975,822	10,889,194	11,109,720
Cheese, ...	260.000	270,000	280,000	330,000	19,504,488 ...	20,026,806	20.481,374	20,538,206
Flax, ...	75.000	82.000	85,000	148,000	5,581,631 ...	6,359,068	7,597,956	7,362,371
Oil cake, ...	150,000	180.000	100,000	290,000	1,349,757 kannen,	780,855	1,026,275	1,275,508
Linseed, tons,	2,800	4,000	3,600	4.400	2,420 lasts,	2,389	3,086	2,304
Bark, ...	20,000	21,000	16,000	18,000	...	...	...	...
Madder, cwts.,	90.000	85,000	125,000	130,000	4,517,397 ponds,	4,898,137	4,118,882	5,263,407
Geneva, galls.,	1,150,000	1,375,000	1,790,000	1,900,000	...	...	...	..

The quantities of the principal articles exported from H. in 1850 were as follows:

ARTICLES.		Domestic.	For., after transit.
Butter,	ponds.	12,016,261	123,318
Drugs,	gulden.	538.621	2,372.200

Total, £	£21,189,894	15,148,109	10,401,035	5,664,519	22,944,950	15,052,012	10,634,128	7,467,461

The Dutch trade in the year 1840 was distributed in very nearly equal portions between the two principal ports of the kingdom, as follow:

	Imports. Florins.	Exports. Florins.	Total. Florins.
Amsterdam,	95,339,500	74,711,000	170,050,500
Rotterdam,	97,777,500	74,767,500	172,542,500
Total,	193,117,000	149,478,500	342,593,000

In 1849, of a total of 6,419 vessels = 1,010,148 tons, which entered the ports of H. with cargoes; 2,012 vessels = 352,283 tons, entered the port of Amsterdam; and 1,750 vessels = 358,917 tons, entered that of Rotterdam. There cleared, in the same year, from all the ports of H., 4,560 vessels = 724,610 tons, with cargoes; of which 1,354 vessels = 220,487 tons, were from Amsterdam, and 1,851 vessels = 355,135 tons, from Rotterdam.

The following table shows the proportion per cent. of the trade carried on with H. by each country, during the years 1839 and 1840:

		1839.	1840.
German states,	Germany and the Rhine,	23·2	22·1
	Hanse towns,	3·6	3·9
	Prussia,	4·0	3·2
	Other countries,	0·8	0·7
England,		22·0	20·7
France,		6.6	6·5
North America (United States),		3·9	5·7
Austria, and other Italian states,		2·3	3·0
Spanish Antilles and Hayti,		1·7	2·6
Belgium,		1·9	2·5
Russia,		2·9	1·8
Brazil, and states of the Rio-de-la-Plata,		0·9	1·4
Sweden and Norway,		1·9	1·4
Spain and Portugal,		0·8	0·8
Denmark,		0·4	0·5
Dutch Indies,		22·5	22·7
Other countries,		0·6	0 5
Total,		100·0	100·0

The *Staats Courant* publishes the return of the exportation and transit of goods during the first semestre of 1849, and showing the corresponding of 1846, 1847, and 1848:

Importation.	1846.	1847.	1848.	1849.
White cotton yarn, lbs.,	4,977,076	under 3,000,000	under 3,000,000	4,048,814
Colrd. cotton, lbs.,	552,164	596,091	419,982	613,461
Wrought iron, fls.	871,475	1,219,344	761,018	638,409
Raw iron, fls.	2,236,801	2,130,835	1,742,109	1,126,124
Manufactured articles of silk, cotton, flax, hemp, &c., fls.	8,572,953	9,395,969	9,022,846	10,933,324
Cloth and wool, kil.,	197,109	242,034	231,348	313,678
Cloth 6 ells, weigh more than 1 lb. lbs.,	197,109	242,034	231,348	313,678
Cloth 6 ells, weigh less than 1 lb., lbs.,	1,362,352	1,277,950	1,129,375	1,728,985
Raw sugar,	62,866,641	51,353,781	62,317,805	65,967,785

Coffee, lbs.,	32,334,766	38,283,080	36,621,008	35,064,474
Hemp seed, &c., lasts,	36,332	6,312	7,009	6,552

Exportation.	1846.	1847.	1848.	1849.
Butter, . lbs.,	3,976,975	5,402,181	5,133,059	5,332,420
Cotton yarn, lbs.,	3,523,336	1,911,958	2,018,688	3,224,319
Provisions, lasts,	28,973	54,180	23,968	41,897
Coffee, . lbs.,	13,507,965	17,498,542	9,962,989	18,683,973
Refined sugar, lbs.,	18,929,061	18,699,476	14,747,850	20,996,181
Raw sugar, lbs.,	13,964,251	9,914,702	11,385,427	11,975,670
Rape, hemp seed, &c., . lasts,	2,753	3,019	2,875	1,784

Colonial trade.] A report on the trade and navigation of the East India possessions belonging to H., published in 1838, exhibits a comparative view of the trade of those possessions for two years, with a decennial interval. The years are 1826 and 1836, and the intervening period of ten years is stated to have been remarkable for the development of the resources of Dutch India. The value of the whole of the imports into Java and Madura, amounted in

	1826.	1836.
	Florins.	Florins.
Merchandise, .	10,250,175	17,848,748
Specie, .	3,982,822	676,150
Total, .	14,232,997	18,524,898

Hence it appears, that in 1836, there was an increase to the amount of 4,291,901 florins over the imports of 1826. In merchandise the increase was 7,598,573 florins, while the import of specie was diminished by 3,306,672 florins.

The following are the countries from which the imports were derived in these years:

Countries.	Years. 1826.	1836.
	Florins.	Florins.
Netherlands, .	6,530,093	5,848,543
England, . .	1,078,412	3,318,495
France, .	305,615	383,753
Hamburg, . .	21,437	23,078
Sweden, .	...	28,026
America, . .	1,138,460	693,191
Cape of Good Hope,	5,611	19,354
Isle of France, .	73,866	10,513
Persian gulf, . .	45,980	...
Ceylon, . .	36,554	...
Bengal, the coast of Coromandel, and Malabar,	689,177	290,200
Siam, . .	118,989	84,256
Cochin-China, . .	...	7,795
China and Macao, .	390,235	979,426
Manilla, . .	248,127	60,906
Japan, . .	161,615	579,439
New Holland, .	56,978	20,533
Australian archipelago,	3,331,848	6,177,390
Total, .	14,232,997	18,524,898

In his remarks on the above table, the author of the report dwells particularly on the item relating to England, which exhibits the very considerable increase of 2,240,083 florins, or more than twice the amount of the imports in 1826. "This," he observes, "is a complete refutation of the assertions often repeated in the English newspapers and other periodicals, that the Dutch government acts on narrow principles as to the trade of Java, and that commercial intercourse with that part of India through British ships is repressed." It appears from the details, that, in 1836, the imports from England of pottery, porcelain, glass and crystal articles, stuffs for clothing, carriages, saddlery, leather and soap, were greater than of the same articles from H.

The imports into Java and Madura in the five years from 1836 to 1840 were as follows:

	Goods.	Specie.
1836 .	17,848,748 flor.	676,150 flor.
1837 .	21,274,178	513,053
1838 .	23,205,212	976,665
1839 .	23,989,780	971,232
1840 .	26,434,624	2,439,269

The importations took place from the following countries in these proportions:

	Holland.	England.	France.
1836	5,848,543 flor.	3,318,495 flor.	383,753 flor.
1837	6,904,701	4,051,599	607,358
1838	9,469,840	4,550,145	583,746
1839	11,348,958	3,887,655	331,597
1840	15,225,586	3,805,847	305,541

The importations under the Dutch flag in these five years appear to have nearly trebled; but the amount of the productions of Dutch industry had not augmented in the same proportion. The exports from Holland, with certificates of Dutch origin, were—

	Florins.
1836	4,212,076
1837	4,739,506
1838	7,342,092
1839	8,924,437
1840	10,550,588

Of the one-third exported under the Dutch flag and not the productions of H., a considerable sum represented opium from the Levant. It will, however, be perceived, that the values here given are quite arbitrary; the high duty on importations inducing the shippers, whenever it is possible, to undervalue their wares; whereas the values of the goods exported to H., representing probably the sum on which the Maatschappy charges its commission, were likely enough to be highly rated. The observation respecting the overvaluing of the exports applies equally to the estimates formed by government of the value of the produce of the islands, which is stated in these five years to have been—

Years.	Coffee.	Sugar.	Indigo.
1836	15,090,362 flor.	9,983,140 flor.	1,122,382 flor.
1837	18,293,179	8,248,571	2,328,076
1838	15,095,793	9,823,028	3,168,065
1839	28,860,499	10,946,222	3,574,909
1840	37,368,361	13,687,687	6,370,733

The exports in the same period, from 1836 to 1840, were stated to have been—

	Wares.	Specie.
1836 .	40,283,895 flor.	932,492 flor.
1837 .	42,382,287	839,532
1838 .	42,073,934	1,266,293
1839 .	56,717,833	956,101
1840 .	73,972,792	257,761

The exportation was in the following proportions:

	Holland.	England.	France.
1836	27,232,588 flor.	139,592 flor.	1,944,145 flor.
1837	30,018,415	313,614	1,194,759
1838	29,435,969	1,400,018	1,100,772
1839	40,214,399	1,939,459	833,237
1840	56,904,873	2,582,474	345,802

The number of ships which arrived in the Javan ports was in

1836 .	2,645	ships, of	101,738	lasts burden.
1837 .	1,648	—	102,416	—
1838 .	1,597	—	116,783	—
1839 .	1,750	—	127,716	—
1840 .	1,820	—	143,051	—

These vessels arrived from the following countries in the proportions of—

HOLLAND.

1836 .	128	ships, of	31,006	lasts burden.
1837 .	111	—	31,710	—
1838 .	153	—	40,284	—
1839 .	170	—	45,081	—
1840 .	239	—	71,535	—

EASTERN ARCHIPELAGO.

1836 .	2,254	ships, of	39,024	lasts burden.
1837 .	1,273	—	39,377	—
1838 .	1,186	—	39,982	—
1839 .	1,279	—	41,072	—
1840 .	1,389	—	42,822	—

ENGLAND.

1836 .	32	ships, of	6,142	lasts burden.
1837 .	18	—	2,839	—
1838 .	36	—	6,968	—
1839 .	32	—	5,418	—
1840 .	21	—	3,791	—

The following table exhibits the total value of merchandise and specie imported and exported at the islands of Java and Madura in each year from 1840 to 1849:

Years.		Imports.			Exports.		
		Merchandise.	Specie.	Total.	Merchandise.	Specie.	Total.
1840,	Florins,	26,434,624	2,439,269	28,873,893	73,972,792	257,761	74,230,553
	£	2,202,885	203,272	2,406,157	6,164,399	21,480	6,185,879
1841.	Florins,	20,156,276	1,207,005	21,363,281	62,959,099	492,616	63,451,715
	£	1,679,689	100,584	1,780,273	5,246,591	41,052	5,287,643
1842,	Florins,	25,192,918	888,285	26,081,203	57,886,448	497,045	58,383,493
	£	2,099,409	74,024	2,173,433	4,823,870	41,420	4,865,290
1843,	Florins,	21,980,792	570,596	22,551,388	58,159,237	833,599	58,992,836
	£	1,831.732	47,549	1,879,282	4,846,603	69,466	4,916,069
1844,	Florins,	24,641,487	700,856	25,342,343	69,017,346	1,068,295	70,085,641
	£	2,053,457	58,405	2,111,862	5,751,445	89,025	5,840,470
1845,	Florins,	26,518,476	573,325	27,091,801	64,455,081	1,440,087	65,895,168
	£	2,209,873	47,777	2,257,650	5,371,257	120,007	5,491,264
1846,	Florins,	26,876,623	509,896	27,386,519	57,164,762	994,223	58,158,985
	£	2,239,718	42,491	2,282,209	4,763,730	82,852	4,846,582
1847,	Florins,	23,167,534	511,639	23,679,173	58,848,428	596,752	59,445,180
	£	1,930,628	42,636	1,973,264	4,904,036	49,729	4,953,765
1848,	Florins,	20,581,103	509,005	21,090,108	52,004,591	483,467	52,488,058
	£	1,715,092	42,417	1,757,509	4,333,716	40,289	4,374,005
1849,	Florins,	23,636,941	461,751	24,098,692	59,958,257	348,056	60,306,313
	£	1,969,745	38,479	2,008,224	4,996,521	29,005	5,025,526

Of the imports in 1840, 22,755,887 florins = £1,896,324, were in Dutch vessels; and 3,765,998 florins = £313,833, in British vessels. The value of importations under these two heads in the subsequent years, was as follows:

	Dutch vessels.	British vessels.
1841	£1,305,207	£252,372
1842	1,599,091	347,433
1843	1,310,980	332,494
1844	1,523,995	377,023
1845	1,514,127	514,113
1846	1,592,653	443,992
1847	1,470,607	312,965
1848	1,345,008	252,656
1849	1,444,219	335,704
1850		

The exports from Java and Madura between 1840 and 1849, in Dutch and in British shipping were as follows:

	Dutch vessels.	British vessels.
1840	£5,500,465	£473,576
1841	4,643,993	184,800
1842	4,183,852	274,999
1843	3,951,902	391,664
1844	5,068,283	377,023
1845	4,928,427	162,374
1846	4,157,620	215,659
1847	4,367,385	159,591
1848	3,803,621	252,656
1849	4,504,677	106,486
1850		

Commercial marine.] In 1831, the Dutch commercial marine amounted to 1,232 vessels = 82,932 lasts; in 1840, 1,628 vessels = 153,333 lasts; in 1845, 1,869 vessels = 183,186 lasts; in 1848, 2,046 vessels = 205,240 lasts. In the beginning of 1851 the merchant shipping belonging to H. was 2,395 ships, measuring 224,666 lasts, being an increase over the previous year. The number added was 136 ships, 12,598 lasts; and the number wrecked, lost, and broken up, 51 ships, 4,163 lasts. The large vessels in the East India trade are some of the finest and best manned that sail from Europe; they are about 250 in number, measuring from 500 to 1,000 tons; they usually carry guns to scare away the pirates. It is a rare occurrence when any of them meets with an accident at sea.—In 1850, there entered the Netherlands havens 3,117 home-ships, with cargo, making 439,617 tons; and 3,229 foreign ships, making 590,056 tons. In ballast were 613 ships, 70,098 tons. The ships cleared out were 2,467 under the home flag, and 365,008 tons; 2,274 foreign ships, measuring 407,925 tons; and in ballast 2,276 ships, measuring 364,231 tons.

Manufactures.] The improvements which have taken place under the present government, in the commerce, manufactures, agriculture, and industry of the country, are remarkable, but the cotton, linen, and woollen manufactures are still inadequate to the home-consumption. In fine linens the Dutch have few rivals. Woollens, consisting of common cloths and hosiery, are extensively manufactured at Leyden and Utrecht. English yarn and twist are imported, and advantage is taken of the cheapness of hand-labour to weave these materials into cloth. Haarlem and Amsterdam retain their silk-manufactories. Leyden and Alkmaer possess extensive tanneries. The tobacco and snuff manufactories of Amsterdam employ 24,000 hands; and the fabrication of tobacco-pipes alone occupies 5,000 persons in the town of Gouda. Sugar-refineries and breweries are numerous, but the former are said to be declining in consequence of Prussian competition. The distilleries which supply that corn-spirit, which, when flavoured with juniper-berries, is known throughout the world by the name of Geneva, or gin, are numerous, especially at Schiedam and Delft. They yield 12,500,000 galls. annually. There are large brass-founderies at Rotterdam, the Hague, and Utrecht. There are above 156 paper-mills in the country. Ship-building employs a very considerable number of hands.

Timber rafts.] A remarkable feature in the inland trade is the vast floats of timber which are sent to Dort from Andernach, and other places on the Rhine. These are generally 800 ft. in length, and 160 ft. in breadth; and are navigated by 500 or 600 labourers, for whose accommodation a temporary village of 80 or 100 huts is erected upon the floating-island. On its arrival at Dort, the sale of one of these rafts occupies several months, and sometimes produces above £30,000. During the years 1839, 1840, and 1841, the average quantity of timber imported into Holland by the Rhine, amounted annually to 110,500,000 kilogrammes, equal to 110,500 tons English weight, consisting principally of wood suited for ship and house building, wainscot logs, spars, weals, staves, and firewood; the whole of which is consumed in H., with the exception of some trifling quantity sent to the colonies. In former years, timber, chiefly oak knees, was exported to Great Britain and France; but for many years past that trade has ceased, and

it remains yet to be seen, whether the alterations of the duties in England will lead to a renewal of the trade in that, or any other species of timber from the Rhine. The value of the Rhenish timber consumed annually in H., amounts to about 2,000,000 florins, or about £170,000 sterling.

Monies, Weights, and Measures.] In the Dutch provs. accounts are kept in pfenningers, stivers, gilders, and ducats. A pfenninger is the sixteenth part of a stiver, which is equal in value to about 1d. British currency. The gilder or florin contains 20 stivers, or 2 Flemish groats, and is worth 1s. 9d. sterling. The gold ducat is equal to 20 florins, or £1 16s. sterling. The new gold William, or piece of 10 florins, is worth about 16s. 10d. English money. —The common weight of commerce is the schippoond of 3 cwt. The 100 lb. Dutch avoirdupois is equal to 108·93 English avoirdupois.—There are 19 Dutch m. in a degree of the equator. The Amsterdam foot contains 125·5 French lines, and the Rheinland foot 139·6 French lines. The Amsterdam ell is equal to 27·0797 English inches.

Railways.] In H. the lines opened to the public to the end of 1846 were those of Amsterdam to Haarlem, opened in 1839, 18 kilometres in length; Haarlem to Leyden, opened in 1843, 28 kils in length; Amsterdam to Utrecht, opened in 1843, 36 kils. in length; Leyden to the Hague, opened in 1844, 15 kils. in length; and Utrecht to Arnheim, opened in 1845, 129 kils. in length; making the complete extent of railway communication in active operation in the Netherland kingdom at that date 226 kils. The government is still occupied with arranging the necessary plans to perfect the system. At this moment the line from the Hague is being carried forward to Rotterdam, and from Arnheim to the frontier of Prussia; besides which the works between Rotterdam and Utrecht are in full activity. To sum up these arrangements, two concessions have been recently made, one for a line in Dutch Brabant and the other for a line in the Eastern Netherland provinces, bordering on Hanover and Rhenish Prussia.—The Amsterdam and Rotterdam railway extends from Amsterdam by Haarlem, Leyden, and the Hague, to Rotterdam, a distance of 48 m., and is constructed throughout on an embankment of 5 to 7 ft. high; the country, of course, being nearly a dead level the whole distance. Except near Haarlem, where there is a curve of about a mile radius, and at Leyden, where there is another of three-fourths of a mile radius, the line is straight throughout its course. As for gradients it has hardly one; if we except a very short and easy one between Amsterdam and Haarlem, and another between Haarlem and Leyden, the line is a perfect level. But notwithstanding the country is so very level, there is a difficult morass between Amsterdam and Haarlem, and the country is of a similar character between the Hague and Rotterdam. The principle of construction is the same as that of the Great Western, namely, on longitudinal bearers, supported by cross sleepers, into which they are let to the extent of half their thickness. The rails are also precisely of the same form as those of the Great Western, and screwed on the longitudinal bearers in the same way. The gauge is 2 French metres, or 6 ft. 6¾ inches English; the rails 5 French metres long, or 16 ft. 4 inches English, and weigh 150 kils., or 336 lbs. avordupois. The gross receipts of the Dutch railways amounted, in 1844, to 299,386 florins (£24,532 3s. 4d.), or on an average of £616 sterling per Netherlands mile. The working cost of 1844 was 156,959 florins (£13,097 18s. 4d), or on an average of £322 18s. 4d. sterling per Netherlands mile, being more than 50 per cent. on the receipts.

Population.] The population of the United Netherlands, in 1827, was 6,059,566, of whom 1,690,000 were Dutch, 145,000 Frisians, 300,000 Germans, 3,360,000 Walloons or Belgians, and 80,000 Jews. In 1831, it was estimated that the seven united provinces were inhabited by 1,900,000 Dutch, 280,000 Walloons, 252,000 Germans, 150,000 Frisians, and 50,000 Jews. The *Almanac de Gotha* states the pop. of Holland, in 1843, to have been 2,953,618, and, with the addition of Luxemburg, as in 1841, 3,128,841; while that of Belgium, in 1841, was 4,092,557. From official documents and tables published in the *Journal de la Haye* it appears that the pop. of the kingdom of the Netherlands amounted in January, 1845, to 3,019,748 souls; that there were 108,598 births in 1844, 56,198 boys and 52,400 girls, including 5,467 bastards; and 77,523 deaths, 39,500 males and 37,943 females, including 5,264 still-born of both sexes. The number of marriages amounted to 22,381, and the number of divorces to 38. The ratio of the number of marriages to the amount of the pop. was 1 in 124, or little more than three-fourths per cent. According to the *Katholischen Handbuch* for 1849, the pop. of the kingdom of the Netherlands on 1st January, 1847, comprised 1,834,513 Protestants, 1,171,910 Catholics, and 55,800 Jews; while the pop. of the foreign dependencies of the kingdom was estimated at 15,500,000. — The Dutch may be divided into the Dutch properly so called, and the Frises. The Dutch is the written language; the Frisian is a rare dialect, still spoken in a part of Friesland, but disappearing daily.—Sobriety, cleanliness, economy, industry, and perseverance, are characteristic features of the Dutch. One of the latest and best informed travellers in Holland says of the Dutch character:—"The national sobriety and quietude of the Dutch is painted on every face you meet. Young boys are as staid and as cautious as the men of other countries; and even the pretty damsels one encounters have their very smiles checked—if not clouded—by habitual sedativeness. Under this snowy mantle, at first so cold and so repulsive, there is much to admire and to love,—much to study and to learn." Yet brandy, gin, beer, tea, and coffee, are favourite beverages; and smoking is very general, even among the women. A genuine Dutch boor, instead of describing the distances of places by miles or hours, says, they are so many pipes asunder. Marriages in Holland are merely civil obligations, which require no ecclesiastical sanction to give them validity. A week or two before the intended consummation, notice is given to the burgomaster; the certificates of baptism, and the consent of the parents—when that consent is necessary—are deposited with the magistrate, and, on the day fixed, the parties attend with their friends in the town-hall, and the article of the code is read, which records the obligations of the marriage condition; then the burgomaster asks, in a loud voice, whether the parties consent to fulfil the matrimonial obligations, and on their answering 'yes,' or bowing the head in assent, he declares the marriage valid. Protestants sometimes proceed to the house of the minister to ask his blessing; and sometimes the burgomaster himself accompanies the civil ceremony with a word of advice, or a friendly benediction.

Religion.] The religion of the United Provinces is Protestantism in the Calvinistic form, both as to doctrine, worship, and government: yet it would appear that the Catholics are to the Protestants as 2 to 3. The system of Calvin was publicly adopted in 1571; and by the articles of union, in 1579, it was stipulated that Calvinists only should enjoy the principal offices of state. The states of Holland, more zealous than the rest, in 1583, proposed that no other form of Protestantism but Calvinism should be tolerated; happily however for the country this proposal was overruled. Ecclesiastical persons are divided into four ranks, professors at universities, ministers, elders, and deacons; and the government of the church is administered by consistories, classes (or presbyteries), and synods. The consistory is the lowest court, commonly consisting of the clergy and elders of a particular town. A class consists of deputies from several towns, and is commonly assembled thrice a-year,—a part of its duty being to visit the churches and watch over the conduct of the clergy. The synods are either national or provincial; the last being assembled yearly,—while the other is only summoned on the most important occasions when essential doctrines are to be discussed; as in the case of the synod of Dort before mentioned. The following table shows the number of synods, classes, and pastors, of the Dutch reformed church:

	Provincial synods.	Classes.	Ministers.
1	Synod of Gelderland,	9	285
2	„ South Holland,	11	331
3	„ North Holland,	6	220
4	„ the Congregation of Zealand,	4	163
5	„ Utrecht,	3	79
6	„ Friesland,	6	207

7	„	Overyssel, . .	4	84
8	„	Groningen, &c., .	7	61
9	„	Drenthe, . .	3	40
		Total, .	53	1,570

There are, besides, numerous Walloon churches, belonging to Flemish Protestants, scattered throughout the provs., who hold a kind of synod twice a-year, composed of deputies from their own sect. With these, as they spoke the French language, the French Protestants, who fled here for safety after the revocation of the edict of Nantz, associated. They have a seminary at Amsterdam for the education of their preachers in theology, &c. The other chief sects are the Lutherans, amounting to 320,000; the Baptists or Mennonites, amounting to 115,000, who have a seminary at Amsterdam for training their preachers in literature and philosophy, under the inspection of the body, and a professor of theology, who presides in the institution; and the Remonstrants, amounting to 38,000. The German and Portuguese Jews in Holland amount to 56,000. and have several synagogues in Amsterdam; there are also Quakers, Arminians, and Greeks. The ministers of all sects are not only tolerated but endowed by the state, as the Reformed, or Calvinistic church, the Remonstrant, or Arminian church, the Lutheran church, the French Protestant, or Walloon churches, the Scotch Presbyterian church, the English Reformed, the Roman Catholics, and even the Jews. Each sect has the management of its own affairs, in so far at least as regards spiritual matters, and in a great measure as regards matters of finance also. The ministers' stipends are paid regularly every quarter by functionaries appointed for the purpose. The money is brought to the minister's door, and he has only to receive it and sign a printed receipt for the amount, which varies according to the place of residence or sphere of labour. The average stipend for the country, where living is cheap, is about 700 and 800 guilders. In large towns the sums varies from 1,500 to 2,300 guilders. A guilder may be reckoned about twentypence sterling.

The number of ministers in the Reformed church is (That number includes the Walloon ministers, who do not exceed 24, and also the one English and six Scotch ministers. It likewise includes 25 Colonial ministers.)		1,570
The number of ministers in the Lutheran churches is		72
Ditto	Arminian do.	22
Ditto	Mennonite, do. about	150
Ditto	Roman Catholic,	uncertain.

Pauperism.] Every church in Holland is bound by law to support its own poor, and most of the different communities have considerable funded property for this purpose, left by private individuals. In case of the insufficiency of the resources possessed by the congregations, the distressed may apply to the magistrates, who redress the complaint. In many places there exist an authority of a civil character, appointed to succour those who do not properly belong to any religious society; in others, the burgomaster or his deputies administer relief. The hospitals and orphan asylums are, for the most part, government establishments. Some are maintained wholly or in part by their own revenues. Admission is not contingent upon religious opinions. Foundlings are maintained at the charge of the locality where they are exposed. There are three houses of industry, where the poor are admitted on application, under the condition of contributing to their own support by working according to their capacity. There are besides in various towns industrial charitable establishments, where work is provided for those who are in circumstances of pressing want. Besides these there are institutions supported by societies for certain specific objects, some destined for the relief of women in childbed, others for distributing provisions, and, in winter, fuel to the indigent. In all cases the local authorities are invested with the right of visitation and control over the receipts and expenditure of these charitable unions. Their officers are bound to furnish an annual statement to the government in order that the same may appear in the report made on this subject to the States General. The average annual receipts of the hospitals and houses of legal charity amount to £100,247. The average number of persons annually relieved is 241,513. The amount of annual wages of a family of workers in H. fluctuates between £10 10s. and £19, while in England it is more than double that sum.

Literature.] Dutch literature begins with the 14th cent. Towards the 15th, the language became more cultivated, by translations of the Bible, by frequent controversy, and popular works and poetry. Gansfort and Agricola at Groningen were among the first who distinguished themselves as theologians. Erasmus of Rotterdam, the great restorer of literature in the western world, contributed by his elegant satirical works and solid information to bring about the great reformation in the church; yet he died in the bosom of that very church whose gross corruptions he satirized, being too timid and irresolute to become a decided reformer like his great contemporary Luther. A much more extensive genius was Hugo de Groot, or Grotius, who, in the beginning of the 17th cent., embraced with his vast mind the whole subjects of philology, archæology, poetry, history, theology, and jurisprudence. For a long time the northern provs. had no university. That of Louvain supplied the whole of the Netherlands. But in 1575, Prince William of Orange founded a university at Leyden, to reward the town for its gallant resistance against the Spaniards; and this university soon rose to great celebrity throughout Europe. At the head of the Dutch jurisconsults we must place Hugo Grotius, who is followed by Voet, Wiquefort, Noodt, Heineccius, Vinnius, Bynkershoek, Keessel, Cras, and the present Meyeer de Rhoer, Van Hall, and Van der Spyk. In medicine the celebrated Boerhaave was followed by Clusius, Tulp, Camper, Van Swieten, Van Royed, Albinus, Gaubius, Van Doeveren, and the great anatomist Ruysch. The arts of pharmacy and surgery are well-cultivated in H. The pantheist Spinoza has been succeeded by less acute but less sceptical philosophers, among whom Franz Hemsterhuis is distinguished by his fine taste and intimate acquaintance with the Socratic philosophy; he has written in French, however. Snellius, Huygens, Z. Jansen, Drebbel, Harsoker, Houk, Brounker, Gelder, Strabbe, and Kanter, are distinguished names in mathematical science; and Coehorn was the Vauban of H. In natural philosophy the Dutch have Muschenbroek, Camper, Gravesande, and Van Swieten; in natural history, Leuwenhoek, Graaf, Swammerdam, Lyonet, and Berkhey; and in chemistry Boerhaave. In history, Hooft is regarded as the Tacitus of H.; and Dousa, Junius, Vossius, Merula, Pontan, Waganaer, and Meermann, have enriched the historical literature of the country. In theology, Gomarus, Voethus, the Spanheims, Witsius, Mastricht, Desmanetz, Hoornbeck, Leidekker, Vitringa, Venema, Lampe, Arminius, and Cocceius, are most distinguished names. Erasmus, Dousa, Heinsius, Baudius, Rutgersius, Van Santen, Schultens, Grævius, Gronovius, Ruhnken, the Burmanns, Valkenaer, Perigonius, Tromius, Wesselin, Wythenbuch, Hoogenen, Drakenborch, and Hemsterhuis, form a splendid list of Dutch philologians. The Dutch geographical writers of merit are Jansen, Bleau, Varenius,

Moll, and Reland; and their voyagers and travellers have greatly enriched the science by their discoveries. Lambert, Kramer, Van Moerbeek, Halma, Weidenbach, and Weiland, have written grammars and dictionaries of their mother-tongue. Notwithstanding, however, of this imposing array of names, there is a poverty of Dutch literature; many of their most popular books are mere imitations of German, French, and English authors. Dutch poetry began to be successfully cultivated in the 17th cent.; several productions of that period are distinguished by great strength and beauty of style and language. Between 1640 and 1750, the national theatre was very much cultivated, and till the latter period the Dutch were richer in original dramatic works than the Germans. Among the dramatic poets of this epoch were Jan Von der Doos, Daniel Heinsius, Peter Cornelius Van Hooft, Jacob Catz, and Joost Van der Vondel. Lyric and satiric poetry have been written by Constantine Huygens, John Van der Veen, and John Adolphus Dans. An epic poem, entitled 'William the Third,' was written by Lucas Rotgans of Amsterdam. Among the more recent poets are Hieronymus de Bosch, Klijn, Kleinhoff, Bilderdyk, Helmers, Van Hall, Tollens, and Gysbeck. Dutch prose has little claim to harmony and elegance, but is very well fitted to convey useful truths in a plain and intelligible manner. H. cannot be deemed a very literary country; yet its popular writers find a much greater proportion of readers among the population than the best of our authors. Gottens, for example,—a very agreeable and attractive poet,—has sold 10,000 copies of the last collection of his poems, in 3 vols.; and Van der Palm disposed of nearly 4,000 copies of his translation of the Bible, though the cost was 35 florins, or £3 English. The poetry of Gottens resembles that of Cowper in many respects. It is not highly imaginative, seldom sublime, but it touches all the chords of common sympathy. He has lately been converted from Catholicism to Protestantism. Van der Palm is equally distinguished as a writer and as an orator. He must be deemed one of the very best prosaists in the Dutch language, and undoubtedly the best of the present time.—The great proportion of books printed in H. are translations from the German; for though the instances mentioned are very remarkable evidences of the great demand for the writings of popular men, these instances are undoubtedly exceptions to the more common rule. The editions ordinarily published consist of 1,100 copies; sometimes of only 550, but very rarely of less. The Dutch periodicals are numerous, but far from valuable. The laws are severe against pirated editions; the censorship was abolished by a decree of 1814; but authors and editors are responsible for their works.

Establishments for education.] All establishments for education stand under a particular department of the ministry. Before the Belgian revolution there were 6 universities in the United kingdom: viz., 3 in the northern provs., at Leyden, Utrecht, and Groningen; and 3 in the southern, at Ghent, Liege, and Louvain. Each university had 5 faculties: viz., theology, law, medicine, physical and mathematical science, and philosophy and literature.

Table of the number of pupils in the schools and colleges in the provs. of Holland in 1827.

	Infant schools.	Schools of industry.	Primary schools.	Colleges.	Total pupils.	No. of pupils to 1,000 inhab.

Total,	29,763	2,122	248,091	1,540	280,517	av. 128·06

An official report made by the government to the States-general gives the following particulars of the state of public instruction for 1835. In the universities there were 1,527 students (fewer by 70 than in 1834); 771 at Leyden; 491 at Utrecht; and 265 at Groningen. The number of scholars in the Latin schools in 1835 was 1,255. The primary schools are the objects of the special solicitude of government. In 1835 there were 2,832 primary schools, with 304,559 scholars.

Government.] Under the mild sway of the dukes of Burgundy, the people of H. and the Netherlands enjoyed great privileges, and comparatively more liberty than those of other European states. But the transference of these provs. to the Spanish branch of the Austrian family, by the marriage of the heiress of Burgundy with Maximilian of Austria, was—as we have seen—eventually unfavourable to their liberties. The Dutch, upon their revolution, erected themselves into a confederated republic, which consisted of seven independent states, leagued together for their mutual preservation, and joined into one political body for the general good. The office of *Stadtholder* bore some resemblance to that of the dictator among the Romans. The resemblance, however, only lay in this, that it was appointed in times of imminent danger, in order to communicate vigour and activity to the councils of the state. After that the independence of H. had been established by the treaty of Westphalia, the office lay dormant till the invasion of H. in 1672, when the office was declared hereditary in the house of Orange, both in the male and female line. After the battle of Leipsic, a new constitution for H. and Belgium was made, by which the two countries became a constitutional monarchy, hereditary in the male line of the house of Nassau-Orange. This new constitution had some resemblance to that of Britain, but the sovereign was invested by it with a greater preponderance of power than what the British constitution allows the king. Since the separation of Belgium, and under the new fundamental law of 1848, H. continues to enjoy a constitutional government under the States-general, who are divided into two chambers, one of which comprises from 40 to 60 members, appointed by the king; and the other 58 deputies, who are named by the Provincial states, in the following proportions: North and South Holland, 22; North Brabant, 7; Gelderland, 6; Friesland, 5; Overyssel and Groningen, 4 each; Zealand and Utrecht, 3 each; Drenthe, 1. The duchies of Luxemburg and Limburg have their own special constitutions.—Each province has its own Provincial states. The second chamber, or lower house of parliament, differs considerably from our house of commons, not only in its mode of nomination, but in its functions and dignity The members accept a petty salary, amounting to about £220; they can originate no motion; and their influence is comparatively inconsiderable. The king can hold no foreign crowns, nor remove the seat of government out of the kingdom. The secretary of state receives £1,670; the minister of finance, the minister of justice (lord-chancellor), and the minister of the interior, the same sum; governors of provs. £750; the postmaster-general about £830; the ministers of war and marine £1,250.

Revenue.] The amount of direct and indirect taxes levied on the United kingdom of the Nether-

lands averaged about 14 Rhenish florins, or 28s. sterling to each individual. The annual revenue scarcely exceeded £7,000,000, and the expenditure fully equalled it. The amount of the public debt was as follows:

	Florins.
Deferred debt on which no interest is paid,	1,131,000,137
Active debt, bearing interest,	510,000,000
Belgian debt, principally contracted by Austria, but assumed by the new government,	34,466,679
	1,675,466,816

Or nearly £170,000,000 sterling, the active portion of which bears interest at 2 or 2½ per cent. The public debt of H. in 1848 amounted to 1,237,819,911 florins, viz.:

GENERAL DEBT.

£68,005,441	2½ per cent.,		£1,700,136
10,071,360	3		302,140
1,867,333	3½ —	Syndicates.	65,356
19,803,375	4 —		792,135
1,229,041	4 —	Old debt,	49,161
816,662	4 —	Treasury bonds,	32,666
666,666	4½ —	Treasury bonds brought to charge,	2,318
	Life annuities,		8,333
	Life domain,		1,716
	Nimeguen tontine,		833
	Sinking fund,		25,000

LOCAL DEBT.

Haarlem lake drainage,		£666,666	£32,166
Maestricht and Gelderland road,		77,500	4,216
Utsuld and Deventer road,		...	249
Leist and Wordenburg road,		...	340
Amsterdam and Naarden road,		...	921
Zutphen and Goer road,		...	851

The following shows the whole capital of the debt for 1849 and 1850:

	1849.	1850.
Two-and-a-half per cent.,	£68,042,333	£68,005,441
Three per cent.,	10,071,405	10,071,360
Three-and-a-half per cent.,	1,892,333	1,867,333
Four per cent.	19,803,375	19,803,375
—	1,229,041	1,229,041
—	816,662	816,662
Four-and-a-half per cent.,	666,666	666,666
Haarlem meer,	666,666	666,666
Maestricht road,	79,166	77,500
Total,	£103,267,647	£103,204,044

This is a monstrous debt for a pop. little exceeding 3,000,000, amounting in fact to about £31 per head; while that of Great Britain averages £29; and the average for all Europe is £6 15s. per head. Viewed in relation to the extent of area likewise, H. is more burdened with debt than Great Britain. The taxes too appear to lay an annual burden on the pop. of H. equal to the interest of the national debt.

The following were the budgets for 1842 and 1848:

REVENUE.

		1842.	1848.
I. Direct Taxes.	Florins.	Florins.	Florins.
General tax,	9,878,596		
Personal taxes,	6,000,000		
Patents,	2,304,000		
		18,182,596	18,748,800
II. Excise Taxes,		20,588,710	18,872,020
III. Indirect Taxes,		8,970,000	9,384,000
IV. Import, Export, and Navigation Duties,		5,520,000	4,716,000
V. Miscellanies:—			
Duty on pawned gold and silver ware,	181,145		
Domains,	1,660,000		
Post-office,	1,460,000		
Lottery,	530,000		
Sporting and fishing licenses,	115,000		
		3,946,145	5,118,294
VI. Divers Revenues,		896,000	
VII. Interest at the charge of East India Revenue,		6,500,000	9,800,000
		65,603,451	
VIII. Amount estimated to be applicable out of balance of colonial administration at home,		5,500,000	
IX. Rents charged on Belgium,			400,000
X. Pay of colonial administration,			4,650,000

Total,		£5,926,403 = 71,116,841	

Armed force.] The army of the king of H. at present consists of about 60,000 men. There is a military academy at Delft.—The navy in commission in 1840 was composed of 9 frigates, of which 3 were used as guardships; 9 corvettes, 12 brigs, 25 gun-sloops, 4 armed steamers, 2 transports, and a demonstration-ship attached to the naval institution of Medemblick. The vessels not in commission were 8 ships-of-the-line, of which 5 were finished, and 3 building; 12 frigates, of which 5 were finished, and 7 building; 9 corvettes, of which 4 were finished, 2 building, and 3 employed as hospital ships; 9 brigs, of which 4 were finished, and 5 building; and 68 gun-boats. The total, therefore, was 8 ships-of-the-line, 21 frigates, 15 corvettes, 21 brigs, and 95 gun-boats. The crews in active service amounted to 5,000 men; the officers of the fleet were 472 in number. The number of marines in the different ports was 383. The shipwrights and others employed in building and fitting out at Amsterdam, Willemvord, Rotterdam, Helvoetsluys, and Flushing, amounted to 2,098.—In 1843, there were at the port of Amsterdam 7 steam-vessels, only two of which appear to be of any importance. They ply as regular packets between Amsterdam and Hamburg. At Rotterdam there were 31 steam-vessels, averaging about 500 tons, only 9 of which can carry an armament of 7 guns each.—According to the *Dutch Naval Almanack* for 1851 the navy of H. is at present composed as follows:—1st. 81 sailing vessels, viz., 2 of 84 guns, 5 of 74, 3 of 60, 1 of 54, 8 of 44, 2 of 38, 2 of 28, 3 of 26, 6 of 24, 4 of 22, 2 of 20, 10 of 18, 3 of 15, 9 of 14, 10 of 12, 11 of 6, of 5, and of 4; 2d. of 21 steamers, of which 18 are of 7 guns, 1 of 8, and 2 (built of iron) of 4 guns; forming a total of 102 vessels, armed with 2,177 guns; lastly, 9 ships of war, 6 of which (sailing vessels) are on the stocks.

Colonies.] It is apparent, from the tables already introduced into this article, that the Indian colonies are the main source of Dutch commerce. They are placed under a governor-general, both executively and legislatively. See article Java. The following table exhibits the area in sq. m. of 15 to a degree, and the estimated pop. of each of the Dutch colonies, as claimed by H., in November 1849:

I. In Asia.	Area.	Pop.
Java, and adjacent islands,	2444·6	9,560,380
East coast of Sumatra,	2200·6	938,585
Bencoolen,	455·6	93,875
Lampong,	475·	82,900
Palembang,	2558·4	272,000
Indragiri,	676·8	50,000
Assahan, Batoa and Bara, Sirda, and Dilli,	352·8	100,000

History.] The first notice we have of the Netherlands is contained in Cæsar's narrative of the progress of the Roman arms in Gaul. The seventeen provinces, and that part of Germany which lies west of the Rhine, were called *Gallia Belgica* by the Romans; and were known to them as inhabited by the Belgæ, the Batavi, and the Frisi. About a century before the Christian era, the Battæ had removed from Hesse to the marshy country bounded by the Rhine and the Maese, to which they gave the name of *Batavia*. The Batavians disappear from history in the 5th cent.: the Belgæ or Belgians in the 6th; the Frisians were conquered by the Franks in the 7th. The monarchy of the Franks, which arose on the ruins of Gaul, in the 6th and 7th cents., embraced all the provs. of the Netherlands. By the peace of Verdun, in 843, all the country to the E of the Rhine, and Batavia and Friesland likewise, were united to Germany; but several of the different governors soon rendered their dignity hereditary and power independent. In the 10th and 11th cents., the inhabitants of the towns in these districts distinguished themselves by their commercial activity, and their industry in reclaiming new tracts of country from the sea. Having rapidly acquired power, and formed alliances, the struggle which this great commercial body maintained with the military lords of the soil, forms one of the most interesting chapters in the history of Europe. During its continuance, the Netherlands were split down into a number of petty states. By purchase, marriage, inheritance, or conquest, several of these lordships were frequently united under one master; and in the 15th cent. we find the whole in the possession of the house of Burgundy, from which it passed to the Spanish branch of the house of Austria, on the resignation of Maximilian in favour of his son, Philip the Fair, who, dying in 1516, left these provs. to Charles V. At this time the Netherlands enjoyed what might be called independence; but Charles, by the vigour of his measures, and the policy of his councils, made them submit to his absolute authority. In 1556 the sovereignty of the Netherlands was abdicated by Charles in favour of his son, Philip.

Philip II.—Duke of Alva.] The successor of Charles, a bigotted Catholic, appointed his sister, the duchess of Parma, regent of the Netherlands; but she had scarcely commenced her administration, when the discontent of the people reached an alarming height. The prince of Orange, Count Egmont, and Count Horn, who were at the head of the disaffected, loudly remonstrated against the new bishoprics, the establishment of an inquisition, and the influence of Cardinal Granvella; and insisted that the States-general should be assembled, for the purpose of considering the grievances of the country. The duchess was compelled ostensibly to comply in part with their requests; but in 1565, it was discovered that the courts of Spain and France were concerting measures for nothing less than the total destruction of the Protestants. A general combination was now formed for procuring the removal of grievances, but Philip resolved that matters should, by his own measures, be brought to an extremity; and in 1666 the Duke of Alva entered the country at the head of 10,000 men, and assumed the regency on the resignation of the duchess of Parma. Count Egmont and Count Horn were condemned and executed; the estates of the prince of Orange, who had left the country, confiscated; and every one who favoured the Protestant cause subjected to unrelenting persecution At last, perceiving that the rigour with which he had enforced his measures, instead of intimidating had united the people in more formidable array against himself, he invited the States to assemble at the Hague, and declared his willingness to repeal the obnoxious taxes. This change of policy, however, came too late. The States assembled at Dordrecht; and, instead of adopting any method for raising the supplies requested by the regent, they raised a supply for the prince of Orange, who, at the head of an army amounting to upwards of 22.000 men, took Roermonde, laid Brabant under contribution, made himself master of Mechlin, Oudenard, and Dendermonde, and while he attempted to raise the siege of Mons, despatched another party to the attack of Amsterdam. Ultimately the efforts of the popular party were crowned with success; and the duke resigned his office and returned to Spain

Duke of Requesenes—Pacification of Ghent.] Alva was succeeded by Louis de Requesenes, who defeated and put to death Louis of Nassau: but this advantage was counterbalanced by a great naval victory obtained by the Zealanders, and by the numerous mutinies which about this time took place in the Spanish army. The ineffectual siege of Leyden is the most remarkable transaction of Requesenes in the Low Countries The firmness of the citizens was triumphant on this occasion; the sluices were opened, and the country laid under water; and the Spaniard made a miserable retreat, leaving the flower of his army buried in the marshes. Negotiations for peace, which had been carried on in 1575, terminated unsuccessfully; and when the war recommenced, the advantage was on the side of the Spaniards. Despairing of being able to maintain their independence, the Netherlanders made offer of the sovereignty of the Netherlands to Elizabeth of England, who, for many good reasons, saw proper to refuse it. A similar offer was made to the duke of Anjou, but declined. The prince of Orange at length succeeded in forming a confederacy, generally known as 'the Pacification of Ghent.' Of this treaty the chief objects were to restore the ancient form of government as it had existed under Charles V.; to abolish all severities with regard to religion; and to rid the country of foreign troops. To carry into effect the resolutions entered into at this pacification, a loan of £20,000 was obtained from England, and Don John of Austria, Requesenes' successor, after much altercation, was compelled to accede to the terms of the pacification. This concession was confirmed by the authority of the Spanish monarch, but the provs. of Holland and Zealand, more zealous than the rest in the cause of liberty, refused to sign the agreement, affirming that several of their ancient privileges had been retrenched; and on both sides active preparations were made for war.

Union of Utrecht.] The States had again recourse to Elizabeth, and prevailed on her to grant them not only a loan, but a considerable reinforcement of troops. To unite the jarring councils of the provs., the archduke, with the council of State, and the prince of Orange, were invested with supreme power in military matters, and had influence sufficient to procure the formation of a closer union between the provs. of Holland, Zealand, Utrecht, Friesland, Groningen, Overyssel, and Gelderland. This union, which, from the name of the place where the treaty was concluded, was called 'the Union of Utrecht'—was concluded in 1579, and laid the foundation of the commonwealth known by the name of 'the United Provinces.' The main stipulations in this treaty were, that the seven provs. should regard themselves as having one and the same political interests in common, each province still retaining its own private customs and laws; that in disputes between any two, the rest should interfere only as mediators; and that all should assist one another with life and wealth against every foreign enemy. In allusion to the uncertain result of the contest upon which they were entering, their first coin was stamped with the image of a ship struggling amid the waves without oars or sculls, and bore the motto,—*Incertum quo fata ferant.* It was indeed a perilous enterprise for a small community of fishers and herdsmen to enter the lists against one of Europe's most powerful monarchs; and unfortunately at this arduous juncture, the prince of Orange was assassinated at Delft, by Balthazar Gerard, one of Philip's creatures. William's death was a heavy stroke to his fellow-citizens, and the Spaniard might ultimately have prevailed, had he not engaged in a war with England, and crippled all his resources by the loss of his armada. Philip died in 1598, but hostilities were continued till 1609, when both parties concluded an armistice for twelve years. No sooner was this treaty concluded, than the Dutch applied themselves with vigour to the arts of commerce; but at the expiry of the armistice, war was again commenced, and during twenty years, hostilities were carried on with great animosity. The Dutch were now generally successful; and in 1648 a treaty was concluded, by which the king of Spain renounced all claim to the sovereignty of the United Provinces.

Struggle with England.] By prosecuting with perseverance the arts of commerce, the opulence of the republic daily increased; the traffic of Lisbon, Cadiz, and Antwerp, flowed into the hands of the Dutch merchants, who now almost exclusively furnished Europe with the rich productions of the East; and the United States of H. began to be ranked among the leading nations of Europe. Maritime rivalship unfortunately involved them in a war with England, in which their fisheries were interrupted, and their commerce nearly ruined. The peace of 1654 relieved them from their embarrassments, and they again prosecuted their commercial enterprises with vigour and proportionate success, till the ambition of Louis XIV. involved them in a new war in 1670. The republic gained little by the treaties of Ryswick and Utrecht, in 1697 and 1713. Its commerce, the great source of its power, disappeared, whilst England extended her own, and France created a commerce for herself. When, in the Austrian war of succession, France attacked the frontier towns of the Netherlands, penetrated into Dutch Flanders, and threatened Zealand, H. endeavoured to shelter itself by acknowledging Prince William IV. of Orange as hereditary stadtholder of all the Netherlands. In the war of England with North America, H. did not fulfil the conditions of the treaty into which it had entered with the former power; it was even discovered that a treaty had been secretly concluded between H. and the United States of America. England upon this declared war against H.,—already weakened by internal dissensions,—in 1780; and though the Dutch fleet fought gallantly at the Dogger-bank under the command of Admiral Zoutman in 1781, yet the United Netherlands were obliged to abandon Negapatam to England in the peace of 1783, and to

allow that power the free navigation of all the East Indian seas, including the passage by the Molucca islands. In the meantime, the State was brought to the very brink of ruin by internal dissensions, and the struggle of the aristocrats and democrats, or of the Orange party against the Patriots; and when the French in 1793 declared war against the stadtholder, and in January 1795 conquered H. under Pichegru, the malecontents gladly assisted the invaders, and dissolved the government.

Batavian republic.] The new Batavian republic, formed under the protection of France, was divided into eight departments. The legislative power, according to the French system, was committed to an assembly of two houses; and the executive, to a directory of five persons. But France retained for herself a part of Flanders, Maestricht, and Venloo,—a district of country amounting to 763 sq. m., with 122,000 inhabitants, and exacted a contribution of 100,000,000 florins as an indemnity for the expenses of the war. In 1801 the constitution was again changed by its capricious rulers; and the Batavian republic, no longer capable of any exertion, saw her fleets ruined by the maritime power of England, her colonies destroyed, her commerce annihilated, and the bank of Amsterdam, the great national resource, completely ruined. The peace of Amiens in 1802 restored some of the lost colonies to the republic; but England kept the important island of Ceylon, and France retained several districts for which only insignificant indemnification was given. The new war between France and Britain destroyed the last hopes of this unhappy country; her colonies fell again into the power of England, and English ships blockaded the Dutch harbours; while, to complete the degradation of the unfortunate Hollanders, a new constitution was given them by the emperor Napoleon, on the 15th of March 1805; and on the 24th of May 1806, his brother, Louis Napoleon, was declared hereditary king of H., under the condition that the crowns of France and H. were never to be united on one head. But the splendour of a royal crown could blind no eye to the misery of the country; the national debt rapidly increased to about 1,200,000,000 florins; and the merchants of H. subsisted only by means of the smuggling trade carried on with England, until the decree of Napoleon from Milan, and the tariff of Trianon, destroyed even this last shadow of commerce. East Friesland, Tever, Kniephausen, and Varel, were united to H. in 1807; on the other hand, the whole land between France and the Maese, a part of Zealand, the fortresses of Bergen-op-Zoom, Breda, Herzogenbusch, Gertrudenberg, Middleburg, and Vliessingen, were appropriated by France. The remaining country, amounting to only 12,253 sq. m., with a pop. of 2,001,416, was taxed to the amount of 70,000,000 florins annually, to support the expenses of Louis Bonaparte's government. In 1810, Napoleon converted part of Brabant, Zealand, and Gelderland, into French departments; whereupon Louis, irritated at finding himself a mere puppet in the hands of his brother, abdicated in favour of his son, and retired into the Austrian territory. Napoleon did not acknowledge the abdication; but nevertheless, by decree of 9th July 1810, united the whole of H. to the French empire. But this state of things continued only till the end of 1813. On Napoleon's defeat at Leipsic, a combined Prussian and Russian force, under General Bulow, was sent against the Netherlands, and was joined by a detachment from England, under General Graham. On the 18th of November 1813, Gysbrecht Charles van Hogendorp, a moderate adherent of the old Orange party, secretly assembled in his house some of the members of the old government, who in 1788-95 had managed the helm of state, and endeavoured to persuade them to constitute themselves provisionally the States-general; but they did not yet dare to engage in the undertaking. Hogendorp next invited those who had held the reins of state in 1786 and 1787, and after 1795, and who, though formerly anti-Orange, would gladly have acceded to the old republican Orange system, had they not been rendered distrustful by their exclusion from the first meeting. After two unsuccessful attempts, the 17 first confederates appointed from their body Gysbrecht van Hogendorp and Baron Van der Duyn van Maasdam as a provisory government, till the prince of Orange should arrive from England, whither Van Perponcher and Fagel were despatched to invite him over. The stadtholder arrived at the Hague on the 30th of Nov., and thence proceeded to Amsterdam. The commissioners of the duumvirate (Kemper and F. Scholten) had, it is thought of their own motion, issued a proclamation ending with the declaration,—"the Netherlands are free, and William I. is the sovereign prince of this free country." The prince, however, accepted the nomination only on condition that his power should be restrained by a constitution, which "should guaranty the privileges and liberties of the people, and secure them from every encroachment." A board of 14 members, among whom were the former duumvirate, was intrusted with the framing of this constitution, which, however, did not wholly answer the expectations of intelligent patriots. Of 600 notables summoned from all departments of the former United Provinces, to meet in convention to consider the draft of the constitution, only 475 appeared, and of those present many acquiesced only conditionally. The plan of the constitution was, however, adopted by a majority of 449 votes. By the congress of Vienna the Belgic provinces were united with the United Netherlands, to form the kingdom of the Netherlands, and Prince William I. was recognised by all powers as sovereign of the Netherlands. As an indemnification for the cession of his territories of Nassau in Germany, the duchy of Luxemburg was given to him, with the title of a grand-duchy, which still, however, belonged to the Germanic confederation; while the king of the Netherlands, as grand-duke of Luxemburg, had a seat in the diet of the confederation, and 3 votes *in plenum*. To these territories was also annexed the ancient bishopric of Liege.

Recent history.] In June 1815 the king acceded to the Germanic confederation. The incorporation of so many provs., inhabited by people who differed in manners, customs, and religious opinions, naturally rendered a revision of the constitution necessary. Conformably with the 143d article, the 55 members of the States-general were eventually doubled, by the provincial estates, in order to deliberate on the proposed alterations; and a convention of notables assembled at Brussels, of whom the greater number, in proportion to the pop., was from the southern provs. One-sixth of these, however, did not appear, so that the whole number present was 1,323, of whom 527 voted for, and 796 against the constitution. It being found, however, that some votes had been given conditionally, and that 126 votes were given against the constitution merely from religious motives, these last, together with the 280 absent, were counted in favour of the constitution; for which a majority was thus obtained. On the 11th of October, a treaty on the subject of the Belgic national debt was concluded between the king of the Netherlands and Austria. By the second peace of Paris, November 20, 1815, France ceded to the kingdom of the Netherlands whatever it still retained of the former Austrian Netherlands, particularly a rich mineral district situated in the centre of the Ardennes, between Hainault and Namur, the loss of which had been severely felt by the inhabitants of the prov. of Hainault, with the fortresses of Marienburg and Philippeville. The crown of the Netherlands also obtained the sovereignty of the small duchy of Bouillon, between Luxemburg and Champagne. By treaty with England, of October 29th, 1814, in consideration of the relinquishment of all the claims of H. to the Cape of Good Hope, and the colonies of Demerara, Essequibo, and Berbice, all the other colonies that H. possessed anterior to 1794, in Asia, Africa, and America, were restored to William I. On the 25th of May 1816, a compact was concluded between the kings of Prussia and the Netherlands respecting the cession of a tract of country to the latter; and in June of that year the king of the Netherlands acceded to the holy alliance. The want of a common feeling between the Belgic and Dutch subjects of the new monarchy had been strongly displayed on several occasions. The great influence of the Belgic clergy, even over the higher classes,—the dissatisfaction of the Dutch with the long residence of the court in Brussels,—and the disunion in the Dutch provs. since the establishment of the monarchy between the professed adherents of the reigning family,—one section of whom was known as the old Orange party, or friends of a hereditary stadtholderate or republican system; and another, the new Orange party, or partisans of the monarchy,—caused much discontent, which was, however, counterbalanced by the personal character and conciliatory policy of the king. Though this incongruously compounded state had made some progress since 1818, under the influence of its constitution, yet the amalgamation of the Dutch and Belgians into one nation was by no means successful; and the reciprocal aversion of the northern and the southern people, stimulated by the events of late years, was several times exhibited with great animosity in the church, the army, and even the chambers of the States-general. But the spirit of dissension entered most deeply into the popular feeling, and was maintained in vigour for years by the Catholic clergy. The government was forced to put a stop, in 1825, to the influx of French missionaries into Belgium. On the other hand, the Pope issued a bull of excommunication against the schismatics, or against the Jansenist bishops and archbishops of Utrecht, Haarlem, and Deventer, who had taken the oath of allegiance to the king. The relations of the Netherlandish government to the Roman court appeared, however, to be finally established, after long negociations, by the concordat signed at Rome, June 18, 1827, by the Netherlandish ambassador Count de Celles, and the plenipotentiaries of the holy see, which concordat was ratified at Brussels, July 25, 1827. By it, the concordat concluded by Pius VII. with Napoleon, July 15, 1801, became valid in the northern provs. of the kingdom, as it had previously been in the southern. Each diocese had its chapter and its seminary. The chapter of a vacant see was to propose candidates from the Netherlandish clergy; those to whom the king should object were to be struck from the list; the chapter was then to choose from the approved list the bishop or archbishop, whom the Pope was immediately to confirm, if he should find him properly chosen. But the execution of this concordat, which did not meet with the approbation of a great part of the nation, was attended with new difficulties; the government, though desirous of retaining the philosophical college founded at Louvain in 1825, as a useful institution for all theologians, was obliged to abolish it in 1830. To the 5 Roman Catholic bishoprics (Mechlin,—the metropolitan,—Liege, Namur, Tournay, and Ghent) 3 new ones (Bruges, Amsterdam, and Herzogenbosch) were added. Another cause irritated the Belgic people in particular,—the prohibition of the French language. The difference of languages, moreover, rendered the union of the southern and northern Netherlands into one nation difficult. The government, while it allowed the use of the French as well as the Dutch in the proceedings of the States-general, abolished, by the ordinance of July 11, 1818, the use of the French language in judicial proceedings, and by the public authorities, only allowing advocates to make use of it for a certain period. Another royal edict, of September 15th, 1819, required that in Limburg, East and West Flanders, and in Antwerp, no other but the national language, the Flemish-Dutch, should be used in public business. This rule, indeed, it became subsequently necessary to soften; but in Oct. 1822 it was anew or-

dered that the national language alone, the Dutch or Flemish, should be used in schools as well as in all public transactions; and on the 1st of January 1823, this rule was introduced into all the courts of justice, even in Brussels. The suppression of the French language made two opposite parties the secret friends of France, — the Catholic Belgians, apprehensive for their church, because they believed that the object was to propagate the Protestant faith by means of the prohibition of French,—and the Brabanters and Flemings adhering to France from old predilections. The settling of the national taxation and finances was a still more difficult problem for legislation. Belgium, a manufacturing, agricultural country, wished to place the burdens on articles of export and import; while H., to spare its own commerce, wished to impose them on real estate. The budget, therefore, always employed a great part of the time of the States-general, who assembled in October of each year, alternately at the Hague and at Brussels, and whose debates were often exceedingly turbulent. After deducting the deferred debt, which bears no interest, the true debt of the kingdom of the Netherlands amounted in 1823 to 593,578,900 Dutch guilders, or 237,000,000 dollars.

Separation of Belgium.] The chief causes of complaint urged by the Belgians were, the undue share of the national debt of H. which was laid upon them,—the unequal division of the representative power,—and the partiality alleged to be shown to the Dutch in the distribution of public offices. To a certain extent, however, the consequences of this national discontent were for some time restrained by the state of France. In deserting H., Belgium, from her situation, was necessitated either to throw herself under the protection of France, or to shape her line of policy so as to insure the neutrality of the French government. For a long time neither alternative presented very strong inducements for a change. France was under the power of the Jesuit party, and the press was restricted; while at home, the church and the press were equally free. The liberal party in Belgium, therefore, continued to support the established order of things, lest any change brought about by French influence might be productive of greater grievances than those complained of. Towards the close of 1829, however, the Catholic and liberal parties coalesced, and the public discontent was more openly expressed than ever. The conduct of the king, on the other hand, was not such as to add to his popularity. He dismissed from various posts about the court several individuals whose integrity had caused them to join the opposition. This measure, though affecting only a few individuals, was viewed by the Belgians as a national injury; the discarded courtiers were covered with honour, a subscription was raised to remunerate them for their losses, and the press raised its voice in favour of them. Affairs were in this condition when the revolution in France produced a contagious effect on the minds of the Belgians. The fear of falling into the hands of France, in the case of a separation from H., seemed now to be completely removed; and the distant hope of a neutrality on the part of that power was changed into an almost certain prospect of co-operation. The revolution was begun by the Brussels mob on the 25th of August 1830. In the course of the 26th, 5,000 men were in arms to protect the city and intimidate the government, —the Brabant colours took the place of those of the house of Orange at the Hotel de Ville,—and the authors of the revolution assumed the rule without openly denying the authority of the king. The example of the people of Brussels was immediately followed by those of Louvain, Liege, Ghent, and Antwerp. A 'committee of public safety,'—being in fact the first step towards a provisional government,—was appointed to conduct the affairs of the nation till a final settlement should be obtained. On the 22d of September a Dutch army approached Brussels. On the 23d the army entered the town, and a sort of desultory warfare took place in the streets. For four days this conflict was maintained with great loss on both sides; but the number of the insurgents increased daily, being augmented by large bodies of volunteers from the cities of the S; and, after a desperate struggle on the 26th, Prince Frederick withdrew his remaining force during the night. The royal troops had no sooner retreated, than M. de Potter appeared in Brussels to take the lead of the provisional government. The most vigorous measures were instantly adopted, the whole machinery of government was organized, and, on the 4th of October, Belgium was declared to be independent. It was no longer in view to effect a separation of the kingdoms alone; the last blow had severed the slender ties which sustained the attachment of the Belgians to the house of Nassau, and the connection with H. was declared to have entirely ceased.—The present king of H., William III., prince of Orange-Nassau, grand-duke of Luxemburg, and duke of Limburg, born in 1817, succeeded his father, William II., who died in March 1849.

HOLLAND, a commune of Belgium, in the prov. of Brabant, dep. of Oetinghen. Pop. 253.

HOLLAND, a township of Upper Canada, in the Wellington district, extending N from the township of Glenelg.

HOLLAND, a township of Hampden co., in the state of Massachusetts, 67 m. WSW of Boston, watered by Quinnebaug river. Pop. in 1840, 423.—Also a township of Erie co., in the state of New York, 284 m. W of Albany, drained by Seneca and Cazenove creeks. Its surface is elevated, and its soil consists of clay and sandy loam. Pop. 1,242.—Also a township, generally fertile, of Orleans co., in the state of Vermont, 56 m. NNE of Montpelier, bounded on the N by Lower Canada. Pop. 605.

HOLLAND (Parts of), a division of Lincolnshire, comprising the wapentakes of Elloe, Kirton, and Skirbeck, and the borough of Boston; and bounded on the E by the German ocean, and on the S and E by Cambridgeshire. Area 256,320 acres. Pop. in 1831, 62,547; in 1841, 72,361.

HOLLAND-FEN. See Lincolnshire.

HOLLAND (Great), a parish in Essex, 11 m. SSE of Manningtree, on the sea-shore. Area 2,220 acres. Pop. in 1831, 425; in 1841, 481.

HOLLAND-LANDING, St. Alban's, or Beverley, a village on Yonge-street-road, 32 m. N of Toronto, partly in the township of East and partly in that of West Guillimbury. It lies in the midst of hills, and is intersected by the E branch of Holland river. Pop. 260.—Holland river has its source in Albion co., and flows NE to the S extremity of Simcoe lake.

HOLLAND (Little), a parish in Essex, 4½ m. ESE of Colchester. Area 740 acres. Pop. in 1831, 76; in 1841, 75.

HOLLAND (New). See Australia.

HOLLAND-PATENT, a village of Trenton township, Oneida co., in the state of New York, 12 m. N of Utica, and 100 m. WNW of Albany. Pop. in 1840, 300.

HOLLAND (Preussisch), a town of Prussia, capital of a circle of the same name, in the prov. of East Prussia, regency and 58 m. SW of Königsberg, and 14 m. ESE of Elbing, on a rising ground, near the Weeska. Pop. 3,360. It is one of the handsomest towns in the prov., and contains an old castle, a Reformed and 2 Lutheran churches, a classical school, and an hospital. It has manufactories of cloth, linen, and leather; is noted for its breweries, and possesses an active trade. This town is said to have been founded in 1296 by some Dutch colonists. The circle is watered by several rivers, and by Lake Drausen. Pop. 26,373.

HOLLAND (Province of), an important division of Holland, or the kingdom of the Netherlands; bounded on the W by the German ocean, or North sea; on the N by the Zuyder-Zee, which separates it from the prov. of Friesland; on the E, by the same sea, which separates it from the prov. of Overyssel, and by the provs. of Utrecht and Gelderland; and on the S by the provs. of N. Brabant and Zealand. It is situated between 51° 40′ and 53° 10′ N lat.; and 3° 56′ and 5° 30′ E long. Its greatest extent, from S to N, including the isle of Texel, is about 90 m.; its breadth from E to W not above 25 m. in some places, but above 40 m. in others. It is of a very irregular figure, and extremely narrow towards its N extremity.

Divisions.] This prov. is divided into Süd, or South H., commonly called Ug Holland; and Nord or North H., also called West Friesland, and sometimes Waterland.

I. Sud Holland.] This government has an area of 1,166 sq. m.; with a pop. in 1824 of 453,818; in 1844, of 546,975; and in 1850 of 568,872. It contains the important towns of Amsterdam, Rotterdam, the Hague, Leyden, Haerlem, Dordrecht or Dort, Delft, the Briel, Gorcum, and Gouda. Rhineland, a subdivision or district in South H., the cap. of which is Leyden, contains within its jurisdiction 45 large boroughs and villages. This subdivision is bounded on the W by the coast of Holland; on the N by part of the river Y, along the course of the dyke that goes from Haerlem to Amsterdam, and by the shallows and washes as far as Beverwyk; on the

E by part of the prov. of Utrecht, and by Amstelland; and on the S, by a line drawn from Montfort, through Oudewater and Gouda, to the Hague. It has its name from the middle branch of the Rhine, which runs through it.—The island of Voornelees, between the mouths of the river Maese, along with the small adjoining islands of Goeree, and Overflackee, form the territory called VOORNELAND, which was anciently part of Zealand.—The isle of Ruggonhill, to the E of that of Voorn, of which Williamstadt is the principal town, together with the isle of Finard, formerly belonged to Brabant.—This prov. is divided into 28 cantons or parishes, the agricultural statistics of which in 1835 were as follows. The extent is expressed in Netherlands' bunders, each equal to 2·471143 English acres.

CANTONS.	Arable land.	Gardens.	Orchards.	Pasture and Hay land.	Dikes, waste, and low land.	Woods.	Reed and rush land and marshes.	Sandbanks, heaths, fens, commons, &c.	Canals, navigable and other waters.	Heritable property.	TOTAL in Bunders.

II. NORD HOLLAND.] This government has an area of 928 sq. m. Pop. in 1824, 391,586; in 1844, 456,320; in 1850, 479,566. It is divided from South Holland by the river Y. The principal towns in it are Saardam, Edam, Monnikendam, Alkmaar, and Hoorn. Across the mouth of the Zuyder-Zee lies a row of islands belonging to North H. The Texel island, separated from the North cape of North H. by a very narrow channel, called the Mars-Diep, is about 9 m. long, and 5 m. broad; and is defended from the sea by sand hills and strong banks. There are several villages on it. The island of Vlieland lies NE of the Texel; it is about 7 m. long, and 1 m. broad; and has two small villages upon it. The island of Schelling, to the NE of Vlieland, is about 10 m. long, and 2 m. broad. There are five villages on it. These islands, together with several small sand-banks, break the rage of the ocean, and form two good harbours, or rather roadsteads, at the Texel and the Vlie; the first being a noted station for ships bound to the S, and the other for those bound to the N. The Wierengen,—so called from the great quantity of sea-weed, in Dutch, *wier*,—consists of a number of little islands which lie to the SSE of the Texel. The principal of these is 5 m. long, and 2 m. broad, and contains several villages.

Coast and dykes.] The name Holland [*i. e.* 'the hollow land'], sufficiently indicates the nature of this country. The surface of a great part of it is, indeed, below the level of the sea, which is only kept out by means of dykes or natural sand-banks. In many parts this dyke, or mound, is 30 ft. above the adjoining land; with a width at top sufficient to permit the passage of two carriages. In its descent, the breadth increases so much that it is not very difficult to walk down either side. On the land side, it is strengthened by stone and timber, and covered with earth and grass; towards the sea, somewhat above, and considerably below water-mark, a strong matting of flags prevents the surge from carrying away the surface of the mound. This matting is secured by bandages of twisted flags running horizontally, at the distance of 3 or 4 yds. from each other, and staked down by strong wooden pins: farther in the sea, it is held down by stones. A range of posts at every 40 yds., which are numbered, enable the surveyors exactly to describe where repairs are necessary. Sir William Temple asserts that these dykes employ annually more men than all the corn of the prov. of H. could maintain. In the time of De Witt, the making of one rood's length of sea-dyke sometimes cost 600 guilders. Besides these sea-dykes, there are other dykes to keep out the waters of the rivers. The annual charges of the district of Rhineland, which contains about 8,000 morgens, and has not much communication with the sea, nor with running waters, were, in De Witt's time, at least 2 guilders for every acre, besides 30 stivers more per acre for drawing out the rain-water by mills, and towards footpaths, highways, and ditches, at least 20 stivers. The banks or dykes near Medenblick, in North H., near the Zuyder-Zee, are

stronger, broader, and higher than any others in the country; for there being nothing to break the violence of the sea, from the islands of Schelling and Vlieland to this shore, the waves beat most furiously upon it when N winds blow, and at spring-tides the sea rises sometimes as high as the dykes. Whenever the sea or the rivers break over upon the lands, they are drained by means of wind-mills, of which there are immense numbers for this purpose. From what has been already said, it may well be imagined that the general face of the country is that of a large marsh that has been drained, the canals, and even the sea, looking pale and discoloured by mud; yet the eye is not unfrequently relieved and delighted by groves, gardens, and meadows; while the great rivers, and the immense number of canals in this prov., leading not only to every great town, but to every village, and almost to every hamlet, present a constant and lively movement of vessels everywhere coursing up and down upon them.

Climate and productions.] The climate of H. is humid, cold, and generally insalubrious. The winters are sharp and long, the rivers being generally rendered unnavigable by the ice for a considerable length of time. In spring, sharp cold winds frequently blast the blossoms of the fruit trees; but the summers are not unfrequently very hot. The E wind generally blows nearly the whole of the winter, and is extremely fierce; but it serves to drive away the fogs with which this country is dreadfully plagued. The climate about Williamstadt is particularly unwholesome, from the extreme flatness and marshiness of the ground.—The soil of H. is in general uncommonly rich, being in fact alluvial, and consisting of deep fat loam; in some parts, however, it consists of a barren sand. The soil of North H., especially in the drained land called the Beemster, is particularly rich, and also that near the village of Schagen. Turf is the most general article of fuel; but coals are imported from England, Scotland, and the Prussian Rhine provs.—From the name of West Friesland, given to North H., it is highly probable that part at least of this division of the prov. of H. was formerly united to East Friesland. How much of it belonged to the *Frisia Occidentalis* of the ancients is not accurately known: some geographers are of opinion that only that part to the NE, in which Hoorn, Enchuyzen, and Medenblic are situated, was the ancient *Frisia Occidentalis.* Tacitus informs us that among the Frisons were great lakes, evidently implying that they were of fresh water; and this is made yet plainer by the expression *ambiuntque immensos lacus,* which proves that the borders of these lakes were inhabited. Hence it is probable that the more inland part of what is now the Zuyder-Zee, was one of the lakes mentioned by Tacitus, between which and the Texel and Vlie islands there lay anciently a large tract of land. This opinion is strengthened by several circumstances. It will be observed, on looking at a map, that these islands lie still in a contiguous line, and like the broken remains of a once continuous coast. The sea here, too, is remarkably shallow, and the sands throughout the whole extent very flat. From the inspection of the accurate maps of the ancient and middle geography of Gaul, by D'Anville, it will be seen that part of the present site of the Zuyder-Zee was occupied by a considerable inland lake called *Flevo,* which lay towards the S part of the present Zuyder-Zee. The question then occurs, by what means, and at what period, were the N part of the Zuyder-Zee formed, and the communication between this sea and the ocean opened, or at least rendered so wide as it is at present? From the lake of Flevo ran a river of the same name into the ocean. Anciently the Rhine divided itself into two grand branches at *Burginasium,* the present Schenck, about 5 m. NW of the *Colonia Trajana,* now an inconsiderable hamlet, called Coln, near Cleves. The S branch joined the Meuse at the town of *Meusa;* while the N passed by Leyden into the ocean. From this branch Drusus formed a canal, bearing his name, which originally joined the Rhine to the Yssel, a river which flowed into the lake Flevo. This canal being neglected, the Rhine joined the Yssel with such force that their waters enlarged the lake of Flevo to a great extent, and ultimately carried its waters forward to the ocean by a wide gulf, instead of having communication with it only by means of the river Flevo. The exact period when Lake Flevo was extended into the Zuyder-Zee is not positively known; indeed it is probable that the increase took place at different periods. We are informed by an old Dutch chronicle, published by Vossius, that the increase on the S side, by the breaking in of the inlet to the Texel, took place about the year 1170; others say it was so late as the year 1400. The increase of the lake on its N side was probably at an earlier period, and also gradual. It certainly was about the year 1400 that the river Y became navigable to Amsterdam by large vessels.—At the time that Lake Flevo gained its increase, the N branch of the Rhine must have been greatly weakened by the division of its waters: even the canal of Drusus was afterwards almost obliterated by the deposition of mud in a low country. The Rhine seems to have been farther divided and weakened by a canal cut by Civilis, which, according to Cluverius, is the present Leck; though Pinkerton thinks the deviation of the Rhine into the Leck was the work of natural causes. The latter author regards the Leck, which joins the estuary of the Meuse between Dort and Rotterdam, as the N mouth of the Rhine; while the Waal continues to be the S; both being lost in a comparatively small stream, the Meuse. According to other geographers, the outflow into the sea near Catwyk is not the Rhine, but a canal bearing the name of that river. The Maese, running by Dort and Rotterdam, fell, as it now does, into the sea at Briel, with a powerful flow of water; but the sands, which are gathered for 3 or 4 leagues upon this coast, having obstructed the exit of that river, caused or increased those inundations out of which so many islands have been ultimately recovered by Dutch industry, and of which that part of South H. is so much composed. Towards the formation of these islands the Scheldt seems also to have contributed. This river anciently formed a mere delta, with four or five small islands. At what time the irruptions of this river took place, by which the islands of Zealand, and the most southern of those of H., were formed, is not accurately known. Pinkerton is of opinion that this may have happened at the time that the Godwin sands arose: other authors assign them to violent tempests in the years 860 and 1170. A Zealandic chronicler, quoted by Cluverius, says that the islands of Zealand were formed by violent tempests in the year 938. It is more probable, however, that these great changes made slow and gradual progress: none of them being so ancient as the time of Charlemagne, and some of them as recent as the 15th cent. Of the most recent changes in the geog. of H., besides the enlargement of the Zuyder-Zee already mentioned, that which took place in 1421 is the most remarkable. In that year the bailiwick of Dort was made an island, by a violent tempest, which drove the waters up the Maese and the Mereune with such violence that they overflowed their banks, and swallowed up a large tract of land, with 70 villages and 100,000 people; a vast lake between Dort and Brabant was

also formed. The name Dordrecht signifies 'a ferry on the river Dort.' but that river is now swallowed up by the channel of the Maese. The isle of Rugenhil, on which Willenstedt stands, was covered by the sea for some time; it was recovered so late as 1654. The modern Naerden, the cap. of a district called Goyland, lies upon the Zuyder-Zee, 13 m. E of Amsterdam, and 14 m. N of Utrecht; but the old town, which stood more to the N, was swallowed up by the sea, and the ruins are still to be seen at low water, 200 perches from the present town.

The drained lands in North H. deserve particular notice; they consist of the Zype, the Beemster, the Purmer, the Wormeer, and Schermeer. The Zype was first drained and encompassed by banks by William Lord of Schagen, and secured by stronger fences in 1552; but the sea broke them down in 1570. After this it was drained again, and secured by a mole of prodigious height and bulk, proof against all attacks of the sea; and it is now, like all the other drained lands, very fruitful soil. Purmer, or Purmeren, and the Beemster, are both drained lakes. The latter is encompassed by a channel from 4 to 8 rods broad, and is joined to the former by a bridge at the S end. Purmer is about 5 m. long, and above 2 m. broad. The Beemster contains 7,090 acres, besides the highways, dikes, and canals which surround and cross it in several places. It lies between Purmer and Edam, and was a lake till the year 1610.

In this prov. few lands are held in fief; and estates are for the most part small. The farms are also small; the average extent being from 40 to 50 bunders; and the term of lease 6 years. The farm-houses are neat, sheltered, and concealed by small clusters of trees, and generally enclosed, together with their gardens and orchards, in a perfect green fence. The fields are separated from each other, and from the road, by deep ditches filled with water, over which are laid small bridges, that may be opened in the middle by a sort of trap-door, and are raised and locked to a post to prevent the intrusion of strangers. The roads in many places are made on the dyke of the canal, the fields being frequently between 5 and 6 ft. below the level of the road; but the communication between most of the farm-houses and the villages and towns, and also between the several parts of the same farm, is often entirely by means of small canals.—The most magnificent public roads in H. are those in the vicinity of the Hague. The road from this place to Scheveling is pointed out by the Dutch as an object of admiration to strangers. The length of this avenue, for it can hardly be called a road, is nearly 2 m., and its breadth rather more than 20 paces. It is a perfectly straight line, so that the entrance of the road commands a view of the whole; and the church of Scheveling, a picturesque object, terminates the prospect. From Delft to the Hague the road is of sufficient breadth to admit four or five carriages abreast; and is shaded on both sides by lofty rows of trees. It is kept in excellent repair, and so level that not the least inequality of ground is to be perceived.—A connected system of railways links together Rotterdam, the Hague, Leyden, Haarlem, Amsterdam, and Utrecht; and from Utrecht is carried eastwards to Arnheim in Gelderland.

There is very little land under tillage in this prov., as may be easily imagined from the nature of the soil and climate; and what exists is almost exclusively confined to South H., in which, in 1835, there were 71,839 bunders of arable land, and 143,516 b. of pasture land. The crops principally cultivated are wheat, madder, tobacco, hemp, flax, clover, &c. The country adjacent to Gravesande, not far from the mouth of the Maese, is reckoned to produce the best wheat, as well as the sweetest grass in South H. Madder of most excellent quality has long been a productive and famous crop in Holland. Tobacco is not so extensively or carefully cultivated as formerly. Hemp flourishes remarkably well; the depth and moisture of the soil being admirably adapted to the luxuriant growth of this plant. Oudewater, about 7 m. to the S of Woerden, upon the Lesser Yssel, in South H., is noted for good hemp. Flax is grown not only for the purpose of manufactures, but also for its seed, though some of the other provs. are more remarkable for this crop than H. The same remark applies to clover.

The pastures, especially those of North H., are perhaps unrivalled for the abundance and luxuriance of their grass; and the milk, cheese, and butter raised here are all of excellent quality. The greater part of the butter is salted and barrelled for exportation. Leyden, Gouda, Edam, Gravesande, and Hoorn, are famous for their cheese. The cattle which produce such large quantities of excellent butter and cheese, are not indigenous, but for the most part are of the Holstein or Danish breed. In the vicinity of Hoorn, a considerable trade is conducted in Danish cattle, which are imported lean, and fattened in the rich pastures round this place, and then driven to other parts of H. The horses are principally from England or Flanders. The ancient race of sheep indigenous to the country, have long been improved by the introduction of foreign breeds; but the soil and climate of H. are not favourable to this animal, and very little wool is exported. The number of cattle in South H., in 1825, was 148,673; of horses, 32,295; of sheep, 23,543. The stock in North H., in the same year, was 116,553 cattle; 15,753 horses; 105,386 sheep. In some parts of H. bees are an object of much attention to the farmer, chiefly on account of the wax which they afford. A vast quantity of this article is annually gathered; and the bleaching of it forms a considerable branch of industry among the poorer classes. In connection with the agriculture of H., its horticulture must not be passed over. The Dutch mode of laying out gardens is still very ungraceful and artificial; the trees are bent and cut into a thousand fantastic shapes, and the flower beds are of every form that can displease and disgust the eye of taste; but setting aside these points of inferiority, the people of H. are excellent horticulturists, especially in what regards the culture and improvement of beautiful flowers, especially bulbous roots. The fruit of H., though abundant, is seldom of good quality; the humidity of the climate, as well as its rapid growth, from the richness of the soil, rendering it insipid.

The shores abound with excellent fish, particularly turbot and soles; but for other fish, in consequence of the shallowness of the sea near the coast, the fishermen are generally obliged to go to a distance of more than 5 m. The village of Scheveling is particularly remarkable for the number of fishermen which it contains; they are distinguished by their ruddy countenances and athletic limbs. The principal foreign fishery of H., formerly was that of herrings; and was carried on from the ports of Dort, Rotterdam, Delft, Schiedam, Briel, and Enchuysen. The cod fishery, which is still carried on to a considerable extent, commences in October, and ends in April. It is carried on upon the Dogger-bank; what is caught serves not only for the consumption of Holland, but forms one of its chief exports. The whale-fishery was formerly vested in a company called the Northern company; it afterwards became open and free; but, like all the other branches of the fisheries and commerce of H., was destroyed by the revolutionary wars, and has not yet revived.

Manufactures.] The chief manufactures of this prov. are linens, pottery and painted tiles, woollen cloth, leather, wax, snuff, sugar, starch, paper, &c. At Haarlem there are considerable manufactures for the fabrication of fine linens; and the bleacheries of that place have long been famous for the delicate whiteness which they give to linen cloths. Coarse woollen cloth is manufactured at Delft, and other places; but Leyden is the principal seat of this branch of manufacture. The cloth manufactures of Leyden do not appear, even in their most flourishing condition, to have rivalled, in the fineness of their articles, the looms of England; but their coarse cloths found a ready sale on the continent, and the East and West India companies procured them ready markets in the other quarters of the globe. As the commerce of H. declined that of Britain increased, and the manufacturers of Yorkshire deprived the manufacturers of Leyden of the foreign markets to such an extent that the Dutch merchants discovered it was for their interest to export English cloths in preference to the manufactures of their own country. The woollen trade of Leyden also received much injury on the continent, from the establishment of extensive looms in various parts of Germany and the Netherlands, which then ceased to draw any considerable supplies from Leyden.—Delft was formerly famous for its manufacture of earthen ware, which rivalled the porcelain of China, and was generally sought after and esteemed throughout Europe, for its elegance and beauty. In 1800, there were scarcely 500 persons employed in the potteries of this place; whereas, in their most flourishing days, they gave subsistence to upwards of 10,000. The principal causes of this astonishing decay, independently of those which produced a general decay of manufactures and commerce in H., were the immense importation of porcelain from China; and the rival manufactures which were established in Germany and England. The earthen ware of Staffordshire was some years ago so much approved of in Holland, that the States-general, in order to protect the manufacturers of Delft from absolute ruin, laid duties on its importation into the republic so severe as to amount almost to an entire prohibition.—Glass, especially glass toys, are made in several parts of the prov. The glass-house in Rotterdam was formerly deemed the best in the seven provinces. From the universal practice of smoking among the Dutch, it may naturally be supposed that the manufacture of pipes is by no means uncommon. There is a noted manufacture of them at Gouda; they are remarkably neat, and a very extensive trade in them is carried on. They make also in the neighbourhood of this city a vast quantity of bricks and tiles.—The breweries and distilleries in H. are numerous and extensive. Delft, Gouda, and Muyden are particularly celebrated for their beer. The beer made in Delft is chiefly consumed in that place and the adjacent country. The distillation of ardent spirits has greatly increased in H. In 1775, there were at Scheidam, particularly noted for its Geneva, 120 distilleries; in 1835, 171; and in the whole prov., 262; each of these distilleries yielded annually 4,492 ankers of gin.—There are a great number of saw-mills in H., particularly in the vicinity of Rotterdam. They are lofty and rather pleasing objects: the mill generally rising from the top of a substantial building two or three stories high. Some of them are painted in a whimsical taste, and others adorned with grotesque figures. During the flourishing state of H., Saardam, where Peter the Great acquired a practical knowledge of the art of ship-building, derived great wealth from that trade; but it is now almost annihilated.—The miscellaneous manufactures of H., not yet enumerated, most of which, however, are confined to Amsterdam, are stuffs embroidered with gold and silver, damasks, brocades, mohair, silk, &c., and particularly the preparation of drugs for dyeing, painting, and medicine, such as white lead, camphor, vermilion, sulphur, borax, lapis lazuli; likewise pitch, tar, rosin, spermaceti, varnish, &c. The oil mills are numerous. The cordage made in H. is very good; and Dutch paper, particularly cartridge paper, is still exported in great quantities, even to England. The preparation of diamonds,—that is, the cutting, polishing, and grinding of them,—is confined to Amsterdam, where many artists are employed for that purpose. The manufacture of skates is also of some consequence in H.—Several large sugar-refineries exist at Amsterdam and Rotterdam. The United Provinces were formerly pre-eminent in commerce; and the prov. of H., from its greater extent, population, and riches, as well as from its possessing nearly all the seaports, enjoyed nearly the whole of this commerce. The commercial details given in our general article HOLLAND are still mainly applicable to this section of the Seven United provinces.

Government, &c.] Though the prov. of H. is now only a part of the kingdom of the Netherlands, and of course has lost many of its peculiar privileges and institutions, yet some particulars respecting its government require to be noticed. Deputies of the nobles, and those of the towns and country, are elected for the parliament of the kingdom. There are also provincial councils of state for South and North H. For the administration of justice there are two courts held at the Hague; namely, the court of H., and the high council. The nobles of Holland are subject to the jurisdiction of this court; and an appeal lies to it from the sentences of the inferior courts. The high council of H. judge peremptorily and definitively of all cases brought before them by an appeal from the court of H. There are two provincial synods; one for South H. and the other for North H. The whole prov. is divided into a great many classes, composed of the deputies of five or six neighbouring churches; and each class sends 4 deputies to the respective synods, viz., 2 ministers and 2 elders. The synods meet twice a-year, and a political commissary attends their meetings.—The taxes of the prov. of H. are very heavy.

History.] The province of H., as well as all the countries watered by the Meuse and the Rhine, were for a long time divided into small earldoms; but in 923, Theodoric was appointed Count of H. by Charles the Simple, king of France, and the title became hereditary. The most frequent wars of the counts of H. were with the Frisons, a branch of the old Saxons. There were also frequent contests between the counts of H. and Flanders, concerning the possession of the islands of Zealand. The counts of H. were likewise frequently opposed by their own nobility; and in order to break their power, they not only demolished many of their castles and strongholds, but also, about the year 1.200, built several cities, and gave especial privileges to their citizens. Philippina, daughter of William III., Earl of Holland, was married to the Prince of Wales, afterwards Edward III. of England. This king contested the earldom of H. with Margaret, his sister-in-law. In the year 1417, Jacquelin, heiress of H., married John IV. duke of Brabant; but her uncle, John of Bavaria, who had resigned the bishopric of Liege, in the hope of espousing her, contested the succession. A kind of anarchy followed. Jacquelin went to England, where, in 1423, she married Humphrey, Duke of Gloucester; but this marriage having been annulled by the Pope, she married in 1432, Borselen, the stadtholder of H. Having no children by any of her husbands, Philip the Good, Duke of Burgundy, who was her first cousin, obliged her to give up the administration and government of her states, and at her death inherited them. Soon afterwards, H., with the other large possessions of the House of Burgundy, fell by marriage to the house of Austria. The history of this prov., from this period, must be sought for under the article HOLLAND.

HOLLANDEN, a hamlet in the p. of Leigh, Kent. Pop. 165.

HOLLANDIA. See FREDENSBORG.

HOLLANDS-DIEP, a large arm of the Meuse,

in Holland, which issues from the lake of Biesbosch, between the provinces of Holland and North Brabant, and flows WSW. At Willemstadt it divides into two arms, named Haring-vliet, and Volke-rak, the former of which runs along the N, and the latter along the S side of the island of Over-Flakke. The H. is nearly 12 m. in length; and opposite Willemstadt possesses a breadth of 2 m.

HOLLANGE, a department and commune of Belgium, in the prov. of Luxemburg, arrond. of Arlon. Pop. of dep., 618; of com., 143.

HOLLE, a river of Baden, in the circle of the Upper Rhine, an affluent of the Dreisam.

HOLLEBEEKSTAET, a commune of Belgium, in East Flanders, dep. of Paricke. Pop. 239.

HOLLEBEEKWYK, a commune of Belgium, in East Flanders, dep. of Meirelbeke. Pop. 1,558.

HOLLEBEKE, a department and commune of Belgium, in East Flanders, arrond. of Ypres. Pop. 625.

HOLLENBACH, a town of Würtemberg, in the circle of the Jaxt, bail. and 10 m. NNE of Künzelsau, and 38 m. NNW of Ellwangen. Pop. 608.

HOLLENBURG, or Holenburg, a fortress of Illyria, in the gov. and 44 m. NNW of Laybach, circle and 6 m. S of Klagenfurt, on the l. bank of the Drave. It is the chief place in the valley of Rosenthal, the population of which is estimated at 11,666.

HOLLERSBACH, a village of Austria, in the circle and 53 m. SW of Salzburg, and 13 m. S of Kizbihel, in the Pinzgau, on the r. bank of the Salza. Pop. 420. It has a castle. In the environs are mines of copper and sulphur.

HOLLESLEY, a parish in Suffolk, 6½ m. SE of Woodbridge, on the Alde. Area 1,710 acres. Pop. in 1831, 604; in 1841, 590.

HOLLEY, a village of Murray township, Orleans co., in the state of New York, 240 m. WNW of Albany, on the Erie canal, which here passes over Sandy creek by an embankment 75 ft. above the bed of the stream.

HOLLFELD, a town of Bavaria, in the circle of Upper Franconia, at the confluence of the Kainach and Wiesent, 15 m. E of Bamberg. Pop. 1,048. Several important cattle-markets are held here.

HOLLIDAYSBURG, a village of Frankstown township, Huntingdon co., in the state of Pennsylvania, U. S., 118 m. WNW of Harrisburg, on Beaver Dam creek, and near the railroad which crosses the Alleghany mountains to Johnstown. Pop. in 1840, 1,896.

HOLLIER, a hamlet of France, in the dep. of the Ardennes, cant. and 3 m. NE of Sedan, and commune of Illy. It has a cloth manufactory.

HOLLING, a village of France, in the dep. of the Moselle, cant. and 6 m. NNE of Boulay, near the r. bank of the Nied. It has manufactories of soap, sal ammoniac, ivory-black, and glue.

HOLLINGBOURN, a parish in Kent, 6 m. SE of Maidstone. Area 4,860 acres. Pop. in 1841, 1,300.

HOLLINGER, a village in the Tyrol, in the circle of the Lower Innthal, 3 m. N of Innspruck. In the environs are mines of silver and copper.

HOLLINGHILL, or Hellinghill, a township in the p. of Rothbury, Northumberland. Pop. 114.

HOLLINGSTED, a village of Denmark, in the duchy and 13 m. WSW of Sleswick, and bail. of Gottorp, on the l. bank of the Treen. The famous wall called Danawerk, which extended to Oldenburg, in Holstein, commenced here.

HOLLINGTON, a parish in Sussex, 2¾ m. WNW of Hastings. Area 2,290 acres. Pop. in 1831, 338; in 1841, 386.—Also a township in the p. of Longford, Derbyshire, 5½ m. ESE of Ashborne. Pop. 289.

HOLLINGWORTH, a township in Mottram parish, 2 m. E of Stayley Bridge. Area 2,130 acres. Pop. in 1831, 1,760; in 1841, 2,012.

HOLLINSCLOUGH, a township in the p. of Alstonefield, Staffordshire, 2 m. NW of Longnor, near the sources of the Dove and Manyfold. Area 1,920 acres. Pop. in 1831, 564; in 1841, 457.

HOLLIS, a township of York co., in the state of Main, 66 m. SW of Augusta, on the W side of Saco river. Pop. in 1840, 2,363.—Also a township of Hillsboro' co., in the state of New Hampshire, 44 m. S of Concord, watered by Nashua river. Pop. 1,333.

HOLLISTON, a township of Middlesex co., in the state of Massachusetts, 24 m. WSW of Boston, watered by a branch of Charles river. Pop. in 1840, 1,782.

HOLLOGNE, a commune of Belgium, in the prov. of Luxemburg, dep. of Waha. Pop. 244.

HOLLOGNE-AUX-PIERRES, a department and commune of Belgium, in the prov. and arrond. of Liege. Pop. of dep., 1,067; of village, 824.

HOLLOGNE-SUR-GEER, a department and commune of Belgium, in the prov. and arrond. of Liege, watered by the Geer. Pop. of dep., 661; of village, 589.

HOLLOLA (Nedre), a district of Russia in Europe, in the grand duchy of Finland, and central part of the gov. of Tavastehus, to the W of the dist. of Œfre-Hollola. It contains several parishes, of which the principal is that of Padasjoki.

HOLLOLA (Œfre), a district of Russia in Europe, in the grand duchy of Finland, and central part of the gov. of Kymmenegard, to the N of the district of Kymmene, and to the S of that of Sawolax-Œfredels. It comprises Jitis and several other parishes.—Also a district of the same duchy, in the E part of the gov. of Tavastehus. It comprises a large portion of lake Paejaene. Padasjoki is the most northerly parish in this district.

HOL-LOUVER-GAVERS, a commune of Belgium, in the prov. of East Flanders, dep. of Saint-Giles. Pop. 532.

HOLLOWAY, a hamlet in the p. of Ashover, Derbyshire, 5½ m. ESE of Ashborne. Pop. in 1831, 343; in 1841, 391. This hamlet, with the chapelry of Dethwick Lea, forms one township.—Also a hamlet, consisting of Upper and Lower Islington, in the p. of Islington, Middlesex, 3¾ m. NNW of St. Paul's cathedral.

HOLLOWELL, a hamlet in the p. of Guilsborough, Northamptonshire. Pop. 273.

HOLLY, a township of Oakland co., in the state of Michigan, U. S. Pop. in 1840, 429.

HOLLYHURST, a township in the p. of and 1¾ m. from Whitchurch, Salop. Pop. in 1841, 38.

HOLLYM, a parish and township in the E. R. of Yorkshire, 16 m. SE of Hull. Area 3,350 acres. Pop. of p. in 1831, 351; in 1841, 373. Area of township, 2,530 acres. Pop. 247.

HOLLYMOUNT, a small post town in the p. of Kilcommon, co. Mayo, 4½ m. ENE of Ballinrobe, 11½ m. WNW of Tuam, and 111 m. NW of Dublin, on the Robe, and on the mail road from Dublin to Westport. Area 16 acres. Pop. in 1841, 454.

HOLLYWELL, a village of co. Fermanagh, 8 m. SW of Enniskillen, on the road from that town to Manor-Hamilton.

HOLLYWOOD, a parish, post-town, and seaport in co. Down. The p. consists of a narrow tract of land stretching along the shore of Belfast Lough, from within 1¼ m. of Belfast. Area 8,064 acres. Pop. in 1831, 4,693; in 1841, 5,045. The town is 4½ m. NE of Belfast, 5½ m. WSW of Bangor, and 84½ m. NE of Dublin, on the road between the two former towns. It consists principally of one long, spacious, and handsome street, stretching along the

Lough, and presents a remarkably neat and cheerful appearance. Area 37 acres. Pop. in 1831, 1,288; in 1841, 1,532.—Also a parish in co. Dublin, 2½ m. SE of Naul. Area 3,997 acres. Pop. in 1831, 1,022; in 1841, 1,022.—Also a parish and village in co. Wicklow. The p. is divided into 2 parts, called Hollywood-Bolies and Hollywood-Lowlands. Area 18,383 acres. Pop. in 1831, 1,850; in 1841, 2,770. Pop. of village, in 1831, 161.

HOLM, a river of Denmark, in Jutland, in the bail. of Ribe, which has its source to the E of Kleland, runs W, and joins the Warde, 5 m. NE of the town of that name, and about 15 m. above its entrance into Hyerting bay.—Also an island of Sweden, in the gulf of Bothnia, in the Northern Quark, outside the entrance to Umeä. Upon the Stora-Fjederagg, a rock situated a ½ m. NE from the N point of H. island, in N lat. 63° 48′ 25″, is a lighthouse, with a revolving light burning at 104 ft. above sea-level.

HOLMANSTRAET, a commune of Belgium, in the prov. of East Flanders, dep. of Steenhuyz-Wynhuyze. Pop. 96.

HOLME, a parish on the SE coast of Pomona island, in the Orkney group, extending along the sound of H. Pop. in 1801, 871; in 1841, 866.—Several rocky islets in this group bear the same name.

HOLME, a hamlet in the p. of Biggleswade, Bedfordshire. Pop. in 1841, 82.—Also a chapelry in the p. of Glatton, Huntingdonshire. Area 4,300 acres. Pop. 408.—Also a township in the p. of Bottesford, Lincolnshire. Pop. 49.—Also a parish in Nottinghamshire, 3½ m. N of Newark, E of the Trent. Area 1,330 acres. Pop. in 1831, 121; in 1841, 127.—Also a township in the p. of Burton-in-Kendal, Westmoreland, 2½ m. WSW of Milnthorpe, intersected by the Lancaster canal. Pop. in 1831, 649; in 1841, 952.—Also a township in the p. of Pickhill, N. R. of Yorkshire. Area 350 acres. Pop. in 1841, 79.—Also a township in the p. of Almondbury, W. R. of Yorkshire, 7½ m. SSW of Huddersfield. Area 3,990 acres. Pop. in 1831, 630; in 1841, 713. See also Longstone (Great), and Holme.

HOLME-CULTRAM, a parish in Cumberland, 6 m. NW of Wigton, on the W bank of the Waver. Area 24,920 acres. Pop. in 1831, 3,056; in 1841, 3,037. It comprises the 4 townships of Abbey-Holme, East Waver-Holme, Low Holme, and St. Cuthbert Holme, containing respectively 868, 470, 933, and 766 inhabitants.

HOLME (East), a parish in Dorsetshire, 2 m. SW of Wareham. Area 1,560 acres. Pop. 59.

HOLME-HALL, a parish in Norfolkshire, 4 m. ESE of Swaffham, on the Wissey. Area 2,690 acres. Pop. in 1831, 447; in 1841, 488.

HOLME-MOSS, a mountain in Derbyshire, on the confines of Yorkshire and Cheshire, which rises to the height of 1,859 ft. above sea-level.

HOLME (North), a township in the p. of Great Edstone, N. R. of Yorkshire, 5 m. WSW of Helmsley. Area 610 acres. Pop. in 1831, 21; in 1841, 19.

HOLME-PIERREPONT, a parish in Nottinghamshire, 3½ m. SE of Nottingham, on the Trent. Area 2,120 acres. Pop. in 1831, 205; in 1841, 222.

HOLME-NEXT-RUNCTON, a parish and village in the co. of Norfolk, 4 m. N of Downham. Area 1,100 acres. Pop. in 1831, 225; in 1841, 288.

HOLME-NEXT-THE-SEA, a parish and village in Norfolk, 8¼ m. NW of Burnham-Westgate. Area 1,570 acres. Pop. in 1831, 268; in 1841, 280.

HOLME (South), a township in the p. of Hovington, 7 m. WNW of New Malton. Area 500 acres. Pop. in 1831, 65; in 1841, 62.

HOLME-UPON-SPALDING-MOOR, a parish in the E. R. of Yorkshire, 4 m. SW of Market-Weighton. Area 10,820 acres. Pop. in 1841, 1,509.

HOLME-ON-THE-WOLDS, a parish in the E. R. of Yorkshire, 6¼ m. NW of Beverley. Area 1,360 acres. Pop. in 1831, 136; in 1841, 149.

HOLMEN, a small island in the Arctic ocean, near the coast of Norway, and prov. of Finmark, to the ENE of the island of Andoe, in N lat. 69° 37′, E long. 15° 58′.

HOLMER, a parish in Herefordshire, 1½ m. N of Hereford. Area 3,110 acres. Pop. in 1841, 628.

HOLMES, a central county in the state of Ohio, U. S., comprising an area of 422 sq. m., generally hilly, but fertile, and watered by Kilbuck and Mohican creeks. Pop. in 1840, 18,088. Its capital is Millersburg.—Also a central co. of the state of Mississippi, containing a superficies of 600 sq. m., and bordered on the W by Yazoo river, and on the E by Big Black river. Pop. 9,452. Its capital is Lexington.—Also a township of Crawford co., in the state of Ohio. Pop. 745.

HOLMES (Flat and Steep), two small islands in Glamorganshire and Somersetshire, about 3 leagues S of Cardiff. See Flat Holm.

HOLMESBURG, a village of Lower Dublin township, Philadelphia co., in the state of Pennsylvania, U. S., 9 m. W of Bristol, on Pennypack creek, consisting in 1840 of about 40 dwellings.

HOLMESFIELD, a chapelry in the p. and 2 m. SW of Dronfield, Derbyshire. Pop. in 1841, 515.

HOLMES HOLE, a village and harbour in Tisbury township, Duke's co., in the state of Massachusetts, U. S., 89 m. SSE of Boston, on the Atlantic. The harbour, which is one of considerable importance, is on the N side of Martha's Vineyard. It is safe and commodious, and is much resorted to when the wind does not admit of doubling Cape Cod. Pop. of v. in 1840, 100.

HOLMESTRAND, or Holmstrand, a town and port of Norway, in the dio. of Aggershuus, amt or bail. of Jarlsberg, on the Drammen-fiord, an arm of the gulf of Christiania, 18 m. NNW of Tönsberg, and 36 m. SSW of Christiania. Pop. 1,746. It occupies a narrow tract stretching along the shore, and enclosed by a long ridge of lofty rocks. The houses are painted, and are remarkable for their neatness. It has a church, and possesses several distilleries. The trade consists chiefly in wood.

HOLMESVILLE, a village of Appling co., in the state of Georgia, U. S., 177 m. SSE of Milledgeville.—Also a v. of Pike co., in the state of Mississippi, 87 m. S of Jackson.

HOLMFIRTH, a village, and a large and populous chapelry, consisting of several townships, in the p. of Almondbury and of Kirkburton, in the W. R. of Yorkshire. The v., which is about 6 m. S of Huddersfield, was dreadfully devastated, on the 5th of Feb. 1852, by the bursting of a reservoir at Bilberry, about 3½ m. to the SW.

HOLMPATRICK, a parish in Dublin co., comprising an area of 2,131 acres. Pop. 735. It comprises several islands, and the town of Skerries.

HOLMPTON, a parish in the E. R. of Yorkshire, 3½ m. NE of Parrington, on the sea-coast. Area 1,290 acres. Pop. in 1831, 239; in 1841, 197.

HOLMSIDE, or Holmset, a township in Lanchester parish, co. and 6¾ m. NW of Durham. Area 3,290 acres. Pop. in 1831, 218; in 1841, 610.

HOLMSLAND, an island of Denmark, in the Ringkiobing-fiord, a gulf of the North sea, in the dio. of Ribe, bail. and 1½ m. NW of Ringkiobing. It is 5 m. in length, and 3 m. in breadth, and contains 2 parishes., with a pop. of 1,800.

HOLMWOOD. See Dorking.

HOLNE, a parish in Devonshire, 3 m. W of Ashburton, on the Dart. Area 2,040 acres. Pop. 394.

HOLNEST, a parish in Dorsetshire, 5 m. SSE of Sherborne. Area 1,970 acres. Pop. in 1841, 139.

HOLOWCZYN, a town of Russia in Europe, in the gov. and district and 27 m. WNW of Mohilev. The last success of Charles XII. of Sweden over the Russians was gained here on the 15th July 1708.

HOLRU, a town of Abyssinia, in the country of the Independent Gallas, 60 m. N of Killali, and 270 m. SW of Gondar.

HOLSBEEK, a department and commune of Belgium, in the prov. of Brabant, arrond. of Louvain. Pop. of dep. 1,009.

HOLSENOE, an island of the North sea, near the W coast of Norway, in the stift or dio. of Bergen, and bail. of S. Bergen, in N lat. 60° 34′. It is about 15 m. in length, and 3 m. in breadth.

HOLSTEBROE, a town of Denmark, in the bail. and 78 m. N of Ribe, on the Stor-Aa. Pop. 850. Extensive cattle fairs are held here.

HOLSTEIN, a duchy, like that of Sleswick and Lauenburg, embodied in the Germanic confederation, though appended to the Danish crown. It lies between the parallels of 53° 32′ and 54° 27′ N; and between the meridians of 9° and 11° E; and comprises an area of 3,255 sq. m., or 3322·964 sq. m. according to another estimate. The pop. in 1830 was 418,920, or 126 per sq. m.; in 1845 it amounted to 479,364. It is bounded on the N by Sleswick, from which it is separated by the Eyder and the Kiel canal; on the E by the Baltic, the territory of Lubeck, and the duchy of Lauenburg; on the N it has the territory of Hamburg, and is separated from the kingdom of Hanover by the Elbe; and on the W it is washed by the North sea. A ridge of bare sandy hills traverses the country from N to S, dividing its surface into two large inclined planes, running down on one side to the Elbe and the North sea, and on the other to the Baltic. The declination towards the Elbe is comparatively gradual, and on this side several streams descend from the highlands, most of which empty themselves into the Elbe: amongst these are the Alster, the Pinau, the Krükau, and the Stör. The section sloping towards the Baltic is more hilly, and presents only two considerable rivers, viz., the Schwentine and the Trave. Lakes are numerous in the E part of the duchy. The principal are the Seelenter-see, the Ploener-see, and the Wester-see. The W section presents a flat low surface, exposed to inundation from the sea, and requiring the protection of sea-dykes. Nearly all the country is fruitful, particularly the lowlands on the Elbe and North sea, which begin about 20 m. below Hamburg, and are 10 m. broad. A considerable proportion of the E section is covered with forest; the central parts, as already noticed, are arid and unfertile. "The E side of H. and Sleswick wears by far the most picturesque and inviting aspect, and presents much more variety of surface than the other portions. The land is generally well-adapted for either corn or the dairy. It is carefully enclosed with hedges in the English fashion, generally growing on banks, so that the country wears a much more English-look than most parts of the continent, and even than the Danish islands generally. Here lies, from Flensburg to Eckernförde, a nook which still retains the name of Engelland or Angeln,—an appellation which, though now restricted to a particular district, was formerly extended to the whole southern half of the peninsula, and was transferred by the emigrant Saxons to the southern division of Britain. The E side of H., from Eckernförde, by Kiel and Plœn, to Lubeck, is the fairest territory in the duchies. The rich meadows, the well-tilled corn lands, the spacious and substantial farm-houses and buildings, the neat and thoroughly clean towns,—looking as pretty as brick, plaster, and paint can make them,—all remind one of the most beautiful parts of England. The undulating surface rises just enough to take away any idea of monotony, and from every eminence you obtain a view of the expanse of the Baltic, its calm dark blue waters sparkling in the sun, and stretching up occasionally into the land in one of those beautiful *fiords* or firths which form so enchanting a feature of Scandinavian landscape. Lakes and groves add to the charms of the scenery, and the wood-covered hills slope gently up from the shore of lake or sea. There is but one drawback to the pleasure of travelling here. The roads in H. are worse than in most other parts of the Danish dominions, and, with one or two exceptions, they are left in their natural state. In Denmark—W. Jutland excepted—as well as in most parts of Germany, the macadamized road is now nearly as general as in England: so backward, however, in this particular, has this nook of Europe remained, divided as it is under so many different jurisdictions, that it is not ten years since the road from Hamburg itself to Lubeck has been macadamized." [*Morning Chron.*] The country about Oldeslohe contains salt and lime, and amber is occasionally found on the W coast; but no metals are wrought at present. Grain and agricultural produce are abundant; manufactured goods are not produced in sufficient quantity to meet the demand. Manufactures, therefore, together with colonial products and wines, are among the articles of importation. Horses, black cattle, grain, oil-cake, butter, and peat are largely exported. Out of the whole export of butter from Denmark in 1847, viz. 82,755 tönder = 183,790 cwt., H. furnished 61,218 tönder; and of 8,770 cwts. of cheese, 5,112 cwt. were from H. The commerce of the country is much facilitated by its situation between two freely navigable seas; and might be enlarged by a more extensive system of canal and railroad intercourse. Hamburg, lying on the borders of H., together with Altona and Lübeck, are most important markets for the consumption of the domestic products of the country. The Greenland seal and whale fisheries furnish profitable employment to a considerable number of hands.

Land-tenures.] The land in the duchy of H., including also Sleswick, is held under various tenures, namely: estates of noblemen, crown-lands, fee-farms, hides of land, cottages, and *leibeigenschaft* or bondage farms. The estates of noblemen are of two sorts. In the beginning of this cent. there were 145 noble estates in H., of which, including those of the duke of Oldenburg, 64 were in possession of the members of the Sleswick-Holstein knights corps. This corps, at the end of last cent., consisted of 39 families, who alone had the right of admission for their daughters to the three H. cloisters or nunneries, and from whose members the prelates for them and St. John's nunnery in Sleswick are chosen. The number of noble estates in H. is computed at 145, having 1,460 ploughs, and valued for taxation at 10,228,500 rix-dollars. The size of these estates varies greatly, and they are dispersed through the whole duchy.—The Crown-lands were formerly royal domains, but in 1763 the king determined on disposing of them. The woods were retained as royal forests and enclosed, but the land was divided into small parcels and sold. The purchase-money was allowed to remain in the estates as mortgage, the purchaser paying interest and a moderate tax. In this way 52 royal estates were disposed of between 1765 and 1787, containing between 40,000 and 50,000 acres, and about 6,000 or 7,000 acres of wood converted into royal forests; and instead of 260 families, which formerly were resident on these estates, there were 776 families on them in 1787. In consequence of this arrangement, the king no longer possesses a single estate in the duchies.—Fee farm tenures have arisen since the middle of the last cent. out of the division of the manors; they are of different sizes, and the possessors, on payment of a *canon* or tax, have full right to the property, which they can dispose of as inheritance, or sell, subject only to the usual rights of the lord of the manor.—*Freihufen* are such tenures as through particular favour of the landlord are free from one or more burdens.—*Bauerhufen* are of different sizes, and, according to their area and the number of ploughs, are divided into whole, half, third, and quarter. They are subject to duties and services; and can, under certain circumstances, be sold. The sons of the *hufner* have right by entail to take the *hufe* at a moderate price. If there are several sons, the eldest in Sleswick, and the youngest in H., has the prior right.—The difference between the *festen* and *bonden* generally consists in the more limited rights of the former over the *hufe*. He cannot sell

the *hufe* to a stranger, or resign it at pleasure to any of his children, but must leave it to the most skilful of his relations, and deliver over to his successor the *hufe* with a certain number of horses, and the stock of iron implements. — There are also cottage-tenures, or cottages provided with a certain piece of land, over which the possessor, upon payment of purchase-money, or a tribute, acquires complete property. The possessor does no transport service, but must forward the landlord's orders through the district, guard prisoners, and assist the hufners in mending the roads. Originally the peasants in the duchies were free, but some by chance of war became bondmen, and the peasants became so bound to the landlord that they could not even marry without consent, could apply themselves to no art or handicraft, and could engage in no service for another which interfered with their bond service. Fortunately, however, this bondage has been entirely abolished in the duchies. The landlords have sold to their tenants that part of their estates which they were formerly obliged to cultivate, or have given it up as hereditary or leasehold farms for the performance of stipulated transport and personal services. The cessation of bondage made it necessary, on account of the large extent of most of the estates, to establish new farms.

The *pflugzhal* or 'plough' is a measurement by which the land-tax called 'Ordinary contribution' is assessed. It is difficult to state on what principle this measurement was formerly made. In some places 22½ morgen, in others 29 to 30, in others 36 morgen, and in Tondern 74¼ demath went to a plough. In order, however, to regulate the tax, a commission was appointed to investigate these measurements locally, and fix the number of ploughs on which duty was to be paid; and H. was found to be thus divided:

The noblemen's districts contained	.	2,750 ploughs.
The bailiwicks and provinces	.	3,166 ...
The towns		1,016 ...
The north and south marshes	.	1,425 ...
		8,357

Morgen is a measurement of land used chiefly in the marsh districts. In the district of Gluckstadt it contains 360, in the prov. of Steinburg 450, and in South Ditmarschen 600 sq roods, = 649 Hamburg sq. roods = 3⅝ English acres. Where no particular land-measure exists, a *tonne* contains, according to the difference of the estates, 200, 240, 250, 300, and 320 sq. roods of 16 ft.; and according to decree 15th Dec. 1802, 260 sq. roods = 1½ acre, were fixed as the reduced land-measure for taxation of a *tonne;* and 220 sq. roods, = 1⅛ acre, as that of a *demath.* [*Consular report.*]

"The dairy-farming of H. is celebrated. It was originally derived from Holland, and the head-manager of the dairy is still generally called the *holländer.* The cows are milked in the fields during the fine season; and the milk is brought to the farm on cars constructed for the purpose, the fabric of which consists of two long poles resting on four wheels, from each of which hangs a row of large milk-pails. Every precaution is used to keep the milk-cellar dry, clean, and airy. The floor is neatly paved with tiles, and a row of arched windows immediately below the roof, which is 15 or 20 ft. high, allows admission to the air. The process of churning is performed by fanners working in large square vats—generally made of iron tinned over—which are driven by horses and sometimes by steam. On farms of 800 and 1,000 acres the number of cows kept is from 300 to 400, and 500 to 600 lbs. of butter are produced daily in the season. The yield of summer butter from each cow is estimated at 106 lbs., and the net yearly produce of ten cows comes to about £4. A large share of the H. butter is exported to England. Most of the dairy farms are on the E coast, but some are also to be found in the marsh country, where the dairy is regarded as a main object of attention. The produce can now be conveyed to Hamburg with great facility by the Holstein railway to Kiel and Glückstadt." [*Morning Chronicle*]

The most important cities in Holstein are Altona; Glückstadt, a fortified city, and the seat of government at the junction of the Elbe and Stör; Rendsburg, an important fortress on the Eyder, at the termination of the canal which connects the harbour of Kiel with the Eyder; and Kiel.

Government.] For the administration of justice, the whole country, except the cities and estates of noblemen, is divided into districts, under the jurisdiction of particular courts, from which an appeal may be made to the college-of-justice, or supreme court at Glückstadt, and from the seignorial courts to the district-court. An appeal to the king is allowed in certain cases.—The established religion of the duchy is the evangelical Lutheran; but other religious sects are tolerated. For the purposes of ecclesiastical government the duchy is divided into 8 provostships. Each provostship has a consistory, or spiritual court, composed of several clergymen of the district, under the supervision of the provost, and decides the causes that come within its jurisdiction. From this court an appeal may be made to the supreme consistory at Glückstadt, or supreme court, composed of the clergymen of Glückstadt and the general superintendent.—The provost superintends the churches and schools of his district, and visits them twice a-year; the superintendent does the same for the whole country. There are good schools in the principal cities; and a university was founded in Kiel in 1665. A seminary for instructors, established in Kiel in 1780, has been of great service in promoting general education.

History.] The earliest history of H. is obscure. Charlemagne conquered the Saxons who inhabited this country, and transported more than 10,000 families across the Rhine into Flanders, Brabant, and Holland. The emperor Lothaire erected H. and Storman into a county. The contest between Denmark and the ducal house of Gottorp was ended, in 1773, by the prince, afterwards Paul I. of Russia, ceding his claims on H. to the king of Denmark, in exchange for the counties of Oldenburg and Delmenhorst, which in 1777 were erected into the duchy of Holstein Oldenburg, and conferred by Paul I. on the younger line of Gottorp. When the constitution of the German empire was abolished by the confederation of the Rhine, the king of Denmark, on the 9th Sept. 1806, united the whole duchy of H. to the kingdom of Denmark, and abolished its existing constitution. In the great European crisis of 1813, the country was occupied by the combined Swedish and Russian armies; and, after a short armistice, a peace was concluded at Kiel in January 1814. In 1815, the king of Denmark, as sovereign of H., was admitted into the Germanic confederation. Holstein was therefore once more connected with Germany, and it became necessary to establish a constitution in which the states should be represented according to the constitution of the confederation. From authentic documents it appears that the Danish duchies in 1460 were inhabited by a free people, who at that time chose as their lord or duke the Danish king, Christian I. of the Oldenburg family, and the ancestor of the present reigning family in Denmark. In the deed drawn up at that election, the king distinctly accepted the condition on which his election took place: one of which clearly states that only the *male* line shall succeed in the duchies; and the other, that both duchies, Sleswick and H., shall always remain together, undivided. These terms were never disputed or violated by Denmark from 1460 down to 1848, if we except the attempt implied by the royal letters patent in July 1846. [See article DENMARK. Pp. 885-6.] Upon the publication of that document, the duchies protested against any infringement or restriction of their independence as a state; and to this protest the king replied that he had no intention to infringe the rights of the duchies. The probable reason of that attempt may be traced to the policy of some of his counsellors, who foresaw that after the extinction of the male line of the present royal family, all connection between the duchies and Denmark Proper would, politically, cease to exist. The present king of Denmark, the last of the elder royal branch, has no issue, and the throne of Denmark devolves on the Princess Charlotte, who is married to the landgrave of Hesse-Cassel, and whose son Emilius is thus presumptive heir to the Danish throne; but the Danish right of hereditary succession is inadmissible in the duchies, according to the agreement contained in the above-mentioned elective document. The revolutionary movements on the continent, of 1848, seemed to favour the long-nourished object of the Danes to secure to themselves the possession of the duchies, and to incorporate them into the Danish monarchy. By letters patent of 24th March 1848, the king tried to effect this incorporation; hence the resistance of the people of Sleswick-Holstein, which issued in a long-protracted and sanguinary war. The duchies rose against such an infraction of their independence; and the duke of Sonderberg-Augustenberg, being of the younger royal branch of the Oldenburg family, and entitled apparently to the after succession in the duchies, applied to the German princes to protect and support his title. After the war had been carried on for a few months an armistice was concluded; and in February 1851, the stadtholders elected by the German diet resigned their power into the hands of commissioners from the Germanic confederation, which undertook to protect the rights of the duchies, and their old-established relations, while installing a new royal ducal administration. An assembly of notables at Flensburg, in the month of July 1851, adopted by a majority the following organisation for the duchies. "Art. 1. The Danish monarchy forms one united nation, under the same prince, with the same order of succession, with one diplomatic and consular representation, and one fleet and flag. One system of commerce, navigation, coins, &c., shall be established. The sinking fund of the public debt of Denmark and H. shall take place, and the portion for H. shall be fixed according to the population.—Art. 2. The duchy of H. shall continue to form part of the German confederation.—Art. 3. When the affairs which interest the whole of the monarchy are discussed in the council-of-state, the H. minister shall have a deliberative vote in the council.—Art. 4. The duchy of Sleswick shall have a special diet, and a subordinate administration for certain affairs. In other cases it shares in the system of Denmark. For ordinary affairs, Denmark and Sleswick will have

the same government and the same laws.—Art. 6. The Danish and German people in the duchies will enjoy the same rights and the same protection.—Art. 7. The affairs of Sleswick and H., which have hitherto been in common, will be henceforth separate.—Art. 8. No change can be made in the above regulations except with the consent of the legislative power.—Art. 9. The duchy of Lauenburg shall continue to belong to the Germanic confederation. The provisions of Art. 1. also apply to that duchy; as to affairs which are not common to all the monarchy, the duchy shall have its administrative and special diet. The latter will exercise the legislative power with the king."

HOLSTEIN-OLDENBURG. See OLDENBURG.

HOLSTEINSBORG, a Danish colony on the W coast of Greenland, on a point of land called Cunningham's-bierg, at the entrance of the Ramel's-fiord, in N lat. 66° 50′.

HOLSTON, a river of the United States, formed by the junction of two rivers which take their rise in the Alleghany mountains, in the co. of Wythe, state of Virginia, and unite on the confines of the cos. of Hawkins and Sullivan, state of Tennessee. It takes its course in a WSW direction, through Hawkins, Granger, Know, and Roan counties, and a little below Kingston joins Clinch river to form the Tennessee river. It has a total course of 240 m.; and, with the interruption of a fall of 7 ft., is navigable for a distance of 70 m. Its principal affluents are Watanga and French Broad river. Near its sources are valuable salt-works.

HOLSWORTHY, a parish and market-town in Devonshire, 7½ m. WSW of Stratton, and 42 m. NW of Exeter, intersected by the Bride canal. Area 8,870 acres. Pop. in 1831, 1,628; in 1841, 1,857. The town is pleasantly situated between two branches of the Tamar. Pop. 775.

HOLT, a parish, township, and borough or corporate town or village in Denbighshire, 5½ m. NW of Wrexham. Pop. in 1831, 1,609; in 1841, 1,634. Pop. of borough, 1,058.—Also a tything in the p. and 3 m. NE of Wimborne Minster, Dorsetshire. Area 3,910 acres. Pop. in 1831, 1,265; in 1841, 1,313.—Also a tything in the p. of Kintbury, Berks. Pop. in 1841, 391.—Also a parish and market-town in Norfolk, 18 m. NNE of East Dereham, and 12½ m. ESE of Walsingham. Area of p. 2,950 acres. Pop. in 1831, 1,622; in 1841, 1,604.—Also a parish in Worcestershire, 5½ m. NNW of Worcester, on the banks of the Severn. Area 2,930 acres. Pop. in 1831, 655; in 1841, 557.—Also a chapelry in the p. and 2½ m. ENE of Great Bradford, Wilts, on the Avon. Area 1,800 acres. Pop. in 1831, 839; in 1841, 1,044.

HOLT, a commune of Belgium, in the prov. of Limburg, dep. of Pilsen. Pop. 172.

HOLT, an island of the South Pacific, in the Low archipelago, in S lat. 16° 20′, W long. 143° 15′. It was discovered by Turnbull in 1803.

HOLTAALEN, a parish in Norway, in the dio. and 57 m. SE of Drontheim, and bail. of South Drontheim. Pop. 2,191.

HOLTBY, a parish in the N. R. of Yorkshire, 5½ m. ENE of York. Area 850 acres. Pop. in 1831, 157; in 1841, 146.

HOLTE, a parish in Norway, in the diocese of Christiansand, bail. of Nedinoes, 12 m. N of Arendal. Pop. 4,595.

HOLTEN, a village of Holland, in the prov. of Over-Yssel, cant. and 12 m. SSE of Raalte. Pop. 2,619.—Also a town of Prussia, in the prov. of the Rhine, regency of Dusseldorf, circle and 4 m. SSE of Dinslacken, on the Altenroderbach. It has a castle and a Reformed church, and possesses manufactories of cloth and of woollen coverlets. Pop. 840.—Also a village in Norway, in the stift of Aggershuus, county of Jarlsberg, and 30 m. NW of Toensberg. In the vicinity is a church cut out in the rock, supposed to have originally been a heathen temple.

HOLTENAU, a village of Denmark, in the duchy of Sleswig, on the Eyder canal. It has a custom-house, and possesses a considerable entrepot trade.

HOLTON, a parish in Oxfordshire, 6¼ m. E of Oxford. Area 1,680 acres. Pop. in 1831, 277; in 1841, 289.—Also a parish in Somerset, 2¼ m. WSW of Wincanton. Area 1,520 acres. Pop. in 1831, 209; in 1841, 224.—Also a parish in Suffolk, 1¼ m. NE of Halesworth. Area 1,130 acres. Pop. in 1831, 435; in 1841, 541.

HOLTON-BECKERING, a parish in Lincolnshire, 2½ m. NNW of Wragby. Area 1,700 acres. Pop. in 1831, 168; in 1841, 191.

HOLTON-LE-CLAY, a parish in Lincolnshire, 4¾ m. SSE of Great Grimsby. Area 1,530 acres. Pop. in 1831, 207; in 1841, 263.

HOLTON-ST.-MARY, a parish in Suffolk, 4¼ m. SSE of Hadleigh. Area 1,340 acres. Pop. in 1831, 150; in 1841, 100.

HOLTON-LE-MOOR, a chapelry in the p. and 3 m. SSW of Caistor, Lincolnshire. Area 1,750 acres. Pop. in 1831, 150; in 1841, 160.

HOLT-PRUN, a township in the p. of Cardington, Salop. Pop. 111.

HOLTVA, or GOLTVA, a town of Russia in Europe, in the gov. and 37 m. WSW of Poltava, district and 32 m. NE of Krementchoug, on the r. bank of the Psioul.

HOLTZ, a commune of Belgium, in the prov. of Luxemburg, dep. of Perle. Pop. 379.

HOLVEN, a commune of Belgium, in the prov. of Antwerp, dep. of Bailen. Pop. 67.—Also a commune in the same prov., in the dep. of Gheel. Pop. 384.

HOLVERSTONE, a parish in Norfolk, 5 m. ESE of Norwich. Area 480 acres. Pop. in 1841, 37.

HOLVING, a commune of France, in the dep. of the Moselle, cant. of Sarralbe. Pop. 1,207.

HOLWELL, a parish in Bedfordshire, 3 m. NNW of Hitchin. Area 650 acres. Pop. in 1831, 167; in 1841, 182.—Also a tything in the p. of Cranborne, Dorset. Pop. in 1841, 407.—Also a chapelry in the p. of Ab-kettleby, Leicestershire, 3¼ m. NNW of Melton-Mowbray. Area 1,400 acres. Pop. in 1831, 131; in 1841, 156.—Also a chapelry in the p. of Broadwell, Oxfordshire, 4 m. W of Bampton. Area 1,160 acres. Pop. in 1831, 96; in 1841, 113.—Also a parish in Somersetshire, 5¼ m. SSE of Sherborne. Area 2,330 acres. Pop. in 1831, 405; in 1841, 397.

HOLWERD, or HOLWERT, a village of Holland, cap. of a cant. in the prov. of Friesland, arrond. and 14 m. NNE of Leeuwarden, near the shore of the North sea. Pop. 1,700.

HOLWICK, a township in the p. of Ronald-kirk, N. R. of Yorkshire, 12 m. WNW of Bernard-castle. Area 5,910 acres. Pop. in 1831, 208; in 1841, 205.

HOLYBOURNE, a parish in Southamptonshire, 2 m. NNE of Alton, on the post-road from Alresford to Farnham. Area 1,150 acres. Pop. in 1841, 522.

HOLYCROSS, a parish in co. Tipperary, 3½ m. SSW of Thurles. Area 8,137 acres. Pop. 3,446.

HOLYCROSS WESTGATE (WITHIN and WITHOUT), a parish in Kent, partly in the city of Canterbury, and partly bounded on the E by the Stour. Area 100 acres. Pop. in 1831, 814; in 1841, 1,020.

HOLYFIELD, a hamlet in the p. and 2 m. N of Waltham-Abbey, Essex. Pop. in 1841, 382.

HOLYHEAD, an island, parish, sea-port, and market-town, in the co. of Anglesey, N. Wales, on the W side of the isle of Anglesey, from which it is divided by a sandy strait, in some places fordable at low water. The island consists principally of barren rocks and sands. The N part—constituting the parish of H.—contains about 3,000 acres of land, upwards of one-half of which is cultivated; the other half is in general very rocky. The S part constitutes

the parish of Rhoscolin. H. mountain, as it is called, rises to an elevation of 709 ft. above the sea, and is almost wholly composed of serpentine. The promontory of the Head is an immense precipice hollowed into magnificent caverns. Upon a small islet, or rather protruding rock, off the NW point of the Head, and called the South Stack,—from which a suspension-bridge has been thrown to the island,—there is a stone lighthouse, 69 ft. in height, erected in 1809. It stands in 53° 18′ N lat., and 4° 42′ W long; and exhibits a revolving light of 3 faces, at a height of 201 ft. from high water to the lantern, visible at 19 m. distance in clear weather. One of the faces of the light is shown every 2 minutes, whereby it is readily distinguishable from the light on the Skerries, which is a stationary light, and bears from the light on the South Stack, NE by E, ¼ E, 7¾ m. Any vessel making either of these two great lights, can find no difficulty in navigating round the Head, or into the harbour of H. The shore about H. is bold and steep, and soundings may be depended on. The extremely bold headland of H. is much more easily distinguished than any other land on this coast; and the bay stretches 7 m. across, from SW to NE, with the Skerries light on the SE side, the South Stack light on the SW, and the leading lights of H. harbour on the pier between.

Port and harbour.] The original harbour of H. is formed by the cliffs under the churchyard, and a small island called Inys Cybi. The tide, however, running rapidly out, and the port becoming a dry harbour, an asylum harbour was constructed here at the expense of government. It consists of a pier 900 ft. in length, running in a direction from W to E, faced with hewn limestone, and having a depth of 14 ft. at the pier-head during low water. The land extremity of the pier is connected with the mainland by a cast-iron bridge across Salt island sound; and the Great Parliamentary mail-road is thence directly continued through Anglesey, and by the Menai bridge. The naval commissioners have recommended various improvements on H. harbour, which are now in progress. In particular, they proposed to extend the present pier about 800 ft. in a NE direction, and to face it on the N side, and render it in every way convenient for packets steaming alongside it to receive and land their mails and passengers, and to project a rubble pier from the N extremity of Salt island, so as to enclose about a square quarter of a mile of water, varying in depth from about 16 to 24 ft. at low-water, spring-tides. Several plans were proposed for a new harbour by different engineers. Mr. Walker proposed a plan which was to enclose an area of 90 acres, with 3,300 ft. of breakwater and 2,500 ft. of pier, at an expense of £400,000. Capt. Beechey proposed to enclose 176 acres, with 4,500 ft. of breakwater, and 3,500 ft. of pier, at an expense of £550,000; and Mr. Rendel, whose plan has been adopted, proposes to make a breakwater of 5,000 ft. from Soldiers' point eastward, and a pier of 2,000 ft. from Ynys-Gybi or Salt island, with its head resting on the outer Platter, enclosing an area of 316 acres, three quarters of a mile long, and in 6½ fath. water; the cost of the works to be £700,000. The works were commenced in January 1848, and they have been going on since then as rapidly as it was possible to proceed. Twelve months were occupied in laying down rails to the quarries, erecting stages, and making other necessary preparations for the works; since which time an average of 1,100 men have been employed on the undertaking. The works may be described as consisting of two breakwaters, one to the N and the other to the E. The E breakwater, which is the smallest portion of the work, has been commenced, but very little has been done upon it. So far, attention has been directed chiefly to the N breakwater, which is not only the largest undertaking in point of magnitude, but it is the most important portion of the works, as it will have to sustain the action of the sea. To this breakwater three lines of rails run. The quarries are within half-a-mile of the works, and here the greatest number of the workmen are employed. H. mountain, which affords the source of supply, consists of schistus quartz of so hard a nature that the tools of the workmen will scarcely touch it, and its edges will cut glass. The quarrying began with the foot of the mountain-slope, and it has progressed into the hill until an elevation of 120 ft. perpendicular has been attained. To cut into so hard a rock the contractors have to adopt the process of blasting, which is carried on upon a magnitude which has never been equalled. The charges vary from 2 to 4 tons of gunpowder, according to the face of rock to be acted upon, and the quantity thrown down varies from 6 to 30 thousand tons in an explosion. The contractors extend their operations about 20 ft. a-week on an average. The stones brought from the quarries are run down the three lines of rails of which we have spoken, which are continued over the works on timber bearings, and the waggons are tilted at an elevation of about 20 ft. above high water mark. The deposit, or "foreshore," as it is technically termed, thus consists of the workings of the quarry deposited in the sea. The upper surface of this deposit is about 150 ft. wide. The depth of the sea in which it is thrown varies from 30 to 50 ft. at low water. The width of the deposit at the base is eventually to be about 600 ft., and this will gradually slope upwards to about 50 ft. on the summit of the breakwater on which the stone-pier will be built. The stones are thrown into ridges, which, to a certain extent, subside by their own weight; but, after all, the sea is the great workman. When a heavy sea comes on, it breaks over the ridges, and gradually lowers them, carrying away ridge after ridge, until that which was far above the water is completely submerged. And this process will go on until the deposits shall have formed a plane sufficiently inclined to sustain the breaking of the sea without removal. The wall or pier will then be built upon the breakwater, and the works will be brought to a close.—The H. harbour lighthouse is a stone building erected in 1820. It stands in 53° 19′ N lat., 4° 36′ W long. Height of building, 37 ft.; of lantern above high water, 44 ft.

Town.] H. is the largest town in Anglesey. It stands at a little distance SW of the harbour, on the peninsula constituting the nearest point of land towards Dublin. It is somewhat triangular in form, spreading from the point of junction between the Great mail-road running SE from the pier, and the road running W to the South Stack; and consists of two good principal streets or avenues and a few cross streets. It underwent great improvements previous to 1830, on the establishment of the Dublin steam-packets, which caused it to become the resort of passengers between England and Ireland; but being much dependent on this traffic for its importance, and the number of passengers having diminished after the recent establishment of the Liverpool packets, it did not keep pace with its previous improvement. Pop. of p. in 1801, 2,132; in 1831, 4,282; in 1841, 3,869. H. unites with Beaumaris, Amlwch, and Llangefni, in returning a member to parliament. The boundaries include the town with all the scattered houses in the vicinity, but only part of the p. The number of electors registered in 1837 was 85. H. is also one of the polling-places at the election of co. members. There is no particular branch

of commerce or manufacture in H. The inhabitants are principally employed in the coasting-trade and in ship-building.

Chester and Holyhead railway.] This important and magnificent line—for its engineering works, the most gigantic of all English railways—issues forth at the terminus of the London and North-Western railway at Chester; passing under a portion of the latter city by a tunnel, 400 yds. long. After crossing the Dee, the line descends to the low ground on the shore of that river, and continues its course nearly parallel with the embanked channel; thence along the estuary of the Dee: through the town of Flint, on a level; between Bagilt and Greenfield and the shore, and by the side of Mostyn-quay, cutting off a part of the dock and reservoir. About 3 m. beyond Mostyn-quay, near the Point of Ayr, the line turns in the direction of Rhyl, which it passes on the land-side of the town, and crosses the river Fforyd by a pile and drawbridge; it thence proceeds close to the shore, through the Rhyddlan marshes, to within 1 m. of Abergale. Passing that town, it continues upon the shore between Llandulas and the sea. About 1¼ m. beyond Llandulas is the promontory of Penmaen-Rhos; here the line rises very considerably; it then descends again towards the shore, the promontory itself, which is of limestone, being tunnelled through for a length of 530 yds. The railway thence proceeds along the beach for about 3 m.; on leaving which, it passes through a narrow valley to the S of the Great and Little Orme's Head. Skirting Conway-castle, the line enters Conway through the wall, and passes out again by a tunnel through the rock, 90 yds. long, considerably below the wall of the western end, thence curving in a NW direction, and passing through another short tunnel of 22 yds., it enters the Conway marshes, about a ½ m. from the town, and continues its progress along the sea-shore, to the promontory of Penmaen-Back, through which it is carried, by means of a tunnel of 630 yds. long, in the solid greenstone. From Penmaen-Back the line continues its course between the present road and the sea-shore, round the promontory of Penmaen-Mawr, and through its extreme projecting point by a tunnel of 229 yds. Approaching the Ogwen, the works are stupendous. The river and valley are crossed by a viaduct 246 yds. in length, the extreme height of which is 42 ft. Between this and the Menai-straits, the line passes through three ridges of mountains, perforated by tunnels, of the respective lengths of 440, 932, and 726 yds. It passes Bangor about 3 furlongs S of the cathedral, and crosses the Menai straits at the Britannia rock, exactly 1 m. below the present suspension-bridge. The rock at this point divides the stream into two equal widths, and upon it the centre pier of the bridge is founded. [See MENAI STRAITS.]—The line then runs several miles parallel with the old coach-road, and turns in a SSW course, following the tract of the coast though some distance from it, and crossing in its course, about 8 m. from the Menai straits, the Maidraeth March valley. A tunnel of 550 yds., through slate rock and clay, eventually conveys the railway into the island of H. and its harbour.

Intercourse with Ireland.] H. has recently become of great interest and importance with reference to the most eligible route of mail and other conveyance, in connection with railways, between London and Dublin. A naval commission appointed to examine the relative capabilities of the ports of Holyhead, Orme's-bay, and Portdynllaen, reported pre-eminently in favour of H.; and a railway commission appointed by the government to examine various projected lines of railway communicating with H., Orme's-bay, and Portdynllaen, also gave the decided preference to that which terminated at H., not only on its own merits, but "as that port affords the shortest sea-voyage. and offers the greatest facilities for a packet-station." The respective distances between Kingstown and H., Portdynllaen, and Orme's-bay, are thus stated by Rear-admiral Gordon and Capt. Beechey, the admiralty commissioners, in their report:—

From Kingstown to Holyhead,	.	54 geog. m.
... Portdynllaen,	.	60 ...
... Orme's-bay,	.	84½ ...

But as the packets from Portdynllaen will have to round the Kish light-vessel, it will be proper to reckon the distance from that spot, in order to draw a just comparison.

From the Kish to Holyhead bay,	.	48 geog. m.
... Portdynllaen,	.	54 ...
... Orme's bay,	.	78½ ...

Considering the importance of the manufacturing districts of Lancashire and Yorkshire, and the great intercourse which is carried on between those districts and Ireland, the Great H. railway through Chester and Bangor, in connexion with the system of the North-Western railway, offers greater facilities for communication between the two countries than any other route that could have been chosen. This railway, moreover, may be easily made to communicate with Portdynllaen bay, and Orme's bay.

HOLY ISLAND, a parish, and an interesting island,—or perhaps, more properly, a peninsula or semi-isle, as Bede has termed it,—in the German ocean, off the coast of a detached part of the co. of Durham, which lies on the NE side of Northumberland; 5 m. NNE of Belford; 9 m. SSE of Berwick-on-Tweed; and 3 m. from the Beal station on the Newcastle and Berwick railway. At ebb of tide, a passage to the island is left almost dry for horses and carriages from the main land, which is 2 m. distant; though, to avoid quicksands, the distance is nearly doubled; but at the flow, the isthmus is entirely covered with water. Exclusive of a narrow spot of land which extends about 1 m. in length to WNW, and gives the island that peculiar form which has been compared to a leg of mutton, H. is about 2½ m. long from E to W; 1½ m. broad; and about 9 m. in circumf.; it contains about 1,000 acres of land. The Farne isles, situated about 7 or 8 m. to the SE of Lindisfarne, form part of the p., together with the two hamlets of Fenham and Goswick, both of which are situated on the main land. Area of the p. 3,320 acres. Pop. in 1801, 601; in 1831, 836; in 1841, 809.—About half of the island on the N side consists chiefly of barren soil and sand-hills, which form a spacious rabbit-warren. The cultivated part of the island consists of one continued plain, which inclines to the SW, and was occupied as a stint-common till 1792, when it was enclosed. There are several springs of fresh water upon the island; and at its NW corner is a lake of 7 acres. There is on the N side of the isle abundance of limestone; and, in a bed of black shiver, iron ore is plentiful, among which entrochi, or as the superstitious call them, St. Cuthbert's beads, occur plentifully. The sands which extend betwixt H. and the main land on the NW, are termed Fenham-flats. The quicksands are situated opposite to Beal, in Kyloe p., at a place called 'The Low.'—The v. of Lindisfarne is situated at the SW corner of the island, where the land declines gradually towards the sands, which afford excellent accommodation for sea-bathing. The venerable ruins of the abbey and cathedral church of Lindisfarne, though they have frequently been plundered for the erection of houses in the v., are yet magnificent. Most of it is in the rude and heavy style of early Saxon architecture, though

it appears to have been built at different periods. The W front is almost perfect. The nave is separated from the aisles by a double row of ponderous columns, with richly ornamented shafts, 12 ft. high, and 5 ft. in circumf., supporting 6 arches. The length of the building is about 138 ft.; and its breadth 36 ft. The opulence and honours of the see of Durham had their origin in the ancient abbey of Lindisfarne,—derived by the Saxons from the *Lindis*, a rivulet which runs into the sea opposite the island, and from the Celtic word *fahren*, 'a recess.'

HOLY LAKE, a lake of British North America, to the NE of Lake Winnepeg. It is 24 m. in length, and 6 m. in breadth, and is the largest of the series traversed by Hill river in the upper part of its course. It contains numerous islands.

HOLYTOWN, a village in the p. of Bothwell, in Lanarkshire, on the road from Whitburn to Mid-Calder. Pop. 900.

HOLYWELL, or Treffynnion, a parish and market-town in Flintshire, 9 m. NNW of Mold, on the river Dee. Pop. of p. in 1801, 5,567; in 1831, 8,969; in 1841, 10,834.—The town, at one time but a small village, has now become the largest and most considerable town in the co. It consists principally of one street, extending by the side of a stream which issues from St. Winifrid's well. Under the reform act it unites with Flint, &c., in returning 1 member to parliament. The pop. of the parl. burgh in 1841 was 5,864. There are valuable collieries and lead-mines in this vicinity. The H. level, or great H. lead-mine, opened in 1773, is entered from the bottom of a hill near the town, by a water-level, a subterraneous passage or canal penetrating the mountain to the distance of nearly 1,700 yds., and cut through the solid rock, 6 ft. high, and 4 ft. wide. The water, which is a running stream, and discharges itself at the mouth of the level, forms a channel nearly 3 ft. deep, which is navigated by boats. The interior of the mine contains apartments hewn in vast beds of quartz, which, reflecting and refracting the rays of tapers, and being beautifully variegated with the tinge of sulphur and other minerals, display a specimen of natural architecture that exceeds all the efforts of art. Various shafts or perpendicular passages, cut through the mountain, pursue the ore in all its ramifications. The mines in this vicinity give employment to upwards of 500 hands. Brass is formed and manufactured at H. The calamine used in its composition is brought from the great mines which cover the top of Pen-y-Bawn. There are also copper-mills, which are chiefly occupied in preparing copper sheets for sheathing ships of war. The manufactured brass and copper is all shipped on the Dee for Liverpool, whence it is sent to London, India, and America. Besides all these works, which employ about 600 hands, and several corn-mills, there are in this p. 4 cotton-mills; a cotton-twist manufactory is carried on upon a great scale; and there is a small trade in the manufacture of galloons.—Also a township in the p. of Earsdon, Northumberland, 4½ m. NNW of North Shields. Pop. in 1831, 944; in 1841, 1,164.

HOLYWELL-with-AUNBY, a chapelry in the p. of Castle-Bytham, Lincolnshire, 5½ m. NNW of Stamford. Area 2,350 acres. Pop. in 1841, 98.

HOLYWELL-with-NEEDINGWORTH, a parish and two villages in Huntingdonshire, 2 m. SE of St. Ives, on the Ouse. Area 3,290 acres. Pop. in 1831, 951; in 1841, 959. The v. of Needingworth was terribly devastated by fire in Sept. 1847.

HOLYWELL-ROW, a hamlet in the p. of Mildenhall-St. Andrew, Suffolk. Pop. 411.

HOLYWOOD, a parish in Nithsdale, in Dumfries-shire. Pop. in 1801, 809; in 1841, 1,061, of whom about 200 are in the village of H.

HOLZAPPEL, a town of the duchy of Nassau, in the bail. and 5 m. W of Diez, and 20 m. WSW of Weilburg, near the r. bank of the Lahn, at the foot of a hill on which are the ruins of the original residence of the princes of Nassau. Pop. 921. It has a classical school. In the vicinity is a rich mine of argentiferous lead.

HOLZBACH, a village of Prussia, in the prov. of the Rhine, regency of Coblenz, and circle of Simmern. Pop. 382.

HOLZEMME, a river of Prussia, in the prov. of Saxony, and regency of Magdeburg, which has its source in the highest part of the Harz mountains; passes Halberstadt; and, after a course of about 30 m. in a NE direction, joins the Bode, on the l. bank, a little below Groningen.

HOLZENOE, an island of Norway, near the coast of S. Bergenhuus, 12 m. NNW of Bergen, in N lat. 60° 31′.

HOLZGERLINGEN, a town of Würtemberg, in the circle of the Neckar, bail. and 4 m. S of Boblingen, and 13 m. SW of Stuttgard. Pop. 1,638.

HOLZHAUSEN, a village of Bavaria, in the circle of Upper Bavaria, W of Landsberg. Pop. 224.—Also a v. of the duchy of Nassau, SW of Katzenelnbogen.—Also a v. of the duchy of Hesse-Cassel, in the prov. of Lower Hesse, and circle of Homberg, on the Efze. Pop. 692. It has several blast-furnaces and forges.—Also a v. of the same duchy, in the circle of Hofgeismar. Pop. 806. In the vicinity are extensive coal-mines.

HOLZHEIM (Ober), a village of Würtemberg, in the circle of the Danube, and bail. of Wiblingen. Pop. in 1840, 408.

HOLZKIRCHEN, a town of Bavaria, in the circle of Upper Bavaria, presidial of Miesbach, 20 m. SSE of Munich. Pop. 418. It has 2 churches, and possesses several breweries and distilleries. This town was held by the French from July 1800 till March the following year.

HOLZMINDEN, a circle and town of the duchy of Brunswick. The town is situated at the foot of the Sölling mountains, on the r. bank of the Weser, 55 m. WSW of Brunswick, and 32 m. NW of Gottingen, in N lat. 51° 51′. Pop. 3,409. It is of small extent; but it has a large suburb named Altendorf. It is well-built, and has several churches, a synagogue, a gymnasium, a library, and an architectural school; and possesses extensive manufactories of flannel, hosiery, thread, needles, pins, iron and steel-wares, potash, and leather; numerous paper, saw, and oil-mills; and extensive iron-works and fineries. The trade consists chiefly in iron, linen, grain, and flag-stones. Cattle markets are held here several times a-year. Pop. of circle 8,535.

HOLZTHALLEBEN, a village in the principality of Schwarzburg-Sondershausen, bail. and 3 m. E of Keula, and 14 m. W of Sondershausen. Pop. 1,500.

HOM-LACY, or Holm-Lacy, a parish in Herefordshire, 5½ m. SE of Hereford, on the Wye. Area 3,310 acres. Pop. in 1831, 430; in 1841, 369.

HOMBEECK, a department and commune of Belgium, in the prov. and 16 m. S of Antwerp, cant. and 22 m. WSW of Malines, on the l. bank of the Senne. Pop. of dep. 1,800; of v. 400. It has a distillery, and several oil-mills and breweries.

HOMBERG, a town of Prussia, in the prov. of the Rhine, regency and 16 m. N of Dusseldorf, and 9 m. SE of Rheinberg, on the l. bank of the Rhine, opposite the confluence of the Ruhr. Pop. 921.—Also a market-town of the grand-duchy of Hesse-Darmstadt, prov. of Upper Hesse, and district of Birtorf, 17 m. ESE of Marburg, and 45 m. N of Budingen, on the Ohm. Pop. 1,692. It is enclosed by

walls, and contains a church and an hospital. The castle is situated on a mountain which rises adjacent to the town. Linen, coarse woollen fabrics, and leather, form the chief articles of local manufacture. —Also a circle and market-town of Hesse-Cassel, in the prov. of Lower Hesse. The circle comprises an area of 30,250 hectares, of which only 11,234 hect. consist of arable land. Pop. in 1840, 23,000. It is generally mountainous; and is covered, to the extent of one-fourth of the surface, with forests. Cattle to the number of about 6,900, 23,000 sheep, 3,700 pigs, and 1,900 goats, are annually reared on its pastures; and, with the iron and coal-mines which it contains, form the chief objects of local industry. It is divided into 3 bailiwicks; and contains 2 towns and 59 villages. The town is 13 m. NE of Neukirchen, and 21 m. SSW of Cassel, on the Efze. Pop. 3,815. It is surrounded by a wall, and on an adjacent mountain is an old castle. It consists of an old and new town; and contains a church, an hospital, a normal seminary, and a school for deaf mutes. It has manufactories of cordage, linen, cloth, and soap; and has several tanneries, soap, and dye-works. In the environs are extensive coal and iron-works. It was formerly a town of considerable strength, but suffered greatly during the 30 years' war. The Wallenstein-stift, a chapter of noble Protestant ladies, founded here in 1762, was tranferred in 1832 to Fulda.

HOMBLEUX, a commune of France, in the dep. of the Somme, cant. of Nesle. Pop. 1,114.

HOMBOURG, a department and commune of Belgium, in the prov. and 19 m. ENE of Liege, arrond. of Verviers. Pop. of dep. 1,579; of v. 137.

HOMBOURG (Haut), Hombourg L'Eveque, or Houmerich, a commune of France, in the dep. of the Moselle, cant. and 5 m. ENE of St. Avold, on a hill, near the l. bank of the Rossel. Pop. 1,830. It has extensive iron-works, a paper-mill, and several tile-kilns. A fortress was built here in 1254, by James, bishop of Lorrain.

HOMBRECHTIKON, or Humbrechtiken, a parish and village of Switzerland, in the cant. of Zurich, and bail. of Meilen. Pop. (Protestant) 2,475.

HOMBRESSEN, a village of Hesse-Cassel, in the prov. of Lower Hesse, and circle of Hofgeismar, on the Lempe. Pop. 1,253. Piano-fortes and iron-ware are manufactured here.

HOMBURG, a canton and town of Bavaria, in the circle of the Pfalz, 6 m. N of Deux-Ponts, and 51 m. W of Spire, on the Little Erbach, an affluent of the Bliese. Pop. 3,107, of whom about 189 are Jews. It is a neat town, and has a castle,—which was formerly a fortress,—an hospital, a custom-house, and a classical school. The manufacture of muslin, of woollen fabrics, and of sugar from beet-root, and the rearing of cattle, form the chief branches of local industry. H. was founded in 1682, and subsequently fortified. Its ramparts were destroyed by the French, in virtue of the treaty of Rastadt.—Also a presidial and town of Bavaria, in the circle of Lower Franconia, 16 m. W of Würtzburg, on the Main. Pop. 700. It has a castle. Fruit and wine are extensively cultivated in the environs. Pop. of presidial 7,828.

HOMBURG, a herrschaft, landgraviat, or administrative province, seignory, and town of Hesse-Homburg. The prov. comprises an area of about 36 sq. m. Pop. in 1840, 9,404. It lies to the N of Frankfort, between Nassau and Electoral Hesse, on the S side of the Taunus, and in the basin of the Nidda. Its highest point, the Feldberg, has an alt. of 2,850 ft. above sea-level. Its climate is salubrious, and its soil productive. It has a great extent of fine wood. Cattle and sheep are reared in great numbers in its pastures. Hosiery and woollen fabrics form its chief articles of manufacture.—The town, which is also called Homburg-vor-der-Höhe, is 10 m. NNW of Frankfort-on-the-Main, and 23 m. NE of Mayence, on the Eschbach, at the foot of a hill, on which the castle is situated in which the landgrave resides. It consists chiefly of one straight street, running along the summit of a ridge. The buildings which form what is called the new town, are large, elegant, and showy. The principal edifices are the ducal chateau, the casino, and the churches, which are 3 in number. It has also a synagogue, an alms-house, an orphan's asylum, a classical and a forest-school. Silk, linen, and woollen fabrics form the staple production of local industry. H. is chiefly known as a thriving and rapidly increasing watering-place. There are 5 *brunnens* or mineral springs here, all near each other, and very similar in their chemical contents and taste, and containing a large proportion of common salt and carbonic acid gas. According to Liebig's analysis, 16 oz. of the Kaiser water contain 117 grains, or a sixty-sixth part, of common salt; and no less than 45 cubic inches of carbonic acid gas. These springs take their rise at the foot of the Taunus mountains, 200 yds. above sea-level.

HOMDOK, a town of Nubia, in the country of Halfay, on the r. bank of the Bahr-el-Azrek, 50 m. N of Sennaar.

HOME, a district of Upper Canada, near the centre of the prov., and bounded on the N by Simcoe district, and Lakes Simcoe and Gougichin; on the E by the Newcastle and Colborne districts; on the W by the Simcoe, Wellington, and Gore districts; and on the S by Lake Ontario. It consists of the co. of York and city of Toronto, and comprises 24 townships. Pop. in 1842, 58,853; in 1848, 106,352. Considerable diversity, both in soil and climate, is to be found within this district. To the distance of 2 or 3 m. from Lake Ontario, the tract extending along its banks is, with the exception of the cedar swamps, poor and sandy; while the townships bordering on Lake Simcoe have a superior level of 530 ft., and are extremely fertile. A succession of pine ridges intersect the district; and it is watered by numerous streams, of which the principal are Credit, Humber, Don, Rouge and Holland rivers, and Etobicoke and Duffin's creek. Next to Gore district, the Home is the best settled in the prov. Until recently, however, it laboured under great disadvantages from want of good roads. Its capital is Toronto.

HOME BAY, an indentation of the NE coast of British North America, on the W side of Baffin's bay, in N lat. 68° 40′, W long. 65° 0′. It is large in extent, but possesses little depth.

HOMENAU, Homonna, or Humenne, a town of Hungary, in the comitat of Zemplin, 36 m. ENE of Kaschau, and 34 m. E of Eperies, on the r. bank of the Udva, at the foot of the Carpathian mountains. Pop. 2,666. It has a fine castle.

HOMER, a township of Cortland co., in the state of New York, U. S., 141 m. W of Albany, drained by Toughnioga creek and its tributaries. Its surface is level, and its soil, consisting of sand and clay loam, is generally productive. Pop. in 1840, 3,572. The v. is on the W bank of the creek. Pop. 1,300.—Also a township of Medina co., in the state of Ohio. Pop. 660.—Also a village of Burlington township, Licking co., in the same state, 46 m. NE of Columbus. Pop. 201.—Also a township of Athens co., in the same state, on Federal creek. Pop. 912.—Also a township of Calhoun co., in the state of Michigan. Pop. 824.

HOMERSFIELD, a parish in Suffolk, 4¾ m. SW of Bungay, on the Waveney. Area 580 acres. Pop. in 1831, 233; in 1841, 291.

HOMER-TING, a district and town of China, in the prov. of Kan-suh, div. of Chin-se-fu.

HOMINGTON, a parish in Wiltshire, 3½ m. SSW of Salisbury. Area 1,340 acres. Pop. in 1841, 171.

HOMME, a river of Belgium, in the prov. of Luxemburg, which has its source in the dep. and to the SE of Saint-Hubert; runs in a circuitous course to the NW; passes Rochefort; and, after a course of about 30 m., throws itself into the Lesse, on the r. bank, at the v. of Eprave. Its principal affluents are the Pois, Ninson, Masseblette, and Wame.

HOMME (L'), a commune of France, in the dep. of the Sarthe, cant. and 1 m. NW of La Chartre-sur-le-Loir, on the l. bank of the Veuve, near the confluence of that river with the Loir. Pop. 1,118. It has a paper-mill.

HOMMEDAL, a parish of Norway, in the dio. and 24 m. NE of Christiansand, and bail. of Nedenoes. Pop. 2,195.

HOMMES, a commune of France, in the dep. of the Indre-et-Loire, cant. and 9 m. S of Chateau-la-Valliere, 21 m. N of Tours. Pop. 1,011. A fair for grain, legumes, hemp, and wax, is held here once a-year.

HOMMET (Le), a fortress of France, in the dep. of the Manche, cant. and 4 m. SW of Sainte-Mère-Eglise, on the r. bank of the Douve.

HOMNABAD, a town of Hindostan, in the prov. and 90 m. WNW of Hydrabad, near the source of the Manjera.

HOMOCHITTO, a river of the state of Mississippi, U. S., which has its source in Copiah co.; traverses that of Franklin; runs along the confines of Adam's and Wilkinson's cos.; and, after a generally S course of 90 m., joins the Mississippi on the l. bank. The most prosperous establishments in the state are situated on this river.

HOMOLITZ, a village of Hungary, in the German Banat, 10 m. SSE of Pancsova, and 14 m. ESE of Belgrade, on the r. bank of the Danube. Pop. 1,612. It has a Catholic and a Greek church.

HOMONNA. See Homenau.

HOMOROD (Almas), a village of Transylvania, in the country of the Szeklers, 9 m. SE of Udvarhely, and 34 m. E of Segesvar, on the Nagy-Homorod. It contains a Greek church, and has a saline spring. In the vicinity is the famous grotto of Amas or Almas.

HOMOROD (Nagy), a river of Transylvania, which has its source in the country of the Szeklers, in the district of Udvarhely; flows thence into the district of Reps, in which it receives the waters of the Kis-Homorod and Mühlenbach; and after a generally SSW course of 36 m., joins the Aluta 4 m. SE of Reps.—The Kis or Little Homorod flows W from, and in a direction nearly parallel to, the Nagy Homorod. It has a course of about 30 m.

HOMOROD (Okland), a village of Transylvania, in the country of the Szeklers, and S part of the district of Udvarhely.

HOMOROD (St. Marton), a village of Transylvania, in the country of the Szeklers, district and 6 m. SE of Udvarhely, on the r. bank of the Kis-Homorod. It has a celebrated mineral spring.

HOMS, Hems, or Hums, a large city of Asiatic Turkey, in the pash. of Damascus, situated in a plain of great fertility, 24 m. SE of Hamah, within 1 m. of the r. bank of the Orontes. Its walls have a circuit of nearly 3 m.; and its pop. is estimated at upwards of 25,000. It is the ancient *Emessa;* but the present town occupies only a fourth of the space contained within the ancient Saracenic walls.

HONAN, a central province, department, and town of China. The prov. extends between 31° 30′ and 37° N lat., and between 6° 20′ W and 0° 25′ E long. of Peking, or from 110° 5′ to 116° 35′ E long.; and is bounded on the N and NW by the prov. of Shan-se, on the NE by the provinces of Tche-le and Shan-tung, on the E by those of Kiang-su and Gan-Huwy, on the S by the prov. of Hu-pih, and on the W by Shen-se and Shan-se. It comprises an area of 420 m. from E to W, and of 390 m. from N to S; and contains a superficial area estimated by Barrow at 25,230 sq. m.; but by Gutzlaff and Martin at not less than 65,104 sq. m. Pop. in 1761, 16,332.507; in 1812, 23,037,171. The latter estimate, taking the area at 65,104 sq. m., shows a pop. of 353 to a sq. m. This prov.,—the name of which signifies 'South of the river,'—is intersected in the N by the Hoang-ho; and nearly all the other streams within its borders are branches of that river or of the Han-kiang, a tributary of the Yang-tse-kiang. The Tan-sia-chan mountains, a branch of the Peling chain, run through it in a SE direction, and form the line of separation between the basins of the above-named rivers. On the NW it is covered with ramifications of the same chain. It comprises some of the most fertile portions of the Plain, and from its beauty and luxuriance has been named 'the Garden of China.' In its greater extent it consists of finely undulating plains or cultivated hills watered by numerous streams and canals, and by several lakes, one of which, named Chao-king, in the dep. of Kwei-tih-fu, is remarkable for the brilliancy of the lustre which its waters impart to silk.—The principal productions of the soil are corn, rice, and other cereals, fruit, pot-herbs, tea, indigo, hemp, and rhubarb. Silk forms also an important article of local produce. The mountains are covered with wood, and on their rich pastures cattle are reared in great numbers. H. contains mines of copper, cinnabar, and mica; but its mineral wealth has hitherto been little explored. Silk forms the chief article of manufacture, and, next to agriculture, constitutes the principal object of local industry. In spite, however, of the natural advantages of its soil and position, this prov. has hitherto made comparatively little progress in commercial enterprise, owing probably to the internal facilities for self-sustenance which it possesses, and the indolence consequently induced in its inhabitants.—The prov. of H. comprises 13 divisions, viz., 9 fu and 4 chu; which are subdivided into 104 districts. It is under the jurisdiction of an independent *fu-yuen* or lieutenant-governor, who resides at the cap., Kai-fung-fu.—The principal cities are situated on the banks of the Hoang-ho, but they contain little worthy of note.—The division of Honan-fu lies in the W part of the prov., and contains 10 heen or districts. The town is 125 m. E of Kai-fung, to the S and on an affluent of the Hoang-hi, in N lat. 34° 43′ 15″. It is surrounded with mountains, and is large and populous. The suburbs and environs are adorned with gardens, and contain the tombs of several princes of the ancient dynasties. This town is considered by the Chinese the centre of the empire, and was also dignified by them as the central point of the earth. It gave to China the first emperor of the Song dynasty; and, under the name of Tung-king, formerly held an important place in the political movements of the country.

HONAU, a village of Würtemberg, in the circle of the Schwarzwald, obmt of Reutlingen, near the Echatz. Pop. in 1840, 450. In the vicinity is the castle of Lichtenstein, a curious Gothic structure rebuilt by Count Wilhelm de Wurtemberg.—Also a village of Baden, in the circle of the Middle Rhine, on the Rhine. Pop. 329.

HON-CHAN, a town of the Corea, 24 m. SSE of Hai-men, and 126 m. SW of Han-yang.

HONCO-TRE, or Babi, an island of the Hastings archipelago, in the gulf and near the coast of Siam, in N lat. 9° 45′, E long. 104° 47′.

HOND, a name sometimes given to the Western branch of the Scheldt. See SCHELDT.

HONDA, a town of New Grenada, in the dep. of Cundinamarca, prov. and 10 m. E of Mariquita, and 60 m. NW of Santa-Fe-de-Bogota, in a narrow valley, surrounded by lofty mountains, on the l. bank of the Magdalena, at the confluence of the Guali, in N lat. 5° 15′, W long. 76° 51′. Pop. 6,000. It is approached by 2 bridges thrown across the Magdalena, and by another over the Guali. It is of small extent; but its streets are paved and well laid out, and it has some good buildings. Of these the principal are the college, custom-house, convents, and hospitals. A church and many of its houses were destroyed by an earthquake which took place 15 years since. It has an active trade, being the principal depot for the merchandise of the provinces to the S of New Grenada. The chief productions of the environs are maize, sugar, and tobacco, and all the varieties of fruit common in tropical countries.

HONDA BAY, an indentation of the N coast of New Grenada, in the dep. of the Magdalena, and prov. of Hacha, SW of Cape Gallinas, in N lat. 12° 18′, W long. 71° 52′. It is large and commodious, and affords safe anchorage to the largest vessels. The Guaviros Indians have a pearl fishery here.—Also a bay on the N coast of the island of Cuba, 60 m. W of Havana, in N lat. 22° 55′, W long. 83° 11′.

HONDEGHEN, a commune of France, in the dep. of the Nord, cant. of Hazebronck. Pop, 1,375.

HONDELANGE, a department and commune of Belgium, in the prov. of Luxemburg, arrond. of Arlon. Pop. of dep. 961; of com. 377.

HONDO, or RIO GRANDE, a river of Central America, which has its source in British Honduras; flows NE; forming the line of separation between that territory and Yucatan; and, after a total course of 240 m., falls into the Caribbean sea.

HONDOLEN, or HONDAL, a village of Transylvania, in the comitat and 19 m. NNE of Hunyad. In the environs are mines of gold and silver.

HONDSCHOOTE, a canton, commune, and town of France, in the dep. of the Nord, arrond. of Dunkerque. The arrond. comprises 8 cant. Pop. in 1831, 13,402; in 1841, 14,065. The town is 11 m. ESE of Dunkerque, and 33 m. NW of Lille, near the canal of the same name. Pop. in 1841, 3,919. It has a manufactory of chicory, several bleacheries and tanneries, and extensive nursery-gardens. Lint and fire-wood form its chief articles of trade. A fair for hosiery, ironware, and linens is held here once a-year. The locality is noted for a defeat which the English here sustained by the French on the 8th Sept. 1793. H. was formerly noted for its woollen manufactures. Towards the close of the 16th century, it suffered from extensive conflagrations, and in 1708 it was nearly totally destroyed by the Dutch. The canal of H. extends from the canal de la Colme in the French dep. of the Nord to the canal of Furnes in the prov. of E. Flanders, a distance of nearly 20 m.

HONDS-EYNDE, a commune of Belgium, in the prov. of East Flanders, dep. of Sainte-Marguerite. Pop. 91.

HONDSHUFFEL, a commune of Belgium, in the prov. of East Flanders, dep. of Hautem-Saint-Lievin. Pop. 106.

HONDURAS, a state of Central America, bounded on the N by the gulf of H.; on the E by the Mosquito territory; on the S by the Nicaragua, the Pacific, and San Salvador; and on the W by Guatimala. Its coast-line extends from the mouth of the Motagua, on the W, to Cape Honduras, or Punta Castillo, on the E. A line drawn from the seaboard, along the meridian of 85° 50′, including the tongue of land forming the cape, passing a few miles to the W of the town of Truxillo, and running S till it strikes the Guayape, a head-branch of the Roman river, forms the boundary on the side of the Mosquito territory. Nicaragua claims for her frontier on the side of H. the upper part of the course of the Guayape; but a more distinct line of physical demarcation might be found along the crest of the highlands in which the Poyais and the Segovia take their rise; while the S frontier of H. might be physically traced by the ridge dividing the waters flowing N into the gulf of H. from those flowing S into the Pacific. The actual boundaries, however, are very uncertain, and appear to partake of the political fluctuations of Central America. It has an area estimated at 81,000 sq. m., and is divided into 7 departments, viz.:

Comayagua,	85,000
Tegucigalpa,	45,000
Choluteca,	38,000
Juticalpa,	45,000
Gracias,	79,000
Santa Barbara,	35,000
Yoro, including Truxillo,	81,000
	308,000

All these deps. are named from their chief towns; and Comayagua, nearly in the centre of the state, in about N lat. 14° 15′, W long. 87° 20′, is the cap. of the state. The dep. of Tegucigalpa lies to the E of Comayagua, and N of Choluteca; that of Choluteca appears to stretch from Comayagua S to the bay of Conchagua on the Pacific, on which it has the port of San Lorenzo. Juticalpa lies to the NE of Tegucigalpa, and N of Segovia. Gracias touches the confines of Guatimala, and is separated by the Lempa on the S from San Salvador. Yoro lies N and NE of Comayagua, comprising the coast from Puerto-de-Sal to Cape Honduras. Santa Barbara lies to the NW of Comayagua, and comprises the coast-line from the Puerto-de-Sal to the mouth of the Motagua.

The principal rivers of H. are the Chamelicon, the Ulua, and the Aguan, all flowing N into the gulf of H. The climate is hot and moist; and there are large tracts of soil of great fertility. The deps. of Santa Barbara and Yoro on the N coasts, like the other regions around the bay of H., are covered with magnificent forests, in which the mahogany and cedar abound. Vast herds of cattle roam over rich and unappropriated pastures in Choluteca, Yoro, and Comayagua. Tobacco of excellent quality is grown in Gracias. The mineral productions of this state are the most valuable in Central America. Gold, lead, and copper are wrought; and mining appears to be pursued to the neglect of agriculture and commerce.

When the city of Guatimala, on the 15th of September, 1821, proclaimed its independence of Spain, the prov. of H., the ancient intendancia of Comayagua, followed its example. Its subsequent history is sketched in our general article on CENTRAL AMERICA, and in that of GUATIMALA.

HONDURAS (BRITISH). See BELIZE.

HONDURAS (BAY OF), a large section of the Caribbean sea, washing the shores of British Honduras on the W, and of Guatimala and the republic of Honduras on the S. It is of a triangular form, and may be regarded as stretching from Cape Honduras, the N point of the bay of Truxillo, in N lat. 16° 1′ 30″, and W long. 85° 59′, from which point a line drawn NNW to Ambergris kay in N lat. 17° 52′ 50″, and W long. 88° 0′, will define the mouth of the gulf, having a width of 220 m. The depth of the embrasure to the mouth of the Caratasca is nearly equal. The coasts of this bay present numerous sinuosities and headlands. Of the latter the principal is Cape Three Points to the N of Amatic bay. The principal rivers which flow into it are the Xagua, Ulua, Motagua, the Felipe which forms the outlet of Lake Dulce, and the Gordo and Zacatan from Guatimala. The only important tributary from Yucatan is the Belize. Numerous islands and rocks are scattered over its area; of these the largest are the

islands of Turneffe and Ruatan. The portion of the Caribbean sea comprised within the coasts of Guatimala on the S, of Yucatan on the W, of Cuba on the N, and Jamaica on the E, is sometimes distinguished as the sea of Honduras. The sand-banks and rocks with which the entire extent of the bay of Honduras is studded render its navigation extremely dangerous. The currents, too, which flow through it run with great violence, especially when the wind blows from the N; and with the dense and misty atmosphere which generally attends that wind, renders the utmost skill of the pilot often unavailing.

HONE-COHE′, a port of Annam on the E coast, to the SW of Cape Avarella, in N lat. 12° 45′, and E long. 109° 12′. It is enclosed on the E by a small peninsula, and is of circular form, opening to the SE. In depth it varies from 5 to 19 fath.

HONELLY, a town of Hindostan, in the prov. of Mysore, 60 m. NE of Bednore, and 144 m. NW of Seringapatam, on the Toumbedra.

HONEOGE, a village of Richmond township, Ontario co., in the state of New York, U. S., 214 m. W of Albany, on the lake of the same name. Pop. in 1840, 200. The lake lies chiefly in Richmond co., and is 5 m. long and 1 m. in width.

HONEOGE FALLS, a village of Mendon township, Monroe co., in the state of New York, 214 m. NW of Albany, on a creek of the same name, which, in the centre of the village, has a fall of 30 ft., and within a distance of 2 m. successive falls of 100 ft. Pop. about 1,000. It has a quarry of excellent stone.

HONESDALE, a village of Texas township, Wayne co., in the state of Pennsylvania, U. S., 172 m. NE of Harrisburg, at the confluence of Dyberry and Lackawaxen creeks, and at the extremity of the canal and railroad of the latter name. Pop. in 1840, 1,086.

HONEYBROOK, a township of Chester co., in the state of Pennsylvania, U. S., 38 m. NW of Philadelphia. Its surface presents a gentle declivity watered by branches of Brandywine river, and has a fine light loamy soil. Pop. in 1840, 1,773.

HONEYCHURCH, a parish in Devonshire, 5½ m. SE of Hatherleigh. Area 710 acres. Pop. in 1841, 69.

HONEYVILLE, a village of Page co., in the state of Virginia, U. S., 125 m. NW of Richmond, on the E side of Shenandoah river.

HONFLEUR, a canton, commune, and town of France, in the dep. of Calvados, arrond. of Pont-l'Evêque. The cant. comprises 14 com. Pop. in 1831, 16,071; in 1841, 16,914. The town is 10 m. N of Pont-l'Evêque, 8 m. SE of Havre, and 35 m. NE of Caen, pleasantly situated on the l. bank of the embouchure of the Seine, at the head of a small bay formed by that river. Pop. in 1841, 9,580; in 1846, 9,506. It is ill-built and ill-fortified; and its port, although good, is only accessible at high-water. The outer harbour is spacious, and contains 2 basins in which vessels of the largest size can find safe anchorage; but it too is difficult of access. The only public buildings worthy of note are the custom-house, bank, and hydrographical school. It has considerable manufactories of cordage, nails, lace, paper, sea-biscuit, and chemical substances, several sugar-refineries and breweries, saw-mills and cooperages, good building-docks, and in the environs extensive salt-works. The fishing of herring, mackarel, and whiting, is extensively carried on from this place; and numerous vessels are annually despatched hence to the fisheries of Newfoundland and Greenland. Butter, fruit, eggs to the number of 7,000 weekly, and grain, are exported hence to England. Fairs for cattle, mercery, iron-ware, &c., are held here twice a-year. H. has long been noted for the skill and hardihood of its mariners. The environs are well cultivated, and produce grain, melons, and apples in great abundance. Silk is also successfully cultivated in the locality. On the summit of the adjacent Côte-de-Grâce is a chapel noted for the view which it commands, and much resorted to by sailors. H. was formerly a place of great prosperity, and carried on an extensive trade with Spain; but has rapidly declined under the rival influence of Havre. It was taken from the English in 1440 by Charles VII., and was the last town in Normandy which submitted to Henry IV.

HONGER, a commune of Belgium, in the prov. of East Flanders, and dep. of Marie-Audenhove. Pop. 283.

HONGG, a village of Switzerland, in the cant. and 4 m. NW of Zurich, on a height near the r. bank of the Limmat. Pop. 1,100. Wine is cultivated in the environs.

HONG-HAI, an islet off the E coast of China, in N lat. 22° 45′, E long. 115° 12′, 2½ m. SSE of Mace point, on the mainland. It rises to an alt. of 240 ft. above sea-level. The large indentation of the coast between Fokai point, in N lat. 22° 33′ and E long. 114° 54′, and Chelang point, in N lat. 22° 39′ and E long. 115° 34′, is known as H. bay; and the island of H. bears 20 m. NE of the former point, and 23 m. WNW of the latter. The name may be restricted to that portion of the bay which lies between Ross head on the W, and Ty-sami head on the E, or generally to the N of the latitude of the islet.

HONG-KIANG, a river of China, which has its source in the mountains which intersect the NE part of the prov. of Yunnan, and about 15 m. NW of Keuh-tsing. In the upper part of its course, it bears the name of the Hong-chui-kiang; runs first S; then bends abruptly NE, flows through the S extremity of the prov. of Kwei-chu, enters that of Kwanse, receives the Pan-kiang on the l.; takes thence the name of Hong-kiang, and pursues its course ESE, is joined by the Lieu-kiang, and, 15 m. N of Tsin-chu, unites with the Ngo-vu-kiang to form the Long-kiang or Si-kiang.

HONG-KONG [*i. e.* according to some 'the Red harbour,' according to others 'the Island of fragrant streams'], one of a number of islands called by the Spanish LADRONES, or 'Thieves,' from the notorious habits of the inhabitants. In the 'History of the Pirates who infested the China sea from 1807 to 1810,' written by a Chinese, and translated by Mr. Neumann, mention is made of this island as the chief retreat of these ruffians. It lies about 40 m. E from Macao, and is distant from the Great Lamma 16 m. in a NE direction. It is of irregular form, about 9 m. long, and from 2 to 4 m. in breadth. It is separated from the mainland of China by a channel of the sea which varies in width from a ½ m. to 3 m. The Lymoon pass (*a*), leading from Tathong channel on the E side of the island into H. road, or the channel on the N, is about half-a-mile across. The East Lamma channel, on the SW side of the island, is from 1½ to 2 m. wide. Its physical aspect is that of a broken ridge of hills running from NNW to SSE, and rising abruptly from the sea, particularly on its N face, where stands the straggling town of Victoria (V). The scenery is composed of barren rocks, deep ravines, and mountain-torrents. The general appearance of all its parts is similar, but the E portions are bolder; in this quarter the vegetation is more sparing and stunted, the outlines are more rounded, and the large bare masses of rock are unscreened by foliage. The W side is evidently preferable, as the valleys descend with less rapidity, and a certain quantity of soil is collected; vegetation thrives better and is more varied, some stunted pines try to assume the importance of trees, and the shores bear no marks of the violence of the ocean. Water abounds everywhere; and each valley of the least pretension sends its stream to the cultivated grounds near the shore, where a portion is retained for irrigation, and the remainder is permitted to find

its way to the sea. A correspondent of the *Athenæum* describes the island as "perfectly mountainous, and sloping in a rugged manner to the sea; having here and there, almost at equal distances, all along the coast, deep ravines, which extend from the tops of the mountains, and gradually become deeper and wider as they approach the sea. Immense blocks of granite are in these valleys or ravines, which have either been bared by the rapid currents of water, or which have tumbled into them from the mountain-sides at some former period. In each of these ravines there is abundance of excellent water, flowing at all seasons of the year. During the wet season—for it rains in torrents then—these little streams become very soon swollen, and then rush down from the mountains with a velocity which sweeps everything before it. There is very little flat ground capable of cultivation on the island. Indeed the only place of any size is a small valley, of a few acres in extent, lying to the E of the town of Victoria, called Wang-nai-chung by the Chinese, and sometimes 'the Happy valley' by the English; here we have numerous small gardens and paddy fields, very well managed by the inhabitants."—The geology of this island resembles that of the S of China, presenting generally rotten rock, hard stiff clay, and red sandstone. A considerable portion of the island is of trap formation, and granite occurs with it in several quarters. The highest peak, which has received the name of Victoria peak (*b*), has an alt. of 1,825 ft. About 1 m. to the SE of Victoria peak is Gough peak (*c*), alt. 1,575 ft. Mount Parker (*d*), in the E part of the island, has an alt. of 1,711 ft.—A number of small rocky islets lie off H. Of these the principal are Lochow (*e*), Maskong (*f*), Gantchow (*g*), Taplichow (*h*), Green island (*i*), and Hongheong (*k*).—The only produce of the island for exportation is granite, which employs a considerable number of boats of from 70 to 100 tons. This trade in 1849 employed upwards of 1,000 people.

Climate.] The climate of H. is variable, and, from its sudden transitions, dangerous to the health of its residents. Situate on the verge of the tropics, a dry burning heat is experienced while the sun is approaching; and during the rainy monsoon a pestiferous gas is emitted from the soil. Mr. Martin assures us that the climate produces the most weakening effects on the European constitution; that few Englishmen can expect to live many years after residing here for some time; and that even in the Indians and Malays it is speedily destructive of life. This testimony is flatly contradicted by the author of *The Chinese as they are*, who tells us that "the harbour of H. is famed among foreign residents in China for its extreme healthiness; and many a sojourner at Macao, after trying what medicine and exercise could do for him there, has at length repaired to H., and found what he had so long sought for in vain. The writer of these remarks," he adds, "while at the place last-mentioned, in the spring of 1838, made full proof of physic, diet, rest, and light excursions, but discovered that he was growing weaker, instead of improving, under this treatment. Just at the time when hope began to give place to despair, an American captain invited him to take a trip to H.; the invitation was accepted, and after the lapse of a fortnight he was so invigorated by the breezes of that delectable place, that he went to Canton and worked through a summer of unusual sultriness." The truth seems to be that a pestilent miasma arises here as elsewhere from undrained grounds; and that the barracks—in which the greatest mortality has occurred—are both ill-situated and overcrowded. The correspondent of the *Athenæum*, already quoted, says on the subject of climate, and writing in 1843: "Fever prevails to a great extent during the hot season, and it is extremely fatal. Those who are seized generally fly to Macao, which is considered much more healthy. The S side of the island is comparatively healthy; and there are certain parts of the N much more so than others; but that part near the W end of the bay called West Point, and the valley of Wang-nai-chung, seem to be most unhealthy. It may be possible to improve such places to a certain extent by draining, and by removing the rice-fields; but I fear the principal cause can never be got rid of, which I believe to be the situation of the town—on the N side of the hills, and sheltered from the breeze of the SW monsoon. During the hot season, when we want the refreshing breeze, the hills prevent it from reaching us; and when the cold season comes, we have enough of the N wind when we could dispense with it. I cannot help thinking, with many others here, that the opposite shores of Cow-loon would have been by far the best place for the English town; the ground is comparatively level and fertile, which would have given the inhabitants an opportunity of having gardens and promenades, while it would have combined all the advantages of Macao, by being fully exposed to the refreshing breeze of the SW monsoon." The deaths among the Chinese pop. in 1848, amounting to 20,338 souls, were 227, or 1·12 per cent.; in 1847 they were 0·15 per cent. The mortality among the fixed White or European pop. in 1848, amounting to 963 souls, was 83, or 8·61 per cent.; in 1847 it was 6·34 per cent. In 1849 the mortality in the white pop. was 65, or 6·58 per cent. The most prevalent diseases are fevers of the remittent and intermittent type, dysentery, and rheumatism.

Vegetation.] The vegetation of this island during the rainy season is but small; in the other months of the year, there is none. There are few trees of any size to be met with, except mangos, lee-chees, longans, wampes, guavas, and others, which are

planted and reared in some of the most fertile spots for the sake of their fruit. *Pinus Sinensis* is met with everywhere on the hill sides, but it never attains any size, partly owing to the sterility of the soil, partly to the keenness of the NE wind, and partly to the practice which the Chinese have of lopping off its under branches yearly for firewood. Several species of *Lagerstræmia*, which are met with both wild and in gardens, when in bloom remind one of our own beautiful hawthorn. The Screw pine, and two or three well-known species of palm, occur on the low land near the sea. As we ascend, the hill-side and ravines become rich in melastosmas, lycopodiums, ferns, *Phaius grandifolius*, and several other familiar orchidaceous plants. It is a curious fact, however, that all the fine flowering plants which we admire so much in England, are found high up on the hills: the azaleas and clematises, for example. To the valleys is restricted nearly all the cultivation of the island. The selection is usually made where these terminate on the coast, the sides of the valleys here expanding, and the supply of water for irrigation being more abundant and regular. Still the surface requires some artificial levelling; and the peasantry often distribute it into a series of broad terraces, from 1 to 2 ft. above each other, which, from a distance, resemble gigantic staircases. Great neatness is conspicuous in their formation; sometimes the sides are faced with stone-work, but an earthy barrier usually suffices, and the outline is formed with much regularity. A supply of water from the neighbouring stream is admitted by suitable channels, according to the necessities of the growing crop; and sometimes women pour water over the plants, from large buckets of bamboo with long spouts. This they often practise in the middle of the day, when the sun is at its highest. The staple production of these terraces is the sweet potato, but yams and cocoas are also cultivated; turnips are evidently favourites, and it is rare to see an establishment without a corner devoted to a bed of onions.

Population, Government, &c.] In Jan. 1841 H. was ceded to Great Britain, and great offers were made by Captain Elliot and Commodore Sir Gordon Bremer to induce settlers to go there. The floating population on its being taken was about 7,800 smugglers, stone-cutters, and vagabonds; in March 1842 it rose to 12,360; in July 1845 it was about 19,000, but of the worst characters from the neighbouring coast of China; in 1848 it was 21,514, exclusive of troops, viz.: 20,338 Chinese, 642 Europeans, 321 Portuguese, and 213 Indians and Malays. The pop. in 1849 had risen to 29,507, of whom 28,297 were Chinese, and 656 Europeans.

Revenue.] The income and expenditure of this colony for the 4 years from 1846 to 1849, were as follows:

	Income.	Expenditure.	Military expenditure.
1846	£27,047	£60,351	...
1847	31,078	50,959	£115,149
1848	25,091	62,658	80,778
1849	23,617	38,986	75,943

The principal sources of revenue are rents, licenses and police assessment.—The heaviest items of expenditure are judicial and police departments. The governor enjoys the enormous salary of £6,000; the chief-justice has £3,000; the attorney-general, £1,500; the police magistrate, £900; while the colonial secretary and his department cost £3,654.

Harbour.] One of the principal recommendations of H. is the excellence of its harbour, which has an entrance from the S, and another from the N; while at the angular point formed by the two arms of the strait there is a convenient berth. The arm of this strait, which separates Chin-sang-Chow and Obtee-Chow, two islands to the N of the Great Lamma, stretches out to the W, and has on the S side a small cove with two isles in it. To the W of these is a very snug berth, where the largest vessels may be land-locked and moored to the shore. Opposite this place the tide flows up a low valley, where a large stream of fresh water falls into the sea, which may be approached in a boat of any size at high water. The harbour bears NNW by compass from the E end of the Great Lamma; and the entrance may always be known by a white beach at its head which is visible at several miles' distance. The strait being once entered, the navigation is clear. The other entrance to the harbour is from the NE, on the N side of a group of three islands, which, with two or three rocks or islets, are situated near the NE point of the island. Ships usually anchor in about 10 fath. water, but in the deep bight in the mainland, the depth of water varies from 3 to 5 fath. As this inner harbour is completely land-locked, it resembles a beautiful lake, surrounded by some towering peaks of steep and rugged ascent. At the top of this inner harbour, on the mainland, stands the v. of Cowloon (C). From the harbour of H. there is a passage to the E about half-a-mile in breadth, where in some places there is 25 fath. water; but as this course is rather intricate, and requires a variety of winds to make it an easy one, ships proceeding to the N prefer a sweep round the island of H., and dropping down the Lamma channel, to steer S and E till they emerge into the China sea.

Towns.] The principal Chinese villages on the island are those of Shekpywan (*l*), Cheagtchu (*m*), and Sheagaw (*n*), all of which are on the S side. At the latter place there is an extensive military station for the English garrison.—The town of Victoria is built on the N side, and consists of houses planted in the most irregular manner around the shores of the bay. A firm broad road, 24 m. in length, with military posts every 6 m., has been made all along the shore, and here forms the principal street of Victoria. Among the principal public buildings are the Government-house, the Oriental bank branch-office, the Medical Missionary hospital, and the Roman Catholic and the Episcopalian chapels. There are 4 Dissenting chapels, 3 Chinese temples, and a Mahommedan mosque in the town, and 5 educational establishments. The pop. in 1849 was 13,087. We extract from the *Hong Kong Almanack and Directory for* 1848, some details of life in this Anglo-Chinese colony. "Upwards of 80 different trades are practised by the Chinese in Victoria. Of these the principal are butchers, bakers, chandlers, shop-keepers, house-builders, road-makers, carpenters, cabinet-makers, bamboo-workers, blacksmiths, tin and copper smiths, painters, glaziers, ivory workers, silversmiths, umbrella makers, tailors, shoemakers, pawnbrokers, opium refiners, washermen, and a variety of others. The bread made by Chinese bakers is mostly of maize flour, and from the use of inferior leaven is coarse and of a dark colour, oftentimes sour; contractors for supplying the soldiery and ships of war are the principal purchasers. The Chinese eat very little bread among themselves; but a plate of hot toast and butter meets with no manner of contempt if placed in their way. The bread which may be called indigenous to China is boiled in small round loaves like dumplings, and sold for about a halfpenny each. A Chinese chandler's store is a complete emporium of varieties. The front of the shop, in addition to the hanging sign, which is disposed *vice versâ* to English fashion, is graced with fat pork in chops, dried and varnished to the colour of mahogany, dry pickled ducks, gizzards, hams, strings of sausages cured by exposure

to the sun, salt fish and huge baskets of rice, of various shades and qualities. In the interior of the store, labelled jars of different kinds of pickles are arranged on shelves, coloured candles and tinsel paper for sacrificial offerings, brooms, baskets, and hats, all constructed of the universal bamboo, showily painted lanthorns, made by varnishing over a light bamboo frame-work, together with bundles of different coloured string hang from the ceilings; and on the floor large jars of oil, pickled cabbage, samshew, beans, tea, and sugar; whilst some portion of the narrow counter displays small baskets of loch-soy (resembling vermicelli in appearance, and used for the same purpose), packs of cards, Chinese crackers, &c. &c.; never less than three, and in large establishments a goodly number of assistants are constantly ready to serve customers; one stands in the centre of the shop and bawls out the article required, another prepares the same, and the clerk sitting on the money-box behind the counter makes entry simultaneously with the delivery. Business is thus carried on with a degree of carefulness and precision exemplary even to Europeans. That greatest bane, and, to present appearance, immovable obstacle, to an extension of legitimate commerce between China and the rest of the world, the opium traffic, which through the obstinate and mistaken policy of the Chinese government, subserves the interests of the many to the fortunes of the few, is not in Victoria—proportionably to the trade in other parts of China—carried on to any great extent; opium is refined and openly retailed on the opposite shore of Kowloon, but the amount of bribe to the Chinese mandarins for winking at this infraction of the law must be very high, or those parties who have for the two years previous to July last made payment to our government of an annual duty of £4,000 for farming the licence to retail, could not have competed with them in the sale; since that time the exclusive right for one man to retail opium in Victoria has been done away with; and licenses are now indiscriminately issued in three different forms; 1st, to sell in quantities less than a chest (which weighs about $1\frac{1}{4}$ cwt.): for this 360 dollars per annum is paid; 2d, for license to boil down and refine the opium preparatory to being used, for which the charge is 240 d. per ann.; 3d, for keeping an opium-smoking divan; and for this indulgence a license is charged at 10 d. per month." A good road has been constructed across the island from Victoria to Stanley.

Commercial value.] The European shipping which arrived at Victoria in 1847 amounted to 694 vessels = 229,465 tons; the Chinese junks to 50,058 tons. In 1848 the shipping, exclusive of Chinese vessels, which arrived in H. was 700 = 228,818 tons. In 1849, 896 vessels = 293,711 tons, arrived. The imports in Chinese vessels consist principally of sugar, alum, sulphur, rice, nut-oil, and salt; and in 1847 amounted to £498,239. The exports, which were principally opium and long cloths, amounted in 1847 to £226,130. Chinese sugar to the extent of 21,529,600 lbs., and value of £144,827, was shipped at H. for New South Wales, India, and England, in 1847. The value of the exports in 1848 was £1,254,703. The imports in Chinese vessels in 1848 amounted to £169,446; the exports to £236,298, of which £147,936 was in sugar. The occupation of H., it is alleged, was first brought about by opium speculators, who thought it a fit place for their traffic; but the opinion of Dr. Gutzlaff is, that this place was only of value when all the other ports of China were closed. To open trade with other ports to the northward, he and Mr. M. Martin argue, an island towards the middle of the coast ought to have been selected. The cause of the retention of H., at the time when the Chinese government on signing the treaty with Sir Henry Pottinger was prepared to make great sacrifices, arose from ignorance of the insalubrity of H., and from the belief that Chusan was a most unhealthy spot for Europeans. When H. was selected by Captain Elliot, the sphere of the British commerce in China was small; but now the case is different, and, it is contended, there are no sound reasons, either in a military, civil, political, social, religious, financial, or commercial light, for preferring it to Chusan, except as an opium entrepot in time of war; but that is scarcely a sufficient justification for the enormous waste in the maintenance of this colony, not only of money, but of the lives of the troops and settlers. On the other hand, Mr. Matheson, with whom several of the best-informed Chinese merchants concur, asserts that prior to our taking possession of H., and for some time after, all the native traders between Canton and the E coast passed through its harbour, and generally anchored there. When the first Europeans settled at H., the Chinese showed every disposition to frequent the place, and there was a fair prospect of its becoming a place of considerable trade. The junks from the coast made up their cargoes there, in place of going to Canton and Macao; these cargoes generally consisted of opium, cotton shirtings, a few pieces of camlets, and other woollens, and States produce; such as pepper, betel-nut, rattans, &c. "Our own firm," he says, "was the first that built a warehouse in the colony; we established a regular salesman in it, and in order to encourage the trade, were prepared to sell the smallest quantity of any article, such as 1, 10, or 20 pieces of shirtings or camlets, and any portion of a chest of opium, to suit the means of purchasers. Our sales in this way averaged during the first year about 8,000 dollars per month. This went on for nearly 3 years; that is, from the beginning of 1841 till the autumn of 1843; and the amount of our sales was progressively on the increase. Some months they amounted to 15,000 d. This was what I call our 'retail trade;' and in addition to it, we sold large quantities of opium and other articles, some of our transactions amounting to 10,000 d., 20,000 d., and 50,000 d." Up to 1843, H. was literally a free port: there were no restrictions of any kind; people went and came as they chose; and the British character stood so high in the estimation of the natives, that many respectable Chinese from Canton and Macao began to make arrangements for moving to H. Had the same unrestricted freedom of trade gone on, H. would inevitably have become in time the emporium of China. The South-sea whalers would have resorted to it for supplies, and for shipping their oil to the European and American markets. Native Chinese, who return to their own country after having realized fortunes in Manilla, Java, and other European colonies, would have settled there; and the security to person and property which British laws and usages were supposed to guarantee, would have attracted to H. many wealthy Chinese, who, under their own government, are ever in dread of being 'squeezed' by the government officers. In 1843, however, peace was proclaimed; H. was regularly ceded to us; a formal government was established; great expenses were incurred; and it became the study of the government to raise as large a revenue as possible to meet the expenses of the place. Up to the departure of Sir H. Pottinger, no means of raising a revenue were resorted to, except the land sales; but the police practised various modes of defrauding the Chinese settlers; and from this time may be dated the reverses of H. By our treaty with China, it was stipulated that no Chinese vessel should be allowed to anchor in the harbour of H. without a pass from some Chinese mandarin. Of course no mandarin would grant a pass without a heavy fee; and by this one act the junk-trade to H. was in a manner exterminated. But this was further aided by other circumstances. A body of police was established, composed of Chinese of the most abandoned character; these men, under the cloak of their office, committed all manner of atrocities, more especially afloat, in the harbour, where their proceedings more easily escaped notice. Boats and junks were plundered, and fees of all kinds were extorted from them under false pretences. Since then the establishment of the opium and other farms has completely extinguished the trade of H. The junks, instead of passing through the harbour as formerly, in going and coming between the Canton river and the W coast, now avoid it as they would a pestilence, and pass to the N of the island. Depot-vessels have taken up their station at a place called Cunsingmoon, about half-way between Macao and Bocca-Tigris, where there is a tolerable harbour: and, since 1844, a considerable native town has sprung up there, with a pop. of from 3,000 to 4,000, composed entirely of petty traders and junk-men, who have deserted H. "The principle that H. is to support itself," Mr. M. goes on to say, "must be entirely abandoned; it can only be viewed as a depot or warehouse for British merchandise, which must be kept up at the expense of the British nation, or rather out of the revenue derived by the nation from the China trade. It is utterly impossible and hopeless to expect that the few British merchants resident in China, not 100 in number, can ever support a settlement like H. Though it would take years to repair the evil which misgovernment has brought upon H., I am still of opinion that a prudent course would in time restore its prosperity, and that it would eventually become one of the principal mercantile emporia in the world. Nothing can exceed the advantages of its harbour, being not only one of the safest in the world, but close to the ocean; and, from having two entrances equally safe, it is accessible with every wind. It would be a central point for the whole whaling-trade in the Pacific, as well as for the general commerce of the East, ranging from Singapore to Japan, and thence along the W coast of America to Cape Horn, including our Australian colonies, the Philippines, Sumatra, Java, &c. H. is also favourably situated as a depot for sugar, cassia, camphor, and other articles of China produce. It is proper to add, in reference to the China junks frequenting the harbour, that though by treaty we are bound not to allow them to anchor without a pass from a Chinese mandarin, this regulation, strictly observed for a year or two by the H. government, has of late, at the earnest entreaty of the British merchants, been dispensed with. But unfortunately before this was done the junks had ceased to come, and will never frequent the harbour again until the farms are abolished."

H. is 1,520 m. steaming distance from Singapore;

3,037 m. from Point de Galle in Ceylon; 5,050 m. from the Sandwich islands; and 6,200 m. from Vancouver's island and the Columbia river.

HON-HERGIES, a commune of France, in the dep. of the Nord, cant. of Bavay. Pop. 1,030.

HONILY, a parish in Warwickshire, 5½ m. NNW of Warwick. Area 660 acres. Pop. in 1841, 50.

HONIMA, Uleastre, or Saparua, an island of the Asiatic archipelago, in the Banda sea, to the S of the island of Ceram, in S lat. 3° 35′, and E long. 128° 40′. It produces rice and cloves.

HONING, a parish in Norfolk, 3 m. ESE of North Walsham. Area 1,310 acres. Pop. in 1841, 344.

HONINGHAM, a parish in Norfolk, 8¼ m. SE of East Durham, on a branch of the Wensum. Area 2,780 acres. Pop. in 1831, 365; in 1841, 358.

HONINGTON, a parish in Lincolnshire, 5 m. NNE of Grantham. Area 1,250 acres. Pop. in 1831, 365; in 1841, 149.—Also a parish in Suffolk, 7¼ m. NNE of St. Edmund's Bury. Area 1,450 acres. Pop. in 1831, 248; in 1841, 273.—Also a parish in Warwickshire, 1½ m. N of Shipton-upon-Stour. Area 2,600 acres. Pop. in 1841, 335.

HONITON, a parish, borough, and market-town of Devonshire, 16½ m. ENE of Exeter, and 148 m. WSW of London, on the Otter, and intersected by a small streamlet tributary to that river. Area of p. and borough 2,800 acres. Pop. of p. in 1831, 3,509; in 1841, 3,895. The town of Honiton is situated in a beautiful vale, on a rising ground, on the S side of the Otter. The town principally consists of one straight and spacious street of considerable length, and well-paved and lighted. The houses are almost all modern, an improvement that originated in fires, which at four periods nearly destroyed the town; namely, in 1747, when three fourths of the houses were burnt down; in 1765, when 160; in 1790, when 37; and in 1797, when 30 houses were destroyed. Through the main street runs a stream of water, from which the inhabitants are supplied by a dipping-place opposite almost every door. The parish-church erected in 1836–8 is a fine structure. Under the reform act the boundaries of the parl. borough of H. coincide with those of the parish, and the borough returns 2 members. The number of electors registered for 1837 was 455; in 1848, 353. H. is a polling-place for the county.—It is said that the manufacture of serge was first introduced by the Lollards at H.; but the principal manufacture of the town long consisted of the celebrated broad bone or thread-lace edgings, also called Bath Brussels lace. In the beginning of the present cent. the manufacturers of H. employed 2,400 hands in the town and neighbouring villages, but in 1820 they did not employ above 300.

HONLEY, a chapelry in Almondbury parish, W. R. of Yorkshire, 4 m. SSW of Huddersfield, on the Colne. Area 2,790 acres. Pop. in 1831, 4,523; in 1841, 5,383.

HONNAY, a department and commune of Belgium, in the prov. of Namur, arrond. of Dinant. Pop. of dep. 395; of com. 300.

HONNECOURT, a commune and town of France, in the dep. of the Nord, cant. and 5 m. S of Marcoing, near the Schelde. Pop. 1,060.

HONNEVAIN, a commune of Belgium, in the prov. of Hainault, dep. of Blandain. Pop. 167.

HONNIFELD, a village of Prussia, in the prov. of the Rhine, regency and 14 m. NNW of Coblenz, circle and 9 m. N of Neuwied. Pop. 214. It has some iron-works.

HONNINGEN, a town of Prussia, in the prov. of the Rhine, regency and 18 m. NW of Coblenz, and circle of Neuwied, on the r. bank of the Rhine. Pop. 1,230. It has a castle.

HONNINGEN, or Huyngen, a town of Prussia, in the prov. of the Rhine, regency and 33 m. WNW of Coblenz, circle and 6 m. N of Adenau. Pop. 420. Wine is cultivated in the environs.

HONO, a small island in the Cattegat, off the coast of Sweden, at the mouth of the Gota, 15 m. W of Gottenburg.

HONOLULU, or Honoruru, a town, the capital of the Sandwich islands, in the island of Waohu or Oahu, in N lat. 21° 20′, and W long. 157° 45′. Pop. 6,000, of whom about 250 are English or Americans. It is situated on the S side of the island, and consists of huts built in the form of hay-ricks; but in many instances comfortably fitted up in the interior, and adorned with neat gardens filled with banana and other shady trees. It has a safe and commodious port and building-docks, and is already an entrepot for European and Indian goods, whence they are re-shipped to the new states of Spanish America. It is also a rendezvous for most of the whale-ships. Sometimes 80 sail of them, each of from 300 to 500 tons, are at anchor there for months at the same time. In 1835 the amount of imports at H. was 300,000 dollars; of exports 620,000. Of the exports 320,000 d. were foreign produce, and 300,000 d. native produce. A permanent commerce in connection with California, and indirectly with Australia, New Zealand, Calcutta, and China, seems to be springing up at this port. Two newspapers are printed here.

HONOR-DE-COS (L'), a commune of France, in the dep. of the Tarn-et-Garonne, cant. and 8 m. ESE of La Francaise, on the r. bank of the Aveyron. Pop. 1,535.

HONORE′ (Saint), a commune of France, in the dep. of the Nievre, cant. and 6 m. S of Moulins-en-Gilbert. Pop. 1,051. It is noted for its thermal sulphureous springs and baths. Fairs for cattle are held here twice a-year. This village occupies the site of an ancient Gallic town, rebuilt by the Romans, and named by them *Arbandata*. It received its present appellation after the establishment of the Christian religion in Gaul.

HONORINE-LA-CHARDONNE (Sainte), a commune of France, in the dep. of the Orne, cant. and 1½ m. NE of Athis, 28 m. NNE of Domfront. Pop. in 1841, 1,541.

HONORINE-LA-GUILLAUME (Sainte), a commune of France, in the dep. of the Orne, cant. and 6 m. W of Putanges, and 18 m. WNW of Argentan. Pop. in 1841, 1,274. In the environs are quarries of excellent granite.

HONORURU. See Honolulu.

HONRUBIA, a town of Spain, in New Castile, in the prov. and 35 m. S of Cuenca, and partido of San Clemente. Pop. 1,820. It has several churches, one of which stands in a square, and is a handsome edifice, a custom-house, and several convents. The manufacture of linen, coarse woollen fabrics, and tape, forms, with agriculture, the chief branches of local industry. A fair is held here once a-year.

HONSEM, a commune of Belgium, in the prov. of Brabant, dep. of Willebringen. Pop. 196.

HONT, a commune of Belgium, in the prov. of Antwerp, dep. of Beersse. Pop. 168.

HONTANARES, a town of Spain, in New Castile, in the prov. and 34 m. ENE of Guadalajara, and partido of Brihuega, in a level tract near the Henares. Pop. 172.

HONTANAS, a town of Spain, in Old Castile, in the prov. and 15 m. W of Burgos, partido and 5 m. E of Castroxeriz. Pop. 318. It is situated at the entrance of a valley, and contains a parish, and has 2 hermitages and a convent. Common cloth is the only article of local manufacture.

HONTANAYA, a town of Spain, in New Castile, in the prov. of Cuenca, and partido of Belmonte, 38 m. S of Huete. Pop. 632.

HONTANGAS, a town of Spain, in Old Castile, in the prov. of Burgos, and partido of Roa, 8 m. SW of Aranda-de-Duero. Pop. 650.

HONTANX, a commune and town of France, in the cant. and 5 m. S of Villeneuve, on the Ludon. Pop. 1,198. Fairs for horses and cattle are held here twice a-year.

HONTECILLAS, a town of Spain, in New Castile, in the prov. and 29 m. S of Cuenca, and 7 m. NE of Honrubia, on the r. bank of the Xucar, and on the road from Valencia to Madrid. Pop. 608. It contains a parish, and has 2 public granaries. Linen and varieties of common cloth are manufactured here.

HONTEM, a commune of Belgium, in the prov. of Liege, dep. of Baelen. Pop. 85.

HONTH-KIS, or LITTLE HONTH, a district of Hungary, in the W part of the comitat of Gömör. It is covered with mountains, ramifications of the Carpathian chain, and is watered in all its extent by the Rima. Its chief towns are Theissholz and Gross-Steffelsdorf.

HONTH, HONT, or NAGY-HONTH, a comitat or administrative prov. of Hungary, comprising an area of 970 sq. m.; bounded on the N by the comitats of Sohl and Bars; on the E by the comitat of Neograd; on the S and SW by that of Gran, from which it is separated to a great extent by the Danube; and on the W by the comitat of Bars. Pop. in 1837, 130,804, of whom more than half were Slavonians. The majority, amounting to 75,000, were Catholics. It is covered in its entire extent by ramifications of the Carpathian chain, and has a general inclination to the S. The principal rivers, the Krupina, Schemnitz, and Szeklencze, all contribute their waters to the Danube, the two former being tributaries of the Ipoly, and the latter to the Gran. Although generally mountainous it possesses considerable fertility, especially in the valleys, and produces grain of all kinds, wine, lint, hemp, tobacco, and wood. Of the arable land, estimated at 347,871 jochs, about 140,000 j. are under cultivation; 13,800 j. are devoted to the culture of the vine; and 144,742 j. covered with wood. Horses and cattle are reared in great numbers on its pastures. This com. possesses mines of gold, silver, lead, copper, iron, and arsenic, quarries of limestone, and some mineral springs. The exploitation of the forests and mines forms, with the manufacture of pottery and of wooden ware, the chief branches of local industry.—This comitat, of which Ipoly-Sagh is the cap., is divided into 4 järäs or marches, viz. Bath, Bozok, Ipoly-Sagh, and Schemnitz; and contains 3 free towns, Schemnitz, Puganz, and Dilln, 9 burghs, and 176 villages.

HONTINENA, a town of ancient foundation of Spain, in Aragon, in the prov. of Huesca, and partido of Fraga, on the road from that town to Sarinena. Pop. 810. It has a parish-church, a convent, and a custom-house.

HONTOMIN, a town of Spain, in Old Castile, in the prov. and partido and 15 m. NNE of Burgos, at the source of the Omino, a tributary of the Ebro. Pop. 327. It is much decayed, but still retains some portions of its walls and gates. In the environs are extensive quarries of granite and breccia.

HONTORIA-DE-LA-CANTERA, a town of Spain, in the prov. and partido and 11 m. S of Burgos. Pop. 256. It has a large parish-church.

HONTORIA-DE-CERRATO, a town of Spain, in Leon, in the prov. and 6 m. SE of Valencia, and partido of Baltanas-y-Dehesa-de-Valverde, in a valley. Pop. 248.

HONTORIA-DE-PINAR, a town of Spain, in Old Castile, in the prov. and 42 m. SE of Burgos, and partido of Salas-de-los-Infantes, in a marshy district not far from the point at which the Lobos disappears underground, and pursues a subterranean course for the distance of 4 m. Pop. 592.

HONTORIA-DE-VALDEARADOS, a town of Spain, in Old Castile, in the prov. and 41 m. SSE of Burgos, partido and 11 m. NE of Aranda-de-Duero, in a valley near the Aranzo. Pop. 507.

HONTOVA, a town of Spain, in New Castile, in the prov. and 14 m. SSE of Guadalajara, and partido of Pastrana, in a fertile plain. Pop. 510. It has a parish-church and a hermitage.

HONTUR, a town of Spain, in Murcia, in the prov. of Albacete, partido and 11 m. NE of Hellin, on the declivity of a hill. Pop. 1,270. It has a parish-church and a custom-house.

HONVELE', a commune of Belgium, in the prov. of East Flanders, dep. of Seeverghem. Pop. 207.

HONY, a commune of Belgium, in the prov. of Liege, dep. of Esneux. Pop. 138.

HOO, a parish in Suffolk, 7 m. N of Woodbridge, and S of the Deben. Area 540 acres. Pop. in 1831, 186; in 1841, 211. See also HOE.

HOO, or ST. WERBURGH, a parish in Kent, $3\frac{3}{4}$ m NE of Rochester, on the Medway. Area 4,460 acres. Pop. in 1831, 910; in 1841, 930.

HOO, or BOO ISLANDS, a group of islets in the S. Pacific, to the SE of the island of Gilolo, and in the passage of that name, in S lat. 1° 15′, and E long. 129° 17′. The most westerly of the group is 6 m. in circumference and of small elevation, the second rises higher, and the third is the largest in size. They are all populous, and afford good supplies of cocoa-nuts, fish, and salt.

HOO (ST. MARY'S), a parish in Kent, 5 m. NNE of Gillingham, S of the Thames. Area 1,920 acres. Pop. in 1831, 296; in 1841, 297.

HOOBERG, a commune of Belgium, in the prov. of East Flanders, dep. of Sulsique. Pop. 118.

HOOBLY, or HAVILE, a town of Hindostan, in the prov. of Bejapur, and district of Gunduck, 13 m. SE of Darwur, on a small river, in N lat. 15° 20′, and E long. 75° 15′. Pop. in 1820, 15,000. It is surrounded by a mud wall and ditches, and defended by 2 small forts. It contains no buildings of any note, but is distinguished for the number and industry of its inhabitants. It has extensive manufactories of silk, cotton, and woollen fabrics, and carries on an active trade with Goa, Surat, and Seringapatam. From the numerous ruins of mosques and Mahommedan burying-places which exist in the environs, Mahommedanism appears formerly to have prevailed in this locality. H. was taken from the kings of Bejapur in 1673 by the Mahrattas, and again in 1707 from the sultan Mauzum, son of Aurungzebe.

HOO-CHOO-FU, a division and town of China, in the prov. of Chi-keang. The div. comprises 6 districts.—The town is situated on a lake from which it derives its name, 45 m. NNW of Hang-choo, in N lat. 30° 52′ 48″, and E long. 119° 56′. This town, from its industry and trade, and the fertility of its environs, is one of the most important in China. Silk-fabrics, to a large extent, are manufactured here, and tea is extensively cultivated in the surrounding district.

HOOD'S BAY, a harbour on the W coast of Admiralty island, in Chatham strait, in N lat. 57° 26′.

HOOD'S CANAL, an inlet in the straits of San Juan de Fuca. See FUCA.

HOOD'S ISLAND, an island in the S. Pacific, the most northerly of the Mendoza islands, in S lat. 9° 26′. It was discovered by Cook in 1774, and

is called Tebua by the natives. It has a bluff appearance, and is of inferior extent to others of the group to which it belongs.—Also one of the Galapagos group, in N lat. 1° 27′.

HOOD (Point), a cape on the W coast of North America, in N lat. 56° 44′.

HOOD RIVER, a large river of Arctic America, which runs from SW to NE, and flows into Coronation gulf, in N lat. 67° 22′.

HOOE, a parish in Sussex, 6 m. SW of Battle. Area 2,290 acres. Pop. in 1831, 525; in 1841, 519.

HOOFDPLAAT, a village of Holland, in the prov. of Zealand, cant. and 18 m. WNW of Hulst, near the l. bank of the Western Scheldt. Pop. 1,000.

HOOGBOOM, a commune of Belgium, in the prov. of Antwerp, dep. of Eckeren. Pop. 291.

HOOGBRAEK, a commune of Belgium, in the prov. of Antwerp, dep. of Wiekevorst. Pop. 169.

HOOGBUTZEL, a commune of Belgium, in the prov. of Brabant, dep. of Bautersem. Pop. 155.

HOOGE, a village of Holland, in N. Brabant, 7½ m. N of Breda. Pop. 1,314.

HOOGE (La), a commune of Belgium, in the prov. of West Flanders, dep. of Zillebeke. Pop. 100.

HOOGEKRAAL. See Pacaltsdorp.

HOOG-EN-LEEG-WORMEN, a commune of Belgium, in the prov. of East Flanders, dep. of Velsieque-Ruddershove. Pop. 835.

HOOGE-ET-NEDERLEST, a commune of Belgium, in the prov. of Brabant, dep. of Laeken. Pop. 556.

HOOGEN-ET-LIEGEN-RIELEN, a commune of Belgium, in the prov. of Antwerp, dep. of Lichtært. Pop. 302.

HOOGEN-HERWEG, a commune of Belgium, in the prov. of East Flanders, dep. of Ruyen. Pop. 586.

HOOGENWEG, a commune of Belgium, in the prov. of East Flanders, dep. of Berlaere. Pop. 196.

HOOGEVEEN, a town of Holland, in the prov. of Drenthe, 14 m. WNW of Coevorden, and 15 m. ENE of Meppel. Pop. 6,995.

HOOGEYNDESHKYLHOEK-EN-ROSKANSMONT, a commune of Belgium, in the prov. of East Flanders, dep. of Saint-Gilles. Pop. 395.

HOOGEZAND, a town of Holland, in the prov. and 8 m. SE of Groningen. Pop. 1,680.

HOOGHEYD, a commune of Belgium, in the prov. of Antwerp, dep. of Duffel. Pop. 648.

HOOGHLY, or Hugli, a town, river, and district of Bengal. The district is situated between the 22d and 23d parallels, and extending a considerable distance on both sides of the river H. It has Burdwan on the N; the Sunderbunds on the E; the gulf of Bengal on the S; and Midnapur on the W. It has an area of 2,260 sq. m., with a pop. of 1,239,150 in 1822. The northern part of it is fertile; but that near the sea is swampy, or covered with jungle.—The town of H., situated on the W side of the river of the same name, in N lat. 22° 54′, E long. 88° 28′, 23 m. N by W of Calcutta, was founded by the Portuguese about the year 1538, and in a short time drew away all the trade from Saatgong, which till that period had been the government port of Bengal. Under the Portuguese H. was fortified, and it continued to flourish till 1632, when it was attacked, and, after a siege of three months and a half, taken by the Mogul troops. From this period H. became the imperial *bunder* or port: all the officers of government were ordered to remove hither; and a special governor was appointed over it, who, in course of time, became independent of the governor of the prov. In 1642, the English, and soon after the Dutch, obtained permission to erect factories here. The former imprudently built theirs in the town; but the Dutch made choice of a spot 2 m. down the river, at a village called Chickori.—For some time after these settlements were formed, H., under the name of Bukshi-Bunder, became the emporium of the greater part of the trade carried on between Europe, Persia, Arabia, and India. The duties were levied at 2 per cent. *ad val.* from Mahommedans, and 3½ per cent. from all others except the English, who, in consequence of a firman obtained by Boughton, the surgeon, from Shah Jehan, paid only 3,000 rupees annually on the whole amount of their trade with Bengal. For a considerable time, however, the English were only allowed to have a corporal and 20 European soldiers to protect their factory at H.; but, in consequence of various disputes, which had taken place between them and the government, a detachment of 400 soldiers, escorted by some vessels of war, was sent from Madras in 1686. This force landed at H. without opposition; but the circumstance caused so much alarm, that the nabob, Shaista Khan, ordered a considerable military force to encamp in the vicinity of the town. Between these troops and the English soldiers a dispute occurred on the 28th of October, when both parties had recourse to arms, and a general action took place. During the conflict, Admiral Nicholson opened a cannonade on the town, and burnt 500 houses, amongst which was the British factory, valued, with the goods it contained, at £300,000 sterling. The governor solicited a suspension of hostilities, and agreed to restore to the English all their immunities; but the nabob, who resided at Dacca, ordered all the English factories and property at H. to be confiscated, and sent a large force to expel them from the place. Previous to its arrival, the English, having embarked all their moveable property, dropped down the river to Chatanati, the present Calcutta, and after a short period proceeded to Hijeli, a town close to the mouth of the Ganges. On the conclusion of peace, in the following year, the nabob wished the English to return to H., but they declined the offer. In 1696, H. was taken and plundered by Subha Sing and Rehim Khan, but was soon after recovered, and restored to the Mogul government by the Dutch of Chinura. About 1704, the nabob, Murshud Cooly Jaffier Khan, having been appointed sole governor of Bengal, transferred the seat of government from Dacca to the present Murshedabad. But the *fujdar* or governor of H. disclaimed his authority, and a battle took place between the two parties, in which the fujdar, owing to assistance he received from the French at Chandernagore, was victorious. That functionary, however, thought it better to retire, and proceeded to Delhi; from which period the right of nomination of fujdar became vested in the nabobs of Bengal. H. was taken on the 10th of January 1757 by the British; was shortly after retaken by the nabob Seraje-ad-dowleh; but in the month of June following was again taken by the British. They nevertheless permitted the nabobs Meer Jaffier and Cossim Ali to appoint the fujdars of H.; but in 1765, when the East India company was appointed by the emperor dewan or collector of the revenues of Bengal, Bahar, and Orissa, they transferred the port-duties from H. to Calcutta; since which period the former place rapidly declined, and most of the opulent inhabitants removed to Calcutta.—The H. river is formed by the junction of the two western branches of the Ganges, the Cossimbazar and Jellingi, sometimes known as the Dummuda and Rupnarain rivers. The entrance to this deltoid branch of the Ganges is rendered extremely dangerous and difficult by the numerous sand-banks, which are frequently shifting their relative positions. At Calcutta it is nearly as wide as the Thames at Gravesend; but is 8 or 10 m. wide at its mouth.

Few rivers can boast of a more extensive commerce; but it is only navigable for ships as high as the tide reaches, and the upper part of it is nearly dry during the hot season. Its junction with the Baghiretti takes place at Nudya, 68 m. above Calcutta. The spring-tides also run up with great violence, advancing at the rate of 15 m. an hour, and frequently overset boats and drive ships from their anchorage. The tide does not extend more than 30 m. above Calcutta, and, during the rainy season, its influence is greatly checked by the large body of water that comes down the river. It is proposed to carry a railway from Howrah, opposite Calcutta, on the bank of the H., to Rajmhal on the Ganges. This railway will be about 200 m. in length; and will save, for 8 months in the year, a dangerous and difficult navigation of 530 m. through the Sunderbunds.—Several kinds of fish are caught in this river, particularly the cockup, the sable mangoe fish, and prawns; it also abounds with crocodiles and sharks. It is esteemed the most sacred branch of the Baghiretti or true Ganges by the Hindus. See GANGES.

HOOGKAMEREN, a commune of Belgium, in the prov. of East Flanders, dep. of Saint-Nicolas. Pop. 213.

HOOGKARSPEL, a village of Holland, in the prov. of N. Holland, 3 m. S by W of Enkhuisen. Pop. 1,000.

HOOGKWARTIER, a commune of Belgium, in the prov. of West Flanders, dep. of Clercken. Pop. 275

HOOG-LAETHEM, a commune of Belgium, in the prov. of East Flanders, dep. of Laethem-Saint-Martin. Pop. 165.

HOOGLAND, a commune of Belgium, in the prov. of Brabant, dep. of Werchter. Pop. 159.—Also a small town of Holland, in the prov. of Utrecht, 2 m. NE of Amersfort. Pop. 1,450.

HOOGLANDEKEN, a commune of Belgium, in the prov. of West Flanders, dep. of Eessen. Pop. 114.

HOOGLEDE, a town of Belgium, in W. Flanders, 12 m. NE of Ypres. Pop. 4,584.

HOOGMOLEN-ET-BANHOUT, a commune of Belgium, in the prov. of West Flanders, dep. of Heestert. Pop. 631.

HOOGSTADT, a commune of Belgium, in the prov. of East Flanders, dep. of Rugen. Pop. 186.

HOOGSTRAEDE, a department and commune of Belgium, in the prov. of West Flanders, arrond. of Furnes, watered by the Yzer. Pop. 689.

HOOGSTRAET, a commune of Belgium, in the prov. of East Flanders, dep. of Baerdegem. Pop. 123.—Also a commune in the same prov., in the dep. of Denderbelle. Pop. 153.

HOOGSTRAETEN, a town of Belgium, in the prov. of Antwerp, 10 m. NW of Turnhout, on the March. Pop. 1,650. It has a noble church, 300 ft. in length, with a tower 364 ft. in height. The material is brick, with stone-dressings.

HOOGWEG, a commune of Belgium, in the prov. of Antwerp, dep. of Itegem. Pop. 123.

HOOK, a parish in Dorsetshire, 4 m. E of Beaminster. Area 1,190 acres. Pop. in 1831, 269; in 1841, 268.—Also a chapelry in Snaith parish, W. R. of Yorkshire, 2 m. S of Howden, on the W bank of the Ouse. Area 1,620 acres. Pop. in 1831, 650; in 1841, 1,221.—Also a hamlet in the p. and 3 m. S of Kingston-upon-Thames, Surrey. Pop. in 1841, 222.

HOOK, or HOOKE, a parish of co. Wexford, 4½ m. SSW of Fethard. Area 1,065 acres. Pop. in 1831, 489; in 1841, 523. At its S extremity, on a headland above Waterford Harbour, is a beacon named Hook Tower or Lighthouse.

HOOKER (CAPE), a headland on the coast of Victoria Land, in S lat. 70° 36′, E long. 166° 28′.

HOOKER (MOUNT), a conspicuous summit in the Melville range, in N lat. 69° 36′, E long. 121° 30′.

HOOKERY, a town of Hindostan, in the prov. and 81 m. SW of Bejapur, and district of Azimnagur, in N lat. 16° 13′, and E long. 74° 47′. This town was once in a flourishing condition, and was long the residence of a Mahommedan chief. The last of these chiefs, Abdul-Kharud, was dethroned by the rajah of Parnella about the year 1643.

HOOK-GREEN, a hamlet in the p. of Southfleet, Kent. Pop. 60.

HOOKSET, a township of Merrimac co., in the state of New Hampshire, U. S., 9 m. SSE of Concord, intersected by the Merrimac. Pop. in 1840, 1,175.

HOOKSIEL, a village of Oldenburg, in the seignory of Jever, on the German sea. It has a small port.

HOOKSTOWN, a village of Green township, Beaver co., in the state of Pennsylvania, 242 m. NW of Harrisburg, on a branch of Mill creek. Pop. in 1840 about 230.

HOOL, an island off the coast of Nordland, Norway, in the West-Fjorden. It has a town of the same name.

HOOLE, a parish in Lancashire, 7 m. SSW of Preston, on the Douglas. Area 2,500 acres. Pop. in 1831, 943; in 1841, 989. It contains the townships of Much and Little Hoole.—Also a township in the p. of Plemonstall, Cheshire, 1½ m. NE of Chester. Area 860 acres. Pop. in 1841, 294.

HOOLE (LITTLE), a township in the p. of Hoole, Lancashire, 6 m. SW of Preston. Area 1,090 acres. Pop. in 1831, 189; in 1841, 204.

HOOLE (MUCH), a township in the p. of Hoole, Lancashire. Area 1,410 acres. Pop. in 1841, 785.

HOOLY-ONORE, a town and fort of Hindostan, in the Mysore, 125 m. NW of Seringapatam, in N lat. 13° 44′, near the Buddra.

HOONGAHABAI, and HOONGATONGA, two small islands in the Pacific, in the Habai group, which Perouse describes as being nothing more than large uninhabitable rocks, lofty enough to be visible at the distance of 15 leagues. They are about half-a-league in circumf.; and are separated from each other by a channel a league wide. The first is about 30, and the other 26 m. NNE from Tongatabu.

HOOPER ISLAND, an islet off the S coast of Quelpart island, in the sea of Corea, in N lat. 33° 10′, E long. 126° 30′.

HOOPER'S ISLAND, an island in Dorchester co., Maryland, U.S., on the E side of Chesapeak bay, and is 7 m. long and 2½ m. broad.

HOORMARA, or HORMARA, a port of Beluchistan, in the prov. of Mekran, in N lat. 25° 18′, E long. 65° 6′. It contains about 400 houses, and is under the protection of the jam of Las. It conducts a smart trade with the interior; but the country, for 7 or 8 days' journey in every direction from it, is utterly sterile.

HOORN, a considerable seaport of Holland, in the prov. of Holland, on the Zuyder-zee, 14 m. E of Alkmaar, and 20 m. NNE of Amsterdam. It is surrounded by old ramparts, and is a tolerably well-built place. Its harbour is the best on the coast of that sea; the trade in cattle, butter, and cheese, as well as in the produce of the fisheries, particularly herrings, is extensive. The principal manufactures are of woollen cloths and carpets; ship-building also is carried on to a considerable extent. H. was the birth-place of Schoutens, a celebrated navigator; who conferred its name on the celebrated Cape Horn.

HOORN ISLANDS, two islands in the S. Pacific, discovered in 1616 by Le Maire and Schoutens, who landed and stayed some days upon them, their ship lying at anchor in the mouth of a river. They

do not appear to have been visited until lately by any other navigator; unless indeed they are the two islands where the navigator Maurelle obtained refreshments in 1781, and which he therefore named Consolation islands. When visited by Schoutens, they were each governed by a king. Their male inhabitants are tall in stature, strong and well-made, good runners, and expert swimmers, and of a yellowish brown complexion; but the women are very deformed, and hideously ugly.

HOORN'S ISLAND, a small island at the E entrance of the straits of Sunda, in S lat. 5° 44′.

HOOSICK, a river of New York, U. S., which has its rise in Massachusetts, and runs through Vermont into Renselaer co., in the state of New York, where it falls into the Hudson. Its length is about 46 m.; and it has a fall of 40 ft. in a distance of 200, affording a fine water-power at the v. of Hoosick-Falls, 35 m. NE of Albany.

HOOTON, a township in Eastham p., Cheshire, 5 m. E by N of Great Neston. Area 1,020 acres. Pop. in 1831, 103; in 1841, 120.

HOOTON-PAGNELL, a parish in the W. R. of Yorkshire, 6¼ m. NW of Doncaster, comprising the townships of Bilham, Stotford, and H. Area 2,740 acres. Pop. in 1831, 425; in 1841, 432.

HOOTON-ROBERTS, a parish in the W. R. of Yorkshire, 6¼ m. SE by S of Darfield. Area 1,050 acres. Pop. in 1831, 178; in 1841, 175.

HOPE, a parish and township in Derbyshire, 6 m. N by E of Tideswell, on the river Noe. Area 36,160 acres. Pop. in 1801, 3,302; in 1831, 3,927; in 1841, 4,434. It comprises the chapelry of Fairfield, the townships of Fernilee, Grindlow, Highlow, H., Stoke, and part of Wardlow; the hamlets of Abney, Aston and Thornton, Brough and Shatton, Bradwell, Great-Hucklow, Nether-Padley, Offerton, Thornhill, and Woodland-Hope; with the liberties of Hazelbadge and Little-Hucklow. Lace, thread, ropes, twines, hats, sackings, &c., are manufactured in this p.—Also a township in Buttington p., Montgomeryshire, 1 m. E of Welshpool, on the Severn. Pop. in 1831, 162; in 1841, 179.—Also a river of Sutherlandshire, which has its rise in Glengollie, in a stream which intersects Strathmore; runs a course of about 11 m. due N; and enters Loch Hope; whence, after a course of 1 m., it falls into the sea 3 m. on the E side of Loch Eribol.

HOPE, a village of Sussex co., New Jersey, U. S., on the road from Newton to Easton, in Pennsylvania, 16 m. SW of the former, and 20 m. NE of the latter, on a branch of the Beaver. Pop. 1,690.—Also a township in Waldo co., in Maine, 36 m. ESE of Augusta, intersected by St. George's river. Pop. 1,770.—Also a township in Hamilton co., in New York, 58 m. NW of Albany. Pop. 711.—Also a v. in Franklin co., in Ohio.—Also a township in the Newcastle district of Upper Canada, bounded on the S by Lake Ontario. Pop. in 1842, 4,432.—Also a river of the island of Jamaica, in Surrey co., which runs into the sea 5 m. S of Kingston, after a course of 12 m. from NNW to SSE.

HOPE, or Eastyn, a parish and village in Flintshire, 5½ m. SE by S of Mold, on the river Alen, over which there is here a fine old bridge. It comprises 8 townships, including the borough of Caergurley. Pop. in 1801, 1,924; in 1831, 2,747; in 1841, 2,916. The v. consists of three parallel streets, intersected by three others at right angles. This place, with Caergurley, constitutes a borough, returning, with Flint and its other contributaries, 1 member to parliament.

HOPE-ALL-SAINTS, a parish in Kent, 1¼ m. NNW of New-Romney. Area 1,550 acres. Pop. 21.

HOPE-BAGOT, a parish in Shropshire, 5 m. E by S of Ludlow. Area 650 acres. Pop. in 1841, 75.

HOPE BAY, a bay in the English channel, on the coast of Kent, between Sandwich and Ramsgate.—Also a bay on the W shore of Vancouver's island, between Point Breakers and Woody point.

HOPE-BOWDLER, a parish in Shropshire, 12 m. NNW of Ludlow. It includes the townships of Chilnwick and Ragdon. Area 2,470 acres. Pop. in 1801, 130; in 1841, 184.

HOPE (Cape), a high and bluff cape of Hudson's bay, at the entrance of Repulse bay, in N lat. 64° 10′, W long. 85° 30′.—Also a cape forming the E point of Stapylton bay, in Arctic America, in N lat. 68° 58′, W long. 115° 54′.

HOPE (Fort), a post on Repulse bay, in N lat. 66° 32′ 16″, W long. 86° 55′ 51″. Mr. Rae's expedition passed the winter of 1846-7 here; and in April 1847, proceeded N and explored the entire E coast of Committee bay as high as the parallel of 69° 30′. The lowest temp. experienced during the winter was —47°. The variation of the compass on 30th Aug. 1846, was 62° 50′ 30″ W.

HOPE HARBOUR, an inlet at the opening of Magdalen sound, in the strait of Magalhaens, with good anchorage in 4 fath. It lies at the foot of a steep mountain, called by Sarmiento the Vernal.

HOPE INLET, a creek in the coast of N. Australia, 11 m. from the S point of Clarence strait, opening into Shoal bay.

HOPE ISLANDS, two small islands near the NE coast of New Holland, in S lat. 15° 41′, so called by Cook, immediately after his ship was cleared from a dangerous situation off Cape Tribulation.

HOPE-MANSELL, a parish in Herefordshire, 3½ m. SE by S of Ross. Area 1,190 acres. Pop. 187.

HOPE (Mount), a lofty insulated mass of rock on the coast of Admiralty sound, in the strait of Magalhaens, in S lat. 54° 26′ 30″, W long. 68° 59′ 11″.—Also a hill in SE. Australia, in S lat. 35° 55′, E long. 144° 20′. It consists of immense blocks of granite, and forms the extremity of a range extending eastwards.

HOPE (Port), a village in the township of Hope, in Upper Canada, at the mouth of a stream which enters the SE corner of Lake Ontario.

HOPE-SAY, a parish in Shropshire, 5½ m. SE by E of Bishop's-Castle, on the river Clun. Area 3,010 acres. Pop. in 1831, 571; in 1841, 660.

HOPE-SOLLERS, a parish in Herefordshire, 6 m. N by E of Ross, on the Wye. Area 1,250 acres. Pop. in 1831, 179; in 1841, 161.

HOPE'S ADVANCE BAY, a bay on the coast of Labrador, 100 m. W of Cape Chidleigh, in N lat. 60°, W long. 70°.

HOPE'S ADVANCE (Cape), a cape in Hudson's straits, in N lat. 61° 45′.

HOPE'S NOSE, a cape in the English channel, on the coast of Devonshire.

HOPE-TOWN, a village of British Guayana, 1 m. from Fort Wellington. Pop. in 1849, 621.

HOPE-UNDER-DINMORE, a parish in Herefordshire, 4¼ m. SSE of Leominster, on the river Lugg. Area 3,660 acres. Pop. in 1841, 586.

HOPELESS (Mount), a hill in SE. Australia, on the W side of the Bozun, in S lat. 31° 2′, E long. 147° 2′.

HOPEWELL, a township of Ontario co., in the state of New York, U. S., 187 m. W of Albany, drained by the outlet of Canandaigua lake and its tributaries. Its soil consists of clay loam. Pop. in 1840, 1,976.—Also a township of Mercer co., in the state of New Jersey, 17 m. N of Trenton. Pop. 3,205.—Also a township of Cumberland co., in the same state, bounded on the E and S by Cohansey

creek, and drained by its tributaries, Mounts and Mill creeks. It has an undulating surface, with a soil consisting of clay loam. Pop. 2,220.—Also a township of Huntingdon co., in the state of Pennsylvania, 13 m. SW of Huntingdon. Its surface is mountainous. The soil in the valleys consists of calcareous loam.—Also a township in Beaver co., in the same state. Pop. 1,603.—Also a township of Washington co., in the same state, 12 m. NW of Washington. It has a hilly surface, with a loamy soil, and is drained by Buffalo and Cross creeks, and Brushy run. Pop. 1,596.—Also a township of York co., in the same state, 14 m. SE of York. Its surface is undulating, and is drained by the headbranches of Deer creek. Pop. 1,905.—Also a township of Cumberland co., in the same state, 21 m. W of Carlisle. It has a hilly surface, and slaty soil. Pop. 1,036.—Also a township of Muskingum co., in the state of Ohio, 46 m. E of Columbus. Pop. 1,806. The v. is situated on the national road.—Also a township of Licking co., in the state of Ohio, on the national road, a few miles E of Hebron. Pop. 1,150.—Also a township of Perry co., in the same state, watered by Jonathan's creek. Pop. 1,544.—Also a township of Seneca co., in the same state, on the W side of Sandusky river. Pop. 913.

HOPEWELL (Cape), a headland on the E coast of Hudson's bay, in N lat. 58°, W long. 79°.

HOPFENAU, a village of Prussia, in the reg. of Gumbrinnen, circle of Insterburg. Pop. 158.

HOPFENBRUCH, a village of Prussia, in the reg. of Frankfort, circle of Landsberg. Pop. 151.

HOPFGARTEN, a town of Tyrol, in the Brixenthal, 10 m. S of Kufstein. Pop. 997.

HO-PHING, a district and town of China, in the NE part of the prov. of Kwan-tung, in N lat. 24° 30′, E long. 114° 53′.

HOPITAL (L'), a town of the Sardinian states, in the prov. of Savoy, 27 m. ENE of Chambery, near the r. bank of the Doron. Pop. 1,200.

HOPITAL-BEAULIEU (L'), a town of France, in the dep. of Lot, cant. and 6 m. WNW of La-Capelle-Marival.

HOPITAL-SOUS-ROCHEFORT (L'), a village of France, in the dep. of Loire, cant. of Boen, 12 m. NNW of Montbrison, on the r. bank of the Lignon.

HOPKINS, a county in the W part of the state of Ohio, comprising an area of 750 sq. m.; bordered on the NE by Green river; on the E by Pond river; and on the W by Tradewater creek; and intersected by Otter, Flat, Drake's, Crary, Clear, and Deer creeks. Pop. in 1840, 9,171, of whom 1,723 were slaves.

HOPKINSVILLE, a town of Hamilton township, Warren co., in the state of Ohio, 96 m. WSW of Columbus. Pop. in 1840, 150.—Also a village of Christian co., in the state of Kentucky, 204 m. SW of Frankfort, on the E side of Little river. Pop. 1,581.—Also a v. of Chatooga co., in the state of Georgia, 192 m. NW of Milledgeville, on the E side of Little river.—Also a v. of Adair co., in the state of Missouri, 6 m. E of Grand Chariton river.

HOPKINTON, a township of Merrimac co., in the state of New Hampshire, 7 m. W of Concord, watered by Contoocook river and its branches, and Warner and Blackwater rivers, all tributaries of the Merrimac. The banks of the streams possess considerable fertility. Pop. in 1840, 2,455.—Also a township of Middlesex co., in the state of Massachusetts, 29 m. WSW of Boston, watered by branches of Charles and Mill rivers, and in the vicinity of the Boston and Worcester railroad and the Blackstone canal. Pop. 2,245.—Also a township of Washington co., in the state of Rhode island, watered by Wood and Pawcatuck rivers, and possessing a fertile soil. Pop. 1,726. The village of the same name is situated in the S part of the township, on a branch of Charles river, and is very flourishing.—Also a township of St. Lawrence co., in the state of New York, 215 m. NNW of Albany. It is watered by Racket and St. Regis rivers, and in the N presents a level surface and considerable fertility. Pop. 1,147.

HOPPEN, a township in Bamborough parish, Northumberland, 4¼ m. ESE of Belford. Pop. in 1831, 43; in 1841, 36.

HOPPER, or Simpson Island, an island of the N. Pacific, in the group of the Gilbert islands, in N lat. 0° 30′, and E long. 174°. It is of crescent form. Under this name is sometimes included as a group the adjacent islands Woodle, Hall's, and Henderville.

HOPPNER (Cape), a headland in Arctic America, in N lat. 76° 56′, W long. 70° 48′.

HOPSFORD, a hamlet in the p. of Withybrook, Warwickshire. Pop. in 1841, 48.

HOPSTEN, a village of Prussia, in the prov. of Westphalia and regency of Münster, NE of Rheina. Pop. 365.

HOPSTONE, a township in the p. of Claverley, Salop. Pop. in 1841, 45.

HOPTON, a township in the p. and 2 m. W of Wirksworth, Derbyshire. Pop. in 1831, 118; in 1841, 81.—Also a township partly in the p. of Stanton-Lacy, Salop. Pop. 50.—Also a township in the p. of Great Ness. Pop. 179.—Also a township in the p. of Hinstock. Pop. 77.—Also a parish in Suffolk, 8 m. W of Diss. Area 1,440 acres. Pop. in 1831, 581; in 1841, 623.—Also a parish 4½ m. N of Lowestoft, on the sea-shore. Area 1,250 acres. Pop. in 1831, 260; in 1841, 251.

HOPTON and COTON, a township in the p. of St. Mary and St. Chad, Staffordshire, 3 m. NE of Stafford, S of the Grand Trunk canal, and E of the Stow. Area 1,770 acres. Pop. in 1841, 464.

HOPTON-CANGEFORD, or Hopton-in-the-Hole, a parish in Salop, 4 m. NE of Ludlow. Area 320 acres. Pop. in 1831, 30; in 1841, 30.

HOPTON-CASTLE, a parish in Salop, 6½ m. SE of Bishop-Castle, on a branch of the Clun. Area 2,260 acres. Pop. in 1831, 145; in 1841, 164.

HOPTON (Upper and Lower), townships in the p. of Church-Hote, Montgomeryshire. Pop. of Upper 65; of Lower 39.

HOPTON-MONK, a parish in Salop, 4½ m. S of Much-Wenlock. Area 3,190 acres. Pop. in 1831, 208; in 1841, 189.

HOPTON-WAFERS, a parish in Salop, 8 m. NE of Ludlow. Area 1,890 acres. Pop. in 1841, 481.

HOPTRUP, a parish and village of Denmark, in the duchy of Sleswig, 5 m. SSW of Hadersleben, on the coast-road, and on a small lake which discharges itself into the Little Belt.

HOPWAS-HAYES, an extra-parochial liberty in Staffordshire, 2 m. NW of Tamworth, and partly within the parliamentary boundaries of the borough. It comprises an area of 500 acres, skirted on the E by the Coventry canal and river Tame. Adjoining on the SSE, in the p. of Tamworth, is the hamlet of Hopwas. Pop. in 1841, 267.

HOPWELL, a hamlet in the p. of Wilne, Derbyshire, 6¾ m. W of Derby. Pop. in 1841, 25.

HOPWOOD, a township in the p. of Middleton, in the co. of Lancaster, 8 m. N of Manchester. Pop. 1,540.

HOR (Mount), or Jebel-Harun, a mountain of Arabia Petræa, in N lat. 30° 18′, E long. 35° 33′. See Aaron (Hill of).

HORAZDIOWITZ, a town of Bohemia, on the Wattawa, 20 m. E of Pisek, and 25 m. NW of Prachatitz. Pop. 1,997.

HORB, a small town of Würtemberg, on the l.

bank of the Neckar, 20 m. NNW of Hohenburg. Pop. 2,100.

HORBERG, a town of Styria, in the circle and 24 m. SE of Cilly. Pop. 375.

HORBLING, a parish of Lincolnshire, 3 m. E of Folkingham. Area 2,620 acres. Pop. 571.

HORBURG, a town of France, in the dep. of Haut-Rhin, cant. of Andolsheim, 1½ m. E of Colmar. Pop. 1,117.—Also a town and free port of Hanover, on the l. bank of the Elbe.

HORBURY, a chapelry in Wakefield p., in Yorkshire, 2½ m. SW of Wakefield, on the Manchester and Leeds railway. Pop. 2,683, chiefly employed in woollen manufactories.

HORCAJADA, a town of Spain, in Old Castile, in the prov. and 30 m. W of Avila, and partido of Barco, in a fertile plain, on the N side of a ramification of the Sierra de Avila. Pop. 806. It has a parish-church and a custom-house, and contains considerable remains of its Moorish origin.—Also a town in New Castile, in the prov. and 29 m. SSW of Cuenca, partido and 21 m. SSE of Huete, near the l. bank of the Giguela. Pop. 1,082.

HORCAJO-DE-SANTIAGO, a town of Spain, in New Castile, in the prov. and 48 m. SW of Cuenca, and partido of Ucles, between the Giguela and Rianzares. Pop. 2,820. It has a parish-church and a custom-house. Its industry consists chiefly in agriculture.

HORCAJO-DE-LAS-TORRES, a town of Spain, in Old Castile, in the prov. and 42 m. NNW of Avila, and partido of Arévalo, near the r. bank of the Trabancos. Pop. 638. It has 2 convents and an hospital.

HORCASITAS, a town of Mexico, 90 m. E of San-Luis-de-Potosi, near the l. bank of the Panuco.

HORCON, a town of Cuba, in the dep. Occidental, jurisdiction of Havana. Pop. 7,242.

HORDA, one of the smaller Orkney islands, lying in the Pentland frith, between S. Ronaldshay and Swinna.

HORDAIN, a commune of France, in the dep. of Nord, cant. of Bouchain. Pop. 1,248.

HORDE, a town of Prussian Westphalia, in the co. of Mark, on the Erusche, 3 m. SE of Dortmund.

HORDLE, or Hordwell, a parish of Hants, 4½ m. SW of Lymington. Area 1,930 acres. Pop. 845.

HORDLEY, a parish in Salop, 3 m. SSW of Ellesmere. Area 1,980 acres. Pop. 308.

HORE-ABBEY, a parish in co. Tipperary, adjoining Cashel. Pop. 536.

HOREB, a mountain of Arabia Petræa, in N lat. 28° 33′, E long. 34° 2′, celebrated in Scripture history. It forms the N extremity of the ridge of Sinai; and attains an alt. of 2,500 ft. above the convent of Saint Catherine, and between 7,530 and 7,480 ft. above sea-level. Dr. Robinson, who supposes this mount to have been the scene of the delivery of the Law, thus describes the approach to it: "As we advanced, the valley still opened wider and wider with a gentle ascent, and became full of shrubs and tufts of herbs, shut in on each side by lofty granite ridges, with rugged, shattered peaks a thousand feet high, while the face of Horeb rose directly before us. Both my companion and myself involuntarily exclaimed, 'Here is room enough for a large encampment!' Reaching the top of the ascent, or water-shed, a fine broad plain lay before us, sloping down gently towards the SSE, enclosed by rugged and venerable mountains of dark granite, stern, naked, splintered peaks and ridges, of indescribable grandeur; and terminated at the distance of more than a mile by the bold and awful front of Horeb, rising perpendicularly in frowning majesty from twelve to fifteen hundred feet in height. It was a scene of solemn grandeur, wholly unexpected, and such as we had never seen; and the associations which at the moment rushed upon our minds were almost overwhelming. As we went on, new points of interest were continually opening to our view. On the left of Horeb, a deep and narrow valley runs up SSE between lofty walls of rock, as if in continuation of the SE corner of the plain. In this valley, at the distance of nearly a mile from the plain, stands the convent; and the deep verdure of its fruit trees and cypresses is seen as the traveller approaches,—an oasis of beauty amid scenes of the sternest desolation. At the SW corner of the plain the cliffs also retreat, and form a recess or open place extending from the plain westward for some distance. From this recess there runs up a similar narrow valley on the west of Horeb, called el-Leja, parallel to that in which the convent stands; and in it is the deserted convent el-Arba'in, with a garden of olive and other fruit trees not visible from the plain. A third garden lies at the mouth of el-Leja, and a fourth farther west in the recess just mentioned. The whole plain is called Wady er-Râhah; and the valley of the convent is known to the Arabs as Wady Shu'-eib, that is, the Vale of Jethro. Still advancing, the front of Horeb rose like a wall before us; and one can approach quite to the foot and touch the mount. Directly before its base is the deep bed of a torrent, by which in the rainy season the waters of el-Leja and the mountains around the recess pass down eastward across the plain, forming the commencement of Wady esh-Sheikh, which then issues by an opening through the cliffs of the eastern mountain,—a fine broad valley affording the only easy access to the plain and convent. As we crossed the plain our feelings were strongly affected, at finding here so unexpectedly a spot so entirely adapted to the scriptural account of the giving of the law. No traveller has described this plain, nor even mentioned it except in a slight and general manner; probably because the most have reached the convent by another route without passing over it; and perhaps, too, because neither the highest point of Sinai (now called Jebel Mûsa), nor the still loftier summit of St. Catharine, is visible from any part of it." They subsequently examined this plain more closely, and were confirmed in their first impressions. "We measured across the plain, where we stood, along the water-shed, and found the breadth to be at that point 2,700 English feet, or 900 yards; though in some parts it is wider. The distance to the base of Horeb, measured in like manner, was 7,000 feet, or 2,333 yards. The northern slope of the plain, north of where we stood, we judged to be somewhat less than a mile in length by one-third of a mile in breadth. We may therefore fairly estimate the whole plain at two geographical miles long, and ranging in breadth from one-third to two-thirds of a mile; or as equivalent to a surface of at least one square mile. This space is nearly doubled by the recess so often mentioned on the west, and by the broad and level area of Wady Sheikh on the east, which issues at right angles to the plain, and is equally in view of the front and summit of the present Horeb. The examination of this afternoon convinced us, that here was space enough to satisfy all the requisitions of the scriptural narrative, so far as it relates to the assembling of the congregation to receive the law. Here, too, one can see the fitness of the injunction, to set bounds around the mount, that neither man nor beast might approach too near. The encampment before the mount, as has been before suggested, might not improbably include only the head-quarters of Moses and the elders, and of a portion of the people; while the remainder, with

their flocks, were scattered among the adjacent valleys." See SINAI.

HORETOWN, a parish in Wexford, 2½ m. SW of Taghmon. Area 3,991 acres. Pop. in 1831, 1,149; in 1841, 1,262.

HORFIELD, a parish in Gloucestershire, 2 m. N of Bristol. Area 1,190 acres. Pop. in 1841, 620.

HORGAU, a town of Bavaria, in the circle of Suabia, and presidial of Zusmarshausen, 15 m. WNW of Augsburg. Pop. 1,150.

HORGEN, a parish and village of Switzerland, capital of a bezirk or bailiwick of the same name, in the cant. and 9 m. SSE of Zurich, on the SW bank of Lake Zurich. Pop., Protestants, 3,869. It is large and well-built, and has a handsome church. It possesses manufactories of silk and cotton fabrics, and a considerable transit trade. In the vicinity are the coal-mines of Käpfnach and the mineral baths of Bocken. The town of H. was destroyed by fire in 1443 by the confederates, in 1531 it was pillaged by the troops of the Catholic cantons, and in 1804 was subjected to a ransom for having taken part in the insurrection against the establishment of the new constitution.

HORHO-HOUTCHIN, a station on the great road from Peking to Maïmatchin, in the desert of Gobi, in Mongolia, about 340 m. NNW of Peking.

HORIMETZ, a commune of Belgium, in the prov. of Hainault, dep. of Chievres. Pop. 320.

HORION, a commune of Belgium, in the prov. of Liege, dep. of Horion-Hozemont. Pop. 504.

HORION-HOZEMONT, a department and commune of Belgium, in the prov., arrond. and 9 m. WSW of Liege. Pop. of dep., 2,289; of village, 323. In the environs are quarries of lime and paving-stone, and several lime-kilns.

HORITZ, or HORICE, a town of Austria, in Bohemia, and circle of Bidschow, 2 m. from the r. bank of the Bystritz. Pop. 3,205.

HORKESLEY (GREAT), a parish in Essex, 5 m. NW of Colchester, on the Stour. Area 2,880 acres. Pop. in 1831, 464; in 1841, 730.

HORKESLEY (LITTLE), a parish in Essex, 2 m. SW of Neyland. Area 1,060 acres. Pop. in 1831, 223; in 1841, 206.

HORKSTOW, a parish in Lincolnshire, 4 m. SSW of Barton-upon-Humber. Area 1,890 acres. Pop. in 1831, 240; in 1841, 228.

HORLEBERQ, a commune of Belgium, in the prov. of Hainault, dep. of Steenkerque. Pop. 77.

HORLEY, a parish in Oxfordshire, 3½ m. NW of Banbury. Area 2,370 acres. Pop. in 1831, 881; in 1841, 917.—Also a parish in Surrey, 5 m. SSE of Reigate, intersected by the London and Brighton railroad. Area 7,640 acres. Pop. in 1841, 1,583.

HORLITAIN (L'), a commune of Belgium, in the prov. of East Flanders, dep. of Amongies. Pop. 257.

HORMAZA, a town of Spain, in Old Castile, in the prov. and partido and 11 m. W of Burgos, near the r. bank of the river of the same name. Pop. 245. The river H. falls into the Arlanzon after a course of about 12 m.

HORMAZAS, a town of Spain, in Old Castile, in the prov. and partido and 13 m. NW of Burgos, in a valley near a small stream. Pop. 567.

HORMEAD (GREAT), a parish in Hertfordshire, 2¾ m. SE of Buntingford, on the Quin. Area 2,160 acres. Pop in 1831, 576; in 1841, 595.

HORMEAD (LITTLE), a parish in Hertfordshire, 2½ m. ESE of Buntingford. Area 2,160 acres. Pop. in 1831, 107; in 1841, 121.

HORMIGOS, or ORMIGOS, a town of Spain, in New Castile, in the prov. and 25 m. NW of Toledo, and partido of Escalona, in a sterile valley near the Alberche. Pop. 216.

HORMILLA, a village of Spain, in Old Castile, in the prov. and 20 m. W of Logrono, near the Nagerilla, an affluent of the Ebro. Pop. 550.

HORMILLEJA, a village of Spain, in the prov. and 16 m. W of Logrono, near the Tuerto, an affluent of the Nagerilla. Pop. 250.

HORMUZABAD, a village of Persia, in the prov. and 96 m. NW of Kerman.

HORN, a town of Lippe-Detmold, 11 m. N of Paderborn. Pop. 1,700. It has manufactories of woollens, linen, and ticking.—Also a town of Lower Austria, on the r. bank of the Tiffer, 46 m. NW of Vienna. Pop. 680.—Also a v. of Bohemia, 3 m. NE of Elnbogen.—Also a v. and harbour belonging to the Swiss cant. of Thurgau, on the lake of Constanz, 9 m. W by N of the town of Constanz.—Also an island on the coast of W. Florida, between Ship and Massacre islands, nearly 13 m. long, and about a m. wide.

HORN (CAPE), a celebrated promontory on the S coast of Tierra-del-Fuego, in S lat. 55° 58′ 41″, W long. 67° 10′ 53″, forming the southern extremity of S. America. It is the S point of a group of islands of unequal extent, lying before Nassau bay, and known by the name of Hermite islands. On the NW side of the cape are two peaked rocks, like sugar-loaves; some other straggling rocks lie to the W of it, and one S of it, but they are all near the shore. From whatever side it is viewed, it appears one isolated majestic mass boldly standing out into the ocean,—an enormous mass of black rock, unenlivened by the slightest trace of vegetation. The land, rising from the NE, conspicuous above all the neighbouring land, here unites in one rounded unbroken promontory, and, after attaining its greatest elevation, sinks towards the S almost perpendicularly into the sea. It was first sighted by Jacob le Maire, a Dutchman, in 1616, and since that time has been commonly doubled by vessels in their passage into the Pacific, being found preferable in every respect to the tedious passage through the straits of Magelhaens. The current setting along the SW coast of Tierra-del-Fuego, takes a more easterly direction from the vicinity of the Diego Ramirez islands, and setting round Cape H. towards Staten island goes off to the ESE. It runs at an average rate of 1 m. per hour, and is strongest near the land. Superior ships, enlarged experience, and a more scientific education, have divested the passage round Cape H. of its pristine terrors; but it still involves sufficient difficulty to put the prudent mariner on his guard. Commander Wilkes of the American navy thus speaks of it: "Before leaving these desolate and stormy regions, it may be expected that I should say a few words relative to the passage round Cape H. There are so many opinions relative to the best manner of proceeding in this navigation, that one in consulting them derives but little satisfaction, no two authorities agreeing in their views upon the subject. I am inclined to believe that as much depends upon the vessel, and the manner in which she is navigated, as the route pursued, whether the cape is passed close to, or given a good berth; the object of all is to pass it as quickly as possible, and taking into consideration the difficulties to be incurred from boisterous weather, heavy seas, and ice, it is impossible to lay down any precise rule. That course which appears most feasible at the time ought to be adopted, keeping, however, in view that there is no danger to be apprehended in navigating on the W coast of Tierra del Fuego, as the current sets along its coast, and it is perfectly safe and practicable to navigate it as far as Cape Pillar. The great difficulty exists in passing the pitch of the cape; there is none afterwards in getting to the westward. On the coast the wind

seldom blows long from the same quarter, but veers from SW to NW; the gales generally begin at the former quarter, and end at the latter. Previous to the SW gales it would therefore in all cases be advisable, when indications of their occurrence are visible,—which are known by the banks of *cumuli* in that quarter some 24 hours previously,—to stand to the southward and westward in preference, with as much sail as well can be carried, that when the change occurs you may be ready to stand on the other tack to the northward. One thing every navigator ought to bear in mind,—that it requires all the activity and perseverance he may be possessed of to accomplish it quickly."

HORN (False Cape), a remarkable headland of S. America, 9 m. NE of Cape Horn.

HORN MOUNTAINS, a range of mountains in N. America, in N lat. 61°, W long. 118°.

HORN'S ISLAND, a small island near the coast of S. Carolina, in N lat. 33° 7′, W long. 79° 17′.

HORN TOWN, a village in Maryland, U. S., 120 m. from Philadelphia.

HORNACHOS, a town of Spain, in the prov. and 42 m. ESE of Badajoz. Pop. 2,500.

HORNACHUELOS, a town of Spain, in the prov. and 27 m. SW of Cordova, on a spur of the Sierra Morena. Pop. 800.

HORN-AFVAN, a lake in Swedish Lapmark, intersected by the parallel of 66°. It is nearly 50 m. in length from NNW to SSE, but its greatest breadth does not exceed 8 m. It discharges itself by the Skelleftea into the gulf of Bothnia.

HORNATH, or Kunnert, a river in the NE of Hungary, which rises in the Carpathian mountains, and falls into the Theiss.

HORNBACH, a river of Bavaria, wnich rises in the Vosges; runs W to Neu Hornbach, where it turns NW; and unites with the Enbach near Deux-Ponts, after a course of 24 m.

HORNBACH (Alt and Neu), two contiguous villages of the Bavarian prov. of the Rhine, on the confluence of the Hornbach and Schwalbach, 5 m. S of Deux-Ponts. Pop. 1,900.

HORNBERG, a town of Germany, in Baden, in the circle of Kinzig, on the l. bank of the Gutach, 20 m. NE of Freiburg. Pop. 1,156.—Also a mountain on the W coast of Spitzbergen, rising to an alt. of 4,680 ft.

HORNBLOTTON, a parish in Somersetshire, 3½ m. WNW of Castle-Cary. Area 1,330 acres. Pop. in 1831, 118; in 1841, 104.

HORNBURG, a small town of Prussian Westphalia, 50 m. N of Cologne.—Also a town of Prussian Saxony, on the r. bank of the Ils, 48 m. WSW of Halberstadt. Pop. 2,500.

HORNBY, a chapelry and market-town in Melling p., Lancashire, 10 m. NE of Lancaster, on the river Wenning, at its junction with the Lune. Area 2,290 acres. Pop. in 1831, 383; in 1841, 318. The town is small but neat, and pleasantly situated between the rivers Lune and Wenning, over the former of which there is a stone bridge of three arches. The cotton manufacture constitutes the chief business of this place; but its general trade is increased during summer by the resort of visitors on their return from the tour of the lakes. Considerable fairs are held here annually on June 20th and July 30th, for horses and horned cattle. H. castle, built soon after the Conquest, has been repaired in the ancient style, and is now occupied.—Also a parish and township in the N. R. of Yorkshire, 5 m. NW of Bedale. The p. comprises the townships of Hackforth, H., and Ainderly-Myers with Holtby. H. castle, a magnificent seat of the duke of Leeds, is in the township. A large portion of this noble edifice is as old as the Norman conquest. Area 3,690 acres. Pop. in 1831, 364; in 1841, 278.—Also a township in Great Smeaton p., N. R. of Yorkshire, 7 m. SE by S of Darlington, on the Tees. Area 2,050 acres. Pop. in 1831, 262; in 1841, 278.

HORNBY, a township in Steuben co., in the state of New York, U. S., 205 m. W by S of Albany, intersected by Mead's creek. Pop. 1,048.

HORNBY HILLS, a range in E. Falkland islands, running parallel to Falkland sound, behind the coast-range, as far as Hill-gap, whence they take a W direction. Their alt. ranges from 1,800 to 2,300 ft.

HORNCASTLE, a parish and market-town in Lincolnshire, 20½ m. E by S of Lincoln, on the river Bane. Area 2,510 acres. Pop. in 1801, 2,015; in 1831, 3,988; in 1841, 4,521.—The town, which is neat and well built, is pleasantly situated at the bottom of the Wolds, on the river Bane, which has been rendered navigable from H. to its junction with the Witham. The principal part of the town occupies an angle formed by the confluence of the Bane and the Warring. The handsome re-edification of many houses in the principal streets has given to the town an air of neatness; but the effect which would thus be produced in its general appearance is materially diminished by the narrowness and irregularity of the streets. Tanning constitutes the chief branch of trade; considerable business is also done in corn and wool; and, from its situation in the midst of a populous district, the town enjoys a large retail trade. Three fairs for horses, cattle, and sheep are held here annually. The first, which concludes on 22d June, has declined much. The second, which terminates on 21st August, has long been celebrated as one of the largest fairs for horses in the empire. It continues about 10 days, being 3 days more than the time appointed by the charter. This fair is attended by purchasers from different parts of Europe, and even from America. The third fair is held on 28th and 29th October. H. is one of the polling-places for the members for the parts of Lindsey. It is supposed to have been the *Banovallum* of the Roman geographer Ravennas.

HORN-CHURCH, a parish in Essex, 17½ m. SW of Chelmsford, and 2½ m. SE of the Romford station on the East Counties railway. Area 4,920 acres. Pop. in 1831, 2,186; in 1841, 2,399.

HORNCLIFF, a township in the p. of Norham, co. of Durham, 4½ m. SW of Berwick-upon-Tweed. Area 840 acres. Pop. in 1831, 369; in 1841, 322.

HORNDON (East or Great), a parish in Essex, 4 m. SE of Brentwood. Area 2,090 acres. Pop. in 1831, 438; in 1841, 529.

HORNDON (West), a parish in Essex, 3½ m. SSE of Brentwood. Area 470 acres. Pop. in 1841, 60.

HORNDON-ON-THE-HILL, a parish in Essex, 6 m. NNE of Gravesend. Area 2,390 acres. Pop. in 1831, 511; in 1841, 576.

HORNE, a parish in Surrey, 4½ m. SSW of Godstone. Area 4,270 acres. Pop. in 1841, 649.

HORNEBURG, or Hornburg, a town of Prussia, in the prov. of Westphalia, regency and 30 m. SW of Munster. Pop. 325.—Also a town of Hanover, in the landr. and 9 m. SSE of Stade, and 18 m. W of Hamburg, on the l. bank of the Lühe. Pop. 1,248.

HORNEFARS, a village of Sweden, in the prov. of West Bothnia, 20 m. SW of Umea, at the entrance of the river Horn into the gulf of Bothnia.

HORNELLSVILLE, a township of Steuben co., in the state of New York, U. S., 241 m. SW of Albany. It has an uneven surface, but is generally fertile, and is drained by the Canisteo river. Pop. in 1840, 2,121. The village is on the Canisteo river, and contains about 500 inhabitants.

HORNERKIRCHEN, a village of Denmark, in the duchy of Holstein, 9 m. SW of Bramstadt. Pop. 234.

HORNHAUSEN, a village of Prussia, in the prov. of Saxony, in the regency and 21 m. WSW of Magdeburg, circle and 8 m. N of Gröningen. Pop. 1,570. The marshes in the environs have been drained by a canal which extends to the Bode at Oschersleben.

HORN-HEAD, a bold rocky promontory in co. Donegal, 3¼ m. NE between the Atlantic and Dunfanachy harbour. It forms a peninsula 1½ m. in extreme breadth, comprising a superficial area of 1,000 acres, and connected with the mainland by a narrow isthmus. Its highest summit is about 833 ft. above sea-level.

HORNHUIZEN, a parish of Holland, in the prov. and 14 m. NW of Groningen, near the shore of the North sea.

HORNIJA, a river of Spain, which has its source in the mountains of Torozos, in Leon, in the N part of the prov. of Valladolid; waters the valley of Torre; enters from the S the prov. of Zamora; and, after a course of about 39 m., flows into the r. bank of the Duero.

HORNILLO, a town of Spain, in New Castile, in the prov. and 63 m. SSW of Toledo, and 32 m. ESE of La Guadalupe. Pop. 600. It possesses extensive manufactories of household-cloth.

HORNILLOS, a town of Spain, in Old Castile, in the prov. and 18 m. SSE of Logrono, and partido of Torrecella-de-Cameros, on the brow of a mountain. Pop. 211. It has extensive spinning-mills, and manufactories of woollen and linen fabrics.—Also a town in Leon, in the prov. and 24 m. S of Valladolid, partido and 5 m. W of Olmedo, on the Eresma, and near the Adaja. Pop. 176.

HORNILLOS-DE-CERRATA, a town of Spain, in Leon, in the prov. and 13 m. ENE of Palencia, partido and 3 m. NW of Battanas-y-Dehesa-de-Valverde, at the foot of a mountain. Pop. 255. It contains a parish and a hermitage, and in the vicinity are the ruins of a castle.

HORNILLOS-DEL-CAMINO, a town of Spain, in Old Castile, in the prov. and partido and 10 m. W of Burgos, on the road from that town to Palencia, and on the r. bank of the Arlanzon, near the confluence of the Hormaza. Pop. 356.

HORNING, a parish and village in Norfolk, 3¼ m. SE of North Walsham, between the Bure and Ant. Area 2,480 acres. Pop. in 1841, 467.

HORNINGHOLD, a parish in Leicestershire, 8¼ m. NE of Market-Harborough. Area 1,120 acres. Pop. in 1831, 97; in 1841, 98.

HORNINGLOW, a township in the p. of Burton-upon-Trent, Staffordshire, 3½ m. SSE of Tutbury, and intersected by the Grand Trunk canal. Area 2,430 acres. Pop. in 1831, 391; in 1841, 852.

HORNINGSEA, a parish in Cambridgeshire, 3½ m. NNE of Cambridge, on the Cam. Area 1,580 acres. Pop. in 1831, 272; in 1841, 298.

HORNINGSHAM, a parish in Wiltshire, 4½ m. SW of Warminster. Area 2,320 acres. Pop. 298.

HORNINGSHEATH, a consolidated parish, formerly consisting of the parishes of Great and Little Horningsheath, Suffolk, 2¼ SW of St. Edmund's Bury. Area 1,780 acres. Pop. in 1841, 599.

HORNINGTOFT, a parish in Norfolk, 4½ m. SSE of Fakenham, W of the Wensum. Area 1,460 acres. Pop. in 1831, 293; in 1841, 290.

HORNISGRUNDE, a mountain of Baden, in the circle of the Middle Rhine, in the Schwarzwald. Alt. 3,616 ft.

HORNOS, a town of Spain, in Andalusia, in the prov. of Jaen, partido and 7 m. S of Segura-de-la-Sierra. Pop. 317.

HORNOS ISLANDS, a group of islands, 8 in number, in the Rio-de-la-Plata, in the gov. and NE of Buenos-Ayres, in N lat. 34° 20′.

HORNOY, a canton, commune, and town of France, in the dep. of the Somme, arrond. of Amiens.—The cant. comprises 26 communes. Pop. in 1831, 11,147; in 1841, 11,281.—The town is 20 m. WSW of Amiens, and 20 m. S of Abbeville. Pop. 1,070.

HORNSEA, a parish and market-town in the E. R. of Yorkshire, bordering on the German ocean, 13 m. ENE of Beverley, and 190 m. N of London. Area 3,160 acres. Pop. in 1831, 780; in 1841, 1,005. On the W side of the town is a fine sheet of water, covering about 436 acres. There is a chalybeate spring in the vicinity of the town.

HORNSEY (St. Mary), a parish and village in Middlesex, 5½ m. NNW of St. Paul's. Area 2,960 acres. Pop. in 1801, 2,716; in 1831, 4,856; in 1841, 5,937. The parish includes the hamlets of Crouch-end, Muswell-hill, Stroud-green, a considerable part of Highgate, and part of Finchley common. The surrounding country is eminently attractive.

HORNSTEIN, a town of Hungary, in the com. of Oedenburg, 9 m. NNW of Ruszth. Pop. 1,704.

HORNTON, a chapelry in Horley p., in Oxfordshire, 6 m. NW of Banbury. Area 1,400 acres. Pop. in 1831, 551; in 1841, 592.

HORNU, a department, town, and commune of Belgium, in the prov. of Hainault, arrond. and 6 m. WSW of Mons. The town has an elementary school, and possesses extensive manufactories of steam-engines and of cordage. In the environs are the most extensive coal-mines in the kingdom. The dep. comprises the communes of Grand and Petit H., containing respectively 2,500 and 300 inhabitants.

HORODENKA, a town of Gallicia, in the circle and 21 m. NE of Kolomea, on the Glowka. Pop. 500, chiefly Armenians.

HORODLO, a town of Poland, in the obwod and 12 m. NE of Hrubieszou, on the l. bank of the Bug. Pop. 1,200.

HORP (Le), a canton and town of France, in the dep. of La Mayenne, arrond. and 10 m. NE of Mayenne. Pop. 1,700.

HORPICHTA, a town of Turkey, in Romelia, in the sanj. and 30 m. SSE of Monastir, on the lake of Castoria.

HORPMAEL, a department and commune of Belgium, in the prov. of Limburg, and arrond. of Tongres. Pop. 543.

HORRA (La), a town of Spain, in the prov. of Burgos, 10 m. E of Aranda-de-Duero. Pop. 950.

HORRHEIM, a town of Würtemberg, in the bail. and 4 m. N of Vaihingen, on the Metter. Pop. 1,340.

HORREY, a district in the E part of S. Carolina, U. S., intersected by the Waccamaw, an affluent of the Great Pedee. Area 1,000 sq. m. Pop. 5,755 in 1840; 7,906 in 1850. Its cap. is Conwaysboro'. Its staple productions are cotton and rice.

HORRUES, a department and commune of Belgium, in the prov. of Hainault, arrond. and 13 m. NNE of Mons, on the Sennette. Pop. of dep. 2,747. In the environs are quarries of mill and lime stone. In this dep. is the com. of Horruette. Pop. 77.

HORSEBRIDGE, a hamlet in Hellingley p., Sussex, 2½ m. NW of Hailsham.

HORSEHEATH, a parish in Cambridgeshire, 3½ m. E by N of Linton. Area 1,677 acres. Pop. in 1831, 430; in 1841, 523.

HORSE-ISLAND, an islet at the W side of the entrance of Castlehaven harbour, 2 m. S of Castletownsend, co. Cork. A tower has been erected on it as a landmark to vessels.—Also an islet in Roar-

ing-Water bay, 1¼ m. WNW of Ringcove, co. Cork. It comprises an area of upwards of 90 acres, and contains copper ores of considerable value.—Also an islet about the middle of the W side of Ballinskelligs bay, co. Kerry.—Also an island in Lake Huron, in Upper Canada, 1 m. SE of the Great Manitoulin.

HORSEL, or HERSEL, a river which has its source on the NE side of the Thüringer-wald, in the duchy of Saxe-Coburg-Gotha, and principality of Gotha, 6 m. N of Tambach. It runs first NE, then NW and W, and, after having traversed the N part of the principality of Eisenach, and bathed the town of that name, joins the Werra on the r. bank, 5 m. SSW of Creutzburgh, and after a course of about 30 m. Its principal affluent is the Nesse, which it receives on the r. On the r. bank of the H. to the E of Eisenach is a mountain of the same name.

HORSELEY, a parish and township in Gloucestershire, 3 m. SW of Minchin-Hampton. Area 4,480 acres. Pop. in 1831, 3,690; in 1841, 3,064. H. was formerly a place of more importance than it is at present. The inhabitants are partly employed in the woollen manufacture. The county house-of-correction stands in this parish.—Also a township in Eccleshall p., Staffordshire, 1½ m. SW of Eccleshall. Area 2,520 acres. Pop. in 1831, 491; in 1841, 491.

HORSELEY (EAST), a parish in Surrey, 5½ m. WSW of Leatherhead. Area 1,740 acres. Pop. in 1831, 291; in 1841, 300.

HORSELEY (WEST), a parish in Surrey, 6¼ m. E by N of Guildford. The old mansion of the Raleigh family stands in this p. Area 3,000 acres. Pop. in 1831, 702; in 1841, 671.

HORSELL, a parish in Surrey, 4 m. NW by W of Ripley. Area 2,890 acres. Pop. in 1841, 766.

HORSEMONDEN, a parish in Kent, 3 m. NE of Lamberhurst. Area 4,300 acres. Pop. in 1831, 1,197; in 1841, 1,218.

HORSENDON, a parish in Buckinghamshire, 6¼ m. SW of Wendover. Area 780 acres. Pop. in 1831, 37; in 1841, 27.

HORSENS, a sea-port of Denmark, in the prov. of N. Jutland, in the bail. of Skanderborg, 25 m. SW of Aarhuus, on a fiord of the same name. Pop. 5,000. It has a good harbour, and possesses 30 small coasting-vessels.

HORSEPATH, a parish in Oxfordshire, 4 m. E by S of Oxford. Area 1,310 acres. Pop. in 1831, 275; in 1841, 306.

HORSEY, a parish in Norfolkshire, 8 m. SE by S of Happisburgh, on the sea-coast. Little Waxham, formerly a parish, but now destitute of village and church, both having been swept away by the incursions of the sea, stands within the bounds of Horsey. Area 2,490 acres. Pop. in 1831, 111; in 1841, 162.—Also an island formed by an inlet of the sea on the E coast of Essex, 4 m. SSW of Harwich, opposite Walton lights, near Kirby and Walton. It is 6 m. in circumf.

HORSFORD, a parish in Norfolkshire, 5 m. NNW of Norwich, on a branch of the Bure. Area 4,030 acres. Pop. in 1831, 543; in 1841, 593.

HORSFORTH, a chapelry and township in Guisley p., W. R. of Yorkshire, 5 m. NW of Leeds, on the river Aire, over which there is here a bridge to Calverley. The inhabitants are chiefly employed in the cloth manufacture. Area 2,820 acres. Pop. in 1831, 3,425; in 1841, 1,188.

HORSHAM, a parish, borough, and market-town, in Sussex, 26 m. NE by N of Chichester, and 35 m. SSW of London, on the river Arun,—here an inconsiderable stream. The London and H. railway terminates in the centre of the town: it is 10 m. in length, and joins the London and Brighton railway at the 17th mile, in the parish of H. Area of the p. 20,040 acres, including 11,160 acres of St. Leonard's forest. Pop. in 1801, 3,204; in 1831, 5,105; in 1841, 5,765. Under the Reform act the boundaries of the borough were extended so as to coincide with the whole of this extensive p.; but the borough was limited to the return of one member in place of two. The number of electors registered for 1837 was 338; in 1848, 339. H. is one of the polling-places for the W division of the county.—The town, though respectable, is small and irregularly built. The street through which the church is approached is agreeably planted with rows of fine trees. The church is a venerable edifice, with a tower and 8 bells. The interior has been thoroughly repaired, but preserves its original character throughout, and contains several ancient and interesting monuments.—The town-hall and sessions-house is a very handsome building, with a stone front. The county-jail is situate near the E extremity of the town. It is adapted for the classification of prisoners. There are numerous seats and mansions in the vicinity of the town; and the parish, altogether, constitutes one of the most luxuriant and fertile districts in Sussex.

HORSHAM-ST.-FAITH'S, usually called ST. FAITH, a parish and village in Norfolkshire, 4 m. N of Norwich, on the post-road from Norwich to Cromer. Area 1,750 acres. Pop. in 1831, including the hamlet of Newton-St.-Faith's, 1,279; in 1841, 973.

HORSINGTON, a parish in Lincolnshire, 4 m. W of Horncastle. Area 1,700 acres. Pop. in 1831, 323; in 1841, 345.—Also a parish in Somersetshire, 3½ m. S by W of Wincanton. Area 3,710 acres. Pop. in 1831, 968; in 1841, 915.

HORSLEY, a parish and township in Derbyshire, 2½ m. SE by S of Belper, on the river Derwent. The parish comprises the townships of H., H.-Woodhouse, and Kilbourne. Area 2,920 acres. Pop. in 1831, 1,948; in 1841, 2,278.—Also a township in Ovingham p., Northumberland, 10 m. E by N of Hexham. Pop. in 1831, 293; in 1841, 286.

HORSLEY-LONG, a parish in Northumberland, 6 m. NW by N of Morpeth, intersected by a branch of the Coquet. Area 13,240 acres. Pop. in 1831, 952; in 1841, 922.

HORSLEY-WOODHOUSE, a township in Horsley p., Derbyshire, 3½ m. ESE of Belper. Pop. in 1831, 709; in 1841, 881.

HORSTEAD WITH STAININGHALL, a parish and village in Norfolkshire, 6½ m. SE of Aylesham. The v. is pleasantly situated on the S bank of the Bure. Area 2,490 acres. Pop. in 1841, 625.

HORSTED, or LITTLE HORSTED, a parish in Sussex, 2½ m. SW of Uckfield. Area 2,240 acres. Pop. in 1841, 278.

HORSTED-KEYNES, a parish in Sussex, 5½ m. NE of Cuckfield. Area 6,210 acres. Pop. in 1831, 782; in 1841, 812.

HORTA, a river of Prussia, which has its source in the S part of the prov. and regency of Posen, to the NE of Kobylin and SE of Kozmin, the latter of which towns, with those of Sutroszyn and Dubinow, it passes in its course into Silesia, in which it joins the Bartsch, on the r. bank, a little above Herrnstadt. Its general course is WSW.—Also a town of Spain, in Catalonia, in the prov. of Barcelona, 18 m. WNW of Tortosa, near the source of the Canaleta. Pop. 1,732. It has a parish-church, a convent, and a custom-house. In the environs is a bed of excellent potters' clay.—Also a port on the SE coast of the island of Fayal. Pop. 3,500. See FAYAL.

HORTALIZA, a town of Spain, in New Castile, in the prov. and 5 m. NE of Madrid, and partido of Colmenar-Viejo. Pop. 750. It has a parish-church and a hermitage.

HORTEN, a town of Norway, in the district of Aggershuus, 32 m. S of Christiania. It has an extensive arsenal and ship-building yards; and considerable works are in progress of erection here by the government, which intends to make it a chief naval station.

HORTIGAS, a mountain-lake of Brazil, in the prov. of Goyaz, near the Rio Araguaia. It is still little known, the locality in which it lies being difficult of access.

HORTIGOSA-DE-CAMEROS, a town of Spain, in Old Castile, in the prov. and 22 m. SSW of Logrono, and partido of Torrecilla-de-Cameros, in the Sierra-de-Cameros, near a stream. Pop. 1,585.

HORTIZUELA, a town of Spain, in New Castile, in the prov. and partido and 14 m. WSW of Cuenca, on a mountain bathed by the Xucar. Pop. 72.

HORTON, a river of Australia, which has its source in the Hardwicke or Nurdawar mountains, and flows N to the Gwydir, which it joins on the l. bank, in S lat. 29° 45′.

HORTON, a parish in Buckinghamshire, 1¼ m. SSW of Colnbrook. Area 1,610 acres. Pop. in 1831, 480; in 1841, 873.—Also a township in Tilston p., Cheshire, 2½ m. NW of Malpas. Area 450 acres. Pop. in 1831, 148; in 1841, 142.—Also a parish in Dorsetshire, 4½ m. SSW of Cranborne. Area 7,000 acres. Pop. in 1831, 421; in 1841, 448.—Also a parish in Gloucestershire, 3¼ m. NE of Chipping-Sodbury. Area 3,560 acres. Pop. in 1831, 477; in 1841, 466.—Also a chapelry in Chartham p., Kent, 3 m. SW of Canterbury.—Also a parish in Northamptonshire, 6 m. SE of Northampton. Area 2,790 acres. Pop. in 1831, 115; in 1841, 65.—Also a parish and township in Northumberlandshire, 6½ m. SE of Morpeth. The parish comprises the townships of Bebside, Cowpen, East-Hartford, West-Hartford, and H. Area 5,360 acres. Pop. in 1831, 2,631; in 1841, 2,638.—Also a township in Wem p., Shropshire, 2 m. NW by N of Wem.—Also a township in Gisburn p., W. R. of Yorkshire, 8½ m. W by S of Skipton. Area 1,780 acres. Pop. in 1831, 200; in 1841, 156.—Also a chapelry and considerable village in Bradford p., W. R. of Yorkshire, 2 m. SW of Bradford. The woollen manufacture is carried on here to a considerable extent. Area 2,070 acres. Pop. in 1801, 3,459; in 1831, 10,785; in 1841, 17,615.

HORTON AND HORTON-HAY, a parish in Staffordshire, 2¾ m. W by N of Leeke. It includes the townships of Blackwood and Crowborough. Area 4,570 acres. Pop. in 1831, 970; in 1841, 942.

HORTON-IN-RIBBLESDALE, a parish in the W. R. of Yorkshire, 10½ m. W of Kettlewell, at the sources of the rivers Ribble and Wharfe. Towards the W boundary of the parish are the skirts of Ingleborough-hill, 2,361 ft. in height above sea-level: the top is flat and nearly a mile in circumf. Area 18,970 acres. Pop. in 1831, 567; in 1841, 520.

HORTON-KIRBY, a parish in Kent, 4 m. SSE of Dartford, on the river Darent. Area 1,800 acres. Pop. in 1831, 666; in 1841, 714.

HORTON-MONKS, a parish in Kent, 5 m. NNW of Hythe, on the line of the South-Eastern railway. Area 1,220 acres. Pop. in 1831, 156; in 1841, 714.

HORWICH, a chapelry in Dean p., Lancashire, 5 m. SE by S of Chorley. There are large establishments here for calico-printing, and bleaching-works. Area 3,230 acres. Pop. in 1831, 3,562; in 1841, 3,773. The H. and Blackrod station of the Preston and Manchester railway is 13 m. from Preston, and 17 m. from Manchester.

HORWOOD, a parish in Devonshire, 3¾ m. ENE of Bideford, on a branch of the Torridge. Area 1,280 acres. Pop. in 1831, 130; in 1841, 118.

HORWOOD (GREAT), a parish in Buckinghamshire, 2½ m. N of Winslow. It includes the hamlet of Singleborough. Area 3,120 acres. Pop. in 1831, 720; in 1841, 712.

HORWOOD (LITTLE), a parish in Buckinghamshire, 3 m. NE by N of Winslow. Area 1,950 acres. Pop. in 1831, 431; in 1841, 392.

HOSDEN, a commune of Belgium, in the prov. of Liege, dep. of Laturne. Pop. 303.

HOSE, a parish in Leicestershire, 7 m. N of Melton-Mowbray. Area 2,140 acres. Pop. 417.

HO-SE, a district and town of China, in the prov. and 66 m. S of Yunnan, div. of Lin-gan-fu, in N lat. 24° 15′, E long. 102° 22′.

HOSHMAT, an Armenian village of Turkey in Asia, 1½ hour NNE of Palu.

HOSHUN, a village on the l. bank of the Euphrates, in N lat. 37° 17′ 20″, a little above the confluence of the Kakhtah river with the Euphrates.

HO-SHUN-HEEN, a district and town of China, in the prov. of Shan-se, div. of Leaou-chu, in N lat. 37° 20′, E long. 113° 36′.

HO-SHWUY, a district and town of China, in the prov. of Kan-suh, div. of King-yang-fu, in N lat. 36° 3′, E long. 107° 58′.

HOSIPUR, a town of Hindostan, in the prov. of Bahar, 90 m. NW of Patna.

HOSPITAEL (VRACENE-KROM-KRICKE-LAER-STRAET-ET-), a commune of Belgium, in the prov. of E. Flanders, dep. of Nieukerken-Waes. Pop. 406.

HOSPITAL, a parish and village in co. Limerick. Area of p. 3,999 acres. Pop. in 1841, 1,757.—The v. is 4 m. E of Bruff. Pop. 781.

HOSPITAL, or HOSPENTHAL, a remarkable hamlet of the Swiss cant. of Uri, in the valley of Urseren, to the N of Mount St. Gothard, on the Reuss, at an elevation of 4,680 ft. above sea-level. Pop. 300.

HOSPITAL-DE-ORBIGO, a town of Spain, in the prov. and 19 m. SW of Leon, partido and 9 m. E of Astorga, on the r. bank of a river of the same name, opposite the town of Puenta-de-Orbigo. Pop. 922. It derives its name from an ancient hospital of the knights of Malta which formerly stood here.

HOSPITALET, a modern town of Spain, in Catalonia, in the prov. of Barcelona. Pop. 2,504. It has a parish-church and a custom-house; and has some cotton manufactures.

HOSSEIN-ABAD, a town of Hindostan, in the prov. and 30 m. NE of Aurung-Abad, in the Nizam's territories.

HOSSEIN-ABDUL, a town of Hindostan, in the prov. of Lahore, in N lat. 33° 54′, E long. 72° 42′. It has frequently been an object of contention between the Afghans and the Sikhs.

HOSSEIN-BELA, a village of Sind, 15 m. E of Shikarpur, on the l. bank of the Indus.

HOSSEINPUR, a town of Hindostan, in the prov. of Oude, 10 m. E of Sultanpore.—Also a town in the prov. of Delhi, district and 68 m. NW of Bareilly.

HOSSO-BETTA, a town of Hindostan, in the prov. of Canara, 12 m. SE of Mangalore. It is principally inhabited by persons whose ancestors emigrated from the vicinity of the Portuguese settlement of Goa, in order to avoid forcible observance of the Christian faith.

HOSSO-DURGA, a town of Hindostan, in the prov. of Canara, in the territory of the Neliswara rajah, in N lat. 12° 16′.

HOSTALRICH, a town of Spain, in the prov. and 20 m. SSW of Gerona, on the Tordera. Pop. 950. Its citadel is strong, and having been a depot at the time of the French war, underwent a regular siege, but was taken after a gallant defence. The Spanish general, O'Donnel, in trying to raise the siege of this

place, lost the hard-fought battle of Vich, in Feb. 1810.

HOSTAU, a town of Bohemia, in the circle of Klattau, on the borders of Bavaria, 27 m. SW of Pilsen. Pop. 1,381.

HOSTEDE, a commune of Belgium, in the prov. of Brabant, dep. of Deurne. Pop. 75.

HOSTEINTHER, a district in the territory to the NW of Lubeck, watered by the Trave. Its principal village is Padelugge.

HOSTENBACH, a village of Prussia, in the prov. of the Rhine, circle and 4 m. SE of Sarrelouis, on the l. bank of the Sarre. Coal is extensively wrought in the vicinity.

HOSTENS, a village of France, in the dep. of the Gironde, cant. and 10 m. NW of Saint Symphorien.

HOSTERLITZ, or HOSTIEHRADICE, a town of Moravia, in the circle and 10 m. NE of Znaim. Pop. 1,100.

HOSTERWITZ, a village of Saxony, on the r. bank of the Elbe, to the S of Dresden.

HOSTIE, a commune of Belgium, in the prov. of Limburg, dep. of Caulille. Pop. 111.

HOSTIEN (SAINT), a commune of France, in the dep. of Haute-Loire, arrond. of Le Puy. Pop. 1,830.

HOSTIMURI, a town of Mexico, in the prov. and 80 m. S of Sonora. Silver-mines exist in the vicinity.

HOSTING, a town of Moravia, in the circle and 15 m. W of Znaim. Pop. in 1834, 787.

HOSTOMITZ, a town of Bohemia, 6 m. SE of Beraun. Pop. 1,200.

HOSTUN, a commune of France, in the dep. of Drome, 19 m. NE of Valence. Pop. 1,044.

HOSZUFALU, a town of Transylvania, adjacent to Cronstadt, a military station near the Wallachian frontier.

HOSZUMEZO, a town of Hungary, in the com. of Marmaros, 7 m. NW of Szigeth. Pop. 1,659.

HOTELLENI-DE-FLE'E (L'), a village of France, in the dep. of Maine-et-Loire, cant. and 4 m. N of Segre. Pop. 650.

HOTENSLEBEN, a village of Prussia, in the duchy of Magdeburg. Pop. 850.

HOTHAM, a parish in the E. R. of Yorkshire, 1 m. N of South Cove. Area 2,530 acres. Pop. 430.

HOTHAM INLET, a deep inlet on the N shore of Kotzebue sound, to the N of Chamisso island.

HOTHAMPTON. See BOGNOR.

HOTHFIELD, a parish in Kent, 3 m. NW of Ashford. Area 1,900 acres. Pop. 408.

HOTON. See KOTAN.

HOTONNES, a village of France, in the dep. of Ain, cant. and 7 m. SE of Brenod. Pop. 860.

HOTOT-ST.-SULPICE, a village of France, in the dep. of the Seine-Inferieure, cant. and 4 m. SW of Doudeville. Pop. 1,200.

HO-TSIH-HEEN, a district and town of China, in the prov. of Shan-tung, div. of Tsaou-chu-fu.

HO-TSIN, a district and town of China, in the prov. of Shan-se, div. of Keang-chu.

HOT SPRINGS, a village in Bath co., in the state of Virginia, U. S., 169 m. W by N of Richmond, celebrated for its mineral springs.—Also a co. and town in the W part of Arkansas. The co. has an area of 2,540 sq. m., and is watered by the Wachita river. Pop. in 1840, 1,907; in 1850, 2,919. The town is 53 m. W by S of Little Rock, and 6 m. N of the Wachita. There are a number of hot springs here, and likewise some cold chalybeate springs.

HOTTENTOTS, a people of Southern Africa, originally occupying the territories around the Cape of Good Hope, and "in all probability the descendants of the earliest inhabitants." [*Pritchard.*] They are in some respects an insulated tribe, bearing no resemblance either to the Negro race along the W coast, or to the Caffre nation to the E. Various conjectures have been proposed, but nothing very satisfactory has yet been established respecting their origin or affinity. Barrow considers them as approaching nearest in colour, and in the construction of the features, especially in the shape of the eye, to the Chinese or Tartar race, and accounts for this relation by supposing them to have proceeded from the Egyptians, who have been represented as originally the same people with the Chinese. In support of this opinion, he adduces the strong resemblance between the physical character of the Bosjesmans or real Hottentots, and the descriptions given by ancient writers, particularly by Diodorus Siculus, of the Egyptians and Ethiopians, especially of the Pigmies and Troglodytes, who are said to have dwelt in the neighbourhood of the Nile. The early Portuguese writers mention a colony of Chinese in the vicinity of Soffala, and the natives in the interior of Madagascar are described as a small race of Tartars resembling the Hottentots in stature, colour, and countenance. The name *Hottentot*, though frequently represented as their native appellation, is now ascertained to be of modern fabrication, and has no place or meaning in their own language: they take it to themselves under the idea of its being a Dutch word; and it is conceived to have been applied at first as a term in some degree imitative of the remarkable clacking made by them in speaking. Each horde had formerly its particular name, as the Attaquas, Hessaquas, Houtiniquas, Dammaras, Kabobiquas, Namaquas, and Koranas; but the designation by which the whole nation was distinguished, and which they still bear among themselves in every part of the country, is QUAI-QUÆ, or GKHUI-GKHUI.

The Hottentot country, comprehending all the different tribes of the race, extends eastward to the Quathlambane mountains, which separate it from Caffreland; and along the W coast to the parallel of 20°. The H. race is also supposed to extend in a scattered manner towards the centre of Africa. None of the first discoverers of the Cape of Good Hope, nor of the early Portuguese navigators, had much communication with the natives, and the H. were scarcely known to Europeans till about the year 1509, when Francisco D'Almeyda, viceroy of India, returning home after his quarrel with Albuquerque, landed at Table-bay, and was killed, along with 70 of his people, in a scuffle with the natives. They were occasionally visited for refreshments by the English, Portuguese, and Dutch traders in their voyages to the E. Indies, till the establishment of a colony among them by the last-mentioned nation in 1650. They were soon induced, by their passion for brandy and tobacco, first to sell their country and cattle, and next to become themselves the servants of the purchasers, for the purpose of guarding those flocks and herds which had so recently been their own property. From various causes the Hottentot race is rapidly diminishing, and in all probability will soon become wholly extinct. Many of their tribes, mentioned by earlier travellers, have entirely disappeared; at the commencement of the present century, not a kraal or village was to be found about the Camtoos river, where, only 20 years before, hundreds of the natives were met; and the whole number within the limits of the colony does not amount to 15,000. Much has been done since the colony came into possession of Great Britain, especially by the progress of missionary settlements, to protect and preserve this oppressed race of beings. The ancient manners and primitive character of the H. are acknowledged to have been greatly changed during their connection with the colonists of the Cape. The personal appearance of the H. is by no means prepossessing. Prominent cheek bones, and a narrow pointed chin, give to the face the form nearly of a triangle. The nose, in most of them, is remarkably flat, and rather broad between the eyes. The eyes are of a deep chestnut colour, long and narrow in their shape; and the eyelids, at the extremity next the nose, instead of forming an angle as in Europeans, are rounded into each other, exactly like those of the Chinese. Their mouth is of the ordinary size, the lips thinner than those of the Negroes and Caffres, and the teeth beautifully white. Their hair is of a singular nature, growing in small tufts at some distance from each other, and extremely hard and frizzled, resembling, when short, the bristles of a shoe-brush twisted into round lumps about the size of a large pea, and when suffered to grow, hanging about the neck in strong tassels like fringe. The colour of their skin is that of a yellowish brown or faded leaf. Their figure, especially when young, is not devoid of symmetry. They are erect, clean-limbed, and well-proportioned; their hands, feet, and all their joints, remarkably small; and the muscular parts of their body delicately formed, so as to indicate rather feminine inactivity, than masculine exertion. Some of the women in their youth, and before child-bearing, are described as models of perfection in the human figure; every joint and limb being well-shaped and turned; their breasts round, firm, and distant; their hands and feet small and delicately formed; and their gait not altogether deficient in grace. But, at an early period of life, and immediately after the birth of their first child, their beauty vanishes. The dress of an uncivilized Hottentot consists of a belt cut from the hide of some animal, and fastened round the body. From this strap is suspended in front a kind of bag made of the skin of a jackal with the hair outwards. From the back part of the girdle hangs a piece of stiff dried skin, reaching nearly to the middle of the thigh. In the winter months, they wear cloaks made of skins, which are worn, as the weather requires, with the wool inwards or outwards; and which serve as blankets and bedding through the night, as well as for a garment through the day. The women suspend from their belt in front a kind of apron made of skin, but cut into threads, which hang in a bunch between the thighs, and reach about half-way to the

knee; they have also sheep-skin cloaks resembling those of the men. When these cloaks are laid aside, in the warmer weather, both sexes may be said to be nearly naked; but their bodies are in some measure protected from the influence of the sun or air by unctuous matter which they rub over the whole of their persons; and which, however filthy in itself, is a natural and useful resource in hot climates, to prevent the skin from being parched and shrivelled by the scorching heat —The H. are often reduced, especially in their native state, to live upon gums, roots, and the larvæ of insects, and at times make a kind of bread from the pith of the palm tree. They are remarkably patient of hunger; but are equally voracious when supplied with animal food, and are described as the greatest gluttons on the face of the earth.—The H. families, who engage in the service of the colonists, live in small straw huts around the farm house. In a more independent state, they horde together in kraals or villages, in which the houses are commonly ranged in a circle, with the doors opening towards the centre, thus forming a kind of court, into which the cattle are collected at night, to preserve them from the beasts of prey. The huts are generally circular in their form, resembling a bee-hive, and covering a space of about 20 ft. in diameter, but commonly so low in the roof, that, even in the centre, it is rarely possible for a man of middle size to stand upright. The fireplace is situated in the middle of the apartment, around which the family sit or sleep in a circle; the door, which is seldom higher than 3 ft., is the only aperture for admitting the light, or letting out the smoke. The frame of these arched habitations is composed of slender rods, capable of being bent in the desired form, some parallel with each other, some crossing the rest, and others bound round the whole in a circular direction. Over this lattice work, are spread large mats made of reeds or rushes, about 6 or 10 ft. long, and sewed together with a kind of thread or catgut made from the dorsal sinews of different animals. These materials are easily taken down, and removed on the backs of the oxen, when there is occasion to change the place of residence. The free H. depend for subsistence upon the milk and flesh of their cattle, and the produce of their skill in the chase. They are excellent marksmen with the musket, but still make use occasionally of their ancient weapons, the *hassagai* or javelin, and the bow with poisoned arrows. The hassagai is an iron spear about a foot in length, fastened to the end of a tapering shaft about 4 ft. long, which is thrown from the hand by grasping it in the middle, raising it above the head, and delivering it with the fore-finger and thumb. The bow is a plain piece of wood seldom more than a yard long, and sometimes tapering to a point at each extremity.

The Hottentots may be said to be entirely ignorant of arts and manufactures, except the formation of coarse earthen ware, the sewing of sheep-skins for their winter garments, the preparation of poisons, and the making of bows and arrows. They discover little taste for music. A kind of guitar with three strings stretched upon a piece of hollow wood is in use among them. Another instrument consists of a piece of sinew or intestine, twisted into a small cord, and fastened upon a hollow stick about 3 ft. long, by a piece of quill at one end fixed into the stick, and by a small peg at the other, which is made to turn for the purpose of stretching the string to the degree required. This instrument is played by applying the mouth to the quill, and producing faint murmuring notes, by giving a vibratory motion to the string A sort of flute made of the bark of trees is also known among them.

The language of the Hottentots is perhaps one of the most extraordinary forms of speech in use among human beings. Its principal peculiarity is a strong clacking of the tongue, in uttering every monosyllable, and every leading syllable of larger words. This sound is formed by suddenly retracting the tongue from the teeth or palate, according to the signification of the word to be uttered, and in some measure answering the part of inflexions, &c. Though the difficulty of uttering these sounds appears to Europeans extreme, yet it is not insurmountable; most of the Dutch colonists are able to speak the H. language with great fluency. Many vocables in the language seem to have been originally exact imitations of nature, and many of the names of animals, especially, are obviously suggested by their distinguishing cry; such as, *kraak*, a frog; *mnoo*, an ox; *meau*, a cat; *hahœ*, a horse; *hurroo*, the sea; *kaboo*, a gun. This last word particularly is so pronounced as to imitate the report of a musket. The syllable *ka* is thrown out with a strong palatial stroke of the tongue expressing the stroke of the flint; while the last syllable *boo* is uttered with a full mouth, outstretched lips, and prolonged sound, descriptive of the report.

Few ancient usages are retained among the scattered tribes of the H.; and all traces even of religion are now lost. No particular ceremonies are observed either at their marriages or funerals. The most prominent point in the habits and dispositions of the H. is an extreme indolence which even the urgent calls of hunger are scarcely able to overcome. Yet they are expert in finding out a passage over a desert country, and can discover the game in the chase at a very great distance. They learn the Dutch language with great facility; and though seldom employed as domestic servants by the colonists at the Cape, can be taught to do every kind of work with as much propriety as Europeans. They are a mild, quiet, and rather timid people; but when led on by superiors, will encounter danger with sufficient alacrity, as the incidents of the war now raging in the colony sufficiently attest.

HOTTENTOT-HOLLAND, a district and town of South Africa, in the SW part of the division of Stellenbosch. The district is bounded on the SW by False bay; and is intersected by the road from Cape Town to the E part of the colony. It presents a finely diversified and well-watered surface; and produces grain, fruit, and wine in great abundance. The advantages of its situation render its export trade in grain active.

HOTTEWILLER, a commune of France, in the dep. of Moselle, cant. of Volmunster. Pop. 1,033.

HOTTI, a village of Turkey in Europe, in Albania, in the sanj. and 20 m. N of Scutari, and near the N bank of the lake of Scutari. Pop. (chiefly Catholic) about 2,000.

HOTTINGA, a river of Brazil, in the prov. of Minas-Geraes, which falls into the Rio-Jequitinhonha, on the l. bank, on the confines of the prov. of Bahia.

HOTTINGEN, a large village in Switzerland, in the cant. and a little to the E of Zurich.

HOTTOMONT, a commune of Belgium, in the prov. of Brabant, dep. of Grand-Rosiere-Hottomont. Pop. 135.

HOTTON, a department and commune of Belgium, in the prov. of Luxemburg, arrond. of Marche. Pop. of dep. 1,029. It is watered by the Ourthe, and possesses numerous manufactories of woollens and a saw-mill. Pop. of com. 642.

HOTZENPLOTZ, a river which has its source in Moravia, in the circle of Troppau, to the N of Würbenthal, on the N side of the Sudetic mountains; enters the Prussian prov. of Silesia; flows through the W part of the regency of Oppeln; and after a course of about 42 m. unites with the Oder on the l. bank, at the town of Krappitz. It runs in a generally NE direction, and bathes the towns of Zuckmantel, Neustadt, and Ober-Glogau.

HOTZENPLOTZ, or HOSSABLAHA, a town of Moravia, capital of the county of Hennersdorf, in the circle and 26 m. NW of Troppau, and 23 m. NNE of Freudenthal, on an affluent of the Hotzenplotz, and on the frontier of Prussia. Pop. 2,579.

HOTZING. See HATZEG.

HOTZSCHEVIE. See GOTTSCHE.

HOU, a commune of Belgium, in the prov. of Brabant, dep. of Rebecq-Rognon. Pop. 111.

HOU, HAOU, or How, a town of Upper Egypt, in the prov. and 30 m. ESE of Girgeh, and 27 m. W of Gheneh, on a height on the l. bank of the Nile, in N lat. 26° 23′, E long. 32° 43′, at the S extremity of the great bend of the river, and nearly opposite Kasr-e-Syad, the ancient *Chenoboscion*. It has a Coptic church; and contains some ruins, supposed to be those of the ancient *Diospolis Parva*.

HOUAT, an island of France, in the Atlantic ocean, in the dep. of Morbihan, cant. and 6 m. NE of Belle-Ile-en-Mer, and com. of Le-Palais, in N lat. 47° 20′. It is 9 m. from the continent, and is about 3 m. in length from the NW to SE. The ship-passage on the NW possesses a depth of 17 fath. at low water. To the W is the little island of Beniguet, and ports Senetal, Plouay, and Carnaquis. Several insulated rocks lie to the S; to the E, on which it is defended by a fort, are the bay d'Enfer and port Navalo. Its inhabitants, about 250 in number, are chiefly fishermen. This island, with the adjacent one of Hoedri, was taken by the English in 1695 and again in 1746.

HOUB, a town of Turkey in Europe, in Servia, in the sanj. of Semendria, 26 m. SSE of Czabatz.

HOUCHE, a town of Moldavia, capital of the district of Faltri, 43 m. SE of Jassy, near the r. bank of the Pruth.

HOUCKE, a department and commune of Bel

gium, in the prov. of West Flanders, and arrond. of Bruges. Pop. 151.

HOUDAIN, a canton, commune, and town of France, in the dep. of the Pas-de-Calais, and arrond. of Bethune. The cant. comprises 31 com. Pop. in 1831, 14,273; in 1841, 14,588. The town is 8 m. SW of Bethune. Pop. 930.—Also a village in the dep. of the Nord, cant. and 1½ m. NNW of Bavay. Pop. 650. It has a marble-work and a bleachery, and in the environs are several coal-mines.

HOUDAN, a canton, commune, and town of France, in the dep. of the Seine-et-Oise, and arrond. of Mantes. The cant. comprises 30 com. Pop. in 1831, 12,976; in 1841, 13,516.—The town is 18 m. SSW of Mantes, on the l. bank of the Vigre, which is here crossed by a bridge. Pop. in 1841, 2,003. It possesses a fine church founded by Robert the Pious, and an ancient tower; and has a manufactory of keys for wind instruments. It carries on an active trade in grain, wool, young cattle, and fowls. Fairs for cattle and grain are held here three times a-year.

HOUDEMONT, a commune of Belgium, in the prov. of Luxemburg, dep. of Rulles. Pop. 461.

HOUDENG-AIMERIES, a department and commune of Belgium, in the prov. of Hainault, arrond. and 9 m. W of Mons. Pop. 2,254. It has extensive coal-mines, several forges, a tannery, and a platina work.

HOUDENG-GOEGNIES, a department and commune of Belgium, in the prov. of Hainault, and arrond. of Mons, watered by the Tiriau. Pop. of dep., 2,686. It has extensive coal-mines. Pop. of village, 2,086.

HOUDREMONT, a department and commune of Belgium, in the prov. of Namur, arrond. of Dinant. Pop. 242.

HOUDRIGNY, a commune of Belgium, in the prov. of Luxemburg, dep. of Villers-la-Loue. Pop. 254.

HOUDZOCHT, a commune of Belgium, in the prov. of Brabant, dep. of Lembecq. Pop. 603.

HOUECOURT, a village of France, in the dep. of the Vosges, cant. and 3 m. E of Châtenoy, on the Vair. Pop. 900. It has an oil-mill and an iron-work. Fairs for cattle, grain, calico cloth, &c., are held here 4 times a-year.

HOUEILLES, a canton and commune of France, in the dep. of the Lot-et-Garonne, arrond. of Nerac. The cant. comprises 7 com. Pop. in 1831, 4,525; in 1841, 3,896. The village is 18 m. WNW of Nerac, on the Ciron. Pop. 1,097.

HOUFFALIZE, or Hauffleschт, a department, commune, and town of Belgium, in the prov. of Luxemburg, arrond. of Marche, 30 m. N of Neufchatel, on the Ourthe. Pop. 1,057. It contains the ruins of an ancient fortress, and possesses several breweries and tanneries.

HOUGA (Le), a commune and town of France, in the cant. of Nogara, 32 m. WSW of Condom. Pop. 1,593.

HOUGAERDE, a town of Belgium, in the prov. of S. Brabant, cant. and 4 m. N of Jodoigne, on the Grande-Gethe. Pop. 3,446. It has a fine church. Its trade is chiefly connected with its extensive breweries and distilleries.

HOUGH, a township in Wybunbury p., Cheshire, 4 m. E by S of Nantwich. Area 1,080 acres. Pop. in 1831, 252; in 1841, 275.

HOUGH-ON-THE-HILL, a parish in Lincolnshire, 6½ m. N of Grantham, comprising the hamlets of Brandon and Gelston. Area 3,600 acres. Pop. in 1831, 565; in 1841, 582.

HOUGHAM, a parish in Kent, 2½ m. WSW of Dover. Area 2,770 acres. Pop. in 1841, 1,311.

HOUGHTON, a township of Upper Canada, in Talbot district, skirted by Lake Erie on the S. Pop. in 1841, 277.—Also a township in Stanwix p., Cumberland, 2½ m. N of Carlisle. Pop. in 1831, 384; in 1841, 372.—Also a parish in Huntingdonshire, 2 m. W by N of St. Ives, on the river Ouse. Area 1,640 acres. Pop. in 1831, 372; in 1841, 182.—Also a parish in Southamptonshire, 2 m. SW by S of Stockbridge. Area 1,790 acres. Pop. in 1841, 458.

HOUGHTON (Great), a township in Darfield p., W. R. of Yorkshire, 5¼ m. E of Barnsley, on the line of the North Midland railway. Area 1,900 acres. Pop. in 1831, 292; in 1841, 348.—Also a parish in Northamptonshire, 2¾ m. SE by E of Northampton. Area 1,570 acres. Pop. in 1831, 305; in 1841, 332.

HOUGHTON (Little), a parish in Northamptonshire, 3½ m. E by S of Northampton. Area 1,070 acres. Pop. in 1831, 539; in 1841, 566.—Also a township in Long Houghton parish, Northumberland, 1 m. NW of Long Houghton.—Also a township in Darfield p., W. R. of Yorkshire, 1½ m. N of Darfield, on the line of the North Midland railway. Pop. in 1831, 132; in 1841, 108.

HOUGHTON (Long), a parish in Northumberland, 3½ m. E by N of Alnwick. It comprises the townships of Little H., Long H., and Bulmer with Seaton-house. Area 3,990 acres. Pop. in 1831, 690; in 1841, 772.

HOUGHTON (New), or Houghton in the Brake, a parish in Norfolk, 10 m. W of Fakenham. Area 1,510 acres. Pop. in 1831, 277; in 1841, 303. H.-Hall, built by Sir Robert Walpole, is a magnificent mansion, and ranks as the first in Norfolk.

HOUGHTON with CLOSE-HOUSE, a township in Heddon-on-the-Wall p., Northumberland, 8½ m. W by N of Gateshead. Pop. in 1841, 127.

HOUGHTON-CONQUEST, a parish in Bedfordshire, 2¼ m. N of Ampthill. Area 3,380 acres. Pop. in 1831, 796; in 1841, 746.

HOUGHTON-IN-THE-DALE, a parish in Norfolk, ¾ m. SW of Little Walsingham, on the river Stiffkey. Area 1,060 acres. Pop. in 1841, 342.

HOUGHTON-GLASS, a township in Castleford p., W. R. of Yorkshire, 2 m. NW of Pontefract. Area 1,500 acres. Pop. in 1831, 446; in 1841, 436.

HOUGHTON-ON-THE-HILL, a parish in Leicestershire, 6 m. E by S of Leicester. Area 2,450 acres. Pop. in 1831, 395; in 1841, 451.—Also a parish in Norfolkshire, 4½ m. NW of Watton, on the river Wissey. Area 470 acres. Pop. in 1841, 41.

HOUGHTON with MIDDLETON and ARBURY, a township in Winwick p., Lancashire, 2 m. N of Warrington. Area 620 acres. Pop. in 1831, 286; in 1841, 293.

HOUGHTON-REGIS, a parish in Bedfordshire, 1½ m. NNW of Dunstable. It includes the hamlet of Bedwell-Green. Area 4,500 acres. Pop. in 1831, 1,424; in 1841, 1,661.

HOUGHTON-LE-SIDE, a township in Gainford p., Durhamshire, 6 m. NW of Darlington. Area 1,240 acres. Pop. in 1831, 130; in 1841, 130.

HOUGHTON-LE-SKERNE. See Haughton-le-Skerne.

HOUGHTON-LE-SPRING, a parish, township, and market-town in the co.-palatine of Durham, 6½ m. NE of Durham, and 10 m. SE of Newcastle, on a tributary to the Wear. The parish comprises the townships of South Bidick, Bourn-Moor, Cocken, Great and Little Eppleton, East, West, and Middle Herrington, Hetton-le-Hole, H., Moorhouse, Moorsley, Morton-Grange, Newbottle, Offerton, East and West Rainton, and Wardenlaw and the chapelry of Painshaw. Area 14,560 acres. Pop. in 1801, 6,414; in 1831, 20,524; in 1841, 16,833. Area of the township, 1,220 acres. Pop. in 1831, 3,917; in 1841, 3,433. This p. has been ecclesiastically divided into

four distinct parishes, under the 16 sec. 58° George III. c. 45.—The town is situated at the head of a fine vale, opening to the W, and sheltered on the N and E by the hills of Houghton and Wardenlaw. The trade of this place depends mainly upon the numerous coal mines in the vicinity. This rich mineral district also contains quarries of limestone and freestone, and several chalybeate springs.

HOUGHTON-WINTERBOURNE, a parish in Dorsetshire, 4½ m. WSW of Blandford-Forum. Area 2,740 acres. Pop. in 1831, 265; in 1841, 304.

HOUGUE (La), a fortress of France, in the dep. of the Manche, cant. and 1½ m. SE of Quettehou, and com. of Morsaline, on the British channel. It stands on a narrow isthmus which connects a small peninsula with the main land, and defends the extensive roadstead of the same name, one of the best in the British channel, and lying within the Bank du Bec, Cape-de-la-Hougue, and the island of Tatihou. At low tide the fort is almost entirely surrounded with water, the only communication with land being by a narrow channel called the Sillon. It forms the residence of a sub-commissioner of the navy, and has some trade in fish. The Cape-de-la-H. is noted for the naval combat which took place in its vicinity on the 29th May 1692, between the French fleet commanded by Tourville, and the united fleets of England and Holland, in which the former sustained a signal defeat.

HOUILLES, a commune of France, in the dep. of the Seine-et-Oise, cant. and 3 m. SW of Argenteuil. Pop. 1,265.

HOULE, a town of Mantchuria, on the r. bank of the Amur, a little above the confluence of the Usuri, 360 m. ESE of Sagalin-Oola.

HOULE (La), a hamlet of France, in the dep. of the Ille-et-Vilaine, cant. and com. of Cancale, of which it is the port, and on the roadstead of that name. It possessed 126 vessels = 1,126 tons in 1841.

HOULME, an ancient district of France, in the S part of Lower Normandy, and now forming the W part of the dep. of the Orne.

HOULME (Le), a commune of France, in the dep. of the Seine-Inferieure, cant. and 3 m. N of Maromme, and 6 m. N of Rouen, on the Cailly. Pop. 1,765. It has several spinning and calico-printing-mills, and manufactories of calico, extensive bleacheries and a paper-mill.

HOULTON, a township and village of Maine, U. S., the cap. of Aroostock co., 120 m. NNE of Bangor. Pop. 1,597.

HOUMEAU-PONTROUVE (L'), a commune of France, in the commune of Charente, cant. and 3 m. NW of Angoulême. Pop. 1,258.

HOUN, or Hoon, a town of Fezzan, 240 m. NNE of Murzuk, and 20 m. E of Sokna. It is surrounded by a wall, and has 3 mosques. Its inhabitants are Fatima Arabs.

HOUNA (Cape), a headland on the coast of Caithness, 2 m. W of Duncansbay-head. A mail-boat crosses and recrosses the Pentland frith every day betwixt this point and the v. of Burwick in S. Ronaldshay, a distance of about 7 m.

HOUNAM, a hilly parish in the SE of Roxburghshire. Area 14,458 acres. Pop. in 1831, 260; in 1841, 280. At the NE extremity of the p. H.-Law attains an alt. of 1,464 ft.

HOUNAN. See Hunan.

HOUND, a parish in Southamptonshire, 3 m. SE of Southampton. Area 2,900 acres. Pop. in 1831, 417; in 1841, 460.

HOUNDSFIELD, a township in Jefferson co., in the state of New York, U. S., 6 m. W of Watertown. Pop. 4.146. It comprises the naval station of Sackett's harbour.

HOUNDSLOW, or Hounslow, a chapelry and market-town, partly in the p. of Heston, and partly in that of Isleworth, Middlesex, 2¾ m. SW of Brentford, and 9 m. W of London, on a branch of the Colne. Pop. 3,097. There are several extensive powder-mills in this chapelry, a flax-mill, and a mill for rolling copper. The town of H. is situated on the edge of what was formerly H. heath, 10 m. from Hyde-park corner. It consists of a long street, on the Exeter and Salisbury road, at the point where the Bath and Bristol road branches off.—H. heath was at one time notorious for highway robberies, and celebrated for races; but every part of it capable of culture has now been enclosed, and numerous and handsome houses have been erected within its bounds; so that its aspect is now entirely changed.

HOU-PE. See Hu-pih.

HOUPET, a village of Belgium, in the prov. of Liege, cant. of Chevron. Pop. 123.

HOUPLIN, a commune and village of France, in the dep. of Nord, cant. of Seclin. Pop. 1,069.

HOUPPERTINGEN, a village of Belgium, in the prov. of Limburg, 4 m. E of Saint-Trond. Pop. 674.

HOUR, a village of Belgium, in the prov. of Namur, cant. of Beauraing. Pop. 363.

HOURAIN, a commune of Belgium, in the prov. of Hainault, cant. of Lessines. Pop. 400.

HOURDEL, a hamlet of France, in the dep. of Somme, com. of Saint-Valery, on the Channel. Pop. 177.

HOURN (Loch), an extensive inlet on the W coast of Inverness-shire, projected from the sound of Sleat, opposite the SE end of Skye. It is nearly 5 m. broad at its mouth; and is navigable for 20 m.

HOUSATONIC, a river of Connecticut, U. S., which rises in two sources in Berkshire co., Massachusetts; runs SE along the whole breadth of Connecticut; and empties itself into Long Island sound, between Stratford and Milford. It is navigable about 12 m. to Derby, and above that is well adapted for mills and machinery. A bar at its mouth obstructs the navigation of large vessels. Between Salisbury and Canaan is a cataract, where the whole river, which is here 150 yds. wide, falls perpendicularly 60 ft.

HOUSE, or East Barra, one of the Shetland isles, in the p. of Bressay, about 5 m. in length, and from a ½ m. to 1 m. in breadth. Pop. about 220.

HOUSSA, a town of Abyssinia, in the S part of the territory of Adel, 65 m. SW of Zeyla, and 30 m. N of Hubetta, to the E of a lake which is formed by the head-streams of the Hawash.

HOUSSA, or Haussa, an extensive district of Central Africa, consisting of various petty kingdoms or states, and stretching on the N to the southern skirts of the Sahara; on the E to Bornu; on the S to Nufi or Tappa; and on the W to the Joliba. The dominant people in this territory are the Fellatahs; but the mass of the pop. Negroes. Major Denham was informed that H. is at present parcelled out into 7 provs., each of which has a governor, and that the whole is under the supreme rule of a sultan. The central prov. is Cashna or Kashna, the cap. of which, of the same name, is situated in N lat. 13° 10′, E long. 5° 50′. To the N of Cashna lies H. Proper; on the E is Katagum, the cap. of which is situated on the Chadda; to the S is Kanu or Kano, and to the S of Kanu, Zegzeg. Zenfra lies to the SE of Cashna; and Sokkatu, whose cap., of the same name, is in N lat. 13° 4′ 52″, E long. 6° 12′, forms the most western prov. The district of Guber to the N of Sokkatu, appears to be inhabited by independent tribes. Several of those states appear to have recovered their independence of late years. See articles

Fellatahs, Sudan, and the special articles on the several states above named.

HOUSSAY, a commune of France, in the dep. of the Mayenne, cant. of Chateau-Gontier. Pop. 1,019. —Also a village in the dep. of the Eure-et-Loir, cant. and 3 m. N of Bonneval, near the Loir. Pop. 360. It has some iron-works.

HOUSSE, a department and commune of Belgium, in the prov. of Limburg, and arrond of Liege. Pop. of dep. 872; of com. 332. It has a manufactory of fire-arms.

HOUSSEN, a commune of France, in the dep. of the Haut-Rhin, cant. of Andolsheim. Pop. 1,000.

HOUSSIERE, a commune of Belgium, in the prov. of Hainault, dep. of Braine-le-Comte. Pop. 1,289.

HOUSSIERE, or Oussiere, a river of France, in the dep. of the Nièvre, formed by the union of several small streams, which have their sources in a forest on the E confines of the dep., and ENE of Chateau-Chinon. After a total course of about 12 m. in a WNW direction, it throws itself into the Yonne, on the r. bank, at Chaumard.

HOUSSIERE (La), a commune of France, in the dep. of the Vosges, cant. of Corcieux. Pop. 1,083.

HOUSSO, a commune of Belgium, in the prov. of Hainault, dep. of Carnieres. Pop. 132.

HOUSSOIS, a commune of Belgium, in the prov. of Hainault, dep. of Herquegies. Pop. 113.

HOUSTON, a parish and village in Renfrewshire, 5 m. NW of Paisley. Area of p. 7,500 acres. Pop. 2,818.

HOUSTON, a county in the state of Georgia, U. S., near the centre of the state, comprising an area of 500 sq. m., bordered on the E by the Ocmulgee river, and on the W by Flint river, and intersected by the branches of the latter. Pop. in 1830, 7,369; in 1840, 9,711, of whom 4,861 were slaves. Its capital is Perry.—Also a township of Clearfield co., in the state of Pennsylvania. Pop. 129.—Also a village in Chickasaw co., in the state of Mississippi, 145 m. NE of Jackson, on the head-waters of Oktibbeha creek.—Also a co. in the state of Texas, bordered on the W by the Trinidad or Trinity river. The soil, especially near the Trinity, is of excellent quality; the air is pure; the water good and abundant; and the forests abound with a great variety of timber. Pop. in 1850, 2,734, of whom 674 were slaves. The town of H. is 70 ft. above sea-level.

HOUTA, or Howta (El), a town of Arabia, in Nedjed, in the prov. and 21 m. E of El-Haryq, and 126 m. SE of Derréyéh.

HOUTAIN-LE-VAL, a department and commune of Belgium, in the prov. of Brabant, arrond. of Nivelles, watered by the Dyle. Pop. of dep. 969. Besides the com., of the same name, which contains 599 inhabitants, it comprises the com. of Houtain-le-Mont. Pop. 370.

HOUTAIN-L'EVEQUE, a department and commune of Belgium, in the prov. of Liege, arrond. of Huy. Pop. 708.

HOUTAIN-SAINT-SIMEON, a department and commune of Belgium, prov. and arrond. of Liege, watered by the Géer. Pop. of dep. 892; of com. 692.

HOUTAIN (Oosteneynde-en), a commune of Belgium, in the prov. of Antwerp, dep. of Casterlé. Pop. 263.

HOUTAING, a department and commune of Belgium, in the prov. of Hainault, arrond. of Tournai. Pop. 813.—Also a commune in the same prov., dep. of Bassilly. Pop. 518.

HOUT-BAAY, or Chapman's Bay, an indentation of the SW coast of South Africa, in the district of the Cape, and 14 m. SSW of Cape Town. Next to Saldanha bay, it forms the safest and most commodious harbour in the colony. It is defended from all winds, has a depth of from 6 to 9 fath. water, with a bottom of fine sand, and is capable of affording accommodation to 20 vessels of the line. The environs are fertile and salubrious, and abound with excellent water.

HOUTE-CRUYS, a commune of Belgium, in the prov. of E. Flanders, dep. of Cruybeke. Pop. 315.

HOUTE-KRUYS, a commune of Belgium, in the prov. of E. Flanders, dep. of Moorsel. Pop. 327.

HOUTENESSE, a village of Holland, in the prov. of Zealand, cant. and 7 m. N of Hulst, near the l. bank of the West Scheldt. Pop. 3,653.

HOUTE-STRAET, a commune of Belgium, in the prov. of Limburg, dep. of Wychmael. Pop. 120.

HOUTH, or Hoath. See Howth.

HOUTHAELEN, a department and commune of Belgium, in the prov. of Limburg, and 8 m. N of Hasselt. Pop. of dep. 1,236. It has several tile and brick-kilns. Pop. of v. 210.

HOUTKERQUE, a commune of France, in the dep. of the Nord, cant. and 5 m. N of Steenworde, 12 m. NNE of Hazebrouck. Pop. 1,338. This was the scene of many sanguinary engagements between the French and Imperialists in 1793.

HOUTMANS ABROLHOS. See Abrolhos.

HOUTTAVE, a department and commune of Belgium, in the prov. of W. Flanders, arrond. of Bruges. Pop. 704.

HOUTTHEIN, a department and commune of Belgium, in the prov. of W. Flanders, arrond. of Furnes. Pop. 1,556.—Also a dep. and com. in the same prov. and arrond. of Ypres. Pop. 1,245.

HOUTVENNE, a department and commune of Belgium, in the prov. of Brabant, arrond. of Turnhout, watered by the Great Nethe. Pop. 488.

HOUVAMO-CHILL, or Little Ceram, a peninsula which forms the W extremity of the island of Ceram, in the Asiatic archipelago. It is joined to the body of the island by the narrow isthmus of Tanoeeng, and is about 42 m. in length, and 18 m. at its greatest breadth. It produces large quantities of cloves and sago. The nutmeg trees with which it was formerly covered were destroyed by the Dutch, to whom the island belonged, in 1667.

HOUVILLE, a commune of Belgium, in the prov. of Luxemburg, dep. of Hollange. Pop. 143.

HOUW, a commune of Belgium, in the prov. of Limburg, dep. of Opoeteren. Pop. 109.

HOUX, a department and commune of Belgium, in the prov. of Namur, arrond. of Dinant. Pop. of dep. 226. It is watered by the Meuse, and has several iron-works. Pop. of v. 205.

HOUX (Aux), a department and commune of Belgium, in the prov. of Liege, and dep. of Clermont. Pop. 112.

HOUYET, a department and commune of Belgium, in the prov. of Namur, arrond. of Dinant, watered by the Lesse. Pop. of dep. 680; of v. 478.

HOVAR, a tribe of the Shelluks who inhabit the prov. of Susa, in Marocco, and whose number is estimated at 80,000 individuals.

HOVAS, a warlike tribe in Madagascar, whose numbers are estimated at 750,000. They inhabit the prov. of Ankova, and constitute the principal military strength of the reigning sovereign, yet they appear to be a distinct race from all the other tribes inhabiting Madagascar. Their complexion is a light olive; their features are flat; their hair is black, soft, and curly; their limbs are small but finely formed; and their gait and movements are free and agile. They live in villages of from 50 to 100 houses each, which are usually encircled for security by a deep fosse and rampart. See Madagascar.

HOVDEN, or Hovedoen, a small island of the North sea, off the W coast of Norway, in the stift and amt of Aggershuus, and gulf of Christiania, in N lat. 61° 40″. It contains the ruins of a Cistercian convent founded in 1148.

HOVE, a department and commune of Belgium, in the prov. and arrond. of Antwerp. Pop. 616.

HOVE, a parish and village in Sussex, 2 m. W by N of Brighton. Area of p. 720 acres. Pop. in 1831, 1,360; in 1841, 2,509.—The v., which has become a favourite watering-place, contains many handsome houses. The district has suffered severely from encroachments of the sea, but since the middle of last century it has been gradually receding, and has left behind it an immense beach extending W to Shoreham harbour. The new terrace occupies a site which about 60 years ago was flooded by every tide.

HOVERINGHAM, a parish in Nottinghamshire, 5 m. S of Southwell, on the W bank of the river Trent. Area 1,050 acres. Pop. in 1841, 398.

HOVERS-EINDE, a commune of Belgium, in the prov. of Limburg, dep. of Overpelt. Pop. 100.

HOVES, a department and commune of Belgium, in the prov. of Hainault, arrond. of Mons. Pop. 2,350. It has several spinning-mills and manufactories of linen.

HOVETON, two united parishes in Norfolkshire, 7 m. S of N. Walsham. Area 2,440 acres. Pop. in 1831, 522; in 1841, 454.

HOVINGHAM, a parish and township in the N. R. of Yorkshire, 8 m. WNW of New Malton. The parish comprises the townships of Ayrholme and Hawthorpe, Cotton, Fryton, H., E. Ness, S. Holme, Scackleton, and Wath. Area 8,630 acres. Pop. in 1831, 1,193; in 1841, 1,277.

HOWAKIL BAY, a large bight on the Dankali coast of the Red sea, upwards of 30 m. broad, and 15 m. deep, containing many low islands and shoal patches, the largest of which gives its name to the bay.

HOWARA, a village of Egypt, in the prov. of Fayum, 6 m. NW of Illahun, celebrated for the remains of the Labyrinth, and for a remarkable pyramid.

HOWARA (Bir), a station near the mouth of Wady Amara, in the Suratta peninsula, near the E coast of the Red sea, and 2 hours from Wady Gherandel. There are two fountains of bitter water here, which Lord Lindsay identifies with the wells of Marah. A few stumped palms grow around them.

HOWARD, a county near the centre of Missouri, U. S. Pop. in 1840, 13,108; in 1850, 13,971. Its cap. is Fayette.—Also a township of New York, 204 m. W of Albany. Pop. 3,247.—Also a township in Pennsylvania, 97 m. NW of Harrisburg. Pop. 1,404.—Also a township in the Western district of Upper Canada, bounded by Lake Erie on the S, and on the N by the river Thames. It is intersected by Macgregor's creek. The soil is a fine light loam. Pop. in 1845, 1,896.—Also a township in Knox co., in Ohio. Pop. 1,000.

HOWASH. See Hawash.

HOW-CAPLE, a parish in Herefordshire, 8 m. SE by E of Hereford. Area 970 acres. Pop. in 1831, 137; in 1841, 140.

HOWDEN, a parish, township, and market-town, in the E. R. of Yorkshire, 20 m. SE by S of York, and 220¼ m. by railway NNW of London, on the N bank of the river Ouse, and in the line of the Hull and Selby railway. The parish comprises the townships of Asselby, Balkholme, Belby, Cotness, Kilpin, Knedlington, Metham, Saltmarsh, Skelton, Thorpe, and Yorkfleet, with the chapelries of Barnby-on-the-Marsh, and Lexton. Area 14,510 acres. Pop. in 1801, 3,395; in 1831, 4,531: in 1841, 4,850. Area of township 2,820 acres. Pop. in 1831, 2,130; in 1841, 2,332.—The town is small but well-built, is situated about 1 m. from the Ouse, on its N side, and is surrounded by a level and richly cultivated tract of country. It has a station on the Hull and Selby railway, by which it is 22 m. W of Hull. On the Ouse is a small harbour for boats, and a ferry. The H. horse fair is now reckoned one of the first in England. The influx of foreigners, dealers, farmers, graziers, and even noblemen and gentry, at this fair, is usually very great. October 2d is the great fair day: for several years, however, this fair has been progressively earlier in its commencement, and it now continues about a fortnight. H. is one of the polling-places for the E. R. of the county.—H. is celebrated for its ancient and interesting church, a noble edifice, consisting of a nave and north aisle, two south aisles, a chancel and aisles, with a chapter-house, and transepts with east aisles. From the centre rises a magnificent tower. The choir is now in ruins. The chapter-house is of great beauty.

HOWDEN-PANS, a township in Wallsend p., Northumberland, 2½ m. SW by W of North Shields, on the banks of the Tyne. This township was noted, in the 16th and 17th cents., for its extensive glass-works, and afterwards for its numerous salt-pans; but its principal support is now derived from the coal-trade. Several frigates and Indiamen have been built here: at present, the docks are used chiefly for building vessels employed in the coal trade.

HOWE, a parish in Norfolk, 5½ m. ENE of Loddon. Area 970 acres. Pop. 92.

HOWE (Cape), the SE point of Australia, in S lat. 38° 31′, W long. of Sydney 1° 14′.

HOWE (West Cape), a projecting rocky cape on the W coast of Australia, 18 m. SW of Albany.

HOWE (Point), the NW cape of Norfolk island, in the S. Pacific.—Also a cape on the N coast of the island of Egmont, 5 m. W of Hanway's Point.

HOWELL, a parish in Lincolnshire, 4½ m. ENE of Sleaford. Area 1,650 acres. Pop. 72.

HOWELL, a township in the co. of Monmouth, in the state of New Jersey, U. S. Pop. 4,699.

HOWE'S FORELAND, the N point of a peninsula on the NE coast of Kerguelen's land, in S lat. 48° 48′.

HOWE'S ISLAND, one of the cluster called Queen Charlotte's islands, in S lat. 11° 10′. It is separated from Egmont island by a passage extending about 11 leagues, and about 4 m. broad. It is 22 m. long, and from 8 to 14 m. in breadth.—Also an island in the S. Pacific, discovered by Wallis in 1767, in about S lat. 16° 46′. It is about 60 m. long, and 4 m. broad. Cook, in 1774, found it to be composed of several smaller islands, united by breakers.

HOWE'S SOUND, a bay or inlet in the gulf of Georgia, in N lat. 49° 30′. The shores are composed principally of rocks rising perpendicularly from an unfathomable sea. The entrance between Point Gower and Point Atkinson contains several islands, and some more are found within the sound.

HOWICK, a parish in Northumberland, 5 m. ENE of Alnwick. Area 1,520 acres. Pop. 242.—Also a recently formed pensioners' settlement in New Zealand, 15 m. from Auckland, and 5 m. from Panmure.

HOWICK'S GROUP, a cluster of 10 or 11 low wooded islands, off the NE coast of Australia, of which the largest, which is nearly 3 m. long, is in S lat. 14° 32′ 40″, E long. 144° 55′ 20″.

HOWLAND'S FERRY, the narrow part of the waters that separate Rhode island, U. S., from the mainland. It is about ¼ m. wide. A bridge is built across this strait.

HOWNRA, a river of Assam, which has a course of about 10 m. from the Garru mountains to the Brahmaputra river.

HOWRAH, a suburb of Calcutta, on the further bank of the Hugli, chiefly inhabited by ship-builders,

but with some pretty villas interspersed. A railway is in progress from this point to Pandoah and Ramigunge, which will probably be pushed forward to the main Ganges at Rajmhal.

HOWTH, a parish in co. Dublin. Area 2,669 acres. Pop. in 1831, 1,707; in 1841, 1,538. It screens the outer part of the N side of Dublin bay, and forms a peninsula of curious and picturesque character, which is connected with the mainland in the vicinity of the v. of Baldoyle, by a low sandy isthmus of about a ½ m. in breadth; and extends, in an ESE direction, 3¼ m. This peninsula rises in what is called the Hill of H. to an alt. of 563 ft. The village of H., which is 7 m. ENE of Dublin, had a pop. of 692 in 1841.—The harbour of H., in which nearly half-a-million of the public money has been spent, has a depth at low water of 11 ft., with a tidal rise of from 9 to 12 ft. Its W pier is 2,700 ft. in length; the E pier consists of 3 limbs respectively 1,200, 200, and 860 ft. in length. These piers enclose an area of 52 acres.

HOXNE, a parish in Suffolk, 3 m. NE of Eye. Area 1,890 acres. Pop. in 1831, 1,243; in 1841, 1,313. This p. is within the boundary of the parl. borough of Eye.

HOXOR, a small port of Denmark, in Jutland, on the N coast of the Lym-fiord.

HOXTER, or HUXTER, a fortified town of Prussia, in the gov. of Minden, on the r. bank of the Weser, 16 m. W of Grubenhagen. Pop. 3,657. Linen weaving, brewing, and distilling, form the chief branches of trade.

HOXTON, a district, forming a suburb of London on the NE, and comprised in the p. of St. Leonard's-Shoreditch.

HOY, a considerable island of the Orkneys, lying S from the mainland, 4 m. W of Ronaldshay, and 2½ m. S of Stromness. It is about 15 m. long from SE to NW; and 6¼ m. at its greatest breadth. Pop. in 1841, 1,486. The peninsula of Walls, on the SE, contains some tolerably fertile land; but the greater part of the island is mountainous, barren, and so encumbered with large rocks as to be almost inaccessible. Almost the whole of it is occupied by three large hills, ranged in the form of a triangle, of which that to the NE, called the Wart-hill, is the largest, rising from a plain, with a broad base, to the height of 1,600 ft. above the level of the sea. Except along the N shores,—which are bordered with a loamy soil and a rich verdure,—the soil is composed of peat and clay, of which the former commonly predominates. The ground destined for the production of grain, and that appropriated for feeding cattle, bears but a very small proportion to what is covered with heath and allotted for sheep-pasture. The moors abound with grouse and other game. Towards the S and E is an extensive cultivated plain, the shores of which form part of the fine harbour of Longhope, well-known as a place of safe retreat for vessels passing through the Pentland frith. This island is entirely composed of sandstone, sandstone flag, schistose clay, and, in many parts, wacken. It is ecclesiastically divided into two parishes,—Hoy, and N. and S. Walls.

HOYA, a small town in the prov. of Hoya-with-Diepholz, situated on the l. bank of the Weser, 23 m. SE of Bremen. Pop. 2,000.—Also a town of Mexico, 16 leagues SW of San Felippe de Chihuahua.

HOYA-WITH-DIEPHOLZ, a considerable province in the SW of Hanover, with the title of a county, adjoining the duchy of Bremen, and the grand-duchy of Oldenburg. Area 1,420 sq. m. Pop. in 1845, 223,000. It is intersected by the Weser and Hunte rivers; and presents a level surface, interspersed with marshes and lakes, divided into upper and lower districts. Its chief town is Niemburg.

HOYALES, a town of Spain, in the prov. and 48 m. SSW of Burgos. Pop. 650.

HOYER, a small town of Denmark, in the duchy of Sleswick, 26 m. SW of Ribe, with a harbour on the North sea, noted for its oyster-fishery. Pop. 650.

HOYERSWERDA, or WOIRETZ, a town of Prussian Silesia, on the Black Elster, 34 m. NE of Dresden. Pop. 2,050.

HOYLAND (HIGH), a parish in the W. R. of Yorkshire, 6 m. NW of Barnsley. Area 3,250 acres. Pop. in 1831, 1,118; in 1841, 1,444.

HOYLAND (NETHER), a township in the p. of Wath-on-Dearn, W. R. of Yorkshire, 5 m. SE of Barnsley. Pop, 2,597.

HOYLAND SWAIN, a township in the p. of Silkstone, in the W. R. of Yorkshire, 6 m. W of Barnsley. Area 2,060 acres. Pop. in 1841, 713.

HOYLE-LAKE, or HOYLAKE, a hamlet in West Kirby p., Cheshire, 11 m. NNW of Great Neston. On the coast here commodious buildings have been erected for the accommodation of visitors during the bathing-season. H. lake, as it is called, is a fit place for ships bound to Liverpool to sail into at night, or wait a tide for sailing through the Rock channel, and also for vessels bound up the river Dee, when they have not tide sufficient to go over Chester bar. This anchorage—in 3, 4, or 5 fath.—is safe, unless when H. sand is covered at high-water, and the wind blows strong from the NW. The H. lights are situated in 53° 24′ N lat., 3° 11′ W long. There are two lights, a higher and a lower: relative position SW ¾ S 1,200 ft.

HOYM, a small town of Saxony, in the duchy of Anhalt-Bernburg, on the Selke, 16 m. W of Bernburg. Pop. 2,300.

HOYO-DE-MANZANARES (EL), a town of Spain, in the prov. and 24 m. NNW of Madrid, between the Pelegrinos and the Torrelodones. Pop. 450.

HOYO-DE-PENARES, a town of Spain, in the prov. and 21 m. SE of Avila, on the r. bank of the Gastanatas. Pop. 850.

HO-YUAN, a district and town of China, in the prov. of Kwan-tung. The town is in N lat. 23° 42′, E long. 114° 33′.

HOZEMONT, a town of Belgium, in the prov. and 9 m. SW of Liege. Pop. 1,600.

HRABIN, a town of Moravia, in the circle and 9 m. ESE of Troppau. Pop. 600.

HRADEK, a town of Bohemia, in the circle of Prachin, 19 m. NNW of Pisek.

HRADEK (NEU), a small town in the NE of Bohemia, 4 m. W of Koniggratz.

HRADISCH, a town of Moravia, situated on an island formed by the Morawa at its point of junction with the Olschawa, 30 m. S of Olmutz. Pop. 3,100. It has a provincial school, and a Franciscan monastery; and is celebrated for its wine.

HRADISTIE. See MUNCHENGRATZ.

HROSZART, or GROZOWO, a town of Russia, in the gov. and 60 m. SSW of Minsk.

HUACHAPURE (POINT), a headland on the coast of Chili, at the embouchure of the Maule, in S lat. 34° 57′ 30″, W long. 72° 16′ 30″.

HUACHO BAY, a small bay, with good anchorage, on the coast of Peru, in S lat. 11° 08′ 45″, W long. 77° 40′ 05″. About 1 m. from the coast of this bay, on a fertile plain, is the village of H., from which fresh provisions, vegetables, and fruit may be procured.

HUAFO. See GUAFO.

HUAGUE, a river of Chili, which, flowing W, joins the Biobio, on the r. bank, after a course of 90 m.

HUAHEINE, or Aheine, the easternmost island in the group of the Society islands, in S lat. 16° 42′ 45″. It is 24 m. in circumf.; and is divided into two peninsulas, by an isthmus which is overflowed at high water. It has a narrow stripe of fertile low land next the shore; and the hills, which are not nearly so high as those of Tahiti, but more strongly marked by volcanic fire, are in some parts entirely cultivated. The productions are similar to those of Tahiti. Coffee thrives in the gardens of the Missionaries. Pop. in 1828, 2,000; now, 1,900. The harbour of Owharra, or bay of Fare, on the NW coast, has good anchorage, in 18 fath., and secure from winds; but the island is nearly surrounded by a coral reef.

HUAILAS. See Guailas.

HUALLA'GA, a great river of Peru, which rises in the plain of Bonbon, on the E flank of the Andes, near Pasco, in the Laguna Chiquiacoba, not far from the Cerro, and at an alt. of 13.200 ft. above sea-level, under the parallel of 10° 40′ S; flows N, through a wide and broken gorge, to Guanuco, where it turns ENE to Cornilla; from Cornilla to Juanjuy, flows NW by N, between the Eastern and Central cordillera; then turns NNE, passing Yurimaguas, and joins the Maranon near the missions of La Laguna, on the r. bank, in S lat. 4° 40′, W long. 75° 45′. Its chief affluent on the r. is the Chipurana; on the l. it receives the Mixcallo, the Apesoncho, the Huayabamba, and the Moyobamba. Mawe, who entered this river in January 1827, found a bank of dry sand towards the middle of its junction with the Maranon, and a bar at its entrance with only 1½ fath. water. He is of opinion that it is only fit for navigation by vessels drawing from 5 to 6 ft. water; and that Yurimaguas is the farthest point to which they could proceed. The Maranon, or upper course of the Amazon, may itself be ascended as far as the mouth of the H. by vessels drawing not more than 12 ft. water.

HUALSOE, a small island in the North sea, near the coast of Norway, in N lat. 69° 40′.

HUAMACHUCO. See Guamachuco.

HUAMALIES. See Guamalies.

HUAMANGA. See Guamanga.

HUAMBLIN, or Socorro, an island on the W coast of Patagonia, in S lat. 44° 55′ 50″, W long. 75° 12′ 45″. It is thickly wooded, and rises from 400 to 700 ft.

HUAMELUA, a town of Mexico, in the prov. of Oaxaca, 45 leagues SE from Mexico.

HUANCAVELICA. See Guancabelica.

HUANTAJAYA, a mountain of Peru, in the prov. of Tarapaca, 7 m. from the port of Iquique, in S lat. 20° 14′, W long. 70° 7′. It contains silver mines, surrounded with beds of rock salt, and celebrated for the masses of native silver which they produce. They were discovered about 1556; and between 1726 and 1826 yielded a mean annual amount of 750,000 dollars. Since 1826, their produce has not averaged more than 30,000 d. a-year. There are about 50 mines in this quarter.

HUAPANTE, a large and abundant river of Quito, in the prov. of Ambato. It flows from the mountain of Quelendana; runs from N to S; turns W, and enters the Ambato on the E, just before it joins the Pachantica.

HUAQUI, or Xaqui, a large river of Mexico, rising in the NE of the prov. of Sonora, and skirting the E part of that prov., in a SSW course to the parallel of 28°, when it turns W and enters the gulf of California to the S of Guaymas.

HUARAS, a town of Peru, in the prov. of Guailas, on the r. bank of the Santa, 180 m. N of Lima. Pop. 4,000.

HUARTE, a town of Spain, in the prov. and 3 m. ENE of Pampeluna, near the l. bank of the Arga. Pop. 500.

HUARTE-ARAQUIL, a town of Spain, in the prov. and 15 m. WNW of Pampeluna, in the valley of Araquil. Pop. 833.

HUASACUALCO. See Coatzacoalcos.

HUASCO, or Guasco, a village of Chili, in S lat. 28° 27′, on the r. bank of a river of the same name; at the mouth of which it has a small port. The river is small, and the country round presents a barren appearance.

HUASMI-COCHA, a lake of Peru, on the W flank of the Andes, 150 m. SE of Lima. It is about 6 m. in length.

HUASSAGA, a river of New Granada, in the dep. of Assuay, which flows from NW to SE, and falls into the Pastuca, on the r. bank, after a course of 60 m.

HUAYABAMBA, a river of Peru, in the prov. of Truxillo, formed by the union of the Huambo and the Catena, which joins the Huassaga, on the l. bank, after an E course of about 50 m.

HUAYTECAS. See Guaiteca.

HUAZOLOTILLAN, a town of Mexico, in the state of Oaxaca, on the r. bank of the Chicometepec, and 24 m. above its embouchure.

HUB, a village of Baden, in the circle of the Middle Rhine, and amt of Bühl, to the E of Ottersweier. It has an alkaline mineral spring and baths.

HUBAILLE, a commune of Belgium, in the prov. of Namur, dep. of Celle. Pop. 88.

HUBB, a small river in Beluchistan, which has its source in the prov. of Jhalawan, in the hilly region to the NE of Beila, flows SW through the prov. of Luz, and unites with the Poorally, 4 m. NE of Lyaree, in N lat. 25° 49′, and E long. 66° 32′.—Also a river which is supposed to take its rise on the N boundary of the prov. of Luz, flows first SE, then SW, and for the space of about 50 m. S. Then bending SW, it directs its course to Sommeanee bay, into which it throws itself, in N lat. 25° 14′, and E long. 66° 58′, and after a total course of about 100 m. Its channel consists of a series of rocky or gravelly gorges in the Pubb mountains; and it is stated on some authorities to become dry in summer.

HUBBARD, a township of Trumbull co., in the state of Ohio, U. S., 183 m. NE of Columbus, and 18 m. SE of Warren, on the Pennsylvania railroad. Pop. in 1840, 1,242.

HUBBARDSTON, a township of Worcester co., in the state of Massachusetts, U. S., 54 m. NW of Boston, watered by branches of the Ware. Pop. of township in 1840, 1,784; of village about 250.

HUBBARDTON, a township of Rutland co., in the state of Vermont, U. S., 81 m. SSW of Montpelier, watered by a river of the same name, an affluent of Lake Champlain. Its surface is generally hilly. Pop. 719.

HUBBERHOLME, a chapelry and hamlet in the p. of Arncliffe, W. R. of Yorkshire, 6½ m. NE of Northallerton, on the N bank of the Wharfe.

HUBBERSTON, or St. Hubert's Town, a parish and village in Pembrokeshire, 2 m. W of Milford. Pop. in 1831, 1,013; in 1841, 1,174. The village lies to the W of Priory hill, at Melfordhaven.

HUBBLESTON. See Bideford.

HUBEAUMONT (D'), a commune of Belgium, in the prov. of Hainault, dep. of Arquennes. Pop. 135.

HUBERMONT, a commune of Belgium, in the prov. of Namur, dep. of Neuvilles. Pop. 340.—Also a commune in the prov. of Luxemburg, dep. of Ortho. Pop. 105.

HUBERSART, a commune of Belgium, in the

prov. of Hainault, dep. of Ecaussinne Lalaing. Pop. 130.

HUBERT, a seignory of Lower Canada, in the co. of Quebec, intersected in a NE direction by the Tlavorte.

HUBERT (Saint), a department, commune, and town of Belgium, in the prov. of Luxemburg, and arrond. of Neufchâteau. Pop. of dep. 1,739. The town is on a small river, an affluent of the Homme, 48 m. NW of Luxemburg. Pop. 1,699. It has manufactories of potash, several oil-mills and tanneries, and carries on a considerable trade in iron, iron-ware, wool, and sheep.—Also a town of Prussia, in the prov. of the Rhine, and regency of Dusseldorf, 2 m. NNE of Kempen. Pop. 1,930. It contains a Catholic church, and has manufactories of linen and of ribbon.—Also a commune in the prov. of Namur, dep. of Morialme. Pop. 110.—Also a commune in the prov. of East Flanders, dep. of Peteghem. Pop. 398.

HUBERTSBURG, or Hubertusberg, a village of Saxony, capital of an amt or bailiwick, in the circle and 27 m. E of Leipzig, and 3 m. NE of Mutzschen. It has a Catholic chapel, and an ancient castle noted for the treaty which was concluded within its walls on the 15th February, 1763, between Austria, Prussia, and Saxony, and which put an end to the seven years' war.

HUBERTSKIRCH, a village of Silesia, ldgb. of Brunn, and circle of Troppau. It contains a castle, and in the vicinity are extensive iron-mines.

HUBETTA, a town of Abyssinia, in the country of the Dawaro, 30 m. S of Houssa, and 360 m. SW of Gondar.

HUBIERNA, a river of Buenos-Ayres, which, after a course of about 100 m. from W to E, joins the Siancas, on the r. bank, 60 m. ENE of Salta.

HUBINGEN, a village in the duchy of Nassau, bail. and 4 m. SSW of Montabaur. Pop. 180.

HUBINNE, a commune of Belgium, in the prov. of Namur, dep. of Hamois. Pop. 182.

HUBRISKEN (Gross), a village of Prussia, in the reg. and 27 m. NW of Königsberg, near the coast of the Baltic. The only known mine of amber was opened here in 1782.

HUBY, a township in the p. of Sutton-on-the-Forest, N. R. of Yorkshire, 10½ m. SE of Boroughbridge. Area 4,790 acres. Pop. in 1841, 556.

HUCA, a river of Lower Guinea, in Angola, which runs W, and after a course of about 120 m., joins the Dande on the l. bank, a little to the N of Icau.

HUCHELHOVEN, a village of Prussia, in the reg. and 12 m. NW of Cologne, circle and 6 m. NNE of Borgheim. Pop. 1,850.

HUCKESWAGEN, a town of Prussia, in the prov. of the Rhine, regency and 27 m. ESE of Düsseldorf, circle and 4 m. SE of Lennap, on the r. bank of the Wupper. Pop. 2,937. It has a castle, a Catholic and a reformed church, and possesses extensive manufactories of cloth, linen, hosiery, &c.

HUCKING, a parish in Kent, 6 m. NE of Maidstone. Area 1,290 acres. Pop. in 1841, 117.

HUCKLECOT, a hamlet in the p. of Churchdown, Gloucestershire, 3 m. E of Gloucester. Pop. in 1831, 465; in 1841, 455.

HUCKLESTONE. See Hackleston.

HUCKLOW (Great), a township in the p. of Hope, Derbyshire, 2¾ m. NE of Tideswell. Pop. in 1831, 168; in 1841, 242.

HUCKLOW (Little), a hamlet in the p. of Hope, Derbyshire. Pop. 218.

HUCKNALL-UNDER-HUTHWAITE, a hamlet in the p. of Sutton-in-Ashfield, Nottinghamshire, 4¼ m. WSW of Mansfield. Pop. in 1841, 887.

HUCKNALL-TORKARD, a parish in Nottinghamshire, 6½ m. NW of Nottingham, and 3 m. from Newstead Abbey. Area 3,270 acres. Pop. in 1831, 2,200; in 1841, 2,630. The remains of Lord Byron are deposited in the family-vault of the small church of this p.; and a plain marble tablet in the chancel records the dates of his birth and death.

HUCQUELIERS, a canton, commune, and town of France, in the dep. of the Pas-de-Calais, arrond. of Montreuil-sur-Mer. The cant. comprises 24 com. Pop. in 1831, 11,923; in 1841, 11,878. The town is 11 m. NE of Montreuil. Pop. 726. Shoes form its chief article of local manufacture. Fairs are held twice a-year.

HUDDERSFIELD, a parish, township, market-town, and parliamentary borough, in the upper division of Agbrigg-and-Morley wapentake, W. R. of Yorkshire, 45 m. SW of York, and 187 m. NNW of London, on the W bank of the river Colne. The town is connected by a branch line 4 m. in length with the Manchester and Leeds railway, by which it is 16¾ m. from Leeds; 7¾ m. from Dewsbury; and 26¾ m. from Manchester. The parish comprises the townships of Golcar, Lockwood, Quarmby-cum-Lindley, Scammonden, Slaithwaite, and Marsden, besides Huddersfield. Area 15,080 acres. Pop. in 1801, 14,848; in 1831, 31,041; in 1841, 38,454. This parish consists of the valley of the Colne, with the collateral gullies which fall into its course, and many miles of moorland. It extends for nearly 12 m. in length, and the town of H. is situated at its S extremity. The district is naturally barren and unproductive; but its local advantages for manufacture, arising principally from its waterfalls and contiguous coal-mines, have caused the assemblage of a great population, and the soil has gradually yielded to the labours of the agriculturist and husbandman. There are many handsome residences and elegant seats in the vicinity of the town of H.; also several mineral springs, the principal of which are the Lockwood spas and baths.—The inland navigation of the p., as well as its line of railway, affords to its trade ample facilities. The Ramsden canal, which commences close to the town of H., crosses the high road to Halifax, and, passing Blackhouse-brook near Dighton, unites with the Calder at Cooper's bridge: thus opening a cheap communication with the great trading towns of Halifax, Wakefield, Leeds, York, and Hull. The H. canal, which joins the Ramsden canal at the S end of the town, conveys goods westward, by way of Linthwaite, Slaithwaite, and Marsden. This is one of the most stupendous works of the kind in England. In its course is a tunnel, nearly 3½ m. in length, cut through the English Apennines to within 2 m. of Dobcross, from which the canal, after crossing the river Tame in several of its windings, comes within a mile of Lydgate, by Mosley and Staley-bridge, and unites with the Ashton and Oldham canal near Ashton-under-line. The navigation to Manchester is thence direct.

The town of H. is situated on the high road from Manchester to Leeds, but it is almost united by scattered houses, not only with Lockwood, Almondbury, and Mould-Green, but with numerous hamlets or collections of houses throughout the township, and the surrounding districts. The houses are principally built of light-coloured stone, in a neat style. The market-place is a large area surrounded with good shops and houses. The commissioners on parliamentary boundaries mention in their report, that "every house but one in the town belongs to the same proprietor," namely Sir John Ramsden, whose family had a grant of the market by patent, dated as early as 23° Carl. II. It was insignificant both in

trade and population until the beginning of last cent. At that period it was less by one-half than either Halifax or Wakefield; but now it is superior to either of them, and is one of the principal seats of the woollen trade. Its manufactures consist of broad and narrow cloths, serges, kerseymeres, and cords. Fancy goods also to a great extent, comprising shawls and waistcoatings in great variety, besides articles from silk, are here made in abundance. The cotton trade, too, has been increasing in importance, and at present a number of hands are employed in spinning establishments. There are fulling and washing-mills, &c., on the streams within the parish; and it has been recently calculated that upwards of 130,000 hands are engaged in woollen manufactures within 6 m. of the town of H. The Piece-hall constitutes a principal edifice peculiarly characteristic of the district. It was built by the lord of the manor, Sir John Ramsden, and enlarged by his son in 1780. It is a circular range of building, two stories high, with a diametrical range, one story high, which divides the interior into two semicircles. The light is wholly admitted from within, there being no windows on the outside. The hall is subdivided into streets, and the benches or stalls are generally filled with cloths lying close together upon edge and properly disposed for inspection. The open stalls are for the accommodation of country manufacturers of woollen cloths; the two central avenues are for the same purpose, and in brisk times an immense quantity of business is here done in a few hours. The Huddersfield college, and the Huddersfield collegiate schools, are both large and well conducted educational establishments; and the mechanics' institute is one of the best establishments of the class in the kingdom.—H. was enfranchised by the Reform act, and now returns one member to parliament. The number of electors registered in 1837 was 826; in 1848, 963. The boundaries of the parl. borough coincide with those of the township of H. It is also one of the polling-places for the West riding elections.

HUDEAN, or Hudeeana, a town of Northern Hindostan, in the prov. of Delhi, and district of Sirhind, 45 m. SW of Ludiana.

HUDEMUHLEN, a town of Hanover, in the gov. of Luneburg, bail. and 2 m. E of Ahlden, at the confluence of the Aller and Meisse. Pop. 747. Navigation, boat-building, and trade in timber, form the chief branches of local industry.

HUDIKSVALL, Huddiksvald, or Hudiks-wall, a town and port of Sweden, in the laen and 84 m. N of Gefle, and 189 m. NNW of Stockholm, on a bay of the same name, in the gulf of Bothnia, in N lat. 61° 43′ 45″, E long. 17° 15′. Pop. 1,877. It is divided into an old and new town. The former is ill-built, and its streets are narrow and crooked. The new town is regularly built. The port is small and insecure, but is the principal place of export for the productions of the prov. The exports consist chiefly in linen, flax, hemp, timber, and cured *strömmings*, a small fish like a sprat. The port had only 3 vessels = 269 lasts, registered in 1847. Linen and snuff are the chief articles of local manufacture. The environs are adorned with gardens, and alleys lined with gigantic sycamores, and contain some mineral springs. Granite of a fine red colour, and in large masses, is found extending over an area of several leagues in the vicinity.

HUDIMESNEL, a commune and town of France, in the dep. of the Manche, cant. and 3 m. S of Brehal. Pop. 1,612.

HUDINGTON, a parish in Worcestershire, 5 m. SSE of Droitwich. Area 890 acres. Pop. 122.

HUDJERA, a village of Arabia, in Yemen, 21 m. W of Amram, and 45 m. WNW of Sana.

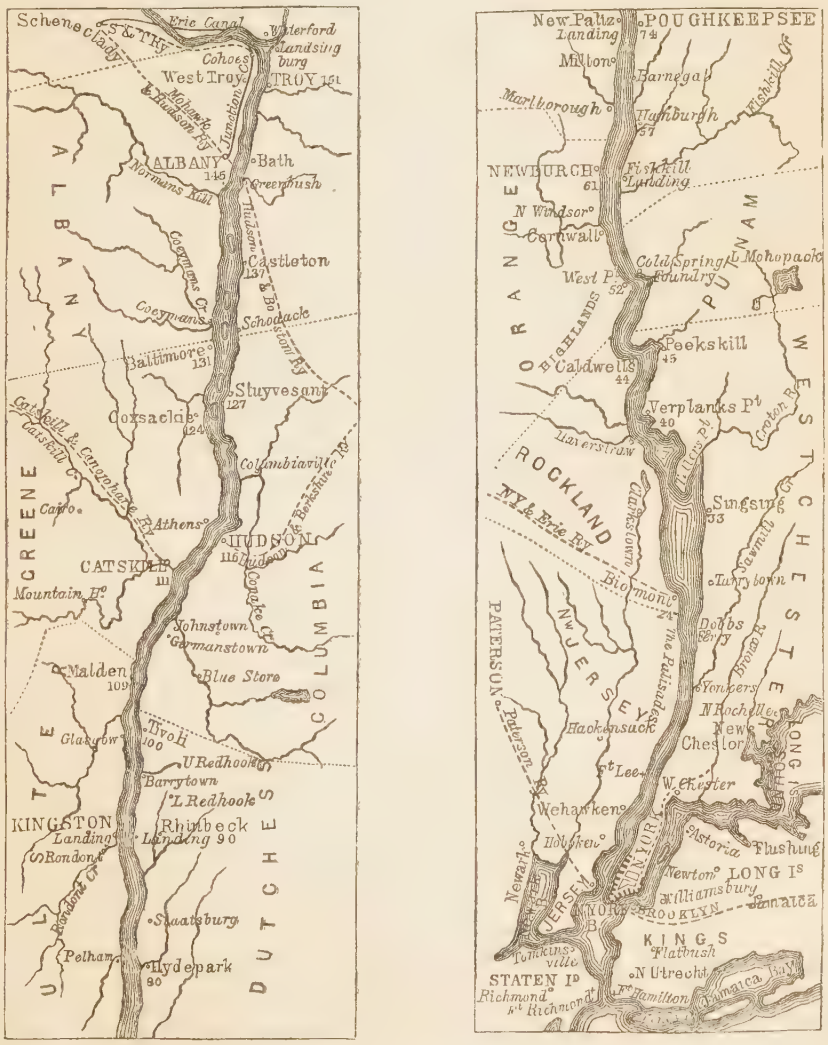
HUDSON, a county in the NE part of the state of New Jersey, U. S., comprising an area of 75 sq. m., bounded on the E by the Hudson, and on the W by the Passaic rivers, and drained by the Hackensack river. Pop. in 1840, 9,483. Its cap. is North Bergen. —Also a township of Hillsboro' co., in the state of New Hampshire, 68 m. SE of Concord. Its surface is hilly, and in some parts fertile. On the W it is bordered by Merrimac river, over which is a bridge to Dunstable. Pop. 1,148. —Also a township of Summit co., in the state of Ohio, 137 m. NE of Columbus. Its surface is level, and its soil fertile. The village is pleasantly situated in a plain, and contained in 1840 about 80 dwellings.—Also a township of Lenawee co., in the state of Michigan, 84 m. SW of Detroit. It has a fertile soil, and is watered by Tiffin creek. Pop. 599.

HUDSON, a town of the state of New York, U. S., the capital of Columbia co., finely situated on the E bank of the Hudson, at the head of ship-navigation, 29 m. S of Albany, and 116 m. N of New York, in N lat. 42° 14′, W long. 73° 46′, upon a high point that projects into the river, and terminates in a bold rocky cliff, on each side of which is a bay of considerable extent, with depth of water for vessels of the largest class. The town commands extensive views to the NW, N, and round to the SE, consisting of hills and valleys variegated with woods and orchards, corn-fields and meadows, with the river itself, which is in most places a mile over, and may be seen a considerable distance to the N, forming a number of bays and creeks. From SE to SW the town is screened with hills; westwards at different distances, and afar off over the river and a large valley, the prospect is bounded by the Catskill mountains running to WNW. The town—with the exception of two streets near the river, which follow the direction of the stream—is regularly laid out in streets and squares. Along the river, the ground is principally occupied with stores and warehouses, compactly built, and adapted to the unevenness of the ground. The principal street, which extends nearly SE about 1 m. from the market, is, for the most part, handsomely built. It has a gentle ascent towards Prospect hill, 200 ft. high; and terminates in a public square. On opposite sides of this street, about a ½ m. from the river, stand the court-house and prisons, which are plain edifices of stone. There are places of worship for Quakers, Presbyterians, Methodists, Universalists, and Episcopalians. Shipbuilding is still carried on here to a considerable extent, though the trade is on the decline; and there is an extensive rope-work. The whale-fishery employs 8 or 9 ships. Several streams in the vicinity afford considerable water-power, which is employed in manufacturing purposes; and there are stores, lumber-yards, distilleries, breweries, and a number of manufactories, established here. A steam-ferry plies between H. and Athens, on the opposite side of the river; and the Hudson and Berkshire railroad, 34 m. in length, connects H. with West Stockbridge in Massachusetts, and thence with Boston on the E, and Albany on the N.—H. experienced a very rapid growth from the time it was founded in 1784. Between the spring of 1784 and that of 1786, 150 dwelling-houses were erected, besides wharfs, warehouses, &c., and several works connected with manufactures. Three years before this spot had been occupied as a farm. Pop. in 1820, 2,900; in 1830, 5,392; in 1840, 5,672; in 1850, 6,263.

HUDSON, a river of New York, U. S., one of the largest and finest rivers of the United States, formed in the mountainous region to the W of Lake Champlain, by the junction of several small streams, the extreme northern limits of which are in N lat. 44° 5′

An eastern head-branch passes through Schroon lake; a western branch, taking a circuitous course from the NW, is considered as the main branch of the H. These two streams unite about 40 m. from the source of each, in Warren co. The course of the united stream is southward; and, after flowing about 15 m., it receives the Sacandaga, a large stream, from the W. Pursuing its course S and E, 15 m. to Hudley-falls, and then NE 20 m. to Glen's falls, it afterwards makes a short bend to the S, bearing a little W, which course it pursues to the Atlantic below New York. Between Waterford and Troy, at a point 40 m. below Glen's falls, it receives from the W the waters of the Mohawk, its largest branch. Its course to Troy, following its windings, is about 146 m.; thence to New York 166 m.; and thence to the Narrows 12 m., making altogether 324 m. From its mouth to Hudson, 118 m. above New York, it is navigable for the largest ships; it opens a good sloop and steam-boat navigation to Albany, which is 27 m. farther; for small sloops it is navigable to Troy 6 m. above, where the usual tides may be said to terminate in a gentle swell. At Albany, the Lake Erie canal has a terminal basin connected with the tide waters of the H.; and a succession of locks leads off westwards, up the valley of the Mohawk, until the 'long level' is reached at Frankfort, in Herkimer co., at 425 ft. above the level of the H. It is a singular phenomenon in this river, that the tide penetrates across the double chain of the Alleghany mountains, without any impediment to navigation, save that of a crooked, though deep, and, in some places, a narrow

MAP OF THE HUDSON RIVER, AS FAR AS NAVIGABLE, WITH THE DISTANCES FROM NEW YORK.



channel. This passage through the highlands, which is 16 or 18 m. in length, and 53 m. above the city of New York, affords a wild romantic scene. On each side the mountains tower to a great height; and the wind, if there be any, collected here and compressed, blows as through a bellows.—Of fish the H. does not afford a very great variety; but sturgeon, shad, and herring ascend it in the spring, and are taken in vast abundance. The salmon has long disappeared from this river; but there is a considerable variety of small fish, such as bass, and white and yellow perch. The principal towns on the E side of the H. are Troy, Hudson, and Poughkeepsie; on the W side, Albany, Catskill, and Newburgh. The usual time employed in steaming from New York to Albany and Troy, is about 10 or 12 hours. The H. river is generally closed by ice from the beginning of December to the middle of March. In the winter of 1835–6 it was closed for 125 days, from Nov. 30th to April 4th; in that of 1827–8 it was closed for only 50 days, from Nov. 25th to Feb. 8th.

HUDSON'S BAY, an extensive inlet of the Atlantic ocean, forming a Mediterranean sea, on the E side of the North American continent, lying between the parallels of 51° and 66° N lat., and measuring upwards of 1,000 m. from N to S; while its breadth varies from 150 to 500 m. It is navigable during four months in summer, but is filled, all the rest of the year, with shoals of ice. Numerous rocks, sand-banks, and small islands, are dispersed through it. The main entrance of the bay from the Atlantic, known as Hudson's strait, is 360 m. in length, with a breadth varying from 80 to 150 m. It stretches from SE to NW, and is bounded on the E by the isle of Good Fortune and Baffin's Land; and on the S by Labrador. Its E extremity is formed by Cape Elizabeth on the N, and Cape Chudleigh on the S, between which is situated Resolution island, a mass of bare rocks, about 15 leagues in length, and a little W, are Savage and Grass islands. The W entrance of the strait lies between Cape Wolstenholme on the East Main, and King's Cape on Cumberland island. The principal bays of this inland sea are, James's bay in the SE corner, containing many islets; Button's bay on the W coast; Chesterfield inlet on the NW coast, stretching far inland, and terminating in a large fresh water lake; Wager inlet; Roe's Welcome, a deep inlet of the sea on the N coast; and Repulse bay still farther N. The N part of the bay is occupied by Southampton island, a mass of ice-bound rocks. The most remarkable rivers which flow into it, are Great Whale river, East Main or Slade, and Rupert's river, all on the SE; the Abbitibbe, Moose, and Albany, which all empty their streams into James's bay; and the Severn, Nelson or Bourbon river, and Missinippi or Churchill river, on the SW side. The N coast of Hudson's bay is yet imperfectly explored; but it has been ascertained to be connected by Fox canal to the N of Hudson's strait, and the Fury and Hecla strait running W from the NW extremity of Fox canal, with the gulf of Boothia, and consequently with the Arctic ocean. The country on the east is that part of Labrador called East Main. The tract which stretches southwards below Button's Bay, and bounded on the S and E by Canada, has been called New South Wales; and the regions to the NW, skirting on Boothia Felix, King William sound, and the shores of the Arctic ocean, are in like manner called New North Wales, or the Churchill territory, but are very little known. All those regions lying around H. bay are sometimes comprised under the general appellation of NEW BRITAIN. Westwards is a vast tract of country extending across the American continent to the Pacific ocean, and separated from the territories of Canada by a mountainous ridge in 49° N lat., which embraces the sources of the great rivers flowing N and S.—H. bay was discovered in 1610 by Henry Hudson, who had been sent out by the English Russia company in quest of a NW passage round the American continent; but his crew having mutinied, left him with his son, and other seven persons, to perish in those seas which now bear his name. It was afterwards more thoroughly explored by successive navigators employed by the same enterprising company, particularly by Button in 1612; by Lucas Fox, and Thomas James, in 1631, the former equipped by government, and the latter by a company of Bristol merchants; and by Zacharias Gillam, who was sent out by Charles II. at the solicitation of Prince Rupert, and was assisted by two French merchants of Canada named De Grosseliers, who had previously made a voyage from Quebec to the scene of the expedition. Gillam passed the winter of 1668 in Rupert's river, where he built the first stone fort erected in the country, which he named Fort Charles, and provided with a garrison. Before his return, the king had granted to Prince Rupert, and divers lords, knights, and merchants, associated with him, a charter, dated May 2d, 1669, in which he styled them 'The Governor and Company of Adventurers trading from England to Hudson's bay;' and, in consideration of their having, at their own costs and charges, "undertaken an expedition to Hudson's bay, in the NW parts of America, for the discovery of a new passage into the South sea, and for the finding of some trade for furs, minerals, and other considerable commodities, and of their having already made by such their undertakings, such discoveries as did encourage them to proceed farther in pursuance of the said design; by means whereof, there might probably arise great advantages to the king and his kingdom,"—his majesty absolutely ceded "to the said undertakers the whole trade and commerce of those seas, &c., in whatsoever latitude they might be, which are situated within the entrance of Hudson's straits, together with all the countries upon the coasts and confines of the said seas, straits, &c., so that they alone should have the right of trading thither." Of this extensive grant the Company has enjoyed uninterrupted possession from the year 1669 to the present day, except during the space of 17 years, from 1697 to 1714, when the settlement was occupied by the French. The charter, however, instead of promoting the progress of discovery, is understood to have produced the opposite effect. The Company was early charged with having rather endeavoured to conceal as much as possible the situation of the coasts and seas connected with their territories; and even with influencing those who had any knowledge of these quarters, to withhold it from the world. The few feeble attempts at discovery which they did make between 1720 and 1730, rather excited the displeasure than satisfied the expectations of the public; Capt. Middleton was sent out by government in 1741, and Capt. Moor in 1746, the former of whom discovered Repulse bay, and the latter explored Wager's strait and Chesterfield inlet, so as to ascertain that no passage existed in that direction. In 1821, Captain Parry entered H. bay with the view of exploring its great northern sounds known as Welcome and Fox channels. After being frozen up one winter, he passed up Fox's channel in July 1822, against a strong current which he justly concluded must come from the Western ocean, and discovered the strait now known as the Fury and Hecla strait by which H. bay is connected with the Arctic sea.

HUDSON'S BAY COMPANY TERRITORIES, a name often applied to the immense regions of N, America which extend from the Russian possessions and Pacific ocean on the W, to Baffin's bay and Davis' straits on the E; and from the N frontiers of Canada, and the 49th parallel, far into the Polar regions, terminating in that direction only with the bounds of discovery. The territories consigned by the charter of Charles II., in 1670, were not defined by any exact geographical boundaries of latitude or longitude, but were generally described as embracing all the countries of which the waters ran into Hudson's bay, and which had not been previously granted, or were in the possession of other Christian states. In process of time, however, the Company gradually extended their settlements, until they occupied the greater portion of the country to the NE of the Rocky mountains; and since their coalition with the North-west company, in 1821, have extended their settlements along the banks of the Columbia, and other rivers flowing into the Western ocean; by a grant, passed in 1838, have had confirmed to them the exclusive privilege of trading with the Indian tribes westward of the Rocky mountains for 21 years from that date; and finally, have had a territorial grant from the British government of Vancouver's island, revocable at the end of 11 years. Their formal application for what is generally called the North-west Territories, has indeed been formally refused by the British government; but they have leased for 20 years, from March 1840, all of Russian America except the port of Siatka; and the Company's dominions have, partly from expressions in treaties, partly from admissions in subsequent acts of parliament, and partly by force of prescription, come, practically at least, to embrace the whole northern portion of the American continent.

Physical divisions.] Naturally, these territories are divided into three sections: one drained by the rivers flowing into the great lakes and Hudson's bay; another by those flowing into the Pacific; and the third by those which, rising in the high lands which bound the great central valley, and flowing N, empty themselves into the Arctic ocean. It is the first of these divisions which forms the Hudson's Bay Territories Proper. The second, or more northern, has been little explored, and probably will never contribute much to the commercial purposes of mankind, being altogether ice-bound and uninviting, and inha-

bited by a half-starved race, whose only means of subsistence is fishing and hunting. The third, which lies to the W of the Rocky mountains, is also an inhospitable region, except a small slip along the Pacific, and a few spots in the S portion of the country. The physical aspect of this dominion is strange and barbarous in the extreme. It has been represented as the 'fag end of the world,' and all the inner springs of the earth are there said to burst forth. Lakes, marshes, and rivers, succeed each other in such abundance, that its title of continent appears only admissible by courtesy. "Imagine," says Mr. Ballantyne, "an immense extent of country, many hundred miles broad, and many hundred miles long, covered with dense forests, expanded lakes, broad rivers, and mighty mountains; and all in a state of primeval simplicity—undefaced by the axe of civilized man, and untenanted by aught save a few roving hordes of Red Indians, and myriads of wild animals. Imagine, amid this wilderness, a number of small squares, each enclosing half-a-dozen wooden houses and about a dozen men, and between each of these establishments a space of forest varying from 50 to 300 m. in length, and you will have a pretty correct idea of the Hudson's Bay company's territories, and of the number of, and distance between, their forts. The idea, however, may be still more correctly obtained, by imagining populous Great Britain converted into a wilderness and planted in the middle of Rupert's Land; the Company, in that case, would build three forts in it, one at the Land's end, one in Wales, and one in the Highlands; so that in Britain there would be but three hamlets, with a population of some 30 men, half-a-dozen women, and a few children! The Company's posts extend, with these intervals between, from the Atlantic to the Pacific ocean, and from within the Arctic circle to the northern boundaries of the United States."

Lakes and rivers.] The vast wilderness of this northern prov. has been explored with a perseverance which the results would hardly seem to recompense; but it must be observed that the title of the Company to its possessions is wholly geographical. Theirs are all the countries "watered by the streams which run into Hudson's bay." Whether, therefore, the Evil Spirit lake actually communicates with Duck bay, and through Duck bay with the original bay of Hudson, becomes a question of strange importance. Problems which could scarcely command the notice of the most romantic member of a geographical society are thus invested with an astonishing interest. Nor are they very easy of solution. The innumerable lakes have each of them innumerable outlets, and by these outlets connect themselves with innumerable others. Even the direction of their currents is constantly varying. According to the convulsions of the season, the Oungigan either flows into the Athabasca or the Athabasca into the Oungigan; and the bewildered geographer finds the Winnepegos and the Saskatchewan exchanging at discretion their courses and capacities. We have our suspicions that the whole face and coast of the continent is perpetually changed by the unnatural agency of cold. No two adventurers find the same promontories in the same state of consolidation, and the consequence is, that from the 'peninsula' of Boothia Felix to the 'highest point reached by the Blossom,' there is scarcely an identifiable headland. [*Daily News.*]—Lake Winnipeg, or 'Muddy water,' is not much inferior in size to Lake Huron. In recent maps it is laid down between 51° and 54° N lat., and between 96° and 99° W long. Its banks are shaded by the sugar-maple and poplar; and it is surrounded with fertile plains which produce the rice of Canada. The Winnipeg connects this lake and the Lake of the Woods with Rainy lake; while the Red river, rising near the sources of the Missinippi, bears to it the tribute of many streams belonging to the United States.—The Saskatchewan river bears an immense tribute of waters almost from the foot of the Rocky mountains to Lake Winnipeg; and by the Nelson river the superfluous waters of this lake are conveyed to Hudson's bay.—The Moose river, and its affluent the Abbitibbe, rise near the head-branches of the Ottawa; and the principal route from Hudson's bay to Montreal passes along these streams.—A ridge called the Portage de la Loche, 13 m. in breadth, divides the waters that discharge themselves into Hudson's bay, from those which flow into the Northern ocean. "The Portage de la Loche," says Mackenzie, "is of a level surface, in some parts abounding with stone, but in general it is an entire sand, and covered with the cypress, the pine, and the spruce-fir. Within 3 m. of its NW termination, there is a small round lake, not more than a mile in diam. Within a mile of the termination of the portage is a very steep precipice, the ascent and descent of which appear to be equally impracticable in any way, as it consists of a succession of eight hills, some of which are almost perpendicular: nevertheless, the Canadians contrive to surmount all these difficulties, even with their canoes and lading. The precipice, which rises upwards of 1,000 ft. above the plain, commands a most extensive and romantic prospect, embracing the valley of the Swan river.—Great Slave lake, between the parallels of 60° 38′ and 63° N, and 110° and 119° W long., is 270 m. in length, and about 1,000 m. in circumf. It receives, by Slave river, the waters of Lake Athabasca, formed by the river of that name, and into which the Peace river or Unjigah flows when full; and it discharges itself at its NW extremity, through Mackenzie's river, into the Frozen ocean, in 70° N lat. The Churchill river,—called also Missinippi, or 'Great water,'—which empties itself into Hudson's bay, is likewise connected, by means of lakes, with the river Athabasca;—"an invaluable communication," Malte Brun remarks, "had it taken place in a more temperate climate;" but here, even under the 57th parallel, the severity of the winter is extreme; and nothing can be more terrifically desolate and repulsive than the barren and rocky shores of Hudson's bay. From Edmondton, on the Saskatchewan, in about N lat. 54°—to which luggage is transportable by cart or boat, but no further—there is a trail to the pass of Kostanee, which lies within the limits of Oregon, and leads to the Columbia river, but is open by treaty for goods and despatches to the Hudson's Bay company. The height of land between the head-streams of the Columbia and the Saskatchewan, or between the eastern and western waters of this region, is from 7,000 to 8,000 ft. above sea-level. "We breakfasted," says Mr. George Simpson in his *Overland Journey*, "on the level isthmus, which did not exceed 14 paces in width, filling our kettles for this our lonely meal at once from the crystal sources of the Columbia and the Saskatchewan, while these feeders of two opposite oceans, murmuring over their beds of mossy stones as if to bid each other a long farewell, could hardly fail to attune our minds to the sublimity of the scene. But between these kindred fountains, the common progeny of the same snow-wreaths, there was this remarkable difference of temp., that the source of the Columbia showed 40°, while that of the Saskatchewan raised the mercury to 53½°, the therm. meanwhile standing as high as 71° in the shade. From the vicinity of perpetual snow, we estimated the elevation of the height of land to be 7,000 or 8,000 ft. above the level of the sea, while

the surrounding peaks appeared to rise nearly half of that altitude over our heads. Still this pass was inferior in grandeur to that of the Athabasca portage. There the road, little better than a succession of glaciers, runs through a region of perpetual snow, where nothing that can be called a tree presents itself to relieve and cheer the eye. There, too, the relative position of the opposite waters is such as to have hardly a parallel on the earth's surface; for a small lake, appropriately enough known as the Committee's Punch-bowl, sends its tribute, from one end to the Columbia, and from the other to the Mackenzie." The valley of the Mackenzie river rises rapidly into hills of from 1,000 to 1,500 ft. elevation towards what is called the Barren grounds, which here extend N from the E extremity of Lake Athabasca, and Great Slave lake, to the E mouth of the Mackenzie. On the W, or towards the Rocky mountains, it presents an undulating surface, becoming more rugged as we proceed S.

Climate and soil.] We have frequent occasion to remark, that the American continent is remarkably cold, in proportion to the distance of the several countries from the equator. That part of the regions now under consideration which contains the principal settlements, is situated between the same parallels with Great Britain; some resemblance might be expected to exist, therefore, in the temp. of the atmosphere in the two countries; but while in this country our winters are generally moderate, those in New Britain are very intense. Wine is here often frozen into a solid mass, and brandy coagulated into a species of thick oil; the breath is condensed as it leaves the mouth, and when in bed, forms on the blankets a kind of hoar-frost. At York fort, "the land seems to have been thrown up by the sea, and is never thawed during the hottest summer, with the therm. at 90° to 100° in the shade, more than 10 or 12 inches, and then the soil is of the consistence of clammy mud." At Fort Franklin, in N lat. 65° 12′, W long. 132° 13′, the mean annual temp. is 17° 50′; the maximum of heat 80°; the minimum —58°. Great Britain, it is true, enjoys a more temperate atmosphere than the neighbouring continent of Europe in the same latitude; but even in the northern parts of Russia, though much farther removed from the equator, there is seldom felt a degree of cold equal to that common in these regions of America. It has also been asserted that, contrary to what is generally experienced in other regions, the cold is more intense on the sea-coasts than in the inland parts. To account in some degree for this, it may be observed, that very little of the coast of this country is bounded by the ocean; the chief parts of the sea upon which it borders are Davis' straits, Hudson's strait and bay, and James's bay. Now, these bodies of water, though of considerable magnitude, are not sufficiently large to check the influence of the wind proceeding from the frozen region in the NW; the consequence is, that they are almost entirely covered with ice during six months of the year, and thus, instead of mitigating the cold, they add considerably to its force. It has farther been observed, that the inland country is elevated and dry, unacquainted with fogs, and accordingly healthy,—while the coasts are low, marshy, exposed to frequent fogs and moist weather, and consequently highly noxious to the human frame. The former is abundantly fertile in spontaneous productions, and, by being cultivated, becomes a very agreeable country; the latter is dreary and unproductive, and scarce affords either food or shelter to those wild beasts by which it is frequented.—In winter the *aurora borealis* is very frequent; it is sometimes of the pale yellow colour which with us it generally exhibits, and sometimes of a blue, black, or flame colour, with corruscations extremely vivid. The sun is frequently surrounded with a halo or circle, and mock suns are often seen. In the northern parts the land is barren and comfortless; in the southern parts it is more fertile, and offers sufficient encouragement to him who would bestow the proper cultivation. On the coasts, the country chiefly produces pines, birch, larches, and willows, but the trees are stunted and knotty. In the interior parts the same kinds of trees are more abundant, and of great size.—With regard to vegetable productions, it is believed that in many places round Hudson's bay the country is capable of bringing to perfection most kinds of grain. The banks of the Churchill produce some berry-bearing shrubs, the gooseberry-bush, three species of vaccinium, the black currant, strawberry, and a small species of white rose, the burdock, wood-sorrel, dandelion, a species of cistus, a species of box, different kinds of moss, several grasses, and pease. The trees which compose the forests of this savage country present very few species. The pine, dwarf-larch, poplar, willow, and dwarf-birch, complete the catalogue. These trees, however, are much influenced in their growth by locality and soil, and are, in some of the S parts near the great lakes, of great size, but in the N gradually dwindle down, and finally disappear. The banks of the rivers in the districts bordering on the United States seem to be susceptible of several kinds of cultivation; barley and rye have ripened there, and hemp becomes very fine.—Iron, lead, copper, and marble, have been found in the mountainous parts. Some parts abound in excellent coal.

Animals.] Deer of various species, elks, stags, bears, buffaloes, wolves, foxes, beavers, lynxes, otters, wild cats, squirrels, hares, and ermines, are numerous throughout these regions, and indeed furs form at present the chief source of commercial wealth and enterprise. It deserves to be remarked, that not only here, but in every cold country, the greater part of animals during winter acquire a kind of hair or down, much longer, thicker, softer, and consequently much warmer than their summer-dress; during the latter season they are, as in other countries, of different colours; but during the former their fur in some instances assumes the colour of snow.—The feathered tribes also are numerous. Many of these abandon it in winter, proceeding southwards to more temperate climates. Of those that remain, several, like the quadrupeds, assume during winter the white dress which in that season is here most universal. Game is so abundant, that it is nothing uncommon for 10,000 geese to be killed during a winter at the factories.—The seas and lakes abound in fish, particularly whales, morses, seals, cod and white fish, pike, perch, carp, and trout.

Population.] The aboriginal inhabitants of the various parts of this country may be generally divided into the Southern Indians, the Northern Indians, and the Esquimaux.—The Southern Indians inhabit the country situated between the S coast of Hudson's bay and the territories of Canada, and that part of the W coast of the bay lying to the S of Churchill river, and reaching inland to lake Athabasca. The chief of these tribes are the Ne-heth-a-wa, the Assinne-poetuc, the Fall, the Sussee, the Paegan, and the Blood Indians.—The Northern Indians inhabit that large tract of country lying between the 59th and 68th parallels of N lat., and which extends upwards of 500 m. from E to W. Their country is bounded by Churchill river on the S; by the country of the Athabasca Indians on the W; and by Hudson's bay on the E. They subsist by hunting and fishing, but are by no means skilful in these operations. In summer they eat the berries of the whortle

and other species, and occasionally feed on a kind of unctuous clay. They are quiet and patient, limited in their ideas and powers of understanding, and so indolent that numbers of them perish every year from famine. Their women are low in stature, and of a delicate shape; they are rather the slaves than the companions of the men.—The numbers of the native pop. are stated very credibly to admit of no accurate estimate. Altogether about 85,000 Indians of both sexes and all tribes, are computed to vegetate and roam between the 42d and 54th parallels. Besides this, it has been calculated that some 9.000 white men—Englishmen, Americans, Frenchmen, and Russians—are engaged in trapping and hunting in the north and far west. "Throughout this immense country," says Mr. Ballantyne, "there are probably not more ladies than would suffice to form half-a-dozen quadrilles; and these, poor banished creatures! are chiefly the wives of the principal gentlemen connected with the fur trade. The rest of the female pop. consist chiefly of half-breeds and Indians; the latter entirely devoid of education, and the former as much enlightened as can be expected from those whose life is spent in such a country. Even these are not very numerous, and yet without them the men would be in a sad condition, for they are the only tailors and washerwomen in the country, and make all the mittens, moccasins, fur caps, deer-skin coats, &c., &c., worn in the land. There are one or two favoured spots, however, into which a missionary or two have penetrated; and in Red river settlement, the only colony in the Company's territories, there are several churches and clergymen, both Protestant and Roman Catholic."

Government of the Company.] The affairs of the Hudson's Bay company are at present directed by a governor, deputy-governor, and committee of 7 elected by 239 proprietors representing a capital stock of £400,000. For the general management of their trade and territories, the Company maintain about 136 establishments or *forts*, as they are called, 25 chief factors, 27 chief traders, and 152 clerks. Below these are about 1,200 servants, chiefly Scotch Highlanders and Orkney men, but a considerable number half-breeds and French Canadians, enlisted for 5 years' service at wages varying from 48 to 80 dollars per ann. Mr. Ballantyne informs us that there are "seven different grades in the service. First, the labourer, who is ready to turn his hand to anything; to become a trapper, fisherman, or rough carpenter, at the shortest notice. He is generally employed in cutting fire-wood for the consumption of the establishment at which he is stationed, shovelling snow from before the doors, mending all sorts of damages to all sorts of things; and, during the summer months, in transporting furs and goods between his post and the nearest depôt. Next in rank is the interpreter. He is for the most part an intelligent labourer, of pretty long standing in the service, who, having picked up a smattering of Indian, is consequently very useful in trading with the natives. After the interpreter comes the postmaster, usually a promoted labourer, who, for good behaviour or valuable services, has been put upon a footing with the gentlemen of the service, in the same manner that a private soldier in the army is sometimes raised to the rank of a commissioned officer. At whatever station a postmaster may happen to be placed, he is generally the most useful and active man there. He is often placed in charge of one of the many small stations, or outposts, throughout the country. Next are the apprentice clerks. These last, after the first five years of their apprenticeship, attain to the rank of clerks. The clerk, after a number of years' service, (averaging from 13 to 20.) becomes a chief trader, or half-share holder, and in a few years more he attains the highest rank to which any one can rise in the service, that of chief factor or shareholder."

"The country is divided into 4 large departments. (1.) The Northern department, which includes all the establishments in the far N and frozen regions; (2.) the Southern department, including those to the S and E of this, the posts at the head of James's bay and along the shores of Lake Superior; (3.) the Montreal department, including the country in the neighbourhood of Montreal, up the Ottawa river, and along the N shore of the gulf of St. Lawrence and Esquimaux bay; and (4.) the Columbia department, which comprehends an immense extent of country to the W of the Rocky mountains, including the Oregon territory, which, although the Hudson's bay company still trade in it, now belongs, as every one is aware, to the Americans. These departments are divided into a number of districts, each under the direction of an influential officer, and these again are subdivided into numerous establishments, forts, posts, and outposts. The name of *fort*, as already remarked, is given to nearly all the posts in the country, but some of them certainly do not merit the name; indeed, few of them do. The only two in the country that are real *bona fide* forts, are Fort-Garry and the Stone fort in the colony of Red river, which are surrounded by stone walls with bastions at the corners. The others are merely defended by wooden pickets or stockades; and a few, where the Indians are quiet and harmless, are entirely destitute of defence of any kind. Some of the chief posts have a complement of about 30 or 40 men; but most of them have only 10, 5, 4, and even 2, besides the gentlemen in charge. As, in most instances, these posts are planted in a wilderness far from men, and the inhabitants have only the society of each other, some idea may be formed of the solitary life led by many of the Company's servants."

At Red river settlement, which is about the central point of the S frontier, there is a resident governor, with a council, recorder, sheriff, and coroner, "for the due government of the affairs of the province, and for the careful and legal administration of justice throughout Rupert's Land," as these dominions are styled in the original grant. Trial by jury has been introduced by the Company. An annual council is held at York factory, before which are brought the reports of the trade of each district, and propositions for new enterprises; and the proceedings and reports are duly forwarded to the board of directors in London, for final approval. Soon after the union of the North-west and Hudson's bay companies, parliament passed an act extending the jurisdiction of the Canadian courts over the territories occupied by the fur-traders. Under this act, certain parties of the Company were appointed justices-of-the-peace, and empowered to try minor offences, arrest and send to Canada criminals of a higher order, and judge and grant execution in civil suits where the amount in issue should not exceed £200.

Commerce.] The Company have two migratory trading and trapping establishments of 50 or 60 men each. The one traps and trades in Upper California; the other in the country lying W, S, and E of Fort Hall. They also have a heavy armed steam-vessel which runs along the coasts, and 5 sailing-vessels of from 100 to 500 tons burden, which are employed part of the year in trading along the coast, and with the islands of the N. Pacific, and the remainder of the year in bringing goods from London, and carrying back furs. One of these ships arrives at Fort Vancouver in the spring of each year, laden

with coarse woollens, cloths, baizes and blankets; hardware and cutlery; cotton cloth, calicoes, and cotton handkerchiefs; tea, sugar, coffee, and cocoa; rice, tobacco, soap, beads, guns, powder, lead, rum, wine, brandy, gin, and playing cards; boots, shoes, and ready-made clothing, &c.; also every description of sea-stores, canvass, cordage, paints, oils, chains and chain-cables, anchors, &c. Having discharged supplies, it takes a cargo of lumber to the Sandwich islands, or of flour and goods to the Russians at Siatka or Kamtschatka; returns in August, receives the furs collected at Fort Vancouver, and sails again for England. The value of peltries annually collected in Oregon, by the Hudson's bay company, is about 140,000 dol., or £18,000, in the London or New York market. The prime cost of the goods exchanged for them is about 20,000 dollars. To this must be added the per centage of the officers as governors, factors, &c., the wages and food of about 400 men, the expense of shipping, to bring supplies of goods and take back the returns of furs, and 2 years' interest on the investments. The Company made arrangements, in 1839, with the Russians at Siatka, and at other ports, about the sea of Kamtschatka, to supply them with flour and goods at fixed prices. And as they are opening large farms on the Cowlitz, the Umpqua, and in other parts of the Oregon territory, for the production of wheat for that market; and they can afford to sell goods, purchased in England under a contract of 50 years' standing, 20 or 30 per cent. cheaper than American merchants can; there seems a certainty, some American authorities tell us, that the Hudson's bay company will engross the entire trade of the North Pacific, as, in their apprehension, it has that of Oregon.

Originally the adventures of the Company were highly lucrative. In 1684, the shares paid 50 per cent.; and in 1688 as much. In 1689, this payment was reduced by one-half, though next year the stock was trebled without any call being made; but soon after this the Company began to suffer from the attacks of the French. In 1720 the stock was again trebled with a call of only 10 per cent.; and the dividends seem to have varied from 5 to 12 per cent. throughout the latter part of the century. During a parliamentary inquiry into their proceedings in 1749, the Company produced documents to prove that their profits were sufficiently limited, as appears from the following summary of their expenditure and returns, in the space of ten years, from 1739 to 1748 inclusive:

Charges of shipping, factories, &c., in ten years,	£157,432 14 4
Exports during that period,	52,463 9 0
Total expenses,	£209,896 3 4
Amount of sales,	273,542 18 8
Clear profits from the trade in ten years,	£63,646 15 4
Dividends in one year among 100 shares of £100 each,	£6,364 13 6
For each proprietor of £100 stock,	£63 12 11

The following account of imports and sales for one year, from Michaelmas 1747 to Michaelmas 1748, affords a detailed view of the articles of trade, and their respective values, at that date.

Articles.	Number.		£	s.	d.	
Beaver skins,	52,716	at	0	7	6	per skin.
Martins,	8,485	...	0	6	8	...
Otters,	1,445	...	0	9	7½	...
Cats,	1,199	...	0	10	10½	...
Foxes,	527	...	0	8	1½	...
Wolverins,	977	...	0	5	0	...
Bears,	371	...	1	2	7	...
Wolves,	1,663	...	0	9	6¾	...
Woodshocks,	32	...	0	10	7	...
Elks,	50	at	0	6	7	per skin.
Deer,	105	...	0	2	3	...
Bed-feathers,	5,838 lbs.	...	0	1	2	per lb.
Castor,	308	..	0	6	2¼	...
Whale fins,	226	...	0	2	0½	...
Minks,	33	...	0	3	1	per skin.
Racoons,	26	...	0	1	7	...
Goose quills,	43,000	...	0	15	0	M.
Musquash,	268	...	0	0	9¼	per skin.
Badger,	80	...	0	1	1	...
Total value,			£30,160	5	11	

The Company's establishments in the bay, in the year 1790, may be seen at one view in the following table:

Settlements.	Number of Servants.	Trade on Average.
Churchill fort,	25	10,000
York fort, Severn-house,	100	25,000
Albany fort,	50	5,600
Moose fort, East Main,	40 25	7,000
Total,	240	£47,600

In forming a standard of trade with the natives, the beaver skin was originally taken as the universal measure; and a comparative valuation made of the other kinds of peltry, &c., according to the following table:

A full grown moose,	skin 1	as 2 beavers.
Cub ditto,	1	1
Old bears,	1	3
Cub ditto,	1	1
Foxes, black,	1	4
Ditto, gray,	1	3
Ditto, white,	2	1
Ditto, red,	1	1
Ditto, brown,	2	1
Wolf,	1	2
Wolverins,	1	2
Cats,	1	2
Otter, old parchment,	1	1
Ditto, cub and drest.	2	1
Martins, prime,	2	1
Ditto, ordinary,	3	1
Deer, buck,	1	1
Ditto, doe,	2	1
Musquash,	6	1
Goose feathers,	lb. 10	1
Ditto quills,	No. 2.000	1
Castor,	lb. 2	1

With these the trading goods were bartered, or directed to be bartered, at the following rates:

Glass beads,	lb. 1	as 1 beaver.
China ditto,	1	6
Kettles, brass,	1	1½
Coarse cloth,	yard 1	3
Blankets,	No. 1	7
Tobacco,	lb. ¾	1
Shirts, check,	No. 1	2
Stockings, yarn,	pair 1	2
Powder,	lb. 1	1
Shot,	4	1
Knives,	No. 4	1
Guns,	1	14
Flints,	16	1
Vermilion,	lb. 1	16
Rings, brass,	No. 3	1
Needles,	12	1
Hatchet,	1	1
Brandy,	gall. 1	4
Razors,	2	1
Thread,	lb. 1	1

Out of this standard, however—which was in itself sufficiently hard upon the Indians—the factors were allowed, for their own emolument, to raise a surplus-trade; so that the natives often payed at the rate of one-third, or even one-half, more than the preceding rates. In consequence of this griping traffic, and the alleged supineness of the Company, the trade gradually decreased, though the articles procured were bringing a higher price at home. This was partly ascribed to the competition of the Canadian traders, who since 1773 penetrated into the interior, and established trading-ports nearer the abodes of the

natives, who often collected more skins than they were able to convey to the settlements on the coast, and were glad to find a market without needing to seek it by a long and laborious journey. By these enterprising competitors the Company's trade suffered so severely, that, in 1775, it fell short nearly one-half of what it had been in 1774. But they immediately commenced pursuit of the retreating trade by erecting trading-houses in the interior. In 1775, they formed a settlement at Sturgeon lake, in N lat. 53° 56′, and W long. 102° 15′; in 1793, their traders repaired to the SE of Portage-de-Traite among the Knisteneaux, and, about the beginning of the present century, to Athabasca river, in N lat. 56° 42′, among the Chepewyans. After the establishment of these trading-houses, which are maintained at a great expense, the Indians in a great measure ceased to visit the factories on the coast of Hudson's bay, which have thus become little better than storehouses for the articles of the trade. Still, however, in spite of these endeavours to secure the traffic of the natives, they found the adventurers from Canada in every respect an overmatch for their people in the business.

The Hudson's Bay company continued to suffer greatly from the operations of the North-west company, and during the interval between 1800 and 1822 they received for 6 years no dividend at all, and but 4 per cent. for the remainder. By the arrangement between the two rival associations, things were a little mended. The present capital stock was now formed; and from 1824 to 1842 half-yearly dividends of 5 per cent. were paid, with bonuses from 1828 to 1832 of 10 per cent., and from 1832 to 1841 of 6 per cent.

Trade is still, Mr. Ballantyne informs us, carried on with the natives by means of the beaver or *castor* standard valuation. "This is to obviate the necessity of circulating money, of which there is little or none excepting in the colony of Red River. Thus an Indian arrives at a fort with a bundle of furs, with which he proceeds to the Indian trading-room. There the trader separates the furs into different lots, and, valuing each at the standard valuation, adds the amount together, and tells the Indian (who has been gazing all the time at the procedure with great interest and anxiety) that he has got fifty or sixty castors; at the same time he hands the Indian fifty or sixty little bits of wood in lieu of cash, so that the latter may know, by returning these in payment of the goods for which he really exchanges his skins, how fast his funds are decreasing. The Indian then proceeds to look round upon the bales of cloth, powder-horns, guns, blankets, knives, &c., with which the shop is filled, and after a good while makes up his mind to have a small blanket. This being given him, the trader tells him that the price is 6 castors; the purchaser hands back 6 of his little bits of wood, and proceeds to select something else. In this way he goes on till all his wooden cash is expended, and then, packing up his goods, departs to show his treasures to his wife, and another Indian takes his place. The value of a castor is from 1s. to 2s. The natives generally visit the establishments of the Company twice a-year—once in October, when they bring in the produce of their autumn hunts, and again in March, when they come in with that of the great winter hunt. The number of castors that an Indian makes in a winter hunt varies from 50 to 200, according to his perseverance and activity, and the part of the country in which he hunts. The largest amount I ever heard of was made by a man called Piaquata-Kiscum, who brought in furs, on one occasion, to the value of 260 castors. The poor fellow was soon afterwards poisoned by his relatives, who were jealous of his superior abilities as a hunter, and envied him for the favour shown him by the white men. After the furs are collected in spring at all the different outposts, they are packed in conveniently sized bales, and forwarded, by means of boats and canoes, to the three chief depôts on the sea-coast—namely, Fort Vancouver at the mouth of the Columbia river, on the shores of the Pacific; York fort on the shores of Hudson's bay; and Moose factory, on the shores of James's bay—from whence they are transported in the Company's ships to England. The whole country, in summer, is consequently in commotion with the passing and repassing of brigades of boats laden with bales of merchandise and furs; the still waters of the lakes and rivers are rippled by the paddle and the oar; and the long-silent echoes, which have been slumbering in the icy embrace of a dreary winter, are now once more awakened by the merry voice and tuneful song of the hardy voyageur."

The following table shows the comparative exports to London by the Hudson's Bay company from York fort in 1845 and 1846:

Skins.	1846.	1845.
Beaver,	31,363	10,509
Badger,	1,017	...
Bear,	2,252	3,080
Fisher,	2,974	2,227
Fox, silver,	367	276
Fox, cross,	1,291	859
Fox, red,	3,922	2,649
Fox, white,	843	2,910
Fox, Kitt,	3,837	5,267
Lynx,	14,202	5,977
Martin,	85,014	63,461
Mink,	19,308	18,083
Musquash,	201,915	164,260
Otter,	1,389	1,137
Rabbit,	27,758	46,970
Siran,	1,909	3,545
Wolf,	7,652	9,106
Wolverin,	693	534

An article in the *Morning Chronicle* enables us to supply the reader with the following table of the total imports into, and exports from, England of skins and furs in 1850:

	Total importation into England.	Exported.	Consumed in England.
Racoon,	525,000	525,000	None.
Beaver,	60,000	12,000	48,000
Chinchilla,	85,000	30,000	55,000
Bear,	9,500	8,000	1,500
Fisher,	11,000	11,000	None.
Fox, Red,	50,000	50,000	None.
... Cross,	4,500	4,500	None.
... Silver and black,	1,000	1,000	None.
... White,	1,500	500	1,000
... Grey,	20,000	18,000	2,000
... Lynx,	55,000	50,000	5,000
Martin or sable,	120,000	15,000	105,000
Mink,	245,000	75,000	170,000
Musquash,	1,000,000	150,000	850,000
Otter,	17,500	17,500	None.
Fur seal,	15,000	12,500	2,500
Wolf,	15,000	15,000	None.

EUROPEAN FURS FOR 1850.

	Imported.	Exported.	Consumed in England
Martin, Stone, and Baum,	120,000	5,000	115,000
Squirrel,	2,271,258	77,160	2,194,098
Fitch,	65,091	28,276	36,815
Kolinski,	53,410	200	53,210
Ermine,	187,104	None.	187,104

To the same source we are indebted for the following notices of the principal furs exported from the Hudson's bay territories. The varieties of foxes include the black, silver, cross, red, blue, white, and kitt. The black fox is the most valuable of this tribe,—a single skin bringing from 10 to 40 guineas; they are generally purchased for the Russian and Chinese markets, being highly prized in those countries. The fox resembles in shape the common fox

of England, but is much larger, and jet black, with the exception of one or two white hairs along the back, and a pure white tuft at the end of the tail. The silver fox differs from the black fox only in the number of white hairs with which its fur is sprinkled. The cross and red fox are used by the Chinese, Greeks, Persians, &c., for cloak linings and for trimming their dresses. The white and blue fox are used in this and other countries for ladies' wear. The white fox is numerous on the shores of Hudson's bay; but the blue fox is seldom seen. Its colour is a dirty bluish grey. The otters are chiefly exported for the use of the Russians, Chinese, and Greeks, for caps, collars, trimmings, robes, &c. The beaver, in former years, was one of the Hudson's bay company's most valuable productions; but since its use has been almost entirely discontinued in the manufacture of hats, it has lost much of its value. Experiments have, however, been made, and are progressing satisfactorily, to adapt its fine and silky wool to weaving purposes. The fur of the lynx (*Felis Canadensis*), and of the lynx cat (*Felis rufa*), when dyed and prepared, is exported in large numbers for the American market, where they are much admired. In its natural state the fur is a greyish white, with dark spots, and it is much used by the Chinese, Greeks, Persians, and others, for cloaks, linings, &c., for which purposes it is very appropriate, being exceedingly warm, soft, and light. The wolves' skins are generally used as cloak and coat linings in Russia and other cold countries, by those who cannot afford the more choice kinds; also for sleigh coverings and open carriages. The Hudson's bay martin, or sable, is principally used for ladies' wear, and is next in repute and value to the Russian sable. It is consumed in large quantities in this country, in France, and in Germany, and generally maintains a steady price. It is most numerous in the Mackenzie river district. The darkest colours are the most valuable, and the lighter shades are frequently dyed to imitate the darker varieties. The minx is exclusively the produce of the Hudson's Bay company's possessions and other parts of North America. It is consumed in Europe in immense quantities principally for ladies' wear; its rich, glossy appearance, and dark brown colour (similar to the sable), combined with its durability and moderate cost, justly render it a great favourite. The musquash, or large American musk rat, is imported into this country in immense numbers; it was formerly much used in the manufacture of hats, but the introduction of the silk hat has entirely superseded it. It is now, however, dressed in a superior way, and is manufactured extensively for female wear, both in its natural and dyed state. The Hudson's bay rabbit is one of the least valuable skins imported by the company. Like all furs from the Polar regions, it is fine, long, and thick, but the skin is so fragile and tender that it is almost useless; it is, however, dyed and manufactured for ladies' wear, and is sold under various names, frequently as sable. The fur of the large North American black bear is generally used in this and other countries for military purposes, for caps, pistol holsters, rugs, carriage hammer-cloths, sleigh coverings and accompaniments. The fine black cub bears are much sought after in Russia for making shube linings, coat linings, trimmings and facings; the other sorts, with the large grey bears, for sleigh coverings, &c. The skin of the white Polar bear, the supply of which is very limited, is generally made into rugs, which are often bordered with that of the black and grey bear. The sea otter, (*Eutrydra maritima*), is said to be the royal fur of China, and is much used by the great officers of state, mandarins, &c. It is in great esteem in Russia, and is principally worn by the nobles, for collars, cuffs, facings, trimmings, &c. On account of its great weight, it is rarely used by ladies. A single skin is often valued at 40 guineas.

HUDSON POINT, a headland of the island of Antigua, on the S coast of the parish of St. Phillip, in N lat. 17° 0′ 59″, and W long. 61° 40′.

HUDSWELL, a chapelry and township in the N. R. of Yorkshire, 1½ m. SE of Richmond. Area 3,180 acres. Pop. in 1831, 291; in 1841, 258.

HUE′, a river of Annam, which descends from the mountains on the W confines of the empire, and running ENE through the prov. of the same name, throws itself by a considerable estuary into the road of the same name, 10 m. N of Hué, and 60 m. NW of Turon harbour, in N lat. 16° 37′, and after a course of about 45 m. It is broad, but possesses little depth, and is navigable for vessels only of small tonnage. The embouchure forms an excellent port, where vessels of the largest size can ride in safety in the SW monsoon. To the NE, however, it is destitute of shelter. The waters of the river flow over a bed of white sand, and are beautifully limpid, and its banks are pretty well cultivated.

HUE′. See FAIFO.

HUE′, HOE′, or KOUANG-TRI, a prov. of Annam, bounded on the N by a wall running across the empire from the mountains on the W to the Chinese sea, by which it is bounded on the E; on the S it is bounded by the prov. of Quang-nan; and on the E by the prov. of Laos, from which it is separated by the mountains of Moi. It is watered by the river of the same name, and is one of the most fertile and salubrious districts of the empire. The capital, Hué, Hué-Fo, Fou-Tschouan, or Phuxuan, which is also the capital of the empire of Annam, is situated on the river of the same name, 200 m. ENE of Lanchang, 500 m. N of Saigon, and 80 m. NW of Fai-fo, in N lat. 16° 30′, and E long. 107° 20′. Pop. 60,000. It is surrounded with brick walls 60 ft. in height, and a double ditch; and the gates, which are built of stone, are surmounted with towers from 90 to 100 ft. high. The fortress, which is considered the strongest in Asia, is rectangular in form, and about 6 m. in circumference. The fortifications are mounted with 1,200 pieces of cannon. The casements are bomb-proof. Within are an extensive arsenal, various magazines, spacious barracks, large public granaries and other buildings, all of which are abundantly supplied with water by means of a canal connected with the river. The aspect of the town from the exterior is extremely imposing. A magnificent line of trees surrounds the ramparts and forms a delightful promenade. The interior is dull, and presents nothing attractive. The buildings are of cane plastered with mud. The river, on entering the town, divides into numerous arms, which, taking different directions, separates the town into several parts; intercommunication between them is effected by means of boats. The streets are clean and well laid out, but with the exception of the palace of the sovereign, the style of which is rich, though grotesque, the town contains no edifice worthy of note. The Catholic missionaries have several schools in which the Latin and French languages are taught, and it is said that a fifth part of the pop. have been converted to their faith. The bazaar possesses little to attract attention. The surrounding country is sandy, and possesses little fertility, but is well-cultivated and pleasing. Grass and reeds form the only vegetation on the banks of the river. The coast is of the same sandy character, and rises so high as to impede all view of the sea from the town.

HUECAS, a town of Spain, in New Castile, in the prov. and 14 m. NW of Toledo, and partido of Torrigos. Pop. 357.

HUECIJA, a town of Spain, in Andalusia, in the prov. and 11 m. N of Almeria, and partido of Canjayar, at the foot of a mountain, and near a considerable stream. Pop. 1,221. It has a parish church and a convent.

HUEHUETOCA, or Gueguetoque, a village of Mexico, in the state and 21 m. N of Mexico, in the upper part of the basin of the Tula, at an alt. of 7,530 ft. above sea-level, in N lat. 19° 49′. It gives its name to the celebrated canal constructed for the preservation of Mexico from inundation by diverting the waters of the Guantitlan from the adjacent chain of lakes.

HUEJOCINGO, a village of Mexico, in the state and 21 m. NW of La Puebla, and 60 m. ESE of Mexico. It is of large size, and possesses a handsome church and a convent. It was formerly the capital of a small republic which bore the same name.

HUELAMO-DE-OCANA, a town of Spain, in New Castile, in the prov. and 27 m. NE of Cuenca, near the l. bank of the Jucar. Pop. 529.

HUELGOAT, a canton, commune, and town of France, in the dep. of Finistère, arrond. of Châteaulin. The cant. comprises 7 com. Pop. in 1831, 11,079; in 1841, 11,994. The town is 20 m. NE of Chateaulin. Pop. in 1841, 1,156. It has numerous annual fairs for cattle, grain, hemp, lint, &c.; and in the environs is a productive mine of lead.

HUELMA, a judicial partido and town of Spain, in Andalusia, in the prov. of Jaen. The partido comprises 11 pueblos. The town is 24 m. SE of Jaen, and 32 m. SSW of Urba, in the midst of rugged mountains. Pop. 2,973. It has a parish church and a convent, and possesses some manufactories of common fabrics for local use. Cattle are reared in considerable numbers in the environs.

HUELVA, or Huelvas, a province, partido, and town of Spain, in Andalusia. The prov., which was created in 1833, is bounded on the N by that of Badajoz; on the E by the prov. of Seville; on the SE by that of Cadiz; on the S by the ocean; and on the W by Portugal, from which it is separated to some extent by the Chanza and Guadiana. It comprises an area of 258 sq. leagues; and is intersected in a SW direction by the Sierra-Arocha, the western part of the Sierra-Morena. The principal rivers by which it is watered are on the E the Odiel and Tinto, both of which flow into the Atlantic, the latter at the Puerto-de-Palos celebrated as the place of embarkation of Columbus on his expedition to the New World. On the opposite side of the mountains, belonging to the basin of the Guadiana, are the Chanza, Malagon, and Albagarilla. Vast and sterile plains cover to a great extent the E portions of the prov., but in other parts it presents a pleasing diversity of surface. The soil is ill-cultivated; but possesses considerable fertility, and produces grain, wine, oranges, lemons, citron, &c., and affords good pasturage. The mountains are clothed with forests, and afford excellent timber; and the banks of the Rio-Tinto were formerly famous for their copper-mines. The prov. comprises 6 judicial partidos, viz.: Aracena, Ayamonte, El Cerro, H., Moguer, and La Palma; and contained in 1849, 153,462 inhabitants.—The judicial partido comprises 8 pueblos.—The town is situated on a point of land formed by the rivers Odiel and Tinto, and on the l. bank of the embouchure of the former river, 5 m. W of Moguer, and 51 m. W of Seville. Pop. 7,173. It has 2 parish churches, 5 convents, an hospital, and a custom-house. The building of small craft for fishing and the coast-trade, the manufacture of cables of Spanish broom, nets, &c., and fishing, form the chief branches of local industry. The port is small, but carries on a considerable export trade with Portugal. This town, the Wuelba of the Arabs and *Onoba* of the ancients, is noted as the birthplace of Jose-Isidoro-Morales, of the famous navigator Jose-Mendoza-Rios, and of Alonso-Sanchez-de-Huelva, the discoverer of Hispaniola.

HUENCHULLAMI, a town of Chili, in the prov. of Maule, 22 m. NE of the mouth of the river of that name, and on a dry channel named the False Maule.

HUENEHUENELES, a tribe of Indians who inhabit the vicinity of the river Mendoza, in the S part of the prov. of that name, La Plata.

HUENEJA, a town of Spain, in Andalusia, in the prov. and 45 m. E of Granada, partido and 10 m. SE of Guadix, at the N base of the Sierra Nevada. Pop. 2,350. It has a parish-church, and a custom house. The iron-works of Jerez afford occupation to a large portion of its inhabitants.

HUERCALOVERA, a judicial partido and town of Spain, in Andalusia, in the prov. of Almeria. The partido comprises 5 pueblos. The town is 45 m. NNE of Almeria, and 100 m. E of Granada, in a flat tract of land near the Almanzor. Pop. 12,912, of whom a large proportion live in the environs. It has manufactories of lace, table-linen, and soap.

HUERCANOS, a town of Spain, in Old Castile, in the prov. and 16 m. WSW of Logrono, partido and 2 m. S of Najera, on the r. bank of the Yulde, an affluent of the Nagerilla. Pop. 833. It has an hospital.

HUERMECES, a town of Spain, in New Castile, in the prov. and 41 m. NE of Guadalajara, and partido of Siguenza, in a valley watered by the Salinero. Pop. 287.

HUEROS, a town of Spain, in New Castile, in the prov. and 16 m. E of Madrid, and partido of Alcala-de-Henares, in a plain between the Tajuna and Henares. Pop. 97.

HUERTA, a town of Spain, in Leon, in the prov. and 13 m. ESE of Salamanca, in a plain near the Tormes, on the road from Salamanca to Madrid. Pop. 282. It has a tile-work.

HUERTA-DE-ABAJO, a town of Spain, in Old Castile, in the prov. and 34 m. SE of Burgos, and partido of Salas-de-los-Infantes, in the Val-de-Laguna. Pop. 158.

HUERTA-DE-ARRIBA, a town of Spain, in Old Castile, in the prov. and 37 m. SE of Burgos, and partido of Salas-de-los-Infantes, 11 m. N of S. Leonardo, in the Val-de-Laguna. Pop. 480.

HUERTA-DE-LA-OBISPALIA, a town of Spain, in New Castile, in the prov. and partido and 25 m. SW of Cuenca, in a mountainous country, near the source of the Zancara. Pop. 227.

HUERTA-DEL-REY, a town of Spain, in Old Castile, in the prov. and 37 m. SSE of Burgos, and partido of Salas-de-los-Infantes, near the source of the Arandilla. Pop. 1,000.

HUERTA-VALDECARA'BANOS, a town of Spain, in New Castile, in the prov. and 19 m. E of Toledo, and partido of Ocana, in a hollow surrounded with mountains on all sides but the S. Pop. 2,000. It has a parish-church and a custom-house. In the environs are mines of saltpetre.

HUERTOTUJAR, a town of Spain, in Andalusia, in the prov. of Granada, and partido of Loja, bathed by the Rio Genil. Pop. 1,350. It has several flour-mills, and a few manufactures.

HUE'RZEMES, or Hue'rcemes, a town of Spain, in New Castile, in the prov. and 39 m. SE of Cuenca, and partido of La Motilla-del-Molancar, on the l. bank of the Cabriel.

HUESA, a town of Spain, in the prov. of Te

ruel, and partido of Segura, at the foot of a hill, the summit of which is crowned by a fort, now in ruins, and near the Aguas. Pop. 1,047. It has several manufactories of pottery, and fulling-mills. This town is of considerable antiquity, and enjoys some peculiar privileges. Within the distance of 1½ m. are the thermal baths of Segura, and a saline spring belonging to the government monopolies.

HUESCA, a province, judicial partido, and town of Spain, in Aragon. The prov. is bounded on the N by France, from which it is separated by the Pyrenees, on the E by the prov. of Lerida, on the S and SW by that of Zaragoza, and on the NW by the prov. of Navarra. It is one of the three provs. into which the intendency of Aragon was divided in 1833, and comprises 8 pueblos, viz. Barbastro, Benabarre, Boltana, Fraga, Huesca, Jaca, Sarinena, and Tamarite-de-Litera. Pop. in 1849, 247,105. It belongs, in its entire extent, to the basin of the Ebro, and is watered by the Aragon and Gallego on the W, the Alcanadre on the S, and the Cinca and Noguera-Ribargorzana. The mountainous parts are well-wooded, but possess little capability of culture. The more level districts have a fertile soil, but labour under the disadvantage of scarcity of water. The principal productions are wine, grain, fruit, legumes, lint, and hemp. Large numbers of cattle and mules are reared on the mountain-pastures. Iron, copper, and other metals exist here in abundance, but have hitherto been little wrought. Common cloth, linen, and alpargatas, a species of sandal commonly worn in the locality, form the chief articles of manufacture. The partido comprises 100 pueblos.—The town is situated on the slope of a hill, in the centre of an extensive plain, near the r. bank of the Isuela, 32 m. NE of Zaragoza, and 67 m. NW of Lerida. Pop. 9,200. It is surrounded with ancient walls, now to a great extent in ruins, and possesses several public squares. The principal street is that named the Cosu, which runs through the entire extent of the town. The houses are built with considerable uniformity, and generally 2 stories in height. Of the public buildings the principal are the cathedral, the parish-churches, of which there are 4, the royal college of Santiago founded by Charles V., and those of St. Vincent, Santa Orosia, and Santa Cruz, the university founded in 1354 by Don Pedro IV., and the town-hall. It has also numerous convents and a foundling-hospital, 2 public granaries, and 2 cavalry barracks. With the exception of a few manufactories of common cloth and tanneries, this town possesses little industry. It has, however, an annual fair which is well-frequented. The foundation of this town is unknown. Its name is of Arabic origin. It was called by the Romans *Urbs Victrix Osca.* A Greek and Latin school was established here by Sertorio. In 1096 it was taken by Don Pedro I. of Aragon from the Moors.

HUESCAR, a judicial partido and town of Spain, in Andalusia, in the prov. of Granada. The partido comprises 5 pueblos. The town is 87 m. NE of Granada, and 35 m. NE of Purchena, in a valley near the r. bank of the Bravata, and not far from the Guardal. Pop. 5,640. It contains 3 churches, 3 convents, an hospital, and a public granary, and possesses a manufactory of cloth, linen, damask, and woollen coverlets. In the vicinity are the ruins of a town of the same name, which is supposed to have been founded by the Carthaginians.

HUETE, a town of Spain, in the prov. of Cuenca, 36 m. SE of Guadalaxara, on the l. bank of a small river of the same name, an affluent of the Guadiela. It is well built, and is defended by a fort. Pop. 2,520. Lint and saffron are cultivated somewhat extensively in the environs.

HUETOR-DE-SANTILLAN, a town of Spain, in the prov. and 10 m. NE of Granada. Pop. 1,400.

HUETOS, a village of Spain, in the prov. and 36 m. E of Guadalaxara, and 6 m. S of Cifuentes. Pop. 300.

HUEVA, a village of Spain, in the prov. and 12 m. E of Guadalaxara. Pop. 400.

HUEVAR, a town of Spain, in the prov. and 12 m. W of Seville. Pop. 545.

HUEZ, a village of France, in the dep. of Isere, cant. and 4 m. NE of Bourg-d'Oysans, near the r. bank of the Sarenne. Pop. 388. There is a productive copper-mine in the vicinity.

HUFINGEN, or Huffingen, a town of Baden, in the circle of the Lake, on the l. bank of the Bregach, 10 m. SSE of Villingen. Pop. 1,580.

HUGELHEM, a village of Baden, in the circle of the Middle Rhine, 6 m. SW of Rastadt. Pop. 766.

HUGGATE, a parish in the E. R. of Yorkshire, 7 m. NE of Pocklington. Area 6,500 acres. Pop. 482.

HUGGLESCOTE, a chapelry in the p. of Ibstock, in Leicestershire, 6 m. NNE of Market-Bosworth. Area, with Donnington, 1,510 acres. Pop. 864.

HUGH (Point), a headland of Russian America, at the S extremity of a peninsular projection on the E coast of Admiralty island, in N lat. 57° 27′.

HUGHSONVILLE, a village in Fishkill township, in Dutchen co., in the state of New York, U. S. Pop. 100.

HUGHLEY, a parish in Shropshire, 4 m. W by S of Much-Wenlock. Area 1,330 acres. Pop. in 1831, 115; in 1841, 127.

HUGILL, a chapelry in Kendal p., in Westmoreland, 1 m. SW of Kendal. Pop. in 1841, 382.

HUGON (Saint), a village of Savoy, in the mand. of La Rochette, 4 m. NE of Allevard, near the French frontier.

HUHNERWASSER, a village of Bohemia, in the circle of Bunzlau. Pop. 1,100.

HUILQUILEMU, a village of Chili, on the frontier of Araucania, formerly the cap. of a prov. of the same name, now forming the districts of Rere and Isla, in the prov. of Leixa. Gold, copper, and zinc, occur in the vicinity.

HUIMES, a town of France, in the dep. of Indre-et-Loire, cant. and 4 m. N of Chinon, near the l. bank of the Loire. Pop. 1,200.

HUINE, or Huisne, a river of France, which rises in the forest of Bellesme, in the dep. of Orne; runs E, then S, then SW; passes La Ferte-Bernard and Montfort; and joins the Sarthe, on the l. bank, near Mans, after a course of 90 m.

HUIS (L'), a village of France, in the dep. of Ain, on the l. bank of the Rhone. Pop. 1,080.

HUISH, a parish in Devonshire, 5 m. N of Hatherleigh. Area 1,130 acres. Pop. in 1841, 141.

HUISH (North), a parish in Devonshire, 7 m. SW of Totness. Area 2,510 acres. Pop. in 1831, 457; in 1841, 433.

HUISH (South), a parish in Devonshire, 4 m. SW of Kingsbridge. Area 1,050 acres. Pop. in 1831, 357; in 1841, 386.

HUISH-CAMPFLOWER, a parish in Somersetshire, 2½ m. W by N of Wiveliscombe. Area 1,920 acres. Pop. in 1831, 345; in 1841, 454.

HUISH-EPISCOPI, a parish in Somersetshire, a ½ m. E of Langport. Area 1,780 acres. Pop. in 1831, 574; in 1841, 713.

HUISSEAU, a village of France, in the dep. of Lot-et-Cher, cant. and 4 m. NW of Bracieux, on the Cosson. Pop. 1,530.

HUISSEAU-SUR-MAUVES, a village of France, in the dep. of Loiret, cant. and 4 m. N of Meun. Pop. 1,280.

HUISSEN, a small town of Holland, in the prov. of Gelderland, on the l. bank of the Rhine, 4 m. S by E of Arnheim. Pop. 960.

HUITAA, a river of Iceland, which, issuing from the SE side of Lake Huitaar-vatn, runs S, and SW, and falls into the ocean in N lat. 64°.

HUITTIS, a small town of Finland, in the gov. of Abo, 17 m. N of Bjorneborg.

HUIZEN, a town of Holland, in the prov. of N. Holland, 3 m. E of Naarden. Pop. 1,869.

HUJAMREE, a branch of the Sata, or E deltoid mouth of the Indus. In 1831 it was navigable for boats from the sea to the Sata, with a depth of 4 fath. to Vikkur; but in 1839 a change in its channel had closed its navigation.

HULBURTON, a village in Orleans co., in the state of New York, U. S., on the Erie canal. Pop. 300.

HULCHERATH, a town of Prussia, in the reg. and 9 m. SW of Dusseldorf. Pop. 2,060.

HULCOTT, a parish in Bucks, 4 m. E of Aylesbury. Area 850 acres. Pop. in 1841, 133.

HULDENBERG, a village of Belgium, in S. Brabant, 9 m. SW of Louvain. Pop. 1,100.

HULDIPUKRI, a town of Bengal, in the district of Midnapore, near a pass which leads into the wild part of Orissa. The country in the vicinity is mountainous and unhealthy.

HULDOA, a town of Hindostan, prov. of Delhi, 5 m. W of Coriahgunge.

HULDSCHIN-HILDSCHEN, or Holtschin, a small town of Silesia, 13 m. E of Troppau, and 6 m. W of Oderburg.

HULIN ROCKS, otherwise called The Maids, a cluster of rocks in the Irish sea, about 6 m. NE from Lough Larne, on the coast of Antrim.

HULIN, or Hulein, a small town of Moravia, 12 m. S of Prerau, on the Russowa. Pop. 1,940.

HULL, or Kingston-upon-Hull, a county of itself, parl. borough, and celebrated sea-port, in the E. R. of the co. of York, at the conflux of the river Hull with the Humber; in N lat. 53° 44′, W long. 0° 20′; 9 m. S of Beverley, 38 m. SE of York, and 174 m. N of London; distant, by railway, from Barnsley 58 m.; from Birmingham 158 m.; from Chesterfield 87 m.; from Crewe 136 m.; from Derby 111 m.; from Fleetwood 144 m.; from Halifax 63 m.; from Leeds 38 m.; from Liverpool 104 m.; from London 242¼ m.; from Manchester 93 m.; from Selby 31 m.; from Wolverton 190 m.; and from York 50 m.—The H. and Selby railway is 30¾ m. in length, and passes over a level country in nearly a straight line. It has, however, to contend with the river Humber navigation throughout its whole length.—The limits of Hullshire, or 'the county of the town of Kingston-upon-Hull,' a district separated from the E. R., and placed under the government of the corporation of H., extend from the Garrison side, E of the river Hull, to the W of Swanland, a distance of 8 m.; and from the Humber on the S to the Hunsley-Beacon division on the N, an average distance of 2 m., comprising a total area of 11,600 acres. Pop. in 1841, 45,173.—The limits of the borough, previous to the passing of the reform and municipal acts, were confined to the line of the ancient fortifications of the town, or, in other words, to that part of the town which is insulated by the river H. on the E side, and by the three docks and their basins, formed along the line of the old walls, on the other sides, comprising a total area of 960 acres, with a pop. in 1801, of 22,161; in 1831, of 32,958; in 1841, of 41,629; in 1851, of 50,552.—The parliamentary boundaries, besides the old borough, comprise the liberty of Myton on the W; the parish of Sculcoates, part of Sutton, and the liberty of Trippet, on the N; and the parish of Drypool, and the Garrison side, on the E; the Humber being on the S; and the whole borough extending about 2 m. 5 furl., with an average breadth of nearly 1 m. Pop. within the limits, in 1831, 49,727; of whom 32,958 were within the limits of the town, with the precinct of Myton; in 1841, 45,173.

General description.] From the point where the Hull and the Humber meet, the town now extends about 2 m. W along the N bank of the Humber, and rather more towards the N, along the W bank of the Hull, from its mouth, at the Humber. From the streets which line the Hull and the Humber, various others, upon no very regular plan, branch off, crossing each other in different places, and covering a very extensive area. Nearly all the wealthy inhabitants reside in Sculcoates; on the S and SW parts of which parish, next the old town, there are some handsome streets and excellent houses. The N part of the parish contains several manufactories on the banks of the Hull; but it is thinly inhabited. The citadel, situated within the angle formed by the junction of the Hull and the Humber, is surrounded and insulated by a fosse, to which the water of the Humber has access. Almost the whole town is of brick, well-built, and paved; furnished with well-constructed sewers, and lighted with gas. The streets in the old part of the town, consisting principally of Hull within the docks, are narrow, incommodious, and unpleasant; but the streets and buildings which have been added within the last 40 years evince the progress of general improvement. The whole town stands on a low and level tract of ground, and the vicinity is now well-secured, by embankments, from the dangers which it formerly encountered through inundations. The environs presenting, all around, for several miles, the same low and uniform level on which the town itself is built, and being almost entirely destitute of wood, except a few trees thinly scattered, have a naked and unpicturesque appearance; but the Humber is a grand feature in the scene, and the vessels constantly sailing on it, with the distant towns and villages on its Yorkshire and Lincolnshire shores, contribute, in some measure, to enliven the otherwise dreary and unvaried scenery. The market-place forms part of the public streets. In 1734, a fine equestrian gilded statue of King William III. was erected by subscription, near the S end of this place. The corn-exchange is situated in the market-place; but there is a new corn-market. Near the corn-exchange are the shambles, a neat but low, commodious, and well-ventilated building. The chartered market-days are Tuesday and Friday; the former is well-frequented as a corn-market; and on Saturday is held a vegetable and flesh-market. The spring fair, an annual market or fair for the sale of horses, cattle, sheep, pigs, and goods in general, is held on the second Tuesday in April.—The public buildings and institutions connected with trade and commerce, besides those just noticed, are the custom-house, Trinity-house, pilot-office, dock-office, excise-office, exchange, post-office, stamp-office, banks, &c. The custom-house is a very large edifice nearly in the centre of the town, built of red brick, with stone quoins and dressings. The Trinity-house, rebuilt in 1753, forms a quadrangle surrounding a spacious area or court. The pilot-office is a lofty brick building opposite the Ferry-boat dock. The exchange holds a respectable rank among the institutions of H. Over it is a news-room. The present church of the Holy Trinity is said to be one of the largest parochial edifices in England. It was originally erected in 1285, but was enlarged and improved in the reign of Henry VII. It consists of a nave and aisles, chancel and aisles, transepts, and a noble

tower in the centre. Its length is 272 ft. from E to W; the nave being 144 ft.: the breadth of the nave of the transept under the steeple is 28 ft., and the length of the chancel 100 ft.; the breadth of the nave of the church is 172 ft.; the length of the transept 96 ft., and the breadth of the chancel 70 ft. The other churches are St. Mary's, St. John's, St. James's, and the Mariner's church, with the parish churches of Drypool and Sculcoates, and Christ's church, Sculcoates. Great Thornton Street dissenting chapel is a very handsome edifice, in the Greek style, consisting of a centre and two wings, with a frontage of 160 ft., and a portico 66 ft. wide, and 56 ft. high. It cost £7,000; and can accommodate 1,800 persons. There are 6 Independent chapels, 3 Baptist chapels, a Presbyterian church, 5 Wesleyan Methodist churches, a New Connexion Methodist, and a Primitive Methodist church, also a Friends' meeting-house, besides places of worship for Roman Catholics, Jews, and Unitarians, and a floating chapel.

Trade and commerce.] H. is admirably situated for trade. The Humber is the common outlet by which all the eastern rivers of England, from the Tees to the Trent, discharge their waters into the North sea; it therefore opens an easy access from H. eastward to the sea, commanding at the same time, by its various branches, the whole of the interior navigation of the W, and affording access to the widely extended communications which ramify from thence to all parts of the country. By means of the rivers Hull, Derwent, and Ouse, the Humber communicates with the E and W ridings of Yorkshire. The Ouse and Calder navigation opens the communication, on the one hand, with the remainder of the W riding, the seat of the woollen manufactures, while, on the other hand, the same navigation communicates with Lancashire, the centre of the vast cotton manufactures, including the grand western emporium—Liverpool. Then again the Trent affords access to the great stocking-district of Nottingham, the mining and mineral district of Derbyshire, the potteries and coal of Staffordshire, and the whole course of the Severn to Bristol; and by means of intermediate branches still farther communication is opened with Derbyshire and with Sheffield. The eastern waters which finally unite in the Humber, by the assistance of the subsidiary streams which extend to the W, the N, and the S, collect the various products of the districts through which they pass, and, depositing them at H., bear back in return the merchandise which had been drawn to that port by its great trade with foreign parts. To such an extent have these advantages been improved, that, on the data of recent parliamentary returns, H. may be pronounced one of the three or four principal maritime towns in the empire with regard to its foreign trade, while its inland trade exceeds that of every other English port.

Harbour, docks, &c.] Commercially important as this place appears to have been, even in the very infancy of British commerce, it is remarkable, that not till a comparatively recent period was any approximation made towards those great improvements and conveniences for shipping, by which H. is now particularly distinguished. Till the formation of the old dock in 1775, the whole of the commerce of this great port, as regarded wharfs and quays, was confined to that part of the river Hull, still known by the name of the Old harbour, and ships received and discharged their cargoes to a very considerable extent, by means of lighters and other small craft, while lying in the roads. In 1773–4, the Hull Dock company was established; and they opened their dock in 1778. The lock and basin of this dock were re-built in 1814–15, when the present convenient drawbridge was erected, and other improvements in the construction introduced. The dimensions of the old dock are as under:—

Dock.—Length, 1,703 ft.; breadth 254 ft.; area 48,074 sq. yards, or 9 acres, 3 roods, 29 poles, and capable of affording accommodation to 100 square-rigged ships.
Quays.—Area 18,163 sq. yards.
Warehouses and Sheds.—The first occupy an area of 2,251 sq. yds.; the last consist of 2 ranges, in length 143 ft. and 492 ft.; breadth 23 ft.
Building Land.—The area attached to the old dock comprises 25,098 sq. yards.
Legal Quays.—The length of these on the S side of the dock is 1,558 ft.
Basin.—Length 211 ft.; breadth 80 ft.; area 1,875 sq. yds., or 1 rood, 22 poles.
Lock.—Length 121 ft.; breadth 38 ft.; depth 24½ ft.
Tides.—The average depth of water upon the old dock locksills, at spring tides, is 20½ ft.—at neap tides 15 ft.

The old dock, capacious and convenient as it was, not being found sufficient to meet the rapidly extending commerce of H., the Humber dock was formed in 1807–9 at an expense of £220,000. The old dock, till the construction of the Junction dock, in 1829, opened only into the river Hull,—the old harbour,—by which alone it eventually communicated with the Humber; but the Humber dock opens at once into the magnificent river or estuary whence it derives its name, by means of a lock of admirable construction, and a basin protected by piers. For the purpose of keeping the basin free from the immense accumulation of silt or warp, which the Humber deposits in greater quantities, probably, than any river in England, the S end of the Humber dock was provided with iron pipes of large bore, and sluice gates, by which the water might be occasionally suffered to rush through into the basin, and by its force loosen the mud, by which it would have otherwise, in course of time, become choked up. The basin of the Humber dock, with its piers, forms one of the most striking objects that meet the eye of the stranger at H. Its dimensions are as under:—

Dock.—Average length 914 ft.; breadth 342 ft.; area 34,607 sq. yds., or 7 acres, 0 roods, 24 poles, and fitted to contain 70 square-rigged ships.
Quays.—Area 17,639 sq. yds.
Legal Quays.—Length on E side of dock 852 ft.; on S side 162 ft.
Quays on Basin.—Area 8,419 sq. yds.
Shed.—Length 754 ft.; breadth 25 ft.
Piers.—The east and west piers of the basin are each 238 ft. long and 18 ft. broad.
Bridge.—Breadth 12½ ft.
Basin.—Length 258 ft.; breadth 434 ft.; area 12,429 sq. yds., or 2 acres, 2 roods, 11 poles.
Lock.—Length 158½ ft.; breadth 42 ft.; depth 31 ft., 2 inches.
Tides.—Average depth of water on dock lock-sills, at spring tides, 26½ ft.; at neap tides 21 ft.

The Junction dock was formed in 1827-9. Its dimensions are as under:

Dock.—Length, 645 ft.; breadth, 407 ft.; area, 29,191 sq. yds., or 6 acres, 0 roods, 5 poles, and fitted to hold 60 square-rigged vessels.
Quays.—Area, 15,643 sq. yds.
Building Area,—2,247 sq. yds.
Locks.—Length, 120 ft.; breadth, 36½ ft.; depth, 25 ft.
Bridges.—Two, each 24 ft. broad.

The additional quay-room gained by means of the Junction dock is not only on a most extensive scale, but, as in the other docks, it is wholly unimpeded by the intervention of buildings of any description, throughout the whole line of frontage on every side. This dock affords the very important advantage of forming a direct and open communication with the old dock, from the Humber, through the Humber dock. The locks at each end of the dock, by which the communication with the other two docks is kept up, are upon a scale admitting passage to vessels of 800 tons burden; and are provided with double flood-gates, by means of which the dock is kept free from the influence of the tides, and retains at all times nearly the same depth of water.

The first specific mention of the port of H. in connection with commerce is of date 1198, when it appears to have been not only a seaport, but also one of the ports whence wool, the great native commodity, was allowed to be exported. At the conclusion of the 12th cent., this port was a regular place of staple for the exportation of wool and other customable commodities, and the importation of wines and other foreign productions. In the reign of John —if an accurate conclusion can be drawn from the amount of the *quinzeme*—it was a port of the sixth magnitude in the island; those of London, Boston, Southampton, Lincoln, and Lynn, being alone superior to it; and in the reign of Edward I. it ranked third, being surpassed only by London and Boston. On the invasion of France in 1359, Edward required every seaport town in the kingdom to send a certain number of ships and mariners, according to the ability of the place. The respective quotas sent by the principal ports are as under:

	Men.	Ships.
Dartmouth,	1,075	43
London, &c.,	662	25
Hull,	466	16
Lynn,	382	16

Newcastle,	314	17
Grimsby,	171	11
Barton,	30	3
Ravenser,	27	1
Scarborough,	16	1

The merchants of H. were the first in England who embarked in the whale-fishery in 1598; and after the revival of that trade in 1765, H. sent more ships to Greenland and Davis' straits than any other port in the empire except London; indeed, so long as the trade was of any importance, this port had about two-fifths of the whole,—53 vessels, averaging about 100 tons burden, with 48 to 50 men each, being yearly employed, on an average from 1810 to 1818, during which time the average from all British ports was 131. From 1818 down to 1827, the number of ships gradually diminished; those of H. from 63 in 1818 to 40 in 1822, and 30 in 1827. In 1832, H. sent 30 ships to this fishery; the number for all England being 39, and for Scotland 42; within the last two or three years its whale-shipping has decreased to 6, and ultimately to 4 ships; the total number from England and Scotland being about 30.—The coasting and inland trade, from the peculiar adaptation of its locality, is one of the chief branches of profit to H.: of this trade, no other provincial port in Britain has so great a share. Some idea of the inland trade of H. may be obtained from the fact, that so long ago as 1792, the value of the merchandise, stones, coals, &c., conveyed to and from H. by the Aire and Calder navigation alone, amounted to no less than £5,156,998 sterling; judging from this, the whole together would not fall much short of £15,000,000. The cottons of Manchester, the woollens and linens of Yorkshire, and the lace and net of Nottingham, are exported from H. to the Low Countries, France, Germany, and the N of Europe; and large quantities of foreign wool, flax, iron, timber, tallow, grain, seeds, &c., are imported.—The foreign trade of H. has been confined chiefly to the North American colonies and the N of Europe. The port is peculiarly well-situated for the Baltic and Eastland trade. The Mediterranean and Leghorn trade, from the want of due cultivation, had long since dwindled away into insignificance, and the American, so rich a source of wealth to Liverpool, has in H. been of very limited extent. From the United States there have generally been two or three cargoes of turpentine; from the Mediterranean, a few cargoes of fruit; and from Portugal, the supply of wine for the trade of the town comes direct. Trials were made to prosecute a trade with the East and West Indies and the South seas, but they did not succeed. The imports from St. Petersburg are extensive and very various. An extensive commerce is also carried on with the N of Germany, Holland, and Denmark. There are bonded warehouses for all foreign goods, including East India goods and tobacco. The following is the gross amount of customs' duties received at this port during a series of years from 1701 to 1849:

In 1701	£26,287	In 1835	£720,870
1778	78,299	1836	891,630
1802	438,459	1837	741,600
1810	311,780	1838	758,432
1814	405,598	1839	884,443
1818	512,998	1846	460,202
1822	496,800	1848	436,820
1826	692,300	1849	399,542
1828	709,700		

The gross amount of customs' duties received at a number of the principal ports in the United kingdom in 1839 and 1849, including H., will show its relative position, at least so far as regards the importance of the revenue derived from its foreign commerce:

	1839.	1849.
London,	£11,431,245	£11,134,317
Liverpool,	4,234,118	3,474,202
Bristol,	1,089,475	1,043,088
Hull,	884,443	399,542
Dublin,	866,056	933,575
Leith,	573,685	545,884
Glasgow,	468,974	640,568
Newcastle,	464,219	347,498
Belfast,	341,442	346,426
Greenock,	315,084	371,922
Cork,	243,732	256,590
Gloucester,	163,466	97,034

The prosperity of H. has within the last few years been greatly increased by steam navigation, as it has become a principal and important steam-packet station:—indeed, it must be considered as the second great centre of this mode of transit on the eastern coast. The *Eastern Counties Herald*, a Hull paper, contains an article, the purport of which is to show the effects of the recent reciprocity treaties upon British shipping. The proximity of H. to the northern continental ports renders it a place peculiarly fitted for observations of the kind, since, perhaps, there is no port in the United kingdom that would sooner feel the ill effects of the reciprocity system, if such indeed there were. The number of vessels that entered inwards at H. in 1844 was,—

	Ships.	Tons.
British,	1,099	242,131
Foreign,	1,338	152,521
Total,	2,437	394,652

The statement of sailing tonnage in that year gives 136,993 to the British, and 125,547 to the foreign shipping; that of steamers was as follows:

	Ships.	Tons.
British,	146	41,991
Foreign,	77	21,646
Total,	223	63,637

Thus, while there was a small advantage in favour of British sailing-tonnage, the steaming-tonnage nearly doubled the foreign. With respect to the operation of the reciprocity treaties it is stated, that a large proportion of small foreign craft arrive in H. from ports whither British ships, from their large build, could not proceed. The trade from these small ports, which is exclusively in the hands of foreigners, employs as many as 670 vessels, carrying 45,757 tons; and as these cannot be said to displace British ships, they should be deducted from the shipping return above given, if we would arrive at the real fair competition with British shipping. Moreover, these small vessels are chiefly employed in bringing over bones and cake for agricultural purposes, and the employment of them is found to be of the greatest benefit to the agriculturists of Yorkshire and Lincolnshire. The great drawback to the prosperity of H. is stated to be the want of outward cargoes, as exhibited by the following comparison:

British and foreign, inwards,	331,015 tons.
British and foreign, outwards,	140,224

The difference between these figures is supposed to represent pretty nearly the amount of tonnage that leaves the port in ballast. On account of this want, the merchants and shipowners of H. are exhorted, in the same article, to advocate any measure that facilitates the introduction of British manufactures into foreign countries, every local manufacture that furnishes articles of profitable export, and every improved means of conveyance to the coal and salt-mines of the interior.—The tonnage which entered the port of H. during 1849 was 1,304 British vessels = 307,104 tons; and 1,198 foreign vessels = 134,531 tons. The number of vessels registered at this port on 31st December 1848 was as follows:

Sailing-vessels	under 50 tons,	187 = 6,921 tons.
—	above 50 tons,	279 = 56,644
Steam-vessels	under 50 tons,	7 = 193
—	above 50 tons,	22 = 4,783

The steamers belonging to H. may be classed as sea-packets and river-packets. Of the former, in 1838, there were 8 constantly employed between Hull and London, 7 between H. and Hamburg, 3 between H. and Rotterdam, 4 between H. and Newcastle, 2 between H. and Leith. In 1850, no fewer than 15 steamers were engaged in the trade between H. and Hamburg; and besides these, ocean steamers to Berwick, Dundee, and Aberdeen, and to Yarmouth, also pass between these places and H. at regular intervals. The river-packets and steam-tugs run between H. and Gainsborough, Selby, Goole, York, Barton, New Holland, Thorne, and Grimsby. Upwards of 20,000 sailors enter the port of H. in the course of a year; and about 10,000 more are engaged in the navigation of the Humber.—The amount of postage collected at H. in 1849 was £13,128; in 1850, £14,079.—Connected with the shipping and commerce of H. is 'The guild or brotherhood of masters and pilots seamen of the Trinity-house,'—a marine institution, anciently established for "the conservation and government of all mariners, and increase of the navies and seamen belonging to the town." This fraternity originated in 1369, as an association for religious purposes and for mutual relief, under the name of 'The Guild of the Holy Trinity.' The corporation of the Trinity-house have, from time to time, been put into possession of different estates and funds, yielding, with the various tolls, imports, and duties, received under the powers of their charters and sundry acts of parliament, very large annual revenues, which are carried to a general account, and applied partly in defraying the charges incidental to the functions and duties exercised by them in the conservation of the Humber, and the care of the navigation of that river, and along the coasts within certain limits, and partly for charitable uses, and the other purposes of their institution. The revenues of the guild in 1833 were £13,300.

Manufactures, &c.] The manufactures of H. are by no means either numerous or important. Shipbuilding, however, is extensively carried on. A few years ago, it employed 700 hands; but iron-boat building is rapidly dwarfing the ship-building business. Ropes, sailcloth, sarking, &c., are manufactured; also chain-cables, and the general iron-work of foundries; whitelead, tar, and turpentine. There are tan-yards, potteries, several large breweries, and an extensive sugar-refinery. Linseed and rape oils are expressed and refined by means of wind-mills and steam-mills, the residue being prepared in the form of cakes for cattle. There are glass-works, which are chiefly employed on the finer species of articles. Soap is extensively manufactured. In the year ending 5th Jan. 1840, the quantity of hard soap made amounted to 4,666,455 lbs. A joint-stock company has erected immense cotton-mills at a point on the river Hull within 1 m. of the town, with accommodation for 4,600 looms, and are now producing 100,000 yds. of cotton cloth weekly.

Institutions.] The literary and philosophical society of H. has a museum and lecture-room, occupying part of a splendid pile of buildings in Kingston square. At the SW corner of the square, is the H. and E. riding school of medicine and anatomy. The H. medical and chirurgical society, instituted in 1821, has also a museum. The mechanics' institute has a handsome hall, including an excellent theatre and library, in Charlotte street. There are botanical gardens at the end of Linnæus street, about a mile from the centre of the town, on the Anlaby road. They comprise 3 statute acres, the property of 300 shareholders, and were established in 1811. The theatre-royal, one of the handsomest and most convenient provincial theatres in the empire, is situated in Humber street, on what was formerly designated the Fore shore, over which the tide at one time washed twice every 24 hours; but a large portion of the ground in this quarter was rescued by skill and industry from the sea. The public subscription libraries in 1839 were four in number, containing 25,671 vols.; and their united circulation amounted to 102,180 volumes per annum, affording an average of 126 vols. annually to each member. There were also four libraries connected with public institutions, and containing 2,920 volumes, with an average annual circulation of 17,992, exhibiting an average reading of 52 volumes per annum to each subscriber. One of the principal subscription libraries, instituted in 1775, possesses a spacious reading-room, numerous subscribers, and a collection of books said to be the most extensive between the Humber and the Tweed. The revenue of this institution amounts to about £700 a-year. The Lyceum library, established in 1807, contains 5,000 volumes. There are several newspapers regularly published at Hull.—The educational demands of the town recently gave birth to two new proprietary institutions designated Hull college and Kingston college, the latter being exclusively intended for education on the principles of the established church; the other being open to all. A comprehensive system of commercial and classical education is in course of practice in the upper schools belonging to these establishments. In the town and county of the town of H. there were in all, in 1833, 36 daily, 3 day and Sunday, 4 infant, 1 boarding, 1 day and boarding, and 19 Sunday schools. There were 3,010 children at the daily and other schools, besides 2,877 at the Sunday schools. The free grammar-school, founded in 1486, is situated on the S side of Trinity church, and is attended by about 50 scholars.—Amongst the numerous charitable institutions of H. the most important are those which have been administered by the Trinity-house corporation. A great part of the splendid revenue derived by this fraternity from the various sources already noticed as connected with Trinity-house guild, has been expended in the beneficent purposes which they were principally intended to fulfil. At the period of the charity inquiry, in 1823, the corporation supported out of these funds, at an average expenditure of £6,000, no less than 6 extensive hospitals or almshouses. Other hospitals and charities are numerous.—The parochial expenditure has been subject to great fluctuations: from 1801 to 1808, it averaged £10,000 per annum; in 1813, it amounted to £17,680; in 1822, to £16,279; in 1838, to £14,705 12s.; and in 1847, to £15,414.

Government, &c.] Myton Wyk, under its new name of Kingston-upon-Hull, was constituted a free borough by charter 27° Edward I. By the new municipal act the borough was appointed to be governed by 14 aldermen and 42 councillors. The burgh revenue for 1832 was £9,852. The whole receipts for the ten years, including 1832, were £104,841; the general expenditure during the same period was £107,714. The income of the borough for 1839 was £24,327; in 1847, £24,833.—H. returns 2 members to parliament. The number of electors on the register for 1836–7, was 4,222; in 1848, 5,063. The old and new limits of the parliamentary borough have been already noticed. The pop. of the parl. borough in 1841 was 65,670.—The public buildings more particularly connected with the municipality are the mansion-house or guild-hall, court-houses, and jail. The mansion-house is a plain brick edifice, situated

in Lowgate; in the rear are a handsome court-room and offices. The new united jail and house-of-correction, finished in May 1830, at an expense of about £22,000, is situated in Kingston street on the Humber bank, in a fine open space. The interior comprises a central building with five radiating wings.—An elegant fluted Doric column, on a square pedestal, with a statue of Wilberforce in his senatorial robes, has been recently erected in H.

History.] So much of the general history of H. has already been interwoven with our notices of its topography, commerce, and ecclesiastical and municipal affairs, that all our limits permit us to add, under this head, are a few additional notices. In 1537 H. was the scene of 'The pilgrimage of grace,' an unsuccessful insurrection, when the town was taken by the Yorkshire insurgents under Aske. In the 15th, 16th, and 17th cents. the inhabitants of H. suffered greatly from pestilential diseases and inundations. H. is memorable in English history as being the first town which openly resisted the authority of the king, at the commencement of the civil war between Charles I. and the parliament.

HULL, a township in Plymouth co., in the state of Massachussetts, U. S., 9 m. ESE of Boston. Pop. 231.

HULL, a river of Yorkshire, rising in the eastern wolds, 3 m. W of Great Driffield, and pursuing a S course, to the eastward of the town of Beverley,—with which it is united by a canal,—till after a course of about 30 m. it falls into the Humber at Hull, where it forms a secure but contracted haven. The Hull serves to drain the whole country between the wolds and the sea. It receives some small streams from the wolds, and the Lambwith stream near Hull. It is said by many of the local historians to have formerly discharged itself into the Humber to the E of the present river; but Mr. Frost says there is abundant evidence to show that its ancient course lay to the W of the present channel. See HUMBER.

HULL (BISHOP'S), a parish in Somersetshire, 1½ m. W of Taunton. Area 1,670 acres. Pop. in 1831, 1,155; in 1841, 1,263.

HULLAND, a township in Ashbourn p., Derbyshire, 4½ m. E by N of Ashbourn. Pop. in 1831, 234; in 1841, 204.

HULLAND-WARD, a hamlet in the same parish, 5 m. E of Ashbourn. Pop. in 1841, 355.

HULLANIYAH (JEZIRAT), the largest of the Curia-Muria group, off the SE coast of Arabia. It is 7¾ m. in length, by 4½ m. broad; and nearly 20 nautical m. in circumf. It is composed of variously coloured granite and limestone, and rises in the centre to an alt. of 1,503 ft.; while its NE end terminates in a majestic bluff, 1,645 ft. in height, in N lat. 17° 32′ 43″, E long. 56° 7′ 17″. It is almost entirely barren; and its pop. in 1837 consisted of only 7 families, amounting in all to 23 souls, who depend for their daily subsistence on fishing. The channel between H. and Sodah is 4½ naut. m. wide.

HULLAVINGTON, a parish in Wiltshire, 5 m. SW by S of Malmsbury. Area 3,200 acres. Pop. in 1831, 563; in 1841, 634.

HULLETT, a township in the Huron district of Upper Canada, on a branch of the Maitland river. Area 35,941 acres. Pop. 195.

HULME, a chapelry and township in Manchester p., Lancashire, 1¼ m. SW of Manchester. Area 440 acres. Pop. in 1801, 1,677; in 1831, 9,624; in 1841, 26,982. The Manchester botanic garden is situated here, and occupies 17 acres. The district is within the boundaries of the parl. borough of Manchester; and the town has been for some time extending in this direction, many houses having been built on the verge of the boundaries of this township, and that of Charlton-row.

HULME-LEVENS, a township in Manchester p., Lancashire, 4 m. SE of Manchester. Area 1,050 acres. Pop. in 1831, 1,086· in 1841, 1,231.

HULME-VILLE, a village in Bucks co., in Pennsylvania, U. S., 118 m. E of Harrisburg. Pop. 150.

HULME-WALFIELD, a township in Astbury p., Cheshire, 1¾ m. N of Congleton, in the line of the Manchester and Birmingham railway. Area 1,110 acres. Pop. in 1831, 109; in 1841, 121.

HULPE (LA), a village of Belgium, in S Brabant, 9 m. SE of Brussels. Pop. 1,040.

HULS, a town of Prussia, in the reg. of Cleves, 3 m. ENE of Kemfen. Pop. 1,900.

HULST, a town of Holland, in the prov. of Zealand, 16 m. WNW of Antwerp, on a branch of the Western Scheldt. Pop. 2,369. It is well fortified, and is situated in a plain which is easily laid under water. It has sustained several sieges.

HULTON. See HILTON.

HUMAGUACA, a town of the Buenos Ayrean republic, in the prov. of Tucuman, 65 m. N of San-Salvador-de-Jugui.

HUMAM-AIDA, a village of Asia Minor, beautifully situated in a valley surrounded by groves, and celebrated for its mineral springs, 65 m. W of Angora.

HUMANES, a village of Spain, in the prov. and 27 m. NNE of Toledo. Pop. 300.

HUMANES-DE-MŒRNANDO, a town of Spain, in the prov. and 15 m. N of Guadalaxara. Pop. 900.

HUMAXAR, a town of the Buenos Ayrean republic, in the prov. of Tucuman, on the river Dolce, 80 m S of Santiago-del-Estero.

HUMBER, a parish in Herefordshire, 3¼ m. SE of Leominster. Area 1,490 acres. Pop. in 1841, 247.

HUMBER, a river dividing the E riding of Yorkshire from Lincolnshire. It is formed by the junction, 8 m. E of Goole, of the rivers Ouse and Trent,—the former having first received the waters of the Nedd, Wharfe, Derwent, and Aire. The H. is more than a mile in width at its origin from the Ouse, with which more especially it is continuous. At Bromfleet it receives the little river Foulness, which has its source at Goodmanham, and passing by Market-Weighton, makes a circuitous tour to the W, but answers no purposes of navigation. The H., rolling its vast collection of waters eastward, in a stream enlarged to between 2 and 3 m. in breadth, washes the large and commercial town of Kingston-upon-Hull, where it receives the river HULL: which see. A few miles below Kingston, and opposite to Hedon and Paul, the H. takes a direction SE, and widening into an estuary of about 6 or 7 m. in breadth, disembogues itself into the German ocean 24 m. below Hull. The H.—resembling the trunk of a vast tree, spreading its branches in every direction—commands, by the numerous rivers which it receives, the navigation and trade of a very extensive and commercial part of England. This inland communication, so far as regards Yorkshire, is greatly aided by several canals; and it has also canal communication with the Mersey, Dee, Ribble, Severn, Thames, and Avon. By the removal of shoals from the bed of the Ouse, since 1834, sea-borne vessels and steamers, drawing from 11 to 12 ft. water, can now at all times navigate from the H. to York, a distance of 80 m.; and by other and subsequent operations, smaller vessels can now pass up to Boroughbridge, a farther distance of 20 m. See OUSE. With the exception of the little river Eske, which rises in the centre of the eastern moorlands, the upper part of the Ribble, which runs into Lancashire, and some inconsiderable brooks that flow into the Tees—all of which taken together form an exception scarcely worth notice—all the waters of Yorkshire are collected and carried off through the H. by the Ouse, as those of several of the inland cos. more to the S are discharged into the H. by the Trent. From the rapidity of the current, which at spring-tides runs at the rate of 5 m. an

hour, and from the numerous sand-banks which are in the river, the navigation of the H. is rather intricate and dangerous; for should a vessel get aground on one of the sands, she is extremely liable to be overset by the force of the tide. Such accidents are, indeed, by no means uncommon, for almost every year affords instances of vessels, both ships and river-craft, being lost in the H. in this manner. In the upper part of the H., in the Trent, and in the Ouse between Trent falls and Selby, the flood-tide, more especially in a strong E wind, frequently rushes up the river like a wave, considerably raised above the water which it meets. This tidal wave is called by the people of Hull and its vicinity, the *ager*,—the *g* being pronounced hard; and from the murmuring sound which it makes as it rolls onward and dashes against the shore, it has been supposed that the river was called the Humber. An immense deposit of silt takes place in the lower part of this stream.

HUMBER, a river on the W coast of Newfoundland, which rises near the bay of St. Paul; and running at first to SE, sweeps round to SW, fetching a current through several large ponds, until it enters Deer pond, emerging from the SW extremity of which, it first flows SW, and then NE, into the bay of Islands. It is connected also with Grand pond; and by means of it, and several small lakes to the NE, with Hall's bay, on the E coast of the island.—Also a river of Upper Canada, which takes its rise in the township of Vaughan, and flows S to Lake Ontario, passing the v. of Weston.

HUMBERSTON, a parish in Leicestershire, 2½ m. ENE of Leicester. Area 2,630 acres. Pop. in 1831, 570; in 1841, 462.—Also a p. in Lincolnshire, 4 m. SE by S of Great Grimsby. Area 2,930 acres. Pop. in 1831, 258; in 1841, 269.

HUMBERSTONE, a township in the Niagara district of Upper Canada, bounded on the S by Lake Erie. Pop. in 1841, 1,376.

HUMBERTON WITH MILBY, a township, partly in Kirby-on-the-Moor p., N. R. of Yorkshire, 2¼ m. NNE of Boroughbridge. Area 2,320 acres. Pop. in 1831, 139; in 1841, 182.

HUMBIE, a parish in Scotland, 8 m. SSW of Haddington. Pop. in 1831, 875; in 1841, 881.

HUMBLETON, a township in Doddington p., Northumberland, 2 m. N of Doddington. Pop. in 1831, 171; in 1841, 185.—Also a parish and township in the E. R. of Yorkshire, 9 m. ENE of Hull. Area 6,110 acres. Pop. 568.

HUMBOLDT MOUNTAINS, a range in Upper California, 150 m. W of the Great Salt lake. At its N and S extremities two small streams take their rise, which, after running in opposite directions 50 m., approach each other, join, and form the St. Mary's river.

HUME. See STITCHEL.

HUME, a township in the state of New York, U. S., 263 m. WSW of Albany. Pop. 2,300.—Also a village in S. Carolina, 10 m. SW of George Town.

HUME, a river of SE. Australia, which descends from the Australian Alps to the Morrumbidgee. In S lat. 36° 3′, E long. 144° 58′, it is joined by the Goulburn.

HUMERA, a town of Spain, in the prov. and 4 m. W of Madrid. Pop. 2,000.

HUMMELSTOWN, a village in Dauphin co., in the state of Pennsylvania, U. S., 9 m. E of Harrisburg. Pop. 480.

HUMOS (CAPE), a headland on the coast of Chili, in S lat. 35° 22′, W long. 72° 33′, to the NE of the embouchure of the Itata. It is higher than any other land near it.

HUMP, or BULLIGE, an island off the N coast of Papua, in N lat. 1° 30′, E long. 135° 30′.

HUMPHREY, a township in Cattaraugus co., in the state of New York, U. S., 8 m. SE of Ellicottville. Pop. 444.

HUMPHREYS, a county in the NW part of Tennessee, U. S. Area 475 sq. m. Pop. in 1840, 5,195; in 1850, 5,325.

HUMPOLETZ, a town of Bohemia, in the circle and 27 m. S of Czaslau. Pop. 1,200.

HUMSHAUGH, a chapelry in Simonburn p., in Northumberlandshire, 5 m. NNW of Hexham. Pop. in 1831, 381; in 1841, 411.

HU-NAN, a province of China, lying between the parallels of 25° and 30°, and the meridians of 109° and 114°; and bounded by the prov. of Hu-pi on the N; by Kiang-si on the E; on the S by Quantung and Quang-si; and on the W by Kwei-chu. Pop. in 1812, 18,652,507. It is intersected in the NW by the Yuen-kiang river; in the centre by the Lo-kiang, and in the E by the Hong-kiang. All these rivers descend from mountain-ranges skirting the S of the prov., and flow northwards into the great Tong-ting-Hou lake, which lies on the N frontier of the prov.; and which forms a great feeder of the Yang-tse-kiang river. It produces tea, cotton, and rice; and is considered one of the most productive districts of China. Its cap. is Chang-sha-fu. With Hu-pi, this prov. formerly constituted the prov. of Hu-Kwang.

HUNCOAT, a township in Whalley p., in Lancashire, 3 m. S of Clitheroe. Area 960 acres. Pop. 467.

HUNDERTHWAITE, a township in Romaldskirk p., in the N. R. of Yorkshire, 6 m. NW of Bernard-Castle. Area 6,390 acres. Pop. in 1841, 280.

HUNDHOLM, a port of Norway, in the bail. of Nordland, 108 leagues NNE of Drontheim, a little to the N of Bodöe.

HUNDLEBY, a parish in Lincolnshire, 1 m. NW of Spilsby. Area 980 acres. Pop. in 1841, 612.

HUNDON, a parish in Suffolk, 3 m. NW of Clare. Area 3,800 acres. Pop. in 1841, 1,095.

HUNDSFELD, a village of Prussian Silesia, 3 m. NE of Breslau. Pop. 750.

HUNDSHUBEL, a village of Saxony, 9 m. WNW of Schwarzenberg. Pop. 850.

HUNDSRUCK, a mountainous district, comprising the circles of Kreuznach, Simmern, and Berncastle, in Rhenish Prussia, and part of Rhenish Bavaria. It stretches between the Rhine, the Moselle, and the Nahe, running chiefly in a direction from N to S. On the SW it is connected with the Hochwald, and by this with the Vosges. On the W it assumes the name of the Idarwald. Its highest summits are elevated about 2,800 ft. above sea-level; and it is chiefly covered with forests.

HUNE (CAPE LA), a headland on the S coast of Newfoundland, at the entrance of Hermit's bay, in N lat. 47° 35′.

HUNERWASSER, a village of Bohemia, in the circle of Bunzlau, 12 m. NNW of Jung-Bunzlau. Pop. 450.

HUNFELD, a circle and town of Electoral Hesse, in the prov. and 10 m. NNE of Fulda, near the Haun. Pop. of town 2,100.

HUNGARY, the MAGYAR-ORSZAG of the Hungarians, and UHERSKA-KRAGINA of the Slavonians, a portion of that extensive country which, in past history, has been 'the debateable land' of Europe,—the nursery of swarms of hardy barbarians who tried the arms and skill of the most active of Roman emperors, and more than once made imperial Rome tremble,—and a region ever memorable in the history of the great struggle between Christianity and Mahommedanism, during that period when the Turkish power seemed destined to subvert Europe. This country, in its widest extent, may be considered as

lying between Turkey, Austria Proper, Russia and Poland; and as stretching from the Adriatic to the Black sea. It belongs to Turkey, Russia, and Austria. The Hungarian states of Austria consist, 1st, of the kingdom of H. Proper, with the provs. of Slavonia and Croatia; 2d, The principality of Transylvania; 3d, The Military frontiers; and 4th, The kingdom of Dalmatia. The whole of these countries together have a surface of 126,600 sq. m., with a pop. of 15,000,000.

The kingdom of H. Proper was by the Romans called *Pannonia*. The present name was given to it in later times, when the Magyars or Madschares—called by the aboriginal natives *Huns*—appeared in Pannonia and conquered H. With the related provs. of Slavonia and Croatia, it lies between the parallels of 44° 43′ and 49° 46′ N lat., and the meridians of 14° 25′ and 26° 30′ E long. Its extent, from the Save to the most northern bend of the Carpathians, is 330 m.; and from E to W, or from the borders of the Bukovine, to the junction of the Danube and Morava, above Presburg, 300 m.; but in the S parts, the extent is much more, being 350 m. from the junction of the Danube and Czerna, to Buccari on the borders of Istria. It is bounded on the NW by Moravia; on the NE by Galicia; on the E by Transylvania; on the S by the Military frontiers; on the SW by Illyria; and on the W by Styria, and the land under the Ens. It is consequently entirely surrounded by Austrian states. The territorial extent, according to recent calculation, is 87,990 square miles. Lipsky estimated it at 4,118, Blumenbach at 4,006, Liechtenstern at 4,034, and Stein at 4,180 German sq. m.

The subjoined table of the area and pop. of H. with Slavonia and Croatia is drawn up from the official documents of the Austrian statistical bureau:

Counties.	Area in Austrian sq. m.	Pop. in 1837.	On Austrian sq. m.
I. Circle beyond the Danube.			
1. Wieselburg,	34	86,800	2,553
2. Oedenburg,	55	261,400	4,753
3. Raab,	28	122,600	4,378

Physical features.] The physical surface of this country presents very diversified regions and climates; here rugged and enormous mountains where reign sterility and eternal snow, and which cover almost one-third of the whole kingdom; there extensive plains, irrigated by numerous rivers and lakes, where winter is scarcely known; on one hand fields of sand, which, constantly shifting before the wind, threaten the traveller with instant death; on another, fertile and smiling valleys, producing every necessary and many of the luxuries of life in great abundance; in one quarter numerous morasses cover the surrounding country with their noxious exhalations; another is clothed with immense forests where the foot of man seldom penetrates. On entering the Banat of Temeswar on the SE, the country appears like Flanders, flat, and entirely destitute of wood excepting in the vicinity of the villages; but the soil is extremely fertile, and the prospect as we advance exhibits immense pastures covered with cattle and horses, or wide fields of corn without enclosures. Silk plantations, and orchards of peach, cherry, and plum-trees are seen on every side. Proceeding westward, the country towards Szegedin becomes sandy; and after crossing the Theiss, low swampy plains full of stagnant pools, where nothing is heard but the croaking of toads, fill up the distance to Ketshkemet. From thence the country, though well-cultivated in some places, is flat and sandy, resembling the *steppes* of Russia; and on approaching the Danube, a chain of mountains appears rising with grandeur on the W side of that river. From Buda, towards Gran, the country is rich, populous, and highly cultivated; the hills are covered with vineyards to their very summits; and everywhere are seen delightful villages filled with healthy inhabitants. On the N of the Danube, the mountainous district towards Schemnitz is agreeably picturesque; and as we approach that town, the scenery becomes sublime. "The appearance of this beauti-

ful country," says Mr. Cripps, "although surrounded by mountains, reminded us of the co. of Kent. The cottages are remarkable for their great cleanliness; and there are numerous villages. The district between Zeilitz and Lewa is the most beautiful imaginable, being full of rich meadows and fields of corn, everywhere thick set with noble oaks." Dr. Clarke also remarks, that "the road, although constructed in the midst of mountains, is not inferior, either in breadth or excellence, to any of the roads about London; and the traveller, surrounded by the sublimest natural scenery, sees to his surprise the greatest artificial labours accomplished with neatness, ornament, and economy; beautiful roads through recesses, and over steeps, that would otherwise be impassable; churches crowning the most elevated summits; towns and villages; gardens and vineyards; all decorating without diminishing the wild grandeur of the Hungarian Alps." Indeed, the whole of this district as far as Presburg is exceedingly rich and beautiful.

Mountains.] The N and W sides of H. are very mountainous. The Carpathians run on three sides from the Sudetic chain to the Danube, and stretch several branches into the country on the W; while several branches of the Alps which cover Croatia run down to the Danube. The Carpathian chain runs in a semicircular direction from W to E, about 500 m., and bounds H. on the NW, N, and NE. See CARPATHIANS. The mountains situated in the E and SE, are separated from the northern chain by a plain which extends into the grand-duchy of Transylvania. They take their rise in the latter prov., and following the direction of the Maros as far as Arad, strike towards the S upon the confines of Transylvania and Wallachia. Those on the W part of the kingdom run from the co. of Eisenburg, in a crooked chain, towards Styria and Austria, as far as the Leitha; and some of them nearly equal the Alps in height. Besides these, there are considerable mountains in the cos. of Pesth, Gran, Veszprim, and Szalad, some of which are covered with impenetrable forests of oak. The N part of the Carpathians is composed chiefly of granite, and its summits are covered with limestone, or with a kind of brown freestone. Granite forms also an essential part of the mountains of Königsberg, and of the rocks of Tatra, which stretch into the S part of the cos. of Zips, Gömor, Sohl, Liptau, and the W part of the cos. of Arva, Thurotz, and Trentschin. It also abounds in the N part of Zips, where the mountains of Fleischbank, Porte-de-Fer, Altendorf, and some others, are entirely composed of it. Near Altendorf it begins to disappear, and is replaced by a greyish freestone, which forms the great mountain of Babagura, and extends along the extremity of the W frontiers of Tatra, Godivilk, and towards the S into the co. of Arva. The central mountains of the Carpathian chain produce limestone and porphyry. The other formations which are formed in the accessary mountains are mica, clay-slate, trap, basalt, and breccia. The body of the Carpathians on the NE consist principally of clay-slate. The chain which stretches along the valleys of Marosch and the borders of the Siebenburgen, as far as the Theiss, and traverses the cos. of Szathmar and Ugotsch, is composed chiefly of porphyry and grey freestone. In the E mountains, and in general in those of the Banat, there is a great deal of limestone, which prevails also in the interior mountains. The mountains of H., especially the Carpathian chain, abound with grottoes, the principal of which are Mazarna and Dupna in the co. of Thurotz, the Drachenhole in the co. of Liptau, Holgocz in Zips, Agtelek in Gomor, and Sziliacz in Torn.

Rivers.] H. does not border upon any sea; but is watered by very large rivers. The principal is the Danube, to the basin of which all the others, except the Poprad, belong. The Poprad descends from the Krivan; and, crossing Zips, unites with the Dunajec, a branch of the Vistula. The level of the Danube at Presburg is 330 ft.; at Raab, 272; at Buda, 229; and near Orsova, 140 ft. [See DANUBE.] Its principal tributaries are the Leitha, the Raab, the Waag or Vag, the Gran, the Drave, the Save, and the Theiss or Tisza. This last-mentioned stream is the largest of all the tributary rivers of the Danube. It rises on the confines of Pocutia; and after receiving into its channel the waters of the Zamos from Transylvania, and of the Toreza, the Latoreza, the Bodrog, and the Ung, all descending from the S side of the Carpathians, joins the Marosch, a Transylvanian stream, at Segedin, when the united streams after a comparative course of 70 m. fall into the Danube, opposite Salankaman. The whole comparative course of the Theiss is 350 m. This river "is certainly one of the most important features of H., whether in a military, agricultural, or commercial point of view. The course of the Danube is marked by towering precipices or undulating hills through the greater part of its course from Presburg to the Iron gates; the Theiss, on the contrary, flowing through a great plain, is at the same time a long vast bog that traverses Hungary from N to S. The Danube is rapid, and rather angular than tortuous; the Theiss is one of the slowest and most winding rivers in Europe, certainly more worthy of the well-known characteristic of Goldsmith than either the Po or the Scheldt. Strike a bridge across any part of the Danube, and you traverse it from bank to bank; but it is, first of all, a very difficult matter to get to the banks of the Theiss, and when you have crossed it, it is equally difficult to get to the dry land, so boggy are its banks for miles on either side. In the whole course of the Theiss, from Tokay, where the hill-country ends, to its junction with the Danube above Belgrade, there are only 6 places passable for artillery: Tissa Fiered, Szolnock, Csongrad, Szegedin, Kanisa, and Becse, —a distance of 500 m. by the river. The openings into Transylvania from Wallachia, Moldavia, and the Buckowina, practicable for artillery, are not more numerous; therefore the position of which Debreczin and Grosswardein are the centres is indisputably one of the strongest in Europe for an army of 100,000 or 120,000 men,—westwards a sweep of river morass, eastwards an arc of precipitous mountains,—westwards the great fosse of the Theiss,—eastwards the great rampart of the Carpathians of Transylvania. The steamers on the Theiss run twice a-week, and are much smaller than those on the Danube; and, on account of the windings, the navigation is much less rapid. For instance, the voyage from Szolnock to Szegedin takes 17 hours, even going down the stream with a light boat of 42-horse power." [*Correspondent of the Times.*]—The Drave, rising in the Tyrol, and flowing E through a level country to the Danube, has a course of 370 m., and is navigable from Villach in Carinthia.—The Save, which rises in the Julian Alps, and flows E by S to the Danube near Belgrade, has a course of 340 m.

Canals and railways.] There are two large navigable canals in this country, viz.: The Francis canal, between the Danube and the Theiss, in the circle of Bacs; and the Bega canal extending from Temes near Temeswar to the Theiss river near Besha on the S; and prolonged past Rokas in a NE direction to the Maros.—H. has at present two railways in active operation, one from Presburg to Tirnan opened in 1842, 30 m. in length; and another from Presburg to Pest and Szolnok, which is now being pushed forward to Debreczin.

Lakes.] There are many lakes in this country, and among these some which are reckoned among the largest in Europe. The Platten-see, or Balaton, near the centre of Lower H., is about 48 m. in length. See BALATON.—The Neusiedler-see, on the frontier of Lower Austria, is a salt-water lake of about 60 sq. m. in superficies, and is surrounded by fens. In the lower plain, the principal is the lake of Politsch, in the co. of Bars. It is about 8 m. long, having a hard bottom covered with alkaline salt.—The most remarkable of the Carpathian lakes is the Grune-see, which is formed by an enclosure of rocks, and is about 300 paces in circumf. It takes its name from the green colour of its waters, which is produced by the reflection of the surrounding pines.—Marshes of various extent pervade almost every quarter of the kingdom, and are in general formed by the inundations of the rivers. The most considerable are those of Saretje, Mohatsch, and Etsed. In the Banat, they cover more than a third of the county of Toronthal, almost the whole of Temeswar, and the greater part of the district of the frontier regiment of Banat. The marsh of Hansag, which joins the lake of Neusiedl, is 15 m. long by 10 m. broad.

Climate.] The mean temp. of Buda, which represents the mean climate of H. Proper, is 54° 30′; that of the great Hungarian plain is 60°. In the valleys, snow falls as early as September, and seldom disappears before the middle of June; while in the S districts it seldom lies above a fortnight. On the whole, however, the climate of H. is warmer than that of Germany; and even under the 48th parallel the finest species of grapes which Europe possesses, the Tokay, thrives amazingly. The finest countries of H. are the middle regions and the terraces of the Carpathians, where the air is most healthy and pure. The flat country is unhealthy, particularly to foreigners. See article CARPATHIANS.

Agriculture and productions.] Although, as has been stated, H. is a very fertile country, yet most branches of agriculture are still in their infancy here. The soil along the banks of the river and in the plains is unrivalled for fertility; the exuberant meadows and fat pastures feed large numbers of live stock, whilst the rivers swarm with fish. The Hungarian and Transylvanian forests cover a space of 7,452,230 acres, or 11,644 sq. m. According to a calculation by Grellmann — but which is founded upon very imperfect surveys of the country—about two-thirds only of the surface are in cultivation. Gardening is well attended to, and no country is better adapted to the growing of fruit than H., though, with the exception of prunes, little is cultivated. Hemp, flax, poppies, and tobacco, are cultivated on a large scale, particularly the latter, which forms a staple ware, and of which 200,000 cwt. are annually exported. In some places, an attempt has been made to rear silk-worms, and the mulberry-tree grows very well.—H. contains numerous vineyards; but they are chiefly in the hands of the peasantry, who pay little attention to the manufacture of wines. The Tokay wine, however, is highly celebrated for its excellence. It is the produce of a tract of various vineyards in the district of country which extends 25 or 30 m. to the NW of Tokay. It was not till about the year 1650 that the produce of these vineyards came into vogue. The whole quantity of this wine annually made consists of about 80,000 casks, containing 14 gallons each. Tokay is remarkably durable, and, like all sweet wines, requires to be kept a long time, until it loses somewhat of its luscious taste, and the flavour begins to preponderate. At Cracow, some vintages are said to have been kept a whole century. In this state it is called *vino vitrawno*, to distinguish it from the new and sweet, *vino slotki;* and sells generally at from 4 to 6, and in some instances as high as 8 ducats, or 4 guineas a bottle. The total quantity of wine annually produced in H. is estimated at 18,230,000 *umers*, or 582,360,000 quarts: and the whole extent of the vineyards at 851,690 acres, or 1,330 sq. m. — The breed of sheep has been greatly improved in the western districts of the country by crossing with Merinoes. H. has, in all ages, been famous for its breed of horses, which are generally mouse-coloured, and highly esteemed by military men. There is a remarkable breed of large rams in the neighbourhood of Presburg. About 100,000 head of black cattle are annually exported to Germany.—"Wool," says Mr. Paget, "is at present one of the chief articles of Hungarian commerce, chiefly because its exportation is untaxed. It is scarcely twenty years since the Merino sheep has been introduced into H., and the quantity of fine wool now produced may be judged from the fact, that at the last Pesth fair there were no less than 80,000 centners offered for sale. The greater part of this wool is bought by the German merchants, and much of it is said to go ultimately to England, after having passed by land quite across Europe to Hamburg. Of late years, a few English merchants have made their appearance at the Pesth fairs, which are held four times in the year; but I have not yet heard of any wool being sent to England by the Danube and Black sea. Besides the Merino wool, there is a considerable quantity of long coarse wool grown, which is chiefly sold for the manufacture of the thick white cloth worn by the peasants, and which might be found very serviceable for our carpet fabrics.—A still more important article of Hungarian produce is corn, and it is one from which, it is to be hoped, England ere long, by the abolition of her corn laws, will enable herself to derive the full benefit. At present, the quantity of grain annually produced in H. is reckoned at from 60,000,000 to 80,000,000 of Presburg metzen. The richest parts of the country are the Banat, the plains on either side the Theiss, the country N of the Maros, and the districts about the Saave and Drave. Now every one of these rivers is navigable, so that it is impossible to conceive a country placed under more favourable circumstances than Hungary.—All through H.," Mr. Paget continues, "the state of agriculture among the peasantry is in a very primitive state. In the poorer parts, they allow the ground to fallow every other year, and sometimes manure it, though rarely. As for changing the crops, that is little attended to. Here they will continue year after year the same thing, without its making any apparent difference. Nowhere are the agricultural instruments of a ruder form or more inefficiently employed than in the Banat. The plough is generally a simple one-handled instrument, heavy, and ill-adapted for penetrating deeply into the soil. The fork is merely a branch of a tree, which happened to fork naturally, and which is peeled and sharpened for use. The corn is rarely stacked, being commonly trodden out by horses as soon as it is cut. In the Wallack villages, notwithstanding the capabilities of the soil, maize is almost the only crop cultivated. Barley is rarely found in any part of Hungary; and, strange to say, where so many horses are kept, horse-beans are unknown. Green crops, except among a few agricultural reformers, are completely neglected, The crop of hay is commonly cut twice in a season. I do not remember ever to have seen irrigation practised, though there are few countries in which it would be productive of greater advantages."

Animal kingdom.] Bears and wolves are numerous in many quarters of H.; and the lynx, wild cat, and

wild boar infest all the larger forests.—Eagles, hawks, bustards, herons, and game, are plentiful; geese, ducks, turkeys, and pigeons are extensively reared.—The Theiss is said to be richer in fish than any other river of Europe.—Gnats, it is reported, are at some seasons so numerous as to cover the streams like a coating of moss; and locusts are often met with. The entomology of H. is peculiarly rich.

Mineralogy.] With the exception of Saxony, the mineralogy of the Austrian dominions in general is by far the most various and interesting of any European country, embracing every known mineral except tin. Their exploration and manufacture afford employment to a great proportion of its inhabitants. Native gold is found in the beds of many of the rivers; in the Körös, pieces of the size of a nut are occasionally picked up by the inhabitants of the Banat. In general, however, it is extracted from the auriferous sand, not only taken from the channels of the rivers, but also from their banks, and in some instances from pits in the adjacent ground. In these pits, which are generally about 4 ft. deep, the first stratum consists of vegetable mould; the second, of loam and an alluvial deposit of pebbles; the third, of the auriferous sand and pebbles; and the fourth, of slate, clay, marl, and coal. The washing of the auriferous sand is chiefly practised by the gypsies, who from long experience are so expert that hardly a particle of gold escapes them. The operation is simple, and is performed by means of a plank of lime-tree 6 ft. in length, and about 3 ft. in breadth, with grooves or furrows cut across. This plank is placed at an angle of about 45°, and at the upper end is a trough into which the auriferous sand is put. The sand is then washed down the sloping board by means of water, when the gold dust falls into the higher grooves, and is afterwards scraped or brushed-off. Sometimes the plank is covered with woollen cloth to which the gold adheres, or they substitute a fleece in its place. Many thousand florins of gold are collected in this manner.—The great source of the precious metals in H., however, are the mines, which surpass in richness those of any other country in Europe. The most valuable are those of Schemnitz in the county of Honth, and of Kremnitz in the county of Bars. In these mines, the gold is always found united with silver; and they estimate the value of the ores by calculating that one quintal or cwt. of ore yields so many *lotos* of silver, and one mark of silver contains so many *deniers* of gold. At Schemnitz the metallic veins extend N and S, running parallel to each other; and their inclination or dip from W to E, is at an angle of about 60°. There are six principal veins, besides many smaller ramifications. At Kremnitz, the direction of the vein in the principal mine is N and S, inclining from W towards E, an angle which varies from 25° to 30° and 40°. The ore consists of auriferous quartz, speckled with minute glittering particles of auriferous pyrites, and penetrated either by a buff-coloured clay, or by an argentiferous sulphuret of lead, and the oxide of iron. The mines are wrought partly at the expense of the Crown, and partly at the expense of individuals, who pay a duty called *urbur*, and are besides obliged to deliver the metal at a fixed price to the royal treasury. The number of miners employed by the Crown, amounted in the early part of the current century to 9,500, of whom 8,000 were at Schemnitz; the expense to government of working was estimated at 50,000 florins a-month; and the clear profits during the same period at 12,000 florins, or about £1,333. The workmen are paid, when the ore is rich, according to the quantity and quality of the ore raised; when it is poor, they receive wages. The Schemnitz ores in the space of 33 years,—from 1740 to 1773,—produced 70,000,000 florins in gold and silver; those of Kremnitz, 30,000,000 during the same period. The greatest produce, however, was derived from them in 1780, when they yielded 2,429 marks of gold, and 92,267 marks of silver, making in value 3,043,000 florins. In common years, according to the calculations of Born and Ferber, these mines, including the copper-mine of Neusohl, where 1 quintal of copper produces 12 oz. of silver, yield from 58,000 to 59,000 marks of silver, and from 1,200 to 1,300 marks of gold. About 20,000 miners are now employed in the district of Schemnitz; yet, with all this amount of labour, the mines there appear to have been profitable to the State only in a comparatively small degree. The private mines remunerate their owners for working them, although these owners are obliged to pay 10 per cent. of all their produce to the government, and to dispose of all the ore they raise at a fixed rate to the imperial smelting works. But the imperial mines scarcely pay—if, indeed, under the existing system, they do so at all. They are under the superintendence of an *Oberst-kammer-gräf*, or High-chancellor, who is himself subordinate to the imperial council at Vienna, and who has never served any 'apprenticeship,' to give him a technical knowledge of the matters over which he is called to preside,—being invested with his office solely by the influence of court favour. Mining officers, who in England would be paid from £100 to £1,000 yearly, receive in H. no more than from £50 to £100 a-year; which, making every allowance for the cheapness of the necessaries of life in that country, is a very inadequate rate of payment for their services, and altogether incommensurate with the benefit which the Austrian government might obtain under a more liberal and wise system. In consequence of this pernicious policy, embezzlement had long ago proceeded to so intolerable a pitch, that the processes of amalgamation had to be given up at Schemnitz, as well as in other mining-districts; and all the gold and silver raised in H. is now sent to Kremnitz to be purified and coined, or otherwise brought into a marketable state. Embezzlement exists no less among the working miners: the government provides oil, gunpowder, and implements; and these are constantly objects of peculation. The workmen, who are paid by the piece, are not permitted to earn more than about 3s. per week: they are bound to perform a certain quantum of work, but are not allowed to do more. Obstacles are not, however, thrown in the way of private workings; on the contrary, a regulation exists, by which any individual may work a mine—if not interfering with previous workings—no matter on whose estate, provided he pay the proprietor of the land for the surface required for buildings, &c.: and any one is at liberty to work a mine on his own account which has been left unwrought by another for a fortnight, on the usual conditions of paying one-tenth of the produce to government, and coining the rest in the country. Half of the mines in the Schemnitz district is in the hands of private individuals or companies. These are incapable of making the most of their property, from the want of capital; but Mr. Paget suggests that an English company, possessed of ordinary wealth, might obtain a good profit from mining at Schemnitz.—The silver-mines at Nagy-Banya, Felsö-Banya, and Lapos-Banya, in Transylvania; in the co. of Szathmar; at Metzenself in the co. of Bihar, with the copper-mines of Retz-Banya and Schmölnitz; according to Ferber, give an annual produce of from 12,000 to 15,000 marks of silver, and from 300 to 400 marks of gold. The copper and lead-mines in the Banat at Oravitza, Saszka, Dognaszka, and Moldava, yield annually about 11,041 marks of silver, and 20½ marks of gold. The cop-

per-mines of H. produce annually from 30,000 to 40,000 quintals. The richest are situated at Schmölnitz in the co. of Zips, and in the Banat.—The lead-mines in 1786 were wrought to the extent of from 14,000 to 15,000 quintals, but this produce is now considerably diminished.—The iron-mines in this country are almost inexhaustible. The best is drawn from a mountain called Hradek, near Esetnek; but as this metal is not subject to any duty or tithe, the annual produce of these mines has not been ascertained. In the co. of Gömor, including the district of Kleinhont, there were raised annually 94,200 quintals of iron, worth 1,304,240 florins. But notwithstanding the great quantity of iron which this country produces and exports, it is indebted to Austria for most of its tools and vessels made of this metal.—Manganese is found near Felsö-Banya, and in some of the iron-mines; titanium in the co. of Gömor near Roeze; tellurium was discovered by Dr. Kietaibel in a mineral of Deutsch-Pilsen in the co. of Hont.—Many valuable and beautiful minerals are found in the H. mines. Among them may be mentioned, amethysts invested by efflorescent manganese spar, in a minute crystallization upon the surface of the amethystine crystals; rich sulphurets of silver, called by the Germans *Weisgulden erz*, or 'White money ore,' which is so malleable that medals have been struck from the unwrought ore; sulphurets of silver, both massive and crystallized; red antimonial, or ruby silver crystallized; dodecahedral and primary crystallizations of quartz; phosphates and carbonates of lead crystallized; red sulphurets of arsenic crystallized; diaphanous crystals of the sulphuret of zinc, and of the sulphate of barytes; pearl spar in spheroidal tubercles, upon silver ore; native gold crystallized, &c.—Of the precious stones of H., the valleys of Königsberg afford emeralds and rubies, and its mountain contains topazes, hyacinths, and chrysalites; garnets are very common, and rock-crystals of various forms; small crystals, remarkable for their brilliancy, are found in the co. of Marmarosch, and receive the name of H. diamonds. There are also amethysts of various colours, jaspers, and agates. A mineral peculiar to H. is the opal,—a gem preferred to all others by the Oriental nations. The opal-mines are situated at Czernwenicza, a short day's journey to the N of Kaschau, and nearly under the same latitude as Kremnitz. The hill in which the opals are found consists of a decomposed porphyry, and the gems occur at the distance of a few fathoms from the surface. They are of various qualities, from the opaque white, or semi-opal,—which is also discovered in Cornwall,—to the utmost effulgence of those iridiscent colours which distinguish this noble gem.

Salt-mines.] The salt-mines of H. are very productive, particularly those in the cos. of Saros and Marmaros. In the former co., near the v. of Sovar, great quantities of rock-salt were extracted during the 16th cent.; but towards the end of the 17th cent., the quarries were inundated by salt springs which contain a remarkable quantity of muriate of soda. Since that time, other inundations have taken place; but without neglecting the extracting of rock-salt, establishments have been formed for obtaining common salt. These mines produce 27 per cent. of salt. All the salt-pits and mines are under the direction of the Crown, and produce annually about 1,500,000 quintals. The price is fixed by the government, and cannot be augmented but with the consent of the diet. As the profits arising from the sale of this commodity form a part of the Crown duties, it is not allowed to any individual to appropriate to his own use any saline earths or springs which he may have discovered, even on his own property.—H. abounds in quarries of limestone, and marbles of various colours. Alabaster and chalk are also common. See articles SCHEMNITZ and KREMNITZ.

Manufactures and commerce.] The manufactures of H. are yet in their infancy. Neither the Slavonians nor the Magyars are fond of manufacturing occupations; indeed, manufactures can hardly prosper in a country whose raw produce is so easily sold to the neighbouring states. The only article manufactured for exportation is leather. H., having so many valuable productions to bring into the foreign market, and such a noble river as the Danube intersecting the interior, might conduct a foreign trade greatly to its advantage, if the Austrian system did not check the free operations of commerce; but this country is treated like a colony, and surrounded on all sides with tax-offices and custom-houses. "In vain did the Diet protest against the maintenance of a tariff which it had never sanctioned, and which Austria had no right to impose upon H. without her consent. The truth was that the imperial government could not afford to act justly on this point without entering upon a series of reforms in the commercial system, for which she was not prepared. By the ancient laws of H. a mere nominal duty was imposed on all goods imported into that country; and, as it is well known that English manufactures are prized there above those of any other nation, it is clear that the only mode by which Austria could preserve the Hungarian market to the manufacturers of Moravia and Bohemia was by imposing heavy duties on all foreign goods imported into that part of her dominions. The obstinate refusal of Austria to comply with the just and moderate demands of the Hungarian people, ended, as might naturally be expected, in calling forth a very decided national demonstration in favour of the principle contended for. Tired of appearing before the cabinet of Vienna in the attitude of petitioners, the Hungarians, like the free-traders of this country, formed a league, the members of which pledged themselves to promote the use of all articles of native industry, and to discourage the introduction of Austrian manufactures. This league elected Count Cassimir Bathyany as its president, and M. Kossuth as director." The principal markets for H., besides the Austrian states, are Silesia, Poland, Italy, and the Turkish empire. Fiume may, in a certain sense, be considered as the seaport of H.,—though not belonging to it,—as the communication with it is greatly facilitated by good roads. The centre of the interior commerce is Pesth, where there are four great annual fairs held. The means offered for transport to the markets of the Black sea, and hence even onwards to the free ports of the Adriatic, are rendered almost nugatory by Russia being permitted to block up the only navigable outlet of the river, and to establish onerous and absurd quarantine regulations: Sardinian vessels that a few years ago loaded at Galatz cannot now approach within several miles of that town. At present cargoes descending from Pesth must twice be unshipped before they can arrive at the Black sea; whereas the rocks at Orsova might be avoided by a canal of a few miles in length. There have been many projects intended to overcome the present barriers to commerce,—such as a railway from Comorn to Fiume, the natural port of H. in the Adriatic,—an independent canal in place of the Soulinch,—another to avoid the 'Iron gates' at Orsova,—and the building of commodious harbours at Pesth, together with a series of canals commencing from that capital to join the Theiss and the Danube on one side, with the Platten-see and the river Drave on the other; thus making the capital of H. the general entrepot of its commerce; but neighbouring intrigue, and the

discountenance of the superior government, have hitherto rested as a dead weight upon such efforts: nor has anything of this character been achieved, if we except the present steam-navigation of the Danube, which owes its success to the patriotic and persevering Count Stephen Szechenyi. "At present," says an eye-witness in 1839, "we may enter the abode of the farming peasant, and see him surrounded with the staple productions of his land,—he has corn, wool, and flax, in abundance; but that peasant will not in the general probability possess the value of 10s. He can find no market for his material, except among his equals, or by land-carriage across the distant frontier; if he reaches that market, he finds an unequivalent remuneration —large sellers are before him, and there is to him no outlet of foreign exportation. None but the richer Hungarian nobles have any opportunity for foreign exportation, and that class monopolize it by means of their exclusive merchant-bankers at Vienna; by which it happens, that any foreign commerce that Hungary possesses is under the control of a sect in that city." Mr. Paget says: "H. manufactures scarcely anything; and in her present position, as a country deficient in population and rich in soil, it would not be wise to attempt it, or indeed possible to accomplish it. The manufactures of H. at present are confined to coarse cloths, linens, leather, and the commonest articles of household use. Yet in H. there is not only great luxury in dress and personal ornament, but a growing taste for the comforts of convenient and elegant furniture. It is true the peasant has little money to exchange for such matters; but that is only because there are no merchants to buy his wine and corn; while amongst the class of country gentlemen, and amongst the richer citizens, the demand is very considerable. The taste is decidedly in favour of everything English, so much so, indeed, that the Vienna manufacturers have English labels printed in England to affix to their own goods, and so deceive the purchasers." An eye-witness writing from Pesth in October 1849, reports that "In agricultural, commercial, and manufacturing pursuits, great changes for the better have been gradually introduced, and many more may still be expected in this country: in particular, much might be looked for from that vast undertaking which Count Stephen Széchenyi has set on foot since the beginning of the present year, viz., the regulation of the Theiss river,—now already fast progressing, as ample funds have also been placed at his disposal for this purpose, and which will be of immense advantage to the country. Thousands and thousands of acres of the most productive land that have hitherto been under water during the greater part of the year, will be drained by this means and freed from further inundation. And, though landed property in general has of late years greatly risen in value, yet in these districts—that is, along the borders of the Theiss—land of the best description may still be had at an exceedingly cheap rate. Steam-navigation also flourishes on this great river, and a railroad, which has recently been opened from hence to Szolnok, effects its junction with the Danube. Thus there is an opening for British settlers in those parts of the most tempting kind, especially as the soil, in point of fertility, may best be compared to the banks of the Nile."

The following is a statement of the total value of the trade between H. and Transylvania, and the other parts of the Austrian empire, in each year, from 1831 to 1841:

Years.	Imports from Hungary and Transylvania.	Exports to Hungary and Transylvania.
1831,	£4,045,526	£1,980,404
1832,	4,746,598	2,790,291
1833,	4,384,105	2,641,357
1834,	3,947,438	2,717,651
1835,	4,142,785	2,707,632
1836,	4,852,962	3,176,253
1837,	4,335,737	3,159,983
1838,	5,563,896	3,451,157
1839,	5,086,687	4,029,723
1840,	5,075,537	4,140,752
Average for 10 years,	4,618,127	3,079,520
1841.	5,139,780	4,261,093
Average for 11 years,	4,665,550	3,186,936

Statement of the average value of the trade between H. and the other parts of the Austrian empire, distinguishing the articles, in the years from 1831 to 1840:

Articles.	Imports from Hungary and Transylvania.	Exports to Hungary and Transylvania.
Natural and agricultural produce:—		
Colonial produce,	£8,268	£26,920
Tropical fruits and produce,	18,427	2,656
Tobacco,	241,281	...
Oils,	75,154	903
Grain of all kinds,	816,460	66,292
Liquors,	91,730	62,338
Fish of all kinds,	8,637	940
Poultry and game,	45,685	258
Cattle for food,	585,762	91,998
Animal produce,	45,335	6,777
Cattle for draught,	33,574	34,479
Building materials, &c.,	21,257	28,844
Miscellaneous articles,	6,393	17,847
Total,	1,997,963	340,252
Other articles:—		
Drugs and perfumery,	14,111	7,612
Chemical produce,	75,513	22,985
Salt,	712	6,715
Colours and dyeing stuffs,	5,844	18,443
Gums, rosins, &c.,	83	4,557
Tanning materials,	83,977	2,294
Minerals and earths,	1,160	3,332
Jewellery and precious stones, rough,	4,144	2,481
Common metals, rough and half manufactured,	114,105	75,623
Raw stuffs,	2,232,092	135,754
Yarn,	7,375	148,553
Manufactured goods,	79,462	2,302,488
Literary and artistical productions,	1,586	8,431
Total,	2,620,164	2,739,268
Grand total,	4,618,127	3,079,520

Population.] Blumenbach, in 1816, stated the pop. of H., including Slavonia and Croatia, at 8,200,000; Liechtenstern, at 7,800,000; Czaplowics, a Hungarian writer, states it to have amounted, according to a census taken in 1820, to 8,643,627; and Rohrer gives it in 1827 at 9,471,263. In 1837 it was returned at 11,727,439; in 1840 at 12,096,202, besides 58,802 military; being an average pop. of 3,010 per Austrian sq. m. In the Hungarian declaration of independence, promulgated at Debreczin, in April 1849, the pop. of the Hungarian and Transylvanian states is estimated at 15,000,000.

Magyars.] The Hungarians, or Magyars, are the ruling nation in H., though their numbers do not exceed 4,500,000. They occupy the rich and fertile plains in the centre and SW of the kingdom. They call the country, in their own language, *Magyar-Orszag*, or 'the land of the Magyars.' They are a handsome, vigorous race, distinguished by a fiery, upright, and open character, great patriotism, and an Asiatic hospitality. The whole character of the Magyars is one of activity and cheerfulness: this distinguishing trait appears in their vices as well as virtues; in their manners, their national dress, and their dances. Since 1806, their language—of which we shall speak afterwards—has been adopted in the tribunals and public transactions, and will probably supersede the Latin, which is still very generally understood in this country, even by the lower classes.—Of a kindred

race are the Kumanes, or Comani, a remnant of the Petschenegri, numbering about 70,000, and the Jazyges, whose numbers do not exceed 45,000. "The Magyar peasant," says Paget, "has a strong feeling of self-respect, at times bordering perhaps on foolish pride. It is very rarely he will consent to exhibit himself as an actor, and in consequence the country is filled with German players, Bohemian riders, and gipsy musicians; for, however much he may dislike amusing others, he has not the least objection that others should amuse him. To all this is united a sense of personal decency, and a fastidious delicacy in certain matters, scarcely to be found amongst any other people. The Magyar has a passionate love of country, united to his conviction that no one is so happy and prosperous as himself. The Swiss does not feel a more devoted attachment to his mountains than the Magyar to his plains. His language and his religion are two important points of nationality with the Magyar. They are Protestants; and their activity of mind has been kept alive by their religious separation from their Greek and Roman Catholic neighbours. The Magyar peasant holds the Wallacks in the most sovereign contempt." Joseph II. laboured to substitute the German language for the native Magyar, but in vain; and renewed exertions are now making to maintain the native Hungarian language; although, says Kohl, "the advantage of employing a language so far more cultivated than the Hungarian as the German is, appears on many occasions so obviously, that the most determined patriots find it hard to avoid doing so, and to feel half-ashamed of their native tongue. They are often compelled to intersperse, in their conversation, German turns and expressions for ideas, which they cannot otherwise make intelligible. The Magyar language has not, like the German, struck deep root into the hearts of the people, but rather resembles those plants which float loosely in the air. It has been by law excluded from the legislative assemblies, from diplomacy, and in a great measure from the sciences and from the schools. Even as late as the preceding summer, the university lectures continued to be given in Latin, but the beginning of this year was to be the final term at which the Latin language was to expire."

Slavonians.] The Slovacks or Slavonians are the second in rank, and the most numerous tribe in this country. They amount to about 4,050,000, and consist of several tribes, of which each speaks its own dialect. They may be divided into the Slovaks, who are chiefly located in the N and W of H., and to whom belong the Kopaniczares, the colossal inhabitants of the Carpathians; the Croates, or Croatians, and Illyrians, in Croatia Proper, and the SW of H., a rude and uncivilized, but industrious and harmless people, speaking the Illyro-Croatian dialect; and the Serbes and Raizes, mostly in Slavonia, the Banat, and the SE of H., speaking a Wlakish dialect. Besides these tribes, there live on the Carpathians a considerable body of Rusniaks, with whom Schwartner classes about 22,000 Vandals, located in the county of Eisenburg, though other geographers have classed them with the German.

Germans, &c.] The German denizens, whom Geysa received into the kingdom in 1143, now amount to about 900,000. They have preserved their language and national character in the midst of Slavonians and Magyars, and are, without doubt, the most industrious and civilized tribe in the whole kingdom.—These are the principal tribes; but besides these there are about 1,000,000 Wlaches or Wallachians, a remnant of the old Dacian inhabitants, dispersed over the whole country as herdsmen and waggoners; the Jews amount to about 300,000; and the Gipsies to 45,000.—The resident Armenians, who are the best farmers and cattle-merchants in H., the Greeks, or Macedonian merchants, the Lithuanian colonists in the Banat, and the Arnauts, occupying two villages, may all together amount to 8,000 souls.

In a conspectus of the recent Hungarian census just published at Vienna, we find the numbers and distribution of the nationalities now existing on the soil of H. thus stated: It should be premised that the figures refer, not to the great historical kingdom which, as administered by the palatine Stephen in 1848, included the countries of Transylvania, the Wovodina, the Banat, Croatia, Slavonia, and the Military border, but merely to the crown land of H. Proper, as stripped of its appanages by Schwarzenberg and Paskiewitch. The crown land of H., then, contains, according to this authority, 5 districts, 45 comitats, 95 cities, 703 towns, 8,335 villages, 1,214,229 houses, and 7,864,262 inhabitants. These are divided in respect of nationality in the following manner: 352,686 foreign residents, not being computed, viz., Magyars, 3,749,662: Slaves, 1,656,311; Germans, 834,350; Romanians, 538,373; Ruthenians, 347,734; Croats, 82,003; Wends, 49,116; Serbs, 20,994; Bohemians and Moravians, 1,539; Poles, 242; Illyrians, 6,982; Italians, 355; French, 81; Belgians, 2; Swiss, 13; English, 25; Armenians, 250; and Israelites, 333,564. In the five districts the nationalities are thus apportioned: Pest and Buda district, including 9 comitats with 1,599,819 inhabitants, there are 1,223,355 Magyars, and 163,700 Germans; the remainder various. The Presburg district contains 12 comitats, with 1,612,203 inhabitants, has 309,744 Magyars, 1,037,176 Slaves, 89,870 Germans, and the remainder of various races. The Kaschau district, comprehending 8 comitats, with 1,410,463 inhabitants, has Magyars 352,878, Slaves 464,998, Germans 77,426, Ruthenians 322,051, Romanians 54,835. The Oedenburg district, numbering 9 counties and 1,782,658 inhabitants, counts 1,051,393 Magyars, Germans 449,818, Slaves 18,846, and Croats 81,938. Finally, the Grosswardein district, including 7 comitats, with 1,549,119 inhabitants, has 752,292 Magyars, 73,896 Slaves, 53,569 Germans, 483,006 Romanians, and 17,055 Ruthenians. Of course any estimate of the component nationalities of a mixed people will be greatly affected by the standard chosen to determine a race. On this point, and with reference to the previous figures, a correspondent of the *Augsburg Universal Gazette* writes thus: "With respect to the classification and assignment of the pop. of H. in the late census returns, it must be admitted that a strict statistical analysis of national elements which have existed and been propagated in the same land for many hundred years, which have moved freely among one another, have been subject to common influences, and entered into a thousand close relations of reciprocity, is no easy task, but rather one whose complete and satisfactory solution borders on the impossible. There is scarcely anywhere a principle to be found upon which such a classification may with security be based. Perhaps the fairest way were to take the voluntary statements of the individuals numbered and classified as to their nation; but it cannot be denied that this practice would be attended with manifold inconvenience, since the nationality thus professed would be of a political rather than an ethnological character, and the census would reflect the opinions rather than register the races of the population. During the conscription this principle of accepting spontaneous profession of nationality made it appear that the national element of the Hungarian population was declining. On the other hand, nothing can be said as far as the Magyar element is concerned, against making descent, as evidenced by the Magyar sound of the name, the criterion of race. The race of pure-blooded Magyars is certainly not larger than a class formed on such a principle would comprise. But now, on the other hand, if all the inhabitants of H. not of pure Magyar descent, who, in the course of centuries, have become assimilated to that race—who, in speech, manners, and ideas, have been Magyaried—who feel with these and claim to be of them—were to be reallowed with them, then very different numbers would have figured in the census lists. The Magyar element had then, in all probability, one-half of the originally German and Slovack, and a good part of the Romanaic, Servian, and Ruthenian nationalities. But even taking the figures as they now stand in the government tables, it appears that in the crown land of Hungary the Magyars form nearly one half, the Slaves about a fifth, and the Germans one-ninth of the entire pop. Looking at the districts separately, we find that in three the Magyars have the majority, and indeed in the Pest district form three-fourths, in the district of Hedenburg two-thirds, and in Grosswardein more than one-half, of the pop. In the districts of Presburg and Kaschau, on the other hand, the Slavish element has the preponderance, forming in the first about two-thirds, and in the second, taking Slovacks and Ruthenians together, more than half of the whole. The German element is represented most powerfully in the Oedenburg district, where it figures as one-fourth; it is weakest in that of Grosswardein, where it contributes but one seven-and-twentieth part to the population." In the Pest district, the Germans are but 1 to every 10; in the Kaschau and Presburg districts, 1 to every 18 of other races.

Religion.] According to the letter of the law there is no established religion in H., although the majority of the inhabitants are Catholics; but the influence of the clergy, and the undefined expressions of the law, cause the other religious creeds to be virtually regarded as merely tolerated. According to Czaplovicz, the number of Catholics, with the United Greeks who acknowledge the supremacy of the pope, and the Armenians, in 1820 was 5,392,395; the census of 1840 returned 6,897,500 Catholics; 919,400 United Greeks; and 1,302,100 Schismatic Greeks. The Calvinists in 1820 were 1,285,816; in 1840, 1,800,100. The Lutherans in 1820 were 822,989; in 1840, 858,300. The Jews in 1820 were 150,000; in 1840, 262,000. The recent census of the crown-lands of H. represents the pop. of H. Proper, classified according to religious confessions, as follows: Catholics, 4,122,738; Helvetic confession, 1,415,192; Augsburg confession, 724,328; United Greek church, 676,598; Non-united Greeks, 396,931; Israelites, 333,564. The Catholic church in H. is very amply endowed, more so, we believe, than in any other country in Europe; and its prelates, by means of their wealth, possess great influence both in the diet and in the county congregations. It is under the direction of 3 archbishops and 16 bishops (besides 4 bishops of the United Greek church), whose united revenues, principally derived from landed property, have been computed at £200,000. There is, however, a very great disparity in the revenues of the different sees. The archbishop of Gran (Esztergom Strigonium), who is also primate of H., with the title of prince, is in the enjoyment of £60,000 per annum

The other prelates have from £1,000 to £10,000. Besides these dignitaries, there are upwards of a hundred titular prelates, and a numerous body of canons, abbots, &c., some of them with very considerable incomes. The supreme head of the Greek church in H., as well as in the whole Austrian empire, is the archbishop of Carlowitz, who is elected by a national congress, comprised of 100 delegates, chosen by the clergy, military (of the frontiers), landed proprietors, and burgesses, twenty-five from each class.—The Evangelic-Reformed (Calvinist), and the Evangelic-Lutheran churches, as they are called, are under the direction of seniors, inspectors, and superintendents. Every Protestant church or parish chooses its own preacher, appoints his salary, dissolves connection with him when it chooses, and manages its own schools. Yet above it is a series of representative assemblies, which have even a legal power over its movements. First comes the 'Assembly of the seniorate,' composed of the preachers from several neighbouring churches, together with delegates from the congregations. This decides upon certain school and parish-affairs, and is presided over by two members, chosen from themselves, a senior and curator. Above this again is 'the Assembly of the superintendents,'—the highest church convention,—which decides upon all the most important matters before the National church. The superintendent is a kind of Protestant bishop, presiding over many seniorates. His duty is to visit the various parishes under his charge, to examine the candidates for the ministry, and to keep watch over the morals of the clergy. He is usually paid from 200 to 300 dollars a-year for travelling-expenses, but otherwise must be at the head of a congregation, and perform the usual duties of a clergyman. They are chosen almost directly from the people. The 'Assembly of the superintendents' is composed also of men sent directly by the congregations as delegates, and is presided over by two members, one a superintendent, and the other the 'upper curator.' In every church, assembly, and council, there should be certain men, appointed from the laity, to aid in guiding the proceedings, and especially to take charge of the monetary matters. In consequence, every assembly of the seniors, every convention of superintendents, every church-meeting, has its two presiding officers,—a clergyman and a layman,—the latter usually having the title of 'curator' or 'inspector.'

Hungarian language and literature.] The language of the Magyars is a very remarkable one, and throws much light on the study of history. It is one of the youngest of the living languages which have come from Asia to Europe, and as such has preserved many traits of its oriental origin. The Magyars belonged originally to the Finns, an Uralian race, which extended in early ages from the SW of Asia on the Caspian sea, to the extreme NE of Europe; and their language is derived from the primitive tongue of this tribe. The Hungarian language is written with Roman characters, and the different pronunciation of the vowels is marked by accents. It is very harmonious, and has something magnificent in its sounds.—Among the numerous grammars of the Magyarian language, the first was written by James Pannonius in the 15th cent., but was afterwards lost. The first which appeared in print was by John Sylvester, or Erdösi, in 1539. A society of learned men published one at Vienna in 1795. The most complete grammar, however, which seems to have been written with great philological skill, is one the publication of which was begun by Nicolas Révai at Pest in 1809.—The civilization of the Magyars made very early progress; and their literature deserves a much greater attention than has yet been bestowed upon it by other nations. In the 11th cent. a number of schools were established in the convents; and in the 12th cent. it was customary for the young Hungarians, particularly those who were destined to be priests, to attend the newly formed university at Paris. In the beginning of the 13th cent., a college, or *studium generale*, was established at Wessprim in Hungary, in imitation of the university at Paris, in which chairs were founded for all the liberal arts, and for theology and law. In the 16th and 17th cents. schools and colleges increased in H. With the 14th cent. the Latin language began to exercise that sway in H. which it then did in all the civilized countries of Europe; but it has maintained its supremacy in H. almost to our own times.—Hungary and Transylvania have produced many excellent writers in this language, although from very ancient times chronicles and annals were kept in the native language. After the close of the 15th cent. there appeared as historians Tubero, Zermeagh, Istvanfi, and Tzentivângi. In medicine, natural philosophy, and natural history, Clusius, Koeleseri, Poda, Horvath, were distinguished names; in the philosophical and mathematical sciences, Petrus de Dacia, Berengi, and Mako; and in poetry and rhetoric, James Pannonius, Olahus, Bekengi, Revai, and Carlooszky. Under the kings of the house of Anjou, the language of the country and the national literature assumed a greater degree of importance. Deeds and letters now began to be written in the Hungarian language, and a translation of the Bible was also executed in the vernacular tongue. But it was not till the 16th cent., under the government of Ferdinand I., and Maximilian, that the fairest flowers of national literature blossomed. The religious disputes which with the Reformation had penetrated into H. accustomed the people to think in their own language, while the sacred poetry which was now introduced into religious services greatly enriched and refined the dialect. The study of national history was now excited and assisted by the chronicles of Szekely published in 1559, of Heltai in 1572, and of Bartha in 1664. Translations of the Bible by Komjáti, Telegyházi, and Kormáromi, now appeared; and many celebrated preachers were trained in this period, whose writings would suffer no loss from a comparison with those of the most celebrated theologians of their age, as Gaal, Kultsár, Telegdi, Delsi, Kaldi, and Alvintzy. Religious and popular poetry were now cultivated by Szekely, Batizi, Gelei, Tinódi, Balassa, and many others; Count Nicolas Zring, Christopher Pasko, and the talented Gyoengyoesi, produced epic poems; while Balassas, Beniczky, and others, devoted themselves to the lighter lyric. An encyclopædia was written in Hungarian, and published by John Tsere in 1653. This flourishing period of national literature was overcast by several circumstances, which we cannot here detail; and the Latin language came again into general use from 1700 to 1780. The first Hungarian newspaper appeared in Latin in 1721; and during this epoch, the works of Hidi, Kazy, Husgty, Bad, Celto, and Horanyi, rivalled in purity and elegance of diction those of our own Buchanan. During the last ten years of Maria Theresa's reign circumstances took another turn, and Faludi Bárólzi, Count Adam Téléki, and many others distinguished themselves by works in the Hungarian language. In 1781 the first newspaper in the Hungarian language appeared at Presburg. The ordonnances directing the Hungarian language to be taught in the schools, and adopted in judicial business, have greatly contributed to advance the national literature, and multiply the number of original works. National theatres have been formed at Buda and Pest; and poetry has been successfully cultivated by

Szabó, Arawka, Matyasi, and Bergsengi; while Viray, Bathory, Marton, and Endroedi, have attained distinguished eminence as prose writers.—The total number of works published in H. from 1817 to 1825 was 719, of which 310 were written in Hungarian, 259 in Latin, 127 in German, 11 in Slavonian, 6 in Greek, 5 in Esclavonian, and 1 in French.

Seminaries.] The Catholics, in 1830, had one university and several colleges, with about 2,689 parish-schools, and altogether 3,561 professors and teachers in H. The united Greeks and Armenians had 382 schools, with as many teachers. The Greeks possessed 2 gymnasia and 1,226 schools. The Calvinists had 3 colleges, and several gymnasia and schools, with about 1,600 teachers. The Lutherans had 1 lyceum, 1 college, several gymnasia and schools, and 629 teachers. The Jews had about 100 teachers. There were also agricultural schools, experimental farms, and schools-of-industry throughout the country. A writer in the *Athenæum*, already quoted, gives us the following account, from a native work, of the state of education in H.: "In a country in which education is under the control of the government, we may speak of an educational department of state as well as of any other branch of administration. This department in H. is under the immediate direction of the vice-regal council. In each of the 5 districts into which the kingdom is divided for this purpose, there is a chief director, under whom are district and local inspectors. There are few villages without a school of some description; in the towns there are generally larger schools, each with three or four masters. In Buda, Presburg, and seven other towns, there are normal schools of a higher description, in which teachers are also formed for the national schools. The next in order are the gymnasia, of which there are 59 in the kingdom, and 6 archi-gymnasia. The course in these schools lasts from 6 to 8 years, which are chiefly occupied in the study of the Latin classics. Still higher in rank are the lyceums, in which a course of philosophy is given, and above these are the academies in Presburg, Raab, Kaschau, Grossvardein, and Agram, and the archi-episcopal lyceums, each of which has 8 professors. There is also a seminary in each diocese for the education of young men for the church. The highest institution for education is the university of Pest, which has upwards of 100 teachers, 50 of whom are professors. Students of every religious creed are admitted without distinction: the actual number is about 1,500, among whom there are a good many Jews, and a few Mahommedans from the Turkish provinces. This university is one of the richest in Europe, possessing landed and other property which has been estimated at near £1,000,000 sterling. This enables it to pay the salaries of 3,560 schoolmasters, and to give stipends of £16 and £20 per annum to upwards of 300 poor students. Altogether there are about 1,500 Catholic students in H. (including those of the theological faculty), whose education costs their parents little or nothing. The Calvinists, Lutherans, and Orientals (as the members of the Greek church are designated), support their own schools, which are on much the same plan as the Catholic, though not so immediately under the control of government. They have also stipendiary students, though the stipends are not so high as those of the Catholics; we should think very little in England of 20 and 40 shilling stipends, which 40 Lutheran students in Oedenburg enjoy. The Calvinist schools are much more amply endowed than the Lutheran. In their colleges of Debreczin and Sáros-Patak, there are about 300 students who are supported from educational funds, besides several hundred who are furnished with lodgings gratis.—Among the institutions for teaching a particular branch of knowledge, we must mention the military academy in Pest; the mining and forest academy in Schemnitz, which has a European reputation; the school of agriculture in Altenberg, founded by the late Archduke Albert of Sachsen-Teschen; and that founded and endowed with a princely liberality by Count Festetics, in Keszthely, on the borders of the lake of Balaton, under the name of Georgicon. It possesses 450 acres of land, and has 4 professors; the course lasts three years; it is an institution which is well worthy the attention of travellers."

Orders of the state.] The privileged orders are the prelates, magnates, nobles, the clergy, and the inhabitants of the free towns. These form what are called 'the Estates.'—The nobles, who have assumed the title of *populus*, have maintained the same privileges which they enjoyed in the time of the Crusades. They are free from all burdens of the state, on condition of serving the king in war, not, however, without the sanction of the diet; but on extraordinary contributions of late years, the nobles, whose numbers amount to 270,000, have assessed themselves for their share of the public burden. They alone can hold landed property. No peasant or citizen can obtain justice against a noble but through another noble, or the magistracy of a free town. Mr. Paget informs us that the word *noble* has a meaning altogether different in H. from its signification with us; that "it answers more to our *freeman*, and expresses a right to certain political and civil privileges not enjoyed by the rest of the population. If the law has made no distinction in the constitutional rights of the nobles, custom has established in their social position as marked gradations as are to be found in the various classes of society of any other country. The Hungarians maintain that the titled nobles date only from the accession of the house of Hapsburg to the throne; and that the magnates of former times were only so from their position as barons and counts of the kingdom—that is, great officers of the court and governors of counties. Even the very titles *grof* and *baro* are borrowed from the German *graf* and *baron*. Be this as it may, at present they are divided socially into three classes—the magnates, answering to our peers; the untitled nobles, a middle class, answering to our gentry; and the 'one-house nobles,' men possessing the hereditary rights of nobility, but in every other respect—in property, education, and manners—little above the peasant. Of these three grades of nobility, making a pop. of half-a-million, is formed the real constituency of H. The whole pop. of H. Proper may be reckoned at 10,000,000, so that the proportion of the represented is 1 in 20, if the number of adult males only be considered." A more recent writer on Hungary (Mr. Fényes) makes the number of nobles to be 617,521, and the whole pop. 12,033,399, the proportion being about the same. The same writer gives the whole number of titled or magnate families as 10 princely, 106 bearing the title of counts, and 98 that of barons. Of the latter, the chief is the palatine, who is chosen for life by the diet, from 4 candidates named by the king. He is regent during a minority, president of the upper chamber of the diet, and names the vice-palatine who commands the nobles when assembled for war. The viceroy, chief judge, *banat*, or governor of Croatia, Dalmatia, and Slavonia, and the *tavernicus*, or president of the court-of-appeal, are also of this class.—The higher clergy are distinguished under the head of the nobility, and do not form a distinct class.—The burghers, or inhabitants of the royal or free towns, have also great privileges, and are exempted from a great portion of the taxes; they are eligible to all offices,

and they elect their own magistrates, but cannot individually possess land unless they have a patent of nobility.—The condition of the peasants—who formerly were all bondsmen—has been considerably ameliorated by the Urbarial law. But the peasant of H. has scarcely any political rights, and there is no limit in point of fact to the services which he may be called upon to perform to the state, while he pays at least nearly ten-elevenths of the land-tax.

Government.] H., since 1687, has been an hereditary monarchy, limited by the representatives of the privileged orders assembled in the diet. The succession goes in the male and female line, and the right of election in the Estates can only be again exercised when the present dynasty is entirely extinct.—The fundamental laws of H. are the golden bull of Andreas II. of 1222, the *magna charta* of the Magyars; the privileges of the nobility as acknowledged by law in 1741; the treaty of Vienna in 1606, and that of Lintz in 1647, by which the free exercise of religion is guaranteed to the Protestants; the act of the diet of Presburg in 1687; and the inaugural diplomas of 1790 and 1791.—The king has very extensive powers. He exercises the whole executive powers; he nominates the bishops and prelates, independently of the pope's confirmation, which only regards their spiritual functions; he has the control of all the establishments for education; he confers all civil and military dignities, except that of the palatine, and the two keepers of the crown; he is the president of all the tribunals of justice, and can order 'the Insurrection,' as it is called, or general levy of the nation; and he alone can grant patents of nobility. But in the legislation and taxation the states have an important vote, and laws and taxes can only be imposed with the consent of the diet. The king must swear to the constitution in presence of the people in the open air; when he receives from the hands of the primate the crown of St. Stephen. He is of age at 14.

The states consist of the prelates, to whom belong the Catholic and Greek archbishops, bishops, and abbots; the magnats, or higher nobility; the rest of the nobility, who are represented by two deputies from each *comitatus;* and the royal free towns. These states alone form what is called in the language of the constitution the *populus in dietum;* whilst the rest of the people are even in the laws styled the *misera plebs contribuens*, having no part in the business of the state, farther than bearing almost all its charges alone.

The diet, or *comitia regni*, is, according to law, summoned every three years. Three months after the summons is issued, they appear in two chambers: the first consisting of the magnats and prelates, under the presidency of the palatine; the second consisting of the deputies of the nobility. The king appears in person, or is represented by a commissioner. He announces, after the opening of the diet, his *postulata* to the states. When the king and states have agreed on a *postulatum*, it becomes a law, or *decretum regni.* The king assembles and prorogues the diet at pleasure.—The whole Hungarian constitution is imprinted with the stamp of the middle ages. Under the first successful movements of the Hungarian diet assembled in the early part of 1848, laws were passed providing reforms in the internal government of the country, by which the commutation of servile services and of the tithe were decreed; a fair representation guaranteed to the people in the diet, whose constitution was before that exclusively aristocratical; equality before the law proclaimed; the privilege of exemption from taxation abolished; freedom of the press pronounced; and, to stem the torrent of abuses, trial by jury established, with other improvements.

Administration.] The administration of H. differs from that of the other Austrian states. The person of the king is represented by the palatine, who is assisted by a council-of-state, of which the members are named by the king; but the whole is subordinate to the Hungarian chancery at Vienna, through which the king decides every matter constitutionally depending on his will. Each *comitatus* is governed by a special council, of which the first officer is the *comes*, or *obergespacin*, of whom thirteen are hereditary,—the rest are named by the king; below the *comes* is the *vice-comes ordinarius*, and the *vice-comes substitutus*, and two or four *judices nobilium*, besides several other officers. These administrative councils are also tribunals of justice, from which the last appeal is to 'the Septemviral board.'—We are not yet in possession of the details of the new system of administration which has been adopted by the authorities of Vienna in relation to H. It is understood, however, that the country will be divided into 5 administrative districts, the respective capitals of which are to be Pesth, Presburg, Oedenburg, Kaschau, and Grosswardein. The affairs of each district are to be administered by an *obergespan*, or district-director, assisted by a large staff of secretaries, clerks, &c. The *obergespan* ranks as next magnate to the statthalter in his ministerial capacity. The districts are, as now, to be further divided into *comitats* or counties whose concerns will be superintended by presidents assisted by a council and officers. The presidents rank next in authority to the district-obergespan. The lowest local administrative division will be that of a *stuhl-bezirke*, or commune, under the superintendence of a single officer. Political administration will belong exclusively to the imperial minister of the interior. Every administrator, whether of comitats, gespanschaften, or stuhl-bezirke, will be personally responsible for the execution of the orders sent to him by the central authorities at Vienna.—H. has its own code of civil and criminal law.—Politically considered, H. stands somewhat in the same relation to the arbitrary power of Austria, that Ireland did to Britain before the passing of the Catholic emancipation act. It was finally delivered from the Turkish yoke about the beginning of the 18th century; but though united to Austria, it still considers itself as an independent kingdom, having a constitution which the Hungarians regard with jealous attachment, and laws and privileges, the operation of which has been, and still continues, a source of great trouble and offence to the Austrian court. "In point of fact, H. and Transylvania, with all their possessions and dependencies, never were incorporated into the Austrian empire, but formed a separate independent kingdom, even after the adoption of the Pragmatic sanction, by which the same law of succession was adopted for H. which obtained in the other countries and provinces. The clearest proof of this legal fact is furnished by the law incorporated into the act of the Pragmatic sanction, and which stipulates that the territory of H. and its dependencies, as well as its independence, self-dependence, constitution, and privileges, shall remain inviolate and specially guaranteed." [*Hungarian Declaration of Independence*, 1849.]

Revenue.] We have no certain accounts of the revenue which Austria derived from H. It is believed to have been about £3,000,000 sterling. Of this £500,000 were levied as a direct tax upon the peasantry and free towns; the remainder was drawn from the crown-domains, the monopoly of salt, the mint, mines, excise, the income of vacant bishoprics, the post, and the tax paid by Jews for the right of

residence. A well-informed writer says: "Whilst the revenue arising from the German and Italian dominions of the emperor proceeds in a great measure from a direct tax under the form of an impost on land, H. has persevered in a system of indirect taxation, which has forced the Austrian government to surround that kingdom by a cordon of custom-houses and fiscal officers. These internal customs' duties have never been a source of considerable revenue to Austria, for her principal object has been to prevent the produce of the untaxed lands of H. from coming into the markets of Austria, Bohemia, Moravia, &c., in competition with the produce of the taxed lands of those provs. But the imperial government has never been able to obtain from the Hungarian diet the assent of the nobles to a system of taxation more conformable to the general system of the empire, more profitable to the state, and less onerous to the people. The consequence is, that the Austrian government, drawing no funds from H., does very little for Hungary. Capital is wanting, roads are wanting, and all the resources of the country, which might be amply sufficient to constitute the real independence of a rich, populous, and powerful state, are paralyzed by the absence of a good system of taxation. The chief obstacle to the reform of the finances of H. lies in the exemption of the secondary nobility from taxation; for although by the *urbarium* of 1835 a noble has now to pay taxes for such peasants' lands as may pass into his possession, the great bulk of the nobles and all their hereditary estates are untaxed. The *casa militaria* and *casa domestica* are subsidies exclusively levied on the peasants and the inhabitants of the free towns, and they are assessed at the county meetings by the nobles who do not directly contribute to them. To maintain this privilege, the Hungarian nobles submit to be excluded from the markets of Europe, and to hold the least improving properties in the world. Never were men more deluded by their own prejudices; all proprietors of the soil are taxed, whether such taxes are paid by themselves, or by their tenants, or levied in the shape of restrictions on the productions of the land; but the Hungarian noble pays no nominal taxes, and he is proud of this exemption, though it prevents industry and trade by shutting him out from his natural markets,—it prevents intercourse, from want of money to make roads or improve navigation,—and it makes the necessities of the state fall with the twofold weight of an unproductive burden on the whole community."

Military force.] Under the old regime, H. contributed to the imperial army, 15 regiments of infantry, composing an effective force of 60,000 men; and 12 regiments of hussars, each of 1,800 horse. Transylvania contributed 5 regiments of infantry, among which were three Wallachian, and two regiments of Szeckler hussars, each 3,000 men strong. To these troops of the line must be added 16 regiments of border-infantry—or infantry of the Military confines—and one regiment of cavalry, together, with reserves, making 80,000 men strong. This large army was paid out of the Hungarian finances. Besides these regular corps, 'the insurrection,' as it was called —a word not borrowed from the French, but native to the country, where Latin is spoken—or the muster of nobles in times of war, formed an imposing force. It was the Hungarian 'insurrection' which saved Maria Theresa, and the army which drove Frederick the Great out of Moravia was wholly composed of noble 'insurgents.' The 'insurrection' which appeared under arms, in 1809, consisted of 18,000 hussars and 22,000 infantry. These nobles, according to the custom of feudal service, were obliged, when summoned to the field by their liege, to equip and maintain themselves. Thus, when the late rising of the Hungarian nobility was termed officially among themselves 'insurrection,' and when, in their proclamations and orders of the day, they styled themselves 'insurgents,' an allusion is made to their own national history rather than to their present position in relation to Austria. In the late revolution of the regular old imperial troops from 20,000 to 25,000 went over to the Hungarians. These consisted of 28 battalions of the line, of the regiments Alexander, Miguel, Schwarzenberg, Turzli, Charles-Ferdinand, Vasa, which were complete; and of single battalions of the regiments of Este, Ernst, Michael, Prince of Prussia, Egulai, and Leiningen. These battalions, formed by the Austrian government out of Hungarians, were full of enthusiasm for the Magyar cause. In the beginning of the revolution, the soldiers of the regiment of the prince of Prussia were seen, in the streets of Pesth, to tear the black-yellow cord from their shakos, and replace it by the Hungarian white-red-green; and the grenadiers of Ofen rent the Austrian stripe out of their trousers to the cry of 'Eljar at Magyar!' Of the 12 hussar regiments, all that were stationed in H. placed themselves at the disposal of the Hungarian diet: these were 8 regiments, well broken in to the exercise, and each 2,000 men strong. Besides these, there were formed before the outbreak of the war three new regiments of cavalry, which bore the name of the Lehel, Matyas, and Hunyadi hussars. The last regiment was so swollen by volunteers that, towards the end of January 1849, it counted nearly 6,000 men, and was divided into three brigades, one of which was led by Bem into Transylvania. This and the Matyas regiment consisted almost wholly of nobles. In the months of January and February were formed 9 guerilla corps. In the middle of February there were only two Polish legions, which counted each 3,500 men; but latterly it is probable 28,000 Poles were serving in the Hungarian army. These Poles, with the exception of some 1,400 or 1,500 *émigrés*, come mostly from Galicia, where single noblemen raised whole companies and battalions, and led them over the Carpathians. Besides these, there were in the Hungarian army many Poles from the kingdom of Poland, from Podolia and Volhynia. These were mostly nobles, who, accompanied by their *jäger* and retainers, and richly equipped, under favour of night and fog slipped over the Russian frontier. The repeated descents of Bem on the Bukowina had for their chief aim to open a communication with Russian Poland in this direction, and to extricate and annex the isolated bands of Polish insurgents, that, having stuck fast in the Bukowina, were unable to cross the Transylvanian frontier.—In the late revolutionary war, the Magyar armies found able auxiliaries in the wild pop. scattered over the vast steppes and forests of the interior, particularly the horse-herds, or tenders of the troops of wild horses of the plains, the swineherds, and fishermen. The first-named of these were especially dreaded by Austrian troops, on account of the extraordinary weapon they carried and used with deadly skill. It is simply the whip with which they select and catch any horse of the herd they wish to tame and dispose of. The application of it in war is quite a novelty. It has a handle not more than 2 ft. in length, while the thong measures from 15 to 20 ft.; a leaden ball is fixed to the end of it, with smaller ones at different distances from it, like shot on a fishing-line; and when thrown it acts like a lasso, curling round man or horse, or it strikes either to the earth with a crushing blow. The horseherds, or *chykosz*, are so skilful in the use of this weapon, that at full gallop they will strike an enemy with unerring certainty on any part of the

body they please. In skirmishes, any isolated foot-soldier, if he fires his musket and misses, is lost before he can attempt to reload: the wild horseman rushes past, and with the sweep of his ball-loaded thong stretches him lifeless on the earth by a blow on the head. The dress of the cavalry is peculiar, and is copied by our hussars. The term *hussar* is Hungarian, and signifies 'the twentieth,' because twenty peasants are bound to furnish one horseman to the cavalry. The Hungarian infantry are called *haiduckes;* the light infantry go under the name of *pandours*, a name which they derive from a mere Rascian village of that name, in the district of Baja, in Lower Hungary. A still rougher tribe of warriors are the Seressans, who inhabit the frontiers of Transylvania and Moldavia. Their arms consist of a carbine and two cutlasses; their dress is similar to that of the Uhlans; and their military service is like that of the Tyrolese chasseurs.

History.] *Pannonia*, or Hungary to the S and W of the Danube, was anciently inhabited by the *Scordisci* and *Taurisci*. When these tribes were subdued, and *Pannonia* was made a Roman prov., it was divided into Upper and Lower, by the conquerors, who made the Raab the boundary between these two divisions. It was invaded by the Huns, A. D. 377. These fierce invaders were overthrown in 489 by the Goths and Gepidæ, who in their turn yielded to the Longobards, in 526. When the latter conquerors marched upon Italy, the Avarians invaded the country, and extended their dominion into Bavaria; but they were conquered by Charlemagne, who forced them to profess Christianity. Towards the end of the 9th cent., the *Magyares* —as they called themselves—or *Hungarians*—as they were called by their Slavonian neighbours—a Caucasian tribe, advanced from the Lower Ukraine and Moldavia, over the Crapacks or Carpathian mountains, into Pannonia. They were about 1,000,000 in number, and were divided into seven confederated tribes. These invaders subdued the country, and reduced the ancient inhabitants, viz. the Slavonians, Bulgarians, Wlaches, and Romans, to slavery. Their principal chief, Arpad, took half the country to himself; and each of the other chiefs received a portion of the newly acquired territory. Under Arpad's grandson, Duke Geysa, the devastating inroads of the Magyares on the countries towards the west and east, were put a stop to; and Geysa himself being baptized in 973, missionaries were received from the west, who spread the civilizing doctrines of Christianity throughout the country. Geysa's son, Saint Stephen, who, according to a custom of the times, had the hereditary royal dignity conferred upon him by the hands of the emperor Otto III. in the year 1000, gave a new form to the ecclesiastical and political institutions of the country. He divided the whole country into 72 *comitatus* or counties: and invested the highest public officer, viz. the *comes*, count, or *graf*, with the superior civil and military command. He also founded 10 bishoprics, and organized a kind of national representation; in which, however, only the higher officers of the state, and the immediate vassals of the king had a place. The trouble which ensued after Stephen's death in 1038, furnished the German emperors with a pretext for interfering in the internal policy of H.; and King Peter was forced in 1044 to accept of his inheritance as a fief of Germany. This yoke was however shaken off in 1063; and under Saint Wladislaw and his successor, Koloman, civil harmony was restored, and the countries of Croatia and Dalmatia were united with the kingdom. About A. D. 1155 several thousands of colonists from Lower Germany, and Flanders, came to Hungary and Transylvania; and Geysa III. permitted them to preserve among themselves their German constitution. Andreas II. gave in 1222, a kind of national charter, which was confirmed and enlarged in 1234. In 1301, the family of the Arpadians was extinguished with Andreas III. He was succeeded by several kings of different families, among whom Lewis the Great possessed also the Polish crown, which after his death devolved on his daughter, who married the duke Jagellon of Lithuania, and united Red Russia, Moldavia, and Wallachia, also with the crown of H. Sigismond, who was elevated to the throne in 1387, by election, was opposed by a powerful party, now the more dangerous since the Turks had begun to attack the kingdom. Red Russia, Podolia, and Wallachia, were seized at this juncture by the Poles, and Dalmatia by the Venetians; and Sigismond was further obliged to pledge 13 of his towns to the Poles. The Hungarian diet now consisted of prelates, barons, lower nobility, and deputies from the towns. The two first were called by way of eminence, *magnats* Sigismond was succeeded in 1437 by his daughter Elizabeth, who married the emperor Albert II., with whom she shared the Hungarian crown. The governor of Transylvania, the gallant Johan Hunyad, a natural son of Sigismond, was regent during the minority of Ladislas, Albert's posthumous son. When Ladislas himself assumed the reins of government, Hunyad supported him by his counsels, and lent energy to all his measures by his great influence and personal bravery. But after the death of that noble-minded man in 1456, the ungrateful monarch, listening to the advice of evil counsellors, caused the eldest son of his friend to be beheaded in 1457, and threw the younger into prison. The weak-minded Ladislas died a few months after this infamous transaction, and the gallant Matthias Corvin, then only 16 years of age, was called out of prison, and on the 24th of January 1458, elected king by the nation. Matthias was a hero of the noblest rank. He patronized the sciences, and promoted the welfare of his people by every means in his power, at the same time that he aggrandized the kingdom, and kept his dangerous neighbours in check. In the war with the emperor Frederic II. he entered Styria, Carinthia, and Carniola, and at last Vienna itself. He founded a university, established a considerable library, and invited various learned men, artists, and printers, from Italy into his country. He died on the 6th of April 1490, without legitimate heirs, and Wladislas of Bohemia, after subscribing certain very humbling conditions, received the crown of H. from the hands of the nobles that same year. Austria, in 1491, resumed possession of Vienna and the other provinces conquered by Matthias. The prospects of succession to the Hungarian crown which now opened up to Austria were favoured by the nation at large, and the weak Wladislas beheld in silence the power of the magnats daily increasing. Moravia and Lusatia were now torn from the kingdom; Venice took possession of several towns in Dalmatia; and Moldavia came under Polish sovereignty. Wladislas was succeeded in 1516 by his son Lewis II., under whom the troubles excited by the magnats, or higher nobility, headed by John Zapolya, gathered fresh strength, while the country was at the same moment invaded by the Turks, against whom Lewis fell in the battle of Mohacz in 1526, when Sabacz, Belgrade, and the whole of Servia and H. as far as the Raab, were devastated by the conquerors. John Zapolya was thereupon elected king; while Stephen Bathory, another magnat, proclaimed Ferdinand I. of Austria, Lewis, brother-in-law, king of H. John nevertheless maintained himself on the throne, but was obliged to leave the best part of H. with Buda in the hands of the Turks, in whose possession they remained until the peace of Carlowitz in 1699, when Leopold I. again got possession of them. From this period H. has remained united with the Austrian empire; indeed, the authority of Austria was established in H. from the day of the victory at Mochos, in 1687, when its armies, assisted by those of Charles of Lorraine, overthrew the Turkish power. The ancient right of the States to elect their own monarch was indeed confirmed; but this every emperor of Austria contrived to evade by having his heir elected to the Hungarian throne in his lifetime, so that whether the supreme governing power was Turk or Christian proved indifferent to the Hungarians—both were oppressors; and accordingly, in 1711, we find the nation in open revolt, so manifold had been the encroachments of the Austrians in the brief period of their sway. This revolution is remarkable for having provoked the intercession of the British government, with whose interests it interfered by weakening the power of Austria, at that time allied with us in the prosecution of that war with France in which the duke of Marlborough gained so much renown. The British plenipotentiaries remonstrated with the house of Austria, and advised the recognition of the rights of H.; but the emperor obstinately resisted, and a six years' war was maintained with varying success, and terminated in a peace and general amnesty. H. gained nothing by this movement, and in a few years hostilities were renewed, which continued until the accession of Maria Theresa, who voluntarily restored to the Magyars their ancient constitution and liberties. A calm of nearly half-a-century succeeded, and was only broken by the emperor Joseph II., in his love of the despotic system of centralization, which prevailed at Vienna, attempting to incorporate H. with Austria. This nefarious proceeding was energetically and successfully resisted; and in 1790 the emperor was fain obliged solemnly to declare, in an express article of the constitution, "That H. is a free and independent nation in her entire system of legislation and administration, and not subject to any other state, or any other people; but that she shall always have her own separate existence and constitution, and shall consequently be governed by kings crowned according to her national laws and customs." The principle here established is that for which the Hungarians so energetically but vainly contended against the united force of Austria and Russia in 1848-9. H., they said, "has ever been independent of Austria. Ferdinand I., the first prince of the house of Austria that ever reigned in H., received the crown in 1526, in accordance with an election by the diet. He swore to maintain the constitution and the independence of H. All his successors took the same oath. The crown of H. first became hereditary in the house of Hapsburg in virtue of the Pragmatic sanction, passed by the Estates of H. in 1687. In 1723 this settlement was extended by the Hungarian diet to the female line of the house of Hapsburg (second Pragmatic sanction). But the independence of H. was maintained and guaranteed not less by these very acts than by the oaths of all the kings of the house of Hapsburg-Lorraine, even down to our own days. By article 10 of the year 1790, the Emperor-king Leopold II. recognised H. as a free and independent state in its whole legislative and administrative system. Hence the article 3 of the year 1848, by which a parliamentary government was settled in H., introduced no change in its relations to Austria. This law was no more than a development of all the foregoing laws. It was passed by an unanimous vote of the two houses in the Hungarian diet, and was formally sanctioned by the king, Ferdinand V."

The armies of Austria had suffered defeat in Italy in the revolutionary movements in that country in the beginning of 1848. Vienna, too, had risen against Metternich, and a constitution and

national guard had been created in that city. Advantage was taken of the crisis by the diet, and the intimidated emperor and his ministers readily granted all the demands it preferred in the name of the Hungarian nation. A responsible ministry was granted, and Count Louis Batthyany was appointed premier of H. on the same day, March 15, that Jellachich was named Ban of Croatia. Before March ended a deputation from both houses of the diet appeared in Vienna, carrying to the king their unanimous claim that he would consent to various bills. In these the greatest constitutional change was the restoration of the old union between the diets of Hungary and of Transylvania; but socially the most important laws were the equalizing of all classes and creeds, and the noble enactment which converted the peasants into freeholders of the soil, quit of all the old feudal burdens. This bill had passed both the houses on Feb. 4, 1848, before the French revolution had broken out; so little had that great event to do with the reforming efforts of the Hungarians. The Austrian cabinet, seeing their overwhelming unanimity, felt that resistance was impossible; and Ferdinand proceeded with the court to Presburg, and ratified the laws by oath on 11th April 1848. This is the reform which all patriotic Hungarians fondly looked upon as their charter of constitutional rights, opening to them the promise of a career in which they should emulate Great Britain, as a pattern of a united, legal, tolerant, free, and loyal country. Croatia is a prov. of the Hungarian crown; and there Jellachich, as ban or governor, openly organized revolt against H., by military terrorism, and by promising Slavonic supremacy. Dissensions between the Magyar and Slavonic races had existed for many years; and the provincial diet of Croatia had returned a flat refusal to the propositions despatched to it from Pest. On Batthyany's urgency, Ferdinand declared Jellachich a rebel, and exhorted the diet to raise an army against him, but always avoided finally to sanction their bills. Meanwhile Radetski defeated Charles Albert in Italy. Jellachich dropped the mask of Croatianism, and announced to Batthyany that there should be no peace until a ministry at Vienna ruled over H. In September, as the king would neither allow troops to be raised in H., nor the Hungarian regiments to be recalled from Italy for home defence, a Hungarian deputation was sent to the Austrian diet, but it was denied admittance by aid of the Slavonic party. On Sept. 4, a royal ordinance—officially published in Croatia only—reinstated Jellachich in all his dignities, who soon after crossed the Drave, and entered H. with a well-appointed army 65,000 strong. As he openly showed the king's commission, Batthyany resigned; no successor was appointed, and the Hungarian diet had no choice but to form a committee of safety. To embarrass them in this, the king reopened negociation with Batthyany, but still eluded any practical result, by refusing to put down Jellachich. Masses of volunteers were now assembled by the eloquence of Kossuth, which, with the aid of only 3,000 regular troops, on 29th Sept. repulsed Jellachich at Sukoro, and chased him out of their country. A royal rescript of Oct. 3d now dissolved the Hungarian diet; forbade all municipal action; superseded the judicial tribunals; declared H. under martial law; and appointed Jellachich civil and military governor of that country, with discretionary power of life and death, and an expressly unlimited despoism. It likewise distinctly announced the determination of the Crown to incorporate H. into Austria. On the 6th of October, troops from Vienna were publicly ordered by Latour to march against the Hungarians. This order, coupled with alarm, inspired by the approach of Jellachich, led to the *emeute* in Vienna, in which Latour was murdered,—a murder which was made a pretext for bombarding Vienna, and destroying the newly sanctioned constitution. Windischgratz, the agent in this work, joined his forces to those of Auersperg, who meanwhile had sheltered Jellachich.

At all this the Hungarians were so infuriated, that after deposing the generals,—who were believed traitorously to have allowed Jellachich to escape,—with inferior artillery, and with forces not half of the Austrians, who were 75,000 strong besides their reserves, they fought and lost the battle of Schwechat, Oct. 30. This was the first and last battle fought by the Hungarians on Austrian soil, fought only against those who were protecting a ruthless enemy, who had desolated H. by countless outrages. On the 2d of November, Jellachich entered Vienna in triumph, and was intrusted with a great army in the course of the whole war that followed. It is then impossible to doubt that the Austrians had supplied him with arms, money, and authority from the beginning. Ferdinand V. at this juncture signed the act for his own abdication, and at once seated the youthful archduke Francis Joseph, son of Francis Charles—who had also abdicated his claim—on the throne of Austria. An Austrian army now marched into H., and in the course of January and February overran and occupied it as far as the Theiss eastward, and as high as the Maros northward. The Russians meanwhile penetrated into Transylvania. On March 4th, 1849, Count Stadion published his new constitution for fusing down H. into a part of the Austrian empire. If previously H. had been under Russian despotism, this constitution would have seemed highly liberal, and from an Austrian point of view such it was; but to the Hungarians it was an intolerable slavery. First, it virtually annihilated their municipalities, and subjected their police to Vienna. Next, it would have enabled the Austrian cabinet to put in Austrian civil and military officers everywhere in H.,—an innovation odious to the Hungarians. Thirdly, it swamped their parliament among a host of foreigners, ignorant of H. and its wants, and incapable of legislating well for it. Fourthly, it was enacted without the pretence of law, by the mere stroke of Count Stadion's pen. On reviewing the constitutional question, it was clear to the Hungarians, first, that Ferdinand had no legal power to abdicate without leave of the diet, which leave it was impossible to grant, since in the course of nature Ferdinand might yet have direct heirs; secondly, that if he became incapacitated, it was the right of the diet to appoint a regent; thirdly, that if Ferdinand had died, Francis Joseph was not the heir to the Hungarian crown, but his father, Ferdinand's brother; fourthly, that if Francis Joseph had been the true heir, and lawfully crowned, the ordinances would still be a breach of his oath, and equivalent to a renunciation of his compact with the people; sixthly, that even to Austria the ministry of Stadion,—or rather of the Archduchess Sophia, the mother of the young emperor,—was no better than that of a knot of intriguers. All H. therefore rose to resist,—Slovachs and Magyars,—Germans and Wallachs,—Catholics and Protestants,—Greeks and Jews,—nobles, traders, and peasants, rich and poor, progressionists and conservatives.

Between the Theiss and the Maros Kossuth had organized the means of fabricating arms and money; and in the course of March and April 1849, a series of tremendous battles took place, in which the Austrians were some fifteen times defeated, and without a single change of fortune, their armies, 130,000 strong, were swept out of H. with immense slaughter. Only certain fortresses remained in their power, and those were sure to fall by mere lapse of time. The Austrian cabinet was desperate at losing a game in which it had risked so much. Its more scrupulous members had retired, including Stadion himself. Bloodier generals were brought forward, and the intervention of Russia—granted, we have seen, as early as February in Transylvania—was publicly avowed. This act finally alienated from Austria every patriotic Hungarian. Upon the entrance of the Russians with the consent of Francis Joseph, the Hungarian parliament, on the 14th of April, after reciting the acts of perfidy and atrocity by which the house of Hapsburg had destroyed its compacts with the nation, solemnly pronounced that house to have for ever forfeited the crown; and declared H., with Transylvama, to be legally united, and to constitute a free independent sovereign state, whose form of government should be fixed by the diet of the united nation. During the existing crisis, Kossuth, according to constitutional precedent, was made governor of the country. The Hungarian line of defence turned upon the strong fortress of Comorn on its centre, with its right upon Leopoldstadt. The chief Hungarian force S of the Danube was collected between that river and the Platten-see. Against the well-provided armies and artillery of Windischgratz on the one side, and of Radetski on the other, the Hungarians had indeed nearly equal numbers to oppose, but chiefly consisting of ill-equipped and undisciplined levies. Yet it may well be questioned whether the united Russo-Austrian forces could have succeeded in subjugating H. had they not found a traitor to aid them, in the person of Georgey, whom Kossuth had, with mistaken confidence, placed at the head of the patriotic forces, and whose surrender at Villagos was the crowning act of a long system of secret treachery.

HUNGARIAN LITTORALE, a small district of Hungary, stretching along the NE side of the gulf of Quarnero, between Croatia and Illyria, and comprising the cities of Fiume and Buccari, and the immediately adjacent districts. It is one continuous line of hard calcareous rocks; and the only soil capable of cultivation is to be found either in the valleys or artificially collected in ledges on the sides of the mountains. The woodlands and forests, principally beech and fir, which give some activity to the trade of Fiume, are distant 20 m. from the coast. Maize is the principal grain cultivated.

HUNGEN, a town of Hesse-Darmstadt, in the prov. of Upper Hesse, 10 m. ESE of Braunfels, on the Horloff. Pop. 1,033.

HUNGERFORD, a parish and market-town in the SW angle of Berks, and partly also in Wilts. Area of p. 6,940 acres. Pop. 2,724.—The town is situated on the river Kennet, which, with the Kennet and Avon canal, affords a navigable communication with the Thames on the E, and the Avon and Bristol channel on the W; while it is connected with the Great Western railway by a branch-line, by which it is 26½ m. WSW of Reading. It thus maintains a considerable traffic. It consists principally of one long street, near the centre of which is the market-house. The church is an ancient building.

HUNGERFORD, a township in the Victoria district of Upper Canada, between Sheffield and Huntingdon. Pop. in 1842, 880.

HUNGERSDORF, a village of Prussia, in the reg. of Aix-la-Chapelle, circle of Schleiden. Pop 168.

HUNGERTON, a parish of Leicestershire, 7 m. NE of Leicester. Area 2,910 acres. Pop. 267.

HUNGRUNG, a division of Kunawar, comprising the lower part of the course of the Spiti river. It is an arid mountain-valley about 20 m. in length, and elevated from 8,500 to 10,000 ft. above sea-level. Its area may be taken at 288 sq. m.; and it is divided into the districts of Nako, Chango, and Hango. The face of the country is arid; the only vegetable productions being a short brown grass, a few patches of juniper, and some prickly bushes and aromatic plants. Grain is cultivated in this region at an elevation of 13,000 ft. above sea-level. The fort of Shealkur, in about 32° N lat., is of some importance.

HUNGRY BAY, a bay on the N coast of Lake Ontario, which affords good anchorage and safe shelter among the islands, to ships of the largest size.

HUNGRY HILL, a mountain in co. Cork, 12½ m. WNW of Bantry. Alt. 2,249 ft. It rises up, first in rocky, rugged, and steep acclivities, and then in a soaring and alpine precipice; and is celebrated for a stupendous waterfall which it flings from a lake on its summit. The stream falls towards the ESE, so as to place its sublime cascade right in the view of Bantry; and it afterwards courses S to the head of Ardagh bay. The upper part of the mountain, down one-third of its entire descent, is so mural that the stream falls sheer over it without break.

HUNGRY POINT, a cape on the E coast of the island of St. Vincent, in N lat. 13° 28′.

HUNG-TANG, a district and town of China, in the prov. of Shan-si, 18 m. NE of Ping-yang, on the l. bank of the Fuen-ho.

HUNGU. See Hangu.

HUNINGEN, or Huningue, a commune and village of France, in the dep. of Haut Rhin, 2 m. NW of Basle. Pop. 1,422. It was formerly an important stronghold, constructed by Vauban in 1679–81, in the form of a regular pentagon. The barracks of the garrison were fitted to contain 4,000 men. In 1815, H. held out a long time against the Allies; and the destruction of its fortifications took place in consequence of a stipulation in the treaty of Paris in that year.—Also a village of Prussia, in the reg. of Arnsberg, circle of Soest. Pop. 170.

HUNINGEN (Klein), a parish and village of Switzerland, in the cant. and 1 m. N of Basle, on the Rhine. Pop. 466.

HUNINGHAM, a parish of Warwickshire, 6 m. NNW of Southam. Area 1,170 acres. Pop. 245.

HUNISH, or Ru Hunish, the N promontory of the isle of Skye, in N lat. 57° 45′.

HUNMANBY, a town and parish in the E. R. of Yorkshire, situated on a rising ground, 4 m. from the sea-shore, and 8 m. from Bridlington. Area of p. 7,200 acres. Pop. 1,214.

HUNNEBERG, a hilly mass in Sweden, near the Venner lake, above which it has an elevation of about 368 ft.; but the surrounding country is so level that it is seen quite distinctly from Kinnekülle, a distance of 36 m. It has a quadrangular form, and measures about 7 m. on each side, rising at once from the plain with very precipitous sides.

HUNNERWASSER, a town of Bohemia, in the circle and 14 m. NNW of Jung-Bunzlau. Pop. 1,100.

HUNNINGEN, a village of Prussia, in the reg. of Aix-la-Chapelle, circle of Malmedy. Pop. 296.

HUNSBORN, a village of Prussia, in the reg. of Arnsberg, circle of Olpe. Pop. 440.

HUNSDON, a parish of Hertfordshire, 5 m. W of Sawbridgeworth. Area 1,760 acres. Pop. 430.

HUNSE, a river of Holland, rising in the central part of the prov. of Drenthe, and flowing N and NW through Groningen to the Lauwer-zee, into which it discharges itself after a course of about 50 m.

HUNSHELF, a township in the p. of Penistone, W. R. of Yorkshire, 7 m. SW of Barnsley. Pop. 578.

HUNSHOVEN, a village of Prussia, in the reg. of Aix-la-Chapelle, on the Worm. Pop. 637.

HUNSINGORE, a parish in the W. R. of Yorkshire, 5 m. ESE of Knaresborough. Area 3,660 acres. Pop. 625.

HUNSLET, a chapelry in the p. of Leeds, in the W. R. of Yorkshire. Pop. 15,852. It forms a suburb of the town of Leeds, with which it is connected by a bridge across the Aire.

HUNSTANTON, a parish, and pleasant watering village, on the coast of Norfolk, 9 m. W of Burnham-Westgate. Area 2,180 acres. Pop. 527. There is a lighthouse on a lofty cliff in this p., in N lat. 52° 56′ 54″, E long. 0° 29′ 30″.

HUNSTE, a village of Prussian Westphalia, in the gov. of Dusseldorf, near Duisburg. Pop. 842.

HUNSTON, a parish in Suffolk, 8 m. NNW of Stowmarket. Area 1,120 acres. Pop. 162.—Also a parish in Sussex, 2 m. S of Chichester. Area 880 acres. Pop. in 1831, 185; in 1841, 193.

HUNSWORTH, a township in the p. of Birstall, in the W. R. of Yorkshire, 4 m. SE of Bradford. Pop. in 1831, 878; in 1841, 978.

HUNTAU, a small river in East Prussia, which falls into the Frische-haff, near Brandenburg.

HUNT BAY, an indentation of the S coast of Jamaica, between the parishes of St. Andrew and Catherine, and 3 m. NE of Kingston. It is defended on the SW by a neck of land, at the extremity of which is Fort Augustus. It is nearly circular in form, and has a diam. of about 1½ m.

HUNTE, a river of Hanover, which rises in the principality of Osnabruck; flows through the Dümmersee; after emerging from it, takes for some time the name of Lahne; passes Oldenburg, and runs into the Weser at Elsfleth, about 20 m. NE of that town.

HUNTEBURG, a small town of Hanover, in the principality of Osnabruck, on the Hunte, 21 m. NE of Verden.

HUNTER, a township of Green co., in the state of New York, U. S., 18 m. W of Catskill, and 54 m. SW of Albany. It is situated on the principal range of the Catskill mountains, and contains the peak named Round-Top, which rises to the height of 3,804 ft. above the Hudson. It is drained by the head-branches of Schoharie creek, but possesses little fertility. Pop. in 1840, 2,019. The village is on Schoharie creek, and contained at the same period 300 inhabitants.

HUNTER, a county in the middle district of New South Wales; bounded on the N by Brisbane co.; on the NE by Durham co.; on the E by Northumberland co.; on the SE by Cumberland co.; on the SW by Cook co.; and on the W by Roxburgh and Phillip counties. It is intersected from W to E by a range of mountains, and watered by numerous streams, affluents of the rivers which form its boundary lines, namely, on the N by the Goulburn and Hunter rivers, on the E by the Woloumbi and Macdonald, on the S by the Colo, and on the NW by Widden creek. Its live stock in 1849 amounted to 1,500 horses, 7,388 cattle, 10,878 sheep, and 1,311 pigs.

HUNTER, a river of Australia, which has a SSW course through a mountainous district, and falls into Prince Frederick's harbour, to the N of the estuary of Roe river, in S lat. 15°, E long. 125° 25′.—Also a river of New South Wales, which has its source in the NE extremity of Brisbane co., at the base of the dividing range; and runs first NE, and then SW, along the confines of Brisbane and Durham counties. On reaching the W point of the latter co., and being joined by the Goulburn from the W, it bends ESE; forms the line of separation between Durham and

Gloucester cos. on the N, and Hunter and Northumberland on the S; and after a total course of 120 m. falls into the port of the same name. It is navigable for about 35 m. from the coast.—Of its numerous affluents the principal are the Isis, Dart, Goulburn, and Woloumbi on the r.; and on the l. the Fall, Paterson, and William.—A considerable export of wine is now taking place from this river; but a vastly more important trade is that of coal, which is now exported from Newcastle, at the mouth of the river, in great quantities. The whole basin of the H. is reported to be one coal-field, extending from the sea at Newcastle to the dividing-range 100 m. inland. A seam 11 ft. thick and lying at the depth of only 20 or 30 fath. from the surface, is now working; and its produce is transported to Newcastle by a railway about 2 m. in length. A railroad from Newcastle to Maitland, and thence to Patrick's plains, is contemplated. The aborigines call this river the Coquun.

HUNTER (Cape), a cape on the SW coast of New Georgia, in N lat. 9° 42′.

HUNTER (Port), a port of New South Wales, on the E coast, at the mouth of the river of the same name, between the counties of Durham and Northumberland, 59 m. N and 22 m. E from Port Jackson, in S lat. 32° 56′, and E long. 151° 43′. Its entrance, which is under 1 m. in breadth, is formed by Piratepoint, a low sandy promontory, on the N, and by Coal-head on the S. Near the latter is the town of Newcastle, in S lat. 32° 55′ 50″, E long. of Sydney 0° 34′ 45″. Within the area of the port are several islands, the principal of which are Ash-Spit, Dempster, Mackellar, and Chapman. The arm which runs to the NE bears the name of Fullarton cove. In its vicinity are mines of coal.

HUNTER'S BROOK, a stream of Lower Canada, in the SW extremity of Drayton township, which joins the Connecticut between Hall's-creek and Indian stream.

HUNTER'S ISLAND, or Onaseuse, an island of the S. Pacific, in the group of the Friendly islands, and to the NW of the Fiji islands, placed by Horsburgh in S lat. 15° 30′, E long. 176° 15′. It is said to be of considerable extent, to rise high, and to possess considerable fertility, producing fruit of different kinds in great abundance. Its existence has, however, been questioned by recent navigators.

HUNTER'S ISLANDS, a group of islands, in the western part of Bass' strait, and near the NW extremity of Van Diemen's land, consisting of two large islands named Barren and the Three Hummocks, and several smaller islands. They were discovered by Flinders in 1798, and were afterwards visited by Freycinet and Boulanger. The channel by which these islands are separated from King island on the NW is sometimes named Hunter's channel. It is about 36 m. in breadth, and in common with other parts of Bass' strait abounds with flying fish and seals.

HUNTER'S LAKE, a sheet of water in N. America, in N lat. 64° 6′, W long. 113° 25′. The surrounding country exhibits only a few stunted pines.

HUNTERDON, a county in the W part of the state of New Jersey, U. S., bounded on the SW by the Delaware, and watered in the W by several affluents of that river, and in the E by Raritan river. It is level towards the S, and generally mountainous. Pop. in 1840, 24.789. Its capital is Flemington.

HUNTERSTOWN, a village of Strabane township, Adam's co., in the state of Pennsylvania, U. S., 35 m. SW of Harrisburg, consisting in 1840 of about 30 dwellings.—Also a township of Lower Canada, in the co. of St. Maurice, and rear of Riviere-du-Loup, Grandpré, and Dumontier. It is well-watered, but its soil is shallow, and towards the rear it rises into broken and almost mountainous ridges. It abounds, however, with pine, cedar, spruce, and hemlock.

HUNTERSVILLE, a village in Pocahontas co., in the state of Virginia, U. S., 190 m. WNW of Richmond, on Kapp's creek, 6 m. above its entrance into Greenbriar river, and at an alt. of 1,800 ft. above the Atlantic. Pop. in 1840, 130.

HUNTINGDON, a borough and market-town, the capital of the co. of the same name. It stands on the N side of the Ouse, on a gentle rising ground, and is connected by three bridges and a causeway with the town of Godmanchester, $\frac{3}{4}$ m. to the SSE, on the Cambridge road. Kimbolton is 10 m. distant W by S, and London 58$\frac{3}{4}$ m. SSW. Pop. in 1801, 2,035; in 1831, 3,267; in 1841, of parl. burgh, 5,500. It consists principally of a long range of houses commencing at the bridge over the Ouse, and extending nearly 1 m. on each side of the N road from London, towards the N boundary of the borough. The market-place is tolerably spacious; on the S side stands the town-hall, with a sort of piazza in front and at the sides for the market people. The lower part of the latter building is divided for assize purposes into two courts; above is a spacious assembly-room. There are baths, and a small theatre, and in the vicinity of the town is a race-course. The new county-jail is situated to the W of the town. The burgh comprises the parishes of All Saints, St. Benedict, St. John the Baptist, and St. Mary. United area 1,230 acres. St. Mary's church consists of a nave, chancel, and aisles, with a handsome embattled tower. —Under the new municipal act, the boundaries of the borough, comprehending its 4 parishes, were left unaltered, and the borough was appointed to be governed by 4 aldermen and 12 councillors. The income of the borough for 1839 was £458, chiefly arising from borough rates. H. has returned 2 members to parliament ever since 23° Edward I.: the old boundaries coincided with those of the municipal borough and the 4 parishes of H.; but the parish and borough of Godmanchester were united with it by the Reform act. In 1837, the number of electors registered for H. and Godmanchester was 389; in 1848, 374. H. is a polling-place, and the principal place of election for the co.-members.—Lying in the midst of an agricultural district, this town participates in the fluctuations of the agricultural interests; but trade is not carried on here to any degree of importance, and there are no manufactures, besides the produce of the ordinary trades carried on in all towns of any magnitude. The Ouse being navigable from Lynn, through H. and up to Bedford, it derives its supply of coals, wood, &c., from Lynn, by barges, and by the same route exports its corn and other agricultural produce. The agricultural trade here is principally in wool and corn.

HUNTINGDON, a central county in the state of Pennsylvania, U. S., comprising an area of 1,276 sq. m., watered by Juniata river, and its tributary Raystown branch. The level parts are fertile and well-cultivated. The mountains are well covered with timber, and contain iron in abundance, lead, bituminous coal, salt, and alum. It is intersected by the Pennsylvania canal, and in the W part is the railroad which crosses the Alleghany mountains. Pop. in 1840, 35,484; in 1850, only 24,789. Its capital, of the same name, is on the W side of the Frankstown branch of the Juniata river, 50 m. from the mouth of the latter, and 92 m. WNW of Harrisburg. Pop. 1,145.—Also a county in the state of Indiana, comprising an area, generally level, of 384 sq. m., watered by Wabash river, and its tributaries Salmania and Little rivers, and intersected by the Wabash and Erie canal. Pop. in 1850, 7,850. Its cap., which bears the same name, is on the N bank of Wabash

river, and 105 m. NNE of Indianapolis.—Also a township of Luzerne co., in the same state, bordered on the N by North mountain, and in the SE by Knob mountain. Pop. 1,510.—Also a township of Adam's co., in the same state, 12 m. NE of Gettysburg. It has a level surface, bordered on the W by Bermudian creek. The soil consists of calcareous loam and gravel. Pop. 1,481.—Also a village in Carroll co., in the state of Tennessee, on the S fork of Obion river.—Also a township of Chittenden co., in the state of Vermont, 20 m. W of Montpelier. It contains one of the highest summits of the Green mountains, and is generally hilly, and destitute of fertility. The principal river by which it is watered is the Huntingdon, a branch of Onion river. Pop. 914.—Also a township of Upper Canada, in the Victoria district, to the W of the township of Hungerford. It has a small lake in the NE corner, and is to a considerable extent well-cultivated. Pop. in 1842, 1,099, chiefly Protestant Irish.—Also a village of Lower Canada, partly in the township of Hitchinbrook, and partly in that of Godmanchester, co. of Beauharnois. It lies on each side of the Chateauguay river, over which a strong bridge has been thrown to connect the two parts of the village, Pop. 125, chiefly Irish.

HUNTINGDON (East), a township of Westmoreland co., in the state of Pennsylvania, U. S., drained by Jacob's creek. Pop. in 1840, 1,774.

HUNTINGDON (North), a township of Westmoreland co., in the state of Pennsylvania, U. S. Pop. in 1840, 1,873.

HUNTINGDON (South), a township of Westmoreland co., in the state of Pennsylvania, U. S. Pop. in 1840, 2,793.

HUNTINGDON ISLAND, an island of British North America, off the E coast of Labrador, at the entrance of Sandwich bay, in N lat. 54°.

HUNTINGDONSHIRE, or Hunts, a small inland county of England; bounded on the N by Northamptonshire, from which it is divided by the river Nene; on the NE, E, and SE, by Cambridgeshire; on the SW by Bedfordshire; and on the NW by Northamptonshire. Its form is an irregular square, measuring about 18 m. from NE to SW and from NW to SE. It has an area of 345 sq. m., or 220,800 acres; or, according to parliamentary returns, 241,690 acres. Pop. in 1801, 37,568; in 1831, 53,100; the latter consisting of 11,278 families, of whom 6,231 were chiefly employed in agriculture; 2,940 in trade, manufactures, and handicraft; and 2,107 otherwise occupied. Pop. in 1841, 55,565, or 24·6 to 100 statute acres, being 42·8 per cent. below the average for all England and Wales; in 1851, 60,320.—No part of this co. consists of hills of any great height; an elevated tract of land, however, runs W from Cambridgeshire towards the town of Huntingdon, whence it strikes NNW to the valley of the Nene at Wansford; N and NE of this ridge is the fen district of the co. Another elevated ridge enters the co. on the S near Potton in Bedfordshire, and runs N to the valley of the Ouse near Huntingdon, where it subsides. The district contiguous to the Ouse, which flows across the SE part, consists of beautiful and fertile meadows. The central and W parts, which are finely diversified in their surface, are fruitful in corn and sprinkled with woods. In ancient times the whole upland part of H. was a dense forest appropriated to the pleasures and excitements of the chase; hence, indeed,—from 'Hunter's down,'—the name of Huntingdon itself is derived. The fens of H. adjoin those of Ely, and consist of 44,000 acres, exclusive of about 5,000 acres of what are called 'skirty lands,' which are considered good pasture-grounds. These together constitute nearly a seventh part of what is called the Bedford level. About 8,000 or 10,000 acres of the fenlands are productive.

Rivers and meres.] Besides the Nene, which skirts the N borders, the Ouse—sometimes called the Lesser Ouse, to distinguish it from the Yorkshire Ouse—is the only river of magnitude connected with this co. It enters from Bedfordshire, between St. Neots and Little Paxton, whence it runs N 11 m. to Huntingdon, and then E to St. Ives, beyond which, near Holywell, 7 m. from Huntingdon, it skirts the co. for 5 m. on the E border, running NNE, and finally enters the Bedford level in the vicinity of Erith. This river is navigable along its whole course across the co. One of the tributaries to the Ouse rises near Thurning, on the NW border of the co., and flows SE into the Ouse at Huntingdon. Another tributary comes from the vicinity of Higham-Ferrers, and flowing by Kimbolton, joins the Ouse below St. Neots. The Nene rises in Northamptonshire, and flowing through a delightful vale, reaches Huntingdonshire, near Elton, where it becomes the boundary between both counties; meandering to the N, it passes Yarwell and Wansford and then winding E through a more level country, it pursues a devious course to Peterborough, below which it sinks into the fens. It is navigable throughout its course along the borders of this co.; but the old channel, whence the present navigable channel separates at Standground sluice, is not now continuously navigable. It is navigable for upwards of 1 m. from the sluice; and near Ramsey town again becomes navigable, and rejoins the present channel at Wisbeach. On the border of this co., and partly in the adjoining co. of Cambridge, is Whittlesea dyke, a navigable cut from the old channel, near Standground sluice, to the part navigable near Ramsey; and thence to the old Bedford river in Cambridgeshire. These cuts afford facilities for the export of agricultural produce, and the import of timber and general merchandise.—There are three large pools or lakes in the N quarter of the co., named Whittlesea mere, Ramsey mere, and Ugg mere. Whittlesea mere is the largest, covering an area of several miles in extent.

Roads.] The great North road enters this co. from Papworth St. Everard, and running along the line of the ancient Ermin-street, through Godmanchester and Huntingdon, traverses the co. in a NNE direction by Stilton, Norman-Cross, and Chesterton, to Wandsford, near which it enters Northamptonshire. Another road from London passes through Barnet and Baldock, and joins the great North road at Alconbury hill, between Huntingdon and Stilton. The highway rates for 3 years, ending 1814, show an average total expenditure of £7,924, on 139 m. of paved streets and turnpike roads, and 357 m. of other highways. The returns of turnpike trusts, for 1836, show a total expenditure of £11,282 13s. 2d., by 7 turnpike trusts in this co.; and the highway returns, for 1839, an expenditure of £6,226, on 378 m. of road.—The railways of this co. are noticed under the head Hertfordshire.

Subsoil, soil, &c.] Nearly the whole substratum of this co. is composed of one thick bed of the Oxford oolitic clay, nearly 700 ft. thick, and varied only on the surface by interspersions of gravel,—the debris of the neighbouring chalk range. The iron-sand occupies the SE part of the co., rising into low hills. Forest marble, or stonebrash, is found in the hills, bounding the valley of the Nene, on the confines, next Northamptonshire.—The general nature of the soil is either a strong deep clay with loam, or a deep gravelly soil with loam: it varies considerably, lying in patches of gravel and sand amongst the clay, and intermixed with vegetable earth, wher-

ever the level is lowest. Peat is found in many places. The climate of H. is deemed rather mild, and more salubrious, especially to natives, than might be expected, where there is so much fen-land, and so deficient a supply of pure water. The most unhealthy parts are in the vicinity of the low marshy land near Ramsey, Huntingdon, and Yaxley in the neighbourhood of Whittlesea mere.—According to the 'Agricultural Survey,' the average produce of H. does not denote great fertility of soil. The agricultural produce of the co. consists of wheat, oats, barley, and hemp; rape is grown in the fens, and turnips on some of the drier soils; mustard-seed is produced in considerable quantities, and hops are occasionally grown.—The breed of sheep upon the enclosed pastures is of a mixed description, nearly approaching to the Leicester and Lincoln kinds. The breed of cows is not very select; and dairy farming is little followed. Of the so-called Stilton cheese, none is now produced in the H. dairies, the article now sold under that name being Leicester or Lincoln produce.

Manufactures, trade, &c.] Agriculture occupying the chief attention of the inhabitants of this co., scarcely any manufactures are carried on, except wool-stapling and spinning yarn. The latter principally occupies the women and children in the winter-season, when they cannot find more profitable employment in agricultural pursuits.—H. comprises 4 hundreds; viz. Norman-Cross, Hurstingstone, Toseland, and Leightonstone; 107 parishes; 1 county-town, and parliamentary borough, Huntingdon, including 2 municipal boroughs, Huntingdon, and Godmanchester; and 6 market-towns, Huntingdon, Godmanchester, Kimbolton, Ramsey, St. Ives, and St. Neots. This co. is ecclesiastically divided into the following deaneries: viz. Yaxley, St. Ives, Leightonstone, Huntingdon, St. Neots, all in the archd. of Huntingdon, and recently transferred from the dio. of Lincoln, to the dio. of Ely.—The number of friendly societies in the co., on 20th Nov., 1839, was 55; income, £6,063; in 1848, 54; income £6,498. The number of savings' banks, on 20th Nov., 1838, was 1; total number of depositors, 1,319; total amount deposited, £37,694; in 1848 the number of depositors was 1.982; the amount of deposits £54,630; average £28.—The poor-rate returns for 3 years to Easter 1750, show an average expenditure of £3,306 on the poor of this co.; in 1839, an expenditure of £25,100; in 1847, £29,608, being at the rate of 2s. in the pound on the property assessed to poor-rates, and 9s. 6½d. per head on the pop., the average for England being 6s. 1½d.—The annual value of property assessed to income tax for the year ending 5th April, 1843, was £401,683, of which £312,082 was on lands.—Property rated to poor's rates in 1847, £296,868.—This co. returns 2 members to parliament, who are polled for at Huntingdon and Stilton, the principal place of election being Huntingdon. The number of electors registered for the co. in 1837, was 2,805; in 1846, 3,047. Besides the county-members, the borough of Huntingdon, with the corporate town and p. of Godmanchester, returns 2 members.—H. is comprehended in the Norfolk circuit. The assizes and quarter-sessions are held at Huntingdon, where the county-jail is situated. Cambridgeshire is joined with this co. in the civil administration; there being but one high-sheriff for both of them. The average commitments between the years 1829 and 1833 was 50 in a pop. of 53,192 in 1831. Between 1845 and 1847 they were 18·7 per cent. below the average for all England and Wales. In 1848 the committals were 104.

History.] H., with the adjacent counties of Cambridge, Norfolk, and Suffolk, composed the extensive territory of the *Iceni*, a powerful British tribe, included in the Roman division of the kingdom, in the district named *Flavia Cæsariensis*. In the early Saxon times this co. formed part of the kingdom of East Anglia, and was then called Huntedunescyre or Huntandunescyre. It was afterwards subjugated by the Mercian sovereigns, and continued under their dominion till the union of the Saxon states into one monarchy. When the Normans became masters of England, the Conqueror, in 1068, gave the earldom of Huntingdon to Waltheof, a noble Saxon, on whom he also bestowed the hand of his niece, Judith. David, prince of Scotland, having married the heiress of Waltheof, was made earl of Huntingdon in 1108, and the honour continued in his family till 1219 In the wars occasioned by the rival claims of Bruce and Baliol to the Scottish crown, this earldom was seized by the kings of England; and Edward III., in his 11th year, created William Clinton earl of Huntingdon. Henry VIII., in his 21st year, bestowed it on George Hastings, grandson to the Lord Hastings, beheaded by the duke of Gloucester; and in his posterity it continued till the decease of Francis, 10th and last earl of this family, in 1789, when the title was supposed to have become extinct; but a satisfactory title having been produced by a new claimant of the Hastings' family, in 1819, the earldom was revived, and still exists.

HUNTINGFIELD, a parish in Suffolk, 4 m. SW of Halesworth. Area 2,570 acres. Pop. in 1841, 397.

HUNTINGFORD, a settlement in the E part of the township of Zorra, Upper Canada, containing about 50 inhabitants.

HUNTINGTON, a parish in Herefordshire, 4 m. SW of Kington, on the Arrow. Area 2,120 acres. Pop. in 1831, 264; in 1841, 262.—Also a parish and township in the N. R. of Yorkshire, 3 m. NNE of York, on the Foss. Area of p. 4,830 acres. Pop. in 1831, 626; in 1841, 652. Area of township 2,760 acres. Pop. 490.—Also a township in the p. of St. Oswald, Cheshire, 3 m. SE of Chester. Area 970 acres. Pop. in 1831, 112; in 1841, 143.—Also a chapelry in the p. of Holmer, Herefordshire. Area 600 acres. Pop. in 1831, 69; in 1841, 115.—Also a township in the p. and 2¼ m. N of Cannock. Pop. in 1831, 106; in 1841, 121.

HUNTINGTON, a township of Fairfield co., in the state of Connecticut, 17 m. W of New Haven, bordered on the E by Housatonic river, which is here crossed by two bridges. The surface is undulating, and the soil fertile. Pop. 1,326.—Also a township of Suffolk co., in the state of New York, extending across the widest part of Long Island, and 189 m. SE of Albany. It is partly hilly, and possesses considerable diversity of soil. It is indented by several bays extending from Long Island sound, and is drained by several small streams which flow into Great South bay on the S. Pop. 6,562. The village is situated at the head of Huntington harbour, a branch of the bay of the same name. Pop. 400.—Also a township of Lorrain co., in the state of Ohio, 20 m. SW of Elyria, watered by the W branch of Black river.—Also a township of Brown co., in the same state, bordered on the S by Ohio river. Pop. 2,362.—Also a township of Gallia co., in the same state, watered by Racoon river. Pop. 971.—Also a township of Ross co., in the same state. Its soil is fertile and well-cultivated. Pop. 1,169.

HUNTINGTON BAY, an indentation of Hempstead township, Suffolk co., in the state of New York, U. S., extending from Long Island sound, between Eaton's and Lloyd's Neck. It affords good harbourage, and abounds with fish and sea-fowl.

HUNTISHAM, a township in the p. of Goodrich, Herefordshire, 4½ m. NE of Monmouth. Pop. 127.

HUNTLEY, a parish in Gloucestershire, 4 m. S of Newent. Area 1,480 acres. Pop. in 1841, 511.

HUNTLEY, a township of Upper Canada, in the Dalhousie district, intersected by a branch of the Mississippi and Carp rivers. It has some good land, and is to a considerable extent cultivated. The timber is chiefly pine. Pop. in 1842, 1,771.

HUNTLEY, a parish and town in Aberdeenshire. The p. is intersected from W to E by the Deveron. Pop. in 1831, 3,545; in 1841, 3,642. The town

stands at the confluence of the Bogie and the Deveron, 34 m. NW of Aberdeen. Pop. in 1841, 2,731.

HUNTON, a parish in Kent, 4½ m. SSW of Maidstone, intersected by the Beult. Area 1,940 acres. Pop. in 1831, 765; in 1841, 740.—Also a chapelry in the p. of Crawley, Southamptonshire, 5 m. S of Whitchurch. Area 1,560 acres. Pop. in 1831, 112; in 1841, 111.—Also a township, partly in the p. of Brompton-Patrick, and partly in that of Hornby, N. R. of Yorkshire. Area 1,770 acres. Pop. 534.

HUNTSBURG, a township of Geauga co., in the state of Ohio, U. S., 175 m. NE of Columbus. Pop. in 1840, 911.

HUNTSHAM, a parish in Devonshire, 3½ m. SE of Bampton. Area 2,930 acres. Pop. in 1841, 157.

HUNTSHAW, a parish in Devonshire, 2½ m. NNE of Great Torrington. Area 2,390 acres. Pop. in 1831, 312; in 1841, 296.

HUNT'S-HOLLOW, a village of Portage township, Alleghany co., in the state of New York, U. S., 258 m. W of Albany. Pop. 200.

HUNTSPILL, a parish in Somerset, 5½ m. N of Bridgewater, on the Parret, and on the Bristol and Exeter railway. Area 5,010 acres. Pop. 1,643.

HUNTSVILLE, a village of Surrey co., in the state of North Carolina, U. S., 138 m. WNW of Raleigh, on the W side of Gadkin river.—Also a v. of Madison co., in the state of Alabama, 153 m. NNE of Tuscaloosa, and 10 m. N of the Tennessee river. Pop. in 1840, 2,496.—Also a v. of Randolph co., in the state of Missouri, 78 m. NNW of Jefferson city, on the E side of E. Chariton river.—Also a v. of Madison co., in the state of Arkansas, 175 m. NW of Little Rock, on the S side of the War Eagle branch of White river.

HUNTWICK WITH FOULBAY AND NOSTAL, a township in the p. of Wragby, W. R. of Yorkshire. Pop. in 1841, 152.

HUNWICK AND HELMINGTON, a township in the p. of St. Andrew Auckland, co. of Durham, 3½ m. NNW of Bishop-Auckland, on the Wear. Area 1,560 acres. Pop. in 1831, 164; in 1841, 338.

HUNWORTH, a parish in Norfolk, 2½ m. SSW of Holt, in the deep vale of the Glaven. Area 940 acres. Pop. in 1831, 285; in 1841, 234.

HUNYAD, a comitat or administrative province of Austria, in Transylvania; bounded on the N by the comitat of Zarand; on the NE by that of Lower Weissenburg; on the E by the district of Szaszvaros and the comitat of Lower Weissenburg; on the SE and S by Wallachia; and on the SW and W by Hungary. It is 81 m. in length from NW to SE, and 54 m. in breadth, and contains a superficies of 97 Austrian sq. m., with a pop. in 1837 of 142,600. The comitat is generally mountainous, and in the S it is intersected by the Carpathian chain, and contains the lofty summit of the Retezat. It belongs in its entire extent to the basin of the Danube; and is divided, by a ridge of mountains running to the S, into two parts. The northern section belongs to the basin of the Maros, a large river which runs from E to W, and receives the Reu-mare-Sztrehl, Cserna, &c. The other forms part of the basin of the Chyl, which has its source in Mount Petra or Petru, and in its course through the comitat is joined by several streams of minor importance. The arable land was estimated in 1837 at 26,904 jochs. The principal productions of the soil are corn, maize, fruit, wine, and timber. Cattle in great numbers are pastured on the mountain herbage, and game is abundant. Gold, silver and copper are found in considerable quantities, and mineral springs exist in some of its localities.—The comitat is divided into three principal parts, the valley of Hotzing, and the circles on this side and beyond the river; and these are subdivided into 18 *marches*. The chief town is Vaida-Hunyad, or Vajda-Hunyad.

HUNYAD (BANFI), a town of Transylvania, in the comitat and 30 m. WNW of Klausenburg, on the Sebes-Körös.

HUNYAD (VAJDA). See VAJDA-HUNYAD.

HUON RIVER, a river of Van Diemen's Land, which has its source in a chain of lakes between Wedge mount and Frankland hills, in the plains of the same name, to the E of Rockingham co.; runs with considerable sinuosities towards the E, dividing in its course the cos. of Buckingham and Kent; receives Mount river on the l.; bends S, and forming a considerable estuary, flows into D'Entrecasteaux channel, by an embouchure 3 m. in width, and opposite a small island of the same name. On the E side of H. river, and near its mouth, is Victoria port. Its lower banks are clothed with magnificent timber, some of the trees exceeding 180 ft. in height, and 28 ft. in circumf.

HUON'S ISLANDS, a group of islands in the S. Pacific, to the NW of the island of New Caledonia, in S lat. 18° 18′, E long. 163°. They were discovered by D'Entrecasteaux in 1793.

HU-PIH, a province of China, lying between the parallels of 29° and 33°, and the meridians of 108° and 116°, nearly in the centre of the country. It has the prov. of Ho-nan on the N; of Ngan-Hoei on the E; Kiang-si and Hu-nan on the S; and Sechwen on the W. The Han-kiang intersects it from NW to SE; and the Yan-tse-kiang from W to E. Its cap. is Wu-chang-fu.—The area of the united provs. of Hu-nan and Hu-pih is estimated by Gutzlaff at 144,770 sq. m.

HUPARLAC, a village of France, in the dep. of the Aveyron, cant. and 5 m. ENE of St. Amans-des-Cots. Pop. 730. Cattle fairs are held here 4 times a-year.

HUPPAYE, a department and province of Belgium, in the prov. of Brabant. Pop. of dep. 942; of com. 759.

HUPPY, a village of France, in the dep. of the Somme, cant. of Hallencourt, 8 m. SW of Abbeville. Pop. 900. It has an oil manufactory.

HURD (CAPE), the NW point of land between Lake Huron and Georgian bay, in Upper Canada. It is 121 m. from Goderich.

HURD (PORT), a harbour on the NW coast of Australia, at the bottom of Gordon bay, in S lat. 11° 39′ 30″, extending in a SE direction for 8 m.

HURDA, a town of Hindostan, 40 m. SSE of Mysore.

HURDSFIELD, a township in the p. of Prestbury, in Cheshire, 2 m. NE of Macclesfield. Pop. 3,551.

HURDWAR, HURRI-DURWASU, or HARIDWARA, [*i. e.*, 'the Gate of Hurri,' or Vishnu,] a town of Hindostan, prov. of Delhi, 36 m. E of Sharunpur, situated on the W bank of the Ganges, near to where that river issues through the Sivalic chain into the plains. The town itself is small and scattered; and in fact chiefly consists of *ghauts* or stairs for the greater facility of bathing, and of houses for wealthy pilgrims. A handsome range of buildings backs an esplanade which runs along the bank of the river; and deep and dense woods run down from the neighbouring forest to the W suburb, where they unite their verdant avenues to the arched gateways and pillared colonnades of the streets. Many of the temples are beautiful objects on account of their picturesque form and position, and all are fine specimens of ancient Hindu sculpture. The break in the chain of hills through which the river here bursts is about 1¼ m. in breadth. It runs close to the town, and with a rapid current. H. is one of the celebrated places of Hindu purification; and pilgrims

from every part of India resort annually to its temples, and to obtain purification in the waters of the holy river at this particular spot. The month of April is the general time of assembly; on which occasion a number of merchants from all parts of India, China, Persia, Tartary, and Bokhara, also attend, and form one of the largest fairs held in Hindostan. The fair is held in the bed of the river, which at this season is confined within narrow limits. Every 6th year the fair has a larger assemblage; and every 12th year, the concourse to the *kum*, as it is termed, is still more prodigious. The usual estimate of the visitors at H., one year with another, viz. 2,000,000, is believed to be rather below than above the true average. The country round about is then formed into one vast camp of Arabs, Cingalese, Persians, Tartars, Sikhs, Chinese, and Europeans. The cattle and animal department at this fair is the best in India: horses, elephants, monkeys, the yak, the nylghau, bears, leopards, and cheetas, are brought hither for sale.

HURIEL, a small town of France, in the dep. of the Allier, on an eminence, 6 m. NW of Montluçon. Pop. 2,730.

HURIKI, a village of the Punjab, on the Sutledge, 33 m. S of Amritsir.

HURIN, a town of Persia, in Irak-Ajemi, 30 m. NW of Zohab.

HURLEY, a parish of Berkshire, 5 m. NW of Maidenhead. Area 4,530 acres. Pop. 1,119.

HURLEY, a township and village of Ulster co., New York, U. S., 68 m. S of Albany. Pop. 2,200.

HURON, a county in the N part of Ohio, U. S., watered by Black, Vermilion, and Huron rivers. Area 800 sq. m. Pop. in 1840, 23,933; in 1850, 26,202.—Also a co. in Michigan, being the point of land between Lake Huron and Saginaw bay.—Also a township in Wayne co., in New York, 183 m. W by N of Albany, skirted by Lake Ontario. Pop. in 1840, 1,943.—Also a township in Erie co., in Ohio, 111 m. N by E of Columbus, on Lake Erie. Pop. 1,488.—Also a township in Wayne co., in Michigan.

HURON, a district and county of Upper Canada, organized in 1842 from a section of London district. It contains the townships of Ashfield, Biddulph, Blanchard, Colborne, Dounie, Ellice, S. Easthope, N. Easthope, Fullarton, Goderich, Hubbert, Hay, Hullett, Logan, M'Killop, M'Gillivray, Stephen, Stanley, Tuckersmith, Usborne, and Wawanosh, all of which, with the exception of the first and last, are the property of the Canada company. A large portion of the land is good; but some parts are rather hilly and rugged; the land on the borders of the lake, and of the Maitland river, is generally poor.—The Maitland, Bayfield, and Thames rivers, which all take their rise in the H. swamp, water this district. Goderich is the chief town. Pop. in 1845, 13,500; in 1848, 20,450, of whom 2,060 were proprietors. Houses in 1848, 3,624. In the latter year this district possessed 17 grist-mills, 33 saw-mills, a fulling-mill, 10 distilleries whose produce amounted to 29,520 galls., 2 breweries, 7 tanneries, and 39 asheries whose produce amounted to 6,230 cwts. of ashes, 3 woollen factories, and 2 foundries. The number of acres under cultivation in 1844 was 30,816.

HURON, a lake of North America, and one of the largest in the world, "more oceanic and more solemnly grand" than either of the lakes Ontario or Erie. It lies between the parallels of 43° 10′ and 47° 30′ N lat., and between 80° 45′ and 84° 45′ W long.; and communicates with Lake Superior by the straits of St. Mary on the NW; with Lake Michigan on the W; and with Lake Erie on the S, by the river St. Clair, which is its outlet. It is also connected by means of the Severn river with Lake Simcoe, which, however, is not navigable. Lake Huron, in point of extent, yields but little to Lake Superior; its greatest length is 250 m.; at its W extremity it is less than 100 m., and at about 100 m. from its E shore it is barely 60 m. broad; but near the centre it suddenly bends away SE to the breadth of 190 m. Measuring the circumf. through all its curvatures, it has an outline of about 1,200 m. It has an area of about 20,400 sq. m. Its banks vary in height, being in some parts low and sandy, and in others rising in high clay land 120 ft. In its N regions, and from its W side, an extensive series of islands, called the Manitoulin [*i. e.* Spirit] islands, stretches in an E direction for 160 m. These islands almost divide the great expanse called the Georgian bay from the body of the lake. Some of them measure from 20 to 30 m. in length, by 10, 12, and 15 m. in breadth; and one of them called the Great Manitoulin, is about 80 m. in length, and from 24 to 25 m. wide. This latter island is the only inhabited one. On some of these islands the land rises into elevations of considerable height; and besides this great chain, there are many others of inferior dimensions, grouped in various parts of the lake, rendering its navigation intricate, and in some places, particularly towards the W end, even dangerous. On this lake, also, the navigator is often assailed by violent storms attended with thunder and lightning. Tobermory, near Cape Hurd, is an excellent harbour; but with the exception of Goderich at the mouth of the Hartland, and the basin at the exit of the Riviere-au-Sable, there is not a single place of security for any kind of vessel between the river Sangume and the St. Clair. The lake has a depth of 860 ft.; its surface has an alt. of 590 ft., or, according to Capt. Lefroy's observations, of 551 ft. above the tide-waters of the Hudson; and, according to the latter observer, of 365 ft. above Lake Ontario. Messrs. Logan and Murray report that the level of Lake Superior has an alt. above sea-level of 21½ ft. above Lake H., of which rise 18½ ft. is at the Sault St. Maria. At the W angle of Lake H. is Lake Michigan, which, although distinguished by a separate name, may be considered as a part of the former, deepening into a bay 262 m. in length, by 55 m. in breadth; and whose entire circumf. is 731 m. Between it and Lake H. lies a peninsula, at the widest part 150 m. across; along which, and round the bottom of Michigan, runs, to the S, part of the chain forming the Land's Height, whence descend many large and numerous inferior streams, on one side to the St. Lawrence, and on the other to the Atlantic. One of these, called French river, communicates with Lake Nipissing; whence a succession of smaller ones, connected by short portages, opens a commercial route with the Ottawa, that strikes the St. Lawrence near Montreal. At the E extremity of the lake is the Matchedash river, which, through another succession of lakes, separated only by one short portage, establishes communication with Lake Simcoe, the level of which is 130 ft. above that of Lake H. Spanish river is navigable for 30 m. from the lake by vessels drawing 5 ft.; but in the next 30 m. presents 5 cataracts with a total rise of 127 ft. On the N shore of the lake are iron mines, and about 10 m. to the N of these are some mountain ranges in which the rocks correspond in character with the auriferous rocks in the Maccabus gold range of Brazil. Gypsum and hydraulic lime are stated to be plentiful around this lake. Very little is known of the interior in this direction. The land bordering on the W shore of the lake is greatly inferior in quality to that on Lake Erie. It is mixed with sand and small stones, and is principally covered with pines, birch, and some oaks; but at a little distance from the lake the soil is very luxuriant.

The waters of Lake H. are reputed to have been gradually rising during the last few years.—During Sir Francis Head's government, the Indian reservations on the S side of Lake Huron were ceded to the British government for a sum of money; and the Indians agreed to take up their future abode on the Manitoulin islands.

HURON, a river of the United States, which rises in the SE corner of Michigan, near the source of Grand river, with which there is a navigable communication for canoes, through a chain of ponds and marshes. It falls into Lake Erie, after a course of 90 m., a few m. below the Detroit.—Also a stream which falls into Lake Erie 11 m. E from Sandusky bay. It is about 50 yds. wide at its mouth; and is navigable about 18 m. to the forks. It has numerous head-branches, which water a fertile and healthy district.—Also a small river which falls into Lake St. Clair from the W. At its embouchure on the lake there are a few good settlements, distant about 35 m. from Detroit.

HURONS, a tribe of North American Indians, whose original seat was the peninsula enclosed between lakes Huron, Erie, and Ontario. They are now reduced to a few families.

HURRIAL, Hurryal, or Harialaya [*i. e.*, 'the abode of Hari' or Vishnu], a small town of Hindostan, in the prov. of Bengal, 25 m. WSW of Belcuchy, and 70 m. NE of Murshedabad, to the E of the Attri river. It has long been an important market for silk and cotton merchandise. The environs are periodically inundated, and the town is then approachable only by means of boats.

HURRIANA, or Hurianah, a district of Hindostan, in the presidency of Bengal and prov. of Delhi, bounded on the N by the Bhatty country and the territory of the Sikhs; on the E by the Delhi district; on the S by the Shekawutty country, the pergunnah of Karnoul and the assigned territories; and on the W by the Bhatty and Bikanir countries and the desert of Ajmere. Area 2,493 geog. sq. m., or 2,112,527 acres; of which only 993,846 acres were cultivated in 1845. Pop. in 1847, 225,086, of whom 176,020 were Hindus. Land revenue in 1846–7, 454,736 rs. Its surface is nearly flat, and its soil sandy, and remarkable for the depth to which it may be penetrated without any indications of water. The only stream by which it is intersected is the Chittongnullah. Two canals were cut in the 15th cent., one from the Sutledge, and the other from the Jumna, and uniting at Hissar, whence numerous ramifications were directed through the surrounding country. These canals have long since been choked up, so that the cultivation of the soil is now entirely dependent on the monsoon. Some of the villages are supplied by small lakes, in which a permanent supply is retained throughout the year. This district, during the flourishing period of the Mogul dynasty, was one of great value and importance. It afterwards became a prey to successive invaders, and the scene of incessant rapine and confusion. In 1812 it was taken by the British. It contains 10 pergunnahs, the towns of Hansi and Hissar, noted for their antiquity, and Rotuk and Bhowani.

HURRICHUNDERGHUR, or Hari-Chandraghar, a hill-fortress of Hindostan, in the prov. of Aurungabad, 70 m. ENE of Bombay, on a rock, in one of the passes of the Western Ghauts.

HURRIPUR, or Haripur, a town of Hindostan, in the prov. of Lahore, 80 m. ENE of Umritsir, on an affluent of the Beas. In 1810 it consisted of about 1,500 houses, and belonged to a petty chief, then tributary to Runjit-Singh of Lahore.

HURRUND, a district and town of Hindostan, in the SW angle of the Punjab, between the 29th and 30th degrees of N lat., and bounded on the E by the Indus. It does not exceed 50 m. in diameter, and is generally hilly, but extremely fertile. The climate is more equable than in other parts of the prov. It has an active trade.—The chief town bears the same name, is situated on a small river 45 m. from the r. bank of the Scinde, and on the road from Dera Ghazee khan to Cutch Gundava. It is of considerable extent, and has a fort.

HURRUR. See Harrar.

HURRUSH, a small Gujur village of Hindostan, in the prov. of Malwah, division of Ujjair, at the N base of Hurshnath, which rises to an alt. of 1,400 ft. above the surrounding plain.

HURRYHUR, or Hari-hara, a town of Hindostan, in the prov. of Mysore, 45 m. WNW of Chitteldroog, 81 m. NE of Bednore, on the E side of the Tumbudra, and at an alt. of 1,831 ft. above the level of Madras. It is defended by a fortress in which is a celebrated temple of Vishnu. After the destruction of the Bisnagar empire this town passed through successive hands, until it was taken from Hyder Ali by the British.

HURSLEY, a parish in Southampton, 5 m. SW by S of Winchester. Area 9,850 acres. Pop. in 1831, 1,418; in 1841, 1,520.

HURSORA, a town of Hindostan, in the prov. of Malwa, 3 m. E of Mow. In 1820 it contained about 500 houses.

HURST, a parochial chapelry, partly in Berkshire and partly in Wilts, 3 m. NNW of Wokingham. Area 6,860 acres. Pop. in 1831, 2,169; in 1841, 2,539.

HURST, or Falconer's-Hurst, a parish in Kent, 5 m. W of Hythe. Area 560 acres. Pop. in 1841, 40.

HURST-CASTLE, a fort in Southamptonshire, 3 m. SE of Milford, near the extremity of an extraordinary natural causeway, or point of land, running 2 m. into the sea, and approaching the Isle of Wight within the distance of 1 m. The causeway itself, at high water, scarcely exceeds 200 yds. in breadth, and is a sterile length of beach covered with loose gravel and pebbles. The side towards the Isle of Wight is a bold shore, beaten into ledges or terraces of pebbles by the violence of the waves; the other, which is sheltered, is undulating, marshy, and, when the tide flows, forms a smooth land-locked bay. The castle was erected by Henry VIII. to defend the entrance to the channel. On the beach, at the point of the ridge, are two light-houses, situated in 50° 42′ 23″ N lat., and 1° 32′ 50″ W long. The relative position of the lights is NE by E ½ E, 755 ft.

HURST (Long), or Longhurst, a township in Bothall p., Northumberland, 4 m. ENE of Morpeth. Pop. in 1831, 216; in 1841, 210.

HURST (Old), a parish in Huntingdonshire, 4 m. NNW of St. Ives. Area 1,350 acres. Pop. in 1831, 150; in 1841, 182.

HURST (Temple), a township in Birkin parish, W. R. of Yorkshire, 3½ m. NW of Snaith. Area 680 acres. Pop. in 1831, 135; in 1841, 114.

HURST-COURTNEY, a township in Birkin parish, W. R. of Yorkshire, 2 m. NNW of Snaith. Area 590 acres. Pop. in 1831, 117; in 1841, 134.

HURST-MONCEAUX, a parish in Sussex, 3 m. E of Harlsham. Area 4,870 acres. Pop. 1,445.

HURST-PERPOINT, a parish and village in Sussex, 32 m. ENE of Chichester. Area 5,590 acres. Pop. in 1831, 1,484; in 1841, 2,118.

HURSTBOURNE-PRIORS, a parish in Southamptonshire, 2 m. WSW of Whitchurch. Area 3,070 acres. Pop. in 1831, 490; in 1841, 482.

HURSTBOURNE-TARRANT, a parish in Southamptonshire; 5½ m. NNE of Andover. Area 6,380 acres. Pop. in 1831, 786; in 1841, 850.

HURWORTH, a parish, township, and village, in

the co. of Durham, 3¾ m. SSE of Darlington, on the S bank of the Tees. The village consists of a spacious well-built street, situated on the brow of a steep hill. Area 3,920 acres. Pop. in 1841, 1,599.

HUSAVICK, a village and port of Iceland, on the N coast, 48 m. ENE of Holar.

HUSBY, a parish and village of Sweden, in the laen and 20 m. SW of Mariastadt.—Also a parish of Sweden, in the haerad of Næsgard, 15 m. N of Hedmora. There are powder-mills belonging to the government here, and several iron-works.—Also a v. of Sweden, in the haerad of Kinriewald, 12 m. SW of Wexio, between Lakes Salen and Asnen.—Also a v. of Denmark, in Sleswick, 6 m. SE of Flensburg.

HUSCH, Hus, or Hussu, a small town of Moldavia, on the Pruth, 70 m. SW of Bender. It is the seat of a Greek bishop. In 1711, the well-known treaty of the Pruth was concluded here between the Russians and the Turks.

HUSEN (Upper and Lower), two neighbouring villages of Baden, on the Rhine, 3 m. W of Cappel.

HUSILLOS, a village of Spain, in the prov. and 5 m. N of Palencia. Pop. 180.

HUSINECZ, or Hussinetz, a small town of Bohemia, in the circle of Prachen, on the l. bank of the Blanitz, 4 m. N of Prachatitz, 72 m. SSW of Prague. It was the native place of the celebrated John Huss.

HUSQUARN, a village of Sweden, in the laen of Jänköping, and haerad of Tveta, 4 m. ESE of Jänköping.

HUSSENABAD, a town of Hindostan, prov. of Mulwah, situated on the S bank of the Nerbuddah river, 135 m. NW of Nagpur. It is an important military station, being the key to this quarter of the Deccan.

HUSSIGNY, a village of France, in the dep. of the Moselle, cant. and 6 m. ESE of Longwy. Pop. 500.

HUSSIATYN, a small town of Austrian Poland, in Galicia, in the circle of Tarnopol, on the l. bank of the Podhorze, 22 m. E of Tremhowla.

HUSSUN. See Hossein.

HUSTEN, a village of Prussia, in the prov. of Westphalia, circle and 3 m. NW of Arensberg, at the confluence of the Bohr and the Ruhr. Pop. 600.

HUSTHWAITE, a parish in the N. R. of Yorkshire, 7 m. SE of Thirsk. Area 2,800 acres. Pop. 577.

HUSTNAPUR, or Hustinagara, one of the most ancient cities of Hindostan, in the prov. of Delhi, and for ages the cap. of a powerful Hindu dynasty; but whose history is much involved in fable. It is situated on the W bank of the Ganges, about 50 m. NE of Delhi. The only remains of it is a solitary Hindu temple: the site of it may, however, be traced for miles.

HUSTOPETSCH, a town of Moravia, in the circle and 15 m. ENE of Prerau, on the l. bank of the Betschwa. Pop. 600.

HUSUM, a small sea-port of Denmark, situated at the mouth of the small river Hever, in N lat. 54° 28′ 59″, on the W coast of the duchy of Sleswick, and 20 m. W of Sleswick. It has a pop. of 4,000, who carry on a brisk trade in horses, fattened oxen, and beer, chiefly with Hamburg and Lubeck. The town contains a sugar-refinery and oil-mills; also several dyeing and bleaching establishments. Shipbuilding is carried on to a considerable extent; and oyster-fishing is a considerable branch of business along the coast. It is in contemplation to establish steam-communication between H. and the English coast.

HUSUM-ET-SCHWALSTEDT, a bailiwick of Denmark, in the SW of the duchy of Sleswick, comprising the two districts whose name it bears, the district of Simonsburg, and the islands of Nordstrand and Pelworm. Area 155 sq. m. Pop. 12,700.

HUSZTH, a small town of Hungary, in the palatinate of Marmaros, on the Theiss, 28 m. NW of Szigeth. Pop. 4,596.

HUTOFT, or Hightoft, a parish of Lincolnshire, 4 m. E of Alford. Area 3,310 acres. Pop. 515.

HUTSCHLAG, a village in the archd. of Austria, 18 m. SW of Rastadt. It has sulphur and copper-works.

HUTSU, a river of India, in the Deccan, which rises in the district of Sirgujah, in about N lat. 23° 30′, E long. 82° 30′, and flows nearly direct S into the Mahanadda, after a course of about 110 m.

HUTTA, a village of Hungary, in the com. of Neograd, march of Kekko, 18 m. E of Bela-Banya.

HUTTANI, a town of Hindostan, in the prov. of Bejapore, 80 m. SE of Sattara. It is a populous and extensive place, and carries on considerable trade with Bombay and Surat. It possesses a small stone citadel, and is enclosed with a mud rampart and a ditch.

HUTTE (La), a village of France, in the dep. of Vosges, cant. of Darney, 15 m. S of Mirecourt. Pop. 1,200. It is celebrated for its steel and iron manufactures.

HUTTENBERG, a small town of Lower Carinthia, in the circle and 25 m. NE of Clagenfurt. Iron is extensively mined in the vicinity.

HUTTENGRUND, a village in the duchy of Saxe-Meiningen, bail. of Sonnenberg. Pop. 200.

HUTTENHEIM, a small town of Bavaria, in the principality of Schwarzenberg.—Also a commune and village of France, in the dep. of Bas Rhin. Pop. 2,084.

HUTTING, or Huttein, a small town of Bavaria, 9 m. E of Passau.

HUTTON, a parish in Essex, 2½ m. WSW of Billericay. Area 2,950 acres. Pop. in 1831, 381; in 1841, 449.—Also a township in Penwortham p., Lancashire, 3½ m. SW of Preston. Pop. 563.—Also a township in Warton p., Lancashire, 2 m. S of Kirkham. Area 970 acres. Pop. 254.—Also a parish in Somersetshire, 5½ m. NW by W of Axbridge. Area 2,040 acres. Pop. in 1831, 381; in 1841, 462.—Also a township in Rudby p., N. R. of Yorkshire, 4 m. WSW of Stokesley, on the river Leaven. Pop. 911.—Also a parish of Berwickshire, lying along the Tweed, 7 m. WSW of Berwick. Pop. 1,333.

HUTTON, an island near the SW coast of the peninsula of Corea, in N lat. 36° 10′.

HUTTON-BONVILLE, a chapelry and township in Birkby p., N. R. of Yorkshire, 10½ m. E of Richmond. Area 1,080 acres. Pop. in 1841, 111.

HUTTON-BUSHEL, or Buscel, a parish and township in the N. R. of Yorkshire, 6 m. SW by W of Scarborough. Area 5,670 acres. Pop. 506.

HUTTON AND CORRIE, a united parish in the co. of Dumfries, about 12 m. in length, and 3 m. in breadth. Pop. in 1801, 646; in 1841, 804.

HUTTON-CRANSWICK, a parish and township in the E. R. of Yorkshire, 3 m. S of Great Driffield. The p. comprises the townships of Rotsea, Sunderlandwich, and Hutton-Cranswick. Area 6,230 acres. Pop. in 1831, 1,118; in 1841, 1,228.

HUTTON-IN-THE-FOREST, a parish and township in Cumberland, 5½ m. NW of Penrith. The p comprises the townships of Thomas-Close and Hutton-in-the-Forest. Area 2,370 acres. Pop. 1,228.

HUTTON-HENRY, a township in Monk-Hesleton p., Durham, 7 m. NW of Hartlepool. Area 1,800 acres. Pop. in 1831, 162; in 1841, 287.

HUTTON-LE-HOLE, a township in Lastingham

p., N. R. of Yorkshire, 3 m. NNW of Kirkby-Moorside. Area 1,520 acres. Pop. in 1841, 272.

HUTTON-MAGNA, a parish and township in the N. R. of Yorkshire, 7½ m. NNW of Richmond. The p. comprises the townships of H. with Lane-Head, and West Layton. Area 2,080 acres. Pop. 297.

HUTTON (New), a chapelry and township in Kirkby-Kendal, Westmoreland, 4½ m. E of Kirkby-Kendal. Pop. in 1831, 172; in 1841, 148.

HUTTON (Old) and HOMESCALES, a chapelry and township in the p. of Kirkby-Kendal, Westmoreland, 4 m. SE of Kirkby-Kendal. Pop. in 1831, 429; in 1841, 488.

HUTTON-ROOF, a township in the p. of Greystock, Cumberland, 4 m. SE of Hesket-Newmarket. Pop. 197.—Also a chapelry and township in Kirkby-Lonsdale p., Westmoreland, 2¾ m. W by S of Kirkby-Lonsdale. Pop. in 1831, 351; in 1841, 319.

HUTTON-SAND, a township in Bossal p., N. R. of Yorkshire, 3½ m. W of Thirsk. Area 940 acres. Pop. in 1831, 161; in 1841, 224.

HUTTON-SESSAY, a township in Sessay p., in the N. R. of Yorkshire, 5 m. SE of Thirsk. Area 600 acres. Pop. in 1831, 129; in 1841, 114.

HUTTON-SHERIFF, a parish and township in the N. R. of Yorkshire, 11 m. NNE of York. The p. comprises the chapelry of Farlington, and the townships of Cornbrough, Lillings-Ambo, Stittenham, and H. Area 9,590 acres. Pop. in 1841, 1,499.

HUTTON-SOIL, a township in Greystock p., Cumberland, 5½ m. NNW of Penrith. Pop. 359.

HUTTONS-AMBO, a parish in the N. R. of Yorkshire, 3 m. SW of New Malton. Area 2,300 acres. Pop. in 1831, 412; in 1841, 408.

HUTWYL, or Huttweil, a small town of the Swiss cant. of Berne, 25 m. WNW of Lucerne, on the Langeten.

HUVEAUNE, a river of France, which takes its rise in the dep. of Var, to the SW of Nans; passes Auriol, Roquevaire, and Aubagne; and flows into the gulf of Lyons near Marseilles, after a course of 24 m. from ENE to WSW.

HUXHAM, a parish of Devonshire, 4 m. NNE of Exeter. Area 730 acres. Pop. in 1841, 150.

HUXLEY, a township in Waverton p., in Cheshire, 4 m. W by S of Tarporley. Area 1,600 acres. Pop. in 1831, 153; in 1841, 279.

HUY, or Hoye, an ancient town of Belgium, in the dep. of Liege, pleasantly situated in a valley on the Meuse, 16 m. ENE of Namur. Paper, leather, glue, and hardware, are the principal articles of manufacture; and the town has a considerable trade by the river in wheat.

HU-YAN-HEEN, or Ho-yan-heen, a district and town of China, in the prov. of Yun-nan, and dep. of Ching-keung-fu.

HU-YANG, or Ho-yang, a district and town of China, in the prov. of Shen-si, and dep. of Tung-chu-fu, in N lat. 34° 35′.

HUYSSE, a commune and village of Belgium, in the prov. of E. Flanders, cant. and 3 m. E of Cruishantem. Pop. 3,750.

HUYTON, a parish of Lancashire, 2 m. SW of Prescott. Area 9,720 acres. Pop. 3,749. It is intersected by the Manchester and Liverpool railway, which has a station here. The p. comprises the townships of Knowsley, Roby, Tarbock, and H.

HU-YUEN, or Ho-yuen, a district and town of China, in the prov. of Kwang-tung, dep. and 60 m. NE of Hwuy-chu-fu, in N lat. 23° 42′.

HUZARA, or Huzru, a town of Hindostan, in the Punjab, in N lat. 33° 50′, and E long. 72° 45′, 28 m. E of Attock, on the road from that place to Lahore. It is inhabited by Afghans, and possesses a considerable trade.

HUZAREH. See Hazareh.

HUZRELWALA, a village in the Punjab, 23 m. NE of Multan, on the road from that place to Ferozepur, and 12 m. from the l. bank of the Indus.

HUZRUTIMAN, a district and town of Kunduz, on the l. bank of one of the headstreams of the Jihun, 60 m. NNW of Kunduz, and 110 m. NE of Balkh. The town is situated in a sandy plain, and is of considerable extent.

HUZUMLI, a village of Anatolia, in N lat. 36° 44′, E long. 29° 18′, 8 m. W of the river Xanthus, situated on an elevated plain, surrounded by peaks of splintery scaglia. Immediately above it, on the S, are the ruins of *Cadyanda*.

HVALOEN, or Qualoen, an island of the Arctic ocean, off the NW coast of Norway, in the stift of Norland, and bail. of Finmark, 3 m. W of Tromsöe, in N lat. 69° 35′. It is separated from the continent by a channel 5 m. in breadth; and is 33 m. in length. In breadth it varies from 1½ m. to 15 m. It is very irregular in form, 3 deep bays penetrating its western coast, and several isolated peaks rising to a considerable height near its northern extremity.

HVAL-OER, a group of islands off the S coast of Norway, in the Skager-Rack, at the entrance of the bay of Christiania, in N lat. 59° 3′, and E long. 10° 50′. They belong to the stift of Aggerhuus and bail. of Smaalchnen.

HVEN, or Hveen, an island of the Sound, off the SW coast of Sweden, in the laen of Malmoehus and haerad of Roenneberg, 4 m. from the nearest point of the Swedish coast, 6 m. from that of Sieland, 17 m. NNE of Copenhagen, and 6 m. NW of Landskrona, in N lat. 55° 54′ 38″. Pop. 300. It is about 6 m. in circumf., rises high, and has a sandy soil. Cattle are reared here in great numbers. The island of H. was ceded to Sweden by Denmark at the peace of Roeskilde in 1658. It is celebrated as having long been the residence of Tycho-Brahe, and the ruins of his observatory are still to be seen amid those of the castle of Stjernborg.

HVIDBERG, a parish and village of Denmark, in Jutland, to the W of the Skiwe.

HVIDDINGSOE, a small island of the North sea, off the W coast of Norway, in the stift of Christiansand, and bail. of Stavanger, at the entrance of the Bukke-fiord, in N lat. 59° 5′.

HVILSAGER, a parish and village of Denmark, in Jutland, in the bail. and 14 m. SE of Randers.

HVITA, a broad and deep river of Iceland, which takes its rise partly from the Hvitar-vatn lake, and flowing SSW falls into the Borgar-fiord.

HWA, a district and town of China, in the prov. of Ho-nan, div. of Wei-hwuy-fu, in N lat. 35° 30′, E long. 114°.—Also a district and town in the prov. of Kwang-tung, div. of Kwang-choo-fu.

HWA-CHU, a district and town of China, in the prov. of Shen-se, div. of Tung-choo-fu, in N lat. 34° 30′, and E long. 109° 41′.—Also a district and town in the prov. of Kwang-tung, div. of Kaou-choo-fu.

HWA-TING, a district and town of China, in the prov. of Kan-suh, div. of Ping-leang-fu, in N lat. 35° 18′, and E long. 106° 32′.

HWA-TING-HEEN, a district and town of China, in the prov. of Keang-su, and div. of Sung-Keang-fu.

HWA-YIN, a district and town of China, in the prov. of Shen-se, div. of Tung-choo-fu, in N lat. 34 35′, and E long 110°.

HWA-YUNG-HEEN, a district and town of China, in the prov. of Hunan, div. of Yo-choo-fu, in N lat. 29° 30′, and E long. 112° 22′.

HWAE-GAN-FU, a division and town of China, in the prov. of Keang-su. The div. comprises 6 dis-

tricts. The town is 112 m. NNE of Nan-kin, on the Imperial canal, and on the r. bank of the Hoang-ho, in N lat. 33° 32′ 24″. It is situated in a marshy district, the level of which is lower than that of the canal, and is consequently in constant danger of submersion. It covers a considerable space, and is surrounded by a triple wall. On one of the gates of the town is a strongly-built tower, and within it a pagoda 5 stories in height. A suburb extends a distance of 3 m. along both sides of the canal to the Hoang-ho on which it has a port. In the environs are extensive building-docks. This town is the residence of several mandarins, one of whom is the governor or superintendent of the rivers in Keang-nan. It contains a large pop., and carries on an active trade.

HWAE-HO, or Hoai-ho, a district and town of China, in the prov. of Kwan-tung, dep. of Kwan-chu-fu. It is sometimes known as Fan-yu.

HWAE-JIN, a district and town of China, in the prov. of Shan-se, div. of Tae-tung-fu, in N lat. 39° 54′.

HWAE-JOW, a district and town of China, in the prov. of Chih-le, div. of Shun-teen-fu and Pih-loo-ting, in N lat. 40° 19′.

HWAE-KING-FU, a division and town of China, in the prov. of Ho-nan. The div. comprises 8 districts. The town is 96 m. W of Kae-fung-fu, on an affluent of the Hoang-ho, in N lat. 34° 6′ 34″, and W long. of Pekin 3° 28′ 30″. The surrounding country is extremely fertile, and abounds with medicinal plants.

HWAELAE, a district and town of China, in the prov. of Chih-le, div. of Seuen-hwa-fu, in N lat. 40° 23′, and E long. 115° 38′. It is of the greatest antiquity, and has been known under various names; that by which it is now distinguished was given it in 936. Its present fortifications bear the date of 1422. Its wall is 21 m. in circuit, and has 3 gates.

HWAE-NING-CHING, Bayanda, or Bainda, a town of Sungaria, in the div. and 12 m. NE of Eli, on the W bank of the Fargalington. Its inhabitants, who devote themselves to trade, and speak Chinese, consider themselves descendants of the army led thither by Tamerlane, but are generally believed to have derived their origin from the Chinese who expatriated themselves about the year 1125. The town contains a garrison of 1,200 men.

HWAE-NING-HEEN, a district and town of China, in the prov. of Gan-hwuy, div. of Gan-hing-fu.—Also a district and town in the prov. of Ho-nan, div. of Chin-chu-fu.

HWAE-YUEN, a district and town of China, in the prov. of Gan-hwuy, div. of Fung-yang-fu, in N lat. 33°.—Also a new district and town in the prov. of Shen-se, div. and SW of Yu-lin-fu, in N lat. 37° 54′.—Also a district and town in the prov. of Kwan-se, div. of Lew-chu-fu, 6 m. W of Kevei-liu-fu, in N lat. 25° 15′ 56″. and E long. 109° 18′.

HWAN-HEEN, a district and town of China, in the prov. of Kan-suh. div. and 54 m. NW of King-yang-fu, in N lat. 36° 39′.

HWAN-HO, or Hoen-ho, a river of China, in the prov. of Chih-le, formed by the union of the Yang-ho and San-kan-ho. It crosses a branch of the great wall, flows 9 m. W of Peking, receives Tse-ho and Ho-to-ho on the r., and joins the Pei-ho on the r. bank 75 m. SE of Peking, and after a total course, in a generally SE direction, of 180 m.

HWAN-YUEN-CHU, a district and town of China, in the prov. of Shan-se, div. of Tae-tung-fu, in N lat. 39° 41′.

HWANG, a district and town of China, in the prov. of Shan-tung, div. and 21 m. SW of Ting-chu-fu, near the Yellow river, in N lat. 37° 40′, and E long. 120° 50′.

HWANG-CHU, a district and town of China, in the prov. of Kwan-se, div. of Nan-ning-fu, in N lat. 22° 37′.

HWANG-CHU-FU, a division and town of China, in the prov. of Hu-pih, 36 m. SE of Wu-chang-fu. The div. comprises 4 districts. The town is in N lat. 30° 26′ 24″, and long. W of Peking 1° 39′ 35″, on the l. bank of the Yang-tze-kiang. It has a large pop. and an active trade. In the environs are numerous small lakes.

HWANG-HO. See Hoang-ho.

HWANG-HAI, a prov. in the N part of the Corea, extending E from the shore of the Hwang-hai or Yellow sea, from which it derives its name, and by which it is deeply indented. It is watered by the Ching-kiang and Chouong-kiang, Ping-yang, and Hi-ho, all of which flow into the Yellow sea. The surface is generally mountainous, but the coast is woody and well-cultivated. The capital is Hwang-chu.

HWANG-MEI, a district and town of China, in the prov. of Hu-pih, div. and 90 m. SE of Hwang-chu-fu, in N lat. 30° 12″. At the entrance to this town is a tower 7 stories in height, and in the interior are numerous shops. The environs are irrigated and well-cultivated.

HWANG-PING-CHU, a district and town of China, in the prov. of Kevei-chu, div. of Chin-yuen-fu, in N lat. 26° 30′.

HWANG-PO, a district and town of China, in the prov. of Hu-pih, div. of Han-yang-fu, in N lat. 30° 56′.—Also an island in the bay and 18 m. SE of Canton, prov. of Quang-tung, at the mouth of the Tchu-kiang. It contains several pagodas and has a port.

HWANG-WANG-HEEN, a district and town of China, in the prov. of Hu-pih, div. of Hwang-chu-fu.

HWANG-YANG-CHAN, a mountain of China, in the prov. of Chih-le, between Peking and Sivan-hoa. It is of granitic structure.

HWANG-YEN, a district and town of Chi-keang, div. of Fae-chu-fu, in N lat. 28° 42′.

HWIEZDLITZ (Neu), or Nowy-Hwiezlice, a town of Moravia, in the ldgb. circle and 15 m. E of Brüon. Pop. in 1834, 700.

HWITLISBOFIAERD, a town of Russia in Europe, in Finland, in the gov. and 96 m. NNW of Abo, and district of Nedre-Satakunda, on the gulf of Bothnia, 14 m. NNW of Biörneborg.

HWITTIS, a town of Russia in Europe, in Finland, in the gov. and 54 m. NNE of Abo, and district of Œfre-Satakunda-Nedredels.

HWO-KEA, a district and town of China, in the prov. of Ho-nan, div. of Wei-hwuy-fu, in N lat. 35° 20′.

HWO-LUH, a district and town of China, in the prov. of Chih-le, div. of Ching-ting-fu, in N lat. 38° 8′.

HWUY, a district and town of China, in the prov. of Ho-nan, div. of Wei-hwuy-fu, in N lat. 35° 30′, and E long. 114°.

HWUY-CHANG, a district and town of China, in the prov. of Keang-se, div. and 66 m. ESE of Kan-chu-fu, in N lat. 25° 32′ 24″, and E long. 115° 43′.

HWUY-CHU-FU, a division and town of China, in the prov. of Gan-hwuy. The div. comprises 6 districts. The town is 156 m. S of Nan-king, in a mountainous locality, in N lat. 29° 58′ 30″, and W long. of Pekin 2° 3′ 20″. Ink and varnish are extensively manufactured here, and the engraving on copper is considered the best in China. It has an active trade. Tea is extensively cultivated in the environs, and gold, silver, and copper are found in the mountains.—Also a division and town in the prov. of Kwang-tung. The div. comprises 10 districts. The town is 90 m. E of Canton, on the l. bank of the Tung-kiang, in N lat. 23° 2′ 24″. It

is well-built, and contains several handsome edifices. The Tung-kiang is here crossed by a fine bridge, and in the vicinity, over Lake Fon, is a similar structure to connect two fine islands, covered with gardens and pleasure-houses, with the mainland. H. is noted for its shell-work, and has an active trade.

HWUY-GAN-HEEN, a district and town of China, in the prov. of Fo-keën, div. and 15 m. NE of Tseuen-chu-fu, near the shore of the channel of Formosa. in N lat. 25° 2′.

HWUY-KE, a district and town of China, in the prov. of Chĕ-keang, div. of Shaou-hing-fu.

HWUY-LAE, a district and town of China, in the prov. of Kwang-tung, div. of Chaou-chu-fu, in N lat. 23° 10′.

HWUY-NING, a district and town of China, in the prov. of Kan-suh, div. of Kung-chang-fu, in N lat. 35° 45′.

HWUY-TING-HEEN, a district and town of China, in the prov. of Kwang-tung, div. and 60 m. SSW of Keun-che-fu, in the island of Hain-an, in N lat. 19° 20′, and E long. 110° 38′. The town itself is not large, but the suburbs are extensive and very populous. The entire pop. of the place is estimated at upwards of 44,000. The walls by which the town is surrounded are lofty, and the streets are straight, and the houses well-built of red brick. To the E of the town is an extensive but shallow lake. —Also a district and town in the prov. of Hu-nan, div. of Tsing-chu, in N lat. 26° 50′, and E long. 107° 7′.

HYACYNTHE, a village of Lower Canada, in the district of Montreal, co. of Richelieu, on the Yamaska.

HYATNAGUR, a town of Hindostan, in the prov. of Hyderabad, 10 m. SE of Hyderabad.

HYATPUR, a town of Bengal, 18 m. NW of Mauldah, in the district of Dinajpur.

HYCATU, a town of Brazil, in the prov. of Maranhao, 30 m. S of Norra-Senhora-del-Rosario, near the confluence of the Iguaru and the Mony.

HYCKHAM (North), a parish of Lincolnshire, 4½ m. SSW of Lincoln. Area 1,990 acres. Pop. 397.—Adjoining it on the W is South H. Area 1,160 acres. Pop. 85.

HYCO-OTEE, a small river of the United States, which rises in N. Carolina; enters Virginia; and falls into the Dan, about 4 m. above the mouth of Staunton river, after a NE course of 50 m.

HYDE, a chapelry and township in Stockport p., Cheshire, 5 m. NE of Stockport. Area 660 acres. Pop. in 1801, 1,063; in 1831, 7,144; in 1841, 10,151; chiefly employed in factories for spinning common yarns and weaving power-loom cloth; in coal-mining to supply fuel for working these mills; and in the ordinary retail business of a small market-town.

HYDE, a maritime county of N. Carolina, bordering on Pamlico sound. Area 800 sq. m. Pop. in 1840 6,458; in 1850, 7,662. Its cap. is Lake Landing.

HYDE-PARK, the cap. of Lamoille co., in the state of Vermont, U. S., 31 m. N of Montpelier, on the Lamoille river. Pop. in 1840, 1,080.—Also a township in Deutschen co., in New York, 66 m. S of Albany, skirted by the Hudson river on the W. Pop. in 1840, 2,364.

HYDERABAD, or Hydrabad, an extensive prov. of Hindostan, formerly called Telingana, and afterwards Golconda. It is situated chiefly between the 16th and 19th parallels of N lat., and strictly speaking is confined to the country between the rivers Godaveri and Kistna; but the name is now applied to all the territories of the Nizam, which extend between the 15th and 21st parallels, and the 75th and 82d meridians, and embrace the provs. of H. Proper and Bidur, with part of Bejapur, Aurungabad, and Berar; and in this sense may be generally stated to be bounded by the territories of the Nagpore rajah, and the British possessions; being about 350 m. in extreme length, and about 300 m. in breadth, and having an area of 96,000 sq. m., with a pop. of 10,000,000. See Deccan. This territory is principally rented to powerful zemindars, as the rajah of Sholapore and others; or granted in jaghires or fiefs to the officers of government. Thus the whole of the land, except some portions set aside for charitable purposes, and the estates of the Nizam and different branches of his family, are in the hands of a few individuals. The country is, however, fertile, and, properly managed, would yield abundantly. Its commerce also is confined, the diamond mines hardly paying the expense of working; and the only other article valuable to foreigners being cotton, some of which is carried to the Northern circars and Carnatic, and exchanged for salt and European commodities. The chief towns are H., Golconda, Warangole, Aurungabad, Bidur, and Ellichpore. Having been for a long period the seat of a Mahommedan government, a considerable portion of the inhabitants are Moslems; the majority, however, are Hindus, but the pop. is by no means equal to that of the British provs.

Revenue.] It is matter of notoriety that his highness the Nizam's financial affairs are in much disorder, and his expenditure above his income by some 30 lacs a-year; and this has been explained and proved by a set of accounts which, drawn up by the Nizam's *duftendars*, or state-officers, have recently appeared in the Indian papers, and are of special interest at the present juncture.

In the first place, the Nizam's total military expenditure is stated to be as follows:—

		Rupees.
For the subsidiary force, by transfer of ceded districts,		63,00,000 0 0
For the regular contingent, excluding payments on account of Appa Desage, chouth, &c., as arranged after the Mahratta war of 1818-1819,		32,00,000 0 0
For the government troops, viz.:—		
5,645 horse,	34,61,983 10 9	
26,665 infantry,	32,51,867 12 3	
33 310	67,13,851 7 0	
Recent deductions of pay by his highness's order,	3,00,000 0 0	
		64,13,851 7 0
His highness's Pargah, or force under Shumshooloomrah, Jaghirdars' quotas, &c. (estimated),		20,00,000 0 0
Private Jaghirdars' quotas, &c.,		12,00,000 0 0
		1,91,13,851 7 0

Which may be classed as follows:—

British troops, according to treaty, and pay provided by cession of territory,	63,00,000 0	
Falling upon his highness's revenues, as at present collected,	1,28,13,851 7	
Total,	1,91,13,851 7	

The revenues of his highness, exclusive of the ceded districts, may be now taken at two crores and a quarter, or 2,25,00,000rs. = £2,250,000, which may be classed as follows:—

Revenue of the Dewanee for public purposes of government (gross),	1,41,00,000
His highness the Nizam's own revenues, exclusive of allowances from minister's department,	30,00,000
Shumshulumra's Pargah establishment, &c.,	22,00,000
Personal jaghires to nobility and dependents,	20,00,000
Military ditto,	12,00,000
	2,25,00,000

It thus appears that out of an income of 2¼ crores, or £2,250,000 sterling, there is only one crore and 40 lacs applied to the ministerial disbursements of the state. The rest is alienated and inapplicable to the exigencies of the state.

The detailed account of the ministerial department is as follows:—

Gross revenue,	1,41,00,000
Deduct civil charges, management, &c.,	17,80,000
	1,23,00,000

Which is accounted for thus—

His highness the Nizam's stipends, servants, &c.,	28,00,000
Contingent, chouth, Appa Desage, &c.,	40,25,000
Government troops,	64,13,000
Mursabdars,	11,15,000
Moonriffs, &c.	1,05,000
Forts,	96,000
Charitable grants,	4,63,000
	1,50,17,000

Result:—Income 1,23,00,000 net.

Expenditure 1,50,00,000

Balance against income, 27,00,000rs. expenditure over income.

It thus appears that the Nizam holds the following amount of revenue apart from the state funds:—

Districts under his own management, the receipts of which are paid to his treasury,	30,00,000
Payment from the ministers' department,	28,00,000
	58,00,000

Fifty-eight lacs, or £580,000 as his own personal income, out of £2,250,000. His highness's personal treasury, therefore, is rich, while his state is bankrupt, has no public credit, and is spending, or would spend if every one were paid, 27 to 30 lacs above its income. A further classification of amount of expenditure, therefore, becomes necessary, and may be thus taken:—

His highness's the Nizam—personal and ministerial,	58,00,000
Pargah establishment,	22,00,000
Personal jaghires and nobility.	20,00,000
Military jaghires,	12,00,000
Ministerial departments, deducting allowance to Nizam,	113,00,000
	2,25,00,000

Viz. 95,20 000 net result
17,80,000 charges of collection and management.

1,13,00,000

The pith of which is that out of a revenue of 2¼ crores there is at the public and ministerial service of government, for payment of military establishments, contingent, officials, public debts and interest, &c., only 95 lacs; or, in other words, that 1 crore and 30 lacs are permanent alienations out of a revenue of 2 crores and 25 lacs. This state of affairs may be better accounted for when it is understood that the minister is allowed to charge upon the whole gross revenue, 6¼ per cent., or about 14 lacs per annum, or £140,000; the peshcar or deputy-minister, 3r. 2a. per cent., or near 7 lacs; the duftendars or accountants, 1r. 9a. per cent., or 3½ lacs; the tulookdars or collectors take 12½ per cent. for expenses of collection, charging for the troops employed with them! There is a zemindar or chief at the head of some 1,000 or 1,500 rabble, who has beaten back one detachment especially selected, yet the minister's military budget shows a force of cavalry and infantry of 32,000 men, costing the state 64 lacs, and the budget shows an expense of 98 lacs!

History.] This country was formerly subject to the rajahs of Telingana and Bijanagur, but was conquered by the Mahommedans in the early part of the 15th cent., and in 1512 was formed into a separate kingdom, under the name of Golconda, by Mohammed Kuli, the founder of the Kutub Shahi dynasty. This person was originally a Turkish adventurer, but rose to the rank of general in the service of the last king of the Bhauseni dynasty. He reigned 39 years, and had for successors his two sons and two grandsons, the latter of whom were defeated by the Mogul emperor Shah Jehan, and compelled to pay tribute. Abdallah Kuttub Shah died in 1674, and was succeeded by his son-in-law Abul Hussein, who in 1687 was taken prisoner by Aurungzebe, when Golconda was converted into one of the provs of the Mogul empire, and with the other five southern provs. was formed into a viceroyalty, governed by an officer appointed by the court of Delhi, called the subahdar of the Deccan. About 1719, a Mogul officer, named Cheen Khilij Khan, was appointed to this government, with the title of Nizam-al-Mulk, *i. e.* 'Superintendent of the kingdom;' and as the Mahrattas were at that period rising fast into power, the new governor had a large army placed under his command to keep those freebooters in awe. This circumstance inspired him with the ambition of founding an independent kingdom. For several years he employed himself in extending his territories, and getting possession of the strongholds of the Deccan; and when summoned to Delhi, proceeded thither with so large a force as completely to overawe Mohammed Shah and his ministers. He is further accused of having encouraged the Persian usurper Nadir Shah to invade Hindostan in 1739. After that event, having been appointed vizier or prime minister, he left to Mohammed nothing but the name of king; and for two years he governed at Delhi with absolute sway, leaving his son Ghazy-ad-Deen his deputy in the Deccan. The Mahrattas having invaded the latter country, he marched from Delhi with a numerous army in 1741, and on his arrival at Arcot, found that country in such confusion and anarchy that not less than twenty petty chiefs had assumed the titles of nabob or rajah. The measures that he pursued soon tranquillized and brought into order that country; and he disposed of the different offices to his friends, without consulting the court of Delhi. He made Aurungabad his cap., but died at Burhanpore in 1748, at the great age of 104. Ghazy-ad-Deen was at the period of his father's decease one of the ministers at Delhi; and the second son, Nasir-Jung, having obtained possession of the treasury, and the goodwill of the army, was too powerful to be dispossessed; he was therefore confirmed by the emperor Ahmed Shah as subahdar of the Deccan. Nasir-Jung was assassinated in 1750, and succeeded by his nephew Muzuffer-Jung, who was likewise assassinated the following year. Salabut-Jung, the cousin of Muzuffer, had held the government for 10 years, when he was seized and imprisoned by his brother Nizam Ali, who for nearly 20 years was engaged in wars with Hyder Ali, the British, and the Mahrattas. During this period Ali's territories were much curtailed, and had it not been for his alliance with the British in 1800, the kingdom would have been annihilated. Nizam Ali transferred the seat of government from Aurungabad to Hyderabad, and dying in August 1803, was succeeded by his eldest son Mirza-Sekundur-Jah, who was supported in his authority by a British force of 8,000 men, called the subsidiary force, and by treaties of alliance offensive and defensive; and who was succeeded some years ago by his eldest son Nasar-oo-Doula. In 1802 the British government deprived the Nizam of his share of Tippu's dominions, which now forms what is known as the Ceded districts. In return, however, for this cession, the Nizam was in the following years relieved from the presence of the Mahrattas on his SW frontiers; and at a later period, when the Pindarrie war brought Lord Hastings into collision with the Peishwa, the greater Mahratta confederacy on the N was also destroyed. By the subjugation of this formidable people on either extremity of the Deccan, the Nizam ceased to have any foreign enemies to be protected against; and it is argued by some parties, the utility of the subsidiary force, which had taken its fair share in the transactions of both periods, was, as far as he was concerned, at an end. Our resident at Hyderabad, however, induced the Nizam to accept and pay for another army called the Hyderabad contingent, which might be regarded as a contribution to the grand army of India in finding the officers and the Nizam the pay. The subsidiary force was to be used against external attacks only. At first it was composed of barely 3,000 men; but gradually it has grown to a strength equal to that of the other body; and, unlike it, is scattered through the Deccan in several cantonments. It is called the Nizam's army, though his highness cannot command even an escort from it. Its cost was an additional charge on the revenues of the Nizam of nearly £350,000 per ann.; and still remains so. There is thus altogether in the Deccan a British force of some 15,000 or 20,000 soldiers; much more highly officered by Europeans than the Company's troops; and its complete disposition is confided to the resident. The Nizam, although bound to pay for both, has no real power over either army; and it is represented that the pretence on which the contingent was raised and increased, and is still paid, has never been carried out; for it never did, and does not effectually assist in enabling the Nizam to carry on his government; while the presence of this immense foreign army has deprived him of the respect of his subjects, without supplying him with the means of collecting his revenue or insuring their obedience. Unable to carry on his government by means of the contingent, the Nizam has been obliged to take into his service bands of Arab, Sikh, Rohilla, Beluchis, and Patan mercenaries; and thus he has no fewer than three armies to provide for, viz., the subsidiary force; the H. contingent, intended to enable him to conduct his internal administration; and the Arab troops. Can we then wonder, it is asked, "that his treasury is empty and his finances embarrassed; that he is £850,000 in arrear to the British government; that he is £1,000,000 sterling in debt to Parsi capitalists for money borrowed to keep up his payments to our government; that the

Arabs, being unpaid, are disorderly, audacious, and rebellious; and that the country is somewhat disorganized?" That the effects of our military connexion with the Deccan have been so disastrous to the Nizam, is by no means evident. Doubtless a perpetual exaction of some 33 per cent. of his annual revenue has been peculiarly burdensome to a government whose financial affairs are in such rapacious hands; on the other hand, it must be remembered that the Nizam owes to the protection thus purchased his very existence as a sovereign prince; and, if the Deccan were left in the Nizam's hands, by the withdrawal of the British forces, it would inevitably be parcelled out, after Eastern fashion, into a number of petty states, whose military rulers would rapidly consummate the ruin already begun of this fair and fertile territory. "The difficulties of the Nizam," it is argued by the supporters of the present governor-general's policy, "have not been produced by the contingent, but by his own wilfulness in maintaining an utterly useless army, which is a source of perpetual annoyance to himself, is utterly inefficient, continually mutinous, and has never been employed by his own government in any of those internal services which the contingent has performed for the last 50 years with advantage to the state. In 1829, the Nizam decided formally on the continuance of the contingent, when offered a good money-bargain, by Lord William Bentinck, if he chose to disband it. The governor-general proposed, in commutation of all future military demands, a money-payment of 20 lacs; but his highness deliberately resolved on its continuance. He knew, and his ministers knew, that if he had no regular troops to depend upon, the factions of his own irregular troops would become dominant, and that the maintenance of a regular army under discipline, which could be depended upon under any emergency, and always at his own personal service, was the best check upon them. He could not apply for the services of company's troops on every occasion for assistance. But his ministers well knew that without the presence of regular troops in stations in various parts of the country, the pop. could not be restrained from lawlessness; the revenue could not be collected, or powerful zemindars kept in check or restrained from active aggression; that the army of the state was utterly inefficient for these purposes, and could not be trusted from the capital in any numbers for fear of plundering the country. They knew also that the country has a very large military pop.; that every village teems with men accustomed to arms from youth, who hold the forces of the state in contempt, and whose partial risings for plunder or for resistance to payment of revenue could not be checked but by regular troops. Every district has its zemindar, and the armed pop. is in his interest; the country is full of strong castles and forts, which, if occupied by local insurgents, would defy every effort of the government and the government troops to reduce them; and the astute minister, Chundu-Lhall, well knew the utter weakness of his government in this particular. He could not dispense with the contingent; and he told his highness that in practical effect its disbandment or reduction would be the direct cause of the loss of his independence and the ruin of his finances. In the transactions of many years it would be impossible almost to point out a single instance of any importance in which the Nizam's government has employed its own troops, numerous as they are. The revolt or disobedience of the Nizam's brother, Mubarazudenla, was checked by the contingent in 1830; and more recently the outrages of the Rohillas. The affair of Appa-Sahib, which was causing the local military pop. to rise for purposes of plunder, was summarily put down; also disturbances in Berar during 1849. In short, the catalogue might be swelled by the mention of many events, which have shown that the Nizam's government have never even attempted to employ its own troops in any affair of moment, and where it has employed them they have been discomfited in a disgraceful manner; and more, that for these many years past they have been a source of perpetual annoyance, alarm and difficulty." On the 20th of June 1851, a demand was made by the British resident that territory should be ceded by the Nizam to an extent sufficient to yield a certain instalment for liquidating the debt in about three years. But this demand has been warded off by an immediate payment of 18 lacs of rupees, and an engagement to clear off the remaining 65 lacs within four months.

Hyderabad, or Hydrabad, the capital of the above kingdom, situated on the S bank of the river Musa, or Mussey, a tributary of the Kistnah, in N lat. 17° 20′, E long. 78° 33′, 480 m. from Bombay, about 6 m. SE of the strong fortress of Golconda. It is said to have been founded about the year 1585, by Mohammed Kuli Kutub Shah, who conceiving that the air of Golconda did not agree with his constitution, gave orders for building a new city on this spot, on which, according to Mir Abu Talib, he expended in the erection of public works a sum equal to £2,800,000. It continued to be the residence of the Kutub Shahi dynasty till 1687, when it was taken by Aurungzebe. The late Nizam Aly was the first of the nizams that made it his residence. The reason assigned for his doing so was, that owing to the curtailment of his territory, Aurungabad was too near the Mahratta boundaries; he therefore conveyed all his wealth to the fortress of Golconda, and expended considerable sums of money in improving H. It is now a populous city, about 7 m. in circumf., and surrounded by a stone wall, with towers at the angles and gates, which, although incapable of sustaining a regular siege, is sufficient security against cavalry or sudden incursions. The streets are in general narrow and dirty, and the larger houses present little exteriorly except high dead walls. Its pop. has been estimated at 200,000, principally Mahommedans, amongst whom are Rohillas, Arabs, Afghans, and Putans, who are employed as soldiers by the local government, and are constantly fighting amongst themselves. It contains 4 palaces and some handsome mosques; and between it and Golconda there are a number of splendid tombs. The principal mosque is built upon the model of that of Mecca; but the most splendid of the religious edifices is the Char-Minar or 'Four Minarets,' a beautiful quadrangular mosque, raised upon 4 gateways, and standing in the centre of the city, so as to open upon each of the 4 principal streets by a gigantic archway. From the angles of the base shoot up 4 minarets, each 220 ft. in height. Above the arches are several apartments formerly employed as a kind of college, but now turned into warehouses. The Chudder-ghat, or residency, built for the accommodation of the British representative at the nizam's court, is one of the most magnificent buildings in India. It consists of a basement story of arches, and two others above it, with wings connected by a continuation of the basement, and finished with a balustrade. The principal front has an enormous Corinthian portico, the columns of which are of white chunam. A large and well-planned bridge, thrown over the Mussey, connects the residency with the city. In the neighbourhood of H. are several immense tanks, one of which a few miles to the S measures, when full, 20 m. in circumf. Sekunderabad, the head-quarters of the English subsidiary force, is 5½ m. N of H., and 394 m. NNW of Madras.

HYDERABAD, a city of Hindostan, cap. of the prov. of Sind, situated in N lat. 25° 22′, E long. 68° 22′. The fortress of H. stands on a rock, the foot of which is washed by a branch of the river Indus, here named the Fulaili, which leaving the main stream about 12 m. above the town, regains it 15 m. below. Its shape is that of an irregular pentagon, suited to the natural form of the rock, and defended at the angles by round towers. The plateau of the hill is 1½ m. in length, and 700 yds. broad, and it rises about 80 ft. above the plain. The town is about 4 m. E from the main channel of the Indus, and is situated on a hill to the N of the fort. There are about 5,000 mud-houses in the pettah and fort together. There are a good bazar and several handsome mosques inside the fort. H. was the residence of the Amirs or princes, who formed the aristocracy by which this prov. was governed until its recent annexation to the British territories. It was founded about the middle of the last cent. The principal manufactures of H. are matchlocks, swords, spears, and shields, ornamental silks, and cottons. A considerable trade is carried on, by means of the river, with Multan, Tatta, and ports at the mouths of the Indus.

HYDERGUR, a fortress of India, in the district of Bednore, at the top of the Western ghaut, 32 m. distant from the sea, and commanding the road from the port of Cundapore to the city of Bednore. It is 14 m. SW of Bednore.

HYDERKHAIL, a village of Afghanistan, on the route from Cabul to Ghuzni, in N lat. 33° 58′. Alt. above sea-level, 7,637 ft.

THE CHAR MINAR HYDRABAD

HYDERKHAN, a village of Afghanistan, on the route from Peshawur to Jellalabad, in N lat. 34° 13′. Pop. 800.

HYDRA, or IDRA, a small island in the Grecian archipelago, near the E coast of the Morea. It is about 10 m. long, and 2 m. broad. It is rocky and little cultivated, scarcely presenting on its whole surface a speck of verdure, but is very populous and commercial. The aspect of its town, called also H., which is situated in N lat. 37° 30½′, E long. 23° 30′, is very pleasant. It is built on the abrupt acclivity of a number of pyramidal rocks, rising in an amphitheatre around its port. The houses are almost all of stone; low, of a square form, and with few windows, but presenting an appearance of comfort, and sometimes even of elegance. Its pop. was estimated in 1825 at 40,000, almost exclusively Albanians, by Waddington; but in 1828 a census returned only 16,092 in the town of H., of whom 3,177 were strangers. The port is in the form of a crescent, and though not large is deep, but is not very secure. It is in fact a deep bay, situated on the W side of the island, and open to the W, having no nearer protection from that quarter than the opposite coast of the Morea, which is between 4 and 5 m. distant. There are besides two other ports on the same side of the island, the one to the N, the other to the S of the city, in which most of the ships-of-war are laid up during winter. The number of vessels belonging to H. in 1816 was 120, carrying from 100 to 600 tons each, and in general well equipped. To defend themselves from the Barbary pirates, they generally carried from 8 to 30 cannon, and were manned with from 35 to 70 men. The Hydriots trade not only to the ports of the Archipelago and Mediterranean, but to France, Spain, Italy, and other countries. The Hydriot sailors are generally large and muscular in person, and are considered the most intrepid navigators in the Archipelago; and bore a glorious part in the regeneration of Greece. The government of the island before the revolution was vested in six primates; but they were incapable of exercising any effective control over 5,000 or 6,000 sailors at the breaking out of the revolution in 1821, when the Hydriots equipped a squadron of 80 square-rigged vessels against the Turks.

HYDRAH, or HEDRA, a considerable town of Tunis, on the frontier of the Algerine territory, situated in a narrow valley with a rivulet running by it, an affluent of the Mejerdah, and distinguished by very extensive ruins. Here were to be seen in the middle of last cent. the walls of several houses, the pavement of a whole street entire, with a number of mausolea very well preserved, and built in a sexagonal or octagonal figure, supported by columns; or square, compact, and covered buildings. Dr. Shaw has some suspicion that this may be the *Tynidrum* or *Thunodromum* of the ancients.

HYDRON, or THOKO, an island of Greece, in the Archipelago, between the E coast of the Morea and the island of Hydra. It is 8 m. in length, and about 2 m. in breadth; and approaches within a ½ m. of the Morea coast; while its SE end approaches Hydra within about 1 m. A few years ago only 3 families existed upon this island.

HYDURZIE, a village in Afghanistan, in the valley of Pisheen, 25 m. N of Shawl, on a stream, at an alt. of 5,259 ft. above sea-level. It is inhabited by Syuds, and is situated in a fertile and well-cultivated locality.

HYE'RES, or HIERES, a canton, commune, and town of France, in the dep. of the Var, arrond. of Toulon-sur-Mer.—The town is 11 m. E of Toulon, and about 3 m. from the shore of the Mediterranean, on the slope of a hill, the summit of which is crowned with the ruins of an old castle, in N lat. 43° 7′ 2″, E long. 6° 7′ 40″. Pop. in 1841, 9,966. The streets are steep, narrow, and ill-paved, but the houses are built with considerable elegance. The town-hall is adorned with a column, erected in honour of Massillon, of whom H. was the birth-place. The trade of H. consists chiefly in olive-oil, wine, oranges, pomegranates, lemons, and salt, productions of the surrounding district. Fairs for cattle, salted provisions, essences, silk-twist, cloth, linen, &c., are held twice a-year. The environs are extremely fertile, and the climate delightful, although rendered unhealthy during the heat of summer by the vicinity of the marshy flats of Gapau. The town of H. was named by the Romans *Areæ;* in the Middle age it received the name of *Ahires.* In the 13th cent. it possessed a port, and was the place of embarkation to Palestine. It was long an appanage of the viscounts of Marseilles.—Also a group of islets in the Mediterranean, annexed to the cant. of the same name, in N lat. 43°. They are 4 in number,—Porquerolles, Portcross, Bagneaux, and Titan. The first, which is the largest of the group, is 6 m. in length, and about 2 m. in breadth. Titan or Levant, which lies to the E of Portcross, the central island of the group, is nearly equal in size to Porquerolles. The present sterility of these islands presents a striking contrast to the famed luxuriance which gave them the name of the Isles d'Or. Portcross possesses a good port. A few pines, and oaks, and aromatic plants, now form their only productions. They are remarkable, however, for the salubrity of their climate. In 1531, these islands were erected into a marquisate. In consequence of the neglect of the condition, the defence of the roadstead, on which the tenure of seignority was subsequently held by the houses of Ornans and Roquendoff, they were forfeited to, and garrisoned by, the French government.—The roadstead, which is enclosed by these islands, and which bears the same name, extends in a semicircular form from the peninsula of Giens on the W, to Cape Benat. It is 12 m. in length from E to W, and about 9 m. in breadth.

HYE'VRE, a village of France, in the dep. of the Doubs, cant. and 4 m. ENE of Baume-les-Dames, and 23 m. NE of Besançon. Pop. 345. Implements of war, cutlery, and agriculture, are extensively manufactured here.

HYKULZYE, a village of Afghanistan, in the district of Pisheen, 35 N of Shawl, and about 2 m. S of the Lora, from which it is well-supplied with water by means of a canal, and at an alt. of 5,063 ft. above sea-level. The inhabitants are principally Syuds. Two engagements took place here in 1842, between the British army under General England, and the Afghans, in the latter of which the enemy was completely routed, and the v. reduced to ashes.

HYLAIRE-DE-COURS (SAINT), a commune of France, in the dep. of the Cher, cant. of Lignières, 18 m. from Saint-Amand-Mont-Rond. Pop. 1,730.

HYLLEKROG, an island of Denmark, in the Baltic, near the S coast of Laaland. It is 3 m. in length, and a little more than a ½ m. in breadth.

HYLLUS, or PHRYGIUS. See DEMIRJI-CHAI.

HYMETTUS, or TRELO-VOUNO, a celebrated mountain of Greece, 5 m. SE of Athens. Its summit, a naked crag of limestone, rises to the height of 2,680 ft. above sea-level, and commands a view of the straits of Negropont, and various of the Cyclades, the E coast of Attica with its numerous ports stretching to Cape Coronna, the Saronic gulf with its islands, the rich plain of Messoia and Athens, the mountains of Pendeli and Parnes in Attica, and of Cithæron in Bœotia. H. is still noted, as in ancient times, for its honey. The wild thyme, or *Thymus*

serpyllum, and the *Salvia pomifera, and Salvia verbascum*, which grow abundantly on H., afford the bees a rich pasture, and fill the air with fragrance.

HYON, a department and commune of Belgium, in the prov. of Hainault, watered by the Trouille. Pop. 1,165.

HYPIAUGHUHI, a river of Brazil, in the prov. of Matto-Grosso, which has its source near that of the Araguaia, and falls into the Pequiri, an affluent of the São-Lourenço.

HYPOLITO-DE-GLEBA (San), a town of Spain, in Catalonia, in the prov. of Barcelona, partido and 5 m. N of Vich.

HYPPOLITE (Saint), or Sanct-Bild, a commune of France, in the dep. of the Haut-Rhin, cant. of Ribeauville, 5 m. N of Colmar. Pop. in 1841, 2,239. It contains extensive coal-mines, and affords good wine. It was taken by the French in 1444, and ceded in 1718 to the duke of Lorrain.—Also a commune in the prov. of Aveyron, cant. of Entruygues. Pop. 2,034.

HYROULINE, a town of Madagascar, on the E coast, in the Betanismesnes territory, near Andevourante.

HYRYNSALMI, a parish of Russia in Europe, in the grand duchy of Finland and E part of the gov. of Ulcaborg. It forms the N part of the district of Kajana, and has a length and breadth of 90 m.

HYSSINGTON, a parish partly in Shropshire and partly in Montgomeryshire, North Wales, 3½ m. N of Bishop's-castle. Pop. in 1841, 364.

HYTHE, a parish and one of the Cinque-ports, locally situated in the hund. of Hythe, Kent, 14 m. S of Canterbury, and 33 m. SE by E of Maidstone, on the line of the Royal Military canal, and the London and Dover railway. Area of p., 860 acres. Pop. in 1801, 1,365; in 1831, 2,287; in 1841, 2,265. —The town is situated about ¾ m. from the sea, in a valley enclosed on each side by high hills, and consists principally of one long street running parallel to the coast, with several smaller ones branching from it. Some of the older houses exhibit curious specimens of domestic architecture. Near the middle of the town is the market-place and court-hall. At the E end are the barracks of the Royal Staff corps. The church of St. Leonards occupies a very elevated situation on the acclivity of the hill above the town. It is a spacious cruciform structure, partly in the Norman and partly in the early style of English architecture, with a tower at the W end. The beach, which lies considerably higher than the town, is studded with martello towers and forts, built of brick upon one uniform plan. On the summit of each and in the centre of the platform, a twenty-four pounder is mounted on a traversing carriage. The military canal, formed to aid in defence of the coast, also facilitates the conveyance of goods and merchandise from H. to Appledore; but the commerce of H. is now little else than that of a domestic character. During the war a large military force, amounting to from 10,000 to 15,000 men, was quartered in this vicinity; but the removal of the military force, and the demolition of the barracks which formerly stood on the cliffs behind the town, checked its rising prosperity. There are a few fishing-boats belonging to the town. H., as a principal cinque-port, enjoys all the rights and privileges conferred by general charters upon these ancient communities. The burgh-revenue is about £300 per ann. The municipal boundaries laid down in the boundary report exclude all W. H. and Aldington, and include additional parts of Saltwood and Newington.—Previous to the passing of the reform act, H. returned 2 members to parliament. Under the reform act, the boundaries of the parl. borough have been extended so as to include Sandgate and Folkestone, with a narrow strip of intervening ground along the coast and through the ps. of Newington and Cheriton, and the borough now returns only one member. The electors registered in 1837 were 503; in 1848, 516.

HYTHE (West), a parish in Kent, 2 m. WSW of Hythe. Pop. in 1831, 150; in 1841, 239.

I

*** Names not found under this letter, are to be sought for under J and Y.

IAKUTSK. See Yakutsk.

IASSY. See Jassy.

IBA, a village of Electoral Hesse, in the bail. and 6 m. E of Rothenburg. Pop. 900. Copper is wrought in the vicinity.

IBABA, the capital of the prov. of Maitsha, in Abyssinia. It lies near the S bank of Lake Dembea, and in Bruce's time was little inferior in extent or importance to Gondar. The country round is remarkably pleasant and fertile.

IBABA, a river of Bolivia, in the dep. of Cochabamba, which joins the Guapey, on the l. bank, after a course from S to N of about 120 m.

IBABAO. See Samar.

IBACH, a scattered village of Switzerland, in the cant. of Schwytz, on the Muotta, at the mouth of the valley, near which were formerly held the periodical assemblies of the canton.

IBAGUA, or Ibaque, a town of New Granada, in the dep. of Cundinamarca, 70 m. W of Santa-Fe-de-Bogota, at the lower end of the passage of the mountain of Quindiu, and at an alt. of 4,900 ft. above sea-level. It was formerly of greater consequence, but was ruined in 1592 by the Indians. The rivers Chipala and Combeima run near it.

IBAR, a small town of European Turkey, in Servia, situated 10 m. N of Novibazar, on a river of the same name which, rising in Albania, falls into the Morava, 5 m. N of Kranovatz, after a course of 90 m. Its principal affluents are the Sidnetza on the r., and the Rashka on the l.

IBARRA, a district and town of Ecuador, in the

dep. and 50 m. NNE of Quito. Its soil is extremely fertile; and produces sugar-canes, cotton, and almost every kind of European and American fruit. It also produces excellent wheat. It is watered and fertilized by the Pisco, the Taguando, and the Blanco, all of which united form the Mira. — Its capital of the same name is situated in an extensive plain, watered on the E by the Taguando, and on the W by the Ajavi, at the N base of the volcano Imbaburu, in N lat. 0° 21′, at an alt. of 7,570 ft. above sea-level. The streets are wide, straight, and convenient, and the buildings are of good construction. It has several convents and a monastery; and the suburbs of the town are inhabited by Indians. Pop. 10,000.—Also a settlement of Mexico, in the state of Xalisco, consisting of some families of Spaniards, Mestizoes, and Indians, 118 m. NE of Guadalaxara.—Also a town of Spain, in the prov. and 12 m. WNW of Vittoria. Pop. 800.—Also a town in the prov. and 40 m. ENE of Lerida.

IBARRANGUELA, a town of Spain, in the prov. of Vixcaya, or Biscay, and partido of Marquina, on the shore of the bay of Biscay. Pop. 1,400. It is of great antiquity, and contains 3 churches and several convents.

IBARS (Saint), a small town of France, in the dep. of Ariège, 14 m. NW of Pamiers, on the r. bank of the Leze. Pop. 2,500.

IBBENBUREN, a small town of Prussia, in the prov. of Westphalia, reg. and 20 m. NNE of Munster, on the Plane. Pop. in 1837, 1,934. Linens are extensively woven here.

IBBETSON (Cape), a cape on the NW coast of Pitt's archipelago, in N lat. 54° 4′.

IBDES, a town of Spain, in the prov. and 12 m. SW of Calatayud, near the l. bank of the Mesa. Pop. 1,100.

IBEIT. See Obeid.

IBERA, or Caracaras, a large lake of S. America, in the La Plata prov. of Corrientes. It lies between the Parana and the Uraguay, under the 28th and 29th parallels of S lat. It is of a very irregular figure, but is estimated to cover 1,000 sq. m. Two rivers issue from its E extremity; one, flowing in a meandering course SW to the Parana, under the name of the Corrientes; the other, under that of Mirinay, or Ibera, joins the Uraguay. The lake is studded with islands which are covered with wood and stocked with deer and other game; vast quantities of wild fowl are seen on its surface; and fish abound in its waters, which are remarkably sweet and fresh. It is supposed to derive its waters by some underground drainage from the Parana, for no stream runs into it. At present it is hardly possible to explore any part of it from the prodigious quantity of aquatic plants and shrubs by which it is for the most part covered. A number of presidencies —as the missions are called since the expulsion of the Jesuits—are established on its shores.

IBERIA, a village in Marion co., in the state of Ohio, U. S., 54 m. N of Columbus.—Also a v. in Miller co., in Missouri.

IBERIA (New), a village of Louisiana, U. S., in the parish of St. Martin, beautifully situated on the W bank of the Teche, at the head of the schooner navigation, 170 m. W from New Orleans. Pop. 300.

IBERIAN MOUNTAINS, the name given to a presumed extensive mountain-chain of Spain, beginning in the NE of the kingdom, near the headstreams of the Ebro and the Pisuerga, and extending SSE to the sources of the Guadalquivir, and thence E to Cape St. Martin, on the SW. It separates the two Castiles from Aragon, and traverses, under different denominations the provinces of Valencia, Granada, and Murcia. If the two chains which strike off between the Douro and the Guadiana are included in this mountain-system, its length from Cape Roca near Lisbon to Cape St. Martin will be upwards of 500 m. The Sierra-de-Oca [alt. 5,436 ft.], in the prov. of Burgos, forms part of this range. The highest point is the Cabeça-de-Maria, in the Sierra-de-Alcaraz, with an elevation of 6,270 ft. It seems doubtful, however, whether there actually exists a continuous chain of mountains along the water-shed betwixt the Atlantic and Mediterranean in Spain; and the geological formation of many of the chains comprised in the Iberian system is opposed to the idea of their belonging to one great formation.

IBERIUS (St.), a parish on the S coast of co. Wexford, at the head of Lough Ta. Area 891 acres. Pop. 408.

IBERVILLE, a river or canal of Louisiana, U. S., one of those numerous outlets through which the overflowing waters of the Mississippi make their way during seasons of inundation. It leaves the Mississippi 14 m. below Baton-Rouge, and 20 m. below joins the Amite which flows into Lake Maurepas. In the season of low water its bed is always dry near the Mississippi. It is about 40 or 50 yds. wide.—Also a parish of Louisiana, in the lower part of the state. Area 350 sq. m. Pop. in 1840, 8,495; in 1850, 12,214. Its cap. is Plaquemine.

IBI, a town of Spain, in Valencia, 7 m. NNW of Xixona. Pop. 3,000, partly employed in woollen manufactures, and partly in oil and wine making.

IBIAPABA, or Hebiappaba, a cordillera of Brazil, running from W to E across the prov. of Ceara, and comprising the serras of Biapina, Boa-Vista, and Boritama. It contains iron and copper mines.

IBICUI, a river of Brazil, in the prov. of San-Pedro-do-Rio-Grande, which runs W, and falls into the Uruguay, after receiving the Taquarembo, Jaguari, Ibicui-Mirim, and Içaica.

IBILCIETA, a village of Spain, in the prov. and 27 m. ENE of Pampeluna, on the l. bank of the Salazar. Pop. 120.

IBIO-Y-SIERRA, a village of Spain, of modern foundation, in the prov. of Santander and partido of Cabrierniga, in the valley of the Cabezon-de-la-Sal. Pop. 735. It has a parish church and a custom-house, and carries on a considerable trade in cattle.

IBIRAPUITA, a river of Brazil, in the prov. of San-Pedro-do-Rio-Grande, which runs NNW, and enters the Ibicui on the l. bank.

IBITIPOCA, a settlement of Brazil, in the prov. of Minas-Geraes, 32 m. S of Villa-Rica. Pop. 1,200.

IBIZA. See Iviza.

IBN, or Iben, a village of the archd. of Austria, in the circle of the Inn, 12 m. E of Dittmaning.

IBO, one of the Querimba isles, off the coast of Mozambique, 120 m. S of Cape Delgado. Pop. 150. See also Aboh.

IBOINA, a province of Madagascar, to the N of Ambongo, intersected by the Betsiboka, which runs into the sea near Mojanga. It is a level district, thickly clothed with wood, and abounding in marshes.

IBOIPITINHI, a river of Brazil, which runs into the Atlantic, in S lat. 30° 19′, in the prov. of Santa-Catharina.

IBOS, a town of France, dep. of the Hautes-Pyrenees, 3 m. W of Faibes, on the Sardaine. Pop. 1,950.

IBRAHIM (Nahr), a river of Syria, in the pash. of Tripoli, which runs into the Mediterranean about 5 m. S of Djebnil, after a course of 15 m.

IBRAHIMLIK, a town of Persia, in the prov. of Irak-Arabi, on the Tigris, 80 m. N of Bagdad.

IBRAILA. See Brahilov.

IBRAIM, a river of Persia, which runs into the Persian gulf, 6 m. SW of Mina, after a course of 75 m.

IBRIDJI, a town of Turkey, in Romelia, in the sanj. and 18 m. N of Gallipoli.

IBRILLOS, a village of Spain, in the prov. and 36 m. WSW of Logrono. Pop. 300.

IBRIM, a town of Nubia, 12 m. SW of Dehr, and 120 m. S of Syene, supposed to be the ancient *Premnis*. Its citadel occupies the summit of a rock 300 ft. high, which shoots up from the edge of the river, and completely locks up the valley on the E bank. This place was destroyed by the Mamelukes on their retreat towards Dongola; but a new village has been built on the lower ground near the river.

IBROS-DEL-REY, a town of Spain, in Andalusia, in the prov. and 20 m. NNE of Jaen, and partido of Mancha Real. Pop. 1,038. It has a parish church, a bank, a custom-house, and an hospital. Mats and common cloth form the chief articles of local manufacture. Adjacent to this town is that of Ibros-del-Senorio, containing 354 inhabitants.

IBSLEY, a parish of Southamptonshire, 3 m. N of Ringwood. Area 870 acres. Pop. 325.

IBSTOCK, a parish of Leicestershire, 5 m. N of Market-Bosworth. Area 4,270 acres. Pop. 2,002.

IBU. See Aboh.

IBURG, a town of Hanover, in the principality of Osnabrück, on the river Colbeck, 10 m. SW of Osnabrück, and 30 m. NE of Munster. Pop. 841.

ICA. See Putumayo.

ICA, a district and town of Peru, skirting on the Pacific, under the parallel of 14° S. The soil is sandy, more especially towards the coast, where various desert tracks are found; but, in general, the district may be said to abound in every kind of fruit, grain, and pulse, and particularly in grapes. The wines and brandies manufactured here are carried to Lima, Panama, and Guayaquil, and to some of the mountainous provinces of the Sierra. Olive plantations are numerous; and corn and maize are abundantly raised.—The capital of the same name is situated in a valley watered by the Rio Ica, 25 m. SE of Pisco. It has several convents, and a college which formerly belonged to the Jesuits. It carries on a traffic in wine and brandy.

ICA (Rio-Grande-de), a river of Peru, in the district of Ica, 40 m. S of the Ica river. It rises in the Cordillera-de-Huambo, and flows SW to Palpa, a little below which it falls into the ocean.

ICABAQUA, a river of Brazil, in the prov. of San-Pedro-do-Rio-Grande, which runs NW, and enters the Uruguay.

ICACOS (Cape), a cape on the N coast of the island of Cuba, to the E of the bay of Matanzas.

ICANA, a river of Brazil, in the prov. of Para, which flows into the Rio-Negro 30 leagues below San-Gabriel.

IÇANNA, a river of Brazil, rising in the Serra-Tunuhy, and flowing into the Rio-Negro near Nossa-Senhora-da-Guia.

ICAQUE (Cape), a cape on the E coast of the island of Hayti, at the entrance of the great bay of Samana, in N lat. 19° 2′.

ICARATE, a river of Portuguese Guayana, which runs NNW, and enters the Utai.

ICATU, a town of Brazil, in the prov. of Maranhao, on the r. bank of the Monim, 30 m. ESE of San-Suez.

ICAZTEGUIETA, a village of Spain, in the prov. and 18 m. SSW of San-Sebastian, on the Oria. Pop. 150.

ICCOMBE, a parish of Worcestershire, 3 m. SSE of Stow-on-the-Wold. Area 970 acres. Pop. 162.

ICELAND, a large island belonging to Denmark, situated on the verge of the Arctic ocean, between the parallels of 63° 24′ and 66° 33′ N, and the meridians of 13° 28′ and 24° 31′ W. It is distant from the colonized part of Greenland 166 m., but from the nearest point of land only 95 m. From the Faroe isles it is distant 320 m., and from Drontheim in Norway 630 m. Its length from E to W is 280 m.; its mean breadth from N to S, 210 m. Its superficial extent is not exactly ascertained, but has been calculated, after deduction of the area of its numerous fiords, at 37,500 sq. m., with a pop. in 1840 of 57,100. Its form would be compact but for a long and nearly insular projection on its NW angle.

A country less inviting to the enterprise of adventurers than Iceland can scarcely be imagined. Surrounded by stormy seas,—its mountains covered with eternal snow,—its barren plains devastated by volcanic fire,—this island seems not to have been framed by Nature for the habitation of man. Its surface in general is mountainous; but in some districts, particularly those extending from the SW to the NW coasts nearly through the centre of the island, there are extensive plains covered with herbage near the sea, or where morasses have been formed. The highest mountains, some of them reaching an elevation of 6,000 ft., are on the E and W sides of the island. They are in groups; and those called *jokuls*, which are covered with perpetual snow, are chiefly, if not all, volcanic. Between the ridges of the mountains, in the vicinity of the coasts, are many beautiful valleys, in which the inhabitants have erected their dwellings; and some of the lower mountains are covered with a coarse grass which affords summer-pasturage to the cattle. About one-seventh of the whole island is capable of culture, but the pop. is extended only over a narrow tract along the coast. The interior chiefly consists of a vast inhospitable desert, traversed in various directions by barren mountains, between which stretch immense tracts of lava and volcanic sand, with here and there a small spot scantily covered with vegetation.

Bays, Lakes, and Rivers.] The coast, except towards the S, is much indented by arms of the sea; but, with the exception of Havens-fiord on the SW, there is scarcely a safe winter-harbour. The Isafiordr on the NW, the Hänafloi and Skaga-fiordr on the N; the Vapna-fiordr on the E, and the Breida-fiordr on the W, are the principal bays.—There are a considerable number of lakes in different parts of the island, some of which are of great extent. The principal are the Thingvallæ-vatn, My-vatn, and Fiske-vatn: the first of these is about 10 m. long, and from 3 to 4 m. broad. The My-vatn is never known to freeze. The Dinpalon, on the peninsula of Snäfialnäs, has high and low tides.—Some large rivers are formed by the melting of the snow on the jokuls; they have all a turbid appearance; some of them being so white as to resemble milk diluted with water. Several emit a fœtid smell, particularly where they issue from the snow. Besides these large rivers, there are numerous smaller brooks, the water of which is very transparent. Along almost all the S coast, eastward from Eyarbakki, where the great river Hvita empties itself into the sea, there are extensive shoals, formed, no doubt, by the deposition of the rivers proceeding from the great range of jokuls to the E of Mount Hecla.

Mountains.] The following is a table of the position, and altitude in Danish feet, of the principal mountains in I. The Danish foot is = 12·36 inches. The longitude is calculated from the meridian of Copenhagen.

	N lat.	W long.	Feet.
Oräfajökel, .	64° 00′ 48″	29° 20′ 16″	6,241

Geology.] The highest mountain the height of which has been ascertained is the Oräfäjokel, in N lat. 64°, alt. 6,405 ft. It is probable that few of the jokuls exceed 6,000 ft. Many of them are very extensive, forming long ridges,—a shape which, were it not for their characteristic covering of perpetual snow, would tend to lessen their apparent elevation to the eye. The height of the curve of congelation may be taken for I. at 2,829 ft. as a mean; and thus a tolerable idea of the heights of the mountains may be had, when an opportunity occurs of observing the snow-line on the jokuls. It appears that all the jokuls are of volcanic formation; in other words, that they are either active or extinct volcanoes. The greatest height of the other mountains, which are not volcanic, does not much exceed 2,000 ft. They are all of trap formation; and this does not appear to reach a great height in the N hemisphere; in Faroe, its greatest elevation appears to be somewhat above 3,000 ft. As far as has yet been discovered, the formations in Iceland are limited to the flœtz trap, volcanic, and alluvial; those of Faroe to the first and last. The flœtz trap of Greenland, that of Iceland, and of Faroe, are probably connected; and the two last may be supposed to rest on primitive rocks, as the Greenland formation has been ascertained to do. The beds of trap are inclined for the most part at a small angle to the horizon, dipping to the E of the meridian; in this respect they agree with those of Faroe. The beds consist chiefly of amygdaloid, containing zeolite, chalcedony, opal, quartz, aragonite, and calcareous spar. Greenstone occurs in veins, and it is in this form only that basalt has been observed in I. and Faroe. It also occurs in a columnar form. In the island of Vidöe, there are columns formed of tables several inches in thickness, and from 3 to 5 ft. in diam.; and in some instances, from decomposition, easily separable from each other. Beds of tufa of large dimensions are frequent. They occur most frequently among a class of rocks which have been distinguished by Sir George Mackenzie by the name submarine lavas. A very remarkable kind of mineralized wood is found on the mountain of Drapuhlid. In external appearance it cannot be distinguished from a mass of charcoal; yet it is very heavy. Pitchstone occurs at Houls, and on the W side of the mountain called Baula. The surturbrandt of I. has not been seen *in situ* by a mineralogist. It has a great resemblance to black oak found in lakes and rivers in many countries. The volcanic formation of I. is perhaps the most extensive in the world. Sir George Mackenzie distinguishes three formations which are ascribed to the action of internal heat. The oldest is that already described as submarine lavas, which resemble trap rocks more nearly both in position and structure than any other, and which he supposes to have flowed at the bottom of the sea. The next is a class of lavas to which he has given the name cavernous, from its containing numerous cavities, some of them very extensive: this is supposed to have been formed of rocks which have been subjected to subterraneous heat, but not removed from their original place. The last is the ordinary erupted lava, including ejected substances.—M. Sartorius von Waltershausen, in his Physico-geographical sketch of this island, says, "In the history of the development of our planet, there has doubtless been a time in which I. did not exist. Where now volcanoes, covered with solid glaciers, and mountains composed of alternate beds of tufa and of trap, rise above the regions of the clouds, there formerly the ocean only existed. At the bottom of the sea lay horizontal beds, formation above formation, even up to the chalk and the tertiary formations, together with their organic remains. By a gradual but unequal act of consolidation of the interior of the earth, while still in a state of igneous fusion, by an irregular addition of new parts, in the act of solidification to the inner side of the already rigid crust of the earth, or by other circumstances lying altogether beyond our knowledge, there were caused in the bottom of the sea very slow secular movements, upheavings and depressions, which produced, as a first result, waved rock-formations. The reaction from within outwards gradually became greater; a part of the bottom of the sea rose up in the form of a plateau, preserving the horizontal character of its beds, whilst another part, on the contrary, remained behind; great flexures must consequently have taken place, and a bursting of the crust became inevitable. The submarine volcanic activity now first begins; masses of water are engulfed by larger or smaller rents, and in the deep become converted into steam, which, in confined spaces, exerts its immense elastic force. Thousands of eruptions produced thousands of different beds of trap, of palagonite, and of amygdaloidal tufa, and equally numerous instantaneous risings, and contributed, during immense intervals of time, towards the formation of the island. From this mode of explanation we may understand how the innumerable varieties of dissimilar trap and tufa have arisen, how the later formations can contain fragments of the former ones, and how the veins cross certain beds of palagonite, without our being constrained to the conclusion that a universal covering of palagonite forms the base of the whole island, whilst we cannot comprehend how this palagonite has itself arisen, and whence its materials are derived. After the beds of tufa, together with the different trap formations, had assumed a certain extension, the trachytic rocks of the same kind broke out here and there into veins, through the already extensive volcanic covering of the bottom of the sea, in the very same way as the traps themselves had done. These trachytic veins passed through the traps and tufas with which they met, and caused in them new instantaneous risings. The trachytes were again followed by other trap injections, which passed through them, raised them up, and spread through them in vein-shaped lateral ramifications. Thus simple is the explanation of the phenomena which we have formerly described among traps and trachytes, and their mutual injections into each other. After this alternate process had continued for many thousand years, Iceland had again received a new and considerable increase, and it began to assume a greater size. Plants gradually covered the surface of the island, the valleys became covered with grass and moss, and there were also found extensive forests, which, as yet, had naught to fear from the stroke of the axe. The smaller hills were not yet covered with glaciers, and thus the climate, favoured by the superior influence of the ocean, was milder than in our days. Whole generations of trees arose and perished; they were the silent witnesses of countless new eruptions, which broke out either whilst under the sea, or after the mainland had been formed, accompanied by earthquakes, and by showers of scoria, ashes, and incandescent lavas. The forests sank under the might of the volcano, like Pompeii and Herculaneum, they were buried beneath showers of ashes, and sometimes sunk under the sea by secular movements, but they afterwards again rose up. At present their remains are frequently found covered by huge mountain masses, and appear as surturbrand in the masses of tufa, and enable geologists to discover a series of revolutions, in which one supplants the other, but all of which have more or less contributed their share towards the formation of the island. From the northerly situation of I. it could not happen otherwise than that the sea should begin to freeze on the shores of the very gradually increasing island, especially in the fiords, which now lie dry, in the form of narrow valleys, and that next spring, during the breaking up and drifting of the ice, there should be formed those striæ and polished surfaces which have been raised by succeeding risings to the height of 2,000 or 3,000 ft., and which are erroneously taken for glacial striæ. At the time of the first formation of I. the formation of a glacier was quite impossible; this first occurred in more recent times, after not merely individual points, but whole ranges of mountains, had reached a height far above the snow-line."

Hot springs.] The Geysers of I. are noticed in a distinct article. The most curious of the springs in I. is that called Tunguhver, in the valley of Reckholt. Among a great number of boiling springs, are two cavities within a yard of each other, from which the water spouts alternately. While from one the water is thrown about ten feet high in a narrow jet, the other cavity is full of water boiling violently; this jet continues about 4 minutes, and then subsides, when the water from the other immediately rises in a thicker column to the height of 3 or 4 ft.; this continues about 3 minutes, when it sinks and the other rises; and so on alternately. It is difficult to imagine the structure of the cavities which occasion this irregular alteration, nor would it be easy to construct a piece of mechanism, of which steam is the prime mover, to imitate the phenomena. In the middle of the river, which runs through the valley of Reckholt, is a small rock, from the top of which hot springs issue. At Reckholt is a bath, which was constructed 600 years ago by the famous Snorro Sturleson. It is 14 ft. in diam., and 6 ft. deep, being supplied with hot water from a spring about 100 yds. distant, by means of a covered conduit. There was also a spring of cold water brought to it, so that any desired temp. might be obtained.

Climate.] Though this island occupies a more southerly latitude, and presents on the whole a much greater extent of vegetation than the adjacent continent, it has nevertheless been unfortunately doomed to bear the repulsive name of *Iceland*, while the other has been favoured with the pleasing and animating appellation of *Greenland*. The imposition of these names was wholly arbitrary, according to the accidental circumstances of the individuals with whom they originated. Flocke, the third adventurer to Iceland, happening to ascend one of the mountains in the western peninsula, discovered a bay completely

filled with Greenland ice, and therefore thought himself entitled to change the name given to the island by his predecessors, to that which it has ever since retained. The consequence has been, that the generality of those who inhabit more genial climes, have viewed it as equally inhospitable with the most rigid of the polar regions,—considering the natives as exposed to all the benumbing influence of relentless frosts, and perpetually immersed in ice or snow. This, however, is far from being the case. The climate is perhaps more unsettled, but it is very seldom that the cold is more intense than in the S of Scandinavia. "At first," says Dr. Henderson, "I confess I shuddered at the idea of spending a winter in Iceland; but what was my surprise, when I found the temp. of the atmosphere not only greater than that of the preceding winter in Denmark, but equal to that of the mildest I have lived either in Denmark or Sweden. In the month of November, the mercury in Fahrenheit's therm. did not sink lower than 20°, and it was nearly as often above the freezing point as below it. On the 6th of December, with clear weather and a light breeze from the ENE, it sunk to 8° 30′; after which, especially towards the end of the year, the weather became remarkably mild, and continued in this state till near the middle of Jan., the therm. for the most part between 34° and 40°. On the 12th of April it fell to 19°, but otherwise kept varying between 32° and 52°. About the middle of May the atmosphere grew colder, occasioned most probably by the approach of some masses of Greenland ice. It must at the same time be allowed, that the winter of 1814, [that which Dr. Henderson passed in Iceland,] as well as that which immediately preceded it, was considered by the Icelanders as uncommonly mild." At Reikiavig, in N lat. 64° 9′, W long. of Copenhagen 34° 34′, the mean temp. from 1828 to 1834, in degrees of Reaumur's scale, and compared with the temp. for the same period at Montreal, was as follows:

	Reikiavig.	Montreal.
January,	0°04	—7°69
February,	—1.55	—5.46
March,	—0.50	—0.29
April,	2.21	6.65
May,	5.34	12.83
June,	8.47	16.59
July,	10.08	18.48
August,	8.92	17.73
September,	6.28	13.02
October,	2.59	7.42
November,	—0.37	1 23
December,	—0.53	—4.96
	3.42	6.30

In the course of the last cent., the winters of 1717, 1742, 1784, and 1792, were excessively cold; and the sea itself was frozen to such an extent, that a communication was kept up for some time on the ice between the coasts on some of the principal bays, as also between the different islands in the Breidafiorden. The keenest frost ever experienced in I. was in 1348, when the ocean was congealed all round the island, so as to admit of the inhabitants riding on horseback from one promontory to another on the ice.—The longest day of summer, and the longest night of winter, last each of them a week in the extreme N.—The *auroræ boreales*, or northern lights, are here seen in all their brilliancy and grandeur.

Productions.] I. presents nothing remarkable to the zoologist. Of indigenous quadrupeds the number must be limited to the fox, of which there are two varieties. The rein-deer, the rat, and the mouse, have all been imported; as well as the dog, the cat, the goat, the sheep, the ox, and the horse. Polar bears are occasional visitors, coming from the ice which takes ground on the N and E coasts during winter. The skins of the foxes, particularly those of the *Canis fuligenis*, or blue fox, furnish a valuable article of commerce. The rein-deer are wild, and are derived from an original stock of three, being all that survived of some that were sent from Norway in 1770. Instead of being serviceable, these animals often destroy the grass which is preserved for hay. Several species of seals frequent the shores in considerable numbers; but they are not much sought after. Whales are seldom seen on the coasts of I.; but that variety named in Orkney "the ca'ing whale," appears frequently in large shoals.—The cinerous eagle, or crane, is very common. The I. falcon, formerly so much prized, is now seldom seen, though it has not for many years been molested. Ravens occur in great numbers near every habitation on the coast, where they watch for the offal of fish; they breed in the cliffs at a considerable distance from the shores. The snow-flake, wheat-ear, white wagtail, golden plover, snipe, and whimbril, together with the ptarmigan, are the other principal land-birds of I. Every kind of water-fowl common to northern latitudes is found on the coasts of I. and on the lakes; swans frequent the lakes and swamps in great numbers. Of all the varieties of birds which breed in this country, the eider duck is, from its habits and usefulness, the most remarkable and valuable.—Mr. Hooker has furnished us with an extensive botanical catalogue, to which we refer such of our readers as desire particular information regarding the vegetable productions of this remote island. The birch is the only tree which withstands the rigour of an arctic winter; but its growth is limited, in the most favourable situations, to 5 or 6 feet. At Eyeford, in Nordland, it is said to attain to 20 feet. The grasses for sheep and cattle are tolerably abundant, and keep both horses and horned cattle in good condition during the summer months. At Husavik potatoes, cabbages, and greens are reared, and a garden here presents beds of parsnips, turnips, carrots, beans, pease, parsley, salad, and onions.—Among the various mineral productions of this country, are zeolite and obsidian, malachite, crystals, agates, surturbrandt—a kind of petrified wood which supplies the place of coal—vitriol, and iron. At Krysuvick in the S, and at Namafell in the N, are great natural chemical laboratories, in which we almost see Nature in the act of forming sulphur, alum, silica, lime, oxide of iron, iron-pyrites, gypsum, basalt, lava, and porphyry.

Population.] The pop. of I. was estimated in 1703 at 50,444; in 1770, at 46,201; in 1801, at 47,207; in 1804, at 46,349; in 1840, at 57,094, in 8387 families. Of this later pop. 25,280 were under 20 years of age; 22,890 from 20 to 50; and 8030 above 50 years of age. The average increase of the pop. in $5\frac{3}{4}$ years, from February 2, 1835, to November 2, 1840, was 0.33 per cent. yearly. The pop. on 1st February 1847 was estimated at 58,300. The following table of the pop. in 1801 was taken from the register of the bishop:—

Districts.	Farms.	Families.	Priests.	Total.
I. SOUTHERN AMT.				
Oster-Skaptafell syssel,	53	126	7	911
Wester ditto,	133	248	8	1,539
Rangarvalle and Westmann isles,	374	664	14	4,187
Arnäs syssel,	418	709	21	4,625
Gullbringu and Kiosar syssels,	256	704	13	4,015
Borgarfiord syssel,	227	285	9	1,882
II. WESTERN AMT.				
Myra and Hnappadale syssels,	180	235	9	1,478
Snæfellsnäs syssel,	270	652	10	3,541
Dala syssel,	181	231	7	1,592
Bardastrand syssel,	203	374	10	2,493
Wester Isafiord syssel,	123	261	7	1,850
Norder Isafiord syssel,	170	305	7	2,037
Stranda syssel,	118	150	6	982

III. NORTHERN AND EASTERN AMTS.				
Hunavatn syssel,	375	433	20	2,880
Skagafiord syssel,	412	492	20	3,141
Eyafiord syssel,	448	535	17	3,453
Norder syssel,	387	451	23	3,002
Norder-Mula syssel	217	267	11	1,762
Suder-Mula syssel,	211	279	12	1,837
Total,	4,761	7,401	231	47,207

With respect to personal appearance, the Icelanders are tall, of a frank open countenance, a florid complexion, and yellow flaxen hair. The women are shorter in proportion and more inclined to corpulency than the men; but many of them would look handsome in a modern European dress. In some districts the men suffer the beard to grow. In youth, both sexes are generally of a weakly habit of body, the necessary consequence of want of proper exercise and poorness of living; yet it is surprising what hardships they are capable of enduring in after life. Owing to their want of personal cleanliness, they are generally exposed to cutaneous diseases; they are also frequently attacked with obstinate coughs and pulmonary complaints, by which, perhaps, more are carried off annually than by any other disease. An extraordinary proportion of children die before their tenth year. The predominant character of the Icelander is that of unsuspecting frankness, pious contentment, and a steady liveliness of temperament, combined with a strength of intellect and acuteness of mind seldom met with in other parts of the world. They are also noted for the unconquerable attachment which they feel to their native island. With all their privations, and exposed as they are to numerous dangers from the operations of physical causes, they seem thoroughly to confide in one of their common proverbs—"Iceland is the best land on which the sun shines;" and the most popular entertainment of all classes consists in reciting poetical legends relating to the history of their country and the deeds of their ancestors. In the persons, habits, and customs of the present inhabitants of I., we are furnished with a faithful picture of those exhibited by their Scandinavian ancestors; they adhere rigidly to whatever has once been adopted as a national custom; and the few innovations that have been introduced by foreigners, are scarcely visible beyond the immediate vicinity of their factories.

Industry.] There are in fact only two seasons in I.—summer and winter; the former of which, short and precarious as it is, the natives must employ with assiduity, in order to make provision for the latter. When the snow leaves the ground, the females spread the manure which had lain on the *tun* in heaps all winter, and collect any stones that may have gathered on it; such of the men as are not employed in the fishery cut turf, both for fuel and a covering to their houses, and make charcoal for the use of the smithy. When the young cattle have been turned out on the mountains, the care of the cows and sheep is left to the female part of the family, who milk them twice a-day, make butter, cheese, &c., and repair in companies about the middle of summer, to collect the *Lichen Icelandicus*, in the uninhabited parts of the country. They are generally accompanied by some of the men; and the few weeks they spend in this employment are regarded as the happiest of the whole year. They live in tents, which they remove from place to place, according to the greater or less abundance of the moss. At this time the body of the men are either out at the fresh water fishing, or proceeding in cavalcades to the factories, where they barter their home-productions against articles of necessary use for the winter. The most important branch of rural labour in I. is the haymaking. About the middle of July, the peasant begins to cut down the grass of the *tun*, which is immediately gathered to dry, and after having been turned once or twice, is conveyed home on horseback to the yard, where it is made up into stacks. Hay-harvest being over, the sheep and cattle that had been out all summer on the mountains are collected; the houses are put in a state of repair for the winter; the wood needed for domestic purposes is brought home; the turf also is taken in; and the labours of the season conclude with the removal of the manure to different parts of the farm. The number of sheep on the island in 1839 was estimated at 500,000; of cattle, from 36,000 to 40,000; of horses, from 50,000 to 60,000. During the winter, the care of the cattle and sheep devolves entirely on the men. The domestic employments of this season are multiplied and various. The men are occupied in fabricating necessary implements of iron, copper, wood, &c. Some of them are wonderfully expert as silversmiths—their work, at times, in this branch being only distinguishable from that done in Copenhagen by the absence of the stamp. They also prepare hides for shoes; make ropes of hair or wool; and full or scour the woollen stuffs. In some parts of the island, the men spin and knit like the women, and a few of them weave. Besides preparing the food, the females employ their time in spinning, which is most commonly done with the spindle and distaff; knitting stockings, mittens, shirts, &c.; and embroidering bed-covers, saddle-cloths, and cushions, which they execute with much taste, interspersing flowers and figures of various colours. Upwards of 200,000 pairs of knitted stockings, and 300,000 mittens, are annually exported from this island.—The tenure of land is peculiar in I., and it is measured, as of old in England, by value, and not extent—the word *hundred* being used to signify any quantity which can support a horse, a cow, and 6 sheep. The ordinary size of estates are 20 hundreds, and are reckoned of the value of from 300 to 400 specie dollars. "The landlord's rights are very limited; for when once in possession, the tenant cannot be ejected, unless a farm of equal value be provided for him, as long as he continues regular in the payment of his rent; nor is the landlord allowed to raise the rent when he pleases, as on a dispute about the increased value of the land, the decision is referred to the *hreppstiore*, and two other competent judges." The rent of the Crown lands is generally calculated at about 5 per cent. of the value of the estate, besides an annual payment for the cattle belonging to the estate. "On the other hand, a remnant of feudalism appears in the obligation of a tenant who holds land on the coast, to serve in his landlord's fishing-boat throughout the season. Though he receives his share of what is caught, the tenant is often injured thereby, particularly when in possession of a boat himself. This custom is so much at variance with all their others, that it can be only ascribed to the scantiness of population, which makes it a matter of difficulty to man all the vessels built for fishing."—[*Dillon.*] It is understood, however, that while tenancy is usually for life, provided the tenant does not injure the farm, yet he may quit whenever he pleases, on 6 months' notice. In 1695, the proportion of estates belonging to the Crown, the church, and freehold, was respectively 718, 640, and 1,847. The estimated number of farms was 4,058, they are now above 6,000. The wages of a man-servant are from 6 to 8 rix-dollars per annum in money, and 12 yards of wad or wadmal, besides their food.

Fisheries.] It is from the sea, however, that the Icelanders derive their chief subsistence and profit. Cod is very plentiful on the coast; and formerly fisheries off the coast of I. were prosecuted by the

British and French with great success. From the 3d of February to the 12th of May is what the Icelanders call *ver-tima* or fishing-season; at which period vast numbers of the inhabitants flock to the S and W shores, from the districts on the N and E, where the fishing is generally impracticable at this time owing to the bays and creeks being filled with polar ice. They provide themselves with a complete sheep-skin dress, consisting of the *brok*, in the shape of small clothes and stockings all in one piece; the *stack*, or large jacket, which falls down, and is tied close over the brok, so as to prevent the water from getting in between them; and tight-fitting shoes of the same materials, below which are coarse warm woollen stockings for greater warmth. The principal fish they catch is cod, which is laid out on the cliffs, or on flat stones on the beach, dried in the sun, and afterwards stacked upon the beach. Sometimes the fish are hung up and dried in houses, called *hiallar*, which are so constructed that the wind has a free passage through them, while they are sufficiently covered to keep out the rain. The ling, skate, hallibut, flounder, and the cat-fish, are common, and are dried for winter use. Herrings are taken on the N coast; but though vast shoals of them frequent the bays, this branch of the fishery is not much attended to. "The fishery is principally carried on in the W, and is sufficiently extensive to give employment to many farmers and labourers from Nordland and Osterland, independent of the regular *soe-bondè*, or sea-peasants. Both Breidè and Faxè fiords swarm with fish, but altogether the N coast of Gulbringè syssell, from Havnifiord to Kieblivik, is the most productive part, and it is consequently crowded from March to May with boats from all parts. Immediately on their arrival at the fishing-places, the peasants engage to serve in the boats, and the owners select out of each crew a *formadr*, whose business it is to summon the men when the weather admits of their going out, and who commands at sea. It is usual for the peasants to bring but little provisions along with them, as, while they remain fishing, their principal food consists of the heads of the fish, which are separated from the bodies immediately on landing them. In places like Kieblivik, where the merchants are the chief owners of boats, they have built several houses capable of containing from 24 to 50 men each. They are long stone hovels, with berths along the walls, and the same distribution in the loft. Though the wind finds admission in every corner through the loose stones, the men, though drenched by remaining at sea the whole day, seem no way affected by the cold and wet, and are satisfied with a blanket and a little hay for bedding. The boats continue at sea 12 and 18 hours together when the weather is at all favourable, and, during that time, the crews do not taste a particle of food. They merely provide themselves with a small keg of *vallè*,—a kind of fermented whey, which they find well-adapted for cutting the thirst."—[*Dillon.*]

Education and language.] The three last centuries have produced many learned Icelanders; and at the present day, I. can boast of sons who have risen to eminence in the different departments of literature. Such young Icelanders as study at the university of Copenhagen are generally distinguished above their fellow-students by their quickness of apprehension, unwearied application, and insatiable thirst for knowledge. On inquiry into the state of mental cultivation in I., it is not so much the literary fame of a few select individuals, who have enjoyed superior advantages, which strikes our attention, as the universal diffusion of the general principles of knowledge among its inhabitants. Though there be only *one* school in Iceland, and that solitary school exclusively designed for the education of such as are afterwards to fill offices in church or state; yet it is exceedingly rare to meet with a boy or girl, who has attained the age of 9 or 10 years, that cannot read and write with ease. It is even said that a priest may refuse to perform the marriage-ceremony if any of the parties cannot read. We frequently meet in I. with persons who both write and speak Latin. The better educated individuals speak Danish.—The Icelandic is properly the ancient unaltered language of the two principal Scandinavian dialects—the Danish and the Swedish. "One of the few cases where the phenomena of rate have been studied with due attention is in the evolution of the three languages of Denmark, Norway, and Sweden, out of the Icelandic. What does this tell us? The last has altered so slowly that a modern Icelander can read the oldest works of his language. In Sweden, however, the speech has altered. So it has in Denmark, whilst both these languages are unintelligible to the Icelander, and *vice versa*. As to their respective changes, Petersen shows that the Danish was always about a hundred years forwarder than the Swedish, having attained that point at (say) 1200, which the Swedish did not reach till 1300. Both, however, changed, and that at a uniform rate, the Danish having, as it were, the start of a century. The Norwegian, however, comported itself differently. Until the Reformation it hardly changed at all, less than the stationary Icelandic itself. Fifty years, however, of sudden and rapid transformation brought it at once to the stage which the Danish had been three hundred years in reaching. How many times must the observation of such phenomena be multiplied before we can strike an average as to the rate of change in languages, creeds, and politics?" [*Latham.*]

Ecclesiastical establishment.] The form and ceremonies of the Icelandic church are strictly Lutheran, though from the poverty of the people, their churches are less elegant, and a greater degree of simplicity pervades their worship, than in other Lutheran countries. The total number of parishes in I. amounts to 184; but as many of them are of vast extent, it has been found necessary in some parts to build two or three churches in a parish, which has increased the number of churches to 305. Some of the priests have chaplains to assist them in the performance of public duty. They are all natives of the island, and are maintained partly from glebe lands, partly from certain tithes raised among the peasants, according to the value of the land they occupy. The pastor can also claim a day's work yearly, and the privilege of having a lamb kept for him from October to the following April by each farmer. This, with a small offering at Christmas, and a few trifling fees for baptism, confirmation, marriage, and burial, constitute the whole of his stipend. As, however, their ecclesiastical dues alone would not suffice to support life, clergymen labour like their neighbours, and depend upon their cattle like other farmers. Although some few of the priesthood are relieved from absolutely labouring themselves, by holding the best livings, by far the greater part are rather below than above the peasantry in pecuniary circumstances; and were it by money that the respect for the clergy was kept up, they would long ago have sunk below the level of the people. It is, however, to their education that they owe the deference at all times shown them; and the priest, who has during the week-days been employed like a simple peasant, rises to his proper position on Sunday, and is as much respected, and probably more beloved by his parishioners than his brethren in countries where the church and wealth

go together. The provision made for their support is exceedingly scanty. The richest living on the island does not produce 200 rix-dollars = £42 sterling; 20 or 30 rix-dollars are the stipend annexed to many of the parishes; and there are some in which it is even as low as 5!

Government.] The circumstances of I. have undergone little or no alteration, either in the laws or in the form of government which was established 600 years ago. The supreme authority is intrusted to an officer who is appointed by his Danish majesty, with the title of *stiftamtamn*, and who is bound to fill this office for the space of 5 years. Under the *stiftamtamn*, each of the four provinces into which the island is divided is governed by an *amtaman* or bailiff, whose duties are the same as those of his superior. Each province is divided into *syssels* or shires, over which *sysselmen* preside. These officers collect the taxes, and are paid by a rate out of the amount collected. They hold courts of law; and, on the whole, their duty is in almost every respect the same as that of sheriffs in Scotland. In each parish there is an officer called *hreppstiore*, whose chief business is to attend to the concerns of the poor, and to assist the sysselman in the preservation of the public peace. For the decision of petty disputes among the people, there is a certain number of persons in each parish, denominated *forlikunarma*, who may be called official arbiters. All cases, whether civil or criminal, are first brought before the sysselman, who holds a court once a-year, or oftener if necessary. In criminal cases, and in public suits, the amtaman orders the trial, after previous examination on behalf of the Crown. From the inferior court there is an appeal to the high court of justice, which sits six times in the year, at Reykiavik; and from this court there is an appeal to the superior courts at Copenhagen.—The punishment of petty offences is a fine and whipping. Sheep-stealing is the most common offence. Murder is exceedingly rare; and except in cases which subject the criminal to capital punishment, he is not confined before the time of trial. Those who are to be punished with hard labour are sent to Copenhagen.—With regard to property, no entail of land is allowed; and the law of descent excludes primogeniture. When a proprietor dies, his lands are valued and divided into shares, of which the eldest son has the choice. A daughter receives a share equivalent to half the portion of a son. A wife surviving her husband possesses half of his estate.—The public taxes are so inconsiderable that they are not sufficient to defray the expenses of the civil establishment. The taxes for the maintenance of the poor are much more severe on the inhabitants than those levied for the public.—Money-currency is very scarce in I.; accounts are paid in dried fish, butter, oil, tallow, or in very coarse woollen stuffs called *wadmal*. Twenty-eight fishes of 2 lbs. weight each, or 30 yds. of wadmal, are equal in value to one thaler or dollar.—Reykiavik, the capital of I., which about fifty years ago consisted merely of a few houses, has lately risen into some notice, having become the residence of the governor, the episcopal see, the seat of the supreme court of judicature, and the principal mercantile station on the island. It is situated on the S side of a considerable inlet of the Faxé-fiorden, upon low marshy ground, between two eminences. It is rather a singular coincidence, that the capital of I. should, as it were by mere accident, happen to be built on the very spot where Ingolf, the first of the Norwegian emigrants that settled on the island, fixed his habitation. In conformity to a superstitious practice common in those days, that adventurer, on approaching the E coast, threw the wooden pillars of his former habitation into the sea, vowing he would settle wherever they were cast on shore. After some time, his slaves, whom he sent in search of them, found them driven up at this place; and Ingolf, true to his vow, fixed his abode at Reykiavik, though reproached by his own people for preferring so rugged and barren a spot to the fine districts they had passed on their way from the east.

History.] Iceland was discovered about A. D. 860, by a Norwegian pirate, named Nadodr, who was accidentally driven upon the coast while on a voyage to the Faroe islands, and who gave to it the name of SNIOLAND. A few years after, Gardar, a Swede, succeeded in circumnavigating the island, and gave it the name of GARDARSHOLM. Its present name was given to it by Flocke, a famous pirate, who explored most of the S and W coasts of this island. The country was colonized in 870, by two Norwegian noblemen, Ingulf and Hiorleif. It is asserted in some of the Icelandic sagas, that there were actual settlements in the island before this period, and that as early as the 5th cent., I. had been colonized from Scotland and Ireland; but this seems improbable. In the *Landnama Bok*—which is among the earliest of the Icelandic historical records—it is stated, however, that among other things, writings in the Irish language were found. The Norwegian colony settled on the SW part of the island, on the spot where Reikiavig now stands. In the course of half-a-century, the coasts of this remote country were well-peopled; and in the *Landnama Bok*, which contains minute details of the spreading of the colonies, we find several names of Scotch and Irish families who came over and settled about this period. Frederick, a bishop from Saxony, began to preach the Christian doctrines in I. in 981; and Islief, the first bishop of Skalholt, was consecrated in 1057. In 1261, the whole of I., with the exception of the eastern prov., submitted to Haco VI., king of Norway. A few years afterwards the total subjection of the Icelanders was completed, but under conditions which still maintained their rights and their commerce. In 1280, Magnus, the successor of Haco, gave to the island a code of laws, well-known by the title of *Ionsbok*, which was no more than a revised copy of the ancient laws. The last political change which occurs in the history of I., was its transference from Norway to the Crown of Denmark in 1381. In 1482, a pestilence carried off nearly two-thirds of the population; and another broke out towards the close of that cent. In addition to these calamities, the Icelanders were at this period exposed to the incursions of pirates, who plundered their property, committing frequent murders, and carrying off the inhabitants. From the 11th to the middle of the 14th cent., the sciences were successfully and ardently cultivated in this obscure corner of Europe, and learned Icelanders were found in the service of foreign courts. The poetry of the Troubadours was introduced into I. in the 12th cent.; but towards the 14th cent. the arts and sciences fell into decay, with the further loss of national independence under the Danish dominion. The decline of literature, and of the national character of the Icelanders, however, may be traced to more remote causes. Europe had now begun to emerge from darkness and barbarity, and the continental nations were gradually advancing in learning; the poets and historians of I. were therefore received with less distinction. The reformation of religion, and the introduction of printing, about 1530, was the dawn of renewed life to I.; and in 1537, the Protestant doctrines were universally embraced. The schools were now re-established; but so great had been the depression of learning, that it was found difficult at first to procure men of sufficient knowledge to superintend them.

The annals of I. during the 17th cent. are destitute of any important events. In the early part of this period, piratical incursions of the French, British, and even Algerines, were not unfrequent. Of the latter, a large body landed on various parts of the southern coast, and on the Wesmann islands, and carried 400 of the natives into captivity. This century also disgraces I. by the superstitious enormities which were practised. A belief in necromancy was so prevalent, and held in such horror, that, within the period of 60 years, 20 persons perished in the flames. The commencement of the 18th cent. was marked by the destruction of 16,000 persons by the small-pox. From 1753 to 1759, the seasons were so inclement, that famine carried off 10,000 people, besides vast numbers of cattle. In 1783, the most terrible volcanic eruption on record broke out from the neighbourhood of the mountain Skaptaa, which for more than a year showered ashes on the island: cattle, sheep, and horses were destroyed, and a famine ensued. The small-pox again appeared, and in a few years 11,000 people perished. On the breaking out of the war between Great Britain and Denmark, in 1807, the Icelanders were greatly apprehensive of absolute starvation, from the want of those necessary supplies which they were accustomed to receive from the mother-country. On considering the case, however, licenses were humanely granted by the British government to Danish vessels to proceed to I., under the condition of their touching at the port of Leith, both when outward-bound and on their passage home. By this arrangement the inhabitants were regularly supplied; and though the act of piracy committed by a Captain Gilpin in 1808, who robbed the treasury of at least 30,000 rix-dollars, as well as the usurpation of Iorgensen the following year, necessarily tended to excite fresh alarms in their minds, yet they were soon relieved by an order issued by the British cabinet, prohibiting all acts of hostility against I. and the rest of the Danish colonies in the Arctic seas, and taking the inhabitants and their pro

perty under the special protection of Great Britain. Since 1815, a new regulation, issued by the court of Denmark, allows British ships to proceed to I., on condition of their procuring a special license from Copenhagen.

Authorities.] We have abundance of fabulous accounts of this island. The best sources of information we possess regarding it are the *Letters of Sir Joseph Banks; Dr. Hooker's Tour*, published in 1813; *Dr. Henderson's Journal*; and Dr. Glicmanni's Account, published in Treuttel and Wurtz's *Cabinet of Modern Foreign Voyages and Travels*, vol. ii., 1826. We may also mention M. Stepensen's *Island i del attende Aarhundrede, &c.* Copenhagen, 1808; *Barrow's Visit to Iceland in* 1834. London, 1835, 8vo; and the Hon. Arthur Dillon's *Winter in Iceland and Lapland.* London, 1840.—A very magnificent map of Iceland, in 4 sheets, has been recently published, under the authority of the Danish government.

ICHABOE, a small island off the SE coast of Africa, in S lat. 26° 19′, E long. 14° 50′, about 4 days' sail from the Cape. It is about 2½ m. from the mainland; and when approached by sea, has the appearance of a promontory. It is in the form of an egg, and measures only 1,200 yds. in circumf. An American trader having observed the interest which the importation of Peruvian guano was creating in Britain, as well as the high prices which it readily commanded in the market, was reminded of the circumstance that he had seen large deposits of a similar substance on the coast of Africa, and published a short narrative of his observations in an American journal. This account fell under the notice of an English captain, who transmitted it to his friends in Liverpool, and by them an expedition of, we believe, 5 ships, was fitted out in the close of 1842, for the purpose of being loaded with African guano for the British market. The instructions, however, which were given to the masters of these ships must have been of an imperfect kind, for 4 of them returned without having succeeded in the object of their search; the fifth, viz., the Ann of Bristol, was nearly in the same position, when accident revealed the El Dorado which was destined to exert such a potent influence in fertilizing our soil. The island, and two reefs which join the continent, form a bay of about 1,000 acres in area, the entrance into which is through a break in the reefs. The whole has probably once formed part of the continent. The guano has been formed by the dung and decomposition of the seal, the penguin, and the gannet, and must have been thousands of years accumulating. When first discovered, the deposit commenced about 6 ft. above high water, and gradually rose to 40 ft. towards the centre of the islet. At the depth of 40 ft. there were abundance of eggs and skins of gannets and penguins, in a state of great preservation; there were no stones, sand, or sea-weeds, but from the rocks upward an entire bed of guano about 7½ per cent. stronger than the Peruvian. When the guano was dug and bagged, it was taken to the beach, where stages were erected over the rocks to the boats, at the outer edge of the surf, by means of which it was taken to the ships. These stages were upwards of 300 ft. in length, and formed by erecting shears, and connecting the shears with anchors and cables; a platform was formed by spars and planks, and upon this the men carried the guano on their backs when the weather permitted, which was not above 4 days a-week. The guano was so firmly imbedded that it required to be dug out by the pick-axe. Ten men could lift about 15 tons per day, but the operation was a very laborious one, and the sun was so powerful that few of the crews escaped without having their faces and hands blistered. The trip to or from the island extended to from 55 to 70 days, or including the time necessary to take in a cargo, the voyage out and home extended to from 6 to 7 months. Captain Farr, who first visited I., estimated the guano deposit to extend 1,000 ft. in length, by 500 ft. in breadth, with an average depth of 35 ft.; and to contain, perhaps, from 700,000 to 800,000 tons. We believe this supply, and that on Halifax, Penguin, Seal, and Possession islands, in this quarter, have been exhausted in fertilizing the soil of Great Britain and her dependencies; but it is to be hoped that vast stores of guano yet exist, which have hitherto never been disturbed by man. On this subject the *South African Commercial Advertiser* says: "On the rocky headlands, or on the rocky and unmolested islands on the W coast, both within and beyond the boundary of this colony, where the sea-fowl, from a vast expanse of open ocean, come to breed, enormous masses of this manure have recently been discovered; and it seems probable that all the way up the coast into the gulf of Guinea, and beyond it, similar treasures await the agriculture of the world, by which means the sea will render back to the land much more matter fitted to form organized,— that is, vegetable and animal substances,—than the rivers carry down into its depths, or the fleets of the nations deposit in their course over its surface." We do not know that these expectations have yet been realized.

ICHALCHA, an island of Russian America, in Prince William's sound, in N lat. 60° 30′, and containing the harbour of Helena and Constantine.

ICHAWUR, a town of Hindostan, in the prov. of Ajmir, 32 m. SW of Bhopal.

ICHENHAUSEN, a town of Bavaria, in the circle of the Upper Danube, 6 m. SSE of Gunzburg, and 30 m. W of Augsburg, on the r. bank of the Gunz. Pop. 2,090. It has a castle.

ICHENHEIM, a village of Baden, in the circle of the Middle Rhine, bail. and 6 m. WSW of Offenburg, and 9 m. SSE of Strasburg, about 1½ m. from the Rhine. Pop. 1,056. It has a church.

ICHIM, or Iskim, a town of Turkey in Europe, in Albania, in the sanjak of Elbassan, 15 m. NNW of Croya, and 30 m. SSE of Scutari. It is situated half-way up a mountain, in the midst of olive plantations. Its inhabitants are Albanian Mussulmans. In the vicinity is a valley, watered by a sulphureous stream.

ICHIM, or Ishim, a river of Russia in Asia, which has its source in a mountainous district near the central part of the gov. of Omsk, in N lat. 50° 35′, and E long. 74°. It runs first WNW, then makes a considerable circuit, and pursuing its course in a NNE direction into the gov. of Tobolsk, joins the Irtish on the l. bank, 130 m. ESE of Tobolsk, and after a total course of 1,200 m. Its principal affluents are the Kaluton, Akbasar, Kulai-Agir-Barluk, and Nova Barluk on the r.; and on the l. the Nura, which conveys to it the waters of Lake Kurgaldjin, and forms the principal head-stream of the I. and the Tersckan. Alexandrovskaia, Petropavlosk, and Ichim are the only towns of importance on its banks. In the lower part of its course it is skirted by several villages and numerous ancient tombs. This river flows in nearly its entire extent through the vast plain named the steppe of Ichim. This plain is studded with numerous lakes, but presents complete sterility. A line of military posts, bearing the name of Ichim, extends along the S part of the gov. of Omsk, from fort Stanovoi to the fortress of Omsk, at the confluence of the Om and Irtish, erected in the reign of the Empress Anne for the defence of the gov. of Tobolsk from the incursions of the Kirghiz.—Also a town, capital of a district in the gov. and 170 m. SSE of Tobolsk, on the l. bank of the river of the same name. Pop. 3,100. The environs are fertile in wheat.

ICHOLNO, a town of Russia in Europe, in the gov. and 47 m. E of Grodno, district and 24 m. SW of Lida.

ICHOUX, a village of France, in the dep. of the Landes, cant. and 6 m. ESE of Parentes-en-Born,

on a small river which flows into the Biscarosse marshes. Pop. 703. It has some iron-works.

ICHSTADT, a village of the duchy of Schwarzburg-Rudolstadt, to the W of Artern.

ICHTEGEM, a department and commune of Belgium, in the prov. of W. Flanders, arrond. and 14 m. SW of Bruges. Pop. 3,907. It has a considerable trade in wood.

ICHTERSHAUSEN, a town of the duchy of Saxe-Coburg-Gotha, capital of a bail., in the principality and 14 m. ESE of Gotha, on the l. bank of the Gera. Pop. 790. It has an ancient fort, and a castle; and possesses manufactories of linen, hosiery, and paper. Pop. of bail. 8,237.

ICHTIMAN, a town of Turkey in Europe, in Bulgaria, in the sanjak and 35 m. ESE of Sophia, on the l. bank and near the source of the Urak or Vid.

ICKBOROUGH, a parish in Norfolk, 8 m. ESE of Stoke-Ferry, on the Wissey or Stoke. Area 1,510 acres. Pop. in 1831, 197; in 1841, 220.

ICKENHAM, a parish in Middlesex, 2½ m. NE of Uxbridge. Area 1,420 acres. Pop. in 1841, 396.

ICKFORD, a parish partly in Buckinghamshire and partly in Oxfordshire, 4¼ m. WNW of Thame. Area 1,500 acres. Pop. in 1831, 368; in 1841, 386.

ICKHAM AND WELL, a parish in Kent, 4 m. E of Canterbury, on the Stour. Area 2,190 acres. Pop. in 1831, 567; in 1841, 577.

ICKLEFORD, a parish and village in Hertfordshire, 2 m. N of Hitchin, and W of the Wilburg hills, and intersected by the ancient Icknield-street. Area 940 acres. Pop. in 1831, 502; in 1841, 576.

ICKLESHAM, a parish in Sussex, 1½ m. SW of Winchelsea. Area 4,270 acres. Pop. in 1841, 681.

ICKLETON, a parish in Cambridgeshire, 5 m. WSW of Linton, on the Northern and Eastern railway. Area 2,672 acres. Pop. in 1841, 700.

ICKLINGHAM, a parish in Suffolk, 3½ m. ESE of Mildenhall. Area 6,580 acres. Pop. in 1831, 473; in 1841, 525.

ICKWELL, a hamlet in the p. of Northill, Bedfordshire, 2½ m. NW of Biggleswade.

ICKWORTH, a parish in Suffolk, 2½ m. SW of St. Edmund's Bury. Area 1,350 acres. Pop. in 1831, 43; in 1841, 62.

ICÓ, an important mercantile town of Brazil, in the prov. of Ceara, in a plain on the E of the Rio-Jaguaribe, here called Rio-Salgado, 200 m. S of Fortaleza, and 70 m. NNE of Crato. It consists of three principal streets, bordered with white-washed brick houses; has 4 handsome churches, a substantial jail, and a well-supplied market, although the whole vicinity is dry and arid except during the wet season. Pop. 6,000. The trade of the place consists in supplying the interior with articles of European manufacture, receiving produce in return, and sending it down to the coast.

ICOD, or FED-DE-LOS-VINOS, a town of the island of Teneriffe, and partido of Ortova, in a beautiful valley near the W coast. Pop. 5,479. It has a parish-church, 3 convents, an hospital, and several hermitages. The surrounding district is extremely fertile, producing silk and wine in great abundance. Handkerchiefs, ribbons, and stuffs, form the chief articles of local manufacture.

ICOLM-KILL. See IONA.

ICOLO, a district of Lower Guinea, in the kingdom of Angola, between the Bengo and Coanza, to the N of the district of Golungo, and NW of that of Ilamba.

ICONONZO, two natural bridges in New Granada, in the dep. of Cundinamarca, on the road from Santa-Fe-de-Bogota to Ibaque, to the SE of the village of Pandi. They consist of solid rock, and arch across a deep narrow valley, watered by the Somma-Paz—the one rising above the other at the height of 300 ft. above the river, and about 2,930 ft. above sea-level. The most elevated is about 40 ft. in breadth and 50 ft. in length, and its thickness at the centre about 8 ft. The lower appears to have been formed by a portion of rock severed from the upper.

ICY BAY, an indentation of the S coast of Russian America, formed on the E by Point Rion, in N lat. 60°, and W long. 140° 56′.

ICY CAPE, a headland of Russian America, on the NW coast, in N lat. 70° 20′, and W long. 161° 46′. It is low, and has a large lake at the back of it, which receives a considerable river. The mainland on both sides, from Wainwright inlet on one side, to Cape Beaufort on the other, is flat and covered with swampy moss.

ICY CAPE, or LEDIANOI NOS, a headland of Nova Zembla, on the N coast, in N lat. 77° 30′, and E long. 72° 30′.

IDA, KAS-DAGHI, or KAZ-TAGH, a chain of mountains in Asia Minor, in Anatolia, in the sanjak of Biga. It runs NNW and SSE from the sources of the Burgas-chaï and Ustvola, to those of the Tuzla-chaï, where it terminates in N lat. 39° 40′, in Mount Gargarus or Gargara, its highest summit, alt. 4,955 ft. Its entire length is about 36 m. The principal rivers to which it gives rise are the Mendere, the river of the Dardanelles, and the Musbu-chaï, all of which descend from its W side, and discharge themselves into the strait of the Dardanelles. From the E side descend the Ustgala and the Boklu or Sataldere, both of which flow into the sea of Marmora. Clarke, describing the view from the highest summit of this chain, says, "It seemed as if all European Turkey and the whole of Asia Minor were really modelled before him on a vast surface of glass. The great objects drew his attention first; afterwards he examined each particular place with minute observation. The eye, roaming to Constantinople, beheld all the sea of Marmora, the mountains of Prusa, with Asiatic Olympus, and all the surrounding territory: comprehending in one survey, all Propontis and the Hellespont, with the shores of Thrace and Chersonesus, all the north of the Ægean, Mount Athos, the islands of Imbrus, Samothrace, Lemnos, Tenedos, and all beyond, even to Eubœa; the entrance to the gulf of Smyrna, almost all Mysia, and Bithynia, with part of Lydia and Ionia. Looking down upon Troas, it appeared to spread as a lawn before him. He distinctly saw the course of the Scamander through the Trojan plain to the sea. This visible appearance of the river, like a silver thread, offered a clue to other objects. He could now discern the tomb of Æsyetes, and even Bonarbashy. At the base of the mountain, and immediately below his eyes, stood the conical hill of Kûshûnlû Têpe, upon whose sides and summits are the ruins before described. The Adramyttian gulph is so close to the mountain, that it may be said to skirt its base; inclining towards the NE, and bearing so much round upon the NE side, that the extremity of it is concealed by that part of the Idæan chain. Thus it would seem impossible for any one to pass in a direct line from the end of the gulph to the Dardanelles, without leaving not only the chain of Ida, but even Gargarus, upon the left hand. There is yet another singular appearance from the summit of this mountain; and as this is pointedly alluded to by Homer, it seems to offer a strong reason for believing that the poet had himself beheld it from the same place. Looking towards Lectum, the tops of all the Idæan chain diminish in altitude by a regular gradation, so as to resemble a series of steps, leading to Gargarus, as to the highest point of the whole. Nothing can therefore more forcibly illustrate the powers of

Homer as a painter, in the display he has given of the country, and the fidelity with which he delineates every feature in its geography, than his description of the ascent of Juno from Lectum to Gargarus, by a series of natural eminences, unattainable indeed by mortal tread, but presenting, to the great conceptions of poetical fancy, a scale adequate to the power and dignity of superior beings."

IDA (Mount). See Psilorati.

IDA (Nagy), a town of Hungary, in the comitat of Abaujvar, 11 m. SSW of Kaschau, on a small river of the same name. Pop. 1732. A great congress of European Jews took place here in 1650.

IDALGASHINA, a mountain ridge in Ceylon, under the parallel of 6° 43′ N, across which, at an alt. of about 2,350 ft. above the military post of Kalupahane, a pass leads across to the military station of Welangahena, 2½ m. NE of the summit of the pass.

IDANHA-NOVA, a town of Portugal, in the prov. of Beira, comarca and 20 m. E of Castello-branco, and 93 m. SSE of Coimbra, in an elevated situation, near the Ponsul, which is here crossed by a bridge. Pop. 2,200. It has an alms-house, an hospital, and a convent.

IDANHA-VELHA, a town of Portugal, in the prov. of Beirà, comarca and 24 m. E of Castello-branco, and 5 m. NE of Idanho-Nova. It is of great antiquity, and was formerly a place of importance. It contains a parish church, a Gothic church, and is noted as the birthplace of king Wamba. The insalubrity of the climate has reduced the number of the inhabitants to 150. In 1704 this town was taken after a vigorous defence by the Duke of Anjou. The environs are extremely fertile.

IDAR-WALD, a mountain-ridge on the SE boundary of the Prussian prov. of the Rhine, in the principality of Birkenfield, between the Hundsruck and the Hochwald.

IDAULLIT, a town of Marocco, in the prov. of Susa, 60 m. NNW of Akka, and 200 m. SSW of Marocco.

IDAUTENAN, the name borne by the W extremity of the main chain of the Atlas, extending from Cape Ghir to Agadir, and rising, at 9 m. E of Agadir, to 4,408 ft. above sea-level.

IDBURG, a parish in Oxfordshire, 5½ m. NNW of Burford. Area 1,370 acres. Pop. in 1841, 207.

IDDAH, or Addah, a town on the l. bank of the Niger, in N lat. 7° 7′, 42 m. below the junction of the Chadda, the cap. of the kingdom of Attah or Eggarah. It has a pop. of about 5,000, chiefly Pagans, but the higher classes profess Mahommedanism. They collect palm-oil, indigo, and cam-wood, which they dispose of to the Ibu and Bonny traders; and conduct a home-trade in salt, grass bags, dried meat and fish, yams, onions, cocoa and goora nuts. The banks of the river in the vicinity of I. rise into cliffs 150 ft. high; the opposite shore is low and swampy, and inhabited by a different people who are subjects of the king of Benin.

IDDESLEIGH, a parish in Devon, 4 m. NNE of Hatherleigh, and E of the Torridge river. Area 2,630 acres. Pop. in 1831, 573; in 1841, 545.

IDE, a parish in Devonshire, 3 m. SSW of Exeter. Area 1,120 acres. Pop. in 1841, 795.

IDEFORD, a parish in Devonshire, 2 m. SE of Chudleigh. Area 1,810 acres. Pop. in 1841, 331.

IDEGEM, a department and commune of Belgium, in the prov. of East Flanders, arrond. of Audenarde, watered by the Dendre. Pop. 1,203.

IDE-HILL, a chapelry in the p. of Sunridge, Kent, 4 m. SW of Seven-Oaks.

IDEN, a parish in Sussex, 2¼ m. N of Rye. Area 3,120 acres. Pop. in 1831, 517; in 1841, 554.

IDERSTRUP, a village of Denmark, in the island of Falster, diocese of Laaland, 5 m. SE of Nyköbing. Pop. 1,042.

IDI, a fortress of Russian Armenia, in the pash. and 24 m. NNE of Erzerum, on the r. bank and near the source of the Tcheskari.

IDIAZABAE, a town of Spain, in the prov. of Guipuzcoa, and partido of Tolosa, in a plain. Pop. 1,087. It is of modern foundation, and has a parish church, several convents, and numerous public fountains. It has considerable manufactories of ironware and cutlery, and several mills. Cattle are extensively reared in the environs. This town possesses the privilege of representation in the provincial assemblies of the province.

IDICE, a river of the States of the Church, in the deleg. of Bologna, which has its source in the Apennines, on the confines of Tuscany; flows N; inosculates with the Savena; bends thence ENE, and joins the Primario a little above Argenta.

IDIDJ, or Aidej, a town of Persia, in the prov. of Khuzistan, 50 m. SE of Shuster, on the S side of the mountains of Louristan.

IDINSK, or Idinskoi-Ostrog, a town and fortress of Russia in Asia, in the gov. and district and 87 m. NW of Irkutsk, on the r. bank of the Angara.

IDLE, a chapelry and large village in the p. of Calverley, in the W. R. of Yorkshire, 3 m. NNE of Bradford. Area 2,420 acres. Pop. in 1831, 5,416; in 1841, 6,212, mostly employed in the manufacture of woollens.—Also a small stream in Nottinghamshire, rising in Ramworth water, and flowing into the Trent, a few miles below the influx of the Ouse.

IDLER, a town of Syria, in the parish and 30 m. WSW of Aleppo.

IDLICOTE, a parish of Warwickshire, 3 m. NNE of Shipston-on-Stour. Area 1,410 acres. Pop. in 1831, 82; in 1841, 82.

IDLIP. See Edlip.

IDMISTON, a parish in Wilts, 5 m. NNE of Salisbury. Area 6,160 acres. Pop. in 1841, 497.

IDRA, a small mining town of Sweden, in the district of Stora-Kopparberg, on the Dala-elf, 136 m. NNW of Fahlun.

IDRA. See Hydra.

IDRIA, a town of Illyria, in the circle of Adelsberg, situated in a narrow deep valley, on a small river to which it gives name, 35 m. WSW of Laybach, and 32 m. NNE of Trieste, in N lat. 46° 0′ 48″. The pop. is only 4,400; and the town is remarkable chiefly for its mines, which were discovered in 1497. The minerals are marble, jasper, freestone, sulphuretted iron, with some indications of coal; but the most valuable and most abundant is rich hepatic mercurial ore found in a formation of slate-clay forming an extensive bed in compact limestone. These minerals seem as if thrown together by some convulsion of nature, and do not afford the facility of working by veins. They form a stratum which has been wrought to the depth of 130 klafters, or about 1,055 ft. The excavations consist of horizontal galleries, which are entered from descending shafts, besides a descent partly by a staircase and partly by a ladder from the interior of a large building in the town. All the galleries are arched, except those which are hewn through the solid rock; and precautions are used to ventilate them, yet the temp. is very high, exceeding 80° in some of the galleries. An account of the present mode of working these mines is given in the 1st vol. of Mr. Turnbull's *Travels in Austria*. The number of hands employed is from 600 to 700. The annual produce of quicksilver is from 3,200 to 3,500 quintals. It was formerly sent to Amsterdam, and sold to the Spanish Americans, to be used in separating the gold and silver of their mines from the baser metals;

but Vienna is at present the great market for this article, which is used partly for plating mirrors, but principally in the gold and silver mines of Hungary and Transylvania. The houses are small, and straggle along on very unequal ground between two hills; but the general appearance is not unpleasant. The principal public buildings are two churches, an ancient castle the residence of the *bergrath* or director of the mines, and some large buildings connected with the public administration, among which are an hospital and a dispensary. There are a few silk manufactories in the town.—The district of Idria comprises the NW corner of the circle of Adelsberg, and contains nearly 5,000 inhabitants, partly miners, partly foresters.

IDRIA, a river of Illyria, which rises in the NW extremity of the circle of Adelsberg; runs E and then N, at the base of the Julian Alps; then turns W and enters the circle of Goriza, and joins the Isonzo, on the l. bank, after a course of 45 m.

IDRIDGEHAY, a township in Wirksworth p., in Derbyshire, 4 m. W by N of Belper. Pop. 194.

IDRO (Alto), a town in the N of Austrian-Lombardy, on the E side of a lake of the same name, 16 m. NNE of Brescia. Pop. 1,745.—The lake is about 6 m. in length from N to S, and is traversed by the Chiesa, an affluent of the Po.

IDRON, a village of France, in the dep. of Basses-Pyrenees, cant. and 3 m. E of Pau. Pop. 400.

IDSTEDT, a village of Denmark, in the duchy of Sleswick, 5 m. N by W of Sleswick, and 13 m. S by E of Flensburg, to the r. of the high road from Sleswick to Flensburg, and near the NW end of a small lake called the Lang-see. On the 25th of July, 1850, the Danish forces under General Krogh, decisively defeated the Sleswick-Holstein army under General Willison, at this place. The battle lasted 11 hours; and of 37,983 men on the field, the Danes lost 3,797; while their opponents, whose numbers amounted to about 30,000, left 4,000 dead on the field, and 1,704 prisoners, but retired in good order, through Sleswick and Missunde to Schestadt.

IDSTEIN, a town of the duchy of Nassau, 13 m. SE of Coblenz. Pop. 2,000. It is walled; and contains a fine church, and a well-endowed provincial school. It has several tanneries, and manufactories of stockings and woollen stuffs.—I. was formerly the chief place of a lordship in the Wetterau, belonging to a distinct branch of the house of Nassau, which becoming extinct in 1721, the lordship went to the head of that house. The territory contains several forests, and has a number of ironworks.

IDSUME, a province of Japan, on the S coast of the island of Nifon, occupying the peninsula between the bay of Jedo on the E, and that of Totomina on the W. It is divided into the districts of Takato, Naka, and Kamo.

IDSUME, or Idsu-Sima, a town of Japan, cap. of the above prov., at the entrance of the bay of Jedo.

IDSWORTH, a township in Chackston p., in Southamptonshire, 7 m. S of Petersfield. Pop. 396.

IEKATERINBOURG. See Yekaterinburg.

IF, a small island of France, on the coast of Provence, 3 m. SW of Marseilles. It has a strong castle, which serves for the protection of the harbour of Marseilles, and was used by Bonaparte as a state prison.

IFFENDIC, a commune and town of France, in the dep. of Ille-et-Vilaine, 4 m. W of Montfort. Pop. 4,299.

IFFEZHEIM, a village of Baden, in the circle of the Middle Rhine, SW of Rastadt. Pop. 1,252.

IFFROS, a town of Yemen, in Arabia, 12 m. ESE of Taas.

IFFS (Les), a village of France, in the dep. of Ille-et-Vilaine, cant. of Becherel. Pop. 520.

IFIELD, a parish in Sussex, 7 m. NE of Horsham. Area 3,830 acres. Pop. in 1831, 916; in 1841, 1,061.—Also a p. in Kent, 3 m. S of Gravesend. Area 350 acres. Pop. in 1831, 72; in 1841, 350.

IFLANI, an elevated plateau in Asia Minor, to the SE of Amaserah, the mean elevation of which is reckoned at 2,500 ft. above sea-level.

IFLEY, a parish and village in Oxfordshire, 2 m. SE by S of Oxford. Area 1,500 acres. Pop. in 1831, 1,081; in 1841, 764. It has an interesting old church.

IFOE-SICEN, a lake of Sweden, in the E part of the prov. of Christianstadt, 9 m. in length from N to S.

IFORD, a parish of Sussex, 2 m. S by W of Lewes. Area 2,500 acres. Pop. in 1841, 174.

IFS-SUR-LAIZON, a village of France, in the dep. of Calvados, cant. and 10 m. E of Brettville-sur-Laize. Pop. 145.

IFSHAR, a town of Hindostan, in the prov. of Malwah, in N lat. 23° 24′.

IFTA, a village of Saxe-Weimar, in the circle of Eisenach, W of Krenzburg. Pop. 754.

IFTON, a parish in Monmouthshire, 3 m. SW of Chepstow. Area 680 acres. Pop. in 1841, 41.

IFTON-RHYN, a township in St. Martin p., in Shropshire, 5 m. W of Ellesmere. Pop. in 1831, 1,016; in 1841, 1,020.

IGA, a district and seaport of Japan, in the island of Nifon, 85 m. SE of Meaco.

IGAL, a small town of Hungary, pleasantly situated at the foot of mountains, to the N of Berki, in the com. of Schümeg.—Also a village of Spain, in the prov. and 24 m. ENE of Pampeluna. Pop. 147.

IGARASSU, a small river of Brazil, in the prov. of Ceara, which runs N, and enters the Atlantic close to the Paraguay.

IGARIPE, a river of Portuguese Guayana, which runs SSE and enters the Amazon.

IGAU, a small river of Paraguay, which runs SSE and enters the Uruguay.

IGE′, a village of France, in the dep. of l'Orne, cant. and 4 m. SW of Belleme. Pop. 1,150.

IGEA, a town of Spain, in the prov. and 35 m. SE of Logrono. Pop. 1,910.

IGEIALIN, or Ighellin, a small island in the strait between Russia and America, in N lat. 65° 40′. Pop. 150.

IGEL, or Aigle, a large village of the Prussian prov. of the Rhine, at the confluence of the Moselle and Sarre, 6 m. SW of Treves.

IGELDI, a lake of Russia in Asia, in the gov. of Orenburg, 30 m. ESE of Cheliabinsk.

IGELHEIM, a town of Bavaria, in the circle of Pfalz, SE of Durkheim. Pop. 1,150.

IGELSHEIB, a village of Saxe-Meinengen, on the N side of the Steineheide. Pop. 257.

IGG, a small town in Lower Carinthia, on the river Igg, 6 m. S by W of Laybach.

IGHTFIELD, a parish in Shropshire, 4 m. SE of Whitchurch. Area 2,800 acres. Pop. in 1841, 368.

IGHTHAM, a parish and village in Kent, 2 m. SSW of Wrotham. Area 3,170 acres. Pop. 1,039.

IGHTERMURROUGH, a parish in co. Cork, 2½ m. ESE of Castle-Martyr. Area 5,556 acres. Pop in 1831, 2,627; in 1841, 3,092.

IGIGUINSK. See Jighinsk.

IGIRIPA, a small island of the Atlantic ocean, on the coast of Brazil, in the prov. of Maranhao.

IGLAU, or Iglawa, a river of Austria, which has its source in Bohemia, in the circle of Tabor, near Ober-Czerekwe; runs NE along the confines of Moravia to Iglau, where it bends SE; crosses the circles of Iglau and Znaym, passing in its course Trebitsch and Eybenschitz; enters the circle of Brünn, and

after a total course of 105 m. unites with the Schwarza, on the r. bank, near Tracht. Its principal affluents are the Oslawa on the l., and the Rokitna on the r.

IGLAU, a circle and town of Austria, in Moravia. The circle is bounded on the N by Bohemia; on the E by the circle of Brünn; on the SE by that of Znaym; and on the S by the archduchy of Austria. It comprises an area of 50 German sq. m., with a pop. in 1837 of 181,957. It is separated from Bohemia by the main ridge of the Moravian mountains, which running along its N frontier throws its ramifications over the entire surface of the circle. The principal rivers by which it is watered are the Iglau and its affluents. Numerous lakes, chiefly formed by these rivers, are scattered over its entire surface. Several valleys remarkable for their beauty and fertility intersect this circle. In these corn, barley, potatoes, fruit, and lint, are raised in considerable quantities. Wood is abundant; and the mountains afford good pasturage, on which large numbers of cattle are annually reared. Game is not scarce, and the lakes abound with fish.—The manufacturing industry consists chiefly in the manufacture of linen and cloth.—The town, called also Gjhlawa and Gislawa, is 51 m. WNW of Brünn, on an affluent of the Iglau. Pop. 14,000. It is well built, and strongly fortified; and has 3 suburbs, several churches, a convent, a well-endowed hospital, a gymnasium, and a school for the education of the children of the military. It possesses extensive manufactories of cloth and other woollen fabrics, several spinning-mills and dye-works, extensive tanneries, paper-mills, manufactories of glass, vinegar, colours, and potash; and a flourishing trade in corn, hops, and articles of local manufacture. This town was taken by the Prussians in 1742; and in 1805 by the French. In the environs are mines of silver and lead.

IGLESIAS, a prov. and town of Sardinia, in the div. of Cagliari. The prov. is bounded on the N by that of Oristano; on the E by that of Cagliari; and on the S and W is bathed by the Mediterranean. Its length from N to S is 60 m., and its breadth about 21 m. It is divided into three districts, viz. Guspini, Iglesias, and Villacidro, and contains 14 com. Pop. 36,685. The town of I., or Villecclesia—so called from the number of its churches in the middle ages—the capital of the prov., is situated on a fine and salubrious elevation, above the plain of Segerio, and NE of Monte Poni [alt. 1,116 ft.], 33 m. WNW of Cagliari, and 8 m. from the W coast of the island. Pop. 4,591. Its ancient fortifications are extensive, but now greatly dilapidated. Its trade consists chiefly in wine, brandy, oil, corn, forage, and cheese. This town was the first taken by the Aragonese in 1323. The environs are fertile in fruit and grain, and well watered, yet a large extent of land remains uncultivated. Between I. and Monte-Ferro are extensive mines of pure galena. White-lead and calamine are also found in the locality.—Also a town of Spain, in Old Castile, in the prov. and 21 m. SE of Burgos and partido of Castrojeriz, in a valley. Pop. 474.

IGLESUELA, a town of Spain, in New Castile, in the prov. and 62 m. WNW of Toledo and partido of Talavera-de-la-Reina, in the valley of Adrada. Pop. 743. It has a parish church and a chapel.

IGLESUELA-DEL-CID, a town of Spain, in the prov. of Teruel and partido of Castellote-y-su-Barrio-Montijo, in a fertile valley. Pop. 768. It has a parish church, a hermitage, from which it takes the name of the Cid, and an hospital, and possesses manufactories of common woollen fabrics.

IGLI, a village of Marocco, in the prov. of Susa, 160 m. SSW of Marocco, on the W side of the Great Atlas mountains. It contains about 300 houses.

IGLO. See Neudorf.

IGLOOLIK (Island), an island of British North America, near the N coast of Melville peninsula, and the E entrance to Fury and Hecla strait, in N lat. 69° 21′, and W long. 81° 53′.

IGNACE (Saint), an island of Lower Canada, in the St. Lawrence, at the head of Lake St. Peter, and to the S of Dupas isle. It is low and marshy, but affords good timber and excellent pasturage. It abounds with wild fowl.—Also a parish in the co. of l'Islet, fronted by the St. Lawrence, and comprising the fief of the same name and Crane and Goose islands. Pop. 1,805.—Also a seignory in the co. of Quebec, bounded in front by the river St. Charles. The lower part is fertile and well-cultivated, and the banks of the St. Charles are clothed with the most luxuriant verdure.

IGNACIO (Santo), a river of Mexico, in the NW of the prov. of Sonora, which issues from a small lake in the Tontos district, makes a considerable circuit to the S, and terminates in a lake at Caborca. —Also a headland in the prov. of Smaloa, 15 m. W of the embouchure of the river of that name, in N lat. 25° 26′, and W long. 107° 7′ 30″.—Also an island in the gulf of California, 5 m. SSW of Cape I.—Also a missionary establishment in Bolivia, in the Chiquitos territory, on the l. bank of the Paraguay, 30 m. NW of Santa Anna, and 180 m. NE of Santa-Cruz-de-la-Sierra. — Also a village in the Moxos territory, on the r. bank of the Rio-S.-Xavier, 300 m. NW of Santa-Cruz-de-la-Sierra.

IGNACIO (Santo), or Montague Island, an island in the gulf of California, near the mouth of the Colorado. It is 39 m. in length, and about 12 m. in breadth.

IGNACIO-DE-LOS-PEVAS (Santo), a missionary establishment in Ecuador, in the dep. of Assuay, at the confluence of the Chiquita with the Maranon, and 300 m. ENE of La Laguna.

IGNACIO-DE-ZAMNEOS (Santo), a missionary establishment in Bolivia, in the dep. and 320 m. SE of Santa-Cruz-de-la-Sierra.

IGNAT (Saint), a commune of France, in the dep. of the Puy-de-Dôme, cant. of Ennezat, 9 m. ENE of Riom. Pop. 2,010.

IGNAZIO-DE-AGANA (Sao), or Ygnacio-de-Agana (S.). See Agana.

IGNERANDE, a village of France, in the dep. of the Saône-et-Loire, cant. and 4 m. S of Semur-en-Brionnais. Pop. 1,250.

IGNEY, a village of France, in the dep. of the Meurthe, cant. and 4 m. SSW of Réchicourt-le-Chateau, at the source of a stream of the same name. Pop. 200.

IGNY-DE-VERS (Saint), a commune of France, in the dep. of the Rhone, cant. of Monsol, 24 m. NW of Villefranche-sur-Saône. Pop. 2,835. Fairs for cattle, planks, timber, and thread are held here 7 times a-year.

IGOS, a commune of France, in the dep. of the Landes, cant. of Arjuzanx. Pop. 1,464.

IGOUMEN, or Ihumen, a district and town of Russia in Europe, in the gov. and 42 m. ESE of Minsk, on a stream of the same name. The district, which is situated in the central part of the gov., is to a great extent covered with wood, but in some parts it is fertile and well-cultivated, and affords also excellent pasture to the numerous herds of cattle which are reared in the locality.

IGRANDE, a town of France, in the dep. of the Allier, cant. and 7 m. WSW of Bourbon-l'Archambaud. Pop. 1,663. It has several annual fairs, and possesses a considerable trade in cattle.

IGRAPIUNA, a town and port of Brazil, in the prov. of Bahia, and comarca of Ilheos, at the mouth of a river of the same name, between Santarem and Cagrú. It has a parish church. The town is small, but is of considerable antiquity. The district produces rice in great abundance. Pop. 1,000.

IGUA, a village of Brazil, in the prov. of Rio-de-Janeiro, in the district of Itaborahi, on a small stream of the same name.

IGUABE, a village of Brazil, in the prov. of Rio-de-Janeiro, comarca of Cabo-Frio, on the N bank of Lake Araruama.

IGUACU, Iguassu, or Yguazu, one of the great affluents of the Parana, which has its two head-streams, the Curitaba and the São-Jose, in the SE part of the prov. of San Paulo, on the W flanks of the Sierra-do-Mar; and flows W, forming the S boundary of the prov. of San Paulo, which it separates from the prov. of Rio-Grande-de-San-Pedro, and the Missiones of Corrientes; and falls into the Parana, on the l. bank, opposite the mouth of the Rio-Monday. —Also a small river in the prov. of Rio-de-Janeiro, which rises in the Cordilheira-dos-Orgãos; passes the town of the same name, and flows into the bay of Nitherohi, on the N of Ilha-do-Governador. It is navigable for *lanchas* of the largest size up to the town.—Also a town in the prov. of Rio-de-Janeiro, on the r. bank of the river of the same name. The planters now unload their coffee, beans, mandioca, toucinho, and cotton at I., whence they are sent to market by the river at a cheaper rate than by land; and they have formed at this place deposits of salt, dry and manufactured goods, and wines, to accommodate the planters in exchange. The town, therefore, is flourishing. With the annexed district it has a pop. of about 4,000.—The name—which is borne by several streams and villages in Brazil—is a compound of the Indian *ig* or *hi*, signifying 'water,' and *açu* or *guaçu*, signifying 'great;' and appears to be synonymous with *Higuaçu* and *Iguaraçu* or *Higuaraçu*.

IGUALA, a town of Mexico, in the state of La Puebla, 105 m. SE of Mexico, the chief town of a district of the same name. It is situated at the bottom of a deep and craggy defile, and contains about 90 families of Mexican Indians.

IGUALADA, a town of Spain, in the prov. and 32 m. WNW of Barcelona, on the l. bank of the Noya. It is situated in a large and fertile plain, and is surrounded by a spacious suburb of houses and gardens. Its pop., 10,095 in number in 1845, possess the characteristic industry of the Catalans. Their principal manufactures are printed calicoes, hats, and fire-arms. In the environs are a number of paper-mills, the produce of which is exported in considerable quantities.

IGUALAPA, a small town of Mexico, in the state and 180 m. SSW of La Puebla, situated on a plain 6 m. from the sea, and watered by two rivers which unite before they fall into the ocean. It contains about 500 families of Spaniards, Mestizoes, Mulattoes, and Mexican Indians.

IGUALEJA, a town of Spain, in the prov. and 42 m. WSW of Malaga. Pop. 1,431.

IGUAPE, a river and town of Brazil, in the prov. of San Paulo. The river rises in the auriferous district of Apiahi; runs NE; and spreads out into a lake; and, after a course of 150 m., falls into the ocean in S lat. 24° 35′. The town stands on the S bank, and near the mouth of the river. It has a good harbour, and exports rice and timber.—Also a village in the prov. of Bahia, in the district of Cachoeira.

IGUARA, a river of Brazil, in the prov. of Maranhão, which rises near the sources of the Monim; runs N; passes Manga, and joins the Monim on the l. bank, 6 leagues above the confluence of the Rio Preto.

IGUARAÇU′, a town of Brazil, in the prov. of Pernambuco, and 18 m. NNW of the city of that name. It stands at the distance of 2 leagues from the sea, on the banks of a creek which flows into the Upper Parnahiba. Pop. 5,000. It is partly situ upon a hill, and partly in the plain below. Many of the houses are of two stories, but some are in decay and ruin. The streets are paved, but much out of repair, and grass grows in many of them. The town contains several churches, a convent, 4 hermidas, a town-hall, and a prison. Its affluence preceeded formerly from a weekly cattle fair which was held upon a plain in the vicinity, but this has been removed.—Also a river which rises in the Serra Hibiappaba, in the prov. of Ceara; runs from SW to NE; and flows into the ocean in S lat. 2° 52′.—There are several other streams of the same name in Brazil.

IGUARIHI-AÇU, a river of Brazil, which rises to the W of Igatimi; receives the Iguarahi-Mirim and the Chechuchi; and, with the latter river, serves to define the boundaries between the Spanish states and Brazil.

IGUATIMY, or Igatimi, a river of Brazil, which takes its rise in the ridge of mountains which runs between the Paraguay and Parana; runs N; receives the Bogos and the Escopil; and falls into the Parana in S lat. 23° 47′. On the N side, 20 leagues from its mouth, the Portuguese had formerly a fortress called Prazeres, which was abandoned in 1777.

IGUERANDE, a commune of France, in the dep. of the Saône-et-Loire, cant. of Semur-en-Brionnais. Pop. 1,532.

IHALAM-VIA, a river of Russia, in the grand duchy of Finland, gov. of Viborg, and district of Kexholm-Midledels. It has its source near a village of the same name; runs E, and throws itself into Lake Ladoga, 30 m. N of Kexholm, and after a course of about 15 m. It was formerly noted for its pearl-fisheries, which are now, however, comparatively unproductive.

IHAROS-BERENY, a town of Hungary, in the comitat of Schmegh, 20 m. NE of Kopreinitz, and 30 m. W of Kaposvar. It has a castle.

IHLIMAN, or Ichliman, a town of Turkey in Europe, in Romelia, in the sandjak and 36 m. SE of Sophia, on the N flank of the Balkan, and near the l. bank of the Vid.

IHNA, a river of Prussia, in the prov. of Pomerania and regency of Stettin, which has its source in a small lake near Kremmin, in the circle of Saazig; runs first S along the confines of the prov. of Brandeburg; then turns NW, passes Stargard and Golnow, and after a total course of 66 m. throws itself into the Dammsche sea, opposite the junction of the Oder.

IHOLDY, a town of France, in the dep. of Basses-Pyrenées, 8 m. SW of Saint Palais. Pop. 850.

IHRINGEN, a village of Baden, 3 m. ENE of Alt-Brisach. Pop. 1,600.

IIDENSALINI, a town of Russia, in Finland, 45 m. NNW of Kuopio.

IIEMSK, a town and district of Russia, in the gov. of Archangel, district of Mezen, on the l. bank of the Petshora.

IIGANOK, a town of Russia in Asia, in the gov. and 330 m. NNW of Jakutsk, on the l. bank of the Lena.

IIGAT, a small island in the Eastern seas, in S lat. 7° 11′, E long. 150° 35′.

IJI, or Izy, a town of Russia, in the gov. of Viatka, 26 m. SW of Votka. There are large manufactories here for making muskets for the army; and the town is said to contain 18,000 inhabitants.

IJIGHINSK BAY, or Gouba Ijighinskaia, a bay on the coast of the sea of Okhotsk, in Asiatic Russia, to the W of Penjinsk bay. At the head of the bay, near the r. bank of the embouchure of a small stream called the Ijiga, is the town of Ijighinsk, which has an active trade in furs and fish. Pop. 6,000.

IJMA, a river of Russia, which rises in the gov. of Vologda, runs N, and enters the gov. of Archangel, in the district of Mezen, and flows into the Petshora, on the l. bank, after a course of 240 m.

IJO, a town of Japan, in the island of Xicoco.—Also a town of Russia, in the duchy of Finland, 21 m. NNW of Uleaborg.

IJORKA, a river of Russia, in the gov. of St. Petersburg, which rises to the W of Gattchina, runs E and then N, and flows into the Neva, on the l. bank, at Oust-Ijora, after a course of 45 m.

IJUI, a small river in the prov. of San-Pedro-de-Rio-Grande, rising in the Serra-Herval, and falling into the Uruguai, after being joined by the Ijui-Mirim.

IK, a river of European Russia, which rises in the gov. of Orenburg, flows SSW, and joins the Sakmara, on the r. bank, 6 m. E of Nikitinsk, after a course of 100 m.—Also another river of Russia, which rises in the gov. of Orenburg, 20 m. SSW of Belebei, flows NNW, and falls into the Kama, on the l. bank, after a course of 240 m.

IKALIS, a town of Russia, in Finland, in the gov. and 104 m. NE of Avo, on the W bank of the Kyroes-Jæroi lake.

IKARMA, or Ekarma, one of the Kurile islands, in N lat. 48° 45′, E long. 153° 20′. It is about 6 m. in length, and presents several elevated peaks.

IKAZNI, a town of Russia, in the gov. and 120 m. NNW of Minsk.

IKBAR, an oasis in the Sahara, on the route from Fezzan to Bornu, 430 m. S of Murzuk.

IKE-ARAL-NOOR, a lake in the Khalkha territory, near the E frontier of Sungaria, at the foot of the Great Altai, between the parallels of 47° and 49°, and the meridians of 89° and 91° E. It is 56 m. in length from N to S, and 40 m. in greatest breadth. The Zabkan flows into it on the N, and the Buyentu on the W.

IKEN, a parish in Suffolk, 5 m. N of Oxford. Area 3,630 acres. Pop. in 1831, 382; in 1841, 342.

IKERI, or Echairi, a town of Hindostan, in the prov. of Mysore, subah of Nagara, 21 m. NNW of Bidnur. It was long the residence of a dynasty of Hindu princes; and is said to have at one time contained 100,000 houses.

IKERVAR, a town of Hungary, in the com. of Eisenburg, march and 12 m. E of Steinamanger, near the l. bank of the Raab. Pop. 800.

IKI, or Yi-ki, an island of Japan, in the strait of Corea, to the NW of the island of Kiu-Siu, in N lat. 34°, E long. 129° 40′. It is 18 m. in length, and 9 m. in breadth.

IKIM. See Ichim.

IKORETZ, a river of Russia, in the gov. of Voronetz, rising 35 m. N of Bobrov, and flowing into the Don, on the l. bank, after a course of 66 m., 15 m. SW of Bobrov.

IKOVSKAIA, a town of Russia in Asia, in the gov. and 210 m. SSW of Tobolsk, on the l. bank of the Tobol.

IKROPA, a river of Madagascar, which rises near the centre of the island, receiving its head-streams from the Ankaratra and Angavo mountains, and flows N to the NW coast, falling into the sea by a large estuary, in 15° 45′ S lat., between Majambo and Boyana bays. It is known on the coast as the Bombetoc, and is navigable as far as Marao-be.

IKSAR, a village of Egypt, a ½ m. N of El-Wuddi, situated in a noble grove of date-trees, and inhabited by a Bedouin tribe.

IKUFA, a town of Japan, in the island of Kiu-Siu, 60 m. NNE of Nagasaki.

ILADI, or Isladi, a town of Turkey, in Romelia, in the sanj. and 42 m. E of Sophia, near the r. bank of the Vid.

ILAM, a parish and village in Staffordshire, 9 m. N by E of Cheadle. Area of p. 2,250 acres. Pop. in 1831, 210; in 1841, 244.—The v. is picturesquely situated in the vale of the Manyfold, a tributary of the Dove.

ILAMBA, a province of Angola, in Lower Guinea, bounded on the S by the Coanza, and divided into two parts, Upper and Lower, the former of which is inland, and the latter upon the coast.

ILAMIKIPANG, a mountain-summit in the Canuku chain, in British Guayana, under the parallel of 3° 15′ N, and 0° 15′ W long. It has an alt. of about 2,500 ft. above the savannahs which lie between it and the river Takutu.

ILANMORE, a small island in Clew bay, on the W coast of Ireland.—Also one of the smaller Hebrides, about 1 m. in circuit, a ½ m. N of Coll.

ILANROAN, a small island of the Hebrides, lying to the S of the island of Oronsay.

ILANTERACH, one of the Hebrides, lying to the E of Oronsay.

ILANTZINSKOI, a town of Asiatic Russia, in the gov. of Irkutsk, 10 m. NNW of Vershni-Udinsk.

ILANZ, or Ilantz, an old but small town of Switzerland, in the Grisons, in the valley of Gruob, 20 m. SW of Coire, at the influx of the Glenner into the Rhine. Pop. 550. It is said to be the only town where the Rhætian language is spoken. It was in this direction that Suwarrow retreated before Massena in the autumn of 1799. In 1801 it suffered severely from fire.

ILARIO (Santo), a village of Tuscany, in the island of Elba, 7 m. SW of Porto-Ferrajo.

ILAT, a small island of the Eastern seas, off the E coast of the island of Bouro, in S lat. 3° 35′.

ILATI, a river of New Granada, which rises in the mountains of the interior; runs W; and enters the river Chucunaqui.

ILAY, the port of Arequipa in Peru, in S lat. 17° 00′, W long. 72° 10′. The port is formed by a few straggling islets, and by Flat-rock point; and is capable of containing 20 or 25 sail. The town is built on the W side of a hill sloping towards the anchorage, and contains about 1,500 inhabitants. — Ilay point lies SE by E ½ E 14 m. from Cornejo point, the coast between rising in irregular black cliffs to from 50 to 200 ft.

ILBENSTADT, a village of Hesse-Darmstadt, 6 m. SE of Freidberg, on the l. bank of the Nidda. Pop. 450.

ILCHESTER, a market-town and parish in Somersetshire, 4 m. SSE of Somerton, pleasantly situated in a rich vale, on the S bank of the river Yeo or Ivel. Area 690 acres. Pop. in 1831, 1,095; in 1841, 1,068. The county business is transacted here, alternately with Wells, Taunton, and Bridgewater. There is a commodious court-house in the town, and a common jail for the county, built and arranged on Howard's plan. I. is chiefly remarkable as being the birth-place of the celebrated Roger Bacon, in 1214. At the time of the Norman conquest, and even much later, I. was a city of considerable importance. Latterly, however, it fell into decay, and since the passing of the reform act, which deprived it of its right to return 2 members, it has further declined. Thread-lace and silk were at one time manufactured here to some

extent; but there are now no particular branches of manufacture.

ILDEFONSO (San), a town of Mexico, in the prov. of Oaxaca, 60 m. NE of Oaxaca.—Also a small island in the gulf of California, situated near the coast, between Point San Miguel and the island of Carmen.—There are various inconsiderable Indian settlements of this name in South America.

ILDEFONSO (San), or La Granja, a town of Spain, in the prov. and 6 m. SE of Segovia, 24 m. N of the Escurial, on the N slope of the Sierra-Guadarrama, at an alt. of 3,840 ft. above sea-level, celebrated for its fine palace. Pop. 3,879. There is a royal manufactory of mirrors here.

ILDEFONSO (Cape San), a headland on the E coast of Luzon, in the Philippines, in N lat. 15° 15′, E long. 121° 56′.

ILDEFONSOS, a group of islands and rocks above water, which lie off the S coast of Tierra-del-Fuego, 35 m. S, 41° E of York-Minster. They extend 5 m. in a NW and SE direction, are very narrow, and rise 100 ft. above sea-level.

ILDERTON, a parish in Northumberland, 4½ m. SSE of Wooler. Area 9,670 acres. Pop. 585.

ILDINSKOI-ZAVOD, a mining village of Russia, in the gov. of Orenburg, 75 m. NW of Birsk, near the l. bank of the Kama.

ILE (L'), or L'Ile-d'Alby, a canton, commune, and town of France, in the dep. of Tarn, arrond. and 6 m. SW of Gaillac, on the r. bank of the Tarn. Pop. of cant., comprising 3 coms., 6,533; of com. 4,951. It has important cattle-fairs, and a considerable traffic in wine and corn.

ILE (L'), a canton, commune, and town of France, in the dep. of Vaucluse, arrond. and 12 m. E of Avignon.—The cant., comprising 9 coms., had a pop. of 15,461 in 1841; the com. of 6,262.—The town is on an island formed by the Sorgues. It has woollen spinning and weaving factories, silk-organsine factories, oil-mills, and tanneries.—Also a v. in the dep. of Haute-Vienne, cant. and 1 m. N of Limoges. Pop. 1,170.—Also a v. of Switzerland, in the cant. of Vaud, 4 m. W of Cossonay.

ILE-ADAM (L'), a canton, commune, and town of France, in the dep. of Seine-et-Oise, arrond. of Pontoise.—The cant., comprising 23 coms., had a pop. of 12,554 in 1841; the com. and town of 1,615. The town is situated on the l. bank of the Oise, 21 m. NNW of Paris. It has a porcelain manufactory.

ILE-A-LA-CROSSE. See Cross-lake.

ILE-AUX-MOINES, a village of France, in the dep. of Morbihan, cant. and 6 m. SW of Vannes, on an island 4 m. long, and 1½ m. in breadth. Pop. 1,000.

ILE-BARBE (L'), an island formed by the Saone, in the French dep. of Rhone, 1½ m. below Lyons. A celebrated Benedictine abbey once existed here.

ILE-BAISE, or L'Ile-de-Noe′, a commune and town of France, in the dep. of Gers, cant. of Montesquiou, on the r. bank of the Baise or Bayse, 9 m. WSW of Auch. Pop. 1,007.

ILE-BOUCHARD (L'), a canton, commune, and town of France, in the dep. of Indre-et-Loire, arrond. of Chinon.—Pop. of cant., comprising 16 coms., 9,181; of com. 1,708.—The town is situated on an island in the Vienne, 9 m. ESE of Chinon. It has a trade in wine, brandy, nut-oil, dried fruits, wax, and skins.

ILE-D'AIX. See Aix.

ILE-DIEU, a commune and town of France, in the dep. of Vendee, arrond. and 30 m. NW of Les Sables. Pop. 492.

ILE-D'ELLE (L'), a village of France, in the dep. of Vendee, arrond. and 12 m. SW of Fontenay-le-Comte, on the l. bank of the Vendee, near the confluence of that river and the Sevre Niortaise. Pop. 1,200. Pottery is largely made here for the Nantes and Bordeaux markets.

ILE-EN-DODON (L'), a canton and commune of France, in the dep. of Haute-Garonne, arrond. of Saint Gaudens, 36 m. SW of Toulouse. Pop. of cant., comprising 24 coms., 11,810 in 1841; of com. 1,841. The town stands on a small island formed by the Save, 20 m. NNE of Saint Gaudens.

ILE-SUR-LE-DOUBS (L'), a canton, commune, and village of France, in the dep. of Doubs, arrond. of Beaume-les-Dames. The cant., comprising 24 coms., had a pop. of 10,007 in 1841; the com. of 1,101. The village is 12 m. E of Beaume-les-Dames.

ILE-DE-FRANCE, an ancient prov. of France, originally comprised between the Seine, the Marne, the Ourcq, the Aisne, and the Oise; and bounded on the N by Picardy; on the E by Champagne; on the S by the Orleanais, and the Nivernais; and on the W by Normandy. It had a total area of 1,408,458 hectares; and was subdivided into the Ile-de-France proper, of which the area embraced 1,051,864 hect., and the small districts of the Brie-Francaise, the Gatinais-Francais, the Hurepoix, the Mantois, the Vexin-Francais, the Beauvoisis, the Valois, the Soissonnais, the Laonnois, the Drouais, and the Thimerais. It now forms the dep. of the Seine; the greater part of the deps. of the Seine-et-Oise, the Seine-et-Marne, Oise, and Aisne; and a small portion of the deps. of Loiret and the Nievre.

ILE-DE-FRANCE. See Mauritius.

ILE-JOURDAIN (L'), a canton, commune, and village of France, in the dep. of Vienne, arrond. of Montmorillon. The cant., comprising 10 coms., had a pop. in 1841 of 9,538; the com. of 662. The village is on the r. bank of the Vienne, 18 m. SW of Montmorillon.

ILE-EN-JOURDAIN (L'), a canton, commune, and town of France, in the dep. of Gers, arrond. of Lombez. The cant., comprising 16 coms., had a pop. of 12,628 in 1841; the com. of 4,933. The town is situated on the r. bank of the Save, 13 m. NE of Lombez.

ILE-ROUSSE (L'), or Isola Rossa, a canton and town of Corsica, in the arrond. and 10 m. ENE of Calvi. The cant. comprises 6 coms., and had a pop. of 5,310 in 1841; the com. and town of 1,466. The town is situated on the NW coast of the island, in N lat. 42° 38′ 39″, E. long. 8° 55′ 28″. Its port is bad, but considerable exports of wax, citrons, oranges, and oil are made from it. The district for many miles round is marshy, and covered in part with jungle, and forms the haunt of lawless banditti, who so recently as 1851 were levying a kind of black mail on the surrounding districts.

ILE-SUR-LE-SEREIN (L'), a canton and commune of France, in the dep. of Yonne, arrond. and 8 m. NE of Avallon. Pop. of cant., comprising 14 coms., in 1841, 7,103: of com. 915

ILE-TRIANON (L'), a village of France, in the dep. of Haute-Vienne, cant. and 1½ m. SW of Limoges. Pop. 1,500.

ILEK, a river of Asia, formed by the union of several streams in the Kirghiz territory, in about N lat. 50° 20′, E long. 57° 10′. It runs WNW, and skirting the gov. of Orenburg, on the S, joins the Ural on the l. bank, at Ilekskoi-Gorodok, after a course of 30 m. Rock-salt abounds in the district through which this stream flows, and is extracted to the extent of 2,000,000 pouds annually.

ILEKSAIA-ZACHTCHITA, a fort of Russia, in the gov. of Orenburg, near the r. bank of the Ilek, and 45 m. S of Orenburg.

ILEKSKOI-GORODOK, or Iletski, a town of Russia, in the gov. of Orenburg, at the confluence of the Ilek and Ural. Convicts condemned to hard

labour are employed here in extensive salt manufactories and forges.

ILETTES (Les Grandes), a village of France, in the dep. of the Meuse, cant. and 4 m. W of Clermont-en-Argonne, on the Hautebas. Pop. 1,296. It has manufactories of glass and earthenware.

ILEVSK, a mining village in Russia in Europe, in the SW part of the gov. of Nijni-Novgorod, district and 24 m. SSW of Ardatov, on the W bank of a small lake.

ILFELD, Ilefeld, or Ihlfeld, a town of Hanover, in the landr. and 63 m. SE of Hildesheim, to the SE of the Hartz mountains, on the Bäre, at an alt. of 906 ft. above sea-level. Pop. 650. A boarding establishment was founded here in 1560 by the Lutheran abbot Neander. In the environs is a mine of manganese.

ILFIS, a river of Switzerland, which has its source in the cant. of Bern. in the immediate vicinity of Schangnau; traverses the SW corner of the cant. of Luzern; thence re-enters Bern, and after receiving two small streams which descend to it on the r. from the Napp mountains, discharges itself into the Emmen.

ILFORD (Great), a chapelry in the p. of Barking, Essex, 4 m. SW of Romford, on the Roding, and intersected by the Eastern Counties' railway. Pop. in 1831, 3,512; in 1841, 3,742.

ILFORD (Little), a parish in Essex, 7 m. NNE of London, on the Roding. Area 750 acres. Pop. in 1831, 115; in 1841, 189.

ILFOW, a district of Turkey in Europe, in the SW part of Lower Wallachia, bounded on the N by the district of Prahova, on the E by that of Jalomnitza, on the W by the districts of Dimbovitza and Vlaska. On the S it is separated by the Danube from the sanjaks of Rustchuk and Silistria in Bulgaria. It is 75 m. in length from NW to SE, and about 42 m. in breadth. It is generally fertile, but towards the S, numerous lakes and marshes are formed by the waters of the Danube. Its capital is Bucharest.

ILFRACOMBE, or Ilfordcombe, a parish, seaport, and market-town, in Devonshire, 48 m. NW by N of Exeter. Area of p. 3,620 acres. Pop. in 1831, 3,201; in 1841, 3,679. The town is chiefly important as a haven for wind-bound vessels, which can put in here when it is dangerous for them to enter the mouth of the Taw. Nature and art seem to have jointly combined in forming the harbour, which, appearing like a natural basin, is almost surrounded by craggy heights, overspread with foliage. On three sides the rocks rise in a semicircular sweep; on the fourth, a bold mass of rock stretches nearly half-way across the mouth of the recess; affording protection to the little cove from the northern tempests. This rock, which is called the Lantern-hill, and is situated on the N side of the harbour, rises nearly to a point, and bears on its summit a lighthouse, in 51° 13′ N lat., and 4° 7′ W long. A number of good houses, chiefly for the accommodation of strangers in the summer season, range along the side of the harbour, and the remainder of the town stretches 1 m. to the W. I. carries on a considerable trade from Cornwall and Devon, with Bristol and other ports; it also employs a number of vessels in the herring fishery of the Bristol channel. Steam or other packets run from this port to Swansea and Milford, as well as to Bristol.

ILGA, a river of Russia in Asia, in the gov. of Irkutsk, which issues from a small lake, 90 m. NNE of Irkutsk, runs N, passes Ilginsk, and joins the Lena at Usk-Ilghinskaïa, after a total course of about 150 m.

ILGHI, a town of Russia in Europe, in the gov. and 57 m. SW of Vilna, district and 42 m. SW of Novo-Troki, on the NW bank of a lake of the same name. The lake is 8 m. in length, and about 1½ m. in breadth.

ILGHINSKOI, or Ilginsk, a town of Russia in Asia, in the gov. and 180 m. NNE of Irkutsk, on the l. bank of the Ilga.

ILGAN. See Eilgun.

ILHA-DAS-COBRAS, See Cobras.

ILHA-GRANDE, an island of Brazil, in the prov. of Rio-de-Janeiro, to the S of the bay of Angra-dos-Reis, and in N lat. 23° 7′ 15″. It is 15 m. in length from E to W, and about 7 m. at its greatest breadth; and is intersected longitudinally by a range of mountains, terminating on the E in Point Castilhanos. To the E and W of the island are the Barra-de-Marambaya and Barra-de Cayrussu, the two principal openings from the bay into the Atlantic. The principal roadsteads are the bay of Palmas, on the NE of the island, and that of Abrahão and Estrella on the N. The parish of I. comprises the adjacent islands of Jorge-Grego and Palmas, and contains about 2,000 inhabitants. The chief productions of the island are sugar, mandioc, millet, kidney-beans, and coffee. The latter is extensively cultivated on the mountains in the central part of the island. See also Angras-dos-Reis.

ILHA-MANOEL, an island of Brazil, in the prov. of the Rio-Grande-do-Norte, at the mouth of the Rio-Açú or Appodi. It has a considerable trade in salt and salted fish.

ILHA-DOS-OVOS, an island of Brazil, in the bay of Cuma, prov. of Maranhão, in S lat. 2° 4′, separated from the continent by a narrow strait.

ILHA-DO-PAO, an island of Brazil, in the Rio-Jequitinhonha, prov. of Minas-Geraes, 35 m. below the town of São-Miguen.

ILHA-PEQUENA, a small island of Brazil, in the Rio-Tieté, prov. of São-Paulo.

ILHA-DO-RIO-DO-SINO. See Rio-do-Sino.

ILHAS-VERDES. See Cabo-Verde.

ILHAVO, a town of Portugal, in the prov. of Beira, comarca and 5 m. S of Aveiro, and 32 m. NW of Coimbra, near the shore of the Atlantic. Pop. 4,000.

ILHEO (Angra do), or Walvisch Bay, an indentation of the SW coast of Africa, in S lat. 22° 45′, extending between Cape Cross on the N, and Pelican point on the S; and receiving Somerset and Kouisir rivers.

ILHEOS, a comarca of Brazil, in the N part of the prov. of Bahia, extending from the Jiquirica on the N, to the Belmonte on the S, and touching on the E the Atlantic ocean; between the comarca of Bahia on the N, the provs. of Minas-Geraes and of Porto-Seguro on the S, and bounded on the W by the comarca of Jacobina. Its total length from N to S is 210 m., and its medium breadth from E to W 120 m. It is intersected from N to S by the wooded mountains of the Serra-dos-Aimores, which here take the names of the Iltaraca and Goytaracas, and is watered by numerous streams. Of these, the principal are the Ilheos or Cachoeira, Commandatuba, Poxim, and Patipe, all of which flow into the Atlantic. At the mouth of the Ilheos is a good port. Running along the coast is a group of islands, 4 in number, from which the comarca, town, and river derive their name. The largest, which lies in 14° 47′ 23″, is covered with wood; the others are mere rocks. The soil of the comarca is generally fertile, and produces manioc, rice, millet, coffee, sugar, anise, and cacao in great abundance,—the two latter indigenously. In the forests, which afford excellent timber and dye-woods, is found the copaiba, from which the balsam of that name is derived, and numerous other medicinal plants and shrubs. With the exception of

pigs, few domestic animals are reared in this part of the prov.; but wild boars and deer are abundant in the woods. Gold, granite, limestone, and crystals are found in the W districts of the comarca. The pop. consists chiefly of Indians. The Tupininquins, who at the period of the conquest inhabited the coast, now form a numerous race. The interior is peopled by the Patachos, or Cotochos, and Mongoyas.—The chief town, Ilheo, or São-jorge-dos-Ilhéos, is situated between two hills, on the l. bank of the river, and near the shore of the bay of the same name, 144 m. SSW of San Salvador, and 138 m. N of Porto Seguro, in N lat. 14° 49′. It contains 2 churches, a Jesuits' college, 2 convents, and a public fountain. The streets are regularly built, but the houses are small and are covered with tiles. The port is large, well-sheltered, and defended by several forts. It is capable of receiving the largest trading vessels; and carries on an active trade with Bahia in mandioc flour, timber, rum, rice, and, in small quantities, coffee and cacao. The district is watered by the Cachoeira, Itahipe or Una, and several minor streams. Its pop., estimated at 3,000, are employed chiefly in the flax and timber trade.

ILI, a military division in the SW part of Sungaria, of which the cap., bearing the same name, but called by the Chinese Hoei-yan-ching, or Hoei-yuen, is situated in N lat. 43°, E long. 82½°. It is a mountainous territory, being intersected on the S by the great snowy range of the Thian-shan. To the N of the river Ili, the surface is covered with forests and marshes. The principal streams are the I., the Tchui, the Tekis, the Arsha, the Guldja, the Kharatal, the Arachan, and the Borotala. Among the lakes of this region are the Balkash, the Issikul or Temurtu, and the Alaktugul. Gold, iron, tin, and coal are among the mineral productions of this territory.—The cap. is garrisoned by a detachment of 3,800 Mantshus; and about 2,000 malefactors, who are sent here from all parts of China, are kept employed in the service of the government.

ILI, or Eli, a river of Chinese Tartary, composed of two main branches, the Tekis and the Ili, both of which rise in the Alak-Tagh, near the pass of Khonghis, in N lat. 44°, according to the Jesuits' map. The Ili or Khonghis runs first about 150 m. NW, and then 150 m. N, to the Balkash lake. The Tekis branch, called also the Partsin, rises considerably to the W of the Ili, and having run 70 m. NE, enters the latter by several mouths.

ILIDJA-VARNA, a town of Turkey, in Bulgaria, on the Black sea, 9 m. S of Varna.

ILIJEH [*i. e.*, 'warm spring'], a village of Asiatic Turkey, 6 m. W of Erzerum, and 3 m. E of the Euphrates, which is here 60 or 70 yds. wide in summer. It has 2 warm springs of a temp. of 100°.—Also a town of Asiatic Turkey, in the pash. and 72 m. WNW of Diarbekir, on the l. bank of the Euphrates.—Also a village of Asiatic Turkey, in the pash. and 60 m. ENE of Diarbekir, at an alt. of 3,779 ft. above sea-level. It contains 4 fountains and 2 mosques.

ILIM, a river of Asiatic Russia, in the gov. of Irkutsk, which rises in the SW part of the district of Kerensk; and running N, and then NW, joins the Angara on the r. bank, after a course of 210 m.

ILIMANI, Nevado-de-Illimani, or Yllimani, a majestic summit of the Andes, second to that of Sorata, in the Bolivian prov. of La Paz, 30 m. ESE of the town of that name. Like Chimborazo in the Andes of Quito, I. is the most southern snowy summit of the eastern branch of the Andes, to which it belongs. By astronomical observation it is fixed between 16° 35′ and 16° 39′ S lat., and 67° and 68° W long. It has three peaks, arranged pretty nearly from N to S. Mr. Pentland, in 1827, measured the most northerly of these peaks, and found its elevation to be 24,200 ft. above the level of the sea, or nearly 12,000 ft. above that of La Paz; but revising his calculations subsequently, he determined the alt. of the S peak, in S lat. 16° 38′ 52″, and W long. 67° 49′ 18″, to be 21,145 ft.; that of the middle peak, in lat. 16° 38′ 26″, long. 67° 49′ 17″, to be 21,094 ft.; and that of the N peak, in lat. 16° 37′ 50″, long. 67° 49′ 39″, to be 21,060 ft. The determination of the height of I. was made trigonometrically from the borders of a small lake at its base, which Mr. P. found barometrically to be 15,951 ft. above the level of the sea. Sir Edmund Temple has given a picturesque description of I., in his journey from Calamaca on the road from Sicasica, to La Paz:—"High in the blue crystal vault, and immediately before me, as I rode thoughtlessly along, I perceived a brilliant streak, [it was not yet day-break,] resembling burnished gold, dazzling to look at, and wonderfully contrasted with the shades of night which still lingered upon the world beneath; for to us the sun had not yet risen, though the sombre profiles of the cordilleras might be distinctly traced through the departing gloom. Imperceptibly the golden effulgence, blended with a field of white, glistening in vestal purity, and expanding downwards, gradually assumed the appearance of a pyramid of silver of immeasurable base. I stopped in mute amazement, doubtful of what I beheld. Day gently broke, and the tops of distant mountains glittered in the early beams; the sun then rose, or rather rushed, upon the silent world in a full blazing flood of morning splendour; and at the same moment the stupendous Ilimani, the giant of the Andes, in all the pomp of mountain majesty, burst upon my view. My first feeling was a sense of delight, with an expansion of soul producing positive rapture. Never before did I feel myself endowed with equal energy, or experience such an elevation of sentiment. Never did I feel myself less, so quickly did that sentiment subside into devout rapture. Admiration, reverence, and awe, with a consciousness of human inferiority, were the mingled feelings of my heart in contemplating this terrestrial manifestation of the glory of God. Here—I exclaimed with fervour and delight—here do I behold the sublime and beautiful, spontaneously produced in the great page of nature by the omnipotence and providence of nature's God! Unprepared as I was at the time, besides being full 30 m. distant, it was altogether unexpected; and the glare of magnificence in which it so suddenly stood, and to appearance so closely, absolutely surpassing imagination itself, occasioned, in a strong degree, those sensations which a scene so truly imposing, in the midst of solitary grandeur, was well calculated to inspire." They who have witnessed and enjoyed wild and magnificent scenery such as this, must have also felt the transport it occasions; they will admit that a superior order of sentiment accompanies the contemplation of such wondrous works; that, in the words of M. Humboldt, it elevates the souls of those who delight themselves in the calm of solitary contemplation. Between the parallel of the I. and that of 21° S lat., the eastern cordilleras do not present a single summit which enters the limits of perpetual snow, though several rise to 16,000 ft., and even higher, as the Cerro-de-Potosi, which has an alt. of 16,080 ft. At 21° 15′ is the Nevado-de-Chosolque, 12 leagues NW of Tupisa, the S frontier of the Bolivian republic; but S of this Mr. Pentland met with several peaks covered with eternal snow. Between the 13th and 17th degrees of S lat., Mr. Pentland says that the inferior line of perpetual snow is seldom less than 17,000 ft. on the flanks of the E

chain of the Andes, or 1,253 ft. higher than in the presidency of Quito—a result, as Humboldt remarks, probably owing, as in Central Asia, to the radiation of caloric from the great upland of Titicaca.

ILIMSK, a town of Asiatic Russia, in the gov. of Irkutsk, 260 m. N of Irkutsk, on the r. bank of the Ilim. Pop. 700, chiefly employed in hunting martins and sables in the adjacent forests.

ILIN, an islet off the S extremity of the island of Mindoro, in the Philippine group, in N lat. 12° 15′, E long. 121° 4′.

ILINISSA, or Illinissa, a lofty peak of the Equatorial Andes, one of the most majestic of those columnar heights which are seen from the city of Quito. It is in the parallel of Cotopaxi, and attains an alt. of 17,238 ft. above sea-level. By the Alto-de-Tiopullo, it is connected with its twin-peak, Ruminavi, I. being on the W, and Ruminavi on the E crest of the Andes. On the top of the dyke or chain of Tiopullo is a tumulus upwards of 200 ft. in height; and on the SW of this tumulus, 9 m. from the crater of Cotopaxi, and 30 m. from Quito, are what are supposed to be the ruins of an ancient palace, forming a square of 100 ft. on the side, with 4 great doorways, and 8 chambers. It is called the palace of Callo.

ILINKA, a town of Russia in Europe, in the gov. and 84 m. SSW of Voronej, district and 30 m. SW of Ostrogojsk.

ILINTZKOI, a town of Russia in Asia, in the gov. and 132 m. E of Irkutsk, district and 36 m. NW of Verkhne-Oudinsk, on the l. bank of the Selinga, and E of Lake Baikal.

ILIRGH, a town of Marocco, in the prov. of Susa, 45 m. NW of Akkah, and 240 m. SSW of Marocco.

ILISSUS, a small but celebrated river of Greece, in the dep. of Attica, which has its principal source near the monastery of Cyriani, just below the higher region of Mount Hymettus. The stream bursts forth there from the marble rock, and soon loses itself in a deep ravine which it has worn in the schistose base of the mountain. At some distance below, the old bed of the river turns to the l., and is joined by several other ravines which convey to it, in the rainy season, an additional supply of water. A subterranean canal conveys nearly the whole perennial stream of the I. into the city of Athens: whence the appearance it now exhibits of an occasional torrent sometimes dry throughout the entire year. Flowing WSW, and passing in its course a little to the S of Athens, after running a total distance of about 12 m., it throws itself into the gulf of Egina, to the SE of the embouchure of the Cephissus.

ILKISTON, a parish and market-town in Derbyshire, 8½ m. ENE of Derby, on the Erwash and Nutbrook canal. Area 2,290 acres. Pop. in 1831, 4,546; in 1841, 5,326. The principal coal-mines of the co. are in this parish.

ILKLEY, a parish and township in the W. R. of Yorkshire, on the Wharfe, 5½ m. WNW of Olley. Area of p. 7,600 acres. Pop. in 1841, 1,174.

ILL, a river of France, which has its source in the dep. of the Haut-Rhin, 12 m. S of Altkirch; runs N past Altkirch, Mulhausen, and Ensisheim; enters the dep. of the Bas-Rhin, passes to the E of Schettstatt, Benfelden, Erstein, and Strasburg, and 5 m. below the latter town enters the Rhine, after a total course of 135 m., 57 m. of which, from Ladhoff to the Rhine, are navigable. Its principal affluents are the Lauch, Faecht, Erstein, and Andlau. The canals of Neuf-Brisach, Scheer, Bruch, and Monsieur, all terminate at the Ill under the walls of Strasburg. The chief articles of transit on this river are wine, cheese, corn, hay, faggots, paper, muslin, and refined sugar, as exports; and madder, oil, alum, potash, raw cotton, sugar, and coffee, as imports.

ILLABASCO. See Cojutepeque.

ILLACK, a small island of the Aleutian archipelago, in the group of the Andreanov islands to the SW of Tanaga island, and SE of that of Goreloi, in N lat. 51° 52′.

ILLANA, a town of Spain, in New Castile, in the prov. and 30 m. SSE of Guadalajara, and partido of Siguenza, in a valley surrounded by mountains. Pop. 751. It has a leather manufactory.

ILLANA, or Illanon Bay, an extensive indentation of the SW coast of the island of Mindanao, in the group of the Philippine islands, Asiatic archipelago, extending from Bamban point on the SE to Flechas point on the W. It is 75 m. from NE to SW, and is nearly equal in breadth. It contains several islands, the principal of which are Bongo and Caragao, and encloses on the E a spacious harbour named Pollok bay. A little to the S of this bay, at the mouth of the Simov, is the capital of the island.

ILLANOS, a people of the island of Mindanao, in the group of the Philippines, who occupy the central part of the island, from Illana bay on the S, to the N coast. They are governed by 16 petty sultans and 17 rajas, and form a species of confederation. They are much addicted to piracy.

ILLARIO (Santo), a town of the duchy of Modena, 12 m. NW of Reggio, on the road to Parma.

ILLAS (San Julian de), a town of Spain, in Asturias, in the prov. of Oveido and partido of Avilés, at the foot of the Sierra-de-la-Peral. Pop. 1,290. It has a parish church and a custom-house, and possesses some branches of manufacture. The rearing of cattle forms also an important employment.

ILLASI, a town of Austrian Lombardy, in the gov. of Venice, delegation and 10 m. ENE of Verona, at the foot of a mountain in a valley of the same name. Pop. 1,500.

ILLATS, a commune of France, in the dep. of the Gironde, cant. of Podensac, 21 m. SSE of Bordeaux. Pop. 1,597. It produces good wine.

ILLAU, or Illawa, a town of Hungary, in the comitat and 12 m. NE of Trentshin, on the l. bank of the Waag. Pop. 1,223. It has a Catholic church, possesses an extensive manufactory of cloth, and 5 annual fairs.

ILLAWARA, or Five Islands, a port on the E coast of New South Wales, in Camden co., 54 m. SW of Sydney, in S lat. 34° 30′, and E long. 150° 52′. It forms a large embrasure, opening to the Pacific by a narrow entrance, at the mouth of which is Windang island. The district of I. consists of a narrow strip of arable land of the first quality, situated between the ocean and the E base of a mountain-range running parallel to the coast, and commencing at about 45 m. S from the Heads. The average breadth of this belt is from 4 to 6 m.; its length, about 60 m. It produces wheat, barley, maize, and tobacco, and is commonly regarded as the garden of New South Wales. "The I. is a region in which the rich soil is buried under matted creepers, tree ferns, and the luxuriant shade of a tropical vegetation, nourished both by streams from the lofty range, and the moist breezes of the sea." [*Mitchell.*] The return, however, is adequate to the labour required in clearing the ground.

ILLE, a commune and town of France, in the dep. of the Pyrenees-Orientales, arrond. and 12 m. ENE of Prades, cant. and 5 m. ENE of Vinca, on the r. bank of the Tet. Pop. 3,102. It is surrounded by walls, flanked with towers, is well-built, and contains 3 churches and an hospital. Olives, peaches, and other varieties of fruit, are extensively cultivated in the environs, and form important articles of trade. Fairs for grain and cattle are held here

twice a-year.—Also a river, which has its source in the dep. of Ille-et Vilaine, near Feins, in the cant. of St. Aubin d'Aubigné; runs S; and, after a course of 21 m., joins the Vilaine at Rennes, on the r. bank. It is connected with the Rance by the canal of Ille-et-Rance, which runs along it in almost the entire length of its course, and is supplied by its waters. The Etang-de-Boullet, in which the Ille has its source, has another outlet, by which it is connected with the Channel. The canal of the Ille-et-Rance joins the latter river a little above Dinan, and has a total extent of 52 m.

ILLE-ET-VILAINE, a maritime department in the NW region of France, formerly included in Haute-Bretagne. It takes its name from its two principal rivers, and is situated between the parallels of 47° 37′, and 48° 31′ N, and the meridians of 1° and 2° 15′ W. On the N it is bounded by the English channel; on the NE by the dep. of La Manche; on the E by the dep. of Mayenne; on the S by that of Loire-Inferieure; and on the W by those of Morbihan and the Cotes-du-Nord. Its length from N to S is 78 m., its greatest breadth 60 m. Its superficial area is 672,096 hectares, or 1,660,883 acres, which is nearly the area of Lincolnshire. The Menez hills, a line of small elevation, intersect this dep. from SW to NE, forming the water-shed between the streams which are conveyed by the Vilaine and its tributaries the Ille, the Men, and the Bruc, to the Atlantic, and by the Couesnon and the Rance to the Channel. The canal of the Ille-et-Rance unites these two water-systems by a line of navigation, which, commencing at Rennès, at the confluence of the Ille and the Vilaine, is continued along the Ille to near its source, where it becomes connected with an affluent of the Rance, by which it is carried into the latter river, terminating at Dinan in the dep. of Cotes-du-Nord. The total length of this canal—which is navigable for vessels of 70 tons—is 84·797 metres, or 52·7 m.; of which 63 metres are in the dep. of I. and 21·7 metres in that of Cotes-du-Nord. It has a fall of 134 ft. to the Vilaine, and of 141 ft. to the Rance. The extent of coast-line is small, but presents the roadstead of Cancale and the port of St. Malo at the embouchure of the Rance, with the fortified islets of Césembre and Conchée. Towards the W, the coast-line is rocky, but in the E it is low and marshy; and in this quarter are a number of salt pools, the remains of the once extensive marsh of Dol, which has not yet been wholly drained, but is defended from the inroads of the sea by dykes extending from Pontoison to Chateauricheux, a distance of 18½ m.

The climate of this dep. is temperate, but humid. The extreme cold of winter is rarely below 22°, and the extreme heat of summer rarely exceeds 68°. The prevailing winds are from the W and SW. The dep. does not rank high as an agricultural district. Its soil is in general light and poor. Only about a ninth part of the whole is rich soil. The total quantity of cultivable land was estimated in 1848 at 411,379 hect., or about two-thirds of the surface; in 1834, it amounted to 397,496 hect. In 1848, 54,516 hect. were in natural meadows, and 40,854 hect. were covered with wood, while 129,635 hect. were mere heaths, sands, and waste ground. The arrond. of Redon is the best cultivated. In 1815 the *cotes foncières*, or properties subject to the *contribution foncière*, were 150,282; in 1835, 143,550, and of this last number 60,920 were assessed at less than 5 fr.; 26,058 at from 5 to 10 fr.; and 307 at upwards of 500 fr. In 1848 the *propriétaires foncières* were 151,647, and the territorial revenue 19,477,000 fr., showing a mean revenue of little more than 128 fr. The principal agricultural productions are grain, buckwheat, hemp, lint, apples, and wood. A small quantity of light white wine is grown in the S part of the dep. In 1839, 70,987 hect. were under wheat; 93,803 under buckwheat; 24,903 under rye; 5,186 under barley; 38,995 under oats; 6,498 under potatoes; 447 under beet-root; 1,732 under colza; 4,243 under hemp; and 4,401 under lint. The live stock in 1839 consisted of 62,433 horses; 243,785 horned cattle; 189,271 sheep; 73,501 pigs; and 10,764 goats. —The mineral produce of the dep. is inconsiderable; but iron was produced in 1839 to the extent of 16,572 quintals of cast-iron, of the value of 565,657 fr., and 11,830 q. of malleable iron, of the value of 511,540 fr. Copper, lead, coal, marble, tripoli, and potter's clay are wrought to a small extent. The fisheries on the coast are active; the oyster-fishery of Cancale in particular.—The manufacturing industry of the dep. is mainly confined to the weaving of strong hemp and linen fabrics and sailcloth, rope-making, tanning, and cyder-brewing. A little glass and pottery ware is manufactured, and there is a government tobacco manufactory at Saint-Malo. Butter, cattle, horses, fat cattle, wood, wax, honey, and coarse linens form the chief articles of export. The 7 ports belonging to this dep. possessed a mercantile fleet of 516 vessels = 37,852 tons, in 1841. The revenue contributed to the state from this dep. in 1844 amounted to 13,822,062 fr. It is intersected by 11 national and 13 departmental roads; the former having a total length of 393 m., the latter of 154 m.

The pop. in 1801 was returned at 488,846; in 1821, at 533,207; in 1831, 547,052; in 1841, 549,417; in 1846, 562,958, or 84·19 to a sq. kilometre; the average density for all France being 67·088. In 1840, the establishments for primary instruction in this dep. consisted of 9 superior schools, with 350 pupils; 473 elementary schools, attended by 26,599 children in winter, and 19,467 in summer; 2 adult classes, attended by 350 scholars; 4 infant-asylums, with 420 pupils; and 10 secondary establishments, of which 1 was a royal college at Rennes, and 4 were communal colleges at Dol, Fougeres, Saint-Savan, and Vitré, with 1,241 pupils.—The administrative division is into 6 arrondissements, viz. Fougeres, Montfort, Redon, Rennes, Saint-Malo, and Vitré, which are subdivided into 43 cantons and 347 communes. Of the communes, 34 have a pop. of above 3,000, 6 of more than 5,000, and 1 of 10,000.—The dep. forms the diocese of the bishop of Rennes, who is a suffragan of the archbishop of Tours.

ILLEKH, a town of Marocco, in the prov. of Susa, 225 m. SSW of Marocco, and 1½ m. W of Talent. The Jews, who form a large proportion of the pop., carry on here a considerable trade.

ILLER, a river of Germany, which has its sources in the Hornberg, in the NW of the Tyrol, near the village of Baad; thence it flows N into Bavaria, through the circle of Swabia, bathing the walls of Kempten and Illertissen, and pursues its course along the frontier of Würtemberg to the Danube, which it joins, on the r. bank, 1½ m. above Ulm, and after a course of about 105 m. Its principal affluent is the Aurach, which it receives on the l. It runs with great impetuosity, and is liable to inundation. Its banks, near its embouchure, were the scene in 1800 of several engagements between the French and Austrians.

ILLERAICHHEIM, a village of Bavaria, in the circle of Swabia, presidial and 5 m. S of Illertissen, and 42 m. WSW of Augsburg, on the r. bank of the Iller. Pop. 540. It has a castle.

ILLERTISSEN, a landgericht-bezirk, or presidial, and town of Bavaria, in the circle of Swabia, on the r. bank of the Iller, 40 m. WSW of Augsburg, and 72 m. W of Munich. Pop. 1,100. It has two castles. Pop. of presidial 2,910.

ILLESCAS, a judicial partido and town of Spain, in New Castile, in the prov. of Toledo. The partido comprises 27 pueblos. The town is 17 m. N of Toledo, and 24 m. S of Madrid, on the road between these two towns. Pop. 1,446. It contains some well-built houses, an hospital, and a convent. In the latter is a magnificent church, containing a highly venerated image of the Virgin. The manufacture of chocolate and of leather form the chief objects of local industry. It was originally called *Ilarcuris*, and afterwards Ibieri or Ibiense, whence the present appellation, Illic-quiescas or Illescas, is derived. It suffered much during the wars of 1808 and 1814.

ILLEVILLE-SUR-MONTFORT, a commune of France, in the dep. of the Eure, cant. and 4 m. NE of Montfort-sur-Rille. Pop. 1,068.

ILLIASSEE, a river of Afghanistan, which has its source in a branch of the Suliman mountains, near the S extremity of the Derajat; runs W along the S confines of Sewistan; and is lost in the sultry plain of Cutch-Gundava.

ILLIDE (Saint), a commune of France, in the dep. of Cantal, cant. and 5 m. W of Saint-Cernin. Pop. 1,830. Cattle fairs are held here.

ILLIERS, a canton, commune, and town of France, in the dep. of the Eure-et-Loir, and arrond. of Chartres. The cant. comprises 21 com. Pop. in 1831, 10,129; in 1841, 10,496. The town is 17 m. SW of Chartres, on the r. bank of the Loir. Pop. in 1841, 2,916. It has manufactories of cloth, serge, hosiery, woollen coverlets, and leather; and possesses 5 annual cattle fairs. See also Lie.

ILLIES, a commune of France, in the dep. of the Nord, cant. of La Basse. Pop. 1,285. It has manufactories of sugar from beet-root.

ILLIFANT, a commune of France, in the dep. of the Cotes-du-Nord, cant. of Merdrignac, 21 m. E of Loudeac. Pop. 1,082.

ILLIFRE. See Jillifre.

ILLIMANI. See Ilimani.

ILLINGEN, a village of Baden, in the circle of the Middle Rhine, on the Rhine, to the N of Rastadt. Pop. 345.—Also a v. of Würtemberg, in the circle of the Neckar, and bail. of Maulbronn, 20 m. NW of Stuttgart, and 20 m. S of Heilbronn. Pop. 1,330.

ILLINGTON, a parish in Norfolk, 3½ m. WNW of East Harling. Area 1,380 acres. Pop. 93.

ILLINOIS, one of the United states of America, admitted into the union in 1818, and the 5th in point of extent. The Ohio washes its S and SE border, extending from the mouth of the Wabash to its junction with the Mississippi, a distance of 160 m., and separating it from Kentucky. The Mississippi constitutes the W boundary from the mouth of the Ohio to the parallel of 42° 30′, a distance, measuring the meanderings of that river, of more than 500 m., and separates it from Missouri and Iowa; a line drawn due E from the Mississippi along the parallel of 42° 30′, divides it from the territory of Wisconsin: the Wabash separates it from Indiana, from its mouth to within 16 m. of Fort Harrison, whence the division line leaves the river, running along the meridian of 87° 49′, until it strikes Lake Michigan. Its length in a direct line from N to S is 372 m.; its extreme breadth 210 m. It contains 55,055 sq. m., or 35,235,209 acres.

Face of the country.] The surface is generally level; the S and N parts are somewhat broken and hilly, but nowhere rise to an elevation deserving the name of a mountain. A large part, amounting to perhaps two-thirds of the whole surface, is covered with prairies. Nature has not only favoured this state with a temperate climate, and highly productive soil, but has prepared, in the numerous streams with which it is watered, convenient channels of communication for the transportation of its produce to market as well as for internal intercourse.—Its chief rivers are the Mississippi, the Illinois, the Kaskaskia, the Ohio, and the Wabash. The Mississippi, Ohio, and Wabash, form more than two-thirds of the boundary of the state. The Illinois, which intersects it, and one of whose head-streams rises within 10 m. of Lake Michigan, is navigable above 200 m.; and it receives about twelve tributary streams, all of which are navigable. The Kaskaskia waters a delightful country, which is well suited to the production of all sorts of grain. The Big-Muddy, Kaskaskia, Illinois, Rock-river, and many smaller streams, empty themselves into the Mississippi. The Chicago empties itself into Lake Michigan. The Vermilion, Embarras, and Little Wabash, are tributaries of the Wabash; Saline and Big-bay creeks flow into the Ohio. Between the mouths of the Wabash and the Ohio, the r. bank of the Ohio in many places presents bold projecting rocks. The banks of the Kaskaskia and Illinois in some places are skirted with sublime and picturesque scenery; and several of their tributary streams have excavated for themselves deep gulfs, particularly those of the first named river, the banks of which, near the junction of Big-Hill creek, present a perpendicular front of 140 ft. high, of solid limestone. A range of bluffs commences on the margin of the Mississippi, a short distance above the mouth of the Ohio, and extends N to beyond the Des Moines rapids, rising abruptly from the water-edge in some places, but most generally at a few miles distance. The NW part of the territory is a hilly broken country, in which most of the rivers emptying themselves into the Wabash from the N have their sources. A great part of the territory is open prairie, exhibiting immense plains covered with grass, on which the eye finds no limit to its vision but the distant horizon. S of the natural road leading from Terré-Haute to the Mississippi, the prairies are comparatively small; but as we go northwards, they widen and extend on elevated ground, between the water-courses. In some instances copses and groves of timber, of from 100 to 2,000 acres, shoot up in the midst of the prairies like islands in the ocean. The large tract of country through which the Illinois river and its branches meander, is not to be exceeded in beauty, richness, and fertility of soil, by any tract of land of equal extent in the United States. From the Illinois to the Wabash, excepting some little distance from the rivers, is almost one continued prairie, or natural meadow, intermixed with copses of wood, and some swamps and small lakes.

Climate and soil.] The climate of I. is in the S sufficiently mild to raise cotton, and peaches come to maturity in the extreme N; yet the rivers are frozen over for several months in the year. Except on the river bottoms, and in the neighbourhood of swamps, the region is healthy and free from endemic diseases. The winds from the N points and the great lakes of North America, are often very cold.—There are six distinct kinds of soil in this state: 1st, The valleys or bottoms, which bear honey-locust, Illinois nut, black walnut, beech, sugar, maple, &c. This land is of the first quality, and is almost invariably covered with a heavy growth of the trees mentioned. The tract called the American bottom, beginning at the mouth of the Kaskaskia, and extending along the Mississippi to the bluffs at Alton, presents a tract 90 m. in length, by 5 m. in average width, with a soil 25 ft. deep, which has produced maize every year without manuring, for upwards of a century. 2d, The newly formed alluvial land at the mouths and confluences of rivers, producing sycamore, cotton-

wood, water-maple, water-ash, elm, willow, oak, &c., and covered in autumn with a luxuriant growth of weeds. These lands are subject to inundations, and are unhealthy, from the exhalations of the subsiding waters. 3d, Dry prairie, which borders all the rivers, and lies immediately in the rear of the bottoms, between them and the bluffs. It is from 1 to 10 m. broad, and is well adapted to the purposes of cultivation. 4th, Wet prairie, which is found remote from streams, or at their sources, and is generally of a cold and barren soil, abounding with swamps and ponds, and covered with a tall coarse grass. 5th, Timbered land, moderately hilly, well-watered, and of a rich soil. 6th, Hills of a sterile soil, and destitute of timber, or covered with stunted oaks and pines.—The oak, of which there are various species, may be said to be the prevailing forest-tree of the state. The honey locust grows to the height of from 40 to 60 ft., when it divides into many branches, which, together with the trunk, are armed with long, sharp, pithy spires of the size of goose-quills, and from 5 to 10 inches in length. The flowers come out from the sides of the young branches, and are succeeded by crooked compressed pods, from 10 to 18 inches in length, and about 1½ or 2 inches in breadth, of which one-half is filled with a sweet pulp. These pods are used in brewing beer; they also afford nutritious and abundant food for hogs. The black walnut, which often rises to the height of 70 ft., is found in the valleys and on the rich hills. The butternut is the companion of the black walnut. All the species of hickory found in the northern states are common; and the *pecan* or Illinois nut grows plentifully in the rich flats. The banks of the Illinois are the favourite soil of the mulberry and the plum. Sugar-cane, maple, blue and white oak, black locust, elm, basswood, beech, buckeye, hackberry, coffee-nut tree, and sycamore, are found in their congenial soils throughout the state. White pine occurs on the head-branches of the Illinois. Spicewood, sassafras, black and white haws, crab-apple, wild cherry, cucumber, and pawpaw, are common to the best soils. Indian corn or maize is the staple product of the state. Wheat is also raised in large quantities; and oats, rye, and buckwheat thrive. Hemp, flax, cotton, and tobacco are grown. In 1847, 4,900,000 bushels of wheat were raised; 116,000 of barley; 4,200,000 of oats; 155,000 of rye; 120,000 of buckwheat; and 33,000,000 of Indian corn. About 300,000 lbs. of cotton were gathered in 1840, and 400,000 lbs. of maple sugar. —Lead is an important mineral production of this state. Its ore lies in horizontal strata, varying in thickness from an inch to several feet, and extending over above 200 m. From 8,000,000 to 10,000,000 lbs. are annually produced at the mines. Iron and copper occur; and the whole state abounds in coal. Salt springs are numerous. About 20,000 bushels of salt were made in 1840.

The buffalo, which formerly roamed at will, and in vast numbers, through the immense prairies of I., has disappeared, preferring the more distant plains of the Missouri. Deer, elk, bears, wolves, foxes, opossums, and racoons, occur in considerable numbers. A fine breed of horses has been reared in this state from the Spanish stock. The cattle have a lively and sleek appearance. Large herds are raised, and sent down the rivers in flat boats; and pork is largely exported. The live stock in 1840 amounted to 199,235 horses; 626,274 horned cattle; 395,672 sheep; and 1,495,254 swine. Wild turkeys abound in the hilly districts. Geese and ducks frequent the lakes and rivers, particularly the head-branches of the Illinois, and the small lakes and marshy districts towards Lake Michigan, whither they are attracted in prodigious numbers, in quest of the wild rice, which furnishes an abundant and favourite aliment. Buzzards, pigeons, blackbirds, paroquets, and several species of hawks, abound as in other parts of the western country. — Most kinds of fish which are found in the Mississippi and the great northern lakes frequent the rivers of this territory. Sturgeon are found in Peoria or Illinois lake. The only venomous serpents are the common and prairie rattlesnakes, and copper-heads.

Manufactures.] Manufactures, except of the ruder sort of articles of the first necessity, can hardly be said to exist in I. Castor-oil and linseed-oil, flour, whisky, leather, salt, agricultural implements, cotton-yarn, and common cotton and woollen goods, leather, soap, and candle are produced; but the whole manufactures of the state employed a capital in 1840 of only 2,704,405 dollars. The abundance of coal, and the inexhaustible water-power which may be commanded in this state, offer great facilities for the introduction of large manufacturing establishments; and there are numerous works of internal improvement in this state. Among these last, the Michigan and I. canal, connecting Lake Michigan at Chicago, with the I. river at La Salle, near the head of steam-boat navigation, 212 m. above the mouth of the I., and 1,500 m. above New Orleans, is the most important work. It is 96 m. in length; 60 ft. wide at the surface; 36 ft. at the bottom; and 6 ft. in depth; has 17 locks, and is designed for boats carrying from 100 to 120 tons. It was begun in 1836; and its estimated cost is 8,654,337 dollars.—The railroads in I. are the Galena and Chicago union 56 m. in length; the St. Charles branch, 8 m.; the Aurora branch, 13 m.; and the Sangamon and Morgan railroad, 54 m. in length.

Government and finances.] The legislative authority of this state is vested in a general assembly consisting of a senate and a house of representatives. Senators are elected for 4 years; representatives, for 2. All white male inhabitants, 21 years of age, who have resided within the state 6 months preceding the election, enjoy the franchise. The executive power is vested in a governor, who is elected every 4th year by the electors of representatives; and enjoys a salary of 1,500 dollars. The judicial power is vested in a supreme court.—The state sent 7 representatives to congress in 1842; but in 1852 became entitled to send 9.—The financial condition of I. is obscure. The *American Almanac* for 1852 sets forth the aggregate amount of state debt at 16,627,509 dollars. A large proportion of this debt appears to consist of arrears of interest which have been accumulating since 1841. The principal debt funded under act of 1847 amounted to 5,590,565 dollars; interest and arrears of interest on the same, in 1851, 2,965,763 d. In addition to this other items are stated under the head of 'unfunded internal improvement bonds,' 'other kinds of indebtedness,' 'liquidation bonds,' &c., amounting to 789,941 d. The canal debt on 1st January, 1851, was 8,112,117 d. This last debt is assuming a more favourable appearance, nearly 10 per cent. of the sum borrowed for its completion has been repaid, and the means of entirely liquidating this preferred loan are not distant; after which, at a moderate computation, there will be at least 100,000 d. per ann. applicable towards paying the arrears of interest, now amounting to upwards of 2,000,000 d. on the registered bonds. The internal improvement debt is, however, a different affair. A law of 1847–48 provided for a new tax of 2,000,000 d., to be first collected in 1851, and annually paid *pro ratâ*, in liquidation of the principal of this debt. This tax so levied would, it is supposed, at once produce 2,000,000 d. per ann.

and of course increase with the increasing value of property subject to taxation. But the absurdity of applying this tax as contemplated by the law, while the arrears of unpaid interest are so very large, has been evident to all; and at a recent extra session a measure was brought forward having for its object such a change in the constitution as would authorize a diversion of any sums collected under this law, so that they might be made to create a sinking fund for diminishing, and eventually extinguishing, this particular debt. This measure has been adopted, but it will require two or three years to make it operative, as it cannot by the constitution become law till acted on by another session of the legislature, and subsequently approved by the people, by a vote of a general election. That it will eventually become law may be hoped; and then the holders of those bonds may look forward to the final though remote liquidation of their claims.—The state is divided into 99 counties.

Springfield, near the centre of the state, is the seat of government. The supreme court holds sessions at Mount Vernon in Jefferson co., at Springfield, and at Ottawa in La Salle co. The principal commercial depot in the N is Chicago on Lake Michigan. The most commercial place in the SW, on the Mississippi, is Alton, 24 m. above the Missouri. The other principal places are Quincy, Galena, Peoria, Vandalia, and Kaskaskia. — Illinois college at Jacksonville, was founded in 1830. It has 6 professors, and was attended by 32 students in 1851. A Baptist theological seminary was founded at Upper Alton in 1835; a Methodist college at Lebanon in 1834; and M'Donough's college at Macomb in 1837.

Population.] The pop. of this state in 1810 was only 12,282; in 1820 it amounted to 55,211; in 1830 to 157,455, being an increase during the 10 years of 185·2 per cent.; in 1840 to 476,183, being an increase of 202·4 per cent.; and in 1850 to 855,384, being an increase of 79·2 per cent. Of the pop. in 1840, 3,598 were free-coloured; in 1850, 5,293. The number of slaves in 1830 was 746; in 1850, 331. The constitution provides that no more slaves shall be admitted into the state. There are a few bands of Indians, chiefly of the tribes of Sacs, Foxes, and Pottawatamies, still roaming over the unsettled lands of this state.

History.] La Salle left colonists at Kaskaskia and Kakokia in 1682; and French emigrants from Canada settled at these places in 1720, where their descendants still exist. By the treaty of 1763, this country came into the possession of Britain. In 1778, a body of Virginia militia took possession of the country. In 1787, it constituted a part of the North-west territory; in 1800, it became, along with Indiana, a separate territory. In 1809 it was constituted a separate territory under its present name; in 1812, it sent a delegate to Congress; and in 1818 it was admitted to the federal union, being the 23d in order of admission. Nearly all the settlements in this state have been made by emigrants from other states since the commencement of the present century. An official report to the secretary of war, in 1821, states that, in 1819, there were but three families settled from the mouth of the Illinois up 240 m. along the course of that river. Galena was settled in 1828: and in 1833, after the termination of the Black Hawk war, settlements began to be formed on Rock river, and in the N part of the state upon the tract purchased of the Sacs and Foxes.—The word *Illinois* is the French form of *Illinouac*, the Indian name borne by Lake Michigan when La Salle entered it in 1679.

ILLINOIS, a river of North America, a large tributary of the Mississippi, giving name to the above state. Its head-streams rise near the SW borders of Lake Michigan, and collect the drainage of a large tract of country. The Kankake, its main S head-branch, rises in a swampy tract within 10 m. of the S extremity of Lake Michigan. The St. Joseph, flowing into that lake, is only divided from the Kankake by a narrow portage of about a league, extending over a marshy plain. The country, says Father Hennepin, who first explored it in December 1679, "is nothing but marshes full of alder trees and rushes, and we could hardly have found, for 40 leagues together, any place to plant our huts, had it not been for the frost, which made the earth more firm and solid." The Kankake flowing W for above 100 m., unites with the Des Plaines or Maple river —which from its size and the direction of its course may dispute with the Kankake the title of the chief head-stream of the I.—a few hundred yds. below the point where the Otokakenog, or Du Page, coming from the NW, mingles with it. The three united streams assume the appellation of the I.; but there is a fourth head-stream coming from the NW, the Pishtaco of the Indians, and Fox river of the present inhabitants, which adds its tribute to the nascent I. only 20 m. below the confluence of the others. The character of the country about the sources of the Des Plaines river is similar to that around the sources of the Kankake,—flat and marshy, covered with tall grass, wild rice, and other aquatic plants, and mostly untimbered. The course of the I., as constituted by these several streams, is nearly S for a considerable distance; it then turns W; and becoming navigable for steamers below the falls, 250 m. above its mouth, pursues a SSW course through a rich and level country, with an almost imperceptible current, to a point within 5 m. of the Mississippi, where it turns E, and, after running 10 m., unites with that great stream, by a mouth 400 yds. wide, in N lat. 38° 58′, and W long. 90° 18′, 20 m. above the confluence of the Missouri. The total length of the united stream is 300 m. On account of the very slight fall to the Mississippi, a flood in that river sets back the waters of the I. for 70 m. The Vermilion, a large but unnavigable stream, enters it below the rapids, near Peru, at the point where the Illinois and Michigan canal, running across the state to Chicago, has its W terminus. The Mackinaw, Sangamon, Spoon, Crooked river, and Macoupin, are the principal tributaries of the I. —Also a river in the Indiana territory of the United states, which rises in Benton co., in Arkansas, and flowing S, enters the Arkansas 4 m. above the mouth of the Canadian river.

ILLINOIS, a nearly extinct Indian nation, or rather group of tribes, who occupied the country on both sides of the Illinois river, and from Lake Michigan to beyond the Mississippi. They consisted, in Charlevoix's time, of the Tamarous at the mouth of the Missouri; the Moingonas on the Des Moines river; the Kaskaskias, and the Kaokias, upon the Illinois river. A war with the Iroquois gave a severe shock to this alliance; and about 70 years after, or in 1752, the combined forces of the Sacs, Foxes, Sioux, and Keckapoos, attacked and dispersed the remains of the confederacy. At this day the Kaskaskias and Peorias, numbering conjointly about 150 persons, are the sole remains of the once powerful Illinois.

ILLISERA, a small town of Turkey in Asia, in Caramania, in the sanjak and 45 m. SSE of Konieh, and 5 m. S of Kabessa. It is surrounded by low walls, built of dried brick and flanked with towers. Madder in large quantities is grown on the adjacent mountains, and forms an important article of trade with Konieh and Smyrna.

ILLKIRCH, or ELKIRCH, a commune of France, in the dep. of Bas-Rhin, cant. of Geispolsheim, 4 m. S of Strasburg, on the r. bank of the Ille. Pop. 1,766. It has a manufactory of fustian, a tobacco and several oil-mills, and extensive iron and steel works.

ILLNAU, a parish and village of Switzerland, in the cant. and 9 m. ENE of Zurich, bail. and 3 m. SSW of Kyburg, on the l. bank of the Kempt, an affluent of the Toss. Pop. 2,766. It has extensive manufactories of thread, linen, and silk.

ILLOGAN, a parish in Cornwall, 2¼ m. NW of Redruth, on the Bristol channel, with the W coast

of which, at Portreath, and with the E at the estuary of the Fal, it is connected by railroads. Area 8,010 acres. Pop. in 1831, 6,072; in 1841, 7,815.

ILLOK, Uj-Lak, or Slok, a town of Hungarian Slavonia, one of the chief towns of the gspenschaft or comitat of Syrmia, 27 m. W of Peterwardein, pleasantly situated on the r. bank of the Danube, on which it has a port. Pop. 3,550. It was formerly strongly fortified, and contains a castle, a Greek church, and a convent, in the church of which is the tomb of the last duke of Syrmia. In the vicinity are three remarkable eminences, each crowned with the ruins of a castle supposed to have been built by the Romans.

ILLOK, or Illeuk, a river of Turkey in Europe, in the prov. of Bosnia, sanj. of Bosna-Serai, which has its source in the mountain of Plaunina, and flows ESE to the Drin, opposite Flotcha. On its r. bank, near the base of the above-named mountain, is a town of the same name.

ILLORA, a town of Spain, in Andalusia, in the prov. and 22 m. WNW of Granada, and partido of Montefrio, on a rocky eminence rising above the Charcon. Pop. 6,900. It is very ancient, and contains some Roman remains, a parish church, and a bank. This town was one of the strongholds of the Moors. In 1242 it was taken by Ferdinand, king of Leon.

ILLORI, or Ilori, a fort of Russia in Asia, in Abkasia, in the principality of Mingrelia, 33 m. SE of Sukgum-kaleh, on the l. bank of the Caladsva. To the W of this fort, on the shore of the Black sea, are the ruins of the ancient town of the same name.

ILLOUKST, or Illuxt, a town of Russia in Europe, in the gov. of Courland, district and 51 m. SSE of Alt-Zelburg, and 81 m. ESE of Mitau. It contains a fine castle and 3 churches—a Catholic, a Greek, and a Protestant.

ILLOVA, a river of Austria, which has its source in the SE extremity of the subdivision of St. George, in military Croatia; runs SW along the confines of the subdiv. and of Hungarian Slavonia; passes through the SW extremity of the latter, inosculates with the Beila, and, under the name of Terbess, joins the Save on the l. bank, a little below the confluence of the Lonya, and after a course of about 54 m.

ILLUECA, a town of Spain, in Aragon, in the prov. and 42 m. WSW of Zaragoza, partido and 14 m. NNE of Calatayud, in a plain, near the Aranda. Pop. 2,559. It has a manufactory of cloth, a fulling mill, and a dye-work, and possesses an extensive trade in ham.

ILLYE, or Elienmarkt, a market town of Transylvania, in the comitat of Hunyad, circle beyond the Maros, 17 m. NW of Vajda-Hunyad, on the r. bank of the Maros. It has a castle, now in ruins, and 3 churches—a Catholic, a Greek, and a Protestant.

ILLYEFALVA, a town of Transylvania, in the country of the Szeklers, lower circle of Haromsck, on the r. bank of the Aluta, 14 m. NE of Cronstadt.

ILLYRIA (Kingdom of), a portion of the Austrian empire, which has passed through various forms of organization since the name first appeared in history. When the Romans had become masters of the Danube, the Save, and the Drave, they united all the lands which lay in the S of *Noricum* and *Pannonia* into the large prov. of *Illyricum*, and called the aborigines whom they found there *Illyrii*. This name was afterwards lost when the western Roman empire was divided; but in modern times it was used again, in the language of the Austrian administration, to designate the Hungarian provs. on the S side of the Drave. When Napoleon, in the peace of Presburg, obtained the circles of Villach, Friuli, Istria, and Croatia on the S of the Save, he joined to them Dalmatia, the Littoral, and some parts of Tyrol, and formed these into a new province of his vast empire, to which he gave the ancient name of Illyria. In 1813–1814, when Austria resumed possession of Illyria, Dalmatia, the Military frontiers, and the Tyrolese districts, were disjoined from it; but, on the other hand, the circle of Klagenfurt, and several districts of Venetia, were added to it, and the whole made a kingdom indissolubly joined to the Austrian monarchy, and divided into the two governments of Laybach and Trieste. It may be observed, however, that it is only those provs. of the new kingdom which had formerly belonged to the German empire,—viz. Carinthia, Carniola, Austrian Friuli, and Trieste,—which belong to the German confederacy.—The kingdom of I., as at present constituted, embracing Carinthia and Carniola, or the government of Laybach, is bounded on the N by Upper Austria and Styria; on the E by Styria and Military Croatia; on the S by Croatia and the Adriatic; and on the W by the Adriatic, the Austro-Venetian territory, and Tyrol. Its area, according to Stein, is 11,160 sq. m. In Weiland's map, [Weimar, 1848,] its area is thus stated:—

I Government of Layeach, or Carinthia and Carniola.

		Area.	Pop.
1.	Circle of Laybach,	58·95 German sq. m.	154,424
2.	„ Adelsberg,	42·34	87,924
3.	„ Neustadt,	72·30	193,455
4.	„ Villach,	94·96	121,945
5.	„ Klagenfurt,	85·30	171,182
II. Government of Trieste, or Illyrian Coast.			
1.	Circle of Gorizia,	50·85	171,169
2.	„ Istria,	85·95	202,065
3.	Territory of Trieste,	1·63	59,336
		492·28	1,161,500

In the *Almanach de Gotha* for 1852 the divisions, area, and pop. of the kingdom are thus stated:—

		Area.	Pop. in 1849.
1.	Duchy of Carinthia,	188·99 sq. m.	316,898
2.	„ Carniola,	181·86	474,525
3.	County of Goritz,	53·46	193,263
4.	Margraviate of Istria,	90·67	230,528
5.	City and territory of Trieste,	1·67	81,500
		516·65	1,296,709

Physical features.] The surface of this country is intersected by high chains of mountains, chiefly belonging to the central chain of the Alps, and likewise presents numerous isolated hills. The coasts are partly flat and sandy, and in some parts marshy. On the SW the bay of Trieste, and on the S that of Quarnero, run deep into the country, and form between them the large peninsula of Istria, of which Cape Promontore is the extreme point. The three principal chains of mountains are that of the Noric Alps, of which the Gross-Glockner is the highest point; that of the Carnic Alps; and that of the Julian Alps. The Noric Alps enter I. in the frontier between Tyrol and Upper Austria, in the Gross-Glockner, which lies under the parallel of 47° 5′, and attains an alt. of 11,782 Vienna or 12,776 English ft. above sea-level. Their branches spread over the circles of Villach and Klagenfurt; but the main chain turns NE at the Ankogel [alt. 10,131 ft.], and enters Styria. The Carnic Alps separate the basin of the Drave on the N, from that of the Save on the S; and are crossed in Styria by the great line of railway from Gratz to Laybach; and further to the W, at Loibel, the great road from Klagenfurt to Laybach crosses them at an alt. of 5,477 ft. The Julian Alps break off at Mount Terglou, at the sources of the Save, and of the Isonzo, and run SSE towards the Adriatic and Dalmatia. There are several chains belonging to the Julian system, all of which are of

primitive limestone, and are excavated in an extraordinary manner. From Isonzo to the boundaries of Bosnia, there are above 1,000 grottoes and caverns; and probably the whole chain is hollow, for many small rivers which flow from these heights seem to sink into the ground, and disappear in a kind of natural tunnel in various places. Indeed, the whole of Carniola, and the eastern coast, present very peculiar physical features. See ADELSBERG.

Rivers and lakes.] The principal rivers of I. are the Drave, the Save, the Laybach, the Gurck, the Kulp, the Isonzo, and the Quieto. Of these the most considerable is the Save, which rises in Upper Carniola, from the Terglou near the v. of Ratshach, and after a W course of 375 m., falls into the Danube at Belgrade. This large stream, which becomes navigable at Laybach, divides in its progress Southern from Northern Croatia, and Slavonia from Bosnia and Servia; receiving on the Turkish side the Unna, the Verbas, the Bosna, the Drino, and the Colubarra; and on the l. the Veleka, the Orianna, and the Bozut. Its waters are easily distinguishable from those of the Danube at Belgrade, as being of a deep green, whereas those of the latter are yellow. The Drave flows through the circles of Villach and Klagenfurt, and enters Styria at a point about 20 m. to the E of Bleiburg.—The principal lakes are those of Ossiach, Klagenfurt, and Zirknitz. The latter is 8 m. long, by 4 m. broad; and is encompassed on all sides by steep mountains and forests. Annually in June its waters disappear, chiefly by two openings which Nature has provided for them in the adjoining rocks; but besides these two cavities, there are a number of holes in the bottom of the lake, through which, in the space of 25 days, the lake is completely drained. After the waters are gone, the bed of the lake is admirably adapted for cultivation, and in 3 months' time abundant crops of hay and millet are obtained from it. The waters have been known to retire and return three times in a year; and in some years not to fluctuate at all. The lake of Klagenfurt is a narrow strip of water from 11 to 12 m. in length. Near it is the Ossiach lake, 7 m. in length.

Climate and productions.] The climate of the elevated districts of Carinthia is very rigorous, but in general healthy. The circles of Laybach, Neustadt, and Adelsberg, enjoy a temperature sufficiently mild for the growth of vines, chestnuts, and maize. On the coasts it is very warm, and the vegetation is luxurious. In the circle of Göritz the mulberry-tree endures the winter quite well, and in Trieste the olive; but these districts want water, and are rendered unhealthy by the exhalations from the lagunes. —Wheat, maize, barley, oats, wine, olive-oil, and timber, are the principal productions of I. Good flax is grown in all the valleys; and fruits, especially chestnuts and figs, are abundant on the coast district. The oil of Istria is equal to that of Provence. There is abundance of good pasture for cattle in Carniola and Carinthia, and considerable flocks of sheep are reared here. The rams are without horns, and the fleeces are not inferior to those of Padua. The common breed of horned cattle is also generally good and strong, though not of the largest size. Dairies of a similar description with those of Switzerland are frequent in Carinthia. Swine are reared in considerable numbers in the eastern quarter of Carinthia; and in the forests are found the chamois, the roebuck, the lynx, the wolf, and red, brown, and white bears.

Industry.] The rural inhabitants are patient agriculturists; and the fisheries of mackarel and anchovies afford a considerable source of wealth to the inhabitants of the coast; but the most important branch of industry is the working of minerals, and the manufacture of iron, which is exported in great quantities. The Carinthian iron is equal in quality to that of Styria. The lead is also excellent, and is generally known in Europe by the appellation of the yellow lead of Villach. Lead-mines have been wrought in Carinthia from a very remote period; that near the Bleiberg has been so for 1,100 years. The annual produce of the Carinthian mines was thus stated in 1837: iron, 391,323 cwt.; copper, 936 quintals; lead, 56,487 cwt.; quicksilver, 3,326 cwt.; and coal, 92,653 cwt. Total value, £375,000. The quicksilver-mines of Idria are of great celebrity and value, and accounted the richest in Europe, yielding at one time annually 12,000 quintals, or 648,000 lbs. of quicksilver, and 7,000 quintals, or 378,000 lbs. of native cinnabar. The common ore is cinnabar; and the quicksilver is obtained from the numerous subterraneous cavities that have been opened in great abundance in the mines, and which have been hollowed out to the depth of 1,000 ft. See IDRIA. Carniola marble is reckoned beautiful, and is found in great plenty and variety in different parts of the country. Alum, nitre, vitriol, bole, fuller's earth, rock-crystal, hyacinths, eagle-stones, and bloodstones, occur in the minerals of this region.—The commerce of this portion of the Austrian empire is chiefly conducted from TRIESTE and ROVIGNO: see these articles.

Inhabitants.] The pop. of I. in 1834 was stated to be 1,154,885; in 1849, 1,296,709. It is chiefly composed of three principal tribes, viz.: about 780,000 Slavonians, including Wendes, Croatians, Raizes, and Ushocks; nearly 320,000 Germans and Gottscheverians; and 11,061 Italians. The majority of the inhabitants are Catholics; but there are above 17,000 Lutherans, and 1,100 Jews, who enjoy ample toleration.—The peasantry are a brave and hardy race. They are accustomed to sleep on a hard bench without bed or bolster; and in Upper Carniola they go barefoot in winter through the snow. Istria is the district farthest behind in the arts and manners of civilized life.

ILLZACH, a commune of France, in the dep. of the Haut-Rhin, cant. of Habsheim. Pop. 1,195. It has a manufactory of handkerchiefs and a bleachery.

ILM, a river of Bavaria, which has its source in the circle of Swabia, 7 m. E of Aichach; runs NE, enters Upper Bavaria, passes Pfaffenhofen, flows into the circle of the Ober Pfalz, and unites with the Danube, on the l. bank, 7 m. W of Abensberg, and after a course of 48 m.—Also a river which has its source on the N side of the Thuringerwald, at the S extremity of the bail. of Ilmenau, in the grand duchy of Saxe-Weimar; flows through the principalities of Schwarzburg-Sondershausen, and Schwarzburg-Rudolstadt; re-enters the grand duchy of Saxe-Weimar, and joins the Saale, on the l. bank, at Gross-Heringen, on the confines of the Prussian prov. of Saxony, and a little to the NE of Sulza. It has a total course, in a generally NE direction, of 60 m., and flows past the towns of Ilmenau, Ilm, Kranichfeld, Tannroda, Berka, Weimar, and Sulza.

ILM, or STADT-ILM, a town of the principality of Schwarzburg-Rudolstadt, 13 m. WNW of Rudolstadt, on the l. bank of the Ilm. Pop. 2,000. It is well-built, and has a castle and a large market-place. It possesses extensive manufactories of woollen fabrics, and has 4 annual fairs.

ILMEN, a lake of Russia in Europe, in the gov. and district and to the S of Novgorod. It is of triangular form, and has a superficies 35 m. in length from E to W, and 27 m. at its greatest breadth. It receives the Msta on the N, the Lovat on the S, and the Cheson on the W, and discharges itself by the Volkhof, which flows N to Lake Ladoga. Frequent

tempests occur on this lake, and render its navigation dangerous. Vessels pass direct from the Msta to the Volkhof by the canal of Novogorodsky.

ILMENAU, a river of Hanover, in the gov. of Luneburg, which rises in a marsh 7 m. SW of Bodenteich; flows N, past Luneburg; and joins the Elbe on the l. bank, 15 m. SE of Hamburg, after a course of 75 m.—Also a bailiage and town of the duchy of Saxe-Weimar, in the principality and 31 m. SW of Weimar, and circle of Weimar-Jena, on the l. bank of the Ilm, at an alt. of 1,600 ft. above sea-level. Pop. 2,364. It is open and is well-built, and contains 2 churches. It possesses manufactories of porcelain and of cutlery, a paper-mill, a large manufactory of woollen fabrics, a nail-work, 3 sawmills, and several tanneries, and carries on an active trade in timber. Fairs are held here 5 times a-year. In the environs are mines of iron and manganese, and the lofty porphyritic mountain of Kückelhahn. Pop. of bail. 4,375.

ILMENSEE, a village of Baden, in the circle of the Lake, 9 m. S of Osterach, near a small lake of the same name. Pop. 250.

ILMINGTON, a parish of Warwickshire, 4 m. WNW of Shipston-upon-Stour. Area 3,100 acres. Pop. in 1831, 836; in 1841, 891.

ILMINSTER, a parish and market-town in Somersetshire, 14 m. SW of Somerton, and 136 m. WSW of London, on the Ile, over which is a bridge, about a mile W of the town. Area of p. 4,390 acres. Pop. in 1831, 2,057; in 1841, 3,221. The town occupies a low but pleasant situation on the Ile; and consists chiefly of two streets, one of them about a mile in length, intersecting each other. Pop. 3,187.

ILMIRE, a parish in Buckinghamshire, 7 m. SW of Wendover. Area 810 acres. Pop. in 1841, 79.

ILMOLA, a town and parish of Russia in Europe, in the grand duchy of Finland, gov. and 39 m. SE of Vasa, and 54 m. NE of Christinestad, and district of Soedra-Korsholms. The environs produce excellent rye.

ILOKI, a town of Russia in Europe, in the gov. and 192 m. NW of Vilna, district and 30 m. NNW of Teleh.

ILOMANTS, a town and parish of Russia in Europe, in the grand duchy of Finland, gov. and 87 m. ESE of Kuopio, and 90 m. NE of Nyslots. The chase forms the chief employment of the inhabitants.

ILONGETES, a town of the island of Luzon,—one of the group of the Philippine islands,—on the E coast, 69 m. NE of Manilla.

ILOVLA, a river of Russia in Europe, which has its source in the gov. of Saratov, and district of Kamichin, to the N of Kamenka, and 9 m. W of the r. bank of the Volga; flows in a SSW direction into the gov. of the Don Cossacks; and unites with the Don, on the r. bank, a little above Ilovlinskaïa, and after a total course of 210 m. Several German colonies have been established on its banks. A canal was projected in the reign of Catherine II., for the purpose of connecting the Don and the Volga by means of this river and the Kamichinka; but was abandoned, in consequence of the level of the Don at the junction of the I. being found to be 106 yds. above that of the Volga.

ILOVLINSKAIA, a town of Russia, in the territory of the Don Cossacks, on the l. bank of the Ilovla, a little above the confluence of that river with the Don.

ILOW, a village of Poland, in the waiv. of Masovia, obw. and 30 m. ESE of Gostignin. Pop. 250.

ILPIZE (Saint), a town of France, in the dep. of Haute-Loire, 6 m. S of Brioude, on the r. bank of the Allier. Pop. 2,487.

ILSE, or Ilz, a river of Germany, which rises on the borders of Bohemia, and runs into the Danube at Ilzstadt, opposite Passau. Pearls are sometimes found in it.

ILSENBURG, a town of Prussian Saxony, in the co. of Stoltberg-Wernigerode, on the Ilse, at an alt. of 798 ft. above sea-level, 4 m. W of Wernigerode. Pop. 2,112, mostly engaged in iron and copper works.

ILSFELD, a small but walled town of Würtemberg, in the circle of the Neckar, 6 m. S of Heilbronn. Pop. 2,000.

ILSINGTON, a parish of Devonshire, 5 m. WSW of Chudleigh. Area 7,100 acres. Pop. in 1831, 1,208; in 1841, 1,093.

ILSLEY (East), a town and parish of Berkshire, 17½ m. NW of Reading. Area of p. 3,610 acres. Pop. in 1831, 738; in 1841, 733. The town is pleasantly situated in the centre of the downs which cross the co. from E to W; and is celebrated for its large sheep-markets.

ILSLEY (West), a parish of Berkshire, adjoining the foregoing, on the W. Area 3,670 acres. Pop. in 1831, 425; in 1841, 404.

ILSNA, a small river of Russian Lithuania, in the gov. of Minsk, which falls into the Bog, 8 m. N of Brzesc.

ILST, or Ylst, a small town of Holland, in Friesland, 14 m. SW of Leeuwarden, and 58 m. NE of Amsterdam.

ILSTON, a parish in Glamorganshire, 6 m. SW of Swansea. Pop. in 1831, 296; in 1841, 365.

ILSTON-ON-HILL, a chapelry in Leicestershire, 8 m. ESE of Leicester. Area 1,900 acres. Pop. in 1831, 131; in 1841, 151.

ILTEN, a village of Hanover, in the landr. of Luneburg, 9 m. E of Hanover. Pop. 500.

ILTON, a parish in Somersetshire, 2 m. NW of Ilminster. Area 1,920 acres. Pop. in 1841, 557.

ILTON-WITH-POTT, a township in Masham p., in the N. R. of Yorkshire, 9 m. WNW of Ripon. Area 2,400 acres. Pop. in 1831, 233; in 1841, 237.

ILTZ, a town of Styria, in the circle and 24 m. E of Gratz, on a rivulet of the same name. Pop. 450.

ILVESHAM, a village of Baden, in the Neckar circle, 4 m. E of Mannheim, on the r. bank of the Neckar. Pop. 960.

ILZA, a town of Poland, in the obw. of Sandomir, on the l. bank of a stream of the same name, an affluent of the Vistula, 25 m. NNW of Opstow. Pop. 2,000.

ILZHOFEN, a village of Würtemberg, in the Jaxt circle, 9 m. NE of Hall. Pop. 450.

IMABA, a town of Japan, in the island of Nifon, prov. of Simosa, 60 m. SSW of Fitals.

IMAGLIN, a small island in Behring's straits, in N lat. 65° 40′, to the N of Ighellin. It is about 3 m. in length, and 1½ m. in breadth.

IMALGAN, a small island in the sea of Mindoro, in N lat. 10° 51′, E long. 121° 5′.

IMAM-DUR, a ruined town of Turkey in Asia, in the pash. of Bagdad, on the l. bank of the Tigris, 9 m. S of Tekrit, which Rich supposes might be the *Dura* of Nebuchadnezzar.

IMAM-MUSA, a village of Turkey in Asia, in the pash. of Bagdad, on the r. bank of the Tigris.

IMAM-ZADA-ISMAEL, a pass on the road from Shiraz to Ispahan in Persia, 38 m. N of the former place. It opens into the plain of Anian, said to produce the finest pasture in Persia.

IMAMO, a district of Madagascar, in the prov. of Ankova, to the W of Imeima. It is hilly, and is said to contain iron mines.

IMANA, a town of Spain, in the prov. of Burgos, and valley of Tobalina, 42 m. SSE of Laredo.

IMANDRA, a large lake of Russia, in the gov. of

Archangel, district of Kola, in N lat. 68°, E long. 32°. It is 60 m. in length from N to S, and about 15 m. in breadth; and discharges itself into the White sea.

IMASSA, or Altummayo, a river of Ecuador, in the prov. of Jaen, which, rising on the frontiers of Peru, in a small lake to the N of Chacapoyas, flows N and NW to the Maranon, which it enters in about 5° S lat., on the r. bank.

IMATACA, a chain of islands in the Orinoco river, 12 leagues above Barima, which divide it into two branches, that on the S called the I. branch; that on the N, the Zacupana. Both are navigable; but the S branch, though much wider, has less depth of water. The I. branch, at its E entrance, between the island of Juncos and the main, is 1,918 yds. wide.—Also a river, which descending from a ridge of hills of the same name, in two branches, which unite about 6 leagues from its embouchure, flows into the Orinoco, on the S side, in the channel of I. It has from 16 to 18 ft. water at its mouth, and is navigable for schooners to the point where its principal branches meet.

IMATUCARE, a river of Peru, in the prov. of of Moxos, which rises in a small lake in S lat. 12° 10′, and flowing N enters the Mamore, a little above the confluence of the Guapore.

IMAUS. See Himalaya.

IMBAUHI, a river of Brazil, in the prov. of São-Paulo, rising in the Serra-de-Mantequeira, flowing S, and joining the Parahiba.

IMBE′, a river of Brazil, in the prov. of Rio-de-Janeiro, comarca of Campos, rising on the E flank of the Cordillera-dos-Aimores, receiving the Urahi, and flowing into Lake Cima.

IMBER, a parish of Wilts, 9 m. SW of Devizes. Area 2,491 acres. Pop. in 1831, 404; in 1841, 405.

IMBROS, or Imbro, an island in the Grecian Archipelago, belonging to Turkey, 12 m. SE of Samothrace, at the E entrance of the Hellespont. Its highest summit has an alt. of 1,950 ft. above sea-level, and is in N lat. 40° 10′, E long. 25° 51′. It is of an oval form, hilly, and densely wooded, and about 30 m. in circumf. The pop. some years ago consisted of about 1,000, chiefly Greeks, who occupied 5 villages.

IMERINA, a district of Madagascar, in the prov. of Ankova, which gave name originally to the kingdom of Radama. It consists of 4 subdivisions, each of which originally constituted a distinct kingdom or petty state. Imamo and Vonizongo were annexed to Imerina by the father of Radama, and have ever since comprised the kingdom of Ankova. Its cap. is Tananarivo, now also the cap. of Madagascar.

IMBST, Imst, or Uimst, a small town of Tyrol, pleasantly situated about 2 m. from the Inn, where it begins to expand into a fine broad stream, 9 m. SSE of Reutten. It has 2,200 inhabitants, and is the chief place of a circle or district, including the Upper Immerthal and the Vingau, with a pop. of 96,000. I. has acquired notoriety from a singular branch of industry—the rearing of canary birds for sale in different parts of Europe. The annual value of birds thus sold was formerly £4,000 a-year, but the trade is now nearly extinct. It, however, has still the appearance of a thriving town, and is a place of some importance as a grain and fruit market. There is a road from I. to Innsbruck carried over the ridge on the N side of the Inn, and which joins the regular or low road at Zirl, about 6 m. from Innsbruck.

IMIER (Saint), or Erguel, a town of the Swiss cant. of Berne, 9 m. W of Bienne, in the Immerthal valley, about 22 m. long, and 10 m. broad, watered by the Suss. The inhabitants are chiefly watch-makers, cotton-weavers, and lace manufacturers.

IMIRITIA, a principality of Asiatic Russia, situated in the Western Caucasian regions, and bounded on the N by the principal chain of Caucasus; on the E by Georgia; on the S by Akhalzike; and on the W by Guriel and Mingrelia. It is watered by the Rioni, and numerous tributary streams, the course of most of which is interrupted by cataracts. The Tzchenesstzquali separates it from Mingrelia. The climate is extremely mild; snow seldom lies on the ground, and the rivers are never frozen over. Much of the surface consists of rocks and mountains, interspersed with fertile valleys and plains. Abundance of fruit of the finest flavour grows wild, and the trunk of the vine is here known to attain 15 inches in diam. Entire hills are overgrown with olive, myrtle, laurel, chestnut, and valuable timber trees; and the lower grounds present almond, fig, quince, pear, and plum trees, the latter sometimes bearing twice a-year. Copious harvests of grain, also of cotton, hemp, and flax, are obtained.

The pop. of the principality is computed at 20,000 families, whose personal appearance is superior to that of their neighbours, but they are in general an indolent, distrustful, and proud race, though distinguished by the virtue of hospitality. As nearly the whole inhabitants dwell in solitary hamlets, the country contains scarcely any towns except Cotatis or Kutais, the capital, situated on the r. bank of the Phase or Rioni; Bagdat, to the SSE of Kutais; and Vakan to the NE of Bagdat. The natives are chiefly occupied in agriculture. Some thousands emigrate annually to Georgia, where they hire themselves out as servants or porters, the remainder manufacture good silken stuffs and thick woollen cloths, but no linens. They make a wine of superior quality, much of which is exported in skins to Georgia; they also export grain, honey, and wax. All the commerce of Kutais is in the hands of Armenians, who carry their traffic as far as Mozdok. The Imiritians profess the religion of the Greek church, and have a patriarch, who is usually of royal descent, but who nevertheless can seldom read or write. Their churches are wretched buildings, with a paper cross over the principal entrance, and some paintings of the Virgin Mary and their saints within. —Imiritia is governed by a prince dependent on Russia, with which country it is now incorporated. He is styled *mephe*, and is under the control of a national council composed of the principal inhabitants, without whose consent he cannot undertake any important enterprise. The laws are founded on the will of the sovereign; but since the supremacy of Russia was acknowledged, he is deprived of the power of life and death. His revenues amount only to between £5,000 and £7,000 yearly, and arise from a contribution of the peasants in wine, grain, and cattle, and from the tribute of neighbouring princes.

This country, said to be the ancient *Iberia*, at the conclusion of the 15th cent. belonged to Georgia, when King Alexander divided it, along with other states, among his sons. It was afterwards subdued by the Turks, who were expelled by the Russians in 1770. About that period, Solomon, king of Imiritia, threw off the Turkish yoke, and sought the protection of Russia. He quelled the civil broils of his country, strengthened its interests, protected it against foreign invasions, and made many internal regulations, among which was the abolition of traffic in slaves. Solomon died in 1786. Giorgi, his son by a first marriage, succeeded him; but his reign was productive of tumults and dissatisfaction, and a civil war arose which terminated either by his death or deposition in a year. David, son-in-law of Solomon, who had married a Georgian princess, succeeded, and reigned till 1793. Heraclius, king of Georgia, desi-

rous of seating her grandson, Solomon, on the throne, then sent an expedition into Imiritia, whereby an insurrection was excited, and David expelled from the country, while his son Constantine was imprisoned in a fortress. After wandering as a fugitive several years, David died at Akhalzike. Meantime, the government of Solomon II. was confirmed, and in 1803 he conquered the prov. of Letshum. In 1802, Anna, widow of David, and mother of Constantine, repaired to Petersburg, and obtained the liberation of her son, after a confinement of ten years. Solomon II., in order to secure himself in the government, acknowledged the supremacy of Russia in 1804; and he and his successors were declared the lawful princes of Imiritia. See GEORGIA.

IMLAY (MOUNT), a remarkable high-peaked hill lying behind the head of Twofold bay, on the SE coast of Australia.

IMLIATSKAIA, a town of Asiatic Russia, in the gov. of Oufa, on the river Imliat.

IMMENDINGEN, a town of Baden, in the bail. and 6 m. NNW of Engen, on the l. bank of the Danube, at the confluence of the Weisenbach. Pop. 630.

IMMENHAUSEN, a town of Germany, in Hesse, 7 m. NW of Cassel. Pop. 1,560.

IMMENSTADT, a town of Bavaria, in the circle of Suabia, on a small river which flows from the lake of Alb, and runs into the Iller, 13 m. S by W of Kempten. Pop. 1,200.

IMMER, one of the New Hebrides, in the S. Pacific, in S lat. 19° 16′, E long. 169° 46′. .

IMMIDA, a village of Russia, in the gov. of Esthonia, on the gulf of Finland, in N lat. 59° 35′ 25″.

IMMINGHAM, a parish of Lincolnshire, 8 m. NW of Great Grimsby. Area 4,280 acres. Pop. in 1831, 199; in 1841, 221.

IMOASA, a long and narrow lake in the series of lagunes which extends a distance of 200 m. along the E coast of Madagascar. Its waters are brackish. On its banks stands the village of Ambila.

IMOGEELY, a parish in co. Cork, 5 m. E of Middleton. Area 6,430 acres. Pop. in 1841, 2,224.

IMOLA, a considerable town of the Papal states, in the leg. of Ravenna, situated on a small island formed by the Santerno, near the S limit of the vast plains of Lombardy, on the site of the *Forum Cornelii*. 18 m. SE of Bologna. Pop. 9,800. It is a very ancient-looking town, surrounded with walls, towers, and ditches, and defended by a strong castle. Its environs are agreeable, being enlivened with large plantations of poplars. It is the see of a bishop, and has an hospital and a theatre, which were erected towards the close of the 18th cent. by Pius VI. Its streets are neat, and contain several churches and other buildings worth the attention of the traveller. Its academy was once of considerable repute, particularly about the year 1566. In the beginning of February 1797, an action was fought in this neighbourhood between the Austrians and the French, in which the former were defeated.

IMOSCHI, or IMOSKI, a town of Dalmatia, in the circle of Spalato, 20 m. NNE of Macarsca. It has a Franciscan convent. The inhabitants are remarkable for the height of their stature, and their skill as equestrians. The environs are well-cultivated.

IMOTO, or HOEY-PEN, a town of Japan, in the small island of Avadsi, which lies between the islands of Sikokf and Niphon.

IMPAFANE, a division of the colony of Port Natal, on the SE coast of Africa, bounded on the N by a line drawn along a ridge between the Bluekrans and Little Tukela rivers; on the E by the Tukela; on the SE by the division of Umvoti; on the S by the division of Pietermaritzburg; and on the W by the Quathlamba or Kathlamba mountains. It contains excellent cattle-pasture land, and wheat and oats have been grown with success. Coal has been found along the banks of Bushman's river.

IMPDE, a commune of Belgium, in the prov. of Brabant, dep. of Wolverthem. Pop. 299.

IMPE, a department and commune of Belgium, in the prov. of E. Flanders, dep. of Termonde. Pop. 721. It has several spinning-mills.

IMPEGEM, a commune of Belgium, in the prov. of Brabant, dep. of Liedekerke. Pop. 512.

IMPERIAL, a town of Chili, in Araucana, on a river which bears the same name, 20 m. ENE of its entrance into the Pacific, and 80 m. N of Valdivia. It was founded in 1551, by Valdivia, and was formerly rich and flourishing, but was taken and devastated by the Indians in 1699. See CAUTEN.

IMPFINGEN, a village of the principality of Hohenzollern-Sigmaringen, bail. and 5 m. WNW of Haigerloch, and 32 m. NW of Sigmaringen. Pop. 2,200.—Also a v. of Baden, in the circle of the Lower Rhine, near the Tauber, and N of Bischofsheim. Pop. 580.

IMPHRICK, or EMERICK, a parish of co. Cork, 4½ m. NNW of Doneraile. Area 3,145 acres. Pop. in 1831, 1,385; in 1841, 1,459.

IMPHY, a commune of France, in the dep. of the Nievre, cant. and 7 m. SE of Nevers, in a valley watered by an affluent of the Loire. Pop. in 1841, 1,489. Copper, iron, white-iron, zinc, and bronze, are extensively manufactured here, and afford employment to upwards of 1,000 hands. A fair is held once a-year.

IMPINGTON, a parish in Cambridgeshire, 3 m. NW of Cambridge. Area 1,200 acres. Pop. 248.

IMPIRA, a town of La Plata, in the dep. and 45 m. SE of Cordova

IMPOSSIBILE (MONTE), a summit on the crest of the Chilean cordillera. Its cone, which is from 500 to 600 ft. high, consists of greenish-grey porphyry.

IMPUCA, a town of Brazil, in the prov. of Bahia, and district of São-Francisco, on the Joannes, which is here crossed by a bridge.

IMRE. See GÖRGENY-ST.-IMRE.

IMSCHBACH (OBER), a village of Bavaria, in the circle of the Pfalz, district and 12 m. NE of Kaiserslautern. Pop. 400.

IMSEN, a lake of Sweden, in the NE part of the prefecture of Skaraborg, and E of Mariestadt. It is 6 m. in length from N to S, and about 2 m. at its greatest breadth.

IMSERAT, or IMZERAT (WADY), a caravan station in Fezzan, on the N side of the Soudah or Black mountains, 30 m. SSW of Sokna, and 210 m. NNE of Murzuk.

IMZA, a river of Russia in Europe, in the gov. of Nijnei-Novgorod, which has its source in the district of Knaiginin; passes the town of that name; pursues its course to the E; and, after running a total distance of 45 m., joins the Ourga.

INA, a lake, vale, and mountain-pass in the p. of Moyrus, co. Galway. The vale sweeps along the E base of the Binabola mountains, which rise almost perpendicularly to the height of 1,200 ft.

INABA, or YN-FAN, a province of Japan, in the W part of the island of Niphon, to the E of the prov. of Foki, and W of that of Tasima. On the N it is bathed by the sea of Japan. Although mountainous, this prov. is generally fertile, and produces large quantities of silk. It comprises 7 districts.

INACCESSIBLE ISLET, the most westerly of the group of the Tristan-da-Cunha islands, in the S. Atlantic ocean, in S lat. 37° 19′, W long. 12° 23′. It consists of a steep and apparently well-wooded

rock, about 9 m. in circumf., visible from a distance at sea of about 42 m.

INADA. See AINADA.

INAFE, or YOUEN-PEEN, a district of Japan, in the prov. of Ise.

INAGH, a parish in co. Clare, 6 m. SE by E of Ennistymon. Area 19,887 acres. Pop. 4,192.

INAGUA (GREAT), or HENEAGA-GRANDE, one of the largest and the most southerly of the islands in the Bahama archipelago, 54 m. NE of the E extremity of the island of Cuba. Its NW point, named the Devil's print, is in N lat. 21° 7′ 30″, W long. 73° 39′ 30″. Its length from ENE to WSW is 54 m., and its medium breadth 15 m. The navigation of its coasts is dangerous, from the reefs, by which to a considerable distance they are surrounded; but towards the SW extremity of the island good anchorage can be obtained. In the interior is an extensive salt pond, covering nearly 1,600 acres, which, it is supposed, might yield from 4,000,000 to 5,000,000 bushels of salt annually. It belongs to the Crown; but with the view of developing its resources, a joint-stock company has been formed for the purpose of salt-raking here. The lessees pay a rent of about 30s. an acre, but only 418 acres have yet been leased. The price obtained for the salt is from 5d. to 6d. per bushel.

INAGUA (LITTLE), INAGUE, or HENEAGA CHICA, an island of the Bahama archipelago, to the NW of the Great Inagua, from which it is separated by a channel 12 m. in breadth. Its E extremity is in N lat. 21° 19′ 15″, W long. 72° 55′ 33″. It is inhabited.

INAISERO, or TCHE-CHEON-TAI, a town of Japan, in the island of Niphon, and prov. of Mouts.

INAMBARI, a river which has its source in Bolivia, in the dep. of La Paz, in the Cordillera-de-Ancuma, to the N of Pelechuco; runs N into Peru along the confines of the dep. of Cuzco, and through the territory of the Chunchos, to the Paro or Beni, which it joins on the l. bank, in S lat. 12°, W long. 72° 20′, after a total course of about 300 m. Its principal affluent is the Cuchoa, which it receives on the l.

INARES, a village of Hungary, in the gsp. or comitat and SE of Pest.

INARUYANG POINT, a headland of Borneo, on the N coast, to the E of Sampanmangi point, and forming the E side of Maludu bay.

INBATSKOI, a village of Russia in Asia, in the gov. and district and 375 m. NNW of Yenisei, on the r. bank of the river of that name, 57 m. SE of the v. of Nijne-Inbatskaïa.

INCA, a judicial partido and town of Spain, in the island of Mallorca. The partido comprises 28 pueblos. The town is situated in a hilly but fertile district, 17 m. NE of Palma, and 14 m. SW of Ludia. Pop. 3,316. It is well-built, and contains a parish-church, 3 convents, and a well-endowed hospital. A large market is held here weekly.

INCAFFI, a village of Austrian Lombardy, in the prov. and 14 m. NW of Verona, district and 4 m. S of Caprino. It derives its name from the quarries of fine statuary stone which are in its vicinity.

INCARVILLE, a village of France, in the dep. of the Eure, cant. and 2 m. N of Louviers, near the Eure. Pop. 600. It has 4 annual fairs.

INCE, a parish in Cheshire, 4½ m. W by S of Frodsham, on the Mersey. Area 1,560 acres. Pop. in 1831, 487; in 1841, 475.

INCE-BLUNDELL, a township in Sephton p., Lancashire, 9¼ m. NNW of Liverpool, on the Alt. Area 2,248 acres. Pop. in 1831, 505; in 1841, 528.

INCE-IN-MAKERFIELD, a township in the p. of Wigan, Lancashire, 1¼ m. SW of Wigan. Pop. in 1831, 1,903; in 1841, 2,565.

INCH, an adjunct of frequent occurrence in Scottish and Irish topography. It signifies 'an island,' and is derived from the British *Ynis*, or the Gaelic *Inis*. It is said that the word occurs, with the same signification, in some of the aboriginal languages of North America. In Scotland, but more frequently in Ireland, the word is also used to denote level ground near a river.

INCH, a parish in the W division of Wigtonshire, stretching along the S shore and the head of Loch Ryan for 8 m. All of it forms part—and that the larger one—of the isthmus between Loch Ryan and Luce bay, and is believed to have been anciently covered by the sea. No fewer than 12 lakes spread out their little expanses of water in the p.,—most of them in its level or S division. They abound in pike, perch, carp, tench, roach, and white and red trout; are frequented by wild ducks, teals, widgeons, coots, and cormorants; and during the winter-months, especially if the temp. be below the average, occasionally become the resort of immigrant swans from Ireland. Those of Soulseat and Castle-Kennedy are beautiful sheets of water. The only village is Cairn or Cairnryan. Sir John Ross, the celebrated arctic navigator, is a native of this p. Pop. in 1841, 2,950.

INCH, a parish in co. Cork, 3¾ m. E of the entrance of Cork harbour. Area 3,823 acres. Pop. in 1831, 1,854; in 1841, 1,617.—Also an island and a parish in co. Donegal. The island lies on the W side of Loch Swilly, 1 m. W of Churchtown, and is separated by a deep and narrow channel from Rathmullen. The surface forms a sort of cone, whose summit bears the name of Inch-Top, and has an alt. of 737 ft. above sea-level. The area amounts to 3,100 acres, and is disposed principally in tillage and pasture. Pop. in 1831, 1,135; in 1841, 978. The p. includes also the mainland district of Barr of Inch.—Also a parish, partly in co. Wicklow, but chiefly in co. Wexford, 2¾ m. SW of Arklow, on the road to Gorey. Area of the Wicklow section 860 acres; of the Wexford section 5,943 acres. Pop. in 1831, 1,487; in 1841, 2,006.—Also a parish in co. Wexford, 6¼ m. SW by W of Taghmore. Area 1,389 acres. Pop. in 1831, 407; in 1841, 526.—Also a peninsula in co. Kerry, separating Dingle bay from Castlemain harbour. Its length is 2½ m., and its mean breadth rather less than a ½ m. It consists of one continued range of sand-hills, some of which are from 30 to 40 ft. high.—Also a parish in co. Down, 2½ m. N of Downpatrick. Area 6,494 acres. Pop. in 1831, 2,857; in 1841, 2,489. The surface lies along the SW arm of Lough Strangford, up to the mouth of the Quoile.

INCHARD (LOCH), an arm of the sea on the W coast of Sutherlandshire, projected into the N part of the p. of Edderachylis. The head of it is very desolate and bare.

INCH-BRAYOCK, or ROSSIE ISLAND, a low flat islet of about 34 acres area, in the channel of the S. Esk, between Montrose basin and the German ocean. It was included by the boundary-bill within the burgh of Montrose, and is rapidly becoming the site of a suburban appendage to that town. At its E end is a dry-dock. Till the latter part of the last cent., the great North road along the E coast of Scotland was continued across the S. Esk only by the expedient of a ferry below I.; but now, by means of connecting bridges, it is carried across the island, and cuts it into two nearly equal parts. The bridge on the S side—where the channel has greatly less breadth than that on the N side—is a work of solid and massive stone masonry. The bridge on the N side is a suspension-bridge, and one of the most interesting public works in the lowlands of Britain. See MONTROSE.

INCH-CAILLIACH [*i. e.* 'the Island of old women'], an islet in Loch-Lomond, ¾ m. NW of the mouth of the Endrick, in the p. of Buchanan, Stirlingshire. The islet is 7 furl. in length, from

NE to SW, and nearly 3½ furl. in breadth near its NE end, but contracts to a point at its opposite extremity. Amidst the green and golden islands of a landscape unsurpassed in its beauties by any other of the most fairy districts of Scotland, I. is one of the most beautiful. In ancient times it was the site of a nunnery,

INCHCOLM, an island in the frith of Forth, forming part of the p. of Dalgetty. It lies about 2 m. S of Aberdour, and 6 m. W of Inch-Keith. It is scarcely a m. in length, and is of a black appearance, though partly arable. A considerable portion is composed of greenstone. With the exception of a body of sandstone enveloped in the greenstone, the W half of the island is entirely composed of trap, having in some places a slightly columnar disposition. Though destitute of beauty, this island is rich in historical and antiquarian associations, and exhibits the ruins of one of the most extensive monastic establishments in this part of Scotland. The ancient name of the island was *Æmona*, which in Celtic means 'the island of Druids,' and from which it would appear that before the introduction of Christianity the Druids had had a place of worship here.

INCH-CONACHAN, or Colquhoun's Island, an islet in Loch-Lomond, 1 m. SE of the v. of Luss, one of a cluster of 3 islets of nearly equal size, in the parish of Luss, Dumbartonshire. It has Inch-Tavanach immediately on the SW, Inch-Moree on the S, and Inch-Cruin in Stirlingshire, not far distant, on the E. It is nearly 6 furl. long, and 3 furl. broad, and comprehends 94 Scottish acres under natural oakwood and fir.

INCH-DOVEA, a parish in co. Tipperary, 4½ m. NW of Thurles. Area 4,889 acres. Pop. in 1831, 1,928; in 1841, 1,983.

INCHEGEELAGH, a parish in co. Cork, containing the sources and upper course of the river Lee. Area 5,576 acres. Pop. in 1831, 5,785; in 1841, 6,357. It comprises the lakes of Allua and Gougane-Barra, the chasm of Cooleagh, and some of the most alpine summits in the SW of Ireland.

INCHELKAUB, a town of Abyssinia, in the prov. of Samen, at the NW base of the lofty mountains of Amba-Hai, 75 m. SSW of Axum, and 80 m. NE of Gondar.

INCHENHOFEN, a town of Bavaria, in the circle of Upper Bavaria, presidial and 4 m. N of Aichach, and 15 m. NE of Augsburg, on a hill. Pop. 659. It has a church, and contains 3 breweries and the same number of tanneries.

INCH-FAD, an islet in Loch-Lomond, ½ a m. NW of Inch-Cailliach. It is 7 furl. in length, and nearly 3 furl. in breadth.

INCH-GARVIE, a rocky islet in the frith of Forth, about 5 furl. in circumf., lying 1½ m. from the S shore of the frith, and 1 m. from the N shore, immediately S of the passage at Queensferry.

INCHICRONANE, or Inniscronan, a parish in co. Clare, 5¼ m. NE by N of Ennis. Area 17,438 acres, of which 597 are water. Pop. in 1831, 4,601; in 1841, 5,118. Most of the surface is rough, rocky, and upland; but the highest ground appears to be a summit 829 ft. in alt. on the E border.

INCHIHOLOHAN, or Castle-Inch, a parish 2 m. SW of Kilkenny, in co. Leinster. Area 2,367 acres. Pop. in 1831, 472; in 1841, 492.

INCHINABACKY, or Roxborough, a parish 3 m. NW of Castle-Martyr, in co. Cork. Area 1,475 acres. Pop. in 1831, 515; in 1841, 543.

INCHINNAN, a parish in Renfrewshire, bounded on the N by the Clyde; on the E and S by the Cart and the Gryfe. Area 3,060 acres. Near the junction of the waters of the Gryfe and the White Cart is a fine bridge completed in 1812 at an expense of £17,000. It is composed of two divisions, which cross the streams 30 or 40 yds. above their junction; an end of each division resting on the intermediate peninsula. Pop. in 1831, 642; in 1841, 678.

INCH-KEITH, an island in the frith of Forth, about 3 m. SE of Pettycur, 22 m. W ½ N of the isle of May, and 17 m. WNW of the Bass rock, in N lat. 56° 2′, W long. 3° 8′. It is rather more than a ½ m. in length, and about ⅛ m. in breadth. Near the middle, but rather towards its N end, it rises gradually to a height of 180 ft. above the level of the sea; and here a lighthouse has been erected. It possesses abundant springs of excellent water, which is collected into a cistern near the harbour, from which the shipping in Leith roads are supplied. It is supposed to be the *Caer Guidi* of Bede.—The lighthouse on this island was erected in 1803; and was at first a stationary light, but in 1815 it was changed to a revolving light as at present. It is elevated 235 ft. above the medium level of the sea. On the 1st of October 1835, the reflecting light on this island was discontinued, and a dioptric light exhibited in its place. It consists of seven annular lenses, which circulate round a lamp of 3 concentric wicks, and produce bright flashes once in every minute; and of 5 rows of curved mirrors, which, being fixed, served to prolong the duration of the flashes from the lenses.

INCH-KENNETH, one of the Hebrides, at the entrance of Loch-na-Kell, off the W coast of Mull, and 12 m. SW by W from Aros. It is about 1 m. long, and a ½ m. broad, and is verdant and grassy.

INCHKENNY, a parish in co. Cork, 4 m. SW of Cork. Area 3,860 acres. Pop. in 1841, 1,390.

INCH-LONAIG, an islet in Loch-Lomond, ¾ m. from the village of Luss. It is about ¾ m. long, and nearly a ½ m. broad.

INCHMAHOME, the larger of two islets in Monteith loch, p. of Port-of-Monteith, on the S verge of Perthshire. This islet possesses such historical and antiquarian interest as to have been the subject of a quarto volume, by the Rev. Mr. Macgregor of Stirling. In itself it has an area of only about 5 acres, and is an object of simple beauty,—an emerald gem on the bosom of the smiling lake; but it was the site of an extensive and noted priory, the ruins of which still sufficiently indicate its ancient grandeur.

INCH-MARNOCH, an islet in the frith of Clyde, on the SW of the isle of Bute. It is about 1 m. long, and lies 2 m. W of St. Ninian's point.

INCH-MURRIN, or Inch-Marrin, an islet in Loch-Lomond, the largest, and, with one exception, the most southerly of the beautiful gems sprinkled on the bosom of that brilliant sheet of water. It lies ¾ m. from the W bank, the same distance from the S bank, and upwards of 2½ m. from the efflux of the river Leven. It forms, with Inch-Croin, Torrinch, and Inch-Failliach, a belt of islets from SW to NE, on a straight line across the broadest part of the lake; and lying direct in front of the navigation from Balloch. It is upwards of 1½ m. in length, and nearly a ½ m. in breadth. It is beautifully wooded, and is used as a deer park.

INCH-TAVANACH, or Monk's Island, an islet in Loch-Lomond, ¾ m. SE of the village of Luss. It is nearly 1 m. in length, and 3 furl. in breadth, and has 135 Scottish acres of superficial area, of which 127 are covered with natural oakwood.

INCHTURE, a parish in the carse of Gowrie, in Perthshire, bounded on the SE by the frith of Tay, which divides it from Flisk in Fife. Its line of beach upon the Tay is only about 1 m. in length. The parish, with trivial exceptions, is a dead level, but is one of the most fertile and beautiful in the rich district in which it lies. The village of I., 13 m. from

Perth, and 9 m. from Dundee, occupies the summit of a rising ground in the centre. Pop. in 1841, 243. The other villages are Ballerno and Polgavie. The pop. of the p. in 1831 was 878; in 1841, 765.

INCHY-BEAUMONT, a commune and village of France, in the dep. of Nord, cant. and 4 m. WNW of Chateau-Cambresis. Pop. 1,580. Light cotton goods are manufactured here.

INCINO, a parish and town of Austrian Lombardy, in the prov. and 9 m. E of Como, district and 1½ m. E of Erba. Pop. 1,500.

INCISA, a town of Sardinia, in the div. and 15 m. SW of Alexandria, capital of a mandamento, in the prov. and 9 m. N of Acqui, on the r. bank of the Belbo. Pop. 2,000. It has a parish-church and a Carmelite convent; and possesses several silk-mills. —Also a town of Tuscany, in the prov. and 20 m. SE of Florence, on the l. bank of the Arno, which is here crossed by a bridge. Pop. 2,130. It has a castle and a parish-church.

INCORONATA. See Coronata.

INCUGNATE, a town of Austrian Lombardy, in the prov. and district and 15 m. E of Milan. Pop. 1,600.

INDAIA', or Andaia', a parish and town of Brazil, in the prov. of Minas-Geraes, and comarca of Paracatu, on the l. bank of the Rio São-Francisco, and to the N of a river of the same name. It is sometimes called, from the beauty of its situation, Boa Vista. Sugar, cotton, and varieties of vegetables, are cultivated; and a considerable number of cattle are pastured in the environs.—The river I. has its source in the serras Bambuhi and Sandade; runs NE; receives the Funchal and other minor streams; and, after an impetuous course of 85 m., discharges itself into the Rio São-Francisco, on the l. bank, a little below the confluence of the Paraupeba.

INDAIAL, or Andaial, a small town of Brazil, in the prov. of Minas-Geraes, and district of Tejuco, 17½ m. from Diamantina, and 42½ m. N of Serro. It has a military establishment stationed here for the repression of contraband trade in diamonds.

INDAIATUBA, a parish and village of Brazil, in the prov. of São-Paulo, and district of Itu.

INDAL, a parish of Sweden, in the prefecture of Wester-Norland, and haerad of Medelpad, 15 m. WNW of Sundswall, and 27 m. W of Hernosand. It contains 3 churches, and has extensive iron-works.

INDALS-ELF, a river of Sweden, formed by the junction of the Ama-elf and Ragunda-elf, in the laen of Ostersund, and haerad of Jaemtland, a little above Ragunda. It runs SE; enters the laen of Hernosand, and haerad of Medelpad; and, after a total course of 75 m., falls into the gulf of Bothnia at Sundswall, and 21 m. SW of Hernosand. This river forms 4 falls in the p. of Ragunda, one of which, named the Eds, is 240 ft. in height. It afterwards becomes navigable.

INDEN, a village of Prussia, in the prov. of the Rhine, regency and 14 m. ENE of Aix-la-Chapelle, circle and 5 m. S of Julich, on a river of the same name, an affluent of the Roer. Pop. 765. It has manufactories of linen and woollen fabrics, a paper-mill, and several bleacheries.

INDENTED HEAD, a peninsula of Australia Felix, extending into and forming the W side of the entrance into Port Philip, and bounded on the W by the river Barwen. It comprises an area of about 100,000 acres, and rises to a considerable height. It affords excellent pasturage.

INDEPENDENCE, a central county of the state of Arkansas, U. S., comprising a superficies of 1,250 sq. m., watered by Big Black and White rivers. Pop. in 1840, 3,669, of whom 514 were slaves. Its capital is Batesville.—Also a township of Alleghany co., in the state of New York, 20 m. SE of Angelica. The surface is generally hilly, and is drained by Cryders and Independence creeks. The soil consists of clay loam. Pop. 1,440.—Also a township of Warren co., in the state of New Jersey, 14 m. NE of Belvidere, watered by Pequest creek, and its tributary Bacon creek, and bordered on the SE by Musconetcong river. It presents a generally hilly surface, intersected in the centre by a valley. Pop. 2,284.—Also a village of Washington co., in the state of Pennsylvania, 227 m. W of Harrisburg. Pop. 335.—Also a township of Cuyahoga co., in the state of Ohio, 10 m. S of Cleveland, on the Cuyahoga river and Ohio canal. Pop. 754.—Also a village of Kenton co., in the state of Kentucky, 82 m. NNE of Frankfort.—Also a township of Oakland co., in the state of Michigan. Pop. 830.—Also a township of Macon co., in the state of Missouri. Pop. 545.—Also a village of Jackson co., in the same state, 146 m. WNW of Jefferson city, and 6 m. S of the Missouri. It is very flourishing, and has an extensive business connection with Santa Fe. The Missouri being navigable at all times from March till November up to this point, this thriving town has become an eligible point of outfit and departure for every part of the great Western and Northern 'prairie ocean;' and, besides the Santa Fe caravans, most of the Rocky mountain traders and trappers, as well as emigrants to Oregon, take this town in their route. It is 150 m. from Council-Grove; 234 m. from the Little Arkansas; 450 m. from the Lower spur on the Cimarron river; 635 m. from the Rio-Colorado; and 775 m. from Santa Fe.—Also a river in the state of New York, which has its source in Hamilton co., and flows W into Black river, in Lewis co.

INDEPENDENCE ISLAND, an island in the S. Pacific, in the group of De Peyser's islands, and N of the Friendly islands, in S lat. 10° 30′, E long. 179°.

INDEPENDENCIA. See Villa-da-Indepen-dencia.

INDERAB. See Anderab.

INDERABIA, or Hinderabi, an island of the Persian gulf, near the S coast of the Persian prov. of Farsistan, and district of Laristan, to the SE of the island of Busheab, and NW of that of Kenn, and 60 m. SW of Lar. It is separated from the continent by a narrow strait, the navigation of which is dangerous; and is about 5 m. in length, and 1½ m. in breadth.

INDERAGIRI, or Andragiri, a river of Sumatra, which has its source in Lake Sinkara, in the kingdom of Menang-Kaban; flows E through the territory of the same name; and falls by several branches into the sea, on the E side of the island, in S lat. 0° 39′. It is navigable to a considerable distance from the embouchure.

INDERGURH, a town of Hindostan, in the prov. of Haraouty, 35 m. NE of Kotah, and 99 m. SSE of Jypur.—Also a fortified town in the prov. of Bundlecund, 25 m. NW of Sumpter.—Also a small town in the prov. of Allahabad, 15 m. NE of Ditteah.

INDERHALL, a town of Hindostan, in the prov. and district and 39 m. NW of Beeder, and 117 m. WNW of Hyderabad.

INDEROE, a village and parish of Norway, in the dio. and 45 m. NNE of Drontheim, and bail. of N. Drontheim. Pop. 2,860.

INDERSDORF, a village of Bavaria, in the circle of Upper Bavaria, presidial and 10 m. N of Dachau, and 22 m. NNW of Munich. It contains an hospital, and about 71 houses; and has a brewery, a distillery, a forge, and a saw-mill.

INDERSKAIA-KREPOST, or Gorskaïa-Inderskikhgor, a fort of Russia in Europe, in the gov.

and 282 m. SSE of Orenburg, district and 204 m. S of Uralsk, on the r. bank of the Ural. The mountains of Inderski rise in the vicinity of this fort, and present towards the river a chain of lofty rocks. The soil consists of clay, mixed with sand, and in some places they exhibit beds of gypsum. The vegetation with which they are covered consists to a great extent of that common to saline soil.

INDESKOE, a saline lake in Turkistan, in the territory of the Little Kirghiz, and 6 m. from the l. bank of the Ural river. It is 13 m. in length, and about 8 m. in breadth.

INDEVILLERS, a village of France, in the dep. of the Doubs, cant. and 7 m. E of St. Hippolyte. It has manufactories of pipes and cotton fabrics, a dye-work, and several tanneries. Pop. 628. Fairs for cattle and various articles of merchandise are held here twice a-year.

INDIA, or THE INDIES, a name which has been very vaguely applied, at different periods, to different extents of country, and is still used in different applications. The name is derived by us from the Greeks, who seem to have borrowed it from the Persians, as it is unknown to the natives. It was at first used by Grecian writers to signify an indefinite extent of country lying beyond the Indus, with which they were acquainted only through meagre and vague accounts obtained from the Persians. Darius crossed the Indus B. C. 520, and conquered Cashmere and a part of the Punjab. Alexander, 200 years later, pushed his conquests a little farther; and the narratives given by his officers supplied Eratosthenes, Strabo, and Pliny with the materials which they arranged and abridged. Ptolemy, who flourished A. D. 150, when commerce had made his countrymen acquainted with the southern parts of I., has given a more accurate account of it. He divides I. into 'India within' and 'India beyond the Ganges.' The former was bounded on the W by the people of Paropamisus, Arachosia, and Gedrosia; on the N by Mount Imaus, the Sogdiæans, and Sacæ; on the E by the Ganges, and on the S by the Indian ocean. Other writers, as Arrian and Pliny, make the Indus its W limit. Strabo calls the S and E boundary, the Atlantic ocean. Of the two great rivers, the Indus and Ganges, the latter was not reached by Alexander, and was seen by few of his followers. The Indus and its five great tributaries were known to all of them. A more accurate acquaintance with Upper India has proved the general correctness of the ancient accounts, and settled many doubtful points. Of the Deccan they knew nothing but the coasts; and of India beyond the Ganges they knew very little. The decline of the Roman empire, the rise of the Parthian empire, and particularly the extension of the Mahommedan power over Western Asia, broke off all direct intercourse between Europe and India. Religious hatred and commercial jealousy contributed to shut up the road to India against Europeans. Caravans were then the medium of Indian commerce, and through them the productions of the East were brought to the Mediterranean shores. Not until the Portuguese had doubled the cape of Good Hope, in 1498, were Europeans able to visit that region of wealth. The islands of Java, Sumatra, Borneo, Celebes, the Philippines, the Moluccas, &c., were discovered, and have often been included under the general name of I., which comprised, on the continent, all that vast tract of country lying S of China, Tibet, and Persia. These regions have been divided by modern geographers into three parts—the islands, or the Indian archipelago; India this side the Ganges, or Hindostan; and India beyond the Ganges, or, as some writers call it, Indo-China. When America was discovered, Columbus supposed it to be the E coast of Asia, of which he was in search. These regions were, therefore, at first called 'India,' and when the error was discovered, the name was retained, with the distinctive appellation of 'West,' the proper I. being called 'the East Indies.' The Spanish kings assumed the title of 'king of the Indies;' and their council for the colonies was styled 'the Supreme council of the Indies.' The name of West Indies was afterwards restricted to the islands, now so called, lying between N. and S. America.

INDIA (BRITISH). See HINDOSTAN.

INDIAN ARCHIPELAGO, a great insular region of the globe, lying between Asia and Australia, embracing 40 degrees of long. close to the equator, namely from the W extremity of the island of Sumatra, to the Arroe islands; and upwards of 30 degrees of latitude, or from the parallel of 11° S to that of 19° N; and presenting an innumerable multitude of islands scattered over an area of about 5,000,000 sq. m. The Indian ocean bounds it on the W; the China sea on the N; on the E and S it has the waters of the Pacific. The W boundary is defined by the Malayan peninsula, and the long narrow island of Sumatra. Its S boundary is traced by a chain of contiguous islands commencing with Java, and terminating in Timor-Laut, and running in a line from E to W nearly 1,600 geog. m. This chain is intersected by the straits of Java and Bale. Lombok, Sambawa, and Timur. The islands of New Guinea, Gilolo, Mindanao, and Luçon form the E boundary of the archipelago; while its N barrier is defined by the islands of Luçon, Palawan and Borneo. The passages in the E quarter are wider than in any other; those passing through the northern barrier are unsafe and intricate. The archipelago contains three very large islands, viz., Borneo, New Guinea, and Sumatra. In the second rank is Java, to which may be added the peninsula of Malacca. In the third rank Mr. Crawfurd places Celebes, Luçon or Luçonia, and Mindanao; in the fourth Bali, Lombok, Sambawa, Chandana, Flores, Timur, Ceram, Buroe, Gilolo, Palawan, Negros, Samar, Mindoro, Panay, Leyte, and Zebu. The whole archipelago is arranged into groups and chains of islands, with here and there a great island intervening; which are encompassed by five portions of ocean bearing distinct names, viz. the China sea between Borneo and the Malay peninsula; the Java sea between Borneo and Java; the sea lying between Celebes on one side, Ceram on the other, and Timur on the S; the clear tract of ocean, called the Sulu sea, lying between Celebes and Borneo to the S and W, Mindanao and the Sulu chain to the N; and the sea formed by the Sulu chain, Borneo, Palawan, the SW side of the Philippines, and Mindanao. Crawfurd, in his valuable *History of the Indian archipelago* [Edin. 1820, 3 vols. 8vo.], treats the whole as capable of being subdivided into 5 natural and well-grounded divisions. "Beginning from the W, whence civilization appears to have originated, and from whence it spread to the E, the 1st division comprehends the Malayan peninsula, the island of Sumatra, the island of Java, the islands of Bali and Sombok, and about two-thirds of the western part of Borneo, up to the parallel of longitude 116° E. The animal and vegetable productions of this quarter are peculiar, and have a higher character of utility than those of the other divisions; the soil is of superior fertility, and better suited for rearing vegetable food of the first quality. The civilized inhabitants have a general accordance in manners, language, and political institutions: they are far more civilized than those of the other divisions, and have made considerable progress in arts, arms, and letters. Rice is their food, and it is generally abundant.—The island of Celebes is the centre of the 2d grand division, which comprehends, besides that great island itself, the smaller ones on its coast, as Bouton and Salayer,—the whole chain of islands from the parallel of E long. 116° to 124°, with the whole E coast of Borneo within the same limit, and up to about 3° of N lat. The animal and vegetable productions of this quarter have generally a peculiar character, the soil is of an inferior fertility to that of the last, and less suited to the rearing of rice or corn of the first quality. The civilized inhabitants have made considerable progress in the useful arts, but their civilization is of an inferior type to that of the first division. In language, manners, and political institutions, they agree surprisingly among themselves, but differ widely from their western neighbours. Rice is their principal food, but it is not abundant, and some sago is occasionally used.—The 3d division differs in a most remarkable manner from all the rest. Its extent is from 124° to 130° E., and from S lat. 10° to N lat. 2°. The character of the monsoons is here reversed. The E monsoon, which is dry and moderate to the W, is here rainy and boisterous; the W monsoon, rough and wet in the two first divisions, is here dry and temperate. The greater number of the plants and animals of the two first divisions disappear in the third, where we have strange productions, in both kingdoms, unknown to any other parts of the world. This is the native country of the clove and nutmeg, and the only country in the world which produces them in perfection. For raising the higher classes of vegetable food, the soil is of inferior fertility. Rice is scarcely produced at all, and the staple food of the people is sago. In language, manners, and political institutions, the people of this quarter agree among themselves, and differ essentially from all their neighbours. They are far inferior to the inhabitants of

the first two divisions in civilization, in power, and in knowledge of useful arts. They never acquired of themselves the use of letters.—The 4th division is the least distinctly characterised, but points of dissimilitude sufficiently striking and obvious mark its character, to entitle it to be considered separately. It extends from 116° E long. to about 128°, and from N lat. 4° to 10°, and includes the NE angle of Borneo, the great island of Mindanao, and the Sulu archipelago. The vegetable products of this division are in a good measure peculiar, but partake in some degree of the character of those of the three first divisions united. The clove and nutmeg are indigenous, but of imperfect and inferior quality. Sago is very often consumed, but rice is, again, the principal article of food. In civilization the inhabitants are superior to those of the third division, and inferior to those of the first, or even of the second. Their language, manners, and institutions are peculiar,—agreeing among themselves, and differing from those of all their neighbours.—The 5th and last division is the well-known group of the Philippines, extending from the parallel of 10° to 19° of N lat. A geographical situation so different from that of all the other countries of the archipelago, produces much relative difference of climate and production. This division is the only portion of the archipelago within the limit of the boisterous region of hurricanes, and this circumstance alone gives a peculiar character to the country. The soil is of eminent fertility, and rice is the food of the more civilized races The mould is eminently favourable to the growth of the tobacco plant and sugar-cane, but produces neither the pepper of the first division, the fine spiceries of the third, nor some of the delicate and peculiar fruits which characterize those countries of the archipelago which lie within 10° of the equator, and which are unknown to all other regions of the earth. The manners, the political institutions, and, above all, the language of the inhabitants, differ in genius and form from those of the inhabitants of all the other divisions."

In the innumerable islands of the vast Indian archipelago, yielding an immense variety of valuable merchantable products, a new and in part unvisited field is opened to commercial enterprise. The slightest acquaintance with its boundless resources must suffice to show that no limit can be assigned to the trade that may be there called into existence. It not only furnishes an innumerable variety of valuable articles suited for European and American markets, but has also an abundance of products not less eagerly sought in the markets of China and Continental Asia. Holland, Spain, and Great Britain, possess valuable colonies among those islands. The prosperity of the Dutch is based exclusively upon the revenue and commerce of Netherlands India, embracing several of the largest islands in the archipelago, and of which Batavia is the chief port and entrepot, With the view of developing the productive resources of Celebes, they have declared Macassar a free port. American commerce with the Philippines, restricted to Manilla, might be greatly increased, were they allowed to trade at the principal ports and islands of that rich, productive, and populous group. The British free port of Singapore is one of the principal commercial emporia of the archipelago. The island of Labuan, and the territory of Sarawak, on the NW coast of Borneo, have been ceded to the British by the sultan of Borneo Proper; and they contemplate forming other trading settlements on that magnificent and fertile island. The trade with the Sulu group is capable of great extension; the most fertile parts of NE. Borneo are entirely subject to its authority, and their trade with the Philippines is very considerable. The immense and unexplored island of Papua or New Guinea, with many noble rivers traversing its interior for hundreds of miles, presents an interesting field for geographical discovery and commercial enterprise. The Americans have long carried on a lucrative and prosperous trade in these half-civilized countries, where the largest profits are always realized. The American whalers have usually a cargo of arms, ammunition, and other articles for barter on board. They fish off Madagascar, and whenever an opportunity offers, carry on a trade of barter with the natives. Thence their course is directed to St. Paul's and Amsterdam, and afterwards along the coast of Australia; and when it becomes necessary for them again to refresh, they touch at some island in the Indian archipelago, and the scene of barter is once more renewed. Their cargo principally consists of muskets and ammunition, which are readily exchanged for ivory, gold-dust, and other costly commodities, whereby enormous profits are realized. An American South-sea ship sets forth on a whaling voyage thus equipped, and returns with a cargo, not simply of sperm oil, or if that fails, with nothing, but laden with valuable gums, ebony, tortoise-shell, gold-dust, seal skins, shells, and curiosities of a rare but very saleable kind.

INDIAN BAY, an inlet on the W side of Bonavista bay, in the island of Newfoundland.

INDIAN (Big), a river of North America, which falls into the Ohio, between the Little Miami and the Scioto.

INDIAN CORN FALLS, a cataract in the river St. Mary, about 20 m. from Lake Superior.

INDIAN CREEK, a small stream which enters the Ohio, 45 m. NE from Vevay.—Also a creek in the island of Antigua, a little to the W of Standfast point.—Also a river of Virginia, which runs into the Chesapeake, in N lat. 37° 43′.—Also a village in Monroe co., in Virginia. Pop. 570.

INDIAN HEAD, a cape on the E coast of New Holland, in S lat. 25° 3′; so called by Cook, from the number of natives who appeared near it as he passed in 1770.

INDIAN ISLAND, an island on the S part of Dusky bay, on the coast of New Zealand, about 4 m. in circumf., 4 m. N of Pickersgil harbour.—Also a small island near the coast of N. Carolina, at the mouth of Pamlico sound.

INDIAN KEY, an island in Dade co., in Florida, 1 m. S of New Matacumbe. It is a huge madrepore rock, having an area of 7 acres.

INDIAN LAKE, a lake in Hamilton co., in the state of New York, U. S., in a wild mountainous region. It is 4 m. long, and 1 m. broad.

INDIAN OCEAN, the name given to that portion of the great ocean which lies between Asia on the N; Sumatra, Java, and Australia on the E; the Antarctic ocean on the S; and Africa and the Atlantic ocean on the W. The Red sea, the Persian gulf, and the bay of Bengal, are the extreme northern arms of this great sea; the Cape of Good Hope, and the S part of Van Diemen's Land, respectively define its extreme W and E limits. The portion lying to the N of the tropic of Capricorn is sometimes distinguished as the Equinoctial Indian ocean; that to the S, as the Southern Indian ocean. By the straits of Malacca, it is connected with the China sea, and the N. Pacific, on the E; and by the Timor and Torres passages, or the Java and Molucca seas, with the S. Pacific. Besides the large island of Ceylon, and that of Socotra, its N section contains the Laccadive, Maldive, Andaman, Nicobar, and Mergui groups; the Seychelles, the Canoras, the isles of France and Bourbon, and the great island of Madagascar, are comprised in its S portion; and the distant group of Kerguelen's Land may also be regarded as lying within its S limits; but some modern geographers understand its S limit to be defined by a line drawn from the Cape of Good Hope to Bass's strait. The great Asiatic rivers, Ganges, Brahmaputra, Irawaddi, Indus, Euphrates, and Tigris, and the African Zambese, are the principal rivers which flow into this ocean.—The great Equatorial stream having swept past the shores of China, continues to flow in a W direction between the parallels of 10° and 25° S, till it reaches the meridian of 65° E, when it turns to the NW. and circling round the N extremity of Madagascar, enters the Mozambique channel, flows along the E coast of Africa, and forms the Cape current.—The SE trade wind blows from April to October within the limits of 10° and 28° S.—The monsoons prevail from the parallel of 8° S to the extreme N of this ocean. On the N side of the equator, the NE monsoon prevails from October to April; while on the S side, the NW monsoon prevails during this season. From April to October, the SW monsoon prevails on the N of this line; and the SE monsoon on the S.—The maximum heat of the waters of this ocean occurs in about 87° 40′ E long., between the strait of Bab-el-Mandeb and the coast of Hindostan.

INDIAN RIVER, or Cypress Swamp, a morass partly in Maryland and partly in Delaware, U. S. It extends 6 m. from E to W, and nearly 12 m. from N to S, and includes an area of nearly 50,000 acres. Yet the whole of this swamp is a high and level basin, very wet though undoubtedly the highest land on that part of the coast. False cape, at the mouth of Indian river, is in N lat. 38° 35′ 15″.—Also a lagune on the E coast of the peninsula of Florida, which runs from N to S, forming a sort of inland passage for above 100 m. along the coast. In some places it is 4 m. wide; in others it is not over 50 yds. Its depth of water also greatly varies.—Also a river of Delaware, which runs into Rehobot bay, in N lat. 38° 40′.—Also a small arm of the sea, in the dist. of Maine, between Chandler's and Pleasant river.—Also one of the head branches of the Connecticut river, which it enters a little N of the parallel of 45°.—Also a river in Lewis co., in the state of New York, which flows into Black lake, in St. Lawrence co., and thence into the Oswegatchie.

INDIAN SOUND, a gulf or bay on the S coast of Patagonia, communicating with the Straits of Magalhaen, by means of St. Jerome's channel.

INDIAN SPRINGS, a village in Butts co., in Georgia, 52 m. W of Milledgeville, on the fork of two creeks, tributaries of the Ocmulgee. There are much-frequented sulphureous springs here.

INDIAN STREAM, a township in Coos co., in New Hampshire, U. S. Pop. 315.

INDIAN TERRITORY, or WESTERN TERRITORY, as it is generally called in official papers, an extensive region, which has been set apart by the general government of the United States as a home for the Indian nations, whose removal beyond the limits of the states, chiefly from the SW states of the Union, has been going on for several years. The tract thus appropriated extends from the W boundary of Arkansas and Missouri to that of the Mexican States, between the Red river on the S, and the Platte or Nebraska, on the N; or the latitudes of 33° 50′ and 40° N. It is about 360 m. in breadth from N to S, by from 700 to 750 m. in extreme length; the S part, however, is not more than one-half that length. The area may be roughly stated at about 250,000 sq. m.

Face of the country.] For about 100 m. W of the eastern boundary the country is gently undulating; in the SE corner, between the Arkansas and Red river, it is mountainous, being traversed by the Ozark range. Beyond this, it spreads out into wide expanses of a slightly undulating surface, or into extensive plains over whose dead level the eye wanders to the verge of vision. In the W part of the northern belt, successive groups of isolated table-lands, or elevated platforms of no great height or extent, and regular but not lofty ranges of hills, mark the approach to the foot of the Rocky mountains. The base of these mountains is about 3,000 ft. above sea-level. James's Peak rises to the height of 11,500 ft.; further N, near the sources of the Platte, some points attain a much greater elevation.—This region is traversed by several large rivers, the largest rising in the Rocky mountains, and flowing E to the Mississippi and Missouri. They have the common character of rivers of a desert, flowing through tracts of sand, with wide but shallow beds, obstructed throughout by sand-bars and banks, sometimes so scantily furnished with water as to form merely a succession of stagnant pools, and occasionally even presenting dry channels. The Nebraska, Platte, or Shallow river, although it has a course of nearly 1,000 m. and is in many places several miles in width, is so shoal that it may be forded at almost any point in moderate stages of the water, and can scarcely be said to be navigable for any considerable length of time. In the lower part of its course, its banks and islands are covered with cotton-wood and willows, which, however, soon disappear as you ascend; and for several hundred miles scarcely a tree or shrub is to be seen, until, on approaching the mountains, it is again lined with straggling groups of stunted trees. The Kansas, or Konzas, is also a large stream and receives several considerable tributaries, amongst which are the Republican fork, Solomon's fork, Smoky Hill fork, and Grand Saline fork. In high stages of the water, it may be navigated for a distance of nearly 200 m., but is beset with numerous shoals. The Arkansas is, however, the principal river of this region; rising in the Rocky mountains, near the head of the Rio del Norte, it forms for several hundred miles the boundary between New Mexico and this territory, which it traverses, passing into Arkansas. It affords few facilities for navigation, being shallow, and in some parts entirely disappearing. Steamboats ascend to Fort Gibson. From the N, it receives the Verdigris, the Neosho or Grand river, and the Illinois; and from the S, the Negracka, Nesuketonga or Salt fork, and Canadian. The last mentioned rises in the Mexican mountains, and has a course of nearly 1,000 m.; but its channel is shallow, and sometimes quite dry, the waters being rapidly absorbed by the sands. The Red river is better supplied with water; and since the removal of the great raft in Louisiana, steamboats come up into this territory. Its largest tributaries from the N are the Washita, or False Washita, Blue Water, and Kiamesha.

Soil.] The Western part of the territory forms a portion of the Great American desert, which extends along the E foot of the Rocky mountains, with a breadth of about 500 m., far beyond the limits of the territory. The soil is arid, sterile sand, almost destitute of trees and shrubs. Vast tracts consist of bare rocks, gravel, or sand, and others are covered only with yuccas, cactuses, grape-vines, and cucurbitaceous plants; nearly the whole region is either destitute of water during a part of the year, or presents to the wayworn and exhausted traveller only a brackish and bitter draught; in many places the surface is whitened by saline efflorescences, and all wears the aspect of desolation. This region is unsusceptible of cultivation, yet it does not exhibit the naked aspect of the African deserts; in certain seasons it is traversed by full streams, and in some parts it affords pasture for large herds of bison, droves of wild horses, and other animals. It is frequented by wandering bands of savages, who roam from place to place in pursuit of game. The E part of the territory, forming a strip of about 200 m. in breadth, is in general productive, and well suited to agricultural purposes. It is mostly prairie, skirted here and there, chiefly along the river-valleys, by lines of woodland, and there are extensive fertile bottoms on the lower parts of the rivers. A portion of it is unfit for cultivation, such as the mountains and flint-hills, that are interspersed throughout the country. These, however, add to the salubrity of the climate, and afford a good range for stock at certain seasons. The country will produce abundantly all the varieties of grain, vegetables, and agricultural products, which are raised in the states of the same lat. E of the Mississippi. It is also admirably adapted to the raising of stock of every description. S of the Kansas river, there is no necessity to provide for them in the winter, as they live in the range winter and summer. This section is the portion which is occupied by the emigrant and indigenous tribes.

Population.] The pop. of the Indian territory consists of tribes of eastern origin, and about 70,000 in number, who have been removed thither by the United States; of indigenous bands and tribes, who occupy a part of their original hunting-grounds, or have merely been removed to an adjoining tract, more suitable for their residence; and of the wild roving bands of the W portion, who have had, until very recently, no communication or political connection with the authorities of the republic.—The Chocktaws possess the tract lying between Arkansas and New Mexico, bounded on the S by the Red river, and on the N by the Canadian and Arkansas rivers. The Chickasaws, who were a friendly tribe while on the E side of the Mississippi, are settled among them. Most of the inhabitants of the territory, which is about 200 m. long, and 150 m. broad, are now engaged in agriculture; they have good houses, and well-fenced fields; they raise more Indian corn and cotton than is necessary for their own consumption, and own great numbers of cattle, horses, sheep, and swine. There are several native traders, mechanics, and teachers among them; and saw and grist mills, cotton-gins, ploughs, looms, and spinning-wheels, give indications of civilization. The European costume has been generally adopted by them, and most of them have learned to relish the common luxuries of their white neighbours. The Choctaws have a written constitution, and have established trial by jury. Their government is administered by 4 principal chiefs, elected for a term of 4 years, and presiding over 4 districts; and a legislative council of 30 members, chosen annually by the people. The American Board of foreign missions have 5 stations in this territory; and there are 2 Baptist and 1 Methodist mission in the nation. Fort Towson, a United States' military post, on Red river, is within their territory.—The Creek country lies between the Canadian on the S, and the Cherokee frontier on the N and E. It is well watered and wooded, though containing extensive prairies. The character and condition of the Creeks or Muscogees resemble those of the Choctaws, but they are less advanced in the mechanic arts and in civilization generally than that tribe. Most of them have comfortable houses, and good gardens and orchards, and raise Indian corn in large quantities, with some rice and wheat; they have also live stock enough to supply their own consumption.—The Seminoles are seated within the Creek country; and are considered a part of the Creek nation. They retain more of the habits of hunters than the Creeks. The Creek government is administered by a general council of the nation, in accordance with the provisions of a written constitution; and the execution of the laws is intrusted, under the direction of the council and judges, to executive officers called light-horsemen or sheriffs. There are 2 stations of the Baptists, a station of the Board of foreign missions, and a Methodist mission among the Creeks; several of the missionaries are natives.—The Cherokees own the tract N and E of the Creeks. They have entirely abandoned the chase, and are more advanced in civilization than any of their neighbours. They have several saw and grist mills, and one or several ploughs to each farm. There are several native traders, one of whom owns a steam-boat, which runs between their country and New Orleans; and some of the natives have executed contracts for subsisting the garrison of Fort Gibson. Their government is conducted by 3 principal chiefs, and the legislature, consisting of 2 houses, meets annually. Each district is also under the care of 2 judges and 2 sheriffs. The Board of foreign missions have missionaries, farmers, and mechanics, with 4 schools, and a printing press, in their country; and the Methodists and Baptists have each a mission.—The Senecas, Shawnees, and Quapaws, occupy a small tract on the Neosho. The Senecas, among whom are about 50 Mohawks, and the united bands of Senecas and Shawnees, are skilful farmers, have comfortable cabins, and several mills. The Quapaws have made less progress, but they are peaceable and industrious. The Senecas, who removed thither from New York, have a translation of the Book of Common Prayer, which many of them are able to read, and one of their number officiates at their meetings for public worship.—The Osages or Wososhes, occupying a territory N of the Cherokees, are an indigenous tribe, and mostly dependent upon the chase. Their squaws raise some Indian corn and beans. A band on the Neosho owns some cattle and hogs, and have begun to use the plough. The others live in portable lodges, formed by inserting small poles in the ground, and bending them over so as to meet at the top, where an aperture is left for the escape of the smoke, the sides being covered with flags, or buffalo or elk skins.—Further N, on the Osage river, are the small kindred bands of Piankeshaws, Weas, and Peorias of the Miami nation, and the related bands of Pottawatamies and Ottawas. They have fenced and ploughed fields, decent cabins, and own a considerable number of cattle. The Methodists, the Western missionary society, and the Baptists, have missionaries among them.—The Shawnees or Shawanees own a tract lying between the head of the Osage and the lower part of the Kansas river. They are amongst the most improved of the Indian tribes, having generally good houses, well fenced and ploughed fields, and a sufficient number of live stock; there is also a saw and grist mill in the country. The Methodists and Baptists have missions among them, and at the Shawanee station, under the care of the latter, there is a printing press.—N of the Kansas, and SW of the Missouri, is the Delaware country, which extends westward 200 m., with a breadth of 10 m. The condition of the Delawares resembles that of the Shawanees, with whom they were long politically connected

and there are among them Methodist and Baptist missions.—The Kansas or Konzas occupy a tract on both sides of the Kansas river, between the Delaware and Shawanee lands. They are an indigenous tribe, nearly allied to the Osages, and are poor and wretched; their lodges are partly like those of the Osages, and in part made of earth; in these last, the roof is supported by wooden props within. They follow the chase for subsistence.—The Kickapoo tract lies on the W side of the Missouri, on the N of the Delaware country. The Kickapoos are of a kindred origin with the Illinois and Miami bands, and resemble them in their condition. One of the Kickapoo chiefs has founded a religious society; he lays claim to divine revelations, and inculcates abstinence from ardent spirits, flagellation for sin, and the observance of holy days. The religious ceremonies consist of a series of prayers chanted by the whole assembly, and they are solemnized four times a-week Many Pottawatamies are also seated here. Fort Leavenworth, on the Missouri, is in the Kickapoo territory.—The united bands of Sacks or Sauks and Towas occupy a tract N of the Kickapoos, on the Missouri. They have lately removed, but are in an improving condition. The Otoes, between the Platte or Nebraska and the Little Nemahaw; the Omahas or Mahas, between the Platte and the Missouri; the Pawnees, to the W of the latter; and the Puncas to the N are indigenous tribes, and retain their primitive barbarous habits of life with little or no change. They pursue the buffalo, and the squaws raise Indian corn, beans, and pumpkins.—In the desert regions further W are roving tribes of Comanches, Kioways, and Towash, often called Pawnee Pects or Piquas; and nearer to the mountains, of Arickaras or Rees, Shiennes or Cheyennes, Arrepahas, Gros Ventres, and Eutaws, who wander from place to place, on both sides of the frontier, in pursuit of game, and have had little intercourse with the whites. They are skilful horsemen; their arms are chiefly the bow and arrow, lance, war-club, and buckler, and their dwellings moveable skin lodges or tents. The great caravan road from Missouri to Santa Fe crosses the country, and there is a trader's fort on the Upper Arkansas.—By a recent law, the president of the United States may, with the consent of the Senate, appoint 3 superintendents of Indian affairs at an annual salary of 2,000 dollars; and in lieu of the 23 agents and subagents heretofore employed, he may appoint 11 Indian agents with yearly salaries of 1,500 d.; and 6 others with a salary of 1,000 d.; besides 4 agents for the New Mexican Indians, and 1 for those in Utah, at a salary of 1,550 d.

INDIAN TOWN, a village of Maryland, U. S., on the SE bank of Choptank river, 3 m. SW of Newmarket.—Also a small town of N. Carolina, 33 m. from Edenton.—Also a town in Williamsburg district in S. Carolina.

INDIANA, one of the United States of America, between the parallels of 37° 45′ and 41° 52′ N lat., and the meridians of 84° 42′ and 88° 12′ W long. It is bounded on the N by the lake and state of Michigan; on the E by the state of Ohio; on the S by the Ohio river, which separates it from Kentucky; and on the W by the state of Illinois. It is 246 m. in length from N to S; and 160 m. broad; and has an area of 36,000 sq. m., or 21,478,760 acres.

Face of the country.] This state is in no part mountainous, but that portion of its S district bordering on the Ohio contains much broken, hilly land, seldom rising above 300 ft. The interior parts, and the valleys of the E and W forks of White river, present a gently undulating country, generally timbered, with occasional strips of rich bottom along the margin of the streams. The valley of the Wabash, in the lower part, is an undulating surface of forest and prairie. N of Terre-Haute the land is of the first quality, presenting fine forests, occasionally opening into beautiful and fertile prairies. On the St. Joseph's, and across to the head-waters of the Maumee, are extensive wet and dry prairies, and heavily timbered lands, with a soil of exhaustless fertility. On the shore of Lake Michigan are sand hills, and along the Kankakee extensive swamps and marshes. The kinds of timber most abundant are, oak of various species, ash, beech, buckeye, walnut, cherry, sugar-tree, hickory, elm, sassafras, honey-locust, cotton-wood, sycamore, hackberry, and mulberry. The principal productions are wheat, rye, Indian corn, oats, buckwheat, barley, potatoes, and all kinds of vegetables.—The Ohio meanders along the entire S boundary of the state. The E and W forks of White river, and their branches, drain the interior counties for an extent of 200 m., and are navigable for flat boats, during the seasons of floods, a distance of 100 m. from their mouths. The Wabash rising on the NE, and flowing SW nearly across the state, is navigable for steam-boats to Lafayette. The main branch of the Wabash rises in Ohio, and after a meandering course of more than 200 m., becomes the boundary between Indiana and Illinois, for a distance of 120 m., till it unites with the Ohio river.

Climate and productions.] The climate of I. is agreeable, and resembles that of Ohio. The winters are milder and shorter than in the Atlantic states; the summers are in general not warmer. Spring commences about the middle of February. The peach blossoms early in March, and the woods are green in April. The country in the upper parts of the state is healthy, and the districts along the rivers, except in the neighbourhood of swamps and marshes, and near Lake Michigan, is not considered insalubrious.—Bituminous coal and iron are found in this state, but its chief products are agricultural. The iron produced in 1840 was only 810 tons of cast, and 20 tons of bar-iron. Bituminous coal was mined to the extent of 242,040 bushels in 1840. Salt and granite are among the mineral productions.—The live stock in 1840 consisted of 241,036 horses and mules, 619,980 neat cattle; 675,982 sheep; 1,623,608 hogs; and the value of poultry was 357,594 dollars. The animal products consisted of 1,237,919 lbs. of wool; and the products of the dairy were valued at 742,269 d. Large quantities of pork are packed in this state; and manufactures of lard, oil, soap, and prussiate of potash are extensively carried on. The number of hogs packed in 1844 was 257,414; in 1845, 147,420; and in 1846, 251,236.—The cereal crops are large, and in 1847, as compared with those of 1840, were as follows:

	Wheat.	Barley.	Oats.	Indian corn.
1840, .	4,049,376 bush.	28,015	5,981,605	28,155,887
1847, .	7,500,000 bush.	39,000	15,290,000	38,000,00

Rye was grown to the extent of 250,000 b., and buckwheat to the extent of 100,000 b. in 1847. Of the miscellaneous crops, those of potatoes and tobacco are the most extensive. The crops of 1840 gave the following results:—Potatoes, 1,525,794 bushels; tobacco, 1,820,306 lbs.; hops, 38,591 lbs.; hay, 178,029 tons; hemp and flax, 8,605 tons; maple sugar, 3,727,795 lbs. The number of cords of wood sold was 183,712. The value of the products of the orchard was 110,055 d.; of market gardens, 61,212 d.; and of nurseries, 17,231 d. The value of lumber produced was 420,791 d., and that of furs and skins 220,883 d.

Manufactures.] The manufactures of Indiana are on a respectable footing; and enjoy many advantages which may tend to develop these interests to an indefinite extent. The whole capital employed in 1840 was 4,132,043 d. Machinery and hardware were made on a small scale, and employed in the aggregate a cap. of 140,468 d. The manufactures of wool, cotton, silk, and flax goods, are but little attended to. Hats and caps are made to some extent, and the tanning and manufacture of leather is largely engaged in. Soap, candles, spirits, earthenware, paper, cordage, &c., form also articles of some consideration. The value of home-made or family goods, in 1840, was 1,289,802 d.—Indiana does not enjoy the advantages of a direct foreign trade, but is dependent on the ports of other states in its commercial relations with the world for an outlet. Its productions generally find a market in the Mississippi river towns; but no inconsiderable amount finds an outlet by the lakes. In 1840 there were 11 commercial and 26 commission houses in the foreign business, with a capital of 1,207,400 d.

and 1,801 retail houses, with an aggregate capital of 5,664,687 d. in this state.

Canals and railroads.] A system of canals, embracing all the great rivers of the state which became unserviceable by lowness of water during part of the year, was projected in this state in 1836. The White water canal extends from Laurenceville on the Ohio, to Cambridge on the National road, 76 m., and will be carried ultimately by a branch to Cincinnati. The Wabash and Erie canal is designed to extend from Terre-Haute to the intersection of the Ohio line by the Maumee, and thence to Maumee bay in Ohio. The Central canal is designed to run from Indianapolis to Petersburg, and thence to Evansville, a distance of 190 m.—The Madison and Indianapolis railroad is 95 m. long, and it is intended to push it forward to Lafayette on the Wabash canal, a further distance of 65 m. A railroad from Indianapolis to Laurenceburg, 90 m., is in process of construction; and several other works of internal importance are progressing.

Population.] The progressive increase of the pop. of this state, from one decennial period to another, has been as follows:

Date of census	
1800,	4,875
1810,	24,520
1820,	147,178
1830,	343,031
1840,	685,866
1850,	990,258

The decennial increase between 1830 and 1840 was at the rate of 99·9 per cent.; between 1840 and 1850, 44·4 per cent.

Towns.] Indianapolis, the capital of the state, is situated on the l. bank of the W fork of White river, at the head of steam-boat navigation, 122 m. from Cincinnati.—Vincennes, the oldest town in the state, having been founded by the French in 1702, contains about 3,000 inhabitants. Terre-Haute, the eastern terminus of the national road, and Logansport, on the Wabash, are considerable towns. Richmond, on the western state line; Michigan city, at the base of Lake Michigan, and the only lake port in the state; Covington, on the Wabash, and on the line of the Erie and Wabash canal, &c., are places of note, fast rising to opulence and importance.

Government.] The new constitution of I., as ratified on 4th August, 1851, provides that every white male citizen of the United States, 21 years old, resident in the state 6 months next preceding the election, and every white male, of foreign birth, 21 years old, resident in the United States one year, and in the state 6 months next preceding the election, who shall have duly declared his intention to become a citizen of the United States, may vote. No negro or mulatto can vote. All persons using bribery, threats, or rewards, to procure their election, shall be disqualified from holding office during the term for which they were chosen. Persons in any way engaging in duels shall be ineligible to offices of profit or trust. Collectors or holders of public moneys shall be ineligible to any office of trust or profit until they have paid over all sums for which they are liable. All elections by the people shall be by ballot, and all elections by the General Assembly shall be *viva voce*. Senators not exceeding 50, and representatives not over 100, in number, shall be chosen by the voters of their respective districts; the former for 4 years, the latter for 2 years. They must be, at the time of their election, citizens of the United States, residents of the state for the 2 years next preceding the election, and for 1 year of the district from which they were chosen. Senators shall be divided into two classes; the first shall vacate their seats in 2 years, and the second in 4 years, and afterwards one-half shall be chosen every 2 years. Senators must be at least 25, and representatives at least 21 years of age. Members of the assembly shall have the usual freedom of speech and exemption from arrest, and no civil process can be served on them during the session, and for 15 days before. The sessions of the general assembly shall be held biennially, commencing on the Thursday next after the first Monday of January. No session, after the first under the new constitution, shall continue for more than 61, and no special session for more than 40 days. The governor and lieutenant-governor shall be chosen by a plurality of votes, for 4 years. They must be 30 years old, residents of the United States and of the state for the 5 years next preceding the election. Persons holding office under the state or the United States, shall be ineligible to either office. The lieutenant-governor shall be president of the senate. The governor shall have power to grant pardons, &c., for all offences except treason and cases of impeachment. Neither the governor nor the lieutenant-governor shall be eligible to any other office during the term for which they are elected. Nor shall the governor be eligible more than 4 years in any period of 8 years. The governor may veto a bill; but, if afterwards passed by a majority of those elected to each house, it shall become a law. A secretary of state, auditor, and treasurer, shall be chosen by the people for 2 years: and no person shall be eligible to either of these offices more than 4 out of any 6 years. The voters of each county shall choose a clerk of the circuit court, auditor, recorder, treasurer, sheriff, coroner, and surveyor. All county officers must be inhabitants of the places from which they are chosen for at least one year before the election. The supreme court shall consist of not less than 3 nor more than 5 judges, chosen from districts by the people at large, for 6 years. The supreme court shall have appellant jurisdiction, and such original jurisdiction as the assembly may confer. Each circuit court shall consist of one judge, who shall reside within the circuit, and be chosen by the people for 6 years. A prosecuting attorney shall be chosen in each circuit for 2 years. Justices of the peace shall be chosen by the people of each township for 4 years. Tribunals of conciliation may be established, whose decisions shall be obligatory upon those voluntarily submitting their matters of difference thereto. Any voter of good moral character may be admitted to practise law in all the courts of the state. The assembly may modify or abolish the grand jury system. In all criminal cases, the juries may determine the law and the facts. Provision may be made for bringing suits against the state for liabilities arising after the adoption of this constitution.—All able-bodied white male persons, between the ages of 18 and 45 years, except those exempt by law, shall be enrolled among the militia of the state.—The common school fund shall consist of the congressional township fund and the lands belonging thereto, of the surplus revenue, saline, and bank tax fund, the fund to be derived from the sale of county seminaries, and moneys and property heretofore held for such seminaries, all fines, forfeitures, and escheats, and lands not otherwise specially granted, including the net proceeds of the sales of the swamp lands granted to the state by the act of congress of September 28, 1850. The principal of the fund may be increased, but shall never be diminished, and its income shall be devoted solely to the support of common schools. The assembly shall provide for the election by the people of a superintendent of public instruction, to hold office for two years. Institutions for the instruction of the deaf, dumb, and blind, and for the treatment of the insane, shall be supported by law. Houses of refuge, for the reformation of juvenile offenders, shall be established by the assembly, and the county boards may provide farms as an asylum for those who have claims upon the sympathies and aid of society. The revenues of the public works and surplus taxes, after paying the ordinary state expenses and interest on the state debt, shall be applied to reduce the principal of the debt. No new debt shall be contracted, unless to meet casual deficits in the revenue, to pay the interest on the state debt, or to repel invasion, &c. The assembly shall never assume any debts, nor shall any county lend its credit to, or borrow money to buy stock in, any incorporated company. No banks shall be established except under a general law, and the stockholders shall be individually responsible for the debts of the corporation, in addition to their stock, to an amount equal thereto. Every bank must close banking operations within 20 years from its organization, and promptly close its business. No Negro or Mulatto shall come into or settle in the state. All contracts made with such negro or mulatto shall be void, and all persons employing them or encouraging them to remain in the state, shall be punished by a fine of not less than 10 d., nor more than 500 d.; and the proceeds of such fines shall be appropriated for the colonization of those Negroes and Mulattoes, and their descendants, in the state at the adoption of the constitution, and willing to emigrate.—There are 3 colleges in the state, viz. Indiana college, founded at Bloomington in 1825; Hanover, established in 1827; and Wabash college at Crawfordsville.

Financial affairs.] The state of I. was one of those unlucky states which, estimating its resources rather according to future expectations than present means, rapidly incurred debt to a large amount, and was forced to betake itself in consequence to the humiliating resource of repudiation. It has lately, however, began to assume a more respectable position in the monetary world. In 1847, when the arrangement of the state's indebtedness was made with her creditors, the debt, exclusive of interest, was 11,045,000 d.; there had been surrendered and converted into new stock, in 1849, 9,563,000 d.; leaving yet to come into this arrangement 1,488 bonds, or 1,488,000 d. The amount of revenue paid into the state treasury during 1849, on all accounts, was 441,650 d., which exceeded the amount paid the previous year, 28,901 d. The assessment for state purposes for 1849 was 508,537 d., and for county, road, school, and township purposes, collectively, 630,570 d. The value of the entire property of the state subject to taxation, as returned for 1849, was 133,419,056 d., which is an increase over 1848 of 4,458,070 d. The state commenced paying interest in July 1847; meantime the state stock has been steadily and gradually advancing in value, until it now stands nearly at its full value, taking 6 per cent. interest per ann. as the standard. The ordinary expenditures of the state government for the fiscal year ending on the 31st day of October 1849, were 74,469 d. The following is the financial sheet for 1850:—

	drs.
Balance in the treasury, October 31, 1849,	428,941.19
Total receipts into the treasury for year ending October 31, 1850,	1,432,442.78
Total revenue,	1,861,383.97
Total warrants on treasury for same period,	1,513,534.04
Balance in treasury, October 31, 1850,	347,849.93

Chief sources of Income.

Permanent revenue,	455,630.02
State prison,	11,145.42
Common school fund,	55,863.00
University fund,	9,477.04
Bank tax,	1,984.19
Saline fund,	4,999.45
Wabash and Erie canal, by trust's,	857,149.61

Principal items of Expenditure.

Legislature,	31,010.64
Executive,	5,877.93
Judiciary,	19,705.81
Public printing,	11,522.49
State library,	964.81
State prison,	3,606.63
Treasury notes cancelled,	144,575.00
Interest on treasury notes,	59,420.78
Interest on public debt,	188,595.00
Wabash and Erie canal, by trust's,	824,987.85
Deaf and dumb,	29,979.92
Blind,	11,781.09
Insane hospital,	32,501.33
University fund,	14,332.39
Saline fund,	7,765.53
Bank tax fund,	3,624.96

State debt.—Prior to 1847, the state owed on her foreign debt principal, 11,048,000 d.; interest, 3,326,640 d.; total, 14,374,640 d. By the acts of the legislature of 19th January 1846, and 27th January 1847, proposals were made to the holders of bonds that they should complete the Wabash and Erie canal, and take the state's interest in it for one-half of this debt, and the state would issue new certificates for the other half, upon which she would pay interest at the rate of 4 per cent. per annum until January 1853, and after that time at 5 per cent., and issue certificates for one-half of the arrears of interest, upon which she would pay interest at the rate of 2½ per cent. per annum after January 1853. In this 2½ per cent. stock is also included 1 per cent. per annum upon the principal, which gives the holder of the old bond when surrendered, 5 per cent. per annum upon the new 5 per cent. stock from the dividend day next preceding his surrender of the old bonds. August 5, 1850, there had been surrendered of the old bonds, and new certificates taken under this proposition by the state, of principal, 9,563,000 d., leaving then outstanding of her old bonds, of principal, 1,485,000 d. The state has issued of the new certificates of stock, paying 4 per cent. until 1853, and after that time 5 per cent., 4,781,500 d.; of 2½ per cent. stock, she has issued 1,736,727.50 d. The state keeps an agency in the city of New York for the surrender of the old stock, issuing the new, and receiving transfers of the new. The state in 1839-40 authorized the issue of one and a-half million of treasury notes to pay off her internal improvement liabilities. These notes were made receivable for all state dues, and have been annually returning into the treasury, and are now nearly all withdrawn from circulation. The state also issued bonds for the bank capital, and treasury notes to pay the bank a debt which the state owed it. But these treasury notes were based upon a sinking fund belonging to the state and held by the bank.

The liabilities of the state and canal, August 5, 1850, may be thus stated:—

State Debt.

	drs.
State's half principal of bonds surrendered,	4,781,500.00
State's half interest on bonds with 1 per cent. of principal, with half of coupons added,	1,736,727.50
Total foreign debt,	6,518,227.50
Add domestic debt,	257,295.00
Total foreign and domestic debt,	6,775,522.50

State Stock.

The amount of the several stocks issued under the act for liquidating the public debt, up to August 5, 1850, is as follows:—

5 per cent. state stock,	4,781,500.00
2½ per cent. state stock,	1,736,727.50
5 per cent. preferred canal stock,	4,079,500.00
5 per cent. deferred canal stock,	702,000.00
2½ per cent. special preferred canal stock,	1,216,250.00
2½ per cent. special deferred canal stock,	207,400.00
Total stocks issued to August 5, 1850,	12,723,377.50
Deduct for 2½ per cent., state stock redeemed,	20,000.00
Total outstanding, August 5, 1850,	12,703,377.50

The state is paying interest only on her 5 per cent. state stock, at the rate of 4 per cent. After the year 1853, the rate of interest on this will be 5 per cent. After 1853, the 2½ per cent. state stock will draw interest at that rate. The remaining stocks are thrown upon the canal, and their redemption, principal and interest, depends upon the receipts from the canal, in accordance with the provisions of the act above referred to.

The following is the disposition of the lands of Indiana:—

Area in acres,		21,478,760
Proclaimed for sale,		21,359,707
Sold,	15,477,628	
Granted to schools,	631,863	
" universities,	46,080	
" internal improvements,	1,609,861	
" individuals,	843	
" seats of government,	2,560	
Bounties, military, late war,	69,776	
" " Mexican war,	189,540	
Reserved salaries,	24,235	
" Indians,	126,220	
" companies,	150,000	
Private claims,	179,880	
		18,508,426
		2,970,334
Swamp lands area,		981,682
Unappropriated balance, 1849,	acres,	1,998,652

History.] Vincennes was originally settled by French soldiers from Canada in 1702. Separated from the world, these colonists soon became assimilated to the savages by whom they were surrounded, and with whom they intermarried. In 1763, I. came by treaty into the possession of the British. The revolution gave it to the United States. The Indians commenced depredations, and committed a number of murders, in 1810-11, in consequence of which General Harrison was despatched to subjugate these marauders. In 1816, I. took her place as a state of the union, and formed a constitution for its own government. Since that period it has rapidly progressed in pop. and wealth: but unfortunately has, as we have seen, contracted a large public debt, which still continues to enthral the energies of the people.

INDIANA, a central county in the state of Pennsylvania, U. S., drained by the head-waters of the W branch of the Susquehanna. Pop. in 1840, 20,782; in 1850, 27,335. Its cap., of the same name, is 155 m. W of Harrisburg.—Also a township in Alleghany co., in Pennsylvania, 10 m. NE of Pittsburg. Pop. 2,697.

INDIANAPOLIS, the capital of the state of Indiana, U. S., and of Marion co., situated on the E side of White river, which is navigable up to it. Pop. in 1840, 2,692; in 1850, 8,034. The national road passes through the town, which was originally laid out on a mile square, with streets crossing each other at right angles. The state-house is a fine building.

INDIANS (American). See article America, vol. i., pp. 221—225.

INDIES (East). See Hindostan.

INDIES (West). See Antilles.

INDIES (British West), a number of fine islands situated among the several groups in the Western hemisphere which constitute the Greater and Less Antilles. These colonies amount in number to 18; and occupy an aggregate territory of 154,000 sq. m., including Honduras and Guayana, with a pop. of nearly 1,000,000. The following table affords a general view of the area and pop. of these islands. Those marked *w* are windward islands; those marked *l*, leeward:

	Area in sq. m.	Pop. in 1834.	Pop. in 1844.
1 Antigua, *l*	168	35,412	36,190
2 Barbadoes, *w*	166	102,912	122,198
3 Dominica,	291	18,830	22,200
4 Grenada and the Grenadines, *w*	155	28,123	28,927
5 Jamaica and dependencies,	5,468	347,692	379,690
6 Montserrat, *l*	47	7,659	7,365
7 Nevis, *l*	38	1,422	9,571
8 St. Christopher or St. Kitt's, *l*	68	25,272	23,177
9 St. Lucia, *w*	275	18,148	22,545
10 St. Vincent, *w*	131	27,122	27,573
11 Tobago, *w*	187	14,901	13,027
12 Tortola and the Virgin islands,	94	6,965	6,689
13 Anguila, *l*	29	3,080	2,934
14 Trinidad,	2,400	45,284	59,814
15 The Bahamas,	5,424	18,573	26,491
16 The Bermudas,	40	8,720	9,915
17 British Guayana,	76,000	96,502	121,678
18 Honduras,	62,740	3,958	11,066
	153,721	820,575	931,050

The reader is referred to the separate accounts of these islands for more minute information respecting their condition and resources, and for an account of their physical features; also to the general article ANTILLES. The object of the present article will be to exhibit a combined view of the whole, chiefly in relation to their commercial importance.

Climate.] Most of these islands present isolated peaks, or mountain-ranges, which attain a great alt. The Blue mountains in Jamaica attain an alt. of 7,150 ft.; Mount Misery in St. Kitt's has an alt. of 3,712 ft.; the highest peak in Dominica reaches 6,000 ft.; the Morne-Garou in St. Vincent's has an alt. of 4,800 ft.; the Soufriere in Guadalupe, of 5,500 ft.; and Volcano in St. Lucia, 4,000 ft. Some, of secondary formation, are low, rising very little above the sea. All the islands, except the more northerly of the Bahamas, lie between the tropics, and are consequently subject to a high temp.; yet, even in the warm season, the influence of the surrounding ocean,—the periodically recurring sea-breezes,—and the height of the land in the interior,—tend to modify the climatic intensity peculiar to their geographical position. In the interior of the large islands, in which elevation is more marked, a mild and delightful temp. is enjoyed throughout the year; and several of the smaller islands possess the same advantages. The lowlands, however, in all these islands are exceedingly unhealthy; and endemic influences render them unfit for the habitation of foreigners: there life is short, even among the native-born. At an elevation of 1,200 ft., the aspect of the climate is different; nor does it end in the propagation and prevalence of those fevers and fluxes which prove so destructive to life in the low and swampy grounds. In the more northerly of the islands, ice sometimes forms in winter, but snow never falls. The inhabitants will complain of cold when the therm. is ranging between 60° and 70°. The year, as in the most tropical countries, may be divided into two seasons,—the wet and dry,—though there is sufficient variation to mark the four seasons of more temperate regions. Spring may be said to commence in April, when the fields put forth their verdant appearance. From May to October the tropical summer reigns in all its intensity, and the heat is insupportable; the sea-breeze, however, which sets in about noon, greatly moderates the temp. The mean height of the therm. at this season is 80° Fah. The nights are beautiful, and are tempered by the land-breeze, which blows gently off shore from about 10 o'clock until day-break. With October commence the autumnal rains, when the waters pour down in torrents. These continue until December, between which and April serene and pleasant weather prevails. The trade-winds blow from an E. direction from December to June; August is the season of hurricanes, which frequently devastate whole islands. These rarely occur, however, in Cuba, and are almost wholly unknown in Trinidad.

Productions.] The rich and varied productions of these islands give them an important position in a commercial point of view. To their numerous valuable native plants, art and industry have added others not less valuable. The sugar-cane, yielding its triplicate of sugar, molasses, and rum; the coffee plant, pimento or all-spice, the plantain, the banana, the pine-apple, anana, yam, and sweet potato; maize, cassava, manioc, cocoa, the tobacco and cotton-plants; various dye-woods and stuffs, as fustic, log-wood, and cochineal; medicinal plants, as liquorice, arrow-root, jalap, and ipecacuanha; and woods for cabinet-work, as mahogany and lignumvitæ;—all these are either indigenous or introduced staples, and render vast contributions to commerce. To this list may be added all the varieties of tropical fruits, the bread-fruit, cocoa-nut, mango, paw-paw, guava, orange, lemon, tamarind, fig, cachew-nut, mamee, grenadilla, vanilla, &c.—The cattle of the W. Indies are inferior, and only a few of the islands contain sheep and goats. Very few horses, asses, or mules are reared, and consequently great numbers of these animals are imported from the adjacent continents. Hogs are more abundant, and find a ready and plentiful supply of food in the woods. Wild animals are almost extinct, and consist only of a few wild boars, monkeys, rats, and the smaller species. The manati is found in Trinidad and Tobago. Reptiles and amphibious animals inhabit the shores and margins of the rivers, and fish and turtles are abundant.—The bird tribe is extensive, and remarkable for beautiful plumage.—Insects, mosquitoes, cockroaches, centipedes, scorpions, ants, chigoes, abound in all the islands. In fact, all the abundance and all the torments of intertropical regions prevail in the W. Indies.

Population.] The original inhabitants of these islands have long been extinct, except a small remnant which still exists in St. Vincent and Trinidad. When discovered, a dense pop. covered these prolific regions, but the barbarities of the Europeans in a short space of time destroyed these unhappy people, supplying their places with the no less unhappy African. Cuba and the other islands were found in possession of the Arrawaaks, a peaceful and timid race, that soon submitted to the invaders. The inhabitants of the Lesser Antilles, on the contrary, were the warlike and vigorous Caribs, who resisted the sway of the Europeans to the last. The present pop. is composed of white and of coloured persons. The former are Europeans and their descendants; while the latter consist of Africans, their descendants, and the mixed races sprung from an amalgamation of all. These are of every variety of colour and complexion, and are variously classified, as Mulattoes, Quadroons, &c., according to the preponderance of caste. There is also another class lately introduced into the British islands under the name of Coolies, who originate in the mountains of Asia, and are imported as free labourers, under stringent restrictions. These are intended to supply the place of the recently emancipated Negroes, who, it is said, have become worthless and lazy, and a mere burden upon the colonist. The Negro race is, however, the most numerous, forming about three-fourths of the whole pop. The curse of slavery has been abolished in all the W. India islands except those belonging to Spain. In 1835 this barbarous institution terminated in the British islands; and during 1848, the Dutch, French, and others, emancipated their slaves. In Cuba and Porto Rico the slaves yet form about two-thirds of the Negro pop.—The census for 1844 gives the total pop. of the British W. Indian colonies at 931,050. The occupations of this pop. are thus enumerated:—108 artists, 26 architects, 61 agriculturists, 13 bankers, 564 boatmen, 1,555 clerks, 1,484 fishermen and fishfags, 20,571 household servants, 50,653 labourers, 132,192 agricultural labourers, 267 pastors, 104 military men, 97 mariners, 41 miners, 433 merchants, 26 pilots, 315 policemen, 3,987 planters, 453 professional persons, 1,672 retail traders, 86 surveyors, 544 storekeepers, 640 teachers, 7,399 tradesmen, 10,097 journeymen, 59 tavern-keepers, 948 miscellaneous, and 14,283 gentlemen! The returns for that year state the number of males at 422,255, and of females at 456,906, which does not differ materially from the relative proportions under the most favourable circumstances. There was, however, in Trinidad and British Guayana an excess of males, but which appears to be in a rapid course

of equalization. There is nothing, therefore, on the face of these returns to impeach the physical elements of the pop. in reference to future increase, while the fact is established of a rapid progressive increase of the Creole over the African race. In Jamaica, Lord Elgin "regrets to observe that the returns do not furnish any very satisfactory proof of progressive increase in the pop. of the island." On the contrary, throughout the Windward islands generally, the increase appears to have materially exceeded the English ratio. The climate is said by Sir C. E. Grey "to improve in salubrity as cultivation advances. In Barbadoes," he adds, "it is as favourable to human life as in England:" an assertion which is in some degree borne out by the fact, that of 56,004 males, 28,663 were returned in 1844 as being above 18 years of age; and of 66,194 females, no less than 38,423 were reported to have exceeded that age. Amongst the Leeward islands, Antigua and Montserrat afford proofs of a material increase. The authorities of the latter state the increase in the ten years preceding 1844, as "upwards of 60 per cent., or 6 per cent. per ann., at which rate pop. will double itself in 16 years." They further state that, "the natural increase of the peasantry will supersede the necessity of immigration into these colonies. Returns show that the number of immigrants into Jamaica amounted, in 1846, to 1,170 against 606 in 1845; and that the gross total number from 1841 to 1846 inclusive amounted to 5,983. The number of immigrants into British Guayana amounted to 11,519 in 1846, and to 3,631 in 1845. The number of immigrants into Trinidad was 2,935 in 1846, against 1,635 in 1845. The total number introduced into the island of Mauritius since the immigration from India was re-opened amounted, in 1843, to 32,096; in 1844 to 14,152; in 1845 to 10,290; and in 1846 to 6,545; making a grand total from January, 1843, to November, 1846, of 63,083. The gross total number of liberated Africans introduced into the W. Indian colonies in 1841, 1842, 1843, 1844, 1845, and 1846, amounted as follows:—viz. into Jamaica, 3,041; into Guayana, 6,186; and into Trinidad, 3,181.

Commerce.] In 1814, the total exports from these colonies were returned at £9,022,309; the imports at £6,622,138; in 1834, the total exports were returned at £8,410,107; the imports at £4,818,635. In 1842 the total exports were valued at £6,015,765; their total imports at £5,376.521, of which sum £2,591,424 represented the value of the British and Irish produce and manufactures imported from the United Kingdom. In 1843 the total value of the exports from these colonies fell off to £4,975,772; that of imports to £4,376,505. Of this latter sum the portion representing the British and Irish produce and manufactures imported is £2.727,419. In 1844 and 1847 the collective value of the imports and exports from each colony was as follows:

	Exports.		Imports.	
	1844	1847.	1844.	1847.
Antigua,	£407,946	£374.887	£237,905	£195,846
Barbadoes,	546.799	737,988	594,484	546,272

	£4,204,136	£4,008,228	£5,034,410	£5,786,377

To the fluctuating and precarious state of the returns from industry and speculation in the W. Indies, these figures bear testimony.

Sugar.] The annual average quantity of sugar imported into Great Britain from the W. Indian colonies, in the 5 years from 1761 to 1765, was 1,485,377 cwts.; from 1771 to 1775, 1,835,336 cwts.; from 1781 to 1785, 1,579,537 cwts.; from 1791 to 1795, 2,021,325 cwts.; from 1801 to 1806, 3,389,734 cwts.; from 1809 to 1811, 4,210,270 cwts. The exports of sugar in the years mentioned were as under:

	1831.	1841.	1846.	1849.

1845	6,355,970	4,264,005	16,657,464	103,731
1846	6,257,764	2,810,473	17,735,406	1,587

The W. India planters appeal to the above returns in proof of the depressed condition of their property; and seem inclined to attribute the falling off to the effects of the emancipation act upon the Negro pop.

and to the recent act for equalizing the duties on colonial and foreign sugar. The Jamaica house-of-assembly, in a memorial to the Crown, state that the earliest alteration was in 1807, when the importation of slaves was abolished; the second in 1815, when an act was made for registering slaves; the third in 1823, when Mr. Canning introduced certain resolutions, conceding the principle of emancipation; next, the emancipation bill, in which six years were to be spent by the labourers as apprentices; and, lastly, in March 1838, when a resolution, granting unqualified freedom on the 1st August next ensuing, was carried in Parliament. During the whole of those years, the attention of the Negroes was concentrated upon freedom, and the shipments of produce declined as follows:—

	Sugar. hhds.	Rum. puns.	Coffee. lbs.
Average of the five years ending 1807, the last of the African trade,	131,962	50,462	23,625,377
Do. ending 1815, Registry act,	118,490	48,726	24,394,790
Do. do. 1823, Mr. Canning's resolutions,	110,924	41,046	18,789,909
Do. do. 1833, last five of slavery,	95,353	35,505	17,645,602
Do. do. 1843, first five of freedom,	42,453	14.185	7,412,498

A similar result, the memorialists allege, was observable in all the other colonies. The chief remedy proposed was the transmission of a number of labourers; and, to induce this, that all restrictions should be removed from free African immigration, it being subject only to such regulations as might be necessary to prevent it being made a cover for carrying the people into slavery, and that contracts for labour should be extended to 3 years, under such stipulations as should secure to the immigrants fair remuneration for their labour, and a full participation in the rights of freemen. The house-of-assembly also proposed an advance of capital for the erection of central boiling-houses, whereby the expense of making sugar might be materially lessened. To these representations, it was replied in Parliament that the great social change from slavery to freedom, however much it might be enjoined by the rules of justice and by the precepts of Christianity, might well be supposed to be likely to occasion a cessation of all industry in all those colonies, but more especially a cessation of a very irksome and toilsome description of labour. The change, again, which took place in the course of late years, first admitting foreign free labour sugar, and then admitting foreign slave labour sugar, exposed these colonies to another far severer trial, and yet the production of sugar, first, of the West Indian colonies, and then generally of British possessions, has been such as to show that they have undergone these trials with far greater success than might have been expected. Of course it was to be considered that if our monopoly had been maintained, the West Indies would have had to contend against the competition of the Mauritius and the E. Indies. Taking an average of three years, from 1815 to 1818, before any of these changes had taken place, we find that the W. Indies furnished for the consumption of this country, 2,947,824 cwt. of sugar. In the average of three years, 1830, 1831, and 1832, before the emancipation, they furnished 3,895,820 cwts. In the average of the three years, 1843, 1844, and 1845, before the great changes in our sugar duties, the returns were 2,645,211 cwt.; and in the average of the years 1847, 1848, and 1849, 2,807,657 cwt. But if we take the whole amount of the British possessions, the quantity is in the first three years, 2,982,608; in the three years from 1833, 4,914,608; in the three years from 1843, 4,327,000; and in the average of the last three years, 1847, 1848, and 1849, no less than 5,058,755, being an increase of more than 2.000,000 cwts. over the quantity consumed from British possessions in 1815. See article JAMAICA.

Government.] All the W. India colonies acquired by settlement are administered by a governor, a council, and an elective assembly, according to the form of the old charter colonial governments. The islands falling under this division are Barbadoes, St. Christopher, Nevis, the Bahamas, Antigua, Montserrat, Tortola, and Anguila. The same constitutions are enjoyed by Jamaica, our first acquisition by capture, and the colonies ceded by France in 1763.—Our acquisitions by capture are administered by a local governor and council, and by order of the Queen in council; but a representative, or semi-representative assembly, has recently been granted to Guayana. — The Windward and Leeward island groups have recently been placed respectively under the governors of Barbadoes and Antigua, as governors-general, allotting to each island a lieutenant-governor; and while the local governments of Barbadoes and Antigua correspond directly with the colonial office, their dependencies only communicate indirectly through them: Grenada, Tobago, and St. Lucia with Barbadoes; and St. Kitts, Montserrat, Nevis, and Dominica with Antigua. Honduras forms a sort of dependency on Jamaica.—The governor has the chief civil and military authority. In those islands which have no representative assembly, the legislative council consists of the chief secretary, the treasurer, the chief-justice, the attorney-general, and the commander of the troops. These are appointed by the Crown; and sometimes a few of the principal landed proprietors are made members of the council. Several islands are sometimes included under one government, and send their representatives to the island which is the seat of the legislature for the time being. Thus St. Christopher, Nevis, Montserrat, and one or two other small islands, send their representatives to Antigua, which is the seat of government for them all, or, in other words, the residence of the governor.

The superior and inferior courts of judicature resemble those of England, the laws being the same, unless as they may be affected by special colonial enactments, passed from time to time. Assize-courts are frequently held, to expedite the course of justice. There are likewise parish-courts, wherein justices-of-the-peace decide summarily in small debt cases, &c. There are also offices of record, where deeds, wills, sales and patents, are recorded. All persons intending to leave the islands are obliged to give notice at the office of enrolment three weeks before they can be entitled to a pass, or to find security for what debts they may leave unpaid; and for further precautions, masters of vessels are bound, under heavy penalties, not to carry off any person without such a pass. The procedure of the assembly follows, as nearly as may be, the formula of the British legislature; and all their bills have the force of laws as soon as the governor's assent is obtained. The power of rejection, however, is vested in the Crown; but, until rejected, the laws are valid. The governor can also refuse his assent to laws, and can dissolve and call together the assemblies at pleasure. Salaries are paid partly by the Crown, and partly from the colonial revenues.

Military force.] After the emancipation of the slaves in 1834, the military force stationed in the British W. India islands was considerably reduced. Instead of 12 regiments of the line, 6, and one W. India regiment, or 5,000 men, garrisoned the Windward and Leeward command; while 5 regiments of Europeans, and one of Africans, say 3,300 men, served for the same purpose in Jamaica, Bahamas.

and Honduras. Matters progressing steadily and quietly, the liberated bondsmen settling down by degrees into their novel position, and there being neither war nor rumours of war, foreign or domestic, the garrisons of Nevis, Montserrat, Tortola, and the Virgin Gorda islands were recalled, and these old and first-settled English colonies left to their own resources, dependent on Antigua and St. Kitts for troops, if any accident or outbreak should render their temporary presence necessary. Meanwhile, able and efficient police were organized in British Guayana, Trinidad, Dominica, Saint Lucia, Antigua, Barbadoes, and in all the other colonies. In some cases the men were taken from the line, and pensioners of the W. India regiments, constables, and sub-constables, were induced to come out from England. The military forces in the Windward and Leeward command in January, 1843, were 4,737 men. Four of the principal and important stations —viz., head-quarters, Barbadoes, Antigua, British Guayana, and Trinidad—were occupied by 3,257; while the balance, 1,480, was distributed between Grenada, St. Kitts, St. Lucia, St. Vincent, and Tobago.

INDIGHIRKA, Indigirk, or Zapadnaia-Kolyma, a river of Asiatic Russia, in the prov. of Yakutsk, rising in the mountains of Okhotsk, in 63° N lat., and 140° E long.; flowing E; and discharging itself, by several mouths, into the Arctic ocean, after a course of about 800 m. from SSW to NNE. Its principal tributaries, on the r., are the Oalakhon-Tarin-Oalakh, the Nera, and the Morma; on the l., the Arga, the Selennakh, the Ouiandina, the Allan, and the Yelon. It is sometimes distinguished as the Western Kolyma.

INDO-CHINA, or Hindu-Chinese states, a general designation for that fair and fertile portion of Asia which extends between Hindostan and China, or from the long. of 92° to 108° E, and from the lat. of 7° to 26° N; being bounded by Bengal on the NW; by Tibet and Assam on the N; by China on the NE; and in every other direction by the ocean, with the exception of the narrow isthmus to the S, which divides it from the Malayan peninsula. Within these boundaries are comprised the Birman empire, the states of Cassay, Cutcher, and Assam, the provinces of Arracan, Montaban, Ye, Tavai, Tenasserim, and Mergui, the kingdom of Siam, Tonkin, Cochin-China, Cambodia, and Laos; to which some geographers add the peninsula of Malacca.—We have at present no generic name in universal use for this region. There has been a want—as is remarked by Malte Brun—of etymological felicity in the formation of such as have been proposed for it. It is often called The Peninsula beyond the Ganges; but a glance at the map will show that it is even less entitled to be called a peninsula than the Deccan of Hindostan. Among other appellations in use are the less exceptionable ones of India beyond the Ganges, — Exterior India, — and Further India. As part at least of this region was once subject to the Chinese government, and as the inhabitants approximate in many particulars both to the Chinese and Hindus, the name Indo-China or Hindu-China has likewise been proposed for this country; while Malte Brun conceives that the appellation of Chin-India should secure the acquiescence of philological and geographical criticism, the country being, in his opinion, not an Indo-China, or China resembling India, but a Chinese India, an India with Chinese features.

Physical features. and vegetation.] The whole of this vast region may be described as hot, moist, and woody. It contains at least five great alluvial plains not inferior in extent or fertility to those of Egypt or Bengal; and yet the greater part of the country is covered with chains of mountains which proceed from Tibet, and run S in directions nearly parallel to each other. These mountains are deeply wooded, uncultivated, and very partially inhabited.—The joint operation of great heat and humidity imparts to the vegetation of this region a character of singular vigour and magnificence. "The contrasts of barrenness and fertility," says Malte Brun, "are here marked in the most striking manner. A burning sun reduces to the state of a light powder, or that of a crust hard as rock, those soils on which rain does not fall in requisite abundance, or remain sufficiently long. But along the margins of the rivers, and on the sides of the mountains, an eternal verdure, and an aspect of peculiar grandeur from the towering and extended foliage, characterize the mighty trees of those climates, in comparison with which the 'kings of our forests' dwindle to the rank of humble vassals. These giants of the vegetable creation are here surrounded by shrubs and herbs, which in their flowers and fruits exhibit the most singular and diversified forms, and vivid colours, while they dispense flavours and odours of the most delicious kind. Two of those which add special dignity to the forests are the *Alöexylum verum*, or eagle-wood, and the white sandal-wood, both of which are used as perfumes in the palaces of the East. The teak of this country surpasses the oak of England for durability in ship-building; the iron-tree is widely spread; and the true ebony is indigenous in Cochin-China. In every district we find the sycamore, the Indian fig, and the banana. Other trees rivalling in beauty or in stateliness those we have mentioned, are the *Bignonias*, the fan-palms, the *Calophyllum*, which shoots up higher than the pine, the *Nauclea orientalis*, and the *Agallocum* of Cochin-China, the leaves of which display a rich purple on their inferior surfaces. Chin-India is singularly rich in aromatic and medicinal species, as well as in those useful in the arts. Ginger and cardamom grow wild on the banks of the rivers, or are cultivated in large plantations; the cinnamon-tree is produced abundantly on both coasts of the peninsula of Malacca, and is sometimes accompanied by the nutmeg; turmeric is used by the inhabitants of these countries to tinge and season their rice and other dishes; and among their favourite aromatics are the betel-leaf, the fruit of the long pepper and the black pepper, to which they add three or four species resembling long pepper, and the grains of the *Fagara piperata*, or long pepper of Japan. Among the different dye-stuffs are distinguished the carmentine or *Justicia tinctoria*, which affords a beautiful green; three species of *royoc*, viz., the *Morinda umbellata*, *carthamus*, and *gambogia*, all of which are yellow dyes; indigo, the red wood of the *Lawsonia spinosa*, and sapan. The bark of the *Rhizophora gymnorhiza* gives a beautiful red dye. The gum-resin called dragon's blood seems to be the produce of more than one plant, among which are the *Dracœna ferrea* and the rotang, both natives of Cochin-China. Among the plants subservient to industry, the *Pimelia oleosa* yields an oil that enters into the composition of the Chinese varnish; the sumach of Java is another varnish tree; from the *Croton lacciferum* is obtained the valuable red lac, the produce of a sort of ant which nestles on it, and separates this gum as its ordinary food; and the suet-tree—the *Sebifera glutinosa* of Loureiro, and the *sapium* or *Gluttier porte-suif* of Jussieu—bears a fruit yielding a stiff grease from which are made candles of an elegant appearance but unpleasant smell. From these countries we also obtain jalap, scammony, the bark of the *Nerium antidysentericum*, called *codogapala*, that of the *Laurus culiban*, the fruit of

the *Strychnos* or *Nux vomica*, cassia, tamarinds, aloes, camphor, and castor-oil. The sugar-cane, the bamboo, and spikenard, three celebrated plants of the family of reeds, are found in all these countries; the first two in the rich marshes, the last on the dry hills. The sweet potato, the *melongena*, and the love-apple, melons, pumpkins, water-melons, and a great quantity of other nutritious plants, enrich the plains. The banana, the cocoa, and the sago-palm, afford a liberal supply to the daily wants of the inhabitants. The vine grows in the forests, but for want of culture, as well as from the excessive heat, its fruit is much inferior to that of Europe. To make up for this disadvantage, however, they have the orange, the lemon, the citron, the delicious mango, the pine-apple, the *litchi*—the *dimocarpus* of Loureiro, and the *euphoria* of Jussieu—the mangosteen, and a multitude of other fruits unknown in Europe. We may also notice the *Phyllodes placentaria*, the leaves of which are used for wrapping up provisions, in order to heighten their colour and improve their flavour, and are also, like the *Amomum galanga*, mixed with the fermented liquors obtained from rice and from sugar."

Animal kingdom.] In this region the camel and the ass are never seen, the horse rarely, and then little better in size than a pony. The ox is not general, the sheep is unknown, and the goat is seldom seen. In short, the most useful and familiar of the domestic quadrupeds of Western Asia and Europe give place here to the elephant, the buffalo, and the hog. Even the wild quadrupeds familiar to the traveller in Western Asia, disappear in the Hindu-Chinese countries, where the fox, the jackal, the hyena, the wolf, the antelope, and the hare are not to be found. Among the wild inhabitants of the forest are the single-horned rhinoceros, the tiger, the leopard, the bear, several species of monkeys, the stag, the oryx, the strepsicoros, the civet, and the porcupine. —The Hindu-Chinese countries differ remarkably from Hindostan, and other countries which they resemble in fertility, in the abundance and variety of their metalliferous products.

Inhabitants.] In stature, the race of men inhabiting the Hindu-Chinese countries is shorter than the Hindu, the Chinese, or the European, but generally taller than the Malayan. The average height of the Siamese is only 5 ft. 3 in. Their lower limbs, contrary to what obtains among the natives of Hindostan, are well-formed, but their hands are stout, and destitute of that softness and delicacy which characterize those of the Hindu. Their persons are hale and robust, but somewhat squab and without grace or flexibility: the whole race, indeed, displays a remarkable tendency to obesity. Their complexion is a yellowish brown, darker by some shades than that of the Chinese, but never approaching the black of the African Negro, or even that of the Hindu. The face differs greatly from that of the European, or the Western Asiatic: the features never being bold, prominent, or well-defined; the nose is small, and round at the point, but not flat; the mouth is wide, but not projecting, and the lips are thick. The eyes are small, having the iris black, and the white of a yellow tinge; and the breadth and height of the cheek-bone give the whole face the form of a lozenge instead of that oval contour which marks the nations of Western Asia and Europe. The hair is thick, coarse, and lank, and always black. The Hindu-Chinese in their different divisions exhibit very various degrees of civilization, some being mere savages, and others in point of attainment standing in the second class among Asiatic nations. In the highest rank, making our enumeration from W to E, may be placed the Birmese, the Peguans, the Siamese, the people of Laos, the Cambodians, and the Annamese, comprehending in the latter term the inhabitants of Cochin-China Proper and the Tonquinese. In the second rank stand the lesser nations bordering upon Hindostan, such as Cachar, Cassay, and Arracan. Of the lowest order are a multitude of savage or semi-barbarous tribes, either the slaves of the leading races, or only escaping servitude by their abode in the recesses of barren mountains and inhospitable forests. Yet amidst all diversities and distinctions, moral as well as physical, one general and distinctive character pervades the whole of these tribes, obviously marking them out as one of those great groups or families of nations into which our species is divided. This is indicated by similarity of physical form and stature,—cognation and kindred genius of language,—common manners and institutions,—a common religion,—and in general among the dominant tribes a common standard and measure of civilization. Their wars and revolutions, too, have in all known times, until recently, been confined among themselves; and yet they have carried on amongst themselves as active and unremitting a course of hostility, as bloody and revolting warfares, as any on the records of the world. The general character of the Hindu-Chinese, is marked by the servility, indolence, disingenuousness, and feebleness which belong to political slavery everywhere; they display no strength or variety of character, exhibit no romantic feelings, and are, in short, utterly unimaginative; yet their national vanity is very considerable.

Languages.] From the confines of Bengal to the borders of China, there exist, besides rude dialects, seven languages, which have received a considerable share of cultivation. These are the Arracanese, the Birmese, the Peguan, the Siamese, that of Laos, the Cambodian, and the Annamese. Of alphabets also there are no less than seven. The Hindu-Chinese dialects are either chiefly or entirely monosyllabic, being so in the greatest degree as we advance eastward; they are rich, however, in letters and elemental sounds. They are all characterized by extreme simplicity of structure, and are destitute of inflections; hence their construction depends almost wholly on the principle of juxtaposition. They are more or less mixed with Chinese or Hindostani, according as the nations which speak them are situated near Hindostan or China. The languages and the physical characteristics of the Hindu-Chinese nations, "give reason to believe that they all originally issued from the same region as the Chinese." [*Pritchard.*]

Religion.] The religion of Buddha is universal from Arracan to Cambodia; but differs materially, especially when viewed as a civil institution, from the Buddhism of Tartary, Tibet, and Hindostan. In the Hindu-Chinese countries, religion is a great business of life; the country is covered with temples, and every male inhabitant must at some period or other of his life enter the priesthood, though he may quit it when he pleases, and enter it again at pleasure. With the Buddhists there is no supreme God, and variety of worship is held to be pleasing to superior beings; hence they are rather tolerant of other religions. The doctrine of castes, and unreasonable antipathies in the choice of food, are unknown in the Hindu-Chinese institutions; neither are religious penances and austerities among their favourite means of propitiating heaven. The form of worship was introduced into these countries from Magada or Behar in Hindostan, several centuries after the Christian era. Universal as far as Cambodia, it begins to give way, in Cochin-China Proper and Tonquin, to the form of worship prevalent in China.

INDORE, or INDUR, a city of Hindostan, in the prov. of Malwah, the capital of the Holkar states, in N lat. 22° 42′, E long. 75° 50′, at an alt. of about

2,000 ft. above sea-level. It stands on the Sypra, on the route from Mhow to Bhopalpur. The British residency is about 1 m. NE of the city.—Also a town in the Nizam's territories, 96 m. N of Hyderabad.

INDRAGHIRI. See INDERAGIRI.

INDRAMAYO, a river of Java, which rises in Mount Papandajang; flows NNE, through the prov. of Cheribon, and falls into the sea of Java, on its N coast, 90 m. E of Batavia.—There is a small town of the same name near its embouchure.

INDRAPURA (CAPE), a headland on the SW coast of Sumatra, in S lat. 2° 5′, near the embouchure of a river of the same name, which has a course of 30 m. from E to W, and offers a small port at its mouth for trading-vessels.

INDRE, a river of France, which rises in the dep. of La Creuse, in the hilly region of which the mountains of Auvergne form the nucleus, flows NW past Sainte Sévre and La Châtre, both in the dep. of Indre, to Chateauroux, receiving on its r. bank the Tessonnes and the Igneray, and on the l. the Vanvres, which receives the Magny. Immediately above Châteauroux, it is joined on the r. bank by the Angotin; and pursues its course NW by Buzançois, Palluau, Chatillon-sur-Indre, Loches, and Cormery; at the latter place it gradually turns W, and flowing past Montbazon and Azey-le-Rideau, divides into two principal arms; one of which runs NW to the Cher, the other SW to the Loire. Its whole length is about 115 m.; for about 36 of which, namely from Loches, it is navigable. The valley of the Indre is crossed in the dep. of Indre-et-Loire by the grand viaduct of the Orleans and Tours railroad, consisting of 58 arches, 20 metres or 63 ft. in height, and 700 metres or 765 yards in length.

INDRE, a central department of France, between the parallels of 46° 20′ and 47° 15′, bounded on the N by that of Loir-et Cher; on the E by that of Cher; on the S by those of Creuse and Haute-Vienne; on the SW by that of Vienne; and on the NW by that of Indre-et-Loire. Its form is compact and nearly circular. Its greatest length from the bank of the Cher on the N, to near Aiguerande on the S, is 60 m.; its greatest breadth, taken at right angles to the length, is nearly the same. Its area is estimated at 684,747 hectares. The pop. in 1801 was 205,628; in 1831, 245,289; in 1836, 257,350; in 1846, 263,977. In the latter years the average density of its pop. was 38·32 to the sq. kilom.; that of all France being 67·088.—The surface of this dep. is generally level, and sloping towards the NW. Some hills of small elevation rise on its W side. The river Indre enters the dep. at its SE corner, and crossing it in a NW direction, divides it into two nearly equal parts. The E side is watered by the tributaries of the Cher. Of these, the principal are the Arnon, the Feuzon, and the Modon. The W side of the dep. is watered by the Creuse, a tributary of the Vienne, and by the Claise, an affluent of the Creuse. Between the Creuse and the Claise is the plateau of the Brenne, which is covered by an immense number of étangs or pools, whose united surface exceeds 5,000 hect.—The climate is mild, but in the Brenne and other marshy districts, it is moist and unwholesome. The prevailing winds are the NE, SW, and NW. The soil varies much, but, excepting in the sandy districts, which in some places form tolerably wide heaths, it is upon the whole fertile. In 1840, 50,228 hect. of the surface were covered with heaths; 160,970 h. were of a sandy soil; 20,070 h. gravelly; 90,296 h. calcareous; and 160,572 h. were rich soil. Agriculture is in a backward state. The cereals chiefly cultivated are wheat, barley, oats and buckwheat. The vine is cultivated, but the wine produced is of inferior quality. The best wines are those of Valençay and Chabris. The cultivation of hemp is general. Little fruit is grown, except apples and pears. The quantity of wood-land and of pasture-land is considerable. The live stock in 1839 consisted of 22,187 horses, 2,512 mules, 8,941 asses, 83,014 oxen, 912,845 sheep, 55,942 pigs, and 23,028 goats. Great attention is paid to the breeding of sheep, whose wool, which has long been celebrated, constitutes a considerable portion of the wealth of the dep. Geese are extensively reared in the Pays-de-Brenne, and leeches form an article of trade.—The principal branches of manufacturing industry are those of cotton and woollen goods, iron, paper, earthenware, and leather. The iron manufactured in 1839 produced 88,610 quintals of cast-iron, value 1,653,497 francs, and 41,154 q. of bar-iron, value 2,143,318 fr. Of the *cotes foncieres*, or properties subject to the contribution foncieres, in 1835, 83,276 were assessed below 5 fr.; 13,002 between 5 and 10 fr.; and 391 at 500 fr. and upwards. The aggregate length of the government roads in 1847 was about 250 m.; of the departmental roads, about 125 m., of which nearly one-half was reported out of repair. There are no canals in this dep.—This dep. is divided into the 4 arrondissements of Chateauroux, Issoudun, La Chatre, and Le Blanc; which are subdivided into 22 cantons and 248 communes. In 1835 it sent 4 deputies to the legislature, who were elected by 1,068 electors. In 1840 it possessed 17 superior schools, attended by 797 pupils, 137 elementary schools, attended by 10,309 pupils in winter and 6,309 in summer; and 47 adult schools, attended by 442 pupils. The dep. is comprised in the dio. of the archb. of Bourges.

INDRE-ET-LOIRE, a central department of France, lying between the parallels of 46° 40′ and 47° 40′ N; and bounded by the dep. of Sarthe on the NW; on the NE by that of Loir-et-Cher; on the SE by Indre; on the SW by La Vienne, from which it is separated by the Creuse; and on the W by Maine-et-Loire. Its length from N to S is 72 m.; its breadth 68 m.; its superficial area 610,697 hectares, or 1,509,154 acres, which is about a twelfth part less than that of Devonshire. The pop. in 1846 was 312,400, showing a density of 51·07 per square kilometre; the mean for all France being 67·088. In 1801, the pop. was 268,924; in 1821, 282,372; in 1831, 297,016; in 1841, 306,366.—The surface is in general flat, rising only in a few places into low chains of hills, and wholly lying within the basin of the Loire, which here receives on the l. the Cher, the Indre, and the Vienne; and on the r. the Brenne and the Mesland. The N extremity of the dep. belongs to the basin of the Loir, itself a tributary of the Loire. A few lakes and marshes are scattered over the dep., of which the lakes of Rillé and Des Hommes, in the NW region, are the most considerable. The valley of the Loire, which intersects the dep. near its centre, from E to W, presents deep alluvial beds resting upon the great chalk belt which surrounds the geological basin of Paris, and is so productive that it has been termed the garden of France. Here almost every species of culture is pursued with success; and the wines grown, in particular, are among the best in the kingdom; but in the more elevated districts remote from the Loire, and especially towards the NW, the soil is thin and comparatively unproductive. Of the total superficies, 62,900 hect. are heaths and waste lands; 190,490 h. rich soil; 144,000 h. chalky or calcareous; 8,200 h. gravelly; 121,000 h. stony soil; 40,680 h. sandy; and 3,700 h. marshy. In 1839, of a total productive superficies of 580,029 hectares, 88,180 h. were under wheat; 15,029 wheat and rye; 21,679 rye;

28,774 barley; 64,870 oats; 945 maize; 598 buckwheat; 6,716 potatoes; 1,884 dry legumes; 35,134 vines; 3,260 in gardens; 206 under beet-root; 301 colza; 3,251 hemp; 13 lint; 19 mulberries; 34,171 natural meadows; 16,628 artificial meadows; 61,477 heaths and wastes; 103,612 fallow-ground; 87,650 wood; 196 chestnut-plantations; and 6,432 willow-beds, nursery-grounds, and hedges. The agricultural produce considerably exceeds the consumption; and in 1835, 42,000 kilog. = 92,650 lbs. of cocoons of silk were gathered. The live stock in 1839 amounted to 27,852 horses, 4,721 mules, 5,024 asses, 92,529 oxen, 287,793 sheep, 37,176 pigs, and 13,853 goats.—Among the mineral productions are iron, saltpetre, lithographic stones, marble, chalk, and potter's clay. The total value of the mineral produce of the dep. in 1839 was 1,507,000 fr.—The chief exports are agricultural produce, wine, and fruit.—Manufacturing industry here embraces woollens and silk manufactures, of which those of Tours are the most important; leather, brandy, beet-root sugar, ropes, pottery-ware, iron and steel tools, gunpowder, red lead, and saltpetre. —The navigable extent of the Loire in this dep. is 51 m.; of the Vienne, 33 m.; of the Creuse, 5 m.; and to this may be added the canal of Berry, over 24 m. The length of the 6 government roads within the dep. in 1837 was 188 m.; of the 17 departmental roads, 285 m. This dep. is also intersected by the Orleans, Tours, and Bordeaux railroad.—Of the *cotes foncières* in 1839, amounting in number to 114,801, there were 54,720 under 5 fr. in annual assessment; and 427 above 500 fr.—The public revenue raised in this dep. in 1840 was 8,844,051 fr.; the communal revenue in 1833 amounted to 671,763 fr.—In 1835 this dep. sent 4 deputies, chosen by 2,036 electors, to the legislature. In 1840 the number of primary schools was 316, attended by 12,588 pupils in winter, and 10.806 in summer; and in 1842, 11 establishments of secondary instruction were attended by 525 pupils. Of these last 2 were the communal colleges at Chinon and Loches, and 1 a royal college at Tours.—The administrative division of the dep. is into the 3 arrondissements of Chinon, Loches, and Tours; which were in 1841 subdivided into 22 cantons, and 282 communes. The dep. forms the dio. of the archb. of Tours.

INDREE, a walled town of Hindostan, in the prov. and 81 m. N of Delhi, 15 m. NE of Kurnal, and near the W bank of the Delhi canal.

INDREMONT. See CHATILLON-SUR-INDRE.

INDRE-SULEN, an island off the W coast of Norway, in the bail. of N. Bergen, in N lat. 61° 7′, at the entrance of the Sogne-fiord. It is 10 m. in length, and about 8 m. in breadth.

INDRET, a small island of France, formed by the Loire, in the dep. of the Loire-Inferieure, cant. and 6 m. W of Nantes, com. and opposite the village of Basse-Indre. Pop. 1,950. It has a large establishment for building steam-boats and steam-engines, and carries on a considerable trade in timber.

INDUS [SANSC. *Sindhu*; PERS. *Aub Sind*], a great and important river of Southern Asia, the earliest known of all the Indian rivers. It is now ascertained to have its source on the N or Tibet side of the Kailas branch of the Himalaya, in about 31° 20′ N lat., and 80° 30′ E long., nearly 320 m. SE of Ladak or Le, whither it bends its course WNW, under the Tibetian appellation of the Sing-kha-bab, [*i. e.* 'Lion's mouth,'] at an alt. of from 18,000 to 15,000 ft. above sea-level. At Tuzhigung, about 120 m. from its source, it is joined on the l. by the Ikung-chu, or river of Gartope, which at 40 m. from its source was found by Moorcroft to be a clear, broad, and rapid but not deep river. The united stream continues to bear the name of Sing-kha-bab or Sinh-ka-bab: and under 32° 56′ N lat., and 79° 25′ E long., within 5 m. of the Chinese frontier, was found to be 60 yards wide in the middle of November. At Le, 320 m. from its source, the elevation of its bed may be estimated at about 10,000 ft., and its course is to NW. Nearly 15 m. below Le, it is joined by the Zanskar or Zangskar; about 100 m. below this, by the Dras, and in N lat. 35° 8′ by the Shy-yok, or Shayok, a great river having its icy fountains in a glacier-lake on the S side of the Karakorum range. At the point of confluence, the Shy-yok has a breadth of 150 yds.; while that of the Sing-kha-bab does not exceed 80 yds.; but the depth, and probably the volume of water, of the latter stream exceeds that of the former. Below this confluence, the river assumes the name of Aba Sind. At Iskardoh, 25 m. below, and to the W of this point, the Indus receives the Shygur; and in 35° 34′ N lat., and 74° 26′ E long., 70 m. below the junction of the Shygur, the river emerges from the mountains, changing its course from WNW to nearly due S, in which direction it flows to Attock, where, at 940 m. from the sea, and 1,000 ft. above sea-level, it is 260 yds. wide, and flows in a rapid stream, with a depth, according to Burnes, of 35 fath., but according to Wood of only 10 fath. A little above Attock, it receives the rapid river of Cabul coming from the W. Just above the junction of the Cabul, the I. has been forded during the dry months —as by Shah-Shuja in 1809—but that is looked upon as an exploit even here; and there is no other point between the gorge of the Hindu-Kush and the Arabian sea, where even an elephant can cross the I. without swimming. The Cabul is a large river, draining the S slope of the Hindu-Kush for nearly 400 m. in longitude, and having one branch that extends 300 m. beyond the mountains; but is fordable in many places in the dry weather. The ancients appear to have regarded it as the true I. A few miles below Attock, the hills approach close to the I.; and the stream, confined between two opposing walls of rock, rushes through a channel of 150 yds. in breadth, with astonishing velocity and tremendous noise. At Nilab, 15 m. lower down, it is said to be not more than a stone's throw in breadth, and gliding between dark, lofty, perpendicular precipices, its waters assume a dark leaden colour, whence the name Nilab, or 'Blue river.' It now winds with great violence through the hills for about 60 m., in a deep channel during the dry season. At Kalabagh, in N lat. 32° 57′, 85 m. below Attock, it is 380 yds. wide, very tranquil, but very deep and swift. Thence to the ocean, the Indus flows across plains, over which its broad and expanded stream is poured in many channels which alternately meet and separate. Near Kahari-ghat, in N lat. 31° 28′, its banks are so low, and in summer are so much overflowed, that the body of water expands to a breadth of 15 m. At Mittunda-Kote, 350 m. below Kalabagh, in lat. 28° 59′, it receives the Punjnud—or combined stream of the *Acesines* or Chenab, the *Hydaspes* or Jelum, the *Hydraotes* or Ravi, the *Hyphasis* or Beyah, and the *Hysudrus* or Sutledge, which, though a large body of water, has not one-half of the volume of the Indus. Below this confluence, the Indus runs SW into Sind, and enters the sea 70 m. below Tatta, in N lat. 24° 44′. After the I. has fairly entered Sind, it throws off its numerous deltoid branches; but the first permanent offset of the Indus is the Fulaili (*b b b*), which leaves the I. 12 m. above Hyderabad, and passes E of that city. It successively takes the name of Guni, Phurrarr and Kori; and separates Cutch from Sind in the lowe, part of its course. The next offset takes its departure near Jurk, and is named Pinyari (*c c c*). It afterwards is called Gungra, and where it enters the sea (*d*), Sir; both these branches, the Feleili or

Fulaili, and the Pinyari, have been closed by 'bunds' or dams, for the purpose of irrigation. At their estuaries, therefore, they are but creeks of the sea, and have salt instead of fresh water if the inundation does not make them fresh by its excess. Some remarkable changes were brought about in the E mouth from an earthquake in 1819, by which a large tract of land was and still continues submerged. About 4 m. below Tatta—which is 3 m. W of the W bank of the river — the I. forms its delta by dividing into two main branches. These bear the names of Bagar or Baggar, and Sata. The first (*e e e*), runs off at right angles W; the other flows S. The Baggar passes Pir, Putta, Daraji, and Lahori bunders, and enters the sea by four main arms, the Piti (*f*), the Pintiyani (*g*), the Joaah or Juwah (*h*), and the Richel (*i*). The Satta (*k k k*) reaches the sea principally by the mouths of the Injamari, or Hujamari (*l*), Khediwari (*m*), Kukewari (*n*), and Mall (*o*). There are even other subdivisions, but it would only confuse to name them. The Sir (*d*), and Kori (*a*), are entrances to the Pinyari and Fulaili branches. All these mouths have communication with each other, so that the internal navigation of the delta is extensive. The course of the waters of the I. is most capricious and inconstant. In 1809 the principal portion of the waters were disembogued by the Baggar. In 1831 their channel of egress was confined to the Sata, which has ever since been the principal channel of discharge. The seven mouths of the Sata even vary in their supply of water, but one branch of the I. is always accessible to country-boats. The great mouth at present is the Kukewari (*n*), but, from sand-banks, it is not accessible to ships. Those mouths which discharge least water are most accessible. [*Burnes* in 1836.] The distance of the E and W mouths of the I. from each other is 125 m. NW. The shore is low and flat throughout; and at high tide is overflowed to a considerable distance inland. With the exception of a few spots covered with jungle, marking the mouths of the river's arms, it is destitute of trees and shrubs, and presents only a dreary swamp. In the annual inundation, the I. expands to a breadth of 15 m. in the flat country; from Mittunda-Kote up to Ouch, where the five rivers of the Punjab unite, a distance of 70 m., the interval between the I. and Punjnud is only 10 m. across, and the whole space is one vast sheet of water resembling a sea.

Navigation.] The I. is a foul, muddy river, with numerous shoals and sand-banks. The tides are not perceptible higher up than 60 or 65 m.; but from the sea to Lahore—a distance of 760 geog. m.—the I. is navigable for vessels of 100 tons, and boats may drop down it from within 50 m. of Cabul. Burnes, in his *Notes on the Trade and Navigation of the Indus*, says: "It is imperatively necessary to adhere to the mould of boats which are now in use on the river. Science may in time improve them, but disappointment will, I believe, follow all attempts at it till further experience is obtained. A boat with a keel is not adapted to the river I. Though the I. is accessible after November, the labour of tracking-up against the stream is at that time great. The river is then, and for the three succeeding months, about its lowest, which prevents the boatmen from seeking the still water, and drives them to the more rapid parts of the current. The N winds, which blow till February, make the task more than ever irksome, and extra trackers are required. The treaty, too, encourages large boats more than small ones, the toll on both being alike; and these unwieldy vessels require many hands, which adds to the expense. After February, the voyage from the sea to Hyderabad, which would previously have occupied nearly a month, may be performed in 5 days: the expense of trackers is avoided, the river has less dangers, and the merchant thus saves his time, labour, and interest. The swell of the I. does not prevent vessels ascending to the Punjab; for at that time the S winds prevail. It is these S winds which give to the I., in its navigation, advantages over the Ganges. The course of the one river is about E and W; that of the other N and S. Use must therefore be made of this natural advantage to make merchandise profitable by the route of the I. The obstacles to navigating the I. at its mouth are no doubt great, but they have been magnified. Above Calcutta, for a considerable part of the year, there is no greater depth in the rivers Bhagratti and Jellinghi, which lead from the Hugli to the Ganges, than 2 and 3 ft. In the I. a greater depth than this will always be found somewhere, to lead from the seaports to the great river. This, then, is a decided advantage in the inland navigation, though the I.

has not a mouth accessible to large ships, like the Ganges. It proves, too, that a portage or even a canal—were it possible to cut one—is unnecessary, as it must never be forgotten that the largest boats of the river draw but 4 ft. when heavily laden. Sea-boats can always ascend one mouth of the I., and the navigators find it out without difficulty. The depth of the river is variable,—in some places great, in others less; but this is of small consequence to flat-bottomed vessels. Sand-banks are numerous, and would perplex an European navigator, but the native pilots have a good eye, and manage to avoid them. In the delta there are also sand-banks, but the streams there are much narrower and deeper, and more free from them. These sand-banks are a marked and general feature of the I., and seem to be formed by back water or eddies. They rise up without regularity, but there is always a deep channel, though sometimes intricate, through them. In December I descended the stream from Hyderabad, and though then near its lowest, the soundings in the great river were never under 2 fath. or 11 ft.; and the boatman did not always keep in the strength of the stream. While in the river we never grounded, and many heaves of the lead gave 5 and 8 fath., but 2 and 2½ predominated. In the cold season, the I. in the delta shrinks into a narrow and deep channel, which disappoints a stranger who has heard of the magnitude of this river. Enterprise will doubtless do much to create and improve commerce; but for the present it is a trade by the I., and not on the I. It is, in fact, a transit-trade to Western and Central Asia,—a line, however, which ought to supersede that by Sonmiani to Candahar, and by Bownuggur to Palli and Upper India." Great danger is experienced in the bends of the river, where the current has a quick gyratory motion, and is continually exerting its influence to undermine the banks; at these places, when a boat is caught by the eddies, she is driven with force against the steep bank, and if a large mass becomes detached by the concussion, which sometimes happens, her destruction is almost inevitable. Every effort is now making to establish steam-navigation on the I. for commercial purposes, but until the channel of the river is cleared, it must be an almost insuperable matter of difficulty. A steamer built in the Bombay dock for this purpose, and drawing only 4½ ft. water, was found nearly useless, her progress up the river, exclusive of groundings, being at the average of only a knot and a half an hour. Another has been constructed to draw only 2½ ft. water; but whilst its power of machinery must necessarily be slight in proportion, and the boat useless for the purposes of freightage, its strength as a tug must be very ineffectual. If the same means which have been so successfully exercised to clear the channel of the Mersey, can be employed with equal good fortune on the I., the successful result of such efforts must be a matter of immense and universal importance. Until some weighty change is effected, the navigation of the I. will ever be hazardous and tedious; but, in the meantime, camel depots might be formed both on the r. and l. arms by which means goods might be conveyed from Kurachi or Vikkur-bunder to the navigable portions of the I., at nearly as small expenditure, and with great celerity. The I. rises about April; "the commencement of the swell is detected more by the increasing current than by the rising of the water in the river. In May it assumes its maximum, at which it continues with little variation until the end of September, when the rapid falling of the river is accompanied by as sudden a decrease in the strength of the current, as its rising was distinguished by its speedy increase." [*Wood.*] The inundation, which does not rise above the delta, extends for above 5 m. over its banks, from whence it is carried, or might be carried, over the entire face of the country, by water-courses and canals, and by natural streamlets formed by its own impetuosity. Its deposits are slight, when its velocity and magnitude are taken into consideration. "Very little mud is found in any of the deltoid branches, except the Kóri; it being apparently carried out by the strong tides, and not deposited until at such a distance from the shore as to be put out of their influence. The tides off the mouth of the I. are everywhere extremely irregular. Between the Sir and Mall mouths a feeble current sets constantly to the ESE along the shore, and flood or ebb can only be distinguished by the rise or fall of the water, which is only 4 ft. No rivers are discharged on this part of the coast, and the sea is but slightly discoloured in consequence. Off the mouths of the Sátá the ebb runs out of the different channels in a broad muddy stream, direct from the land, but quickly loses its strength as it leaves the bank. Here the water is fresh at low tide 5 or 6 m. from shore, and the rise and fall increases to 10 ft. In other parts, where the small mouths are numerous, the tides change their direction almost every hour, and are scarcely felt at 2 m. outside of them. From the beginning of October to the middle of March the Sind coast is navigated by the boats of the country without difficulty or danger. The soundings are everywhere a sufficient guide, and, in general, decrease so gradually that no danger is to be apprehended in approaching it. The only shoal of any consequence is a great bank off the mouth of the Sátá, which projects beyond the line of the direct route to the N rivers. From the dangerous appearance of the breakers during the sea-breeze, the native boatmen have a great dread of approaching it, and at night always stand out into 11 or 12 faths. before they venture to pass it. During the fine season land and sea breezes generally prevail, with cold clear weather; but the wind sometimes blows very fresh from the NE, and the atmosphere is obscured by clouds of fine dust many miles from the land. The season terminates here long before it does on the Malabar coast, and the navigation then becomes very dangerous. W winds set in early in February; and after the middle of March, the I. may be considered as closed for the season. [*Lieut. Carless.*]

The Indus as a frontier-line.] The Indus is now the boundary of British India on the W. The mouths of the river were made over by the annexation of Sind, and its great branches by that of the Punjab. Whether it is a better boundary than the line of the Sutledge is a question which divides military authorities. "If," says Sir C. Napier, "we abandon the Punjab, and retire to the l. bank of the Sutledge, we must there make our stand to defend a frontier of some 600 m., from Sind to Simla, divided from the hostile and powerful Sikh nation by a river everywhere fordable to these enemies, though not to our regular armies. Let military men say what army could defend so exposed and extended a frontier against such adversaries,—all plunderers, all ripe for inroads, and not only ready for border-war, but a border-war against the British alone; our border pop. (consisting of Sikhs also) being quite as hostile to us as are the Sikhs on the Punjab side of the river Sutledge, with whom they are as one people. To suppose that our army could do this, is nonsense. It would become a perpetual guerilla war. An army of 30,000 men could not do it. Even if such an army could do it, that army would become an insupportable drain upon the finances of the East India company, and would in a few years be obliged to retire from the Sutledge to the Nerbudda and the Ganges. Could we halt there? This question I will not pretend to answer; but I will say that to occupy Delhi with advancing standards was one thing; to hold Delhi with retiring standards would be another thing. A retreat upon Delhi would be the first march towards Calcutta, and the power of Nepal would come down like a mountain-torrent on the flank of our retiring columns; while the Bombay and Madras troops, which occupied the line of the Nerbudda, would have the Nizam of Hyderabad in the Deccan, with his 12,000,000 of subjects between that river and the capitals of the two presidencies, without counting the numerous other enemies all round them To abandon the line of the Sutledge would be a disgraceful defeat in the eyes of all Asia, and defeat, as all the

world knows, is fraught with more danger in India than in Europe. There is no choice but to advance. In that alone we have safety and the hope of future peace. 'But,' says the advocate for abandoning the Punjab, 'if we advance to the I., and plant the British standard on the towers of Peshawur, we shall still have hostile nations on our frontier.' Not so. Various small tribes inhabit the r. bank of the I., disunited among themselves, and all disposed to be friendly and to entertain relations with us. So I found it in Sind; all those to the W eagerly cultivated our friendship except the plundering tribes of the Cutchi-hills, and those we conquered. In short, there would be no union among the tribes W of the Indus: and we should command all the passes in our front. There are 10 or 12 of these passes through the chain of mountains which run nearly parallel to the r. bank of the I., from Peshawur to Kurrachi. Through some one of these great defiles an army invading India must come, with all the supplies for its wants. Such an invasion of India must be met upon the I., not on the Sutledge. There would be no King Porus to defend the Punjab for us. The small tribes between the mountains and the r. bank of the I. are contemptible, and would find enemies on the l., or Punjab bank, if they dared to cross the river for plunder; but this would not happen under our rule if well administered. The inhabitants of the l. bank would become rich and more than ever inimical to those on the r. bank. Unlike the plains on each bank of the Sutledge (inhabited by nearly the same people, and all adverse to the British), those nations on the I. would be friendly to us as our subjects; but they must be well treated, for all depends upon the way in which they are governed."

To these arguments it has been replied, "First, that with regard to the comparative length of the two lines of frontier, it is only necessary to refer to a map of the country, which will show at a glance that the line of the Sutledge, instead of being more, would be less than that of the I. From Mittunkote to Roper at the foot of the hills, as surveyed and measured, is by land 388 m., by water 476½ m. Simla is not on the river, and if it is to be included as a *point d'appui* (for which it has never served, nor is likely to serve), we are bound in like manner to include the I. to Cashmere, the northern mountains of which bear the same relation to the course of the I. as those of Simla do to the Sutledge. In considering, however, the relative merits of the two boundaries geographically, a very material point has been overlooked: viz., that, while by the line of the Sutledge, the frontier of our defensive measures would be still limited to that of our old tributaries and territories, which have now been owning our sway from 25 years to nearly half-a-century, we should, by adopting the upper, as well as the lower, course of the I., extend the line of our defence by a semicircle of about 1,000 m., and have to cover an additional area of 125,000 sq. m.,—or measuring in length 550 m., and in breadth, from Ferozepore to Attock, at least 250 m.,—in a country and over a people of whose relative qualities, with those of the protected Sikh states and others, as subjects, on the l. banks of the Sutledge, no favourable comparison can be made. Again, with regard to fords, it can be shown that for practical purposes the Sutledge is scarcely less difficult than the I. From a table showing the soundings of the former river from Hurriki to Mittunkote, taken in a voyage made to explore the course of the Sutledge for the first time, in 1833, by a regular surveyor, it appears that in January—when, and in the months of November and December, these rivers are only fordable, being at their lowest—the extreme depth for an entire distance of 357 m. was 27 ft.; that it generally averaged from 10 to 12 ft.; and that although twice or thrice it shallowed to 3 ft., yet that in the whole course only one place was fordable, viz., between Bazidpore and Nunka. It should also be noticed that the soundings were taken in going down, and not across the river; and therefore that where they were only 3, 4, and 5 ft. to the r. and l. of those spots the channel was impassable. If fords were general, the pastoral tribes inhabiting the banks of the Sutledge would be the first to find them out; instead of which they use a bundle of straw about 1½ ft. thick, with the assistance of which they swim across. Above Hurriki to Roper, a distance by land of 96 m., by water of 108 m., fords are sometimes found, but they are of rare occurrence. Lord Lake, in pursuit of Holkar with a light division of his army in 1805, crossed the river near Kirana-ghat, just above Filore, opposite to Ludiana, but the tumbrils were emptied and the ammunition carried on the heads of the men to enable the horse artillery to pass; and even then several lives were lost, and in the course of a few minutes the ford became impracticable from a circumstance which is common to these rivers, viz., the friction of the carriage-wheels against the sand, and the steps of men and horses causing the sand to float and drift away, which deepens the passage in an incredibly short time. Since we advanced our line of frontier to the Sutledge in 1808-9 there is not a single instance of any ford having been used by a body of troops between Roper and the I., although after the first three years Ludiana was our only military post on the whole of that frontier." See article PUNJAB.

INDUSTRY, a township of Franklin co., in the state of Maine, U. S., 34 m. NW of Augusta. It is watered in the SE by Sandy river, and is extremely fertile. Pop. in 1840, 1,036.—Also a village of Beaver co., in the state of Pennsylvania, 234 m. NW of Harrisburg.

INDVEG, a parish of Norway, in the bail. of N. Bergen, and SE of Gloppen. Pop. 3,899.

INEABAR, a township of Lafayette co., in the state of Missouri, U. S. Pop. in 1840, 302.

INE'BOLI, a town of Turkey in Asia, in Anatolia, in the sanj. and 54 m. N of Kastamuni, and 81 m. W of Sinope, situated between two mountains which terminate in a headland, and at the entrance into the Black sea of a small river of the same name. Pop. about 3,000. It contains 4 mosques, a bazaar, and a public bath. The fort, which was built for its defence in the 15th century, has been suffered to fall into ruins. The roadstead offers few natural advantages, but affords the means of carrying on a considerable export trade in copper, timber, and grain. The inhabitants of the valley of the Ineboli are chiefly employed by the Sultan in coppering vessels. The town occupies the site of the ancient Ionopolis.

INEK-BAZAR, a village of Turkey in Asia, in Anatola, in the sanj. of Aïdin, 18 m. WNW of Guzelhissar, and a little to the E of Jenisheher, on an affluent of the Meander. It occupies a portion of the site of the ancient *Magnesia ad Mœandrum*.

INES, a town of Spain, in Leon, in the prov. and 35 m. WSW of Soria, and partido of Burgo-de-Orma, near the l. bank of the Duero. Pop. 365.

INES (SANTA), or ANGEL-DE-LA-GUARDA, an island in the N part of the Gulf of California, to the WNW of the island of Tiburon, in N lat. 29° 45′, and W long. 113° 40′. It is 48 m. in length, and about 15 m. in breadth.

INESTRILLAS, a town of Spain, Old Castile, in the prov. and 32 m. ENE of Soria, and 18 m. SSW of Corella, on the l. bank of the Alama, in a mountainous district. Pop. 574. The environs are fertile and well-watered.

IN-EUGHI, IN-OGHI, or IN-EUNI, a town of Turkey in Asia, in Anatolia, in the sanj. of Sultan-Euni, 18 m. NW of Eski-shehr, and 33 m. N of Kutaiah, at the foot of a lofty mountain, in which are numerous grottoes.

INEZ (SANTO), a headland on the E coast of Tierra-del-Fuego, in S lat. 54° 20′, W long. 67° 8′.

INFANTA (CAPE), a headland of S. Africa, in the district of Zwellendam, on the W side of Sebastian bay, in S lat. 34° 32′, and E long. 20° 47′.

INFERNO, a river of Brazil, in the prov. of Goyaz, which has its source in the Serra-da-Canastra, runs SE, and falls into the Rio Velhas on the l. bank.

INFICIONADO, a large and well-built village of Brazil, in the prov. of Minas-Geraes, 10 m. N of Marianna. Pop. 4,500. Agriculture and mining form the chief branches of local industry. It is noted as the birth-place of the poet José-de-Santa-Rita-Durão.

INFIESTO (NUESTRA-SENORA-DE-LA-CONCEPCION-DE), a judicial partido and town of Spain, in Asturias, in the prov. of Oviedo. The partido comprises 31 parroquias or parishes. The town is ancient, and contains several Roman remains, a parish church, numerous convents, and a custom-house. Pop. 416.

INFRESCHI (PUNTA DEGLI), a headland of Naples, on the W coast, on the W side of the bay of Policastro.

INGA, a town of Lower Guinea, in the kingdom of Cacongo, on the r. bank of the Zaire, 60 m. NNW of San Salvador. Pop. 600.

INGATESTONE, a parish in Essex, 6 m. SW of Chelmsford, on the Eastern Counties railway. Area 670 acres. Pop. in 1831, 789; in 1841, 856.

INGALINSKAIA, a town of Russia in Asia, in the gov. and 156 m. SW of Tobolsk, district and 18 m. SW of Jaloutorovsk, near the r. bank of the Isct.

INGALOS, a people of Russia in Asia, in the NE of the gov-

of Georgia. They are slaves of the Lesghi, who assert the sole proprietorship of the soil, and exact in tribute from the I. the third of its produce. They are chiefly Mahommedans.

INGAN. See KHING-KHAN.

INGBERT, a village of Bavaria, in the circle of the Pfalz, district and 8 m. WNW of Blieskastell. It has considerable iron-works, and in the environs is a mine of coal.

INGBIRCHWORTH, a township in the p. of Penniston, W. R. of Yorkshire, 9¼ m. SE of Huddersfield. Area 820 acres. Pop. in 1841, 419.

INGELFINGIN, a town of Würtemberg, in the circle of the Jaxt, bail. and 3 m. W of Künzelsau, and 33 m. NW of Ellwangen, on the r. bank of the Kocher. Pop. 1,500. It has a suburb, and contains a castle belonging to the family of Hohenlohe-Ohringen. Jewellery forms the chief article of local manufacture. The vine is cultivated here.

INGELHEIM (NIEDER), a town of the grand duchy of Hesse-Darmstadt, in the prov. of Rhein-Hessen, cant. and a little to the N of Ober-Ingelheim, 8 m. W of Mayence, and 1½ m. from the l. bank of the Rhine, on the brow of a hill at the foot of which is the Salzbach. Pop. 2,000, of whom 805 are Catholics and 21 Jews. It possesses 2 churches, a Catholic and a Protestant church. On the summit of the hill are the ruins of the magnificent palace built by Charlemagne in 774, and destroyed by the French in 1689. The environs afford excellent wine.

INGELHEIM (OBER), a canton and town of the grand duchy of Hesse-Darmstadt, in the prov. of Rhein-Hessen, 8 m. WSW of Mayence, near the r. bank of the Salzbach. Pop. 2,212, of whom 590 are Catholics and 136 Jews. It is surrounded by a wall flanked with towers, and contains 3 churches, one of which, a Protestant church, is of great antiquity, and contains many curious monuments. The first diet of Charlemagne was held here in 774, and it has since been the ordinary place of the assembly of diets and councils by his successors. The environs afford good wine. Pop. of cant. 13,968.

INGELMUSTER, a department and commune of Belgium, in the prov. of West Flanders, arrond. and 7 m. N of Courtrai, and 18 m. S of Bruges, on the l. bank of the Mander-Beke. Pop. 6,085. It is noted for its manufacture of linen, and has several salt-refineries and breweries. A sanguinary engagement took place here on the 10th May, 1794, between the French and Anglo-Hanoverians, in which the former had the advantage.

INGELSTA, a haerad of Sweden, in the S part of the prefecture of Christianstad. It contains a village of the same name.

INGENBRUCK, a village of Prussia, in the prov. of the Lower Rhine, regency and 18 m. SSE of Achen, and circle of Montjoie. Pop. 1,000. It has manufactories of cloth.

INGENIO (EL), a town of Chili, in the district of Aconcagua, on the r. bank of the Ligna, 90 m. N of Santiago.

INGENOE, an island of the Arctic ocean, in the bail. of Finmark, to the WSW of Cape North, in N lat. 71° 11′ 40″, and E long. 24° 55′. It is 12 m. in length, and 3 m. in medium breadth.

INGERSBY, or INGARSBY, a hamlet in the p. of Hungerton, Leicestershire, 5½ m. E of Leicester. Area 810 acres. Pop. in 1841, 26.

INGERSHEIM, a commune and town of France, in the dep. of the Haut-Rhin, cant. and 4 m. SE of Kaysersberg, near the Weybach. Pop. in 1841, 2,516.

INGERSHEIM (GROSS), a town of Würtemberg, in the circle of the Neckar, bail. and 5 m. SSE of Besigheim, and 14 m. N of Stuttgard, on the l. bank of the Neckar. Pop. 1,500.

INGERSHEIM (KLEIN), a village of Würtemberg, in the circle of the Neckar, and bail. of Besigheim, near the Neckar. Pop. in 1840, 603. This village was in the middle age the capital of the county of Ingersheim.

INGERSOLL, a village of Upper Canada, in the township of West Oxford, on the plank road, 22 m. E of London, and 10 m. W of Woodstock, on the E branch of the Thames. Pop. 400.

INGERTHORPE, a township in the p. of Ripon, W. R. of Yorkshire, 4 m. SE by S of Ripon. Area 470 acres. Pop. in 1831, 48; in 1841, 46.

INGESTRIE, or INGESTRY, a parish in Staffordshire, 3½ m. ENE of Stafford, on the Trent. Area 1,150 acres. Pop. in 1831, 116; in 1841, 118.

INGHAM, a parish in Lincolnshire, 8¼ m. NNW of Lincoln. Area 1,750 acres. Pop. in 1831, 361; in 1841, 514.—Also a parish in Norfolk, 7½ m. NE of North Walsham. Area 1,980 acres. Pop. in 1831, 419; in 1841, 509.—Also a parish in Suffolk, 4½ m. NNW of St. Edmund's Bury. Area 1,910 acres. Pop. in 1831, 226; in 1841, 208.

INGHAM, a central county in the state of Michigan, U.S., comprising an area of 560 sq. m., generally level, and possessing considerable fertility. It contains Pine, Portage, and Swampy lakes, and Red-Cedar, Willow, Mud, and Sycamore creeks. Pop. in 1840, 2,498. Its capital is Vivay. It contains a township of the same name, 77 m. W of Detroit.

INGHE-NOR, a lake of the Chinese empire, in the country of the Mongols of the Koko-Nor, and about 100 m. WNW of the lake of that name. It is 18 m. in length, and about 12 m. in breadth, and discharges itself by the Poukapira, which issues from its E extremity, and throws itself into the Koko-Nor.

INGHUR, a fortress of Hindostan, in the prov. and 36 m. WSW of Bijapur, and 15 m. WSW of Hutnee, on the l. bank of the Kistna.

INGLEBOROUGH, a mountain of Yorkshire, 9 m. NW of Settle. Alt. 2,370 ft above sea-level.—Also a mountain of New South Wales, near the S confines of Westmoreland co.

INGLEBY, a township in the p. of Foremark, Derbyshire, 7 m. NE of Burton-on-Trent. Pop. in 1831, 163; in 1841, 157.

INGLEBY-ARNCLIFFE, a parish and township in the N. R. of Yorkshire, 7 m. SSW of Stokesley. Area 1,840 acres. Pop. in 1831, 335; in 1841, 329.

INGLEBY-BERWICK, a township in the p. of Stainton, N. R. of Yorkshire, 3 m. SSE of Stockton-upon-Tees. Area 1,190 acres. Pop. in 1841, 138.

INGLEBY-GREENHOW, a parish and township in the N. R. of Yorkshire, 4 m. WSW of Stokesley, at the source of the Leaven. Area of p. 6,400 acres. Pop. in 1831, 368; in 1841, 355. Area of township 2,610 acres.

INGLESHAM, a parish, partly in Berkshire, and partly in Wiltshire, 3 m. N of Highworth, on the S bank of the Thames. Area 890 acres. Pop. 125.

INGLETON, a township in the p. of Gainford, Durham, 8½ m. WNW of Darlington. Area 800 acres. Pop. in 1831, 355; in 1841, 334.—Also a chapelry and village in Bentham p., W. R. of Yorkshire, 9½ m. NW of Settle. Area 15,280 acres. Pop. in 1831, 1,228; in 1841, 1,355. The v., situated at the foot of Ingleton hill, is large and well-built.

INGLEVERT (ST.), a village of France, in the dep. of the Pas-de-Calais, cant. of Marquise, 13 m. N of Boulogne. Pop. 400. It is celebrated for the tournament which took place in the environs in 1390.

INGLIS ISLAND, an island at the mouth of Arnheim bay, Arnheim Land, N. Australia, in N lat. 12°, E long. 136° 15′. It is 12 m. long, and about 1[illegible] m. in breadth.

INGODA, a river of Russia in Asia, in the gov. of

Irkutsk, and district of Nertchinsk. It has its source on the E side of the mountains of Nertchinsk or Dauria; flows first NE, then E, and joins the Onon, which thence takes the name of Chilka, and is tributary to the Amour, near Gorodtchenskaia. It has a total course of about 360 m. The principal places which it passes are Doroninsk and Tchitinskoi. It flows in the upper part of its course between lofty banks covered with forests. The lower part is flat and fertile.

INGOE, a township in the p. of Stamfordham, Northumberland, 9¼ m. NE by N of Hexham. Pop. in 1841, 231.

INGOLDESTHORPE, a parish in Norfolk, 5½ m. NNE of Castle-Rising. Area 1,480 acres. Pop. 344.

INGOLDMELES, a parish in Lincolnshire, 8 m. ESE of Alford, on the coast of the North sea. Area 2,250 acres. Pop. in 1831, 206; in 1841, 259.

INGOLDSBY, a parish and village in Lincolnshire, 3¼ m. N of Corby. Area 2,350 acres. Pop. in 1831, 345; in 1841, 402.

INGOLDSTADT, a town of Bavaria, capital of the landgericht-bezirk of the same name, in the circle of Upper Bavaria, 36 m. SW of Ratisbon, on the l. bank of the Danube, which is here crossed by a handsome bridge, and at an alt. of 420 yds. above sea-level. Pop. in 1838, 10,170; in 1845, 9,189, of whom 2,601 belong to the garrison. The streets are broad, and the houses, which are well-built, are generally painted outside. The principal buildings are the castle and the churches; the latter are adorned with numerous fresco paintings, and in one of them are the tombs of General Tilly, and of Eck or Eckius, the celebrated antagonist of Luther. There are 3 hospitals, an orphan's asylum, a college, a classical school, and schools of agriculture, and of arts and sciences. The chief articles of local manufacture are cloth, playing cards, powder, and potash. It has some distilleries, numerous breweries, and several bleacheries of linen and wax. The trade has much decayed. This town sustained a siege by Gustavus Adolphus in 1632. In 1704 it was surrendered to Prince Louis of Baden; and in 1800 was given up to the French, who destroyed its fortifications.—The landgericht-bezirk presents a flat surface, but is well-cultivated, and possesses fine forests and meadow-land. Pop. 17,020.

INGORNACHOIX, a bay of Newfoundland, on the W coast, to the S of St. John's bay, in N lat. 50° 40′, and W long. 57° 20′.

INGOUL, or Ingul, a large river of Russia in Europe, which has its source in the N part of the gov. of Kherson, in the district and 27 m. NW of Yelisavetgrad; passing that town it flows S, and throws itself into the Bog on the l. bank, at Nicolaïev, after a course of about 180 m. Its principal affluent is the Gromokleia, which it receives on the r.

INGOULETZ, a river of Russia in Europe, which has its source in the N part of the gov. of Kherson, 18 m. N of Yelisavetgrad; runs E to Alexandria; then bends S, runs for some distance along the confines of the gov. of Yekaterinoslav, and falls into the Dnieper, on the r. bank, 9 m. above Kherson, and after a course, chiefly through steppes and grazing lands, of about 300 m.

INGOURI, or Ineour, a river of Russia in Asia, which has its source on the N side of the Caucasus, to the SE of Mount Elburz, in the N part of Mingrelia; separates that prov. from Great Abasia, and after a total course of 75 m. in a W and SW direction, throws itself into the Black sea at Anaclea, in N lat. 42° 22′.

INGOUVILLE, a canton, commune, and town of France, in the dep. of the Seine-Inferieure, arrond. of Havre. The cant. comprises 5 com. Pop. in 1831, 10,844; in 1841, 22,079. The town, which is a little to the N, and is considered a suburb of Havre, is pleasantly situated on a finely-cultivated hill, near the estuary of the Seine. Pop. in 1831, 5,666; in 1841, 9,880; in 1846, 12,060. It contains numerous villas, and a general hospital for Havre; and has numerous brick and tile-kilns, manufactories of pottery vitriol, pitch, and tar, lace, cordage, copperas, acids, &c., several sugar-refineries, and a copper foundry. A fair for jewellery, ironmongery, &c., is held once a-year.

INGOYGHEM, a department and commune of Belgium, in the prov. of West Flanders, arrond. and 10 m. E of Courtrai. Pop. 2,313. It has considerable manufactories of and trade in linen.

INGRAM, a parish and township in Northumberland, 7½ m. S by E of Wooler, on the Breamish. Area 14,890 acres. Pop. in 1831, 205; in 1841, 220.

INGRANDE, a commune of France, in the dep. of the Maine-et-Loire, cant. of Georges-sur-Loire, 20 m. WSW of Angers, on the r. bank of the Loire. Pop. in 1841, 1,452. It has an extensive glass-work, and a manufactory of sugar from beet-root.

INGRANDES, a village of France, in the dep. of the Indre-et-Loire, cant. and 8 m. WSW of Langeais. Pop. 750. Fairs are held twice a-year.

INGRAVE, or Ging-Ralph, a parish in Essex, 2 m. ESE of Brentwood, on the Eastern Counties railway. Area 1,220 acres. Pop. in 1841, 530.

INGRE, a commune of France, in the dep. of the Loire, cant. and 3 m. WNW of Orleans. Pop. 2,905. It has a manufactory of animal black, and produces good wine.

INGRIE, Ingermannland, and Ijorskaïa-Zembla, an ancient prov. of Russia in Europe, and now comprised in the gov. of St. Petersburg. Its original inhabitants were Slaves; and were named Ijorka, from a river of that name on which their chief town was situated.

INGROWITZ, or Gimramow, a market-town of Moravia, in the ldgb. of Brünn, circle and 36 m. ENE of Iglau, and 9 m. NNW of Bistriz, on the Schwarzawa. Pop. 1,390. It contains 2 reformed churches, and possesses several manufactories of cotton and linen fabrics. Flax is extensively cultivated in the environs.

INGSTETTEN, a village of Bavaria, in the circle of Swabia, NE of Illertissen.

INGUAZHILLIGI, a town on the Wowow territory, on the W bank of the Niger, the first place below Boussa where the river is entirely clear of rocks, and a general thoroughfare for merchants passing and repassing to Nufi.

INGUIAGHER, a small town of Senegambia, in the kingdom of Walla, on the Atlantic, at the mouth of the Maringouins, an arm of the Senegal, and about 60 m. N of St. Louis.

INGUINELL, a commune of France, in the dep. of Morbihan, cant. and 5 m. NNE of Plouay. Pop. 2,204.

INGURLI, a town of Turkey in Asia, in the pash. and 120 m. W of Sivas, sanj. of Buzok, and 15 m. SSE of Yuzgat or Uskat.

INGUSHES, or Ingouchi, a people who inhabit the E part of Circassia, on the N side of the Caucasus, to the S of Little Kabarda, to the W of the Tshetshentsis, and to the E of the territory which is intersected by the great road from Mozdok to Tiflis. The men devote themselves to war and to the chase, and leave to the women, in addition to their own more appropriate employments, the labours of agriculture. Contempt for life is held as a primary virtue by the I., and they admit of no supremacy in their chiefs beyond that which their moral influence may command. They acknowledge only one God, and devote the Sabbath to rest.

INGWILLER, or Hengwiller, a commune and town of France, in the dep. of the Bas-Rhin, cant. and 3¼ m. N of Bouxwiller, on the r. bank of the

Moder. Pop. in 1841, 2,170. It has manufactories of madder, potash, starch, soap, tobacco, hosiery, and cordage, several dye-works and extensive bleacheries. Fairs for cattle, grain, &c., are held 3 times a-year.

INGWORTH, a parish of Norfolk, 2 m. N of Aylesham. Area 560 acres. Pop. 152.

INHAMBAN, or INHAMBANE, a country of E. Africa, situated to the S of Sabia and Sofala, and 200 m. NE of Delagoa bay. It is now the farthest region on this side to which the Portuguese dominion extends. Ivory and bees' wax are abundantly produced in the interior forests. The country in other respects is little known.—Also a river of Africa, of considerable magnitude, forming the N boundary of the country of the same name, and falling into the Eastern ocean, in S lat. 23° 15′, after a SE course of 150 m. At 8 m. above its entrance, is a town of the same name. Above this town, the river is navigable even for boats only 5 m.

INHAMBIPE, a town of Brazil, in the prov. and 50 m. NNE of Bahia, on a small river of the same name, which falls into the Atlantic near Villa-de-Conde.

INHANGA, or ZAVARA, a small river of Inhambane, which falls into the Indian ocean, in S lat. 24° 10′, after a SE course of 120 m.

INHAUMA, a parish and town of Brazil, in the prov. and 5 m. NE of Rio-de-Janeiro.

INHIMIRIM, a river of Brazil, in the prov. of Rio-de-Janeiro, which rises in the Serra-dos-Orgãos, runs S, receives the Ouro, the Santa-Cruz, Bonga, and Caioba, and flows into the bay of Nitherohi.

INIA, a river of Asiatic Russia, in the gov. of Tomsk, which runs NW, and flowing into the Mozambique channel, 20 m. N of the embouchure of the Sofala, after a course of 150 m., falls into the Obi, 50 m. NE of Kolyvan, after a course of 180 m.—Also a river in the district of Okhotsk, which flows SW into the sea of that name, after a course of 90 m.

INICHI, a sea-port of Asia Minor, on the Black sea, 80 m. N of Castamouni.

INIESTA. See HINIESTA.

INIQUIARI, a small river of New Grenada, which enters the Caura on the l. bank, after a NE course of 90 m.

INIRIDA, a large and abundant river of New Grenada, prov. of San Juan de los Llanos, which rises in the Sierra Tunuhy, runs NE, and falls into the Guaviare on the r. bank.

INISHAIL. See INNISHAIL; and generally for words with the prefix INIS, see INNIS.

INJEH-BURUN, a sharp but not high cape of Asiatic Turkey, on the coast of the Black sea, in N lat. 42° 9′, E long. 34° 56′, 73 m. E of Cape Kerempeh. It was the ancient *Sylias*.

INJEH-KARA-SU, a river of Asiatic Turkey, formed by the union of the Nazilitza and the Venetico, in the sanjak of Monastir, at a point about 6 m. NW of Servia. It flows in a N and NE course of 140 m. into the gulf of Salonica. Its general character is that of a deep full stream, flowing through fine pasture-lands.

INJEH-SU, a small town of Asiatic Turkey, 15 m. W of Gurun, remarkably situated in a ravine traversed by a rivulet which gives name to the town. It contains about 750 Mahommedan and an equal number of Greek families; and is governed by a mutsellim sent from Constantinople, its taxes being devoted to the maintenance of the Mahmudiyah mosque in Constantinople.

INJERAM, a town of Hindostan, in the Northern Circars, on the l. bank of the most eastern of the three principal branches of the Godaveri, 56 m. NE of Masulipatam.

INJIGHIZ, a town of Turkey, in the sanj. and 48 m. SE of Viza, on the r. bank of the Kara-su.

INKBARROW, a parish of Worcestershire, 8 m. ESE of Droitwich. Area 6,940 acres. Pop. 1809.

INKERMANN, a small town of European Russia, in the Crimea, at the head of the gulf of Sebastopol, 4 m. E of that city, and 25 m. direct distance SSW of Simferopol. It has given name to a battle, fought on the 5th Nov. 1854, in which the allied forces of only 14,000 men defeated 45,000 Russians aided by the fire from the forts of Sebastopol.

INKORESTI, a town of Turkey, in Moldavia, 12 m. NW of Tekritsch.

INKPEN, a parish of Berkshire, 4 m. SE of Hungerford. Area 2,840 acres. Pop. 743.

INN, a large river in the south of Germany, an affluent of the Danube. Its source is in the lakes of Saint-Meritz, in the Swiss cant. of the Grisons, at the foot of the Rhetian Alps, where it forms the romantic valleys called the Upper and Lower Engadine. It enters the Tyrol at Martinsbruck; traverses that province from W to E, and forms for some distance the boundary between it and Bavaria; enters Bavaria, and afterwards receives the Salza on the borders of Upper Austria; and separates Austria and Bavaria, till its course is closed by its junction with the Danube at Passau, on the r. bank. The Inn has a course of more than 250 m., and being early swelled by a number of streams from the Alps, becomes navigable so high as Hall in the Tyrol. At Passau it is nearly 900 ft. wide. Its principal affluents on the r. are the Ocz, the Sill, the Zill, and the Salza; on the l. the Trofana, the Mangfall, and the Roth. It was the *Œnus* or *Ænus* of the Romans.

INNACONDA, a town of Hindostan, on the Northern Circars, 52 m. SW of Guntur, and near the l. bank of the Gondijam.

INNERINGEN, a town of Hohenzollern-Sigmaringen, in the bail. and 5 m. NNE of Jungnau.

INNERKIP, a parish in Renfrewshire, bounded on the N and W by the frith of Clyde. Its coast is indented, but not deeply, by the bays of Gourock, Lunderstone, I., and Wemyss. It contains 12,540 acres: of which in moss or moors, are 5,860; arable, 4,500; sound pasture, 1,500. The village of I. is inhabited chiefly by fishermen, and frequented for sea-bathing. Its pop. in 1841 was 431. Pop. of parish in 1831, 2,088; in 1841, 3,420.

INNERLEITHEN, or INVERLEITHEN, a parish chiefly in the NE of Peebles-shire, but partly in the N of Selkirkshire. Area 30,100 acres. The surface gradually rises from the Tweed to the N extremity, and has, in general, a broken, rugged, and precipitous appearance. Hills, forming part of the broad range which diverges at an acute angle from the central chain of the Southern Highlands of Scotland at the Hartfell group, and runs NE to St. Abb's head, and attaining here, in many of their summits, the elevation of about 1,000 ft. above sea-level, crowd nearly the whole area. Estimating the whole area at somewhat more than 30,000 acres, nearly 26,000 are enclosed and constant sheep-walk, about 2,500 have been occasionally in tillage, nearly 550 are under wood, and about 1,500 are in a waste condition. About 16,000 black-faced and Cheviot sheep, and nearly 400 black cattle, feed upon the pastures. Pop. in 1801, 591; in 1831, 810; in 1841, 931.—The village of I. stands on the haugh-ground of Leithen water, about a ½ m. above the influx of that stream into the Tweed, 6 m. from Peebles, and about 28 m. from Edinburgh. It consists chiefly of one neat street running along the public road, and winged with detached buildings and little clusters of houses. Most of the houses have been erected as accommodation for summer-rusticators and invalid visitors to

the spa. Across the Leithen is a stone-bridge, connecting the two parts of the village, and carrying over the Glasgow and Kelso turnpike. The mineral spring to which the v. mainly owes its prosperity, seems to have been unremarked for its medicinal properties till about the commencement of the present cent. In 1824, the publication of Sir Walter Scott's tale of 'St. Ronan's Well,' greatly enhanced its celebrity, and poured down upon it some rays of that lustre which popular opinion then assigned to 'the Great Unknown.' The well springs up at the base of the Lee-pen, about 200 ft. above the street of the village. In its original state, it issued in small quantities, and at only one spring; but, when the ground was dug to its source, in order to clear away admixtures near the surface, it became emitted in two streams of different strength. A quart of the less impregnated stream has been found to contain 5·3 grains of carbonate of magnesia, 9·5 grains of muriate of lime, 21·2 grains of muriate of soda,—in all, 36 grains; and a quart of the other stream, 10·2 grains of carbonate of magnesia, 19·4 of muriate of lime, and 31 of muriate of soda,—in all, 60·6 grains. The waters, jointly with the salubrious influence of the climate, are efficacious chiefly in cases of ophthalmic complaints, old wounds, and dyspeptic and bilious disorders. Tartans and broad cloth are manufactured here, to the extent of an annual consumption of raw material of between 2,500 and 3,000 stones. Pop. of the v., in 1838, irrespective of summer-visitors, or persons attracted by the spa, 412; in 1841, 431.

INNERSTE, a river of Germany, rising in the Harz, near Zellerfeld in Brunswick, and flowing into the Leine, on the r. bank, near Ruthe in Hanover, after a course of 38 m.

INNERWICK, or INVERWICK, a parish in the E of Haddingtonshire, about 9½ m. in length, by about 2½ m. in average breadth. Two-thirds of the surface stretch across the Lammermoor hills. The coast—which, followed along its indentations, is about 2¼ or 2½ m. in extent—partakes, in a general way, but tamely, of the rocky boldness with which the ocean is confronted from Dunbar to St. Abb's head. About five-ninths of the area of the parish are in natural pasture; nearly four-ninths are in tillage; and 350 acres are under plantation. The p. is intersected along the coast by the mail-road between Edinburgh and London, by way of Berwick; and by the North British railroad along Monynut edge by a road between Dunbar and Dunse. The v. of I. is situated at the base of a steep but cultivated hill, about 1 m. W of the Edinburgh and London road. Pop. of the p., in 1801, 846; in 1831, 987; in 1841, 961.

INNICHEN, a town of Austria, in Tyrol, circle and 14 m. ESE of Bruneck, on the r. bank of the Drau.

INNISBEG, an island in the estuary of the Ilen, co. Cork. It lies in the upper part of the estuary, 3¾ m. SSW of Skibbereen; and measures 1¼ m. in length, and ¾ m. in breadth.—Also an islet in the Atlantic ocean, 3 m. SSE of Tory island, off the coast of Donegal.—Also an islet in the Atlantic ocean, about ¾ m. N of the Great Glasquet, co. Kerry.—The name, meaning 'the small island,' is applied to numerous islets in Ireland.

INNISBEGIL, an island nearly in the middle of Achill sound, co. Mayo. It extends lengthwise from E to W; and is separated by narrow sounds from the island of Achill on the W, of Annagh on the S, and the mainland of Erris on the E. Its length is about 2 m., and its breadth about 1½ m.

INNISBOFFIN, an island in the Atlantic ocean, about 1 m. N of the mainland of co. Donegal, and 3 m. ENE of Bloody-Foreland. It measures about 1 m. in length, and between 3 and 4 m. in circumf.—Also an island and a parish in co. Mayo. Length, 3½ m.; breadth, 2 m.; area, 3,151 acres. Pop. in 1831, 1,462; in 1841, 1,612. It extends E and W; is divided by a narrow sound from Innishark on the SW; and is partly encircled with a zone of isles, islets, and rocks, the chief of which is Davilin. Though politically within co. Mayo, it lies in considerably closer topographical position to co. Galway; being 9 m. W by S of the nearest part of the mainland of Mayo, and only 2¾ m. WNW of Claggan-point, co. Galway. The N coast is a precipitous cliff, indented with two inlets; the W coast has at its upper end a lagune, divided from the sea by a beach of stones; and the S coast has an excellent natural harbour with 9 or 10 ft. of water, and facing the SW.—Also an island of co. Longford, in Lough Ree.

INNISCALTHRA, a parish, partly in co. Cork, but chiefly in co. Galway. It includes some isles in Lough Derg, lies mainly along the W shore of that lake, and is situated 3¾ m. NE by E of Scariff. Area of the Munster section, 684 acres, of which 279 are in Lough Derg; of the Connaught section, 10,599 acres, of which 1,532 acres are in Lough Derg. Pop. of the whole, in 1831, 2,198; in 1841, 2,378. The rivulet Bora separates the two sections of the p., and at the same time forms the boundary between Connaught and Munster. The principal islands are, in the Munster section, Red island; and, in the Connaught section, Inniscalthra, Young's island, Basley island, and Cribby island. The celebrated island of I., which gives name to the p., but is itself more usually called the Holy island, lies about a ½ m. from the shore, and 2¾ m. E by N of Scariff. It is the chief of a group of three; and contains an area of about 20 acres. It has been famous from early ages as the site of ecclesiastical structures and the scene of superstitious observances. It has a pillar-tower 70 ft. high, in good preservation.

INNISCARAGH, an islet in the p. of Templecroan, co. Donegal, 1¼ m. S of Arran, and 1¼ m. W of Innisfree.

INNISCARRA, a parish, 5 m. W by S of Cork, co. Cork. It contains the villages of Lower and Upper Dripsey. Area 10,190 acres. Pop. in 1831, 3,432; in 1841, 4,407. The river Lee flows along the S; and the Dripsey traces the W boundary.

INNISCATTERY,—popularly SCATHERY, and anciently INNISCATHAI,—an island of co. Clare, in the Shannon, 1¾ m. SSW of Kilrush, and ¾ m. S of the nearest part of the mainland. It contains about 100 acres; well stocked with cattle, and abounding with rabbits and wild fowl. It is a low-browed island, little remarkable in its configuration or natural structure and produce, yet figures prominently in history and archæology. Its sound or roadstead was early ascertained by the Vikingr to be one of their most convenient harbours for making descents upon Ireland: and the island, in consequence, was for a long period a bone of contention and a scene of strife between them and the Irish. Eleven churches are asserted to have been built on the island by Senanus; but the remains of only seven ecclesiastical structures can now be traced, and three of these evince themselves, at a glance, to have been built long after the time when Senanus is said to have flourished. The cathedral, St. Mary's church, and another of the seven structures, are in the pointed style of architecture, but possess no particular attraction; the four other structures measure only from 12 to 24 ft. in length, and were lighted each with only one or two very small loopholes. But proudly over all soars one of the finest pillar-towers in the kingdom, springing, from a base of 22 ft. in circumf.,

to an alt. of 120 ft., and wearing still its barrad or conical cap, though very long ago split by lightning almost from top to bottom. This *turraghan* forms an useful landmark to mariners.

INNISCLOGHRAN, or INNISCLOTHRAN, an islet of co. Longford, in the vicinity of Innisboffin.

INNISCOO, an islet of co. Donegal, in the vicinity of Rutland island, measuring about a ½ m. by a ¼ m. The narrow sound between it and Rutland forms the harbour of the latter island.

INNISDADROM, an island, a little S of the centre of the estuary of the Fergus, and 4¼ m. SW of Newmarket, co. Clare. It extends SW; and though proportionately narrow, is about 1¼ m. in length.

INNISDRISCOL, an island of co. Cork, on the E side of the lower part of Roaring-Water bay, and across the mouth of the creek of Ringcove. Its length is about 1½ m.; its breadth about 1 m.

INNISFALLEN, a beautiful island, nearly in the centre of the Lower Lake of Killarney, and about 2¼ m. SW of the town of Killarney, Munster. It comprises an area of 18 acres, is richly wooded, and has a sinuous shore-line partly of shallows and partly of bold rocks. Its surface is spread with the brightest verdure, over which flourish, in rich foliage, great varieties of trees and shrubs, and especially fine specimens of the arbutus, the sorbus, and the holly. The abbey of I. is alleged to have been founded toward the close of the 6th cent.; but, though its celebrated 'Annals' have the reputation of being one of the earliest and most authentic of the ancient Irish histories, hardly anything is known respecting the establishment till 1180. Its ruins are rude, and nearly level with the ground, and indicative of a much later date than that of the alleged original founding of the establishment; but an older pile stands on a projecting cliff at the SE end of the island. The *Annals of I.* were written by one monk down to 1215, and continued by another to 1319. Though containing extracts from the Old Testament, a history of the world down to St. Patrick's arrival in Ireland, and a view of Irish civil affairs from 432 to 1319, they are so exceedingly brief and superficial as to comprise only 57 leaves of medium quarto parchment. The original work is in the Bodleian library.

INNISFIL, a township in the Simcoe district of Upper Canada, skirted on the E by Lake Simcoe. It is mostly wild land. Pop. in 1842, 762.

INNISFREE, a small island of co. Donegal, 1 m. S of Rutland island, and midway between the v. of Dunglo and the island of Arran. It is about 2 m. in circuit.

INNISHANNON, a parish and town of co. Cork. Area of p. 7,153 acres. Pop. in 1831, 3,840; in 1841, 3,615.—The small post-town of I. stands on a beautiful bend of the Bandon river, on the road from Cork to Bandon, 3½ m. NE of Bandon, and 12 m. SSW of Cork. The Bandon is here tidal, and brings up vessels of considerable burden from Kinsale. Pop. in 1831, 653; in 1841, 625.

INNISHARGIE, a parish in co. Down. Area 5,516 acres. Pop. in 1841, 3,014. The surface is principally a part of the E sea-board of Lough Strangford, but extends on the N to the Irish channel.

INNISHARK, an island of co. Mayo, separated by a narrow sound from the SW side of Innisboffin, of a circular form, and upwards of 1¼ m. in diam.

INNISHERE, an insular parish of co. Galway, the most easterly of the Arran islands, and separated by the South sound from the mainland of co. Clare. Length from E to W, 2 m.; breadth, 1⅛ m. Area 1,400 acres, of which 16 acres are in Lough More. Pop. in 1831, 442; in 1841, 456. The highest ground has an alt. of 202 ft.

INNISHERKIN, or SHERKIN, an island of co. Cork, extending S down the mouth of Baltimore bay, and seaward to within 1¼ m. of Cape Clear island. With the islands, islets, and rocks in its vicinity, it renders Baltimore bay an intricate though mimic archipelago. Its length is 3¼ m.; its greatest breadth 1½ m. Pop. in 1831, 1,026. The N extremity is called Wren-head, and the S extremity Sleamore-point. The E side is all high, bold, rocky coast.

INNISIRRER, an island of co. Donegal, 3 m. SSW of Bloody-Foreland. It is about 1 m. in length.

INNISKEA, two islands of co. Mayo. They lie parallel to the S part of the peninsula of the Mullet, at the distance of from 2¼ to 4 m. W, and 9 m. N by E of Achill-head. North I. is 2¼ m. long from N to S; South I. is 1¾ m. from NNE to SSW; but the two practically form only one island, being mutually separated by a sound not 50 fath. wide.

INNISKEEL, a parish 11 m. N of Killybegs, co. Donegal. Length 24 m.; breadth 8 m. Pop. in 1831, 11,432; in 1841, 12,606. The whole is politically divided into the two parishes of Upper I. and Lower I., mutually separated by the sea-lough called Loughrusmore. Area of Upper I. 21,627 acres; of Lower I. 80,453 acres. The district includes some islets in the Atlantic; and extends NE from the Glen river, through the moorish, broken, and chaotic basin of the Awinea, the Stracashel, the Finn, and the Guibarra, to the rugged mountainous region around Loch Muck,—a lake whose elevation above sea-level is 678 ft. Rochrow summit in Upper I. has an alt. of 1,649 ft.; and Aughta summit in Lower I. of 1,958 ft. The chief lake in Upper I. is Nalughraman, and has an elevation of 593 ft.; and the chief lakes in Lower I. are Finn, 438 ft., Ea, Kip, Macew, Derryduff, Sheskinmore, Doon, Derkmore, Nacroaghy, Drumnalough, and Muddy. The v. of Glenties is situated in Lower I.

INNISKILLEN. See ENNISKILLEN.

INNISKILLEN (MOUNT), a salient mountain in Tropical Australia, near the Victoria river.

INNISLACKEN, a small island at the middle of the entrance into Roundstone bay, co. Galway.

INNISMACSAINT, or ENNISMACSAINT, a parish, partly in co. Donegal, but chiefly in co. Fermanagh. The Donegal section contains the vs. of Bundoran and Single-Street, and part of the town of Ballyshannon; the Fermanagh section contains the v. of Derrygonnelly, and a small portion of Churchill. Length of the p. 20 m.; breadth 4 m. Area of the Donegal section 7,126 acres; of the Fermanagh section 45,867 acres. Pop. in 1831, 14.874; in 1841, 14,693. The summits of Glenalong and North Shean, in this p., have altitudes above sea-level of respectively 795 and 1,135 ft. The island of I., which gives name to the p., is situated in Lough Erne, about a ½ m. from the shore, and 3 m. ESE of Churchill, and was the site of a somewhat famous abbey, which monastic writers allege to have been founded early in the 6th cent.

INNISMACKLELAN, the most southerly of the chief isles of the Blasquet group, co. Kerry. It lies 2½ m. S by W of the Great Blasquet.

INNISMAGRATH, a parish of co. Leitrim. Length 8 m.; breadth 6½ m. Area 27,439 acres, of which 4,026 acres are in Lough Allen. Pop. in 1831, 7,976; in 1841, 9,603. The surface of the whole declines S and E to the head and the W side of Lough Allen, and is to a large extent mountainous. Two summits, the one on the W and the other on the S boundary, have alts. above sea-level of respectively 1,125 and 1,377 ft.

INNISMOTT, a parish of co. Meath, 3 m. WSW of Ardee. Area 1,457 acres. Pop. in 1831, 405; in

1841, 481. The surface declines E along the course of the Dee.

INNISMURRAY, a small island of co. Sligo, off the S side of the entrance of Donegal bay, 3 m. N of Gessigo-point. It is a rock rising from the sea, with precipices toward the ocean, but shelving gently on the side opposite the mainland, and contains about 130 acres of shallow soil.

INNISNEE, an island of co. Galway, screening the E side of Roundstone bay. It extends upwards of 2 m. N and S, but is proportionally narrow.

INNISRUSH, a village in the p. of Tamlaght-O'Creilly, co. Londonderry. Pop. 282.

INNISTIOGUE, a parish and town of co. Kilkenny. Area 9,741 acres. Pop. in 1831, 3,221; in 1841, 3,501. The surface extends along the r. bank of the Nore, here a broad and tidal stream.—The town, formerly a parl. burgh, is situated on the W bank of the Nore, 4½ m. SE of Thomastown. Pop. 966.

INNISTURK, an island of co. Mayo, 4¼ m. NNE of Innisboffin, and 6 m. W of the nearest mainland. Its length is 2¼ m.; its breadth 1 m. It consists chiefly of slate rock.

INNOWRAZLAU, or JUNG-BRESLAU, a small town of Prussian Poland, in the gov. and 26 m. ESE of Bromberg. Pop. 5,660, nearly one-half of whom are Jews. It has some trade in woollens, and is the seat of a board for the superintendence of mines of saltpetre in the neighbourhood.

INNSBRUCK, INSPRUGG, or INSPRUCK, [*i. e.* 'Bridge of the Inn,'] the capital of the Tyrol, situated at the confluence of the Sill and the Inn, 62 m. S of Munich, 84 m. WSW of Salzburg, and 84 m. NNE of Trent; at an alt. of 566 metres = 619 yds. above sea-level. Its pop. in 1845 was 12,800. It may be called a handsome town, although it has but one broad principal street, in the centre of which stands a full-length and exalted figure of the Virgin. Its public edifices, more remarkable however for size than elegance, are the government-house, the town-house, the opera, the arsenal, and the barracks. The only buildings of taste are the small chapel erected by Maria Theresa to the memory of her husband, Francis I., on the spot where he suddenly expired, and the great hall, the former residence of the princes of Tyrol. In the church of the Franciscans is a magnificent cenotaph, erected to the memory of the emperor Maximilian, with 28 bronze statues of members of the house of Austria. A university was founded here in 1672, but afterwards suppressed, and its place supplied by a lyceum or academy. It was, however, re-established in 1826; and in 1842 had 24 professors, and 416 students, and possessed a library of 40,000 vols. The transit from Germany to Italy is considerable. The chief manufactures are silk, woollen, linen, and muslin goods, leather, glass, and cutlery. The artisans excel in wood-carving. The Innthal, or valley in which I. stands, one of the largest of those formed by the Northern Alps, and also the most picturesque, is about 30 m. in length; its breadth in the neighbourhood of I. is about 3 m. The river washes one of the sides of the town, and separates it from a suburb of considerable extent. The immediate environs are rich and beautiful, and interspersed with small villas. The background of the picture is formed by mountains, covered along their sides with vast forests, while their lofty tops terminate in a mass of precipitous and barren rocks. To crown the whole, the stranger, walking up the principal street, sees over the roofs of the houses, and as if overhanging the town, an enormous snow-capped mountain, called the Sollstein-berg. This valley was the scene of several of the events that took place during the heroic resistance made by the Tyrolese to the French and Bavarians in 1809.

INNSTADT, a small town of Bavaria, to the E of Passau, from which it is separated by the Inn.

INNTHAL. See ENGADINE.

INNTHAL (OBER). See IMBST.

INNTHAL (UNTER). See SCHWATZ.

INNVIERTEL, a large district or circle of Upper Austria, consisting of the territory lying between the Danube, the Inn, and the Salza. It was originally a part of Bavaria, and was ceded to Austria by the treaty of Teschen in 1779. It was restored to Bavaria in 1810, but retained only till 1815. In that year also the quarter of the Hausruck, which Bonaparte had compelled Austria to cede to Bavaria, was restored for an equivalent, and annexed to this circle, so that at present its extent is 1,270 sq. m., with 200,000 inhabitants. The chief towns are Braunau and Scharding. The S division of this district, lying towards the duchy of Salzburg, is intersected by several chains of mountains covered with wood; but the tracts on the banks of the Danube and the Inn are fertile and well-cultivated, producing wheat, barley, and flax, and having extensive pastures.

INNY, a river of the NW of Leinster. It issues from Lough Sheelan, and falls into the head of the extreme E expansion of Lough Ree, after a S and SW course of 24 m. Much of the upper part of its run is through a flat, tame, boggy country; but the lower part is through a district not only rich and beautiful, but rendered classic by association with the names and writings of Oliver Goldsmith and Maria Edgeworth.—Also a rivulet of co. Kerry, rising among the lofty mountains on the E border of the barony of Iveragh, and flowing W about 12 m. to the head of Ballinskelligs-bay.

INNYCOTTA, a town of Hindostan, in the prov. of Berar, belonging to the Nagpore rajah, and situated on the E bank of the Wurda river, 47 m. SSW of Nagpore.

INOWLODZ, or INOWLADISLAW, a village of Poland, in the gov. of Masovia, 16 m. S of Rava, on the Pilica.

INSARA, a town of European Russia, in the gov. of Penza, at the confluence of the Issa and the Insara, 278 m. ESE of Moscow. Pop. 4,730. There are iron works here.

INSCH, a parish in the Garioch district of Aberdeenshire, skirted by the Urie water on the N. Area 7,500 acres. Pop. in 1831, 1,338; in 1841, 1,379.

INSCRIPTION (POINT), a sandy point on Sweers's island in Australia, in S lat. 17° 6′ 50″, E long. of Port Essington 7° 28′ 30″.

INSELBERG, a mountain of Germany, in the forest of Thuringia. Alt. 3,300 ft. above sea-level.

INSHENE, a village of Upper Egypt, on the l. bank of the Nile, 9 m. S of Dendera.

INSHILLA, a small sea-port on the E coast of Tunis, and 108 m. S of Tunis.

INSINGEN, a large village of Bavaria, in the circle of Franconia, 4 m. S of Rothenburg.

INSKIP, a township of St. Michael p., in Lancashire, 7½ m. NW of Preston.

INSKOLKAIA, a fortress of Asiatic Russia, in the gov. of Kolivan, 40 m. SW of Busk.

INSMING, a commune of France, in the dep. of Meurthe, cant. of Albestroff, 20 m. ENE of Chateau Salins. Pop. 860.

INSTERBURG, a town of E. Prussia, in the gov. of Gumbinnen, on the river Inster, at its confluence with the Angerapp, 50 m. E of Königsberg. Pop. in 1846, 9,700. Its chief traffic is in corn and lint-seed produced in the adjacent country.

INSTOW, a parish of Devonshire, 4 m. NNE of Bideford. Area 1,360 acres. Pop. 557.

INSUMA, a town of Arabia, in the Hedjaz, 100 m. SW of Mecca.

INTCHEN-OUEI, a town of Chinese Tartary, 230 m. ENE of Pekin.

INTEL, a small port of France, in the dep. of Morbihan, cant. of Erdwen, 12 m. SE of L'Orient. Pop. 860.

INTERLACHEN, a beautiful village of Switzerland, in the cant. of Bern, situated on the l. bank of the Aar, between the lakes of Thun and Brienz, 32 m. SE of Bern, in a small plain about 3 m. in length, and 2 m. in breadth, richly cultivated, and girdled by lofty mountains.

INTRA, a small town of Piedmont, on the l. bank of the Lago-Maggiore, 30 m. N of Novara, 1½ m. NE of Pallanza, in a picturesque country, called the Val Intrasca. It is noted chiefly for its bleaching grounds and dye-houses. Pop. 3,743.

INTRODACQUA, a town of Naples, in the prov. of Abruzzo-Ultra 2da, 4 m. SW of Sulmona. Pop. 4,000.

INTWOOD, a parish of Norfolk, 4 m. SW of Norwich. Area 440 acres. Pop. 49.

INVER, a parish of co. Antrim. Area 1,773 acres. Pop. in 1831, 953; in 1841, 1,020. It contains the villages of Inverbeg and Invermore. Lough Larne forms its E, and the Larne river its N boundary.—Also a fishing-village in co. Mayo, on the E shore of Broadhaven, and 6 m. NE of Belmullet.—Also a parish on the S coast of co. Donegal, 7½ m. E of Killybegs. It contains the villages of Port and Mount Charles. Area 36,810 acres. Pop. in 1831, 11,785; in 1841, 12,835. About one-third of the surface is arable; the remainder is heathy upland pasture, and wild irreclaimable mountain. Benbawn, the principal eminence, is 1,490 ft. in alt., and forms part of a great chain which extends from the Atlantic about 20 m. E, and then deflects S toward Lough-Erne.—The Inver issues from a lake on the top of a mountain at the E extremity of the p., tumbles headlong over the side of the mountain in a cataract called the Grey Mare's Tail, and runs about 6 m. SW to the head of Inver-bay.—Inver-bay may be regarded as entering between Durin-point on the E, and St. John's cape on the SW, which are 5 m. asunder. It penetrates the land 5 m. NE, and forms a good fishing-ground.—The small v. of Inver, situated at its head, is dependent chiefly on fishing at the bar of the Inver. The v. of Port-of-Inver is situated on the W side of the bay, 1½ m. from Inver.

INVER (Loch), a small arm of the sea, on the NW coast of Sutherlandshire, near the promontory of Ru-stoer. The village of Inver or Lochinver is a post-station 245 m. NNW of Edinburgh.

INVERARITY, a parish in the centre of the S division of Forfarshire, intersected by the Dundee and Forfar railway. Pop. in 1801, 820; in 1841, 997.

INVERARY, a parish in Argyleshire, extending about 18 m. in length, and on an average 3 m. in breadth, somewhat in the form of a crescent, and chiefly betwixt Loch-Awe and Loch-Fyne, and watered by the Aray and the Shira. Pop. of the town and parish in 1801, 2,051; in 1841, 2,285.

Inverary, a royal burgh in the above p., and the county-town of Argyleshire, is 60 m. NW of Glasgow, by Luss and Arroquhar, 39 m. N by W of Rothesay, in Bute, and 32 m. SE of Oban, situated on a small bay on the NE side, and within 5 m. of the head of Loch-Fyne, where the Aray falls into that arm of the sea. It is a small town, consisting chiefly of one street, in the centre of which stands the church, and another row of houses which face the bay. The pop. in 1831 was 1,117; in 1841, 1,233; in 1851, 1,164. It unites with Ayr, Irvine, Campbellton, and Oban, in returning a member to parliament. The parliamentary and municipal constituency in 1840 was 55; in 1848, 40. The chief support of the place is the herring-fishery, which appears to have subsisted here from time immemorial.—Not far from the town, on a level space on the S bank of the Aray, is the castle of I., the principal seat of the duke of Argyle, a large quadrangular building, with a round tower at each corner, and a high glazed pavilion, by which the staircase and saloon are lighted, shooting up above the towers in the centre. It was founded in 1745, and is built of a micaceous slate brought from the other side of the lake, which is extremely soft, but will, in all probability, long stand the effects of the weather. The stone is of a blue grey colour; a single shower of rain turns it almost black, but a gleam of the sun restores its original colour.

INVERAVEN, a parish partly in Morayshire, stretching from the river Spey to the borders of Aberdeenshire, but chiefly in Banffshire. Its length is about 20 m.; breadth from 4 to 9 m. Pop. in 1831, 2,648; in 1841, 2,417. The river Livet intersects this parish, rising from numerous sources within its limits, and flowing NW through the celebrated Glenlivet, which occupies a considerable portion of its surface, to the Aven, whence the name Inveraven is derived. The Aven, however, only skirts the parish on the W in its course to the Spey, which runs across the NW boundary.

INVERCHAOLAIN, a parish in the district of Cowal, in Argyleshire, about 15 m. in greatest length, and 8 m. in greatest breadth; bounded on the SW by the E. Kyle of Bute, and intersected for 8 m. by Loch Striven. A ridge of mountains rises with a steep ascent all along the coast. In some places there are small flat fields nigh the shore; but, for the most part, the ascent from the sea is immediate. Pop. in 1801, 626; in 1831, 596; in 1841, 699.

INVERESK, a parish in the extreme NE of Edinburghshire, skirting on the N the frith of Forth. Along the shore stretches a broad belt of pleasant downs, formed by the subsidence of the sea, and only a few feet above the level of high water, furnishing a charming field for the favourite exercises of golf and walking. Behind this plain the surface rises in a slow ascent of verdant fields and highly cultivated soil, sending up across the SW projection the hills of Fallside and Carberry, 540 ft. above sea-level. The river Esk, combining just at the point of entering the p. the waters of the N. Esk and the S. Esk, bisects the p. into considerably unequal parts, in a beautifully winding course northward to the sea between Musselburgh and Fisherrow. The celebrated Pinkie-burn rises a little SE of Inveresk hill, and flows first N and then NW to the Esk, between Musselburgh and the sea. Little more than 1 m. in length of course, it derives all its interest from historical association with the disastrous battle to which it gave name. Coal, of remarkable aggregate thickness of seam, stretches beneath the whole p. It is mined chiefly at Monkton-hall, New Craighall, and Edmonstone, and produces, with the labour of upwards of 550 persons, nearly 55,000 tons a-year. Besides the v. of I., the p. contains the towns of Musselburgh and Fisherrow, and the vs. of Newbigging, Westpans, Wallford, and Craighall. The p. is cut from W to E near the shore by the great mail-road from Edinburgh to London; it is traversed by the North British railway and its branch-line to Musselburgh; and by a part of the Edinburgh and Dalkeith branch of the North British railway, and contains the inclined plane of the railway passing New Hailes, Fisherrow, and Craighall. Pop. of the p. in 1831, 8,961; in 1841, 8,263.

INVERFARRAKAIG (Pass of), a beautiful de-

file leading from Loch Ness, across Strathcrrick, into Strathnairn.

INVERGORDON, a village in Ross-shire, in the p. of Rosskeen, on the N side of the frith of Cromarty, over which there is a regular ferry to Inverbreckie. It has a good harbour, having 16 ft. water at spring-tides, and 13 ft. at neap; and a fine sandy shore, where vessels may safely deliver their cargoes. It is 12 m. from Dingwall.

INVERGOWRIE, a village pleasantly situated at the head of a little bay formed by the influx of I. burn to the frith of Tay, in the p. of Liff, Forfarshire, 2½ m. W of Dundee, and 19½ m. E of Perth.

INVERKEILOR, a parish nearly in the centre of the maritime district of Forfarshire, bounded on the E by the German ocean. Area 6,100 Scottish acres. Keilor burn, from which the p. has its name, rises on the S boundary, and flows 4 m. E to Lunan bay. Lunan water comes in from the W, and falls into the sea at Redcastle. The v. of I., situated near Lunan water, contains a pop. of 150. Pop. of the p. 1,879.

INVERKEITHING, a parish in Fifeshire, stretching along the shore of the Forth, about 4 m. from E to W. At its E end a peninsula runs into the frith, at the extremity of which is N. Queensferry. Pop. in 1801, 2,228; in 1831, 3,189; in 1841, 2,350.—The town of I. is situated at the E end of the p., on an eminence overlooking the bay which bears its name, and chiefly consists of a main street of considerable length, and several lanes diverging from it, with a number of houses fronting the harbour. A lazaretto is built on the point of the bay opposite the town. As a royal burgh it is of great antiquity. The corporate-revenue is about £500. The burgh joins with Dunfermline, Stirling, Culross, and S. Queensferry, in sending a member to parliament. Pop. in 1851, 1,814. The parliamentary and municipal constituency in 1839–40 was 56; in 1848–9, 45. The harbour is pretty good, though it might be greatly improved; vessels of 200 tons burden can load and sail from it at spring-tides, but it is usually frequented by smaller vessels. There are at present 20 vessels belonging to it, varying in burden from 20 to 100 tons, which are chiefly employed in the coasting trade. A considerable number of foreign and English vessels load coal here.

INVERKEITHNIE, a parish in the shire of Banff, extending along the S bank of the Deveron about 6 m. Pop. in 1801, 503; in 1831, 589; in 1841, 687. The rivulet Keithnie intersects it from S to N, entering the Deveron near the p.-church.

INVERKIRKAG. See Assynt.

INVERLOCHY, a hamlet and castle on the E shore of Loch-Eil, 2 m. from Fort-William. The castle is a quadrangular building, with round towers at the angles, measuring 30 yds. every way within the walls. Near this place the celebrated marquis of Montrose signally defeated the Campbells under the marquis of Argyle, in February 1645.

INVERNESS, a parish in the shire of Inverness, bounded on the NE by the Beauly and the Moray friths. Its length from NE to SW is 14 m.; its average breadth 2½ m. It may be considered as the NE portion of the Great glen of Caledonia. On the S the surface rises to an elevation of about 400 ft.; on the N the acclivity is higher and more precipitous. The elevation of Loch Ness above sea-level is only 46 ft. The coast-line is flat, and well cultivated. The river Ness intersects the p. for 8 m. The most remarkable hill is Tomnahurich, near the town, on the W side of the river, a beautiful isolated mount, whose length is 1,984 ft.; breadth 176 ft.; and elevation from the channel of the river 250 ft. The elevation of Craig-Phadric from the sea-level is 435 ft. The number of arable acres in the p. is calculated at from 8,000 to 9,000. Pop. in 1841, 15,308.

INVERNESS, a seaport, a royal burgh, the capital of the Northern Highlands of Scotland, and the supposed original metropolis of *Pictavia*, stands 19½ m. SSW of Cromarty, 38½ m. WSW of Elgin, 118½ m. WNW of Aberdeen, and 156½ m. NNW of Edinburgh. Its site is on both banks—chiefly the r. one—of the river Ness, from a ½ to 1½ m. above its entrance into that long sweep of marine waters which, inward from this point, is called the Beauly frith or loch, and outward is assigned a community of name with the Moray frith. Three large openings,—the basin of the Beauly frith from the W,—that of the Moray frith from the NE,—and the divergent termination of the Glenmore-nan-Albin from the S,—meet at the town and pour around it a rich confluence of the beauties of landscape, and the advantages of communication. Each outlet is different from the others, and each is beautiful; whether we proceed towards Fort-George, or towards Moy, or enter the valley of the Ness, or skirt the shores of the Beauly frith. All the W town, and nearly all the outskirts, as well as some of the interior of the E town, may at present compare in general neatness with any modern town of its size in the United kingdom. The public buildings, though possessing no remarkable features of elegance or beauty, are both creditable and interesting. A suite of co. buildings, which crowns the Castle-hill, and was erected at a cost of about £7,000, strongly arrest the eye of a stranger. On the NE side of Academy-street stands the Inverness academy, an extensive erection opened in 1792 for the education of the families of the upper classes throughout the Northern Highlands. On the l. bank of the Ness, 3 furl. above the old bridge, stands the infirmary of the northern cos., built in 1804, and including a lunatic asylum. At two beautiful islets in the Ness, very nearly united, and lying about a mile above the town, two handsome suspension-bridges have been flung across to connect them, the one with the r. bank, and the other with the l. These islands have been tastefully cut into pleasure-walks, and variously beautified as public promenades. Remains of a vast fort which Oliver Cromwell built in 1652–7—one of the four which he constructed for checking and overawing Scotland—may be seen at the harbour, 2 or 3 furl. above the mouth of the Ness. The fort had accommodation for 1,000 men; but it so annoyed and chafed the Highland chiefs under the keen administration of Cromwell, that at their request, and in acknowledgment of their loyalty to the Stuarts, it was destroyed immediately after the Restoration. I., though possessing many advantages for productive industry, has but inconsiderable manufactures. A white and coloured linen thread manufacture, which at the end of last cent. had its seat in the burgh, and was ramified over the northern cos., and employed about 10,000 persons, has almost wholly disappeared before the energetic competition of the towns of Forfarshire. A hemp factory within the area of Cromwell's fort employed 50 years ago about 1,000 persons, but now employs at most 300. Some coarse clothing, and tartan and plaids for the Highland market, are woven in the town; and there are 3 tanneries. Ship-building was a few years ago commenced in a spirit of enterprise. Malting was for generations a chief employment in the town; and I. had anciently a large share in the limited commerce of Scotland. During several centuries previous to the Union, it was the adopted home of foreign traders, or was annually visited by German merchants; and it conducted, with the ports of Holland and other parts of northern continental Europe, an extensive trade in skins and other Highland pro-

duce, in exchange for foreign manufactures. The northern cos., and even the Highlands generally, as well as the Western and the Northern islands, looked to it as the only mart for their commodities, and the only depot whence they could obtain the produce of other lands. But during the effluxion of the former half of last cent., the Highlanders of the western and southern districts found their way by agents to Glasgow, and adopting it as a superior market, abandoned I. to the incompetent support of the infertile north. In its custom-house district, which extends from the mouth of the Spey to the Dornoch frith, there were, in 1831, 142 vessels of aggregately 7,104 tons; and in 1850, 149 under 50 tons, and 90 above that tonnage; aggregate of the 239 vessels, 11,279 tons. The number of sailing-vessels that entered inwards in 1850 was 965 = 61,219 tons; and 172 steamers = 41,061 tons. About one-third of the vessels, and about one-half of the tonnage, belong to the town. Steam-vessels sail every 10 days to London; once a-week to Aberdeen and Leith; and twice a-week to Glasgow and places intermediate along the route of the Caledonian and the Crinan canals. From I. and its vicinity, including Beauly and Easter Ross, between 30,000 and 40,000 quarters of wheat are annually shipped for London and Leith; and within its custom-house district about 100 cargoes of mixed goods from these ports and Aberdeen are annually debarked. A great trade is conducted also along the Caledonian canal, and disgorges most of its proceeds at the basin near the town. See article CALEDONIAN CANAL.—Three harbours, all small, but good and easily accessible, have at different periods been constructed in the Ness; the lowest admitting vessels of 250 tons burden, and the others vessels of 200 tons. At the Caledonian canal wharfs, within a mile of the town, large ships may receive and deliver cargoes, and in Kessock roads they have safe and excellent anchorage. The amount of customs collected at the port in 1850 was £5,008. At the July wool and sheep fair of I., the principal sheep-farmers throughout the north of Scotland are met by the sheep-dealers of southern counties, and by wool-staplers and agents from England, and sell to them annually sheep and wool to the value of between £150,000 and £200,000. —I. has not yet shared in the advantages of the railway-system. The Northern railway is now extended, on the east coast, onwards to Aberdeen, from which it has been proposed to carry the communication as far as Inverness. Another line, to connect I. with Ross-shire, by Beauly, Dingwall, and Tain, has been projected; and also a line running to Elgin, and thence by Braemar and the Spittal of Glenshee, to Perth.

I. is a burgh of great antiquity. The corporation revenue in 1838–9 was £1,985; in 1848–9, £1,930. The town is the seat of the courts of assize for the Northern counties; and unites with Forres, Fortrose, and Nairn, in sending a member to parliament. Parliamentary constituency in 1839, 475; in 1849, 496. Pop. of parl. burgh, in 1831, 9,663; in 1841, 11,575; in 1851, 12,715.

History.] The town of I. is invested with a fictitious interest, and assigned an origin at least 60 years before the Christian era, by Boethius and Buchanan connecting it with one of their apocryphal kings. Yet it probably was a seat of pop., and, at all events, it occupies a site in the centre of what certainly was a closely-peopled district in the remote age of British hill-strengths and vitrified forts. It is believed to have been the original seat of the Pictish monarchs; and is supposed, even after Abernethy and Forteviot became a sort of Pictish capitals, to have retained its pre-eminence, and not altogether lost it till the union of the Scottish and the Pictish crowns. In the reign of David I. it figures as a king's burgh, and was made the seat of a sheriff, whose authority extended over all the north of Scotland. After the accession of Bruce, and during the successive reigns of the Stuarts till near the Union, I. was constantly exposed to the predatory visits of the Islesmen and the Highland clans. The inhabitants distinguished themselves after the Revolution by enthusiastic and bold attachment to both Prelacy and Jacobitism. During the rebellion of 1745-6, and especially amid the stir which preceded and followed its closing-scene in the neighbouring field of Culloden, the town had the distinction, and reaped the bitter awards of being the virtual capital of the losing party. No modern event of note has occurred, except an earthquake on the night of the 16th of August 1816; and a fearful inundation of the river Ness in January 1849.

INVERNESS-SHIRE, the most extensive and by far the most mountainous county in Scotland; bounded on the N by Ross-shire and part of the Moray frith; on the E by the shires of Elgin, Moray, and Aberdeen; on the S by Perth and Argyle; and on the W by the Atlantic ocean. A small insulated district, between the shires of Banff and Moray, containing Cromdale and Inverallen, is annexed to it; and several of the Hebrides are politically attached to this co. The mainland extends in length from the point of Arasaig on the W, to the point of Ardersier on the E, where Fort-George is built, about 92 m.; its greatest breadth, from the ferry of Ballachulish to the boundary of Strathglass, is nearly 80 m. Playfair estimates the superficies of the continental part of this co., exclusive of lakes, at 2,904 sq. m., or 1,858,560 acres. To this approximation must be added 132 sq. m., or 84,480 acres, for the lakes. The surface of the islands attached to this co. is equal to 1,150 sq. m., to which we may add 59 sq. m. of insular lakes—making 1,209 sq. m., or 773,760 acres. The total superficies of the whole county, continental and insular, is thus 2,716,810 acres. It contained, in 1801, including its islands, 74,292; in 1811, 78,336 inhabitants; in 1821, 90,157; in 1831, 94,797, whereof 44,510 were males, and 50,287 females; in 1841, 97,799, in 19,194 inhabited houses; and in 1851, 96,328, of whom 44,648 were males, and 51,680 females. The increase per cent. in 50 years, from 1801 to 1851, has been 32, that for all Scotland being 78. The annual rate of increase within the same period of 50 years has been 0·56, that for all Scotland being 1·16. The number of families employed in agriculture, in 1831, was 9,892; in trade and manufactures, 2,753.—The real land-rent was estimated, in 1811, at £70,530 sterling. The value of assessed property, in 1815, was £185,565, of which the proportion under entail was nearly one-half; in 1843–4 it was £181,292.—The shire comprises 35 parishes. The number of parochial schools, in 1834, was 34, attended by 2,639 children. The number of schools not parochial was 122, attended by 6,667 children.

Divisions, &c.] The divisions of this co. are chiefly determined by natural boundaries. Lochaber comprehends that tract of country whose waters are discharged into the Western ocean at Fort-William. Moydart, Arasaig, S. and N. Morar, and Knoydart, seem to belong, in an extensive acceptation, to Lochaber. Glengarry is accounted a division; and Glenelg, Glenmoriston, Urquhart, Strathglass, and Aird, the vicinity of Inverness, the lordship of Petty, Ardersier, Stratherrick, the braes of Strathnairn and of Strathdearn, and the lordship of Badenoch, are all accounted separate divisions of the co. These divisions are generally marked by the different valleys watered by a river peculiar to each, and comprehended within parallel ranges of opposite hills. Unless one were to enter I. by the coast of the German ocean, its aspect from any other line of approach is rudely grand and forbidding. Mountains piled upon one another, and stretching away in immense chains, with hardly a pass or an opening to afford access from the S or W, form a barrier which requires enterprise to surmount. These mountains stretch across the island, and lie parallel to every valley—rising like immense walls on both its sides,

while the inhabited country sinks deep between them, with a lake or rapid river flowing in the centre; and no sooner is one defile passed over, than another range of hills comes into view, which conceal in their bosom another defile, and another strath of inhabited country. To form some conception of the W part of the co., one must suppose a deep valley beginning at Fort-William, and stretching across the whole co., nearly in the middle, from SW to NE. This valley has a range of lofty mountains on both sides, which, at the NE extremity, sink down into the sandstone strata of Nairnshire. The rivers, flowing between the openings of these parallel mountains, meet one another, and discharge their streams into the bottom of the valley, as a common reservoir, and feed Loch-Lochy, which falls W, and Loch-Oich and Loch-Ness, which fall NE: See these articles. But after we penetrate back through these parallel ranges of mountains for several miles, either to the r. or to the l., we find other rivers, which flow in a direction opposite to the former, and take their course away from the great valley of the canal. This range of mountainous ground between the Great valley and the Atlantic, is the highest and wildest throughout all the forbidding surface of this co., and has got the name of 'the rough bounds.' It extends from the head of Moydart, which joins the co. of Argyle, to Glensheil in Ross-shire—a distance of 70 m. or more. There descend from this general range of elevated land, five or six lines of lower but very rugged ground, which penetrate into the Atlantic, and form so many bold promontories on that shore. It is a singular feature in the complexion of this country, that the lower grounds are in many places covered with barren heath growing on a poor soil; while the tops of the mountains are in many instances clad with a rich carpet of green grass, springing from a fertile mellow earth. Travelling down the N side of Loch-Ness, a person of any taste must be struck with the beauty of the noble sheet of water, nearly 2 m. broad, which stretches away before him for a distance of nearly 24 m. The sides present a continued line of bold rocky ground, rising immediately from the lake to the height of mountains, without any opening on either hand, except at Invermoriston, at Urquhart, and at Foyers. These lofty banks consist of shelves of earth incumbent upon rock, and afford nourishment for copse of various kinds. In the division of the co. which lies E from the Great canal, there are six valleys of various degrees of sinuosity, which send all their waters to the German ocean. To the N of Loch-Laggan we arrive at high ground, where the waters separate in the same manner as at Laggan-achdrom on the side of the Caledonian canal, partly holding their course to the Atlantic, and partly to the German ocean. The rivers Pattack and Massie run almost parallel to each other for the space of 2 m.; and yet the former, after joining the Spean, is discharged into the Western sea; while the latter, uniting its waters with the Spey, flows eastward into the German ocean. The Spey derives its source from a small lake of the same name in the northern mountains. The co. is everywhere intersected by numerous rapid currents, which uniting form several large rivers. The most noted of these are the Spey, the Ness, the Lochy, the Garry, the Glass, &c., [see these articles,] all of which, with the lakes, abound with trout and salmon. The W shores, particularly of the districts of Moydart, Arasaig, Morar, and Knoydart, are indented with numerous bays, creeks, and arms of the sea—called lochs—which might be rendered excellent fishing-stations. On the confines of the county there are extensive tracts of natural wood,—evident remains of much larger forests. The fir woods of Glenmore and Strathspey [see these articles] are supposed to be far more extensive than all the other natural woods in Scotland together.

Climate and soil, &c.] On the W coast the rains are heavy, and of long continuance, but the winters are mild, and when snow falls, it soon disappears, owing to the genial influence of the sea-breeze, unless the wind be northerly. On the E coast the heaviest rains are from the German ocean; but the climate, upon the whole, is not so rainy as in those districts which are adjacent to the Atlantic. In the notes taken by Dr. Robertson from one gentleman's communications, it is stated that Fort William, Inverary, and Greenock are the most subject to rain of any towns in Scotland. In the *New Statistical Account* it is stated that the annual number of rainy days at the Inverness end of the Great glen is about 60 less than at Fort-William at the other extremity of the glen.—A very great proportion of the surface is covered with heath. When Dr. Robertson wrote, some were of opinion that 39 parts out of 40 of the surface of this co. were clad with its russet hues. The dominion of the heath is, however, daily losing ground before the progress of agriculture and the industry of the inhabitants. A considerable tract of the surface is under wood; much of it is rock; and nearly as much is covered with water. Clay, in a pure state, is but a small proportion of the soil. Along the river Beauly, near its confluence with the sea, and on the side of the frith of that name, there is a certain extent of a rich blue clay; and about Inverness, and down the border of the Murray frith, where creeks and bays abound in which the tide ebbs and flows very gently, some small fields of a clay soil present themselves. Haugh is frequently to be met with, and the fields of it are far more extensive than any other valuable soil in the county. In Badenoch, from Kinrara on the E, to the place where the Spey descends from the hill of Corryarrick,—a tract of more than 20 m.,—haugh abounds almost without interruption, on both sides of the river. The head of every loch or arm of the sea, on the W coast, where they receive their respective brooks from the valleys behind, have less or more of this kind of soil, all the way from Moydart to Glenelg. Loam, properly so called, is rare. Sand and gravel form part of the soil in a great variety of places. Strathnairn, and particularly Strathdearn, so far as they are within this co., abound with this light free soil: a great proportion also of Strathspey and of Badenoch is of this complexion. Till, next to a sandy or gravelly soil, is the most common; and, if the mountains are taken into account, the proportion of till exceeds all the other kinds taken together. Moss, moor, and heathy ground, in the opinion of some intelligent persons, as already noticed, covers two-thirds of the shire. If one-fortieth only be arable land, there are probably twenty-six of the remaining parts covered with heath incumbent on moss or a till bottom. Almost all the deep mosses of this country are situated on land which is more or less elevated above the general level of the valleys, and lie on gravel, or stones, or till. None of these fields of moss—except a patch at Corpach, and a very few more—are in the bottom of a valley, like the famous Flanders moss of the county of Perth; nor, like it, have they in any case a bottom of rich clay.—Limestone is found in every district of the county, and in many places approaches to the nature of marble. Near Ballachulish there is a rock of ash-coloured marble, speckled with veins of copper pyrites, and intersected with small thready veins of lead ore. Near Fort-William, in the bed of the Nevis, is a singular vein of marble, of a black ground, with a white flowering resembling the frosting upon

a window, penetrating the whole vein. Most of the mountains are composed of a reddish granite, which, according to Williams, is the most beautiful of any in the world. In the p. of Kingussie a rich vein of silver was discovered, and attempted to be wrought, but without success; in other places veins of lead, containing silver, have been observed. Iron-ore has also been found, but not in sufficient quantity to render it an object of manufacture. In the isle of Skye there are several valuable minerals: see SKYE. —The mountains and forests are inhabited by herds of red and roe deer, which here roam in safety, in recesses impenetrable to man; the alpine and common hare, and other game, are also abundant.

Towns, Roads, &c.] I. contains one royal burgh, viz. Inverness, and several small villages. The Gaelic is the language of the people on the N, W, and S borders; but, in the neighbourhood of Inverness, the better sort use the English language. In the tract of the great vale or Glenmore, Fort-George, Fort-Augustus, and Fort-William, were erected, as a chain of forts across the island, after the events of 1715 and 1745. By means of Fort-George on the E all entrance up the Moray frith to Inverness was prevented; Fort-Augustus curbed the inhabitants midway; and Fort-William was a check to any attempts on the W. Detachments were sent from these garrisons to Inverness, to Bernera, opposite to the isle of Skye, and to Castle-Douart in the isle of Mull.—The military roads in this co., made by the soldiers under General Wade, are executed with great skill, and lead over mountains and through mosses and morasses which before were impassable to the lightest vehicle. The military roads maintained in repair are: 1st, the Badenoch road, from Inverness through Badenoch to Dalwhinnie, and further to the borders of Perthshire, reckoned at 52 m.; 2d, the Boleskine road, from Inverness to Fort-Augustus, 33 m.; where a road, 30 m. in extent, turning to the left over Corryarrick, reaches Dalwhinnie, and joining the Badenoch road enters Perthshire by a road originally military; 3d, the road from Fort-Augustus to Fort-William, and farther to Ballachulish ferry, reckoned at 45 m.; 4th, from Inverness another military road passes along the shore to the entrance of the Beauly frith at Fort-George, and with its offset-roads to the eastward is reckoned at 16 m.—The magistrates of Inverness in recently memorializing the Lords of the Treasury for a survey and investigation of the most practicable lines of railway to I., suggest that "a line of railway communicating with the Glasgow and Edinburgh railway at Falkirk, midway between these cities; extending, by Stirling, through the valley of the Allan, and down the valley of the Earn, towards Perth; thence through Strathmore, by Forfar and Brechin, to Aberdeen; from that city, through the centre of the agricultural district of Buchan, perhaps by the valley of the Ythan, to Banff; and thence along the coast, by Fochabers, Elgin, and Forres, to Inverness,—would form the main trunk of communication between the N and S counties." Another projected line proceeds from I. by Nairn and Forres to Elgin; thence by the Vale of Rothes to near Drumbain; thence between E and W Elchies to the river Spey, which it will cross between Carron and the church of Aberlour; thence by the vale of the Carron, between Benrinnes and Tamfarclas to the river Avon above Delnashaugh; thence by the E side of the Avon to Drummin; thence by Glenconglass and the E side of Tomantoul, to the head of the Don at Laggan-hall; thence by Loch Bulg and the Gairn to Allt Vrotachan; thence, crossing the Sluggan, to the river Dee, which it will cross below the ford and near the castle of Braemar; thence by the E side of the water of Clunie, till within about 1 m. of Cairnwell. From this point the line it is proposed shall proceed either by a hollow on the W side of Cairnwell and the Spittal of Glenshee, and by Kirkmichael and the Loch of Lowes, to the Tay, which it will cross below Dunkeld, and thence proceed by Auchtergaven to join the Midland railway, about 4 m. north of Perth; or it will take the E side of Cairnwell and the Spittal of Glenshee, and proceed by Glenshee and the bridge of Cally and Rattray to Blairgowrie; and thence to join the Midland at Cupar-Angus. Numerous roads and bridges have been formed, under the direction of the Parliamentary commissioners, through every district of this extensive shire. See our general article THE HIGHLANDS.—The principal inhabitants of Inverness-shire are the clans of Forbes, Macintosh, Macpherson, Fraser, Grant, and Macdonald.

History.] The earliest notice of the existence of the office of sheriff in this district, is about the middle of the 12th cent. It appears that the sheriffdom of I. comprehended, at that time, the whole of the kingdom to the N of the Grampians. The shire of Moray appears to have been disjoined from I. as early as the year 1263. The shires of Forres, and Nairn, and of Crombath or Cromarty, are mentioned in the regulations adopted for the government of Scotland by Edward I., in 1304. The erection of the sheriffdom of Moray, properly so called, took place in the reign of James II, and was, perhaps, the first material dismemberment of the shire of Inverness. The defeat of Haco, king of Norway, at the battle of Largs, in the middle of the 13th cent., had destroyed the power of the Norwegian monarchs over the Western isles; yet, under the Lords of the Isles, they continued independent till after the battle of Harlaw, in 1411. In the beginning of 1476, John of the Isles was proscribed by act of parliament; and a powerful fleet and army being collected with a view to reduce him, he was persuaded to make his submission, surrendering the earldom of Ross, which was then declared to be unalienable from the Crown, and consenting to hold his insular possessions of the king in future. Although the independence of this chieftain was thus destroyed, it does not appear that Argyle, Lochaber, or the Isles, were included in any sheriffdom until the beginning of the 16th cent. At the Restoration, in 1660, the cos. of Argyle, Ross, Sutherland, Caithness, and Nairn, were all distinct from I. The boundaries of Ross, however, were not finally settled until 1661; since which time, excepting the abolition of heritable jurisdictions in 1748, there is no material alteration in the limits of the shire of Inverness.

INVERURY, a parish, in Aberdeenshire, bounded by the river Urie on the N and E. Area about 4,000 acres. Pop. in 1801, 783; in 1841, 2,020; in 1851, 2,264.—In the SW part of the p., on the N bank of the Don, stands a building, occupied from 1799 till 1829, as the Roman Catholic college of Aquhorties. The building is handsome, and beautifully situated; but the college has been removed to Blairs in the county of Kincardine.—The royal burgh of I., in the above parish, is a straggling village, with none of the characteristics of a town, situated on the angle formed by the confluence of the Don and the Urie, about 15 m. NW of Aberdeen. It joins with the Elgin district of burghs in returning a member to parliament. Constituency, in 1839, 94; in 1848, 110. Large and well-frequented cattle-markets are held here.

INVESTIGATOR ISLANDS, a group of islands in the S. Pacific, near the SW coast of Eyreland, South Australia. The principal of the group, Flinder's island, is in S lat. 33° 45′, and E long. 134° 20′.

INVESTIGATOR STRAIT, a channel of the Pacific, which runs between the S part of York peninsula and Kangaroo island, and connects Spencer gulf on the W with the bay of St. Vincent. It is 17 leagues in length E by N and W by S; and 23 m. in medium breadth; and has depth sufficient for the largest vessels. It was discovered by Captain Flinders.

INVOY, a commune of Belgium, in the prov. of Namur, and dep. of Maillem. Pop. 189.—Also a commune in the prov. of Liege and dep. of Ramet. Pop. 798.

INWARDLEIGH, a parish in Devonshire, 3½ m. SSE of Hatherleigh, on a branch of the Torridge. Area 6,050 acres. Pop. in 1831, 638; in 1841, 715.

INWORTH, a parish in Essex, 3½ m. SSE of Coggeshall, on the Eastern counties or London and Norwich railway. Area 1,430 acres. Pop. 591.

INYACK ISLAND, or Santa Maria, an island of Africa, in Delagoa bay, off its E peninsula. Its N point, Cape I., is in 13° 25′ 12″ S lat., E long. 13° 36′ 41″. The interior of the main, from this cape to Cape St. Lucia, is a low level country; but about 3 or 4 leagues from the shore a line of hills, apparently 800 or 1,000 ft. high, is visible.

INZA, a river of Russia in Europe, in the gov. of Penza, and district of Gorodichtshe. It has its source to the SE of the village of Voronovo, and flowing NW along the frontier of the gov. of Simbirsk, throws itself into the Sura, on the r. bank, at Tcherkovo, after a course of 78 m.

INZAGO, a village of Austrian Lombardy, in the prov. and 18 m. ENE of Milan, district and 5 m. E of Gorgonzola, on the Martesana canal. Pop. 1,930.

INZELI. See Enzelle.

INZER, a river of Russia in Europe, in the gov. of Orenburg, which has its source in the Ural mountains, in the district and 60 m. NW of Verkh-Uralsk; makes a considerable circuit to the S; and then bending W, throws itself into the Bélaïa, on the r. bank, 24 m. SE of Ousa, and after a course of 156 m. Its principal affluent is the Sim.

INZERSDORF, a village of the archduchy of Austria, in the prov. of Lower Austria, and circle of the Wienerwalde, 5 m. S of Vienna. Pop. 680. It has a manufactory of light cloth. Its trade consists chiefly in rhubarb.

INZINZAC, a commune of France, in the dep. of Morbihan, cant. and 3 m. N of Hennebon, and 8 m. NNE of L'Orient. Pop. 2,300. Fairs for grain and cattle are held here 3 times a-year.

INZLINGEN, a village of Baden, in the circle of the Upper Rhine, bail. of Lörrach, 5 m. NE of Bâle, and 26 m. SSW of Friburg. Pop. 838.

IO. See Yo.

IOACHIMSTHAL, or Joachimsthal, a town of Prussia, in the prov. of Brandenburg, regency and 54 m. NE of Potsdam, circle and 12 m. WSW of Angermünde, near the lakes of Grimnitz and Werbellin. Pop. in 1837, 1,560. It has several distilleries and oil-mills.

IOCKGRIM, or Jockgrim, a town of Bavaria, in the circle of the Pfalz, district and 12 m. SE of Landau, near the Rhine. Pop. 800. It has a castle.

IOCKMOCK, or Jockmock, a town of Sweden, in the prefecture of North Bothnia, lappmark and 99 m. NW of Lulea, 144 m. WNW of Tornea, on the r. bank of the Lulea. Pop. 1,400.

IOCKSBERG, or Jocksberg, a village of Bavaria, in the circle of Middle Franconia, presidial and 2 m. NW of Leutershausen, and 10 m. WNW of Anspach, on the Altmuhl. It contains a castle, and has a manufactory of calico.

IODLOVA, or Jodlova, a town of Galicia, in the circle and 12 m. NNW of Jaslo, and 17 m. SE of Tarnow, near the l. bank of the Wisloka.

IOELSTER, or Joelster, a parish of Norway, in the diocese of Bergen, near the centre of the bail. of North Bergen. Pop. 1,811.

IOENAKER, or Joenaker, a haerad of Sweden, in the S part of the prefecture of Nykoeping.

IOENKOPING. See Jönkoping.

IOLA, a village of Calhoun co., in the state of Florida, U. S., 58 m. SSW of Tallahassee, on the W side of Appalachicola river, and connected by a railroad with the St. Joseph, on the coast of the gulf of Mexico.

IOLA, or Yola, a town of Central Africa, the cap. of Adamawa, situated in about 8° 30′ N lat., and 7° E long., in an extensive and well-cultivated plain, on the Faro, a considerable river which receives all the small rivulets in which the surrounding territory abounds, and is not passable except in boats. It was first visited in 1851, by Dr. Barth, who was informed that it is a journey of 15 days from Kuka, and 7 days from the N frontier town of Adamawa. Indigo, ivory, salt, and slaves constitute the leading articles of traffic. The chief currency consists of small yellow Venetian glass beads. The town is large and open, and forms a kind of distant suburb of the larger town of Gorin or Guren, the former cap. of the sultan.

IONA, Icolmkill, or I-columb-kill, or I, a small but celebrated Hebridean island, situated off the SW extremity of Mull, in the p. of Kilfinichen, Argyleshire, 9 m. SW of Staffa, and about 36 m. W of the nearest part of the district of Morven, or the mainland of Scotland. A strait, called the sound of I. or of Icolmkill, about ¾ m. broad, and 3 m. long, deep enough for the passage of the largest ships, but dangerous from sunken rocks, separates it from Mull. Islets and rocks—the most conspicuous of which is Soa on the SW—are numerously sprinkled round one-half of its coast. A heavy swell of the sea, but not such as to imperil navigation, usually rolls toward it from the N. Its length is about 3 m. from NE to SW; its breadth about 1 m. Its superficial area is conjectured to be about 1,300 Scottish acres. It has a waving outline, approaching on the whole to the form of an oval, but exhibiting an almost constant alternation of projection of land and indentation of sea. The bay of Martyrs, on the NE side, a little creek, forms the chief harbour. Port-na-Currach, on the SW side, is a still more inconsiderable creek. The surface of the island consists of small, pleasant, fertile plains, in most places along the shore, and of rocky hillocks and patches of green pasture, and an intermixture of dry and of boggy moorland in the interior. At the S extremity, excepting a low sandy tract near Bloody bay, it is merely a vexed and broken expanse of rocks. The highest ground is near the northern extremity, and rises only about 400 ft. above sea-level. Numerous though small springs afford an ample supply of pure water. About 500 Scottish acres, or five-thirteenths of the whole area, are arable. Serpentine—probably the most beautiful stone found in large quantities in Scotland—may be quarried to any extent in Icolmkill. Sienite or red granite, nearly as hard as the granite of Mull, occurs in extensive rocks in the SW. Spotted schistus, difficult to be worked, and too coarse for slates, is the chief stone on the NE. The whole island is the property of the Duke of Argyle, and yields a rental of only about £300. On the bay of Martyrs, near the ruins which constitute the grand attraction and the glory of the place, stands the village of Threld,—a collection of miserable huts. The inhabitants of this v. constitute nearly the whole pop. of the island. By the rearing of cattle on their little crofts, and selling them in Mull, and by an unimportant tiny trade in pebbles and other matters, they procure a small importation of oatmeal, and for every other necessary of life depend on their own little island and its encincturing sea. I. was probably uninhabited, or at best but occasionally visited by the people of Mull, previous to the time of Columba, and comes first into notice as a quiet retreat gifted over to the saint for the uses of his missionary establishment. Columba himself excelled in all secular learning, was a proficient in the knowledge of medicine and the practice of eloquence; and not a few of the members of his community, in

successive generations, were eminently skilled in rhetoric, poetry, music, astronomy, mathematics, and general philosophy and science. About the beginning of the 8th cent. learning of every sort, in fact—with the exception of some poor remains of philosophy and the arts in Italy—was hunted out of every part of Continental Europe, and concentrated its energies and its glories on the little arena of Icolmkill. If any relics of the Culdees exist on the island, they must, to all appearance, be sought only among the oldest of the tomb-stones. St. Oran's chapel, the oldest existing ruin, is probably the work of the Norwegians. It is in the Norman style, rude, only 60 ft. by 22, and now unroofed, but otherwise entire. On the S side of this chapel, and adjacent to it, is an enclosure called Relig Oran, 'the burying place of Oran.' This was the grand cemetery of Iona, the cherished and far-famed spot whither, for ages, funeral parties voyaged from a distance to inter the illustrious dead.—The chief ruin on the island is that of the abbey church or cathedral. Its form is that of a cross; the length being about 160 ft., the breadth 24 ft., and the length of the transept 70 ft. That of the choir is about 60 ft. The tower is about 70 ft. high, divided into three stories.—I, pronounced Ee, and sometimes written Hi, Hii, or Hy, means 'the island,' and is the name commonly in use by the natives and other Hebrideans, the place being, among the Ebudean archipelago, the island par excellence. But when necessity is felt to speak distinctively, the name used is I-columb-kill, or abbreviatedly, I-colmkill, 'the island of the cell of Columba,' the saint to whom the place owes all its importance, the patron-saint of the Hebrides, and long the patron-saint of all Scotland. The name Iona is either *I-thonna*, 'the Island of the waves;' or *I-shonna*, 'the Holy or Blessed island;' most probably the former, and, in that sense, quite descriptive of its appearance in a storm. This name is sometimes written Hyona; and is used by historians, poets, and strangers,—commending itself to them by its euphoniousness.

IONIA, a central county of the state of Michigan, U. S., comprising an area of 576 sq. m. It has a finely undulating surface, with a highly fertile soil, and is drained by Grand river and its branches. Pop. in 1840, 1,923; in 1850, 8,488. It contains a township and village of the same name, 136 m. WNW of Detroit.—The township lies on both sides of the Grand river, which is here navigable, and is watered also by its tributaries. The village is on the N side of the river. Pop. 486.

IONIAN REPUBLIC, or UNITED STATES OF THE IONIAN ISLANDS, a small republic in the SE of Europe, composed of a group of islands in that part of the Mediterranean which lies between the coast of Greece and the island of Sicily, and consisting of seven large and several smaller islands. The larger islands are Corfu, Paxo, Santa-Maura, Ithaca, Cephalonia, Zante, and Cerigo. Six of these islands are situated in the Ionian sea, and one in the Ægean. They stretch along the coasts of Greece and Albania from NW to SE, between 35° 50′ and 39° 57′ N lat. Four of them lie in a group opposite the mouth of the gulf of Corinth; other two, Corfu and Paxo, are situated about 80 m. NW of this central group, from which Cerigo, the remaining island, lies about 150 m. SE. The five seaport towns of Bucintro, Gomenitza, Parga, Prevesa, and Vonitza, on the neighbouring continent, were formerly placed under the same jurisdiction with these islands. A more minute description of the several islands and their productions will be found in our pages under their respective heads. A few general details will be here embodied.

Area, &c.] The area and pop. of the principal islands are as follows:

	Area.	Pop. in 1836.	Pop. in 1844.
1 Cephalonia,	348 sq. m.	63,197	69,984
2 Corfu,	227	65,057	64,676
3 Santa-Maura,	180	17,195	18,676
4 Zante,	156	35,348	38,929
5 Cerigo,	116	8,707	11,694
6 Ithaca,	44	9,644	10,821
7 Paxo,	26	5,064	5,017
	1,097	204,266	219,797

To the island of Corfu belong Fanno, Merlere, Saseno, Samothracia, Sivota, and all the other islets in or out of the channel to Cape Formaggio. To Cephalonia belong Guardiani, Luca, Dia, and several other islets. To Zante belong Stivali, Marathonisi, Piluso, Trentenove, Prodono, Sapienza, Porto-Schisa, Venitico, and other islets between it and Cape Gallo. To Santa-Maura belong Meganisi, Chitios, and the islets in the channel of Santa-Maura to the port of Figlia. To Cerigo belong Cerigotto, Poro, Poretto, Dragonera, Cervi, and all from Cape St. Angelo to Coron. To Ithaca belong Kalemos, Castus, Arkudi, Atako, and all the islets out of the channel to the rock Cazzolani inclusive. To Paxo belong Antipaxo, Cassionisi, San-Nicolo, La Madonna, and all the other islets round Paxo, and along the neighbouring continent, from Cape Formaggio to the mouth of the channel of Prevesa.

Physical features and soil, &c.] The general surface of the I. islands is mountainous and rocky; but the elevations do not reach any considerable height except in Zante and Cephalonia. In the latter island Mount Ænos has an alt. of 5,306 ft. The other larger islands have mountains varying from 1,000 to 3,000 ft. in alt. Their geological formation is chiefly limestone, intermixed with gypsum and sandstone; and they are generally distinguished for beauty of landscape and luxuriancy of vegetation. "Their beauty they owe partly to the great variety of ground, partly to luxuriant vegetation, partly to the boundary mountains and distant views, and partly to the sea and sky." [*Davy.*] There is no active volcano in existence. The coasts are rocky, but afford good havens and roadsteads. There cannot, of course, be any considerable rivers in these islands: Corfu, however, is watered by several powerful torrents.—The soil is generally dry and calcareous; the only mineral production is asphaltes. Some of the islands of the Mediterranean are of volcanic origin; but the rocks of all these islands belong to the same great calcareous formation which occupies the continent of Greece. There is a quarry of grey marble in Corfu, and a vein of coal has also been found there. Gypsum, marl, and clay, are abundant. Chalcedony and quartz are the only silicious minerals. Iron and manganese occur, and sulphate of soda is plentiful in the marl districts.

Climate and productions.] Spring is mild and showery, and of long duration; the summer-months are hot and dry; the autumn is showery; the winter rainy and tempestuous. N winds maintain the winter-season; the S bring in the spring, and predominte in April. Like all mountainous districts, these islands are subject to sudden vicissitudes, having the extremes of cold and heat, moisture and dryness, in rapid succession in a few hours. The olive, the lemon, the orange, and the fig-tree, display their fruits and flowers throughout the whole year; in some places the happy islanders luxuriate on a four-fold vintage, and the frosts of winter are never known to chill a single rose-bud. The mean temp. at Corfu is from 63° to 66°; the summer-heat never exceeds 80°, except when the fiery sirocco blows. The centre islands, and especially Zante, are exposed to occasional hurricanes and earthquakes. Snow often falls during

the winter, but never lies except on the high grounds. Malaria prevails in low situations in the autumnal months, and the itch is common in some parts.—Much of the surface is rocky, some parts stony, and patches of fertile grounds are interspersed. The extensive plain of Zante, in particular, resembles one continued vineyard, with patches in tillage or pasture. The following table exhibits the number of acres in crop, in all the islands, in the years 1828 and 1836:

	1828. acres.	1836. acres.
Wheat,	...	16,137
Indian corn, barley, &c.,	24,782	37,437
Oats,	1,475	5,492
Currants,	13,006	15,740
Olives,	104,523	219,339
Wine,	49,066	119,152
Cotton,	678	1,014
Flax,	995	1,310
Pulse,	2,723	4,530
Pasture,	7,770	44,960
	207,810	420,151

The extent of uncultivated land in 1828 was 292,753 acres; in 1836, 442,007 acres. The proportion of cultivated and uncultivated land in the several islands, in 1836, was as follows:

	Cultivated. acres.	Uncultivated. acres.
Corfu,	302,648	30,896
Cephalonia,	33,386	189,786
Zante,	45,071	53,869
Santa-Maura,	12,426	97,436
Ithaca,	1,725	3,137
Cerigo,	12,555	61,685
Paxo,	...	5,200

Farms are generally let by the year, and on the *metayer* system, the tenant paying half of the produce to his landlord. Field-labourers are paid about 15d. a-day. The ploughman has 1½ dollar a-day, but provides his own plough and oxen. Zante is the richest and best cultivated island.—The principal productions of the I. islands are grain, fruit, cotton, honey, wax, oil, hare-skins, and lamb-skins. The inequality of the surface affords little scope for the improvements of agriculture: nevertheless, every advantage is taken even of the smallest portions of soil. Terraces are formed on the declivities, their culture is carefully attended to, and rich harvests are obtained. Vines and olives grow universally in great luxuriance, and are the chief objects of notice. The grapes are of a diminutive kind, known in Britain when dried by the name of currants, of which the average crop is about 8,000,000 lbs. in Zante alone. In some years it has even amounted to 23,000,000 lbs. They are gathered somewhat earlier than other grapes, and spread out for 8 or 10 days previous to being packed; but there are instances of the harvest being totally ruined by rains. The valonia oak (*Quercus ægilops*) is here a tree of great value as well as beauty. Cephalonia likewise yields 80,000 or 90,000 lbs. of honey yearly; in the island of Cerigo, it was computed there were 1,480 hives in 1811. About 100,000 lbs. of cotton of very fine quality are produced in Cephalonia. The live stock in 1836 amounted to 14,189 horses, 10,366 horned cattle, 95,950 sheep, and 68,826 goats.—The fish caught on the coasts of Corfu, Paxo, Santa-Maura, and some of the other islands, and large eels taken in the inland pools, afford important subsistence to the inhabitants. Scorpions, lizards, and small snakes, are not uncommon. Birds of prey, and poultry in general, are scarce; nor are there many other species, except birds of passage, and water-fowl among the marshes. The wild animals of the islands are foxes, hares, and rabbits.

Manufactures and commerce.] Salt-works are carried on to a great extent in Corfu. From 5,000 to 6,000 tons of the same commodity are made in Santa-Maura. Oil of olives is expressed in large quantities in Corfu and Zante, and a small portion in almost all the rest of the islands. The quantity of the oil depends greatly on the nature of the soil, and the mode of manufacture: that of Paxo is esteemed the best. The olive plantations yield little fruit, excepting every other year. Wine, brandy, and liqueurs, from aromatic herbs and flowers, are manufactured; and a considerable quantity of soap is made in Corfu and Zante. The best wines are those of Ithaca and Cephalonia, and the hilly parts of Zante. Coarse cotton cloths are fabricated for clothing; silk stuffs and carpets of goats' hair, for the Venetian gondolas, are made in Zante.—The I. isles export their own produce and manufactures, especially great quantities of currants, to England. Salt is sent from Corfu and Santa-Maura, chiefly to the port of Goro, at the mouth of the Po. Oil is exported to Venice, whence it is distributed to various quarters of the continent. Brandy is sent from Cephalonia to Trieste, and to Venice, Leghorn, England, and Russia. Cotton is carried from the same islands to Zante, where it is manufactured into goods suitable for turbans, and exported to Constantinople. The honey is principally consumed at Venice; hare-skins are sent to Corfu, and lamb-skins to Trieste and Senigaglia.—The imports of the I. islands consist of cattle and grain from the Morea, in proportion to the necessities of the pop. Pasturage is scanty in the greater number of the islands. Paxo does not produce more grain than is adequate to one month's consumption, and it remained a long time uninhabited, owing perhaps to its natural sterility. Between 4,000 and 5,000 peasants annually repair from Zante to the Morea, for the purpose of assisting the inhabitants in reaping their harvests; and as their services are paid in grain, each returns with several months' provision for his family. A large quantity of salted fish is imported, which meets a ready sale.—A considerable number of vessels belong to the I. isles, particularly Cephalonia and Ithaca; their commerce long laboured under many restrictions, yet their position is extremely favourable for traffic, presenting a common centre for the commerce of Albania, of a part of Thessaly and of Macedonia, as well as of Epirus and the Morea, and situated in front of the avenues of all the great communications between the interior of the Ottoman empire and the W coast of Greece. Ithaca has recently begun to trade with the Black sea.—The total exports in 1833 amounted to £250,699. In 1846, these islands imported into the United kingdom 3,204 qrs. of wheat; 266,308 cwts. of currants; 106 tons of fustic; 285 cwts. of liquorice juice; 123 lbs. of silk; and 119 tons of valonia.—The declared value of British and Irish produce exported from the United kingdom to the I. islands, from 1828 to 1850, was as follows:

1828	£41,078	1840	£89,204
1831	50,883	1843	127,598
1834	94,498	1846	171,731
1837	124,465	1850	135,912

The shipping employed in the trade with the I. islands in 1848 was 83 = 10,874 tons inwards, and 74 = 11,614 tons outwards, besides 2 foreign vessels = 555 tons.

Inhabitants, State of Education, Religion.] The inhabitants of the I. islands have preserved the features of their Grecian ancestors: "the antique beauty is common amongst them," [*Davy.*] Both sexes are distinguished by a fine and slender shape: the men are erect, noble, and dignified in their carriage, their eyes are animated, and their whole expression open and bold. The manners and customs of the country people are purely Grecian; in the towns we occasionally meet with some lingering vestiges of Vene-

tian manners.—The foundation of a college by Lord Guildford at Corfu, has done much to improve the higher classes; and the situation of the peasantry and poorer Ionians has attracted the attention of several philanthropic societies, one or two of whom have sent out teachers to the islands. The university of Corfu had 78 students in 1848. The number of scholars in the primary and secondary schools, in that year, was 5,278 boys, and 868 girls. The Greek patois, which has hitherto been spoken in these islands, is gradually changing into the more elegant and copious language of continental Greece. At Corfu, Italian is spoken by the higher classes, which language is pretty generally understood in the towns. The present constitution declares the modern Greek to be the established and proper language of the republic, and that it is desirable this language should be the sole medium of judicial proceedings and official acts. The constitution provides also for the general and liberal education of the people. It enjoins upon the government, as one of its earliest and most imperious duties, the institution of elementary schools in the first place, and afterwards of an university. The system of instruction devised by the government is composed of three parts, viz. primary or elementary schools, secondary or classical schools, and an university. The primary schools are on the plan of mutual instruction. In the principal town of each island there is one, which serves as a model for the others, and for the education of teachers. In the village-schools, the parent or guardian pays one-fourth of a dollar monthly for each child he engages to send to the school. The teacher receives about 10 dollars a-month. And whenever a sufficient number of pupils is pledged in any village to defray a certain proportion of the expenses, the government sends a master to commence a school. The pupils are engaged for two years. It is not promising for the schools that many parents refuse to meet their pecuniary engagements until constrained to do so by the civil authority. Most of the secondary schools are of more recent establishment. They occupy a middle ground between the primary schools and the university, and are designed to prepare young men for the latter institution. Each island has one of these schools, in which there are, on an average, somewhat over 100 scholars. Every school is furnished with two or three teachers. The course of study embraces a period of four years, and the ancient Greek, Latin, Italian, and English languages, with arithmetic, algebra, geography, geometry, and penmanship. The government has printed a specific code of laws in Greek and Italian for these seminaries, from which it appears that more than two-thirds of the student's time is devoted to languages. In the Levant, this species of learning is more prevalent and more valued than any other. The principals of the classical schools receive a monthly salary of 60 dollars; and are required to make frequent reports of the state of their respective institutions to a general committee for public instruction, consisting of one ecclesiastic and two laymen, whose duty it is to watch over the interests of education in all the islands. The Ionian university, established at Corfu, owes all its importance to the munificence of Lord Guilford. It is said to date its origin as far back as 1807, when the islands were in the possession of the French; but it properly commenced its existence in 1823, when Lord Guilford, who had formed the design of an university seven years before, and had been zealously contending all that time with obstacles in the way of his benevolent schemes, obtained the countenance of government, endowed an university, and was appointed its archon or chancellor. From that time till his death in 1827, his fortune and his time were devoted to this seminary. He used his influence to obtain patronage from the government; he paid the salaries of many of its instructors; he sent young Greeks to the universities of England to be educated for professors; he supported beneficiaries within the walls of his own university; and rendered the collection of modern Greek literature in the library of the university perhaps the most complete in the world. After his death, the government was obliged to reduce the number of professors from 17 to 9, which is the number at present. Several of those who were dismissed have since been placed at the head of classical schools. The old government house has been appropriated to the university. The professors are supported by the government, and deliver their instructions in the form of lectures, each spending about two hours a-day in this manner. Tuition is gratuitous. The studies, according to an official document, are in the Greek, Latin, Italian, and English languages, and literature, the mathematics, the natural sciences, logic, and metaphysics, together with theology and law. The two last named form distinct departments; that for theology is called the theological seminary. Three years are devoted to the other studies. A theological seminary within the pale of the Greek church, instituted by Greeks, and with the declared design of "raising the Greek clergy of the Ionian islands from their present declension to that rank which shall qualify them happily to influence, by their instructions and example, the morals and manners of the people,"—is an interesting object of contemplation. The government provides for the support of 39 beneficiaries, to be received from the different islands in certain fixed proportions. If more are admitted, they must be supported from their own resources, or by private beneficence. The requisites for admission as beneficiaries of government are these:—the student must be a native Ionian—must have completed the age of 17 years—must have gone through the studies of the secondary schools—must be certified by the bishop of his island to possess a good moral character—must have no physical defect or organic disease—must have had the small-pox in the natural manner, or by inoculation, or have been vaccinated—and must belong to a respectable family. The student ordinarily remains five years in the seminary. At the end of that time, if his age be suitable, and he has obtained the different degrees, he may receive orders as a deacon or presbyter. If a student renounce his clerical profession, and retire from the seminary without sufficient reasons, he is required to refund the expenses incurred by the government on his account, and may be debarred from all public employments, and the remaining students are forbidden to have intercourse with him. The statutes define the studies of the seminary to be theology, and whatever goes to illustrate theology, together with the ecclesiastical services and ceremonies. The summary of Christian divinity, by Platon, late metropolitan of Moscow, translated into modern Greek by Coray, with some additions by the university professor of divinity, is at present used as a text-book; and is said to give a faithful representation of the doctrines sanctioned by the highest uninspired authorities of the Greek church. The theological students may attend the various lectures of the university; and if they have a taste for music, they are instructed in that which is practised in their churches. In their vacations, they are required to be taught the theory of agriculture.—The established religion is that of the Greek church, which is followed by at least six-sevenths of the inhabitants. In Corfu there is a numerous body professing the united Greek creed; they have an arch-

bishop, and enjoy the same rights as those of the Greek communion. The Greek clergy are governed by the archbishop of Cephalonia, and the bishops of Zante, Santa-Maura, and Cerigo. These 4 bishops have each the title of 'metropolitan,' because they are in turn vested with the supreme ecclesiastical authority over all the islands, which they exercise during the period of one parliament. The bishop of Ithaca is a suffragan of Cephalonia; the bishop of Paxo is a suffragan of Corfu. The clergy are divided into regular and secular, and are in general extremely ignorant. Their number is said to exceed 1 to every 50 inhabitants. There are about 6,000 Jews, who have a number of synagogues.

Government.] By the 3d article of the treaty of Paris, the Ionian republic was to regulate its own internal economy, subject to the approbation of Great Britain, and a lord-high-commissioner invested with the necessary power and authority for this purpose, was to reside upon the islands. His Britannic majesty was to have the right of occupying all the fortresses and fortified places of the seven islands, and of maintaining garrisons in them; and the military force of the said states was also to be under the orders of the commander-in-chief of the British troops. The ostensible object of this arrangement was to save the inhabitants from Moslem aggression; the mainland and most of the islands of Greece being then part of the Turkish empire. A charter was granted the united islands in May 1817, according to which the legislative assembly was composed of 40 deputies, who should hold their sittings at Corfu, the seat of government. Of this assembly, 29 members were elective and chosen by the nobles from prepared lists, and 11 integral, consisting of the president and members of the old senate with the regents or governors of the five largest islands, all of whom were substantially though not directly nominated by the high-commissioner. The 11 integral or *ex officio* members, form what is called the primary council. All the members of the legislative assembly must belong to the class of *synclitæ* or nobles. The administration was confided to a senate, composed of a president, 5 senators, and a secretary. The president was chosen by the lord-commissioner, and nominated for five years; the 5 senators were chosen by the legislative assembly, and the secretary by the commissioner. The judicial power was lodged in a supreme court at the seat of government, consisting of 4 ordinary and 2 extraordinary members. Of the former, 2 were native Ionians named by the senate, and 2 were named by the commissioner, and might either be British subjects or Ionians. This constitution has, as might have been anticipated, failed to give satisfaction. The Chevalier Mustoxidi, in his "Promemoria of 1839," says: "That the people may repose the requisite confidence in their representatives, it is necessary and just that they should nominate and elect them freely. The Ionian people, by the constitution of 1803, enjoyed this privilege. This was snatched from them by General Maitland, to get up the constitution of 1817, by a new form of nomination and election; and this form was afterwards made a part of the constitution itself; so that of the 40 members composing the assembly, the electors do not nominate a single one, and make a feint of electing 29; they do not nominate a single one, since the senators and the regents of the previous parliament, and the senators and the 5 members of the expired assembly, who are named by the lord-high-commissioner when the parliament is dissolved, form the high council, and are in their own right members of the new assembly; and they present to the electors the double list of names for the other 29 members. And often has it happened, that not even all the 11 councillors, but 5 or 6, and even 3, have exercised the jealous duty which ought to have devolved upon the electors; and invariably opposite to the predestined member, they purposely place on the double list as a competitor, such a candidate as must either withdraw of his own accord from the conflict, or must certainly be defeated Thus, then, the electors make a show of electing 29; and if they do not, the senate does it; that is to say, a part of that council which nominated them. What, then," the Chevalier continues, "is the mode of proceeding, and what the powers of the assembly? The presence of 11 members is sufficient to constitute a legal sitting, so that the representatives of the island of Corfu, and the neighbouring Paxo, can, of themselves, decide on the interests, though so divided, of all the other islands; and the 11 members of the high council, that is to say, those non-elected by the people, can decide on their greatest and most important interests." A member of the assembly is not able to propose a law, unless he first informs the senate and the lord-high-commissioner. The other two powers can re-introduce at any time to the assembly a bill which it has rejected; while the assembly cannot re-propose but once during the whole course of that parliament its own bill, when rejected by the senate and the lord-high-commissioner. "The assembly meets only every two years, and for three months only. It holds three ordinary constitutional sittings every week—that is (taking days and weeks of holidays into consideration) it sits little more than 30 days in two years. What follows, of course? It leaves the business already began unfinished, and when it again re-assembles, still more time is lost in recovering the thread of business, after an interval of 21 idle months. Besides, the public revenue of the Ionian states being derived solely from the exported produce of the land, is precarious and annually variable; while the assembly, being obliged to sanction the civil list for two years, cannot foresee, nor regulate, nor proportion to the wants of the state, the means of satisfying them." The lord-high-commissioner, in a proclamation dated 22d December 1851, has announced that he is authorized to propose certain modifications to the next parliament, with a view to remove whatever stands in the way of the fair operation of the constitution, "provided always the result of the next elections be an assembly disposed to accept her majesty's liberal concessions in a proper spirit." The modifications proposed are—1st. The substitution of an annual to a biennial session, in order thus to put an end to the dissensions between the senate and the assembly, concerning the constitutional right of the senate to make regulations having the force of law, during the recess, with the consent of the lord-high-commissioner; 2dly, the modification of those articles which regulate the present organization of the senate, in order to increase the responsibility of its members, and to regulate its duties; 3dly, the addition of a fifth judge to the supreme court of justice, in order to enable that body to decide all cases by an absolute majority, instead of by the casting vote of the president of the senate and the lord-high-commissioner; 4thly, the permission to introduce a bill for the better regulation of the powers of the local government; 5thly, the substitution of powers defined by an act of parliament, for those now exercised under the name of the high police.—Subordinate to the supreme court are 21 inferior tribunals—that is, a civil, a criminal, and a commercial tribunal in each island; and under these again are justice of peace courts for minor offences and small civil suits.—Great Britain maintains a garrison of 2,400 soldiers, which she can increase at pleasure in the islands; and has expended

above £450,000 on the fortifications of Corfu alone. The states themselves have no military establishment, but are bound to pay one-fifth of the net annual revenue into the military chest. The geographical position of these islands, combined with the possession of Malta, gives Great Britain the command of the Adriatic, and a naval and commercial preponderance in the Mediterranean, and opens an easy communication with the countries which formerly composed the states of ancient and once-glorious Greece.

Revenue.] The revenue in 1837 was £147,507. The gross revenue from 1834 to 1840 varied from £139,771 to £200,346. It is principally derived from an export duty on oil, currants, valonia, wine, and soap, stamp duties, and a tariff on imports. The export duties from 1834 to 1840 fluctuated as follows: on currants, from £29,921 to £54,306; on oil, from £3,665 to £62,901; customs, from £23,907 to £36,693. There are no direct taxes.

The gross amount of the general revenue for 1845 was	£149,242
Local revenue,	35,648
	£184,890
The gross amount of the general revenue for 1847 was	£122,893
Of the local revenue,	35,225
	£158,118

The sum of £15,000 is placed at the disposal of the lord-high-commissioner annually to pay the residents or governors of the different islands, two members of the supreme council, the secretary of the senate, and the treasurer-general. The president of the senate has a salary of £1,350 a-year; each senator has £675; and each member of the legislative assembly, £119.—The expenditure incurred by Great Britain in 1847–8 was £119,920; in 1848–9, £145,918.

History.] These islands were early celebrated in Grecian history, particularly in the Peloponnesian wars. In the war of the Romans against Philip, Corfu adhered to the former, whilst Cephalonia and Zante espoused the cause of the latter. The battle of Actium, which decided the destinies of the Roman empire, was fought between Santa-Maura and Corfu. The Romans protected the I. isles; and science and the arts lingered while in this asylum after the fall of the Western empire. In the 13th cent. the kings of Naples got possession of Corfu; in the 14th, the Venetians, then masters of the Mediterranean, took these islands under their protection. Upon the dissolution of the once powerful republic of Venice, in 1796, the I. islands fell into the hands of the French; but in 1799 they were retaken by the combined fleets of Russia and Turkey; and in 1800 the emperor Paul declared them an independent state under the protection of the Porte. They were restored to France at the peace of Luneville, confirmed by the treaty of Presburg in 1806, and that of Vienna in 1809; but were all, with the exception of Corfu, taken by a British squadron in 1810, and remained in the hands of Great Britain till, by the treaty of Paris in 1815, they were declared a free, single, and independent state, and placed under the protection of his Britannic majesty and his successors; and an act of ratification, formally placing the islands under the British protectorate, was executed at Constantinople on 25th April 1819.

IORDANOW, or Jordanow, a town of Galicia, in the circle and 22 m. SE of Wadowice, on the r. bank of the Skawa, and 30 m. SSW of Crakow.

IORI. See Yori.

IOROIS, a town and parish of Russia in Europe, in the grand duchy of Finland, gov. and 54 m. S of Kuopio and district of Nedre-Savolax, 54 m. NW of Nyzlott, and to the W of Lake Haapavesi.

IOROZ (Cape), a headland of Turkey in Asia, in the pash. of Trebizonde, on the Black sea, between Trebizonde and Tireboli, in N lat. 41° 6′ 55″, E long. 39° 23′ 20″.

IOS. See Nio.

IOSCO, a township of Livingston co., in the state of Michigan. Pop. in 1840, 395.

IOSLOWITZ, or Ianoslawice, a town of Moravia, in the circle and 11 m. SE of Znaim, near the r. bank of the Taya. Pop. 1,640. It has a castle; and in the vicinity is a large rural establishment, celebrated for its cheese. The vine is extensively cultivated in the locality.

IOSS, Iaschau, Iaszo, Iasow, or Jasow, a town of Hungary, in the comitat of Abaujar, 14 m. WSW of Kaschau, and 32 m. SE of Leutschau, in a valley, on the l. bank of the Bodva. Pop. 1,581. It has a castle, a handsome Catholic church, a priory with a handsome church, and a valuable library, and possesses several manufactories of pottery. In the environs are quarries of marble, and mines of copper and iron.

IOUCHANSK, a town of Russia in Europe, in the gov., district, and 26 m. WSW of Simbirsk.

IOUDOMO, or Iudomo, a river of Russia in Asia, in the district of Okhotsk, which has its source on the W side of the Okhotsk mountains, 42 m. NW of the town of that name; runs with considerable sinuosities to the W; passes Ioudomskoï-Krest, and after a rapid course of about 180 m., joins the Maïa, on the r. bank, on the confines of the gov. of Yakutsk.

IOUDOMSKOI-KREST, a town of Russia in Asia, in the district and 129 m. WNW of Okhotsk, on the l. bank of the Ioudomo, and on the road from Ikhotsk to Yakutsk. It has a chapel, and possesses a considerable transit trade.

IOUDOUNTZICHKI, a town of Russia in Europe, in the gov. and 66 m. NE of Vilna, district and 21 m. E of Sventziani.

IOUDOUPA, a town of Russia in Europe, in the gov. and 102 m. NNE of Vilna, and 66 m. NE of Vilkomir.

IOUG, a river of Russia in Europe, in the gov. of Vologda, which has its source in the district and 33 m. E of Nikolsk; runs at first SW, then turns N past Nikolsk, then NE; and at last taking a NW direction, enters the district of Veliko-Oustioug, and a little below the Veliko-Oustioug unites with the Soukhona to form the Dwina. It has a total course of about 240 m., and receives the Moloma and the Louza on the r., and on the l. the Chargenga.

IOUGAN (Bolchoi), a river of Russia in Asia, in the gov. of Tobolsk, which has its source in the S part of the district of Surgut; runs NNW, and joins the Obi, on the l. bank, 21 m. SW of Surgut, and after a course of about 240 m.

IOUKAGHIRS, or Iukaghirs, a people of Russia in Asia, who inhabit the E part of the prov. of Yakutsk, between the Koriaks on the S, the Yakuts on the W, the country of the Tchuktchi on the E, and the Frozen ocean on the N. The principal rivers along the banks of which they are found are the Kolima, Alazeia, Indighirka, and Iuna. They are divided into tribes, and resemble the Tungus family in many of their habits. They live in villages during the intensity of winter, and in the months of June and July, which form the fishing-season; the rest of the year they devote to the chase. They speak Russ, and conform in costume to the Russians in the vicinity. Christianity has been introduced among them, but they remain addicted to many of the superstitions of Shamanism. Their frequent wars with neighbouring tribes, and the prevalence among them of virulent disease, have much diminished their numbers.

IOUKHNOV, or Jouknov, a district and town of Russia in Europe, in the gov. and 138 m. E of Smolensk, on the r. bank of the Ougra. Pop. 500. It contains 2 churches and a convent. The district lies in the E part of the gov., and is very fertile.

IOUKOPA, or Iukopa, a river of Russia in Europe, in the gov. of Tver and district of Ostachkov. It has its source on the confines of the gov. of Smolensk, to the S of Barsuki; runs N; and throws itself into the Volga, near the l. bank, near the place

where that river issues from Lake Peno, and after a course of about 45 m.

IOUNASKA, or EUNASKA, a small island in the Aleutian archipelago, between Behring's sea and the Pacific, to the SW of the island of Oumnak, NE of that of Amlia, and a little to the E of the island of Amukhta, in N lat. 52° 40′.

IOUPANOVSKAIA-SOPKA, JOUPONOVA, or JUPONOVA, a volcano of Russia in Asia, in Kamtschatka, 40 m. N of Petropavlosk. It does not emit flames, but smokes continually, and occasions frequent earthquakes. Its height is about 3,018 ft., and gives rise to the Keminta, an affluent of the Ioupanova, a small river which flows into the sea of Kamtschatka.

IOUPKOV, or JOUPKOV, a town of Russia in Europe, in the gov. and 87 m. SW of Kiev, district and 40 m. ESE of Makhnovka.

IOURA, or JURA, a river which has its source in the Russian gov. of Vilna, in the NW part of the district of Rossiena; runs S into the prov. of East Prussia; and throws itself into the Niemen, on the r. bank, 11 m. ESE of Tilsit, and after a total course of about 78 m. Its principal affluent is the Sheshura, which it receives on the l.

IOURATZICHKI, a town of Russia in Europe, in the gov. and 60 m. SSE of Vilna, district and 34 m. S of Ochmiana.

IOURAVKA, a town of Russia in Europe, in the gov. of Voronej, district and 15 m. N of Bogoutchar, and 36 m. SE of Pavlosk, on the l. bank of the Don.

IOURBOURG, or GEORGENBOURG, a town of Russia in Europe, in the gov. and 81 m. WNW of Vilna, district and 27 m. SSW of Rossiena, on the r. bank of the Niemen, on which river it has a port. It is one of the most important custom-places on the Niemen, and carries on an extensive trade with Prussia.

IOURDANI, a town of Russia in Europe, in the gov. of Vilna, district and 57 m. WNW of Rossiena, and 30 m. SW of Telch.

IOURIEV-POLSKOI, a district and town of Russia in Europe, in the gov. and 39 m. NW of Vladimir. The town, which derives its name from the extensive plain in which it is situated, is on the Kolokcha, and contains 5 churches and a cloister. It has an extensive manufactory of silk, a calico-printing-mill, and several tanneries. Pop. 1,800. The exports consist principally in linen, leather, silk, and ironmongery. The environs are adorned with numerous gardens. The district occupies the NW part of the gov., and is generally flat. It contains numerous marshes and extensive forests, but the soil is fertile, and produces hemp and flax in great abundance. Spinning and linen-bleaching form the chief branches of local industry.

IOURIEVETZ-POVOLSKOI, a district and town of Russia in Europe, in the gov. and 96 m. ESE of Kostromo, on the r. bank of the Volga, at the confluence of the Unja. Pop. 2,500. It has 3 churches and a cloister, and possesses an active trade in tallow, hops, and corn. Fairs are held several times a-year. The district, which is situated in the E part of the gov., is well-wooded and well-cultivated. It has extensive manufactories of coarse linen and common cloth.

IOURKINA, a village of Russia in Europe, in the gov. and 63 m. WNW of Kaluga, district and 17 m. NW of Musalsk. It has a glass-work.

IOURZEN, a river of Russia in Europe, in the gov. of Orenburg, which has its source in the Ural mountains, near the source of the river of that name, runs first NW, then W, and joins the Ousa, on the l. bank, 12 m. above Fort-Yeldiatzkaïa, after a course of about 150 m. Its banks contain rich mines of iron.

IOUZVIN, a town of Russia in Europe, in the gov. of Podolia, district and 10 m. WSW of Vinnitza, and 90 m. NE of Kamenetz.

IOWA, one of the federal states of North America, formerly a portion of the Missouri territory, and lying immediately N of the state of that name, between the parallels of 40° 30′ and 43° 30′ N lat., and the meridians of 90° 20′ and 96° 59′ W long.; bounded on the W and N by the Western territories; on the E by the Mississippi, which separates it from Wisconsin and Illinois; and on the S by the state of Missouri; and the lower course of the Des Moines river. It is 270 m. long, and about 200 m. broad; and has an area of 50,914 sq. m., or 32,584,960 acres.

Physical features.] The general features of this state present much of what is called 'rolling land;' without being mountainous or even hilly. An elevated table-land or plateau extends through a considerable portion of the country, dividing the streams which flow respectively into the Missouri and Mississippi. The margins of these rivers and streams are thickly timbered; but the rest of the state is open prairie, with alternations of woodland of some extent, which diversify and enliven the scenery. About three-fourths of all the lands are prairie,—some level and others rolling; some clothed in thick grass suitable for grazing farms, while hazel thickets and sassafras shrubs invest others with perennial verdure. The soil is universally good, being of a rich black mould; in the prairies this is sometimes mixed with sandy loam, and sometimes with red clay and gravel.—The Mississippi borders the E of this state, and is navigable for the entire distance. The Des Moines waters the S section of the country, and falls into the Mississippi, after forming for some distance the SW boundary of the state. It is navigable for 100 m. from its mouth. The Iowa is a navigable stream traversing a large portion of the state. Besides these there are numerous minor rivers and streams falling into either the Missouri or Mississippi.

Climate and productions.] The salubrity of the climate here depends much upon locality, but the therm. does not range so widely as under similar latitudes E of the Alleghanies. It is exempt, too, from those searching E winds so fatal in their effects to the pulmonic invalid in the older states. Along the low bottom-lands of the rivers and watercourses, which are occasionally subject to inundation, there will be liability and predisposition to bilious diseases, fever, ague, &c.; but upon the uplands and rolling prairies, the air is salubrious and free from miasma. Periodic breezes blow over these elevated portions of the country as regularly as from the ocean between the tropics.—The buffalo, which formerly roamed here over the flowery prairies, is now almost extinct; but the elk, though much diminished in numbers, is still hunted in the recesses of the state. Panthers and wild cats are sometimes seen, and the grey wolf still lurks about the remote settlements. The common prairie-wolf is a denizen of these regions, and proves mischievous among the sheep and hogs. In the wooded districts, the black bear is found. Foxes, racoons, porcupines, and squirrels of various kinds, are numerous. The otter and bear still inhabit the unsettled parts about the rivers and lakes. Deer are abundant, their flesh affording food, and their skins clothing to the pioneer of the wilderness. The musk-rat is found in every part of the state, and common rabbits abound. Wilk turkeys are found in large flocks; prairie-hens, grouse, partridge, woodcocks, &c., abound. Geese, ducks, loons, pelicans, plovers, snipes, &c., are among the aquatic birds that visit the rivers, lakes, and sluices. Bees

swarm in the forests. The rivers and creeks abound with fish; and the insect tribe are varied and beautiful.—With regard to the mineral productions of I., "a review of the resources and capabilities of this country," says Dr. Owen, "induces me to say with confidence, that 10,000 miners could find profitable employment within its confines. The lead-mines alone afford as much of that metal as the whole of Europe, excepting Great Britain, and their capabilities are unbounded. Zinc occurs in fissures along with the lead, chiefly in the form of electric calamine, and is found in cellular masses. In some diggings this mineral appears in a state of carbonate, and in others as a sulphuret. Iron ore is abundant; but as yet, on account of the scarcity of pop., and want of capital, but little iron, either bar or cast, has been manufactured. The mineral region is principally confined to the neighbourhood of Dubuque, and along the river heights of the Upper Mississippi."—Wool-growing is receiving from year to year more attention. Sheep, instead of being slaughtered as formerly, are annually imported, and as fast as their increase exceeds their pasturage, are driven further into the wilderness. The wool is of superior staple, but suffers in the foreign market on account of the unclean condition in which it is put up and shipped.—The raising of hogs is also one of the most profitable employments. They are raised with little or no trouble, having a boundless range in forest and prairie, and feeding upon the natural productions of those regions. When wanted for market, the herds are hunted up, each owner having his respective mark; and after feeding the animals on Indian corn for a few weeks, they are sufficiently fattened for use.—The agricultural productions of I. are similar in every respect to those of the western territories. The cereal grains and root crops of every description grow luxuriantly, and the fruits of temperate climates find it a congenial locality. Tobacco also proves a successful staple, and on the rich alluvial margins of the Des Moines river, grows to perfection, and of a very excellent quality. The cultivation of the castor bean (*Ricinus communis*) has of late been introduced, and succeeds well.—In 1840, the capital invested in manufactures in this young state amounted to nearly 200,000 dollars. This was when the pop. was scarcely one-third its present force, and before sufficient time had been allowed the first settlers to determine on their situation and prospects. The value of mills, manufactories, distilleries, carding-machines, and tanyards, in 1849, was 432,238 d. The principal articles made are those used by agriculturists, as carriages, harness, &c. Home-made or domestic goods are necessarily manufactured to a large amount.

Population.] I. is rapidly progressing in population. The emigration from Europe, especially, has been immense. The pop., which in 1840 was 43,112, had increased to 192,247 in 1850. There are few Negroes in I.: the whole number does not exceed 300. The pop. is almost altogether European. England, Ireland, Germany, Denmark, &c., have all contributed to the pop. of this state. The Sioux, Sacs, and Foxes, and other tribes of Indians, still roam over more than one-half of the state.

The position of I., and its intersection by fine streams flowing into the Mississippi, will contribute to elevate it to consideration as a commercial state. As yet it enjoys no direct foreign commerce, nor is it probable that any great amount will ever centre here. It will, however, gradually become a great market for the manufactures of other countries, and the more eastern states. I. has a highly creditable university, but being only a young state, we cannot expect any great progress in relation to the general education of the people. The permanent school-fund in 1848 amounted to 132,908 d. The statistics of the churches, in 1847, give the following results: the Methodists had 53 travelling and 95 local preachers, and 7,909 members; the Baptists, 36 churches, with 913 communicants; Congregationalists, 34 churches, and 910 church-members; and the Protestant Epicopalians and the Roman Catholics had each a missionary bishop, and several churches. The Presbyterians, Universalists, Anti-mission Baptists, &c., had also a few congregations.

Government.] The constitution of I. provides that every adult white male citizen,—idiots, insane, and persons convicted of infamous crimes, excepted,—and who has resided in the state 6 months, and in the co. in which he offers his vote, shall enjoy suffrage. The general-assembly consists of a senate and house-of-representatives; and holds its sessions biennially, commencing on the first Monday in December. The representatives must be at least 21 years of age, and have resided in the state one year, and in the district one month previous to election. Senators must be 25 years of age,—one-half their number being elected biennally. The governor is chosen by a plurality of votes, for 4 years. He must be at least 30 years of age, and have resided in the state 2 years next preceding his election. In case of the death or disability of the governor, the secretary-of-state is invested with his powers. A secretary-of-state, auditor, and treasurer, are chosen by the people for the term of 2 years; and a superintendent of public instruction for 3 years.—The funded debt in 1850 was 79,442 dollars. The ordinary annual expenditure is 25,000 d. The state-tax in 1849 was 47,295 d.; in 1850, 56,558 d.—The judiciary consists of a supreme court and circuit-courts. The supreme court consists of a chief justice, and two associate justices, elected by the joint vote of the general-assembly, for 6 years. This court has only appellate jurisdiction, and the power to correct errors in law. The judges of the lower courts are elected by the voters of each district, for 5 years. There are also co.-courts, and justices-of-the-peace.

History.] I., formerly a portion of French Louisiana, came into the possession of the United States in 1803. It was erected into a separate territorial government in 1838; and having formed for itself a constitution, and performed all the other requirements of the national laws, was admitted as a state of the Union in Dec. 1846. It has of late rapidly filled up; and the stream of immigration, which is now flowing westward, will at no distant period swell the pop. of this state to millions.

IOWA, a county in the SW part of the state of Wisconsin, U. S., comprising an area of 1,300 sq. m., bounded on the N by Wisconsin river, and watered by several small tributaries of that river, and by Pekatonokee and Feve rivers. It has some fine prairie-land, and contains copper and lead ore in great abundance. Pop. in 1840, 3,978; in 1850, 9,576. Its capital is Mineral point.—Also a town of Johnson co., and the cap. of the territory of Iowa, 33 m. WNW of Bloomington, 86 m. SSW of Dubuque, and 75 m. NW of Burlington, on the E bank of the Iowa river, which is here navigable at all seasons. Pop. in 1840, 800; in 1850, 2,308.

IOZEFOW, a town of Poland, in the woiwod and 38 m. WSW of Lublin, on the r. bank of the Vistula. Pop. 860.—Also a town in the woiwod and 62 m. SSE of Lublin, obwod and 20 m. SW of Zamosz. It contains a Greek church and a Latin school. Pop. 775.

IPA, a river of Russia in Europe, in the gov. of Minsk, which has its source in the district and 30 m. S of Bobrisk; runs SSW; and throws itself into the Pripet, on the l. bank, 11 m. above Mozir, after a total course of about 75 m.

IPANI. See YPANE.

IPANEMA, or IGPANEMA, a river of Brazil, in the

prov. of Pernambuco, which flows S, and joins the Rio São-Francisco, on the l. bank, about 90 m. above the entrance of that river into the Atlantic.—Also a river of the prov. of São-Paulo, in the district of Sorocaba, and an affluent of a river of that name.

IPARANNA, a village of Brazil, in the prov. of Para, on the r. bank of the Rio Negro, and at the N angle of the confluence of the Ucagari. Its inhabitants are chiefly Indians of the Baniba tribe.

IPATEVA (Serra), a chain of mountains in Brazil, on the confines of the provs. of Minas-Geraes and São-Paulo, and to the N of the town of the last name. It detaches itself from the Mantiqueira on the S, and runs SW towards the sources of the Tibaia, a distance of about 24 m. One of its ramifications runs SE, separates the upper basin of the Tieti from that of the Parahibo, and joins the Serro-do-Mar.

IPAVA, a small lake of Venezuela, in the dep. of the Orinoco, in about N lat. 5° 30′, W long. 65° 15′. It is supposed by some to be the true head of the Orinoco river.

IPEICK, or Pechia, a town of Turkey in Europe, in Albania, capital of a jurisdiction, in the sanj. and 60 m. ENE of Scutari, on the Bistritz, and near the r. bank of the White Drino.

IPHOFEN, a town of Bavaria, in the circle of Middle Franconia, 12 m. NW of Markt-Bibert, and 32 m. NNW of Anspach. It is surrounded by a wall, flanked with towers, and has a church and an hospital. Pop. 2,069. The vine is extensively cultivated in the environs.

IPIALES, a river of Ecuador, in the dep. of Pasto, which descends from the volcano of Cumbal, and forms one of the head-streams of the Guaytara.

IPING, a parish in Sussex, 2½ m. WNW of Midhurst, on the Rother. Area 2,260 acres. Pop. 409.

IPIRANGA, a town of Brazil, in the prov. and near the town of São-Paulo.

IPITANGA, a town of Brazil, in the prov. and district of Bahia —Also a river in the prov. of Rio-de-Janeiro.

IPOEIRA, a large lake of Brazil, in the prov. of Goyaz. It is of great depth, and abounds with fish. The river by which it discharges itself flows into the Maranhão.

IPOJUCA, a parish of Brazil, in the prov. of Pernambuco, district of Cabo-de-Santo-Agostinho, on the l. bank of a river of the same name. The inhabitants, about 800 in number, find their chief employment in agriculture. The river I. rises in the Serra-dos-Cairires-Velhos, near the source of the Capibaribe, and runs parallel to that river for the distance of 150 m. through extensive cotton and sugar-growing districts, to the ocean, into which it discharges itself to the S of Cape Santo-Agostinho, in S lat. 8° 23′.—Also a small river of the prov. of Parahiba, in the district of Alhandra. It issues from a place named Mareacão, runs through Lake Abiahi, and falls into the ocean 6 m. N of the mouth of Goyanna.

IPOLY, or Eipel, a river of Hungary, which has its source in Mount Pietrova, in the N part of the comitat of Neograd; passes through its centre, enters the comitat of Honth, and joins the Danube, on the l. bank, a little below Gran, and after a course in a generally SW direction of about 90 m. The principal towns which it passes are Balassa-Gyarmath and Ipoly-Sagh.

IPOLY-SAGH. See Sagh (Ipoly).

IPORUNGA, a town and new parish of Brazil, in the prov. of São-Paulo and district of Apiahi. Pop. 900. Mining, agriculture, and the rearing of cattle form the chief branches of local industry.

IPOTESCHTY, a village of Turkey in Europe, in Great Wallachia, in the bezirk of Sekujani, on the Braowa.

IPOUT, a river of Russia in Europe, which has its source in the gov. of Moghilev, in the district and 9 m. E of Klimovitchi; enters into the gov. of Smolensk; runs S into that of Tchernigov, in which it bathes the walls of Souraj and Novo-Miesto; thence re-enters the gov. of Moghilev, and joins the Soj a little above Novo-Bielitsa, and after a course of 240 m. Its banks are covered with wood, and afford excellent timber for the docks of Riga, as well as for the ports of the Dnieper.

IPPANE-GUACU and IPPANE-MIRIM, two small rivers of Brazil, in the prov. of Matto-Grosso. The former descends from the Serra Maracaju; is joined by the Ippane-Mirim; pursues its course through uncultivated lands, a distance of about 75 m., and unites with the Paraguaia, on the l. bank, 90 m. above the confluence of the Correntes.

IPPLEPEN, a parish in Devonshire, 3¼ m. SSW of Abbot's-Newton. Area 5,090 acres. Pop. in 1831, 1,164; in 1841, 1,172.

IPPOLITTS, or Hippolits, a parish in Hertfordshire, 2 m. SE by S of Hitchin. Area 2,970 acres. Pop. in 1831, 874; in 1841, 919.

IPPU, or Ipu, a town of Sumatra, on the SW coast of the island, 90 m. NW of Bencoolen, at the mouth of a river. It has an active export trade in copper.

IPS, or Yves, a river of the archduchy of Austria, in the upper circle of the Wienerwalde, which has its source in the S confines of the archduchy, 6 m. WNW of Maria-Zell; runs NW, passing Lunz; thence bends first SW, then W; at Hollenstein takes a N direction, flows past Waidhofen, and finally making a turn to the NE, unites with the Danube, on the l. bank, at the town of the same name, and after a course of about 75 m.—The town is 29 m. W of St. Polten, and 60 m. W of Vienna. Pop. 1,952. It is small, but well-built, and has a large hospital and a military school. It was formerly noted for its pottery. It is supposed to occupy the site of the ancient *Pons Isis* or *Isipontum*.

IPSA, a town and port of the island of Corfu, on a bay of the same name, 7 m. NNW of Corfu.

IPSALA, a town of Turkey in Europe, in Rumelia, in the sanj. and 50 m. NNW of Gallipoli, and 24 m. SSW of Dimotika, in the angle formed by the junction of a river of the same name with the Maritza. It contains a mosque, several baths, a large caravanserai, and numerous gardens. This place was one of the first in which the Turks established themselves in Europe. The name is said to be derived from the word *Ilbsala*, signifying 'first prayer,' Gasi-Suleiman Pasha having here offered his first prayer on entering Rumelia at the head of his troops.—The river I. takes its rise in the E extremity of the Tekir-Dagh, flows along the S side of that mountain range, and has a total course of about 39 m.

IPSAMBOL. See Abu-Sambul.

IPSARA, Psara, or Psyra, an island of the Archipelago, 8 m. NW of the island of Scio. It is 6 m. in length from NW to SE, and nearly equal in breadth; and is traversed longitudinally by a chain of mountains, which gradually declines in height towards the S. Their highest summit, Mount Elias, is in N lat. 38° 35′ 34″, and E long. 25° 35′ 44″. The outline of the coast presents three large promontories: Point East and Point Alexander on the NW, and Point St. Nicholas on the S. A little to the E of the latter is a good port. On the NW is a bay, the entrance to which is divided by a rock into two channels, and is incapable of admitting large vessels. This bay is noted as the first landing place of the Turks. The interior of the island presents little else

than barren rock, with here and there a few patches of verdure and cultivation. It contains several wells, of which the water of one only is fit for use. The inhabitants, about 400 in number, are chiefly Greeks.—The chief town, which bears the same name, is situated on the S coast, at the head of a bay which forms a good port. It once contained 3,000 inhabitants, but in 1824 it was totally destroyed by the Turks. The name *Psyra* or *Psyris*, given to this island by Strabo, denotes its sterility. It appears to have been very early inhabited; a temple to Bacchus having formerly occupied the site on which a monastery now stands. The present inhabitants form the residue of the once flourishing colony established here about a century since by a small number of Greeks, who had sought in this island a refuge from the domination of the Turks.—To the NE of Ipsara is the small uninhabited island of Anti-Psara or Psara-Poulo.

IPSDEN, a parish in Oxfordshire, 9 m. WNW of Henley-upon-Thames. Area 3,340 acres. Pop. in 1831, 582; in 1841, 610.

IPSERA, or Ispira, a sanjak and town of Turkey in Asia, in the pash. of Erzerum. The sanj. lies in the N part of the pash., and is watered by several rivers, of which the Chorak is the principal. The town is on the l. bank of the Chorak, opposite the confluence of the Gurdje-Bogas-Khewi, in a fertile and well-cultivated district, 54 m. NNW of Erzerum. It is of small extent. The environs are celebrated for their honey.

IPSHEIM, a town of Bavaria, in the circle of Middle Franconia, presidial and 5 m. ENE of Windsheim, and 18 m. N of Anspach, on the r. bank of the Aisch. It has 2 castles.

IPSICA, a valley of Sicily, in the S part of the prov. of Syracuse and district of Modica, extending from 5 m. SE of the town of the latter name to Spaccafurno, a distance of about 6 m.

IPSITZ, or Ybbsitz, a town of the archduchy of Austria, in the upper circle of the Weinerwalde, 6 m. E of Waidhofen, and 42 m. WSW of St. Polten, on the r. bank of the Oisbach, a little above the confluence of that river with the Ips. Pop. 414. It has manufactories of hardware. In the environs are mines of iron and coal, and quarries of marble.

IPSLEY, a parish in Warwickshire, 6 m. NNW of Alcester, at the source of the Arrow. Area 3,000 acres. Pop. in 1831, 830; in 1841, 1,029.

IPSTONE, or Ibstone, a parish in Buckinghamshire, 6½ m. NW of Henley-upon-Thames. Area 1,380 acres. Pop. in 1831, 313; in 1841, 347.

IPSTONES, a parish and village in Staffordshire, 4½ m. NNE of Cheadle, on the Uttoxeter canal. Area of p. 6,490 acres. Pop. in 1841, 1,370.

IPSWICH, an ancient borough, and an inland port and market-town, the capital of Suffolk, situated on the Orwell, at the influx of the Gipping, and on the line of the Eastern Counties railway, by which it is 66 m. NE of London, and 24 m. SE of Bury-St.-Edmunds. The ancient liberty of I., coincident with the boundaries of the parl. borough, has a circuit of 19 m., and an area of 8,450 acres, about 360 of which form the bed of the river Orwell, and are covered at high water. Pop. in 1801, 10,401; in 1831, 20,600; in 1841, 25,384. A small central portion only of this extensive district is occupied by the town; the remainder consists of large farms and gentlemen's seats. The limits of the municipal borough laid down in the boundary report restricted it to an area of 1,720 acres. Pop. in 1841, 19,824.—The lines of communication by land between I. and other parts of the country are extremely numerous—no less than 17 different roads entering the borough boundary, and meeting in the town. The Gipping was rendered navigable for barges from hence to Stowmarket in 1792, and has been sometimes called the Stowmarket canal. The Orwell, immediately below Stoke bridge, assumes the character of an estuary, and continues from thence, in a SE direction, to the North sea at Harwich, distant about 12 m., in a bed varying from a ½ m. to upwards of 1 m. in breadth at high water. At Harwich it unites with the Stour. The channel of this river has been straightened, deepened, and much improved, since 1805; and vessels of about 200 tons burden, or drawing 12 and 13 ft. water, can now come up to the quays at high water. Many of this size, however, prefer to unload in Downham-reach, about 3 m. below the town. A new dock has been recently formed, and other improvements made on this harbour. Steamers ply between I. and London,—a distance of 104 m. by the ordinary water-course.—The town occupies a healthy situation; the southern aspect and protection of the hills behind it, to the N and E, contributing to the mildness, and the moderate elevation and sandy crag or gravelly soil on which it stands, to the dryness of the locality. Considerable improvements have been made on I. within the last 40 years; and on the whole, although still containing many old-fashioned houses, it presents a flourishing appearance. The most valuable premises in the town are the warehouses, &c., situated near the common quay, and along the banks of the Orwell. There is a theatre in the town, and the assembly-rooms are very handsomely fitted up. The parish churches are chiefly ancient edifices; but some of them are spacious and handsome, and contain monuments of interest. The exterior of the new courts is very elegant and chastely ornamented, but the plan and arrangement is said to be defective. The county-jail and house-of-correction was erected in 1790, on the plan of Mr. Howard, in an open area of considerable extent in the town. It is enclosed by a wall built in a sunken fosse, with an iron *chevaux de frise* round the top. The enclosure forms a perfect square, of which the sides are 260 ft. The hall-of-commerce, a building appropriated to the business of the customs and excise, is a fine new building, 125 ft. in length and 44 ft. in depth. I. is pre-eminent in educational endowments and other charitable as well as literary institutions.—The corporate revenues, previous to 1835, consisting of a water-rental, with other rents, and town and port dues, amounted in all to upwards of £2,000 per ann. The water-rental alone produced £700. The revenue now amounts to upwards of £5,000.—I. sends 2 members to parliament. The number of electors registered at the general election in 1837 was 1,418; in 1848, 1,685. I. is a polling-place, and the principal place of election for the E division of the co.—During the 15th and 16th cents., I. was an extensive and flourishing port. During the middle and close of the 17th cent., its commerce received a severe injury in the breaking up of its manufactories of woollen cloths and of sail-cloth. Within the last 20 years, however, it has been rapidly reviving. The amount of tonnage in 1820 was about 5,000 tons; in 1827 it had increased to 8,120; and in 1836 to no less than 10,000 tons burthen, distributed in about 150 vessels, manned by nearly 500 persons, and employed in its coasting and foreign trade. In 1847, it possessed 182 vessels = 14,434 tons. The principal business of I. at present consists in the corn trade. About 80,000 qrs. of malt and coal are annually sent to London alone, besides the grain and flour sent thither and to other parts of the kingdom.—The corn trade alone of I. averages in all 300,000 qrs. per ann. Upwards of 40,000 chaldrons of coals are annually brought to I., and from thence supplied to the W parts of the co., by means of the Gipping, or Stowmarket canal. This

river also brings down vast quantities of agricultural produce from these parts of the country, and serves for the conveyance of almost all heavy goods. A general foreign trade of some extent is also carried on. The trade with the Baltic is increasing; and the importation of timber from Norway, &c., has been promoted by I. being made a bonded port for foreign timber. The bonded warehouses here, however, have been hitherto limited to wine and spirits, wood goods, barilla, and corn. The gross amount of customs duty collected at this port in 1838 was £38,864; in 1839, £41,857; in 1846, £37,012; and in 1847, £30,406. The foreign vessels with cargoes entered inwards, were for 1845, 62; 1846, 79; 1847, 71; with cargoes outwards, 1845, 14; 1846, 5; 1847, 14. The number of vessels with cargoes inwards, was in 1845, 1,443; 1846, 1,404, with a tonnage of 96,097; 1847, 1,683, with a tonnage of 121,673. With cargoes outwards, the returns were, for 1845, 1,015; 1846, 915, with a tonnage of 51,457; 1847, 926, with a tonnage of 53,826. This marked impetus to the coasting-trade is due to the formation of the railway to Bury, above 300 vessels having, since the opening of that line, discharged cargoes of coals at the railway wharf for the inland parts of the co. The number of registered vessels belonging to the port was, in 1845, 179, with a tonnage of 14,524; 1846, 183, with a tonnage of 14,544; 1847, 181, with a tonnage of 14,611. The light dues for 1846 amounted to £1,607; for 1847, £1,985.—Ship-building is carried on to a considerable extent in two yards. In the town there are two very extensive iron-foundries, a manufactory of tobacco and snuff, extensive breweries, and also very extensive soap-boiling establishments. The manufacture of hemp, flax, and cotton, is now all but extinct here; but there are still a few looms, employed on goods made solely from cotton, the last and sole remnant of the once extensive cotton weaving in this part of England. Messrs. Ransome & May, who unite implement-making with mechanical engineering, possess an establishment which is one of the most extensive and well-arranged of the kind in the kingdom, covering 10 acres of ground, and employing from 800 to 1,000 men, nearly one-half of whom are engaged constantly in the department of agricultural implements. Three fairs are annually held here. The lamb fair, held on 22d Aug., is of great importance to all the neighbouring cos.

IPSWICH, a recently founded town in Stanley co., New S. Wales, on Moreton bay. It is said to be rapidly advancing in importance.

IPSWICH, a town and port of Essex co., in Massachusetts, U. S., 26 m. NE by N of Boston, situated on both sides of a river of the same name, 2 m. above its mouth. Pop. 3,000. The shipping belonging to this port in 1840 amounted to 3,739 tons.

IPUCA, a village of Brazil, in the prov. of Rio-de-Janeiro, and comarca of Cabo-Frio, in the Cordelheira-dos-Aimores, and near the source of a river of the same name.—Also a v. lower down the same river. Their united pop. is estimated at about 3,000. The locality is unhealthy, but produces rice, mandioc, millet, sugar, and coffee, in great abundance. Timber forms an important article of trade with Rio-de-Janeiro.—Also a small river in the same prov., which unites with the Rio-de-São-João, on the l. bank, a little below the outlet of Lake Juturnahiba. It passes in its course Velha, Ganilhosa, and Ipuca; and is navigable for canoes a distance of about 15 m.

IPU-GRANDE, a town of Brazil, in the prov. of Ceara, and comarca of Sobral, 210 m. to the SW of Fortaleza. The district, which is of great extent, is bounded on the N by those of Vicosa and Januaria, and on the W by the prov. of Piauhi; and comprises a pop. of 8,000. Agriculture and the rearing of cattle form the chief branches of local industry.

IQUI, an island of Japan, in N lat. 31° 30′, E long. 132°.

IQUIQUE, a small port of Peru, in the prov. of Tarapaca, 11 m. NW of Grueso point. It is a poor place, with a pop. of about 500; but is the only village on the coast of the prov., the other places named in charts being merely headlands, beaches, islands, &c., occasionally visited by fishermen from I. in search of eels, seals, and sea-otters. [*Bollaert.*] There is neither wood, water, nor vegetation here. Provisions are brought from the interior, and from Chili, and water from Pisagua, 45 m. to the N; but the port has a considerable trade from the vicinity of the silver-mines of Huantajaya and Santa Rosa, which are respectively 12 and 17 m. from I., and the large cargoes of saltpetre which are here shipped for England. Extensive districts in the vicinity of this place are covered with an efflorescence consisting principally of nitrate of soda. This can be brought to England at less than half the freight of the East Indian nitrate of potash or saltpetre; and as its manufacture is simple, it has already supplanted that of the potash saltpetre of the East. The deposit of this valuable salt is said to exist in this quarter of S. America, on the W margin of the Pampa-de-Tamarugal, in beds extending over more than 200 sq. m.—Nearly opposite the town of I. lies a small island of the same name, in S lat. 20° 12′ 30″, W long. 70° 14′ 30″, which Frezier, who visited this coast in 1712–14, describes as yielding large supplies of guano to the farmers and vine-dressers of all the neighbouring districts. His words are: "The island of I. is also inhabited by Indians and Blacks, who are there employed to gather guano, being a yellowish earth, thought to be the dung of birds, because, besides that it stinks like that of the cormorants, there have been feathers of birds found very deep in it: however, it is hard to conceive how so great a quantity of it could be gathered there; for during the space of a hundred years past they have laden ten or twelve ships every year with it, to manure the land, as shall be observed lower; and it is scarce perceivable that the height of the island is abated, although it is not above three-quarters of a league in compass; and that, besides what is carried away by the sea, they load abundance of mules with it for the vines and ploughed lands of Tarapaca, Pica, and other neighbouring places, which makes some believe that it is a peculiar sort of earth. For my part, I am not of that opinion; for it is true the sea-fowls are there so numerous, that it may be said, without romancing, that the air is sometimes darkened with them." This deposit has been removed; but sea-birds, in immense flocks, including cormorants, pelicans, boobies, gulls, and shags, still make this island, and the rocks along the adjacent coast, a favourite haunt.

IQUITOS, a town of Assuay, at the confluence of the Nanag with the Amazon, and 30 m. NE of San Joaquim-de-Omaguas.

IRA, a township of Rutland co., in the state of Vermont, U. S., 70 m. SSW of Montpelier. It has a mountainous surface, and is watered by Castleton river, and Ira and Furnace brooks. The soil affords excellent pasturage. Pop. in 1840, 431.—Also a township of Cayuga co., in the state of New York, 169 m. W of Albany. It has an undulating surface, and its soil, consisting of sandy loam, is generally fertile. Pop. 2,283.—Also a township of St. Clair co., in the state of Michigan. Pop. 204.

IRACUBA, a small town of French Guayana, on the Atlantic, at the mouth of a river of the same name, 75 m. WNW of Cayenne.

IRAJA, an old parish of Brazil, in the prov. and

district of Rio-de-Janeiro, bordered on the E by the bay of Nitherohi, and watered by two rivers of the same name. Its inhabitants, about 5,000 in number, are chiefly agriculturists. It contains 8 churches, and has numerous sugar-houses and distilleries of brandy.

IRAK-AJEMI, Irak-Adjemi, or Iraku-l'-Ajam, [*i. e.* 'the Persian Irak,'] the largest and one of the most valuable provinces of Western Persia, comprising the cap., Ispahan, and several of the finest cities of the kingdom. It forms the greater part of the ancient *Media;* and is bounded on the N by Azerdbijan, Ghilan, and Mazanderan; on the E by Khorassan and the Great Salt desert; on the S by Fars and Khuzistan; and on the W by Kurdistan. It politically comprises a considerable portion of the Great Desert, and of the countries which enclose it on the W and N. The surface is entirely mountainous; its valleys are of varying length, but seldom exceed 10 or 15 m. in breadth. The mountain-chains are barren, and destitute of timber. They run almost invariably from W to E; and either gradually sink into the Desert, or throw out branches into the provs. of Kerinan and Khorassan. The valleys are, for the most part, uncultivated, excepting in the vicinity of the villages; but the soil is in general good. To the S of Ispahan, or the parallel of 32° 30′ N, the mountains of Kurdistan terminate abruptly towards the table-land of Iran, and the country which lies between them and the Desert—a space of more than 100 m.—consists of long valleys, running W and E, and terminating in the Desert. The most arid part of I. is the SE corner of the prov., between Ispahan and the city of Yezd in the Kohistan. To the N of Ispahan, as far as N lat. 36°, there is a mountainous district, containing wide, fertile, and well-watered valleys; and E of this extends a plain about 40 or 50 m. wide, traversed by several broad and low ridges, and terminating on the border of the Desert. That portion of I.-Ajemi which lies N of the parallel of 35°, belongs to the table-land of Azerdbijan. Its surface stretches out in a plain consisting of gradual ascents and descents, and furrowed by deep valleys. A lofty range of mountains divides the N frontiers of I. from the provs. bordering on the Caspian. This range passes about 6 m. to the N of Tehran; and about 50 m. to the SE of that city, suddenly turns S to about the parallel of 36°, whence it turns NE, and enters Taheristan. At the point of deflection is the pass of Khawar, through which the road leads from Cashan to Demavend and to Tehran, and from this pass a vast but undulating valley extends to the NW as far as Caswin, in 36° 12′ N lat. The climate of this part of I. is delightful in spring. The summer-heat sets in towards the middle of June. Cold begins to be felt towards the end of September, and much snow falls in December, January, and February. The Kezil-Ozein, or Kizil-Uzein, forms the natural boundary on the NW, between I. and Azerdbijan. A few m. to the E of Miana, it is joined by the Karauku, and the combined rivers force a passage through the Ak-Dagh or Caucasian range, and being joined by the Shahrud, assume the designation of the Sufidrud, and rush in a rapid course through Ghilan to the Caspian sea. The most mountainous part of I. lies between the Kezil-Ozein and the cities of Hamadan and Kermanshaw. This district is the El-Jebal, or 'mountain,' of Oriental writers, and the *Matienne* of the Greeks and Romans. During eight months of the year, the climate is here delightful, but in winter the cold is excessive. To the S of Hamadan lies Elvend, the *Mons Orontes* of Diodorus. It is a lofty ridge, topped with continual snow, and extending from E to W about 12 m. A fertile tract of country lies to the SW, between Hamadan and Kungawar. The range of the Elburz mountains, with its well-watered and fertile valleys, and its high summits, is included in I., as well as the hilly country which skirts its S base, and which is generally well cultivated. The road from Teheran to Casvin or Casbin leads through this rich valley at the foot of these lower hills. The large expanse of country between Kermanshaw S to Ispahan, is chiefly occupied by wandering tribes, although it embraces some of the most fertile parts of I. That part of the desert which is included in I. has a sandy soil, and is nearly enclosed by mountains. But though sparingly watered, it produces silk and fruit.—The whole prov. is divided into 5 large districts, viz. Isfahan or Ispahan, Tihran or Tehran, Nayon, Melayer, and Kermanshahan; which are again subdivided into *buluks*, or large feudal estates.

IRAK-ARABI. See Bagdad.

IRANCTA, a town of Spain, in the prov. of Navarra, partido and 15 m. WNW of Pamplona, on the l. bank of the Araquil. Pop. 420. In the vicinity is a vitriolic spring.

IRANCY, a commune and town of France, in the dep. of the Yonne, cant. and 5 m. ENE of Coulange-la-Vineuse, and 8 m. SSE of Auxerre. It affords excellent wine.

IRANGA, or Irangy, a lake or lagune on the E coast of Madagascar, in S lat. 18° 14′, in the Betsimsaraka district. It lies immediately S of Atopiana lake, and is one of the most extensive in the series which line the coast S of Tamatave. It is infested with crocodiles. On its banks are the villages of Atakalampona and Ambaribé.

IRAPIRANG. See Vazabarris.

IRAPUAN, a river of Brazil, in the prov. of São-Pedro-do-Rio-Grande, and district of Caçapaba. It runs S, and joins the Jacuhi, on the r. bank, near the mouth of the outlet of lake Pathos, and after a course of about 27 m.

IRASBURG, a township of Orleans co., in the state of Vermont, U.S., 45 m. NE of Montpelier. It has an undulating surface, and is watered by Black and Barton rivers. Its soil is generally fertile. Pop. in 1840, 981.

IRASU, a volcanic mountain of central America, in the state of Costarica, in N lat. 9° 35′, W long. 83° 52′, to the NE of the town of Carthage.

IRATI, a river of Spain, in the prov. of Navarre, which has its source near the frontier of France, in a forest of the same name; runs first W, then S, passing in its course Orbaicete, Aribe, Aviz, and Lumbier; at the latter town it receives the Salazar, and 1½ m. above Sangueza joins the Aragon. It has a total course of about 39 m., and abounds with fish.

IRAWADI, Irrawaddy, or Airavati, [*i. e.*, according to some, 'the great river,' or, according to other authorities, 'the Elephantine river,'] the principal river in India, beyond the Brahmaputra. It has its sources near the E extremity of the Himalaya in Tibet, about 28° N lat. and 97° 30′ E long., not far from the sources of the Bor-Lohit, the E branch of the Brahmaputra. Klaproth contends that the Sanpu or Dzang-bo of Tibet, is the head-stream of the I.; but Lieutenant Burlton having penetrated across the Lang-tan chain in 1827, to the residence of the Borkhamti rajah, 12 m. distant from the I., found it about 80 yds. broad at Manchi, in the lat. of 27° 30′, and formed a little above that point by the union of two head-streams, which were fed by numerous small rills, rising in lofty snow-clad mountains 50 m. to the N. The plain through which it flows at Manchi is only 1,855 ft. above sea-level. It flows generally S, through the Singfo territory, and the centre of the Birman empire, which it traverses in its entire length of 600 m., till it falls by 14 mouths into the
